Credit Hours: 3.00. The methods and materials needed for the teaching of chemistry, earth-space, physics, and general science in the secondary schools, including field experience. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. May be taken for two credits (no field experience) by students who are enrolled in another methods course with field experience.

Learning Outcomes: 1. State your goals for secondary science teaching based on an informal position. 2. Use questions, demonstrations, and activities to probe students' concepts. 3. Describe teaching strategies which motivate students and which foster learning. 4. Describe teaching strategies to encourage meaningful problem solving. 5. Plan a science unit using a model of science teaching which takes student conceptual change into account. 6. Teach a lesson, lab, or demonstration employing appropriate strategies. 7. Choose appropriate assessment techniques to evaluate various learning outcomes. 8. Compare and evaluate secondary science curriculum materials, including audio-visual and computer materials. 9. Be able to store and/or dispose of materials properly and select experiments based on appropriate safety guidelines. 10. Describe strategies to provide appropriate learning for a diverse student population.

Credits: 3.00

EDCI 42800 - Teaching Science In The Middle And Junior High School

Credit Hours: 2.00. Designed to prepare preservice teachers to teach science in the middle and junior high school (grades 5-9). No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Gain knowledge about Indiana's middle school science standards. 2. Gain knowledge about curriculum of the courses that they will be student teaching. 3. Gain knowledge about relevant professional organizations and communities. 4. Gain skills to write a high school science lesson plan and teach. 5. Gain skills to write a lab lesson plan. 6. Gain skills to identify and use resources from professional communities. 7. Gain skills to develop project-based learning unit. 8. Gain skills to write a lesson plan to teach NOS. 9. Gain skills to collaborate in a team of teachers. Credits: 2.00

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDCI 55800 - Integrated Science, Technology, Engineering And Mathematics (STEM) Education Methods-Secondary

Credit Hours: 3.00. Focuses on operationalizing the theoretical pedagogical approaches to integrated Science, Engineering, Mathematics and Agriculture (STEM) education. Collaboratively and cooperatively investigate, plan and deliver integrated learning experiences appropriate for secondary education. Course content will blend philosophical considerations with practical application. Permission of instructor required.

Learning Outcomes: 1. Engage in instructional conversations, collaboratively share instructional resources, and develop a sense of community for integrated STEM learning and teaching. 2. Contextualize STEM learning in authentic contexts. 3. Explain and apply socially and culturally relevant pedagogy in the context of STEM learning. 4. Discuss levels and types of integrated STEM content, pedagogy, and ways of knowing. 5. Develop and disseminate integrated STEM learning experiences. 6. Implement, assess and reflect on integrated STEM learning experiences in public school classrooms. 7. Articulate a framework explaining integrated STEM education. 8. Adapt existing singular discipline curriculum resources to leverage connections across disciplines to facilitate integration. Credits: 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners'

strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 24800 - Differentiating Curriculum And Instruction

Credit Hours: 1.00. This course provides a solid foundation and set of principles for differentiating curriculum and instruction in any classroom at any grade level. Students will explore a variety of evidence-based strategies, tools, and curriculum models that effectively meet the diverse needs of all learners. Through readings, online classroom meetings and discussions, case studies, differentiated instruction examples, direct application and reflection, students will deepen their understanding and need to differentiate. With an overarching goal of increasing achievement and developing student talents, this course includes the following major components: creating positive learning environments that support a) high-quality curriculum; b) diagnostic, formative and summative assessments to inform instructional decision-making; and c) flexible grouping addressing student differences in readiness, interest, and learning profile (including learning preference, intelligence preference, gender, culture, language preference, locale, and opportunities to learn) and appreciating how these differences influence the ways in which students learn. Understanding that process of differentiation involves modifying content, process, product, learning environment, and/or affect incorporating higher-order thinking skills, creative problem solving, project-based learning, authentic/respectful tasks, collaborative learning, and other evidence-based strategies to promote student achievement and talent development understanding how differentiation of curriculum and instruction fits within specific educational interventions and models, such as scaffolding, flexible grouping, Response to Intervention (Rtl), and Multi-Tiered System of Support(MTSS). Effective teachers do more than teach content; they teach unique individuals who enter classrooms with various levels of expertise, skills, abilities, social-emotional needs, and learning expectations. Effective teachers differentiate curriculum by personalizing content based on the particular needs and interests of their students. Effective teachers differentiate instruction by applying various grouping strategies, technology applications and thinking skills. The goal of every effective teacher is that every child learns something new every day. Cannot be taken concurrently with EDPS 24000.

Learning Outcomes: 1. Describe and implement the concept of differentiation as a response to the needs, interests and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. 2. Demonstrate proficiency in assessing students readiness, interests, and learning profiles and in creating differentiated lessons that utilize instructional strategies and technologies to engage special populations of students in learning. 3. Develop, implement, and evaluate various differentiated instructional plans designed to maximize learning and demonstrate proficiency in analyzing and evaluating differentiated lessons taught by other teachers. 4. Evaluate and reflect upon your course experience and plan for your future use of knowledge and skills gained in this course. Credits: 1.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated

instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Optional Concentration

Other Departmental /Program Course Requirements (15-20 credits)

College of Science Additional Requirements

Computing (3-4 credits)

Laboratory Science (6-8 credits)

Mathematics (8-10 credits)

Statistics (3 credits)

Required Pre-Requisite Course (4-5 Credits)

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 27101 - Honors Multivariate Calculus (UCC: QR)

Credit Hours: 5.00. This course is the Honors version of MA 26100, Multivariate Calculus; it will also include a review of infinite series. The course is intended for first-year students who have credit for Calculus I and II. There will be a significant emphasis on conceptual explanation, but not on formal proof.

Permission of department is required.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know techniques of vector algebra and be able to apply these to the geometry of space; in particular they will be able to find equations for lines and planes in space. 2. Find equations for standard surfaces in space. 3. Use vector methods to analyze motion in space, and calculate arc length and curvature. 4. Acquire a conceptual and computational knowledge of infinite series; in particular they will be able to test for convergence, and to do calculations with power series. 5. Understand the meaning of partial derivatives in various situations, and will be able to calculate with them. 6. Know the multivariable chain rule and its meaning, and will be able to apply it to calculate derivatives in various situations. 7. Know the meaning of directional derivatives and how to calculate them. 8. Find tangent planes. 9. Find and classify extreme values and saddle points and use the method of Lagrange multipliers. 10. Know the meaning of multiple integrals and how to calculate them. 11. Know the meaning of line integrals and surface integrals and how to calculate them. 12. Know Green's theorem, Stokes' theorem, and the divergence theorem and their applications. Credits: 5.00

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

CHM 12500 - Introduction To Chemistry I (UCC: SCI)

Credit Hours: 5.00. Principles of chemistry including stoichiometry; atomic structure and chemical bonding; properties of gases, liquids, and solids; thermochemistry; descriptive inorganic chemistry. Recommended for entering students intending to major in chemistry. One year of high school chemistry or one semester of college chemistry required.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate competency of chemistry concepts through solving of numerical-based chemistry problems. 2. Demonstrate a mastery of concepts, theories, and ideas of chemistry topics specific to this course. 3. Connect chemistry topics in this

course to real-world problems and solutions that you and others experience. 4. Meet laboratory learning objectives. Credits: 5.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

17-19 Credits

Spring 1st Year

CHM 12600 - Introduction To Chemistry II (UCC: SCI)

Credit Hours: 5.00. A continuation of CHM 12500 . Properties of solutions; chemical equilibrium calculations; elementary thermodynamics; oxidation-reduction reactions and electrochemical cells; rates of reaction; qualitative analysis; descriptive chemistry.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 5.00

CHM 13600 - General Chemistry Honors (UCC: SCI)

Credit Hours: 4.00. A sophisticated treatment of the principles of chemistry. Atomic structure and bonding, spectroscopy, equilibria, thermodynamics and kinetics. Includes weekly laboratory experiments. Two years of high school chemistry recommended. Students with a grade of C or better in CHM 13600 who need 8 hours of credit in general chemistry may request credit for CHM 11500.

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3.

Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and

critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

16-18 Credits

Fall 2nd Year

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 30600 - Mathematical Methods Of Physics I

Credit Hours: 3.00. Discussion of wide-ranging physics problems from mechanics, E&M, thermal, and modern physics with emphasis on reviews and introductions of mathematical methods and techniques that are essential in such discussion. Relevant mathematical methods include one-and multi-variable calculus, complex numbers and functions of a complex variable, and vector calculus. Intended primarily for sophomore physics majors.

Learning Outcomes: 1. Students will acquire capacity to apply essential mathematical methods and techniques to physics problems. Credits: 3.00

PHYS 34000 - Quantum Science Laboratory

Credit Hours: 2.00. Physics experiments will be conducted that emphasize how quantum behavior differs from classical physics, including particle interference, entanglement, photon-electron scattering, and electron charge-to-mass ratio. Special emphasis is given to keeping a professional lab notebook, error analysis and data plotting, and interpretation of experimental results. Lecture hour will cover underlying physics and exploration of lab results.

Learning Outcomes: 1. Acquire the ability to

understand design of a physics experiment, to develop experimental techniques and tools, to analyze and interpret data, and to draw and present physical conclusions. 2. Conduct physics experiments where the quantum aspects are distinctly different from classical predictions. Credits: 2.00

PHYS 34400 - Introduction To Quantum Science

Credit Hours: 4.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrodinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrodinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 4.00

MA 27101 - Honors Multivariate Calculus (UCC: QR)

Credit Hours: 5.00. This course is the Honors version of MA 26100, Multivariate Calculus; it will also include a review of infinite series. The course is intended for first-year students who have credit for Calculus I and II. There will be a significant emphasis on conceptual explanation, but not on formal proof. Permission of department is required.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know techniques of vector algebra and be able to apply these to the geometry of space; in particular they will be able to find equations for lines and planes in space. 2. Find equations for standard surfaces in space. 3. Use vector methods to analyze motion in space, and calculate arc length and curvature. 4. Acquire a conceptual and computational knowledge of infinite series; in particular they will be able to test for convergence, and to do calculations with power series. 5. Understand the meaning of partial derivatives in various situations, and will be able to calculate with them. 6. Know the multivariable chain rule and its meaning, and will be able to apply it to calculate derivatives in various situations. 7. Know the meaning of directional derivatives and how to calculate them. 8. Find tangent planes. 9. Find and classify extreme values and saddle points and use the method of Lagrange multipliers. 10. Know the meaning of multiple integrals and how to calculate them. 11. Know the meaning of line integrals and surface integrals and how to calculate them. 12. Know Green's theorem, Stokes' theorem, and the divergence theorem and their applications. Credits: 5.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and

data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

18-19 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

PHYS 30700 - Mathematical Methods Of Physics II

Credit Hours: 3.00. Discussion of wide-ranging physics problems from mechanics, E&M, thermal, and modern physics with emphasis on reviews and introductions of mathematical methods and techniques that are essential in such discussion. Relevant mathematical methods include vectors, matrices and normal modes as well as ordinary and partial differential equations. Intended primarily for sophomore physics majors.

Learning Outcomes: 1. Students will acquire capacity to apply essential mathematical methods and techniques to physics problems. Credits: 3.00

PHYS 36000 - Quantum Mechanics

Credit Hours: 3.00. Contemporary approach to quantum science that combines traditional quantum mechanics with aspects of quantum information science. Primary topics include quantum states, operators, measurement, spin, angular momentum, entanglement, qubits, and the Schrodinger Equation. Special attention is given to the Einstein-Podolsky-Rosen paradox, quantum cryptography, and an introduction to quantum computing.

Learning Outcomes: 1. Utilize the fundamental assumptions of quantum mechanics to distinguish between classical and quantum physics. 2. Solve the Schrodinger equation when applied to standard examples of constant potentials, including harmonic oscillators and the hydrogen atom. 3. Apply quantum measurement concepts and entanglement to describe the fundamental physics behind quantum cryptography and quantum computing.

Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.

Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to

support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

15 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that

should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

PHYS 31000 - Intermediate Mechanics

Credit Hours: 4.00. For students familiar with calculus. Elements of vector algebra; statics of particles and rigid bodies; theory of couples; principle of virtual work; kinematics; dynamics of particles and rigid bodies; work, power, and energy.

Learning Outcomes: 1. To Understand order in Nature as contained in the Laws of Physics. The student exhibits the knowledge of and the ability to apply the core physics subject of Classical Mechanics. Credits: 4.00

17 Credits

Spring 3rd Year

EDCI 42800 - Teaching Science In The Middle And Junior High School

Credit Hours: 2.00. Designed to prepare preservice teachers to teach science in the middle and junior high school (grades 5-9). No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Gain knowledge about Indiana's middle school science standards. 2. Gain knowledge about curriculum of the courses that they will be student teaching. 3. Gain knowledge about relevant professional organizations and communities. 4. Gain skills to write a high school science lesson plan and teach. 5. Gain skills to write a lab lesson plan. 6. Gain skills to identify and use resources from professional communities. 7. Gain skills to develop project-based learning unit. 8. Gain skills to write a lesson plan to teach NOS. 9. Gain skills to collaborate in a team of teachers. Credits: 2.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make

efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution.
Credits: 4.00

PHYS 33000 - Intermediate Electricity And Magnetism

Credit Hours: 3.00. Electrostatics; electric currents; magnetostatics; electromagnetic induction; Maxwell's equation; electromagnetic waves.

Credits: 3.00

PHYS 42200 - Waves And Oscillations

Credit Hours: 3.00. Physics of waves and oscillations including sound, elastic waves, and electromagnetic waves such as light. Topics range from the theory of simple harmonic oscillators, transverse modes of a continuous string, and physical optics including interference, Fresnel and Fraunhofer diffraction, and resolution, to diffraction of X-rays and electrons by crystals. Optionally includes topics such as nonlinear waves and surface waves.

Credits: 3.00

PHYS 53600 - Electronic Techniques For Research

Credit Hours: 4.00. A summary of principles of modern electronics currently used in research Coursework will include broad coverage of the field and selected topics in electronics instrumentation.

Credits: 4.00

PHYS 58000 - Computational Physics

Credit Hours: 3.00. Introduction to computationally based problem solving in physics, emphasis on understanding and applying various numerical algorithms to different types of physics problems. Topics will include chaos in mechanical systems, stochastic systems including percolation and fractal structures, molecular dynamics and the properties of simple fluids, Monte Carlo methods and phase transitions, and time dependent as well as time dependent problems in quantum mechanics.

Credits: 3.00

EDCI 55800 - Integrated Science, Technology, Engineering And Mathematics (STEM) Education Methods-Secondary

Credit Hours: 3.00. Focuses on operationalizing the theoretical pedagogical approaches to integrated Science, Engineering, Mathematics and Agriculture (STEM) education. Collaboratively and cooperatively investigate, plan and deliver integrated learning experiences appropriate for secondary education. Course content will blend philosophical considerations with practical application. Permission of instructor required.

Learning Outcomes: 1. Engage in instructional conversations, collaboratively share instructional resources, and develop a sense of community for integrated STEM learning and teaching. 2. Contextualize STEM learning in authentic contexts. 3. Explain and apply socially and culturally relevant pedagogy in the context of STEM learning. 4. Discuss levels and types of integrated STEM content, pedagogy, and ways of knowing. 5. Develop and disseminate integrated STEM learning experiences. 6. Implement, assess and reflect on integrated STEM learning experiences in public school classrooms. 7. Articulate a framework explaining integrated STEM education. 8. Adapt existing singular discipline curriculum resources

to leverage connections across disciplines to facilitate integration. Credits: 3.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

15-17 Credits

Fall 4th Year

EDCI 42400 - The Teaching Of Earth And Physical Science In The Secondary Schools

Credit Hours: 3.00. The methods and materials needed for the teaching of chemistry, earth-space, physics, and general science in the secondary schools, including field experience. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. May be taken for two credits (no field experience) by students who are enrolled in another methods course with field experience.

Learning Outcomes: 1. State your goals for secondary science teaching based on an informal position. 2. Use questions, demonstrations, and activities to probe students' concepts. 3. Describe teaching strategies which motivate students and which foster learning. 4. Describe teaching strategies to encourage meaningful problem solving. 5. Plan a science unit using a model of science teaching which takes student conceptual change into account. 6. Teach a lesson, lab, or demonstration employing appropriate strategies. 7. Choose appropriate assessment techniques to evaluate various learning outcomes. 8. Compare and evaluate secondary science curriculum materials, including audio-visual and computer materials. 9. Be able to store and/or dispose of materials properly and select experiments based on appropriate safety guidelines. 10. Describe strategies to provide appropriate learning for a diverse student population. Credits: 3.00

PHYS 45000 - Intermediate Laboratory

Credit Hours: 2.00. Laboratory primarily intended for junior year physics majors. Assorted experiments in optics and other fields using lasers, photodiodes, computers, and other modern technology.

Learning Outcomes: 1. Students will acquire the ability to understand design of a physics experiment, to develop experimental techniques and tools, to analyze and interpret data, and to draw and present physical conclusions. Credits: 2.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an

educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

17 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (33-35 credits)

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase

decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

CSR 10000 - Introduction To CSR

Credit Hours: 1.00. A workshop to familiarize students with the CSR department, department majors, advising resources, and major requirements. Special emphasis on basic freshman survival skills.

Credits: 1.00

CSR 20000 - Professional Development In Consumer Science

Credit Hours: 1.00. Professional Development in Consumer Sciences & Retailing is a required course that will provide the necessary techniques to manage job search skills and career development for both current and future professional needs. The covered topics will expose students to on-campus resources, opportunities to gain key networking skills, and establish their professional identity to better prepare students for the current job market.

Learning Outcomes: 1. Provide life-long job search skills. 2. Enable students to effectively navigate career fairs & networking events. 3. Educate students about Purdue's resources regarding career and academic development. 4. Develop student's professional documents. 5. Assist students in creating their personal professional brand. 6. Perpare students on the transition from college to the professional world. Credits: 1.00

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

CSR 30700 - Field Experience In Selling And Sales Management

Credit Hours: 1.00. Approved in-service training and supervised work experience in selling and sales management. Total of 140 hours required with in-depth report and analysis of activities. Permission of department required.

Learning Outcomes: 1. Provide exposure to career options in a real world setting through direct practice or by observation and interaction with colleague at the internship site. 2. Apply theory and relevant coursework in a professional setting, where the student will combine academic and work site assignments. 3. Advance skills and professional experience to enhance the student's career development. Credits: 1.00

CSR 30900 - Leadership Strategies

Credit Hours: 3.00. Provides knowledge of humanistic processes that contribute to development of effective leadership.

Learning Outcomes: 1. Identify leadership principles and skills for the 21st-century organization. 2. Understand and apply ethical leadership. 3. Connect theory to applied solutions. 4. Apply critical thinking to leadership principles through in-class discussion and written assignments. Credits: 3.00

CSR 31500 - Relationship Selling

Credit Hours: 3.00. This course focuses on long-term relationship selling. The course is organized around a seven-step selling process which has proven to be effective. The course adds to this process some principles of marketing and business strategy. The elements are necessary for the success of professional salesperson both in successful prospecting and

making strategic choices as to how to allocate their time within the territory. Important to the learning process is actually practice of principles. Students will do various exercises of principles such as prospecting and negotiation. At the end of the semester, students will hone the skills learned through the semester with a series of role plays designed to put them in position of both seller and buyer.

Learning Outcomes: 1. Recognize that selling is a process which can be taught versus an innate trait. 2. Have an organized approach to the process of selling which can be applied to any industry. 3. Know principles of marketing and strategy which students can apply to the selling process. 4. Know principles of negotiation and handling objections both through class assignments and role playing. 5. Know how to do effective product presentation and frame benefits to the clients through a series of role play scenarios. Credits: 3.00

CSR 33100 - Consumer Behavior

Credit Hours: 3.00. An interdisciplinary survey of consumer behavior theory focused on psychological, sociological, and cultural influences on consumer choice and use of products and services. Credit will not be given for both CSR 33100.

Credits: 3.00

CSR 34200 - Personal Finance

Credit Hours: 3.00. The class covers a comprehensive discussion of investments, consumer credit, insurance and retirement issues. The goal is to show how these components are interconnected in order to create a complete picture of financial health of an individual. CTL:IPO 1811 Personal Finance

Credits: 3.00

CSR 34400 - Fundamentals Of Negotiations

Credit Hours: 3.00. This course is designed to be relevant to the broad spectrum of bargaining "problems" that are traditionally faced by the manager, sales personnel and financial advisors. The course explores the processes of bargaining and negotiation as social and managerial activities. Special emphasis will be given to the areas of interpersonal and interpersonal and intergroup conflict, in addition to the interpersonal influence techniques and the tactics and strategies involved with improved bargaining and negotiation. The major purpose of the course is for each student to gain insight into his or her own negotiating style and to become a more effective negotiator, as well as a more astute observer of social process. The course will involve extensive use of cases, role-plays, and related participative activities, enhanced by rigorous self-review and introspection.

Learning Outcomes: 1. Explore the major concepts and theories of the psychology of bargaining and negotiation. 2. Understand the dynamics of interpersonal and intergroup conflict and its resolution. 3. Help develop the sophistication to analyze bargaining and conflict relationships. 4. Learn about your own individual "bargaining" style. 5. Development appropriate negotiation strategies and tactics for specific situations. Credits: 3.00

CSR 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an International experience that is recognized by the University. Permission of department required.

Credits: 1.00 to 6.00

CSR 40400 - Strategic Management For Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. Through the analysis of internal and external forces, students develop strategies to help an organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of an organization. The course is structured to enhance students' analytical, critical thinking, and verbal skills by integrating academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc.

Learning Outcomes: 1. Demonstrate through effective written and oral communication, the ability to conduct a strategic situational analysis of a service organization. 2. Develop a business strategy for a service organization. 3. Integrate and apply prior knowledge areas from your major to propose a functional strategy that aligns with the strategic vision of your service organization. Credits: 3.00

CSR 41500 - Sales Force Management

Credit Hours: 3.00. An introduction to sales force management. An examination of the sales force management process, including principles of recruiting and selecting, training, compensation, motivation, supervision, and evaluation. Planning skills, including sales force deployment and the role of the sales force in sales forecasting, are also covered.

Learning Outcomes: 1. Identify the appropriate balance between the theoretical, analytical, and pragmatic dimensions of professional sales management through discussions and examples of the diverse sales concepts, issues and activities. Credits: 3.00

CSR 41800 - Selling And Sales Management Capstone

Credit Hours: 3.00. A capstone course in advanced professional selling taught in a seminar format and designed to prepare students for the transition from student to professional. Students are introduced to practitioner-focused issues involved in long-term, major B2B account sales and an emphasis is placed on professional presentation skills. Students will complete a senior group research project and a major account sales project. Professional dress code from business-casual to full-business attire required based on the scheduled day-to-day activity.

Learning Outcomes: 1. Construct a complete selling and sales management program (term project). 2. Demonstrate the ability to analyze selling and sales management situations, and apply skills to solving selling and sales management problems and developing effective selling strategies (exams; quizzes; class exercises). 3. Identify how diversity, ethical, global, and multicultural considerations affect the selling and sales management decision-making processes (exams; class exercises). 4. Demonstrate effectively communication skills by the presentation of a research project in an oral presentation and in a written paper (term project presentations and project updates). Credits: 3.00

CSR 10300 - Introduction To Personal Finance

Credit Hours: 3.00. This course will provide knowledge and skills for young adults to be active, informed, and rational managers of their financial life. The course will particularly address the following 4 areas of personal finance. Managing money: Why it's useful to plan ones financial affairs, budgeting, being an informed manager of ones money and consumer of financial products. Financing large items using savings and credit: Know how credit works, how to use it wisely, and how to avoid over indebtedness. Learn savings strategies to maximize the growth of your money. Using financial markets: What are the different ways to invest, and how to make them work for you and your objectives (such as retirement). Managing risk: How to use financial tools (such as insurance) to protect yourself against risk. The course will emphasize age-relevant knowledge and practical advice, with the objective to help students make better financial decisions and adopt better financial behaviors for the long term.

Learning Outcomes: 1. Estimate their budget, according to basic general principles of accounting, and use it to improve their financial situation by matching expenses to income and smartly planning for the long-term. 2. Decide whether to use savings and/or credit to finance large purchases, which implies being able to save in the most appropriate and rewarding way, and distinguishing between the benefits and drawback of various sources and types of loans. 3. Invest in financial markets wisely using appropriate financial instruments, based on their personal situation at any point in time (including planning for retirement). 4. Identify and implement the best financial products to protect themselves against risk (e.g. different types of insurance). 5. Make financial decisions in an informed and carefully thought-out manner, including reaching out to appropriate resources and advice when necessary. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using

Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

ENTR 46000 - Internship And Career Preparation Seminar

Credit Hours: 1.00. This course is a distance option course for the Certificate in Entrepreneurship and Innovation. It equips students with professional skills based on entrepreneurship competencies. Students develop resources to illustrate their skills, talents, abilities, and goals to increase career preparedness. They learn what it takes to successfully transfer academic skills to a workplace setting and develop an entrepreneurial mindset that sets them apart from other job seekers.

Learning Outcomes: 1. Improve self-awareness of professional skills development through assessments and reflection. 2. Create a professional brand through an improved LinkedIn profile, resume review, interviewing, and networking skills. 3. Showcase educational and professional skills in an e-portfolio or website. Credits: 1.00

CSR 20100 - Introduction To Professional Sales

Credit Hours: 3.00. Introduction to sales process, business to business communication strategies, and expectations of a sales professional.

Learning Outcomes: 1. Describe the operationalization of sales and the purchasing function within a business. 2. Define the variety of sales roles and determine best fit. 3. Demonstrate the skills necessary to succeed in a sales role. 4. Apply sales process to a role play sales call. Credits: 3.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.

Learning Outcomes: 1. Identify personal strengths, skills, and interests using the Strengths Finder Assessment and describe how these align with the National Association of Colleges and Employers Career Readiness Competencies. 2. Construct a professional profile, identifying areas for development in building a personal brand. 3. Explore competencies sought by employers for an internship or entry-level position and how they link to individual skills and strengths. 4. Demonstrate proficiency in a professional interview. Credits: 1.00

Other Departmental/Program Requirements (58-65 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model

and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 31800 - Principles Of Persuasion

Credit Hours: 3.00. Persuasion and its effects, ranging from individual influences to societal impacts. Various perspectives and models of persuasion are examined, including classical and modern approaches. Both theoretical and pragmatic considerations are introduced.

Learning Outcomes: 1. List the major areas of study in the field of persuasion. 2. Analyze and critique persuasive techniques. 3. Apply theories of persuasion to explain everyday circumstances. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to

compose for different purposes. Credits: 3.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss

various social issues associated with computers and information systems. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50100 - Experimental Statistics I

Credit Hours: 3.00. Concepts and methods of applied statistics. Exploratory analysis of data. Sample design and experimental design. Normal distributions. Sampling distributions. Confidence intervals and tests of hypotheses for one and two samples. Inference for contingency tables, regression and correlation, and one-way analysis of variance. Use of the SAS statistical software. Intended primarily for students who have not had calculus. Not open to students in mathematical sciences or engineering. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: College Algebra.

Learning Outcomes: 1. Produce and identify basic statistical analyses. 2. Discuss statistical terminology (speak statistics). 3. Use SAS to run basic statistical analyses and interpret corresponding SAS output. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important

macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to

managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn about the marketing-decision making process. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques,

sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

HTM 25500 - Advanced Spreadsheet Techniques For Hospitality And Tourism Management

Credit Hours: 2.00. This course builds upon information and skills obtained in an entry-level-computing course. It will take students to the next level by introducing them to more advanced techniques used in Hospitality, Tourism, Retail, and Sales Management.

Learning Outcomes: 1. Demonstrate proper utilization of spreadsheet techniques to effectively organize and analyze data for management presentations. 2. Explain the purpose of selected spreadsheet techniques and describe how they are used in Hospitality, Tourism, Retail, and Sales Management. 3. Demonstrate advanced spreadsheet techniques, such as: Advanced Spreadsheet Formulas; Statistical Analysis; Validating Data Entry; Conditional Formatting; Advanced Charting Techniques; Pivot Tables; Spreadsheet Dashboards; Recording and Using Spreadsheet Macros; Power Query; Advanced Cell/Column/Row/Table Formatting; Creating Templates. Credits: 2.00

CSR 10000 - Introduction To CSR

Credit Hours: 1.00. A workshop to familiarize students with the CSR department, department majors, advising resources, and major requirements. Special emphasis on basic freshman survival skills.

Credits: 1.00

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

16-17 Credits

Spring 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

14-16 Credits

Fall 2nd Year

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

CSR 20000 - Professional Development In Consumer Science

Credit Hours: 1.00. Professional Development in Consumer Sciences & Retailing is a required course that will provide the necessary techniques to manage job search skills and career development for both current and future professional needs. The covered topics will expose students to on-campus resources, opportunities to gain key networking skills, and establish their professional identity to better prepare students for the current job market.

Learning Outcomes: 1. Provide life-long job search skills. 2. Enable students to effectively navigate career fairs & networking events. 3. Educate students about Purdue's resources regarding career and academic development. 4. Develop student's professional documents. 5. Assist students in creating their personal professional brand. 6. Perpare students on the transition from college to the professional world. Credits: 1.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

HTM 25500 - Advanced Spreadsheet Techniques For Hospitality And Tourism Management

Credit Hours: 2.00. This course builds upon information and skills obtained in an entry-level-computing course. It will take students to the next level by introducing them to more advanced techniques used in Hospitality, Tourism, Retail, and Sales Management.

Learning Outcomes: 1. Demonstrate proper utilization of spreadsheet techniques to effectively organize and analyze data for management presentations. 2. Explain the purpose of selected spreadsheet techniques and describe how they are used in Hospitality, Tourism, Retail, and Sales Management. 3. Demonstrate advanced spreadsheet techniques, such as: Advanced Spreadsheet Formulas; Statistical Analysis; Validating Data Entry; Conditional Formatting; Advanced Charting Techniques; Pivot Tables; Spreadsheet Dashboards; Recording and Using Spreadsheet Macros; Power Query; Advanced Cell/Column/Row/Table Formatting; Creating Templates. Credits: 2.00

CSR 20100 - Introduction To Professional Sales

Credit Hours: 3.00. Introduction to sales process, business to business communication strategies, and expectations of a sales professional.

Learning Outcomes: 1. Describe the operationalization of sales and the purchasing function within a business. 2. Define the variety of sales roles and determine best fit. 3. Demonstrate the skills necessary to succeed in a sales role. 4. Apply sales process to a role play sales call. Credits: 3.00

14-16 Credits

Spring 2nd Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

CSR 34200 - Personal Finance

Credit Hours: 3.00. The class covers a comprehensive discussion of investments, consumer credit, insurance and retirement issues. The goal is to show how these components are interconnected in order to create a complete picture of financial health of an individual. CTL:IPO 1811 Personal Finance

Credits: 3.00

COM 31800 - Principles Of Persuasion

Credit Hours: 3.00. Persuasion and its effects, ranging from individual influences to societal impacts. Various perspectives

and models of persuasion are examined, including classical and modern approaches. Both theoretical and pragmatic considerations are introduced.

Learning Outcomes: 1. List the major areas of study in the field of persuasion. 2. Analyze and critique persuasive techniques. 3. Apply theories of persuasion to explain everyday circumstances. Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business

marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn about the marketing-decision making process. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

CSR 10300 - Introduction To Personal Finance

Credit Hours: 3.00. This course will provide knowledge and skills for young adults to be active, informed, and rational managers of their financial life. The course will particularly address the following 4 areas of personal finance. Managing money: Why it's useful to plan ones financial affairs, budgeting, being an informed manager of ones money and consumer of financial products. Financing large items using savings and credit: Know how credit works, how to use it wisely, and how to avoid over indebtedness. Learn savings strategies to maximize the growth of your money. Using financial markets: What are the different ways to invest, and how to make them work for you and your objectives (such as retirement). Managing risk: How to use financial tools (such as insurance) to protect yourself against risk. The course will emphasize age-relevant knowledge and practical advice, with the objective to help students make better financial decisions and adopt better financial behaviors for the long term.

Learning Outcomes: 1. Estimate their budget, according to basic general principles of accounting, and use it to improve their financial situation by matching expenses to income and smartly planning for the long-term. 2. Decide whether to use savings and/or credit to finance large purchases, which implies being able to save in the most appropriate and rewarding way, and distinguishing between the benefits and drawback of various sources and types of loans. 3. Invest in financial markets wisely using appropriate financial instruments, based on their personal situation at any point in time (including planning for retirement). 4. Identify and implement the best financial products to protect themselves against risk (e.g. different types of insurance). 5. Make financial decisions in an informed and carefully thought-out manner, including reaching out to appropriate resources and advice when necessary. Credits: 3.00

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration.

Learning Outcomes: 1. Describe the fundamentals of robotics. 2. Create robot programs for various applications. 3. Implement robot applications that use peripheral devices or sensors. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

ENGT 48100 - Engineering Technology Capstone II

Credit Hours: 3.00. This is the second course of two-term capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of

the design solution. 5. Present final solution recommendations. Credits: 3.00

MFET 41000 - Introduction To Additive Manufacturing

Credit Hours: 3.00. This course covers topics in additive manufacturing (AM) technologies. Topics include the AM benefits and drawbacks of additive as compared to subtractive manufacturing, additive manufacturing process and material selection, design for additive manufacturing, support structure generation, printing process planning, and quality control techniques, such as monitoring, inspection, and surface modification.

Learning Outcomes: 1. Describe the concepts, benefits, and application of additive manufacturing. 2. Select appropriate additive manufacturing processes and material for producing parts. 3. Design 3D objects for additive manufacturing considering the process requirements. 4. Develop strategies and practices incorporating appropriate quality control techniques. Credits: 3.00

MFET 35000 - Smart Manufacturing Systems Modeling & Simulation

Credit Hours: 3.00. This course addresses application of industrial internet of things (IIoT) for modeling and simulation of smart manufacturing assets, processes, and operations. Emphasis is on synchronizing modeling/simulation with real-time data to develop innovative services, create efficiencies, and enable productivity improvement in smart factories.

Learning Outcomes: 1. Describe the convergence of the physical and digital worlds, technology, and standards of IIoT-aided modeling and simulation. 2. Implement process data modeling and application to various types of plant data (drives, pumps, production lines) using real-time, historical, and event-based data. 3. Develop digital/virtual-cloud representation models to be mirrored onto physical manufacturing systems. 4. Create digital twin (DT) models using data from IIoT devices for monitoring and automating control of smart connected assets. 5. Construct DT-oriented simulation model for IoT-aided manufacturing system for applications in productivity, reliability, efficiency, and predictive maintenance operations. 6. Develop application of augmented reality and manufacturing model proxies in diagnostic and troubleshooting operations. Credits: 3.00

MFET 23000 - Industrial Internet Of Things, Networks, And Systems I

Credit Hours: 3.00. This course provides an introduction to Industrial Internet of Things (IIoT) devices, networks, and standards in the context of converged information technology (IT) and operations technology (OT) industrial automation systems. Course topics include an examination of IT and OT networks, hardware, architecture, protocols, standards, and security practices in the context of industrial applications.

Learning Outcomes: 1. Explain the concept of Industrial Internet of Things (IIoT) and the enabling technologies. 2. Describe IT and OT development and detail differences in priorities and capabilities. 3. Design, implement, and analyze an integrated industrial network. 4. Configure host-level and network-level technical security controls in IT and OT systems. 5. Apply industry standards and reference architectures to ensure best practices in the selection, deployment, and operation of IIoT devices. Credits: 3.00

MFET 23100 - Industrial Internet Of Things, Networks, And Systems II

Credit Hours: 3.00. This course offers a practical exploration of Industrial Internet of Things (IIoT) in converged information and operations technology (IT/OT) industrial automation systems. Course topics include IT and OT reference architectures, industrial network convergence, standards, and security practices in the context of Edge, hybrid, and Cloud-based industrial applications. Specific focus is given to integrating and securing networked industrial devices with local and cloud-based IT systems in greenfield and brownfield scenarios.

Learning Outcomes: 1. Apply industry standards to develop a basic industrial network for converged IT/OT smart manufacturing systems. 2. Demonstrate the implementation of key security components required for converged IT/OT industrial networks. 3 Describe the role,

characteristics, and requirements of safety systems in smart manufacturing. 4. Implement batch and real-time computation and basic machine learning models in an automated system. Credits: 3.00

MFET 25000 - Smart Manufacturing Cloud Computing Applications

Credit Hours: 3.00. This course introduces concepts and principles of cloud computing and the virtualization of computing resources and services for smart manufacturing applications. The fundamental topics of cloud computing will be addressed, including virtually processing, storing, modeling and analyzing of data in the cloud environment. Fundamental concepts about cloud tools, applications, and services from a production and manufacturing perspective will be presented.

Learning Outcomes: 1. State the challenges and advantages of cloud computing in smart manufacturing. 2. Explain the concepts and principles of cloud computing such as a scalability, elasticity, agility, fault tolerance, disaster recovery and networking. 3. Recognize the models, tools, and service types offered by the different cloud platforms for smart manufacturing applications. 4. Select strategies for managing and optimizing cloud computing resources for different manufacturing applications. 5. Apply techniques in clouding computing to model and manage manufacturing data. 6. Build manufacturing apps using cloud based platform tools and services. Credits: 3.00

MFET 36100 - Machine Learning And Manufacturing Analytics

Credit Hours: 3.00. Machine learning (ML) algorithms are used to extract and analyze large amounts of manufacturing data. Fundamental ML analytic techniques and commonly used ML algorithms for manufacturing applications will be introduced. Students will create, train, and deploy ML models on a cloud platform to create enterprise-ready smart manufacturing artificial intelligence (AI) solutions.

Learning Outcomes: 1. Explain the benefits machine learning and artificial intelligence have in manufacturing. 2. Describe the fundamental principles, core concepts and operations involved with developing machine learning applications. 3. Apply commonly used machine learning algorithms for smart manufacturing applications. 4. Apply cloud-based automated machine learning tools to develop models and applications to perform intelligent manufacturing operations and analytics. Credits: 3.00

MFET 35100 - Mixed Reality Smart Manufacturing Applications & Design

Credit Hours: 3.00. The course investigates development strategies, use cases, and mixed reality (MR) application in industrial IoT (IIoT)-based smart manufacturing systems. Emphasis is on superimposing digital content onto physical systems, integrating data from smart and connected manufacturing production operations, processes, and machines.

Learning Outcomes: 1. Outline the benefits and applications of mixed reality (MR) offers in smart manufacturing environments. 2. Link the MR concepts, industrial IoT (IIoT) technologies, and development approaches with smart manufacturing applications. 3. Develop proficiency in using hardware, software tools and technologies to design and prototype effective MR applications for manufacturing. 4. Design and develop MR user interfaces and interaction techniques for augmented human-machine systems. Credits: 3.00

MFET 35200 - Smart Manufacturing Production Information Systems

Credit Hours: 3.00. An examination of smart manufacturing information systems with particular focus on applications for horizontal- and vertically-integrated manufacturing organizations. Topics include cloud-based integrated information systems to provide connectivity, visibility, and analytics of production and shop-floor execution systems and integrating manufacturing execution, manufacturing operations management, and enterprise resource planning (ERP) systems.

Learning Outcomes: 1. Apply ISA-95 standards for horizontal and vertically integrated smart manufacturing operations using Manufacturing Execution System (MES), Manufacturing Operations Management (MOM) and Enterprise Resource Planning (ERP) systems. 2. Apply

cloud infrastructure and data concepts for storing, distributing, and accessing manufacturing enterprise data for planning, scheduling, management, and production control. 3. Implement real-time, batch, and streaming data processing techniques for visualization and analytics of production data. 4. Apply cloud-based Manufacturing Execution System (MES), Manufacturing Operations Management (MOM) and ERP for creating efficiency, optimization, and control of production operations. Credits: 3.00

MFET 44000 - Smart Manufacturing Autonomous Human Robot Systems

Credit Hours: 3.00. This course explores robot cognition with application of intelligent human-robot systems in unstructured manufacturing environments. Topics include intelligent robotics, machine learning, machine vision, and human-robot interaction with particular emphasis on applications for smart manufacturing.

Learning Outcomes: 1. Describe the fundamental concepts of autonomous mobile and field robotics and human-robot interaction in unstructured smart manufacturing environments. 2. Apply intelligent sensory perception algorithms and robot control through sensory feedback for visual and tactile sensing as modalities for human-robot interaction. 3. Identify machine perception approaches and deep-learning techniques to help robots acquire interactive skills. 4. Apply algorithms for spatial representation, mapping and localization with real-time robot control strategies integrated with machine perception approaches for applications in smart manufacturing environments. Credits: 3.00

MFET 36300 - Intelligent Manufacturing Systems I

Credit Hours: 3.00. This course investigates how artificial intelligence, industrial IoT, and big data are used to enable predictive analytics with machine learning. Emphasis is on optimizing production processes, improving productivity, quality, efficiency, and integrating predictive maintenance applications in smart manufacturing operations.

Learning Outcomes: 1. Apply appropriate machine learning algorithms for improving and optimizing manufacturing operations. 2. Enable predictive analytics with machine learning for maintenance operations. 3. Evaluate manufacturing processes using machine learning. 4. Identify and solve manufacturing problems using machine learning and root cause analysis. 5. Describe how data- and knowledge-based systems are used in product and design lifecycles. Credits: 3.00

MFET 36400 - Intelligent Manufacturing Systems II

Credit Hours: 3.00. Artificial intelligence (AI), machine learning (ML), industrial IoT (IIoT), and big data are applied to enable predictive analytics with machine learning for optimizing processes and operations in a horizontally-integrated smart manufacturing value-chain network.

Learning Outcomes: 1. Integrate cloud platforms with industrial big data, advanced analytics, AI/ML, and IIoT in a horizontally integrated supply chain network. 2. Implement data, analytics, and machine learning to create insights and drive decision-making in a horizontally integrated value chain network. 3. Describe how intelligent systems are connected to physical assets via IIoT infrastructure to automate inventory, and asset management across a manufacturing value chain network. 4. Apply predictive modeling, analytics, and AI/ML techniques to optimize material management, production planning, scheduling, and supply operations across a manufacturing value chain network. Credits: 3.00

MFET 34100 - Process And Continuous Control Applications

Credit Hours: 3.00. An examination of devices, algorithms, strategies, and standards used in smart manufacturing continuous process and control serves as the basis of this course. Concepts include Proportional, Integral, & Derivative Control (P&ID), loop modeling, transfer functions, PID design, implementation and tuning. Course laboratories focus on implementing and tuning systems using industry-grade hardware and devices.

Learning Outcomes: 1. Explain the importance of control systems in the management of a continuous process. 2. Apply fundamental control theory concepts and models to a process or continuous control scenario. 3. Document process control applications, using recognized standards and symbology. 4. Apply controller algorithms and tuning methods to refine the performance of control loops. 5. Determine appropriate control architecture and hardware for single and multiple loop systems. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

MFET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

Other Departmental/Program Course Requirements (51-53 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult

conversations, and conveying meaning. Credits: 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 31500 - Speech Communication Of Technical Information

Credit Hours: 3.00. The organization and presentation of information of a practical technical nature. Emphasis is placed upon the study, preparation, and use of audiovisual materials in such presentations.

Credits: 3.00

COM 32000 - Small Group Communication

Credit Hours: 3.00. A study of group thinking and problem-solving methods; participation in, and evaluation of, committee, and informal discussion groups. Focus on the roles, networks, and messages employed by small group communicators.

Credits: 3.00

COM 41500 - Discussion Of Technical Problems

Credit Hours: 3.00. Principles of speech communication related to interpersonal and group discussions on technical topics and problems; practice in using these modes in situations typically encountered by technologists.

Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety

of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ENGL 42400 - Writing For High Technology Industries

Credit Hours: 3.00. Applies principles of effective professional writing to the planning, production, and evaluation of computer user manuals and other writing tasks.

Learning Outcomes: 1. Communicate technical knowledge through writing. 2. Think and write about writing in high technology workplaces. 3. Write concisely, precisely, and with economy of language. 4. Become familiar with the best practices and procedures for documenting advanced technologies. 5. Become familiar with adapting technical language and requirements for a non-specialist audience. 6. Become familiar with composing and delivering policies or new procedures to colleagues or co-workers. 7. Become familiar with practical strategies for improving your resume, conduct, and online presence. Credits: 3.00

CNIT 15501 - Introduction To Software Development Concepts

Credit Hours: 3.00. This course introduces fundamental software development concepts common to most programming languages. Topics include problem solving and algorithm development, debugging, programming standards, variables, data types, operators, decisions, repetitive structures, modularity, arrays, user interface construction, software testing and debugging. A broad range of examples will be used throughout the course to show how each programming concept applies to real life problems.

Learning Outcomes: 1. Define key application development terms. 2. Explain the importance of programming to different domain areas. 3. Identify advantages and disadvantages of using an IDE to write program code. 4. Use debugging tools to find program errors. 5. Use data types, variables, constants, arithmetic

operators, relational operators, logical operators, decisions, loop, functions, and arrays when writing computer programs. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3.

Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these

objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Additional Information

Sample 4-Year Plan

Fall 1st Year

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

16 Credits

Spring 1st Year

CNIT 15501 - Introduction To Software Development Concepts

Credit Hours: 3.00. This course introduces fundamental software development concepts common to most programming languages. Topics include problem solving and algorithm development, debugging, programming standards, variables, data types, operators, decisions, repetitive structures, modularity, arrays, user interface construction, software testing and debugging. A broad range of examples will be used throughout the course to show how each programming concept applies to real life problems.

Learning Outcomes: 1. Define key application development terms. 2. Explain the importance of programming to different domain areas. 3. Identify advantages and disadvantages of using an IDE to write program code. 4. Use debugging tools to find program errors. 5. Use data types, variables, constants, arithmetic operators, relational operators, logical operators, decisions, loop, functions, and arrays when writing computer programs. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

14-15 Credits

Fall 2nd Year

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and

manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

MFET 23000 - Industrial Internet Of Things, Networks, And Systems I

Credit Hours: 3.00. This course provides an introduction to Industrial Internet of Things (IIoT) devices, networks, and standards in the context of converged information technology (IT) and operations technology (OT) industrial automation systems. Course topics include an examination of IT and OT networks, hardware, architecture, protocols, standards, and security practices in the context of industrial applications.

Learning Outcomes: 1. Explain the concept of Industrial Internet of Things (IIoT) and the enabling technologies. 2. Describe IT and OT development and detail differences in priorities and capabilities. 3. Design, implement, and analyze an integrated industrial network. 4. Configure host-level and network-level technical security controls in IT and OT systems. 5. Apply industry standards and reference architectures to ensure best practices in the selection, deployment, and operation of IIoT devices. Credits: 3.00

MFET 25000 - Smart Manufacturing Cloud Computing Applications

Credit Hours: 3.00. This course introduces concepts and principles of cloud computing and the virtualization of computing resources and services for smart manufacturing applications. The fundamental topics of cloud computing will be addressed, including virtually processing, storing, modeling and analyzing of data in the cloud environment. Fundamental concepts about cloud tools, applications, and services from a production and manufacturing perspective will be presented.

Learning Outcomes: 1. State the challenges and advantages of cloud computing in smart manufacturing. 2. Explain the concepts and principles of cloud computing such as a scalability, elasticity, agility, fault tolerance, disaster recovery and networking. 3. Recognize the models, tools, and service types offered by the different cloud platforms for smart manufacturing applications. 4. Select strategies for managing and optimizing cloud computing resources for different manufacturing applications. 5. Apply techniques in clouding computing to model and manage manufacturing data. 6. Build manufacturing apps using cloud based platform tools and services. Credits: 3.00

16 Credits

Spring 2nd Year

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration.

Learning Outcomes: 1. Describe the fundamentals of robotics. 2. Create robot programs for various applications. 3. Implement robot applications that use peripheral devices or sensors. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

MFET 23100 - Industrial Internet Of Things, Networks, And Systems II

Credit Hours: 3.00. This course offers a practical exploration of Industrial Internet of Things (IIoT) in converged information and operations technology (IT/OT) industrial automation systems. Course topics include IT and OT reference architectures, industrial network convergence, standards, and security practices in the context of Edge, hybrid, and Cloud-based industrial applications. Specific focus is given to integrating and securing networked industrial devices with local and cloud-based IT systems in greenfield and brownfield scenarios.

Learning Outcomes: 1. Apply industry standards to develop a basic industrial network for converged IT/OT smart manufacturing systems. 2. Demonstrate the implementation of key security components required for converged IT/OT industrial networks. 3 Describe the role, characteristics, and requirements of safety systems in smart manufacturing. 4. Implement batch and real-time computation and basic machine learning models in an automated system. Credits: 3.00

15 Credits

Fall 3rd Year

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green

materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

MFET 35000 - Smart Manufacturing Systems Modeling & Simulation

Credit Hours: 3.00. This course addresses application of industrial internet of things (IIoT) for modeling and simulation of smart manufacturing assets, processes, and operations. Emphasis is on synchronizing modeling/simulation with real-time data to develop innovative services, create efficiencies, and enable productivity improvement in smart factories.

Learning Outcomes: 1. Describe the convergence of the physical and digital worlds, technology, and standards of IIoT-aided modeling and simulation. 2. Implement process data modeling and application to various types of plant data (drives, pumps, production lines) using real-time, historical, and event-based data. 3. Develop digital/virtual-cloud representation models to be mirrored onto physical manufacturing systems. 4. Create digital twin (DT) models using data from IIoT devices for monitoring and automating control of smart connected assets. 5. Construct DT-oriented simulation model for IoT-aided manufacturing system for applications in productivity, reliability, efficiency, and predictive maintenance operations. 6. Develop application of augmented reality and manufacturing model proxies in diagnostic and troubleshooting operations. Credits: 3.00

MFET 36100 - Machine Learning And Manufacturing Analytics

Credit Hours: 3.00. Machine learning (ML) algorithms are used to extract and analyze large amounts of manufacturing data. Fundamental ML analytic techniques and commonly used ML algorithms for manufacturing applications will be introduced. Students will create, train, and deploy ML models on a cloud platform to create enterprise-ready smart manufacturing artificial intelligence (AI) solutions.

Learning Outcomes: 1. Explain the benefits machine learning and artificial intelligence have in manufacturing. 2. Describe the fundamental principles, core concepts and operations involved with developing machine learning applications. 3. Apply commonly used machine learning algorithms for smart manufacturing applications. 4. Apply cloud-based automated machine learning tools to develop models and applications to perform intelligent manufacturing operations and analytics. Credits: 3.00

MFET 35100 - Mixed Reality Smart Manufacturing Applications & Design

Credit Hours: 3.00. The course investigates development strategies, use cases, and mixed reality (MR) application in industrial IoT (IIoT)-based smart manufacturing systems. Emphasis is on superimposing digital content onto physical systems, integrating data from smart and connected manufacturing production operations, processes, and machines.

Learning Outcomes: 1. Outline the benefits and applications of mixed reality (MR) offers in smart manufacturing environments. 2. Link the MR concepts, industrial IoT (IIoT) technologies, and development approaches with smart manufacturing applications. 3. Develop proficiency in using hardware, software tools and technologies to design and prototype effective MR applications for manufacturing. 4. Design and develop MR user interfaces and interaction techniques for augmented human-machine systems. Credits: 3.00

15 Credits

Spring 3rd Year

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture

of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

MFET 35200 - Smart Manufacturing Production Information Systems

Credit Hours: 3.00. An examination of smart manufacturing information systems with particular focus on applications for horizontal- and vertically-integrated manufacturing organizations. Topics include cloud-based integrated information systems to provide connectivity, visibility, and analytics of production and shop-floor execution systems and integrating manufacturing execution, manufacturing operations management, and enterprise resource planning (ERP) systems.

Learning Outcomes: 1. Apply ISA-95 standards for horizontal and vertically integrated smart manufacturing operations using Manufacturing Execution System (MES), Manufacturing Operations Management (MOM) and Enterprise Resource Planning (ERP) systems. 2. Apply cloud infrastructure and data concepts for storing, distributing, and accessing manufacturing enterprise data for planning, scheduling, management, and production control. 3. Implement real-time, batch, and streaming data processing techniques for visualization and analytics of production data. 4. Apply cloud-based Manufacturing Execution System (MES), Manufacturing Operations Management (MOM) and ERP for creating efficiency, optimization, and control of production operations. Credits: 3.00

MFET 36300 - Intelligent Manufacturing Systems I

Credit Hours: 3.00. This course investigates how artificial intelligence, industrial IoT, and big data are used to enable predictive analytics with machine learning. Emphasis is on optimizing production processes, improving productivity, quality, efficiency, and integrating predictive maintenance applications in smart manufacturing operations.

Learning Outcomes: 1. Apply appropriate machine learning algorithms for improving and optimizing manufacturing operations. 2. Enable predictive analytics with machine learning for maintenance operations. 3. Evaluate manufacturing processes using machine learning. 4. Identify and solve manufacturing problems using machine learning and root cause analysis. 5. Describe how data- and knowledge-based systems are used in product and design lifecycles. Credits: 3.00

15 Credits

Fall 4th Year

MFET 44000 - Smart Manufacturing Autonomous Human Robot Systems

Credit Hours: 3.00. This course explores robot cognition with application of intelligent human-robot systems in unstructured manufacturing environments. Topics include intelligent robotics, machine learning, machine vision, and human-robot interaction with particular emphasis on applications for smart manufacturing.

Learning Outcomes: 1. Describe the fundamental concepts of autonomous mobile and field robotics and human-robot interaction in unstructured smart manufacturing environments. 2. Apply intelligent sensory perception algorithms and robot control through sensory feedback for visual and tactile sensing as modalities for human-robot interaction. 3.

Identify machine perception approaches and deep-learning techniques to help robots acquire interactive skills. 4. Apply algorithms for spatial representation, mapping and localization with real-time robot control strategies integrated with machine perception approaches for applications in smart manufacturing environments. Credits: 3.00

MFET 36400 - Intelligent Manufacturing Systems II

Credit Hours: 3.00. Artificial intelligence (AI), machine learning (ML), industrial IoT (IIoT), and big data are applied to enable predictive analytics with machine learning for optimizing processes and operations in a horizontally-integrated smart manufacturing value-chain network.

Learning Outcomes: 1. Integrate cloud platforms with industrial big data, advanced analytics, AI/ML, and IIoT in a horizontally integrated supply chain network. 2. Implement data, analytics, and machine learning to create insights and drive decision-making in a horizontally integrated value chain network. 3. Describe how intelligent systems are connected to physical assets via IIoT infrastructure to automate inventory, and asset management across a manufacturing value chain network. 4. Apply predictive modeling, analytics, and AI/ML techniques to optimize material management, production planning, scheduling, and supply operations across a manufacturing value chain network. Credits: 3.00

MFET 34100 - Process And Continuous Control Applications

Credit Hours: 3.00. An examination of devices, algorithms, strategies, and standards used in smart manufacturing continuous process and control serves as the basis of this course. Concepts include Proportional, Integral, & Derivative Control (P&ID), loop modeling, transfer functions, PID design, implementation and tuning. Course laboratories focus on implementing and tuning systems using industry-grade hardware and devices.

Learning Outcomes: 1. Explain the importance of control systems in the management of a continuous process. 2. Apply fundamental control theory concepts and models to a process or continuous control scenario. 3. Document process control applications, using recognized standards and symbology. 4. Apply controller algorithms and tuning methods to refine the performance of control loops. 5. Determine appropriate control architecture and hardware for single and multiple loop systems. Credits: 3.00

MFET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

15 Credits

Spring 4th Year

ENGT 48100 - Engineering Technology Capstone II

Credit Hours: 3.00. This is the second course of two-term capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of the design solution. 5. Present final solution

recommendations. Credits: 3.00

MFET 41000 - Introduction To Additive Manufacturing

Credit Hours: 3.00. This course covers topics in additive manufacturing (AM) technologies. Topics include the AM benefits and drawbacks of additive as compared to subtractive manufacturing, additive manufacturing process and material selection, design for additive manufacturing, support structure generation, printing process planning, and quality control techniques, such as monitoring, inspection, and surface modification.

Learning Outcomes: 1. Describe the concepts, benefits, and application of additive manufacturing. 2. Select appropriate additive manufacturing processes and material for producing parts. 3. Design 3D objects for additive manufacturing considering the process requirements. 4. Develop strategies and practices incorporating appropriate quality control techniques. Credits: 3.00

14 Credits

Professional Experience

Social Studies Education, BA

About the Program

Degree Requirements

Departmental/Program Major Courses (119-120 credits)

Major: Required Education Courses (44 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Demonstrate the ability

to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDCI 42300 - The Teaching Of Social Studies In Secondary Schools

Credit Hours: 3.00. The purpose of this course is the development of a theoretical framework and pedagogical skills necessary to teach social studies to middle and high school students. Students are introduced to the general issues involved in planning and organizing a social studies curriculum.

Learning Outcomes: 1. Develop theoretical understanding and pedagogical skills necessary to teach social studies to middle and high school students. 2. Develop understanding of cross collaboration, communication, and the characteristics of the community, school, and classroom. 3. Develop specific and relevant understanding of student characteristics, approaches to learning, or skills and prior learning. 4. Learn general issues involved in planning and organizing a social studies curriculum. 5. Obtain the knowledge, skills, and attitudes necessary to become a reflective and skilled social studies teacher. Credits: 3.00

EDCI 43300 - Advanced Social Studies Methods

Credit Hours: 2.00. Foundations of social studies; methods, techniques, strategies of teaching, and activities - with special attention to skills of planning, questioning, and testing. Includes observation, participation, and microteaching in social studies classrooms. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Develop knowledge of social studies content, appropriate state and national standards, and social studies specific pedagogy. 2. Develop and apply knowledge of middle level learners' academic needs and interests. 3. Utilize their new understandings to draw conclusions about what constitutes powerful social studies teaching and learning in middle school. Credits: 2.00

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning

using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and

evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to

practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 21910 - Teaching For Economic Literacy: Developing An Economic Way Of Thinking

Credit Hours: 1.00. Course focuses on preparing students in the social studies education licensure program to teach high school economics and to integrate economics into other middle and/or high school social studies courses. Course addresses issues of economic pedagogy. It will address economic content/concepts specifically and only in a way to illustrate/expand on the teaching ideas, resources, methods, and assessment.

Learning Outcomes: 1. Develop a rationale for teaching high school economics. 2. Identify state and national standards addressing economic content. 3. Explore methods for active teaching/learning in economics. 4. Identify resources appropriate for the active teaching/learning of economics. Credits: 1.00

EDCI 21610 - Teaching History: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching history in powerful, exciting and innovative ways through a topical study (e.g., American Civil Rights Movement) approach. Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national history standards. 2. Use research and theory about how grades 5-12 students learn history. 3. Merge historical content and processes with pedagogy to forge pedagogical content knowledge. 4. Employ appropriate history-specific academic language in history lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful and purposeful history teaching and learning grades 5-12. Credits: 1.00

EDCI 21710 - Teaching Geography: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching geography in powerful, exciting and innovative ways through a study of geographic concepts within the framework of inquiry design model (IDM) and an inquiry-based curriculum. Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national geography standards. 2. Use research and theory about how secondary students learn geography. 3. Merge geographical content and process with pedagogy to forge pedagogical content knowledge. 4. Plan standards-based powerful geography lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful secondary geography teaching and learning. Credits: 1.00

EDCI 21810 - Teaching Civics And Government: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching civics and government in powerful, exciting and innovative ways through a study of civics and political science concepts within the framework of inquiry design model (IDM) and an inquiry-based curriculum Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national civics and government standards. 2. Use research and theory about how secondary students learn civics and government. 3. Merge political

science content and processes with pedagogy to forge pedagogical content knowledge. 4. Plan standards-based powerful civics and government-oriented lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful secondary civics and government teaching and learning. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Required Learner Specialty Pathway Concentration (9 credits)

Major: Social Studies Content (57 credits)

Historical Perspectives (21 Credits)

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

Civics and Government (15 credits)

POL 10100 - American Government And Politics (UCC: BSS)

Credit Hours: 3.00. A study of the nature of democratic government, the U.S. Constitution, federalism, civil rights, political dynamics, the presidency, Congress, and the judiciary. CTL:ISH 1002 American Government

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Identify the basic theories and concepts used in the study of American politics. 2. Explain the institutions, processes, and values that underpin American political behavior and events. 3. Apply the knowledge gained to function and perform as an educated citizen. Credits: 3.00

POL 37200 - Indiana Government And Politics (UCC: BSS)

Credit Hours: 3.00. An examination of the political and governmental organization of the state of Indiana. Includes the political and historical development of Indiana state government and comparison of policies and institutions with those of other states.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

Economics (9 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life.
Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications.
Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

Diversified (12 credits)

EAPS 10500 - The Planets (UCC: SCI)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about the origin and characteristics of the bodies in our Solar System, including planets, moons, asteroids, comets, exoplanets beyond, and the search for extraterrestrial life. We'll discuss how solar systems form and die, the origin of the terrestrial versus giant planets and their orbits, the evolution of planetary surfaces due to asteroid impacts and volcanism, the development of atmospheres, the formation of planetary rings, the origin of moons, the hazards of space travel, and why Pluto IS a planet.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Place your home in context with the Universe (cosmic geography). 2. Understand how the solar system came to be. 3. Understand the basic structure of the solar system and Earth's place in it. 4. Understand the processes that shape the surfaces of the planets. 5. Learn about past, current, and future exploration of space. Credits: 3.00

EAPS 10900 - The Dynamic Earth

Credit Hours: 3.00. This course covers the formation and development of the solid earth, atmosphere, hydrosphere, and bio-sphere. The course studies the whole earth as a system of many interacting parts and focuses on the changes within and between these parts. This course is intended for all majors in earth and atmospheric sciences.

Credits: 3.00

EAPS 11100 - Physical Geology (UCC: SCI)

Credit Hours: 3.00. Geologic processes and the development of land forms. Laboratory covers the study of minerals and rocks, the interpretations of topographic and geologic maps, and field investigations. CTL: Physical Geology

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

EAPS 11200 - Earth Through Time (UCC: SCI)

Credit Hours: 3.00. The history of the planet Earth from its beginnings to the present. This course will explore the causes and effects of processes that have changed the Earth's surface and subsurface through time, the impacts of these changes on the evolution of life, and how scientist interpret Earth history from the geologic record. The laboratory will provide hands-on experience in interpreting various geologic and fossil records. This course may be taken on its own, or as a year-long lab series with EAPS 11100 . EAPS 11100 and EAPS 11200 will fulfill the two course sequence laboratory experience outside the major department.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

EAPS 11600 - Earthquakes And Volcanoes (UCC: SCI)

Credit Hours: 3.00. A survey class on earthquakes and volcanoes. Topics include earthquake hazards and forecasting, the use of seismic waves to investigate the earth's interior, volcanoes and tectonics, volcanic hazards, and the influence of volcanoes on climate. Examples of recent and historic earthquakes and volcanic eruptions are presented.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

EAPS 12000 - Introduction To Geography (UCC: STS)

Credit Hours: 3.00. Introduction to the major themes of modern geography, designed to enhance your spatial thinking skills, geographic literacy, and to help you understand the relevance of geographic concepts and how they relate to our changing world. This course will expand your awareness of global issues and provide you with tools to understand how the world around you changes at local, regional, and global scales.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Interpret geographic data and identify and understand spatial relationships linking humans and the environment. 2. Use geographic tools introduced in the course (e.g. Google Earth, MapMaster). 3. Understand how and why people organize themselves and move as a function of economic, social, historical and cultural forces. 4. Understand how weather and climate are linked to natural and human induced climate change, and links between the atmosphere and biosphere through water and nutrient cycles. 5. Understand how processes within and on the Earth are reflected in the landscape and how erosions, transport and deposition re-shape landscapes. 6. Understand the resource concept and be able to make connections between distribution of resources and balancing competing interests. Credits: 3.00

EAPS 13800 - Thunderstorms And Tornadoes (UCC: SCI)

Credit Hours: 3.00. Not open to juniors and seniors majoring in atmospheric science. An elementary treatment of the physical structure of the atmosphere and the dynamical conditions that lead to the development of convective clouds, thunderstorms, and severe weather (including tornadoes, hail, wind, rain, lightning, and flash floods). This course will also focus on storm climatology, the socioeconomic impact of severe weather, as well as prediction, detection, warnings, and safety procedures. Analysis of severe weather events will include tornado movies and case studies of ground/aerial surveys of storm damage.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

Optional Concentration for Social Studies Education

Other Departmental/Program Course Requirements (9-10 credits)

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

Teacher Licensure Information

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

POL 10100 - American Government And Politics (UCC: BSS)

Credit Hours: 3.00. A study of the nature of democratic government, the U.S. Constitution, federalism, civil rights, political dynamics, the presidency, Congress, and the judiciary. CTL:ISH 1002 American Government

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify the basic theories and concepts used in the study of American politics. 2. Explain the institutions, processes, and values that underpin American political behavior and events. 3. Apply the knowledge gained to function and perform as an educated citizen. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

16 Credits

Spring 1st Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the

Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

POL 37200 - Indiana Government And Politics (UCC: BSS)

Credit Hours: 3.00. An examination of the political and governmental organization of the state of Indiana. Includes the political and historical development of Indiana state government and comparison of policies and institutions with those of other states.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

EDCI 21610 - Teaching History: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching history in powerful, exciting and innovative ways through a topical study (e.g., American Civil Rights Movement) approach. Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national history standards. 2. Use research and theory about how grades 5-12 students learn history. 3. Merge historical content and processes with pedagogy to forge pedagogical content knowledge. 4. Employ appropriate history-specific academic language in history lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful and purposeful history teaching and learning grades 5-12. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community

stakeholders through formal and informal conversations. Credits: 3.00

16 Credits

Fall 2nd Year

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDCI 21910 - Teaching For Economic Literacy: Developing An Economic Way Of Thinking

Credit Hours: 1.00. Course focuses on preparing students in the social studies education licensure program to teach high school economics and to integrate economics into other middle and/or high school social studies courses. Course addresses issues of economic pedagogy. It will address economic content/concepts specifically and only in a way to illustrate/expand on the teaching ideas, resources, methods, and assessment.

Learning Outcomes: 1. Develop a rationale for teaching high school economics. 2. Identify state and national standards addressing economic content. 3. Explore methods for active

teaching/learning in economics. 4. Identify resources appropriate for the active teaching/learning of economics. Credits: 1.00

15 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

EAPS 12000 - Introduction To Geography (UCC: STS)

Credit Hours: 3.00. Introduction to the major themes of modern geography, designed to enhance your spatial thinking skills, geographic literacy, and to help you understand the relevance of geographic concepts and how they relate to our changing world. This course will expand your awareness of global issues and provide you with tools to understand how the world around you changes at local, regional, and global scales.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Interpret geographic data and identify and understand spatial relationships linking humans and the environment. 2. Use geographic tools introduced in the course (e.g. Google Earth, MapMaster). 3. Understand how and why people organize themselves and move as a function of economic, social, historical and cultural forces. 4. Understand how weather and climate are linked to natural and human induced climate change, and links between the atmosphere and biosphere through water and nutrient cycles. 5. Understand how processes within and on the Earth are reflected in the landscape and how erosions, transport and deposition re-shape landscapes. 6. Understand the resource concept and be able to make connections between distribution of resources and balancing competing interests. Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with

disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 21810 - Teaching Civics And Government: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching civics and government in powerful, exciting and innovative ways through a study of civics and political science concepts within the framework of inquiry design model (IDM) and an inquiry-based curriculum Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national civics and government standards. 2. Use research and theory about how secondary students learn civics and government. 3. Merge political science content and processes with pedagogy to forge pedagogical content knowledge. 4. Plan standards-based powerful civics and government-oriented lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful secondary civics and government teaching and learning. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy.

Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

17 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EAPS 10500 - The Planets (UCC: SCI)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about the origin and characteristics of the bodies in our Solar System, including planets, moons, asteroids, comets, exoplanets beyond, and the search for extraterrestrial life. We'll discuss how solar systems form and die, the origin of the terrestrial versus giant planets and their orbits, the evolution of planetary surfaces due to asteroid impacts and volcanism, the development of atmospheres, the formation of planetary rings, the origin of moons, the hazards of space travel, and why Pluto IS a planet.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Place your home in context with the Universe (cosmic geography). 2. Understand how the solar system came to be. 3. Understand the basic structure of the solar system and Earth's place in it. 4. Understand the processes that shape the surfaces of the planets. 5. Learn about past, current, and future exploration of space.
Credits: 3.00

EAPS 10900 - The Dynamic Earth

Credit Hours: 3.00. This course covers the formation and development of the solid earth, atmosphere, hydrosphere, and bio-sphere. The course studies the whole earth as a system of many interacting parts and focuses on the changes within and between these parts. This course is intended for all majors in earth and atmospheric sciences.

Credits: 3.00

EAPS 11100 - Physical Geology (UCC: SCI)

Credit Hours: 3.00. Geologic processes and the development of land forms. Laboratory covers the study of minerals and rocks, the interpretations of topographic and geologic maps, and field investigations. CTL: Physical Geology

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 11200 - Earth Through Time (UCC: SCI)

Credit Hours: 3.00. The history of the planet Earth from its beginnings to the present. This course will explore the causes and effects of processes that have changed the Earth's surface and subsurface through time, the impacts of these changes on the evolution of life, and how scientist interpret Earth history from the geologic record. The laboratory will provide hands-on experience in interpreting various geologic and fossil records. This course may be taken on its own, or as a year-long lab series with EAPS 11100 . EAPS 11100 and EAPS 11200 will fulfill the two course sequence laboratory experience outside the major department.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 11600 - Earthquakes And Volcanoes (UCC: SCI)

Credit Hours: 3.00. A survey class on earthquakes and volcanoes. Topics include earthquake hazards and forecasting, the use of seismic waves to investigate the earth's interior, volcanoes and tectonics, volcanic hazards, and the influence of volcanoes on climate. Examples of recent and historic earthquakes and volcanic eruptions are presented.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 13800 - Thunderstorms And Tornadoes (UCC: SCI)

Credit Hours: 3.00. Not open to juniors and seniors majoring in atmospheric science. An elementary treatment of the physical structure of the atmosphere and the dynamical conditions that lead to the development of convective clouds, thunderstorms, and severe weather (including tornadoes, hail, wind, rain, lightning, and flash floods). This course will also focus on storm climatology, the socioeconomic impact of severe weather, as well as prediction, detection, warnings, and safety procedures. Analysis of severe weather events will include tornado movies and case studies of ground/aerial surveys of storm damage.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications.
Credits: 3.00

EDCI 21710 - Teaching Geography: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching geography in powerful, exciting and innovative ways through a study of geographic concepts within the framework of inquiry design model (IDM) and an inquiry-based curriculum. Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of

appropriate state and national geography standards. 2. Use research and theory about how secondary students learn geography. 3. Merge geographical content and process with pedagogy to forge pedagogical content knowledge. 4. Plan standards-based powerful geography lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful secondary geography teaching and learning. Credits: 1.00

15 Credits

Spring 3rd Year

EDCI 42300 - The Teaching Of Social Studies In Secondary Schools

Credit Hours: 3.00. The purpose of this course is the development of a theoretical framework and pedagogical skills necessary to teach social studies to middle and high school students. Students are introduced to the general issues involved in planning and organizing a social studies curriculum.

Learning Outcomes: 1. Develop theoretical understanding and pedagogical skills necessary to teach social studies to middle and high school students. 2. Develop understanding of cross collaboration, communication, and the characteristics of the community, school, and classroom. 3. Develop specific and relevant understanding of student characteristics, approaches to learning, or skills and prior learning. 4. Learn general issues involved in planning and organizing a social studies curriculum. 5. Obtain the knowledge, skills, and attitudes necessary to become a reflective and skilled social studies teacher. Credits: 3.00

15 Credits

Fall 4th Year

EDCI 43300 - Advanced Social Studies Methods

Credit Hours: 2.00. Foundations of social studies; methods, techniques, strategies of teaching, and activities - with special attention to skills of planning, questioning, and testing. Includes observation, participation, and microteaching in social studies classrooms. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Develop knowledge of social studies content, appropriate state and national standards, and social studies specific pedagogy. 2. Develop and apply knowledge of middle level learners' academic needs and interests. 3. Utilize their new understandings to draw conclusions about what constitutes powerful social studies teaching and learning in middle school. Credits: 2.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop

advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

14 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Sociology, BA

Degree Requirements

Departmental/Program Major Course Requirements (36 credits)

Requirement A: Foundation (6 credits)

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

SOC 22000 - Social Problems (UCC: BSS)

Credit Hours: 3.00. Contemporary problems at the community, society, and international levels, focusing on patterns of social organization and social change in American society, with concentration on such topics as technological militarism and war, poverty, racism, political protest, and cybernation. CTL:ISH 1061 Social Problems

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Describe the cultural, social, and historical dynamics that influence how we construct social problems. 2. Identify the strengths and weaknesses of contending explanations or interpretations of major social problems. 3. Critique proposed solutions to

major social problems. Credits: 3.00

Requirement B. Theory and Methods (9 credits)

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

SOC 38300 - Introduction To Research Methods In Sociology

Credit Hours: 3.00. Introduction to the methods of data collection and analysis and to the use of the scientific method of social research. Formulation of hypotheses and research designs for their testing. Elementary principles for the conduct of experiments, observation and interviewing, documentation, content analysis, and surveys. Relationship between social research and social theory.

Learning Outcomes: 1. Understand the conditions needed to establish social causation in social research. 2. Become familiar with major approaches to collecting data for social research. 3. Understand practices to achieve valid measurement and representative samples. Credits: 3.00

SOC 40200 - Sociological Theory

Credit Hours: 3.00. An advanced critical treatment of the theories, concepts, and methods of sociology. A basic course required of undergraduate majors in sociology.

Credits: 3.00

Requirement C. Sociology Fundamentals (6 credits)

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.

Learning Outcomes: 1. Identify the role of race and ethnic identity in social and professional environments. 2. Identify, define and explain the Americanization process consistent with ethnic group's integration, assimilation, and/or acculturation into American status. 3. Become familiar with principle terms, concepts, and theories of the field of race and race relations. Credits: 3.00

SOC 35000 - Sociology Of Family

Credit Hours: 3.00. Designed to provide an understanding of contemporary courtship, marriage, and family interaction as cultural, social, and social-psychological phenomena. Consideration of the major sources of marital strain and conflict within a heterogeneous, rapidly changing society.

Learning Outcomes: 1. Articulate the contours of health disparities in the contemporary US. 2. Hold an informed discussion about current debates surrounding the organization of the health care system. 3. Understand the experiences of people suffering from chronic illness. Credits: 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion.

Learning Outcomes: 1. Apply sociological approaches and concepts to the study of hate

and violence. 2. Identify some of the causes of hate and violence, as well as the forces that perpetuate hate and violence. 3. Identify and critically evaluate institutional responses to hate and violence. 4. Empirically examine an organized effort to work against hate and violence. Credits: 3.00

SOC 36700 - Religion In America

Credit Hours: 3.00. Examines the social dimensions of religion in American life; religion in American culture; social profiles of America's religious groups, trends in individual religious commitment; and religion's impact on American life.

Learning Outcomes: 1. Describe the sizes and influences of major (and some minor) religious groups in America and how these sizes and influences have changed over the past 50 years. 2. Explain and evaluate the influence of religious groups and ideas on at least one other important aspect of social life. 3. Explain ways in which trends in American society over the past 50 years (e.g., changing gender roles, political shifts, etc.) are bringing about changes in American religion. Credits: 3.00

SOC 36800 - The Social Significance Of Religion

Credit Hours: 3.00. Examines religion's relationship with family, work, politics, gender, war and peace, race and ethnicity, health, crime and deviance, education, law, and poverty. Content differs each time course is taught.

Credits: 3.00

SOC 37400 - Medical Sociology (UCC: BSS)

Credit Hours: 3.00. Medical sociology provides an overview of the social determinants of health and health disparities, the experience of illness and being a patient, the organization of the medical profession, and the health care system in the United States as well as other areas of the world.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Articulate the contours of health disparities in the contemporary US. 2. Hold an informed discussion about current debates surrounding the organization of the health care system. 3. Have a greater understanding of the experiences of people suffering from chronic illness. Credits: 3.00

SOC 41100 - Social Inequality

Credit Hours: 3.00. Examination of systems of class and caste, with special attention to the United States; status, occupation, income, and other elements in stratification.

Learning Outcomes: 1. Challenge misconceptions about the nature and origins of social inequalities. 2. Critically apply social inequality research to their own social environments. 3. Construct arguments about social inequalities' causes and consequences. Credits: 3.00

SOC 41900 - Sociology Of Law

Credit Hours: 3.00. Provides an overview of American legal thought and legal processes. Major topics include definitions of law; anthropological studies of law; origin and development of law; jurisprudence; police behavior; lawyers and courts; deterrent and labeling effects of legal sanctions.

Learning Outcomes: 1. Understand how official law and law-in-action can differ. 2. Identify key theories in sociology of law. 3. Apply socio-legal theoretical concepts to real-world examples. Credits: 3.00

SOC 42900 - Sociology Of Protest (UCC: BSS)

Credit Hours: 3.00. This course focuses on the sociological study of protest. Topics include protest emergence, individual reasons for participation in protest, and outcomes. Course readings cover protest in the United States as well as other cultural contexts.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

SOC 45000 - Gender Roles In Modern Society

Credit Hours: 3.00. A critical examination of the complementary roles of men and women, with particular attention to problems of role adjustment in the contemporary United States. The neofeminist movement and countermovements. Role conflicts and adjustments in such areas as family, education, employment, and the political arena.

Credits: 3.00

SOC 46100 - Health And Social Behavior

Credit Hours: 3.00. This course provides a sociological examination of health and illness, with a particular focus on social position (e.g., race, socioeconomic status, gender), stress and social support, and health care. Goals for this course include developing critical thinking skills, understanding the broader implications of issues related to health, and thinking creatively about potential societal solutions to these issues.

Learning Outcomes: 1. Understand the ways in which social factors influence health and social behavior as well as the broader implications of these issues. 2. Develop critical thinking skills through critical writing and classroom discourse on issues related to the sociology of health and illness. 3. Apply a sociological perspective to potential solutions to health-related issues. Credits: 3.00

Requirement D. Sociology Electives (15 credits)

Requirement A: Foundation (6 credits)

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

SOC 22000 - Social Problems (UCC: BSS)

Credit Hours: 3.00. Contemporary problems at the community, society, and international levels, focusing on patterns of social organization and social change in American society, with concentration on such topics as technological militarism and war, poverty, racism, political protest, and cybernation. CTL:ISH 1061 Social Problems

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the cultural, social, and historical dynamics that influence how we construct social problems. 2. Identify the strengths and weaknesses of contending explanations or interpretations of major social problems. 3. Critique proposed solutions to major social problems. Credits: 3.00

Soil and Water Sciences, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (38-39 credits)

Required Major Courses (29-30 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7.

Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 33500 - Weather And Climate

Credit Hours: 3.00. An introductory course in meteorology and climatology with applications to daily life. The study of the fundamental physical principles behind weather and climate and how they apply to the homeowner and the world citizen. Emphasis is on how to interpret weather conditions and forecasts, what controls the wide range of climates in the world, and what the future may hold.

Credits: 3.00

AGRY 33700 - Environmental Hydrology

Credit Hours: 3.00. This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Credits: 3.00

AGRY 34900 - Soil Ecology

Credit Hours: 3.00. An introductory course that will cover the basic concepts of soil ecology. Biological diversity and the interactions between and within biotic and abiotic components of the soil ecosystem, nutrient cycling, and genetic engineering are introduced.

Credits: 3.00

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (NRES 38500) Designed as an upper level introductory course covering environmental soil chemistry concepts in framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or math background. (el.5).

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society

at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 4.00

AGRY 39800 - Agronomy Seminar

Credit Hours: 1.00. Weekly discussions of agronomic topics and other subjects relative to agronomic interest. Students are expected to participate in the discussions.

Learning Outcomes: 1. Critical Thinking: Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 2. Professional Preparation: Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 1.00

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 49800 - Agronomy Senior Seminar

Credit Hours: 1.00. Weekly discussions and presentations on assigned topics in Agronomy, interpersonal interactions, professional ethics, and leadership skills. Student teams will evaluate case studies and present their analysis orally and in writing.

Credits: 1.00

AGRY 56000 - Soil Physics

Credit Hours: 3.00. Fundamentals of soil physics; transport of chemicals, heat, and gases; field spatial variability; principles and methods of physical analysis of soils; the influence of soil physical processes on environmental quality and agricultural production. Students having an understanding of introductory soil science will be suitably prepared.

Credits: 3.00

AGRY 56500 - Soils And Landscapes

Credit Hours: 3.00. Soils as natural components of landscapes, geomorphology and soil characteristics; processes of soil formation; principal soils of Indiana, their adaptations, limitations, productivity and use; global soil distributions; application of GPS and mobile GIS in the field. This course requires two all-day field trips. Students will pay individual meal expenses when necessary.

Credits: 3.00

AGRY 58500 - Soils And Land Use

Credit Hours: 3.00. Soils as a resource in development planning; soil properties affecting land use; use of soil survey, aerial photos, topographic maps, and other resource data in land-use allocation; nonengineering aspects of site selection for various land uses, water conservation, waste disposal, and erosion control.

Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form

opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

Major Selectives (9 credits)

Other Departmental/Program Course Requirements (70-73 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11300 - Introduction To Agronomy Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Agronomy, which includes Applied Meteorology, Agronomic Business and Marketing, Environmental Soil Science, International Agronomy, Plant Genetics and Plant Breeding, Soil and Crop Management, Soil and Crop Science, Turf Science, and associate degrees. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain

which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and

interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2.

Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

EAPS 11100 - Physical Geology (UCC: SCI)

Credit Hours: 3.00. Geologic processes and the development of land forms. Laboratory covers the study of minerals and rocks, the interpretations of topographic and geologic maps, and field investigations. CTL: Physical Geology

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and

trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a

few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

AGRY 52500 - Crop Physiology And Ecology

Credit Hours: 3.00. Study of the physiological basis for growth, yield, and adaptation of crop plants. Topics emphasized include: carbohydrate assimilation and partitioning, nitrogen metabolism, crop growth and development, water relations, stress tolerance, and crop improvement using physiological genetics. Basic background in college level plant biology is recommended.

Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can

be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

Electives (8-12 credits)

Additional Information

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11300 - Introduction To Agronomy Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Agronomy, which includes Applied Meteorology, Agronomic Business and Marketing, Environmental Soil Science, International Agronomy, Plant Genetics and Plant Breeding, Soil and Crop Management, Soil and Crop Science, Turf Science, and associate degrees. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic

acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational,

quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-16 Credits

Spring 1st Year

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the

plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary

approximation methods of integration. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

15-17 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 39800 - Agronomy Seminar

Credit Hours: 1.00. Weekly discussions of agronomic topics and other subjects relative to agronomic interest. Students are expected to participate in the discussions.

Learning Outcomes: 1. Critical Thinking: Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 2. Professional Preparation: Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 1.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to

demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

15 Credits

Spring 2nd Year

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think

critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media.
Credits: 4.00

15 Credits

Fall 3rd Year

AGRY 34900 - Soil Ecology

Credit Hours: 3.00. An introductory course that will cover the basic concepts of soil ecology. Biological diversity and the interactions between and within biotic and abiotic components of the soil ecosystem, nutrient cycling, and genetic engineering are introduced.
Credits: 3.00

AGRY 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (NRES 38500) Designed as an upper level introductory course covering environmental soil chemistry concepts in framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or math background. (el.5).
Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 4.00

EAPS 11100 - Physical Geology (UCC: SCI)

Credit Hours: 3.00. Geologic processes and the development of land forms. Laboratory covers the study of minerals and rocks, the interpretations of topographic and geologic maps, and field investigations. CTL: Physical Geology
University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II
University Core Curriculum (UCC): (UCC: SCI)
Credits: 4.00

15-16 Credits

Spring 3rd Year

AGRY 33700 - Environmental Hydrology

Credit Hours: 3.00. This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.
Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

15 Credits

Fall 4th Year

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage. Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 49800 - Agronomy Senior Seminar

Credit Hours: 1.00. Weekly discussions and presentations on assigned topics in Agronomy, interpersonal interactions, professional ethics, and leadership skills. Student teams will evaluate case studies and present their analysis orally and in writing.

Credits: 1.00

AGRY 56000 - Soil Physics

Credit Hours: 3.00. Fundamentals of soil physics; transport of chemicals, heat, and gases; field spatial variability; principles and methods of physical analysis of soils; the influence of soil physical processes on environmental quality and agricultural production. Students having an understanding of introductory soil science will be suitably prepared.

Credits: 3.00

AGRY 56500 - Soils And Landscapes

Credit Hours: 3.00. Soils as natural components of landscapes, geomorphology and soil characteristics; processes of soil formation; principal soils of Indiana, their adaptations, limitations, productivity and use; global soil distributions; application of GPS and mobile GIS in the field. This course requires two all-day field trips. Students will pay individual meal expenses when necessary.

Credits: 3.00

AGRY 58500 - Soils And Land Use

Credit Hours: 3.00. Soils as a resource in development planning; soil properties affecting land use; use of soil survey, aerial photos, topographic maps, and other resource data in land-use allocation; nonengineering aspects of site selection for various land uses, water conservation, waste disposal, and erosion control.

Credits: 3.00

13 Credits

Spring 4th Year

AGRY 33500 - Weather And Climate

Credit Hours: 3.00. An introductory course in meteorology and climatology with applications to daily life. The study of the fundamental physical principles behind weather and climate and how they apply to the homeowner and the world citizen. Emphasis is on how to interpret weather conditions and forecasts, what controls the wide range of climates in the world, and what the future may hold.

Credits: 3.00

15-17 Credits

Sound for the Performing Arts, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (39-41 credits)

A. Foundation Studies (18-20 credits)

1. Theatre Required Courses (13-15 credits)

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental

functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

2. Music Selective (3 credits)

MUS 11200 - Fundamentals Of Music (UCC: HUM)

Credit Hours: 3.00. Fundamentals of music notation, ear training, and music reading.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Understand music notation, rhythmic structure, meter, scales, blues form, chords, basic musicianship and ear training, and fundamentals of songwriting. Credits: 3.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

3. Required Dance Course (2 credits)

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

1. Theatre Required Courses (13-15 credits)

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

B. Sound in the Visual & Performing Arts Courses (21 credits)

THTR 35300 - Audio Technology I

Credit Hours: 3.00. This course introduces the fundamental principles of audio technology with a focus on live sound reinforcement. Topics covered include acoustics, audio signal flow, microphone techniques, mixing consoles, and loudspeaker systems.

Learning Outcomes: 1. Identify key vocabulary in room acoustics and components of audio systems. 2. Apply industry best practices and standards in system designs and design documentation. 3. Demonstrate understanding of the functions of major audio equipment such as mixing consoles, amplifiers, loudspeakers, and digital signal processing. Credits: 3.00

THTR 36300 - Sound Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into auditory response and environment. Emphasis on the interrelationship among all aspects of production and how sound becomes a building block toward total picturization. Majors have priority. Offered alternate years.

Credits: 3.00

THTR 56300 - Advanced Sound Design

Credit Hours: 3.00. Advanced study of the principles of sound design for theatre and theory application to specific problems. Offered in alternate years.

Credits: 3.00

THTR 56900 - Special Problems In Audio Production

Credit Hours: 3.00. Advanced study and application of sound studio production techniques to different audio related disciplines. Permission of instructor required.

Credits: 3.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

A. Foundation Studies (18-20 credits)

1. Theatre Required Courses (13-15 credits)

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4.

Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

2. Music Selective (3 credits)

MUS 11200 - Fundamentals Of Music (UCC: HUM)

Credit Hours: 3.00. Fundamentals of music notation, ear training, and music reading.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand music notation, rhythmic structure, meter, scales, blues form, chords, basic musicianship and ear training, and fundamentals of songwriting. Credits: 3.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass;

secondary dominants; chromatic harmonies. Credits: 3.00

3. Required Dance Course (2 credits)

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

1. Theatre Required Courses (13-15 credits)

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre

practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

Electives (45-56 credits)

ECE 40020 - Sound Reinforcement System Design

Credit Hours: 3.00. An introduction to computational tools used in the measurement and analysis of electro-acoustic systems, and their application to sound reinforcement system engineering. Service learning based projects, serving the needs of community clients, provide the context for application of sound reinforcement system design principles and practices.

Learning Outcomes: 1. An ability to apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design a sound reinforcement system. 2. An understanding of the engineering design process. 3. An ability to function on a multidisciplinary team. 4. An awareness of professional and ethical responsibility. 5. An ability to communicate effectively, in both oral and written form. Credits: 3.00

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 30400 - Video Art

Credit Hours: 3.00. Introduction to digital video as a creative medium for artistic expression. Students will record, digitize, edit and distribute digital video content and author a digital portfolio of their work in the form of an interactive DVD.

Learning Outcomes: 1. Analyze key ideas in the field of Video Art by preparing a research presentation on the practice of an individual video artist or collective. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Create a variety of video artworks by the creative use of the video camera, editing strategies and postproduction techniques. Credits: 3.00

AD 33400 - New Media Culture

Credit Hours: 3.00. This lecture course provides a historical overview of the development of new media art. In their research, project papers, and practical assignments, students explore issues of media criticism, technology's impact on culture and society and visions of media utopias.

Learning Outcomes: 1. Summarize the key characteristics of new media based on course texts and artistic examples. 2. Analyze and critique new media-related texts and cultural productions through group discussion and oral presentation. 3. Apply project-based methods to respond creatively and critically to the material history and social context of new media. Credits: 3.00

AD 41700 - Variable Topics In Electronic And Time-Based Art

Credit Hours: 3.00. Examination of thematic or specialized topics reflecting the most recent developments and contemporary artistic practices in Electronic and Time-Based Art. Permission of department required.

Learning Outcomes: 1. Use essential tools and techniques for generating, sketching and realizing ideas in the field of new media art using DIY strategies, commercial as well as open source software and hardware solutions for creative production. 2. Able to analyze key works and artists in the emerging field of Electronic and Time-Based Art. Credits: 3.00

MUS 25000 - Music Appreciation (UCC: HUM)

Credit Hours: 3.00. The traditions, forms, and styles of classical music. Other types of music may be examined as well. (Students may register through the Continuing Education Student Learning Center at the Tech Statewide locations via distance education.) CTL:IFA 1330 Music Appreciation

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37500 - Selected Topics In Music

Credit Hours: 3.00. A study of a specific genre in music (symphony, opera, chamber music, etc.) or the works of a single composer.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 3.00

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 49000 - Guided Reading In Music

Credit Hours: 1.00 to 6.00. For students with specialized needs and interests in the field. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 1.00 to 6.00

THTR 21300 - Voice For The Actor

Credit Hours: 2.00. Designed to heighten the actor's awareness of the vocal instrument. Elementary vocal techniques will be practiced to expand the student's vocal flexibility and range. Emphasis on freeing habitual vocal tensions and teaching the student the fundamentals of vocal health.

Learning Outcomes: 1. Understand and apply the vocal techniques required of the actor and practice a specific vocal warm-up procedure. 2. Recognize and use effectively the phonetic alphabet in your text work. 3. Hear, feel, and evaluate healthy vocal practices. 4. Understand and employ the bodily structures that allow for sound production and how to feel/adjust sound

placement. 5. Develop and explore new ways in which to use your voice to support your acting work/how the voice can convey an emotional journey and create character (and the technical demands that accompany it) that you can apply to your work after this course. Credits: 2.00

THTR 55300 - Theatre Audio Technology II

Credit Hours: 3.00. The study of the technical aspects of audio as they relate to use of, and experimentation with, various techniques in the design, installation, and specification of theatre sound systems, etc. Priority for majors. Offered in alternate years. Permission of instructor required.

Credits: 3.00

THTR 56800 - Advanced Problems In Design

Credit Hours: 1.00 to 3.00. A described tutorial in theatrical design or design research. Permission of instructor required.

Credits: 1.00 to 3.00

THTR 56900 - Special Problems In Audio Production

Credit Hours: 3.00. Advanced study and application of sound studio production techniques to different audio related disciplines. Permission of instructor required.

Credits: 3.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

THTR 13300 - Acting I

Credit Hours: 3.00. Beginning training and exercises in the basic elements of acting, including vocal and physical preparation, sensory awareness, releasing the imagination, and a basic understanding of action an objective. Staging exercises and terminology are emphasized.

Learning Outcomes: 1. Become familiar with the techniques and practices of acting: vocal and physical techniques, analysis and interpretation. 2. Understand the concepts of given circumstances, action, objective, obstacle, character and conflict, and utilize these in basic scene work. 3. Communicate the play's idea through the medium of character in a scene from a published play. Credits: 3.00

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

THTR 44000 - Directing: Page To Stage

Credit Hours: 3.00. This course focuses on theoretical and practical understanding of the essential principles and fundamentals of directing for the stage. Students will learn a proven directorial methodology and engage in essential research and written and practical presentations throughout. Permission of instructor required.

Learning Outcomes: 1. Identify, classify, and critique elements of drama and the requirements of production with depth and imagination. 2. Analyze plays for production. 3. Articulate aspects of student's own personal aesthetic orally, visually, and in writing. 4. Integrate skills in play analysis, intuitive contemplation, research, composition techniques, and various rehearsal strategies to stage dramatic texts. 5. Evaluate creative decisions and processes. Credits: 3.00

Additional Information

Sample 4-Year Plan

Fall 1st Year

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

17-18 Credits

17-18 Credits

Spring 1st Year

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio

recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

15 Credits

15 Credits

Fall 2nd Year

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 36300 - Sound Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into auditory response and environment. Emphasis on the interrelationship among all aspects of production and how sound becomes a building block toward total picturization. Majors have priority. Offered alternate years.

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

MUS 11200 - Fundamentals Of Music (UCC: HUM)

Credit Hours: 3.00. Fundamentals of music notation, ear training, and music reading.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand music notation, rhythmic structure, meter, scales, blues form, chords, basic musicianship and ear training, and fundamentals of songwriting. Credits: 3.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

14-15 Credits

14-15 Credits

Spring 2nd Year

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

THTR 56300 - Advanced Sound Design

Credit Hours: 3.00. Advanced study of the principles of sound design for theatre and theory application to specific problems. Offered in alternate years.

Credits: 3.00

14-15 Credits

14-15 Credits

Fall 3rd Year

THTR 35300 - Audio Technology I

Credit Hours: 3.00. This course introduces the fundamental principles of audio technology with a focus on live sound reinforcement. Topics covered include acoustics, audio signal flow, microphone techniques, mixing consoles, and loudspeaker systems.

Learning Outcomes: 1. Identify key vocabulary in room acoustics and components of audio systems. 2. Apply industry best practices and standards in system designs and design documentation. 3. Demonstrate understanding of the functions of major audio equipment such as mixing consoles, amplifiers, loudspeakers, and digital signal processing. Credits: 3.00

THTR 56900 - Special Problems In Audio Production

Credit Hours: 3.00. Advanced study and application of sound studio production techniques to different audio related disciplines. Permission of instructor required.

Fall 1st Year

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (30 credits)

Pre-requisite Language Courses

SPAN 10100 - Spanish Level I (UCC: HUM)

Credit Hours: 3.00. A beginning Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1910 Spanish Level I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Describe themselves, their friends and families, their personal interests and activities using the present and preterit verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, hobbies, holidays, daily schedules, food, and shopping. Credits: 3.00

SPAN 10200 - Spanish Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 10100. CTL:IWL 1911 Spanish Level II

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Describe aspects of daily life and communicate in personal and professional situations using the present and various past verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, daily schedules, food, social engagement, and technology. Credits: 3.00

SPAN 20100 - Spanish Level III (UCC: HUM)

Credit Hours: 3.00. An intermediate Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1912 Spanish Level III

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate mastery of grammatical structure and syntax, formation of plural nouns, noun-adjective agreement, verb conjugation, through the application of the communicative pedagogy (teaching in context) in the use of the basic learning skills (reading, writing, speaking and listening) by: 2. Discussing personal relations and academic studies. 3. Giving and receiving directions to a destination and/or in order to complete a task. 4. Writing short essays (maximum 250 words) on specified topics. Credits: 3.00

SPAN 20200 - Spanish Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 20100. CTL:IWL 1913 Spanish Level IV

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate control of most structures, considerable breadth of vocabulary, and appropriate communicative competence. 2. Develop the linguistic and analytic skills needed for advanced study in Spanish. 3. Be able to communicate in an academic setting, critically assess ideas and texts, and be able to present them in writing to an academic audience. 4. Show the knowledge of the rich cultural, geographical, and linguistic variety of the Spanish-speaking world. Credits: 3.00

SPAN 22400 - Spanish Level IV: Business Spanish

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed towards use of Spanish for business purposes. Course materials cover a variety of business aspects in several professions.

Credits: 3.00

SPAN 10500 - Accelerated Basic Spanish (UCC: HUM)

Credit Hours: 4.00. Accelerated Basic Spanish course that substitutes for SPAN 10100 and 10200.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of Spanish language in specific contexts by reading Spanish texts. 2. Identify appropriate use of Spanish language in specific contexts by listening to audio recordings and watching videos of spoken Spanish. 3. Compose Spanish sentences by focusing on a set of grammatical rules and standards in the language. 4. Produce sentences in spoken Spanish in the form of dialogues and presentations. Credits: 4.00

SPAN 20500 - Accelerated Intermediate Spanish (UCC: HUM)

Credit Hours: 4.00. An accelerated intermediate Spanish course that substitutes for SPAN 20100 and 20200.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of Spanish language in a variety of contexts by reading Spanish texts. 2. Identify appropriate use of Spanish language in specific contexts by listening to audio recordings and watching videos of spoken Spanish. 3. Compose Spanish sentences by focusing on a broad set of grammatical rules and standards in the language. 4. Produce a variety of sentences in spoken Spanish in the form of dialogues and presentations. Credits: 4.00

Spanish Major (30 credits)

Area A - Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

Area B - Spanish Literature (3 credits)

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.

Learning Outcomes: 1. Gain understanding of literature produced in the Spanish speaking world. 2. Develop the ability to talk effectively about and interact with literature in Spanish. 3. Write specific types of texts for analyzing Spanish literature. Credits: 3.00

Language & Culture Track (21 credits)

Area C - Advanced Spanish Language (3 credits)

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 44400 - Advanced Communication In Spanish

Credit Hours: 3.00. Advanced-level communication course that delves into oral and written communication within the Spanish-speaking world, emphasizing cultural context and practical application. This course explores complex grammar structures, pronunciation, lexical variations, and intercultural differences in authentic scenarios. Students will enhance their Spanish language proficiency, focusing particularly on oral expression. Taught in Spanish.

Learning Outcomes: 1. Engage in advanced formal and informal Spanish conversations across various settings. 2. Identify and apply different language functions used in everyday oral communication. 3. Discern and explain cultural nuances in both spoken and unspoken communication and analyze prevalent communication styles in Spanish. 4. Investigate and discuss contemporary topics related to the Spanish world fluently in Spanish, in written and oral form. 5. Explore and critique facets of Spanish-speaking cultures, contrasting them with personal cultural norms and traditions. Credits: 3.00

Area D - Advanced Spanish Literature (3 credits)

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

Area E - Spanish Linguistics (6 credits)

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on

morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

Area F - Spanish Electives (9 credits)

SPAN 23500 - Spanish American Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected masterpieces of Spanish American literature. The course context will change from semester to semester. Knowledge of Spanish not required.

Credits: 3.00

SPAN 31200 - Advanced Spanish Conversation

Credit Hours: 1.00. One credit hour advanced Spanish conversation course focused on guided practice in conversation to enhance communicative competence. Discussions in Spanish on various topics. Course may be taken concurrently with SPAN 30100, 30200, 40100 or 40200.

Learning Outcomes: 1. Develop advanced listening skills and improve oral Spanish proficiency. 2. Acquire advanced vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss assigned materials in Spanish. Credits: 1.00

SPAN 32200 - Spanish For The Health Professions

Credit Hours: 3.00. Intermediate level course directed towards the use of Spanish in the health care professions. It covers specialized vocabulary from the medical fields, as well as grammar and syntax with the goal of developing speaking, listening, reading and writing abilities. Students will have the opportunity to apply their skills in practical contexts and discuss cultural considerations.

Learning Outcomes: 1. Prepare students to communicate effectively in the health professional field. 2. Study of specialized vocabulary of the health sciences. 3. Apply their skills in a practical classroom setting. 4. Gain cultural, legal, and ethical awareness about the use of Spanish in their interaction with Spanish speaking patients. Credits: 3.00

SPAN 33000 - Spanish And Latin American Cinema (UCC: HUM)

Credit Hours: 3.00. Screening and analysis of selected Spanish and Latin American films with readings and discussions relative to their historical, social, political, aesthetic, literary, and linguistic contexts. No knowledge of Spanish required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 33500 - The Literature Of The Spanish-Speaking Peoples In The United States

Credit Hours: 3.00. Study of selected poetry, fiction, theatre, and essays written in the United States by Spanish-speaking writers; includes readings in the literature written in Spanish and English as well as bilingual poetry and prose. Conducted in Spanish and English.

Credits: 3.00

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

SPAN 39800 - Special Topics In Spanish

Credit Hours: 1.00 to 3.00. Studies of particular aspects of Spanish (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussions, and papers in Spanish.

Learning Outcomes: 1. Recognize and apply a broad range of hospitality and tourism-related vocabulary. 2. Read, understand, and discuss specific hospitality and tourism topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific problems in hospitality and tourism in Spanish. Credits: 1.00 to 3.00

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 41500 - Spanish Translation And Interpreting

Credit Hours: 3.00. Introduction to the Translation and Interpretation Studies field for Spanish speakers. High level of competence in Spanish required. Overview of translation theory, methodology, and practice both in class and in real settings. Includes a service learning component. Conducted in English and Spanish.

Learning Outcomes: 1. Have an overview of the translation studies field in its relation to Linguistics, Literature, Media, Sciences, and Second Language Acquisition. 2. Understand the different methodologies used for translation

and interpretation. 3. Learn the ethics, standards and rules of the profession. 4. Practice different types of translation (technical, scientific, literary, legal medical, etc.) and interpretation (simultaneous, consecutive, over the phone, conference, etc.). 5. Understand the basic principles of cross-cultural communication. Credits: 3.00

SPAN 41900 - Directed Tutoring In Spanish

Credit Hours: 1.00 to 4.00. Guided practicum in tutoring Spanish, operation of a tutorial laboratory, and the rationale for audio tutorial second language learning. Students learn tutorial techniques, grade homework, and maintain records under the supervision of the SPAN 10100 -SPAN 10200 course chairperson and experienced teaching assistants. Permission of instructor required.

Credits: 1.00 to 4.00

SPAN 42400 - Business Spanish

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Credits: 3.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48100 - Spanish Culture

Credit Hours: 3.00. The development of the cultural life of the Spanish people as reflected in the geography, history, music, art, and architecture of Spain. Lectures in Spanish.

Learning Outcomes: 1. Catalogue and describe in Spanish the major historical epochs of Spain. 2. Correctly identify major works of painting and music, and locate them temporally, geographically, and by cultural movement or period. 3. Debate accurately Spain's current regional conflicts through knowledgeable assessment of the historical evolution of the language, literature, commerce, and agriculture. Credits: 3.00

SPAN 48200 - Latin American Civilization

Credit Hours: 3.00. Outline of Latin American history; the cultural heritage from Spain and from the pre-Spanish civilizations; the intellectual, social, and cultural progress of the Latin American countries. Lectures in Spanish.

Learning Outcomes: 1. Identify and locate the major groups of Latin America's indigenous peoples on the map and assess their historical trajectory through primary and secondary texts, group discussion and debate, and written reports. 2. Survey in Spanish from a historical perspective the rise and development of Colonial Latin American institutions through critical readings, written and oral presentations. 3. Summarize in Spanish the key forces leading up to and following the 19th-century wars of Independence by assessing regional military and political strategies and by generating written and oral reports. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries,

including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

SPAN 49800 - Advanced Topics In Spanish

Credit Hours: 1.00 to 3.00. Advanced studies of particular aspects of Spanish (e.g. culture, civilization, literature, linguistics, film, etc) by examining a varied selection of works. Readings, discussion, and papers in Spanish.

Credits: 1.00 to 3.00

SPAN 54000 - Spanish Literature Of The Middle Ages

Credit Hours: 3.00. A survey of Spanish Literature from 11th to the 15th century through the reading and discussion of representative prose, dramatic and poetic works. Lectures and supplemental readings on literary criticism and on various aspects of the period useful to an understanding of the literature it produced. Permission of instructor required.

Learning Outcomes: 1. Discuss the history and the development of Spanish literature. 2. Explain the importance the adoption of foreign prose had on the development of Spanish novel. 3. Describe Spanish literary movements. 4. Analyze literary works produced. Credits: 3.00

SPAN 54100 - Spanish Literature Of The Golden Age

Credit Hours: 3.00. A survey of Spanish literature from 1500 to 1681. Reading and discussion of representative prose, dramatic and poetic works. Lectures and supplemental readings on literary criticism and on various aspects of the period useful to an understanding of the literature it produced.

Learning Outcomes: 1. Student will gain practical experiences in the language. Credits: 3.00

SPAN 54200 - Cervantes Don Quijote

Credit Hours: 3.00. Reading and discussion of Don Quixote in the context of Spanish Renaissance literature and subsequent developments in the genre of the novel.

Credits: 3.00

SPAN 54300 - Spanish Literature Of The 18th And 19th Centuries

Credit Hours: 3.00. The development of Spanish peninsular literature from Neoclassicism to Realism. Reading, analysis, and discussion of a representative selection of works of the periods.

Credits: 3.00

SPAN 54900 - Hispanic Women Writers

Credit Hours: 3.00. A survey of the literature of Hispanic women writers from Latin America, the Caribbean, and Spain in light of their traditions and of feminist literary theory and criticism. Permission of instructor required.

Learning Outcomes: 1. Discuss female characters from an informed perspective, whether applying feminist theories or not . 2. Compare and contrast literary innovations of male and female writers in literary movement since Modernity Credits: 3.00

SPAN 55000 - Spanish American Literature Of The Colonial Period

Credit Hours: 3.00. A survey of Spanish American literature of the colonial period. Reading and discussion of a number of representative works as well as excerpts from several others.

Credits: 3.00

SPAN 55100 - Spanish American Literature Of The 19th Century

Credit Hours: 3.00. A survey of Spanish American literature of the 19th century. Reading and discussion of a number of representative works as well as excerpts from several others.

Credits: 3.00

SPAN 55200 - Spanish American Literature From 1900 To 1970

Credit Hours: 3.00. A survey of Spanish American literature from 1900 to 1970. Readings and discussion of a number of representative works, as well as excerpts from several others.

Learning Outcomes: 1. Student will gain practical experiences in the language. Credits: 3.00

SPAN 55300 - Spanish American Literature From 1970 - Present

Credit Hours: 3.00. A survey of Spanish American literature from 1970 to the present. Readings and discussion of a number

of representative works, as well as excerpts from several others.

Learning Outcomes: 1. Student will gain practical experiences in the language. Credits: 3.00

SPAN 55400 - Hispanic Caribbean Literature

Credit Hours: 3.00. This course focuses on various topics pertaining to Hispanic Caribbean literature. The particular works included will change each time the course is offered. All coursework and discussion is in Spanish.

Credits: 3.00

SPAN 55500 - Latino/a Literature

Credit Hours: 3.00. This class offers an overview of U.S. Latino/a literature, written in Spanish and English and produced in the United States. It will introduce students to the many and diverse experiences of different Latino/a groups through their literary production. Permission of instructor required.

Learning Outcomes: 1. Gain a sense of the diversity of the Latino/a experience in the U.S. as well as the longevity and richness of the Latino/a literary tradition in the U.S. 2. Become familiar with some of the major themes and trends in Latino/a literature. 3. Consider the ways in which identities like - class, race, and gender - intersect with one another and are constructed in relation to one another. 4. Learn how to close-read a literary or cultural object, such as a novel, a film, or a poem. 5. Work on improving their writing and research skills through the development of an original research project dealing with Latino/a literature. Credits: 3.00

SPAN 55600 - Mexican Literature

Credit Hours: 3.00. A survey of Mexican literature. Reading and discussion of a number of representative works as well as excerpts from several others. Permission of instructor required.

Learning Outcomes: 1. Discuss the impact the history of Mexico has on literary production. 2. Examine the nature of the development of Mexican literary movements. 3. Analyze Mexican literature with consideration of its individual literary innovations. Credits: 3.00

SPAN 55700 - Argentine Literature

Credit Hours: 3.00. A survey of Argentine literature. Reading and discussion of a number of representative works as well as excerpts from several others and from standard anthologies.

Credits: 3.00

SPAN 56100 - The Structure Of Spanish I: Phonetics, Phonology, And Dialectology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a theoretical and contrastive Spanish/English perspective.

Learning Outcomes: 1. Understand, recall, and discuss the main concepts in the fields of phonetics and phonology. 2. Apply and adapt the fundamental concepts of phonetics and phonology to multiple varieties of Spanish. 3. Examine and critically assess current research in the field. 4. Design and conduct original research in the field of Spanish phonetics and phonology. Credits: 3.00

SPAN 56200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Have knowledge and understanding of basic notions of Spanish syntax including syntagmatic structure, X-bar theory, thematic roles, argument structure, constituents and hierarchical representation, and syntactic operations (e.g., wh-movement). 2. Be able to observe, describe, and formulate abstract theoretical concepts in relation to the syntactic structure of Spanish. 3. Be able to relate theoretical analysis to experimental syntax, specifically in relation to the acquisition of Spanish syntax and semantics among

second language learners and heritage speakers. Credits: 3.00

SPAN 56300 - History Of The Spanish Language

Credit Hours: 3.00. Development of Spanish since the Ancient Latin period, taking into account influences of other cultures and languages; Spanish in relation to Latin and other Romance languages; basic principles of language change; language change underlying differences between American and Peninsular Spanish.

Learning Outcomes: 1. Have a perspective of the evolution of Spanish and being able to identify the basic features of Spanish through its history, as well as understanding the influence of external influences in the evolution of the language. 2. Understand the configuration of the different varieties of Spanish in the different areas (peninsular Spanish and Spanish in America). 3. Read publications on general aspects of History of Spanish Language with critical sense and understanding basic problems of diachronic studies and basic principles of language change. 4. Able to read, understand and linguistically analyze texts from all the stages of Spanish. Credits: 3.00

SPAN 32100 - Introduction To Spanish For The Professions

Credit Hours: 3.00. Continued work at the advanced-intermediate level with a focus on vocabulary and grammar for contexts in a wide variety of professional settings. Conducted primarily in Spanish.

Learning Outcomes: 1. Build upon and improve intermediate Spanish language skills. 2. Develop necessary vocabulary for communication in the target language within broader professional contexts. 3. Create real-world scenarios that facilitate, promote, and practice professional communication in the target language. 4. Incorporate trade-specific situations that are relevant and applicable to each student and his/her respective field of study, while covering the broader implications of these contexts. 5. Promote personal and meaningful application of material through personalized activities and projects that students could use as part of their job search. 6. Examine and present current news events through articles, websites, and videos. Credits: 3.00

SPAN 56401 - Spanish Sociolinguistics

Credit Hours: 3.00. This course addresses the linguistic variation found at all linguistic levels of Spanish (e.g., phonetics, morphology, syntax) that is explained through social variation (e.g., socio-economic status, race, gender). Regional varieties of Spanish in Latin America, the U.S., and Peninsular societies will be studied. Related topics are style and identity, language attitudes, discourse analysis, and pragmatics. All classes will be conducted in Spanish.

Learning Outcomes: 1. Define and express main understandings about language, the study of linguistics, and language variation. 2. Analyze and discuss specific examples of Spanish variation analyzed through use of various methods. 3. Identify and evaluate the pros and cons of various sociolinguistic methods of research. 4. Reflect on the relationships among social factors, language, diversity, and power in society. 5. Use previous investigations to demonstrate the need for additional research in a specific area, thereby identifying a research topic. 6. Consider one's own perspective of language use in social settings and reflect on any changes in that perspective that resulted from interaction with the course. 7. Speak, read, write, and comprehend Spanish to communicate about the course topics. Credits: 3.00

SPAN 32500 - Spanish For Engineering And Technology

Credit Hours: 3.00. This is an intermediate-level course directed towards the use of Spanish in Engineering and Technology professions. It covers specialized vocabulary from the different technical areas, as well as grammar and syntax, with the goal of developing speaking, listening, reading, and writing abilities. Students will have the opportunity to apply their skills in practical contexts, including job interviews, internships, formal presentations and communication in the workplace.

Learning Outcomes: 1. Recognize and apply a

broad range of engineering and technical-related vocabulary. 2. Read, understand, and discuss specific engineering and technical topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific engineering problems in Spanish. Credits: 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

SPAN 41201 - Advanced Spanish Conversation II

Credit Hours: 1.00. This course is designed to help students use and improve their Spanish speaking and comprehensive skills. Students will be expected to actively participate in classroom discussions, prepare for class, and utilize the target language only. No textbook is needed.

Learning Outcomes: 1. Build Spanish speaking and comprehension skills through classroom discussions. 2. Explain and assess relevant texts and audio materials in the target language. 3. Formulate ideas based on texts and audio materials as expressed in written and oral Spanish. Credits: 1.00

SPAN 38000 - Spanish Language And Culture Abroad

Credit Hours: 1.00 to 6.00. This course must be taken concurrently with participation in an experiential learning opportunity abroad (e.g., study abroad, internship) that requires a period abroad in a Spanish-speaking location. The course will guide students to improve their Spanish language abilities and gain cultural knowledge about their experiential learning location. This course, coupled with the immersion experience, will enhance student learning through Spanish language activities and also cultural research projects. Permission of instructor is required.

Learning Outcomes: 1. Identify important moments of daily learning and reflect on them in written form in Spanish. 2. Explain experiences in the Spanish-speaking location through conversations in Spanish with a peer. 3. Compare experiences and problems encountered through conversations in Spanish with a peer; formulate possible solutions to problems if encountered in the future. 4. Research cultural surroundings and present findings in various modes of communication (e.g., presentational, written). 5. Assess learning during the immersion period in a summative way, reflecting on language and cultural learning through the creation of a final presentation project. Credits: 1.00 to 6.00

SPAN 32300 - Global Sustainable Engineering

Credit Hours: 1.00 to 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life. Taught in Spanish.

Learning Outcomes: 1. Discuss various approaches to engineering problems in class meetings or online discussion boards. 2. Analyze global engineering problems from engineering and humanistic perspectives

evidenced in written case study responses and assessments. 3. Apply concepts of systems thinking and design thinking and express them in individual and group activities. 4. Explain the application of humanistic fields of study to engineering problems. Credits: 1.00 to 3.00

SPAN 36600 - Spanish In The United States

Credit Hours: 3.00. The course explores the linguistic profile of established and emerging Spanish-speaking communities in the United States. Topics addressed are the current demographic profiles of Spanish speakers, the historical presence of Spanish, language identity, the meaning of linguistic landscapes, American Spanish and its speakers in the media and social institutions, as well as the varieties of Spanish in the U.S. The course is conducted in Spanish.

Learning Outcomes: 1. Describe Spanish-speaking populations in the U.S. considering their diverse histories. 2. Use course-related concepts and terms accurately in class discussions and written texts. 3. Examine the experience of Spanish-speakers in the U.S. through course activities. 4. Investigate the sociopolitical position of language through course readings and data analysis. 5. Identify a topic of research and conduct research to contribute to our knowledge of Spanish or Spanish speakers in the U.S. Credits: 3.00

Electives (17-54 credits)

Grade Requirements

GPA Requirements

Sample 4-Year Plan

Fall 1st Year

SPAN 10100 - Spanish Level I (UCC: HUM)

Credit Hours: 3.00. A beginning Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1910 Spanish Level I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Describe themselves, their friends and families, their personal interests and activities using the present and preterit verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, hobbies, holidays, daily schedules, food, and shopping. Credits: 3.00

15-17 Credits

Spring 1st Year

SPAN 10200 - Spanish Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 10100. CTL:IWL 1911 Spanish Level II

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Describe aspects of daily life and communicate in personal and professional situations using the present and various past verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, daily schedules, food, social engagement, and technology. Credits: 3.00

15-16 Credits

Fall 2nd Year

SPAN 20100 - Spanish Level III (UCC: HUM)

Credit Hours: 3.00. An intermediate Spanish course with

emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1912 Spanish Level III

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate mastery of grammatical structure and syntax, formation of plural nouns, noun-adjective agreement, verb conjugation, through the application of the communicative pedagogy (teaching in context) in the use of the basic learning skills (reading, writing, speaking and listening) by: 2. Discussing personal relations and academic studies. 3. Giving and receiving directions to a destination and/or in order to complete a task. 4. Writing short essays (maximum 250 words) on specified topics. Credits: 3.00

13-15 Credits

Spring 2nd Year

SPAN 20200 - Spanish Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 20100. CTL:IWL 1913 Spanish Level IV

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate control of most structures, considerable breadth of vocabulary, and appropriate communicative competence. 2. Develop the linguistic and analytic skills needed for advanced study in Spanish. 3. Be able to communicate in an academic setting, critically assess ideas and texts, and be able to present them in writing to an academic audience. 4. Show the knowledge of the rich cultural, geographical, and linguistic variety of the Spanish-speaking world. Credits: 3.00

13-15 Credits

Fall 3rd Year

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

15-16 Credits

Spring 3rd Year

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.

Learning Outcomes: 1. Gain understanding of literature produced in the Spanish speaking world. 2. Develop the ability to talk effectively about and interact with literature in Spanish. 3. Write specific types of texts for analyzing Spanish literature. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

15-16 Credits

Fall 4th Year

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (77 credits)

Pre-requisite Language Courses

SPAN 10100 - Spanish Level I (UCC: HUM)

Credit Hours: 3.00. A beginning Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1910 Spanish Level I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Describe themselves, their friends and families, their personal interests and activities using the present and preterit verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, hobbies, holidays, daily schedules, food, and shopping. Credits: 3.00

SPAN 10200 - Spanish Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 10100. CTL:IWL 1911 Spanish Level II

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Describe aspects of daily life and communicate in personal and professional situations using the present and various past verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, daily schedules, food, social engagement, and technology. Credits: 3.00

SPAN 20100 - Spanish Level III (UCC: HUM)

Credit Hours: 3.00. An intermediate Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1912 Spanish Level III

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate mastery of grammatical structure and syntax, formation of plural nouns, noun-adjective agreement, verb conjugation, through the application of the communicative pedagogy (teaching in context) in the use of the basic learning skills (reading, writing, speaking and listening) by: 2. Discussing personal relations and academic studies. 3. Giving and receiving directions to a destination and/or in order to complete a task. 4. Writing short essays (maximum 250 words) on specified topics. Credits: 3.00

SPAN 20200 - Spanish Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 20100. CTL:IWL 1913 Spanish Level IV

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate control of most structures, considerable breadth of vocabulary, and appropriate communicative competence. 2. Develop the linguistic and analytic skills needed for advanced study in Spanish. 3. Be able to communicate in an academic setting, critically assess ideas and texts, and be able to present them in writing to an academic audience. 4. Show the knowledge of the rich cultural, geographical, and linguistic variety of the Spanish-speaking world. Credits: 3.00

SPAN 22400 - Spanish Level IV: Business Spanish

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed towards use of Spanish for business purposes. Course materials cover a variety of business aspects in several professions.

Credits: 3.00

SPAN 10500 - Accelerated Basic Spanish (UCC: HUM)

Credit Hours: 4.00. Accelerated Basic Spanish course that substitutes for SPAN 10100 and 10200.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of Spanish language in specific contexts by reading Spanish texts. 2. Identify appropriate use of Spanish language in specific contexts by listening to audio recordings and watching videos of spoken Spanish. 3. Compose Spanish sentences by focusing on a set of grammatical rules and standards in the language. 4. Produce sentences in spoken Spanish in the form of dialogues and presentations. Credits: 4.00

SPAN 20500 - Accelerated Intermediate Spanish (UCC: HUM)

Credit Hours: 4.00. An accelerated intermediate Spanish course that substitutes for SPAN 20100 and 20200.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of Spanish language in a variety of contexts by reading Spanish texts. 2. Identify appropriate use of Spanish language in specific contexts by listening to audio recordings and watching videos of spoken Spanish. 3. Compose Spanish sentences by focusing on a broad set of

grammatical rules and standards in the language. 4. Produce a variety of sentences in spoken Spanish in the form of dialogues and presentations. Credits: 4.00

Spanish Major (30 credits)

Area A - Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

Area B - Spanish Literature (3 credits)

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.

Learning Outcomes: 1. Gain understanding of literature produced in the Spanish speaking world. 2. Develop the ability to talk effectively about and interact with literature in Spanish. 3. Write specific types of texts for analyzing Spanish literature. Credits: 3.00

Education Track (21 credits)

Area C - Advanced Spanish Language (3 credits)

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

Area D - Advanced Spanish Literature (3 credits)

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

Area E - Spanish Linguistics (6 credits)

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

Area F - Spanish Culture (3 credits)

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries, including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

Area G - Spanish Selectives (6 credits)

SPAN 23100 - Cervantes' Don Quixote

Credit Hours: 3.00. Reading and discussion of Cervantes' masterpiece. All readings, discussion, papers, and examinations will be in English.

Credits: 3.00

SPAN 23500 - Spanish American Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected masterpieces of Spanish American literature. The course

context will change from semester to semester. Knowledge of Spanish not required.

Credits: 3.00

SPAN 28000 - Second-Year Spanish: Special Topics

Credit Hours: 3.00. Selected topics on the civilization, culture, and literature of Spain and Spanish America. Lectures and readings primarily in English, but knowledge of Spanish at the first-year level necessary.

Credits: 3.00

SPAN 31200 - Advanced Spanish Conversation

Credit Hours: 1.00. One credit hour advanced Spanish conversation course focused on guided practice in conversation to enhance communicative competence. Discussions in Spanish on various topics. Course may be taken concurrently with SPAN 30100, 30200, 40100 or 40200.

Learning Outcomes: 1. Develop advanced listening skills and improve oral Spanish proficiency. 2. Acquire advanced vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss assigned materials in Spanish. Credits: 1.00

SPAN 33000 - Spanish And Latin American Cinema (UCC: HUM)

Credit Hours: 3.00. Screening and analysis of selected Spanish and Latin American films with readings and discussions relative to their historical, social, political, aesthetic, literary, and linguistic contexts. No knowledge of Spanish required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

SPAN 33500 - The Literature Of The Spanish-Speaking Peoples In The United States

Credit Hours: 3.00. Study of selected poetry, fiction, theatre, and essays written in the United States by Spanish-speaking writers; includes readings in the literature written in Spanish and English as well as bilingual poetry and prose. Conducted in Spanish and English.

Credits: 3.00

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

SPAN 39800 - Special Topics In Spanish

Credit Hours: 1.00 to 3.00. Studies of particular aspects of Spanish (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussions, and papers in Spanish.

Learning Outcomes: 1. Recognize and apply a broad range of hospitality and tourism-related vocabulary. 2. Read, understand, and discuss specific hospitality and tourism topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific problems in hospitality and tourism in Spanish. Credits: 1.00 to 3.00

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific

topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 41500 - Spanish Translation And Interpreting

Credit Hours: 3.00. Introduction to the Translation and Interpretation Studies field for Spanish speakers. High level of competence in Spanish required. Overview of translation theory, methodology, and practice both in class and in real settings. Includes a service learning component. Conducted in English and Spanish.

Learning Outcomes: 1. Have an overview of the translation studies field in its relation to Linguistics, Literature, Media, Sciences, and Second Language Acquisition. 2. Understand the different methodologies used for translation and interpretation. 3. Learn the ethics, standards and rules of the profession. 4. Practice different types of translation (technical, scientific, literary, legal medical, etc.) and interpretation (simultaneous, consecutive, over the phone, conference, etc.). 5. Understand the basic principles of cross-cultural communication. Credits: 3.00

SPAN 41900 - Directed Tutoring In Spanish

Credit Hours: 1.00 to 4.00. Guided practicum in tutoring Spanish, operation of a tutorial laboratory, and the rationale for audio tutorial second language learning. Students learn tutorial techniques, grade homework, and maintain records under the supervision of the SPAN 10100 -SPAN 10200 course chairperson and experienced teaching assistants. Permission of instructor required.

Credits: 1.00 to 4.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48200 - Latin American Civilization

Credit Hours: 3.00. Outline of Latin American history; the cultural heritage from Spain and from the pre-Spanish civilizations; the intellectual, social, and cultural progress of the Latin American countries. Lectures in Spanish.

Learning Outcomes: 1. Identify and locate the major groups of Latin America's indigenous peoples on the map and assess their historical trajectory through primary and secondary texts, group discussion and debate, and written

reports. 2. Survey in Spanish from a historical perspective the rise and development of Colonial Latin American institutions through critical readings, written and oral presentations. 3. Summarize in Spanish the key forces leading up to and following the 19th-century wars of Independence by assessing regional military and political strategies and by generating written and oral reports. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries, including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

SPAN 49800 - Advanced Topics In Spanish

Credit Hours: 1.00 to 3.00. Advanced studies of particular aspects of Spanish (e.g. culture, civilization, literature, linguistics, film, etc) by examining a varied selection of works. Readings, discussion, and papers in Spanish.

Credits: 1.00 to 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

SPAN 41201 - Advanced Spanish Conversation II

Credit Hours: 1.00. This course is designed to help students use and improve their Spanish speaking and comprehensive skills. Students will be expected to actively participate in classroom discussions, prepare for class, and utilize the target language only. No textbook is needed.

Learning Outcomes: 1. Build Spanish speaking and comprehension skills through classroom discussions. 2. Explain and assess relevant texts and audio materials in the target language. 3. Formulate ideas based on texts and audio materials as expressed in written and oral Spanish. Credits: 1.00

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

SPAN 10100 - Spanish Level I (UCC: HUM)

Credit Hours: 3.00. A beginning Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1910 Spanish Level I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Describe themselves, their friends and families, their personal interests and activities using the present and preterit verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, hobbies, holidays, daily schedules, food, and shopping. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

LC 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (CMPL 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities.

Learning Outcomes: 1. Trace how various cultures have shaped our contemporary models of higher education through written and oral assignments. 2. Describe how literary texts from various cultures provided the catalyst for major political and social events throughout history. 3. Identify the impact that literary endeavors have in the development of scientific, medical, corporate, environmental and political ideas. 4. Articulate clearly why a Liberal Arts education that focuses on languages and intercultural competency is both valuable and marketable in today's global context. Credits: 3.00

15 Credits

Spring 1st Year

SPAN 10200 - Spanish Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 10100. CTL:IWL 1911 Spanish Level II

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Describe aspects of daily life and communicate in personal and professional situations using the present and various past verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, daily schedules, food, social engagement, and technology. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

SPAN 20100 - Spanish Level III (UCC: HUM)

Credit Hours: 3.00. An intermediate Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1912 Spanish Level III

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate mastery of grammatical structure and syntax, formation of plural nouns, noun-adjective agreement, verb conjugation, through the application of the communicative pedagogy (teaching in context) in the use of the basic learning skills (reading, writing, speaking and listening) by: 2. Discussing personal relations and academic studies. 3. Giving and receiving directions to a destination and/or in order to complete a task. 4. Writing short essays (maximum 250 words) on specified topics. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4.

Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

15 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

SPAN 20200 - Spanish Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 20100. CTL:IWL 1913 Spanish Level IV

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate control of most structures, considerable breadth of vocabulary, and appropriate communicative competence. 2. Develop the linguistic and analytic skills needed for advanced study in Spanish. 3. Be able to communicate in an academic setting, critically assess ideas and texts, and be able to present them in writing to an academic audience. 4. Show the knowledge of the rich cultural, geographical, and linguistic variety of the Spanish-speaking world. Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

15 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes,

fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.

Learning Outcomes: 1. Gain understanding of literature produced in the Spanish speaking world. 2. Develop the ability to talk effectively about and interact with literature in Spanish. 3. Write specific types of texts for analyzing Spanish literature. Credits: 3.00

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

SPAN 56100 - The Structure Of Spanish I: Phonetics, Phonology, And Dialectology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a theoretical and contrastive Spanish/English perspective.

Learning Outcomes: 1. Understand, recall, and discuss the main concepts in the fields of phonetics and phonology. 2. Apply and adapt the fundamental concepts of phonetics and phonology to multiple varieties of Spanish. 3. Examine and critically assess current research in the field. 4. Design and conduct original research in the field of Spanish phonetics and phonology. Credits: 3.00

17 Credits

Spring 3rd Year

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

LC 47500 - Theories Of Teaching World Languages

Credit Hours: 3.00. This course is designed to assist you in the process of becoming a skilled professional who can teach world language(s). You will gain experiential hours in the secondary classroom. You will also develop an understanding of the connection between effective language teaching and successful language learning, be able to think critically about your own teaching and teaching materials and gain an understanding of various theories, methods, approaches, and techniques in world language teaching. Areas of emphasis include the nature of language learning theories, early approaches to language pedagogy, communicative language teaching methodology, the relationship between theory and practice, aspects of the interaction between speakers in the classroom, skills-based theories, sociocultural perspectives, individual differences between learners, and usage-based approaches to second language acquisition.

Learning Outcomes: 1. Identify various theories of foreign language learning. 2. Describe various theories of foreign language teaching. 3. Analyze how student learning is influenced by different types of instructional practices. 4. Recognize how theories of individual and

collaborative learning strategies affect student engagement. 5. Compare and contrast how diverse learners process information and develop language learning skills. Credits: 3.00

15 Credits

Fall 4th Year

EDCI 42700 - Teaching Of World Languages

Credit Hours: 3.00. This is one of the two methods courses required for World Language Teaching major. While LC 47500 is a theoretical course, this course is a practical course on world language teaching in secondary school.

Learning Outcomes: 1. Design lesson plans that draw on knowledge of content areas. 2. Write language learning assessment documents (diagnostic formative, and summative). 3. Design language assessment rubrics. 4. Evaluate their own and others' teaching effectiveness. 5. Plan lessons that incorporate strategies to monitor student learning. 6. Build collaborative relationships with other language teaching professionals. 7. Identify resources for the developing foreign language teaching, including textbooks, scholarly journals, pedagogy associations and conferences. Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the

study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries, including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

SPAN 56200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Have knowledge and understanding of basic notions of Spanish syntax including syntagmatic structure, X-bar theory, thematic roles, argument structure, constituents and hierarchical representation, and syntactic operations (e.g., wh-movement). 2. Be able to observe, describe, and formulate abstract theoretical concepts in relation to the syntactic structure of Spanish. 3. Be able to relate theoretical analysis to experimental syntax, specifically in relation to the acquisition of Spanish syntax and semantics among second language learners and heritage speakers. Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area

performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.
Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

16 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.
University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Special Education Mild and Intense Intervention P to 12, BA

About the Program

Degree Requirements

Departmental/Program Major Requirements (99 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.
University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4.

Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDPS 46100 - Practicum In Strategies For Teaching Individuals With Disabilities

Credit Hours: 1.00 to 6.00. Practicum experience in assessment and teaching of individuals with disabilities. Experience in design, delivery, implementation, and evaluation of instruction. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A and B.

Learning Outcomes: 1. Provide instruction that is responsive to student differences and promotes development and learning for all students. 2. Match expectations to the unique characteristics, abilities, developmental levels, and behavior of students. 3. Identify characteristics of students with disabilities and design classroom accommodations. 4. Adjust instruction according to student needs and performances. 5. Use a variety of evidence-based instructional strategies. 6. Plan and deliver standards-based, data-driven differentiated instruction that actively engages students in the learning process. 7. Demonstrate an appreciation and concern for students as individuals and interact with them in positive ways that encourage and teach appropriate behavior. 8. Model effective use of language. 9. Demonstrate effective classroom and behavior management and establish a positive, productive, and safe learning environment with high expectations for all students. 10. Integrate instructional technology by creating instructional materials, delivering instruction using technology, or encouraging student use of technology in assignments. 11. Reflect on practices. 12. Engage in professional development activities to remain current with best practices. 13. Collaborate effectively with colleagues, parents, and others to increase the effectiveness of instruction and engage in professional growth. Credits: 1.00 to 6.00

EDPS 49800 - Supervised Teaching- Special Education (UCC: OC)

Credit Hours: 1.00 to 16.00. A student planning to enroll in EDCI 49600, EDCI 49800, EDCI 49900; EDPS 49800, EDPS 49900, EDPS 56100, or EDPS 56600 in the spring or fall semester of any academic year must secure, complete, and submit a student teaching application form between the middle of September and November 1 preceding the academic year during which he or she will be enrolled in the course. Failure to file the application during or prior to this time will make it virtually

impossible for the student to receive a student teaching assignment for that year. Application forms may be obtained in and submitted to Room 3241, Liberal Arts and Education Building. Teaching full time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A, B, and C.

University Core Curriculum (UCC): (UCC: OC)
Credits: 1.00 to 16.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)
Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts.
Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed.
Credits: 1.00 to 3.00

EDCI 43400 - Literacy Teaching And Learning In Secondary Schools

Credit Hours: 2.00. Exploration and development of various instructional methods and materials appropriate for supporting adolescent literacy in secondary English (i.e., middle and high school English Language Arts), including the teaching of reading. Content-area literacy methods and materials are also addressed. Includes a field experience of up to 20 hours in a secondary English school setting.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of secondary English literacy. 2. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 3. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary English. Credits: 2.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make

reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 36300 - Psychoeducational, Medical, And Physical Aspects Of Individuals With Disabilities

Credit Hours: 3.00. Introduction to characteristics of individuals with mild and severe intellectual disabilities: defining characteristics, etiological factors, assessment, social, legal and educational issues, and basic physical or medical disability management issues and techniques. Admission to Teacher Education Program, passage of Gates A required.

Learning Outcomes: 1. Demonstrate the knowledge of the roles and responsibilities of the educational team. 2. Demonstrate the knowledge of instructional strategies needed to promote independence. 3. Demonstrate the knowledge of motor tone and motor patterns. 4. Demonstrate the knowledge of proper positioning, lifting, and handling techniques. 5. Demonstrate the knowledge of feeding and toileting techniques. 6. Demonstrate the knowledge of infection control. 7. Demonstrate the knowledge of assessment and monitoring techniques of major health conditions. Credits: 3.00

EDPS 46300 - Teaching Individuals With Severe Disabilities

Credit Hours: 3.00. Education of individuals with severe or multiple disabilities. Application of innovative technology, design of individual educational programs, strategies and methods for instruction, evaluation of instruction, community-based instruction, generalization and maintenance of skills. Admission to Teacher Education Program, passage of Gate A required.

Learning Outcomes: 1. Demonstrate the knowledge of the various aspects of trial management. 2. Demonstrate the knowledge of the ability to record, graph, and interpret ongoing data of student performance. 3. Demonstrate the knowledge of the ability to apply the principles of learning and strategies of instruction. 4. Demonstrate the knowledge of the components of community referenced curriculum and community-based instruction. 5. Demonstrate the knowledge of the inclusionary/collaborative strategies for students with severe disabilities. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective

management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 33500 - Reading Instruction For Tier 1 And Tier 2

Credit Hours: 2.00 to 3.00. Given the needs of variety of needs of readers throughout the educational system, this class will focus on effective interventions from the primary grades through high school. Instructors will present a balance of theoretical and practitioner-oriented aspects of reading development and instruction. The course will also examine evidence-based science of reading approaches designed to ensure all students have access to effective, researched-based literacy instruction.

Learning Outcomes: 1. Establish an understanding of P-12 science of reading principles and practices. 2. Develop an understanding of effective Tier 1 and Tier 2 reading instruction. 3. Understand how to implement Tier 1 and Tier 2 reading practices in a classroom. 4. Establish an understanding of reading difficulties/disabilities. 5. Extend knowledge of unique needs of struggling readers. Credits: 2.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component

is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 30400 - Assessment And Transition (Data-Based Decision-Making)

Credit Hours: 3.00. This course addresses assessment techniques and transition planning in special education, with applications to curriculum. It includes norm-referenced and curriculum-based measurement, error analyses, observational ratings, data-based decision-making, and transition planning from early intervention to post-secondary settings.

Learning Outcomes: 1. Apply their understanding of specialized curricula to inform their programmatic and instructional decisions for individuals with exceptionalities across a variety of contexts and the continuum of placement options (CEC 3.2) 2. Develop, select, administer, analyze, and interpret multiple measures of student learning, behavior, and the classroom environment to evaluate and support classroom and school-based systems of intervention for students with and without exceptionalities (CEC 4.1). 3. Develop, select, and administer multiple, formal and informal, culturally and linguistically appropriate measures and procedures that are valid and

reliable, to contribute to eligibility determination for special education services CEC 4.2). 4. Assess, collaboratively analyze, interpret, and communicate students' progress toward measurable outcomes, using technology as appropriate, to inform both short and long-term planning, and make ongoing adjustments to instruction (CEC 4.3). 5. Utilize appropriate progress monitoring skills in order to develop individualized education plans (IEPs) for students. Credits: 3.00

EDPS 40200 - P-12 Reading Methods For Exceptional Learners

Credit Hours: 2.00 to 3.00. This course is designed to meet the expectations of CEC, NCTQ, IDA and REPA 3 and prepare students in the science of reading for exceptional learners (including students with dyslexia and those with intensive needs) in Tiers 2 and 3. This course will provide implementation details on Response to Intervention (RTI) and Multi-tiered Systems of Support (MTSS). The course will present strategies and programs used in strategic and intensive intervention efforts for those learners needing additional, unique, and/or more focused remediation efforts. Topics will include understanding reading intervention research, the behavior analytic and learning sciences' contributions to understanding the reading process, the sequence of learning to read (systematic instruction), reading to learn, and the five components of reading instruction for P-12 learners. This course will specifically address the REPA 3 Standard: Focused work using (interventions that are direct, explicit, and multi-sensory) as a component of scientifically-based reading.

Learning Outcomes: 1. Review the five components of effective reading instruction for those in P-3 and those in grades 4-12. 2. Explain the models for remediation of prereading/reading difficulties and describe how they function: RTI, MTSS. 3. Describe and demonstrate how to use various screeners and progress monitoring assessments for P-12 students in Tiers 2 and 3. 4. Describe the meaning of direct and systematic instruction. 5. Demonstrate mastery of Corrective Reading sounds. 6. Demonstrate methods of increasing student engagement. 7. Discuss strategies to enhance content area reading performance. 8. Illustrate a scope and sequence for reading remediation for readers needing strategic and intensive intervention. 9. Explain how reading instruction can be made more explicit for those needing more focused efforts 10. Demonstrate how to provide systematic and explicit small group/one-on-one reading instruction. 11. Describe Big Direct Instruction and published scientifically-based programs that are designed based on the science of reading instruction and demonstrate how they are implemented. 12. Describe the use of Universal Design for Learning and assistive technology approaches to increase access to reading materials and/or improve reading skills. Credits: 2.00 to 3.00

EDCI 36101 - Teaching Social Studies In K-2

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practice strategies for teaching social studies to children in the K-2 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how K-2 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the K-2 grades. Admission to Teacher Education is required.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the K-2 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the K-2 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the K-2 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36401 - Teaching Mathematics In K-2

Credit Hours: 2.00. This course focuses on teaching mathematics in the elementary school, grades K-2, and encouraging children as mathematical problem posers. Students learn what it means to teach math interactionally using children's ideas, beliefs, and experiences as primary resources.

Eliciting and interpreting children's mathematical thinking as well as mathematical reasoning, problem solving, communication, and connections are foci. Admission to Teacher Education required.

Learning Outcomes: 1. Gain skill in assessing, evaluating, and responding to the diverse needs of K-2 learners in mathematics. 2. Identify, practice, and reflect on strategies of teaching mathematics to support K-2 students conceptual and procedural knowledge. 3. Analyze mathematics books and tasks for language demands, conceptual and procedural knowledge, and cross-curricular connections. 4. Reflect on the role of K-2 teachers and children's funds of knowledge in relation to their learning of mathematics. Credits: 2.00

EDCI 36501 - Teaching Science Through Design In Grades K-2

Credit Hours: 2.00. The aim of this lab-based course is to prepare students to teach science, engineering, and computational thinking with grade K-2 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade K through 2 learners. At least 9 credits of science content required.

Learning Outcomes: 1. List and contrast current models of science teaching and learning. 2. Demonstrate competence in the use of various learner-centered pedagogical strategies for culturally and linguistically diverse students. 3. Develop collaborative, inquiry based, cross-cultural, learner centered unit plans. 4. Demonstrate competence in assessing student learning and in developing plans of action to meet students' needs. 5. Implement pro-active strategies to establish a safe classroom environment in which all students are encouraged to participate and express their views. 6. Demonstrate competence in the use of instructional technologies to enhance student learning. 7. Demonstrate competence in integrating science, technology, engineering practices and mathematics (STEM) across the curriculum to address culturally and socially relevant issues. 8. Demonstrate competence in developing unit plans that engage children in the use of the engineering design process to address culturally and socially relevant issues. 9. Demonstrate competence in developing activities that promote children's computational thinking. 10. Explain how his/her personal philosophy of teaching and learning contrasts with the College of Education mission: "We are committed to social justice and education of all the children of all the people - especially in the area of P=12 STEM education." 11. Participate actively in discussing regarding curriculum development and implementation designed to address the needs of culturally diverse learners. Credits: 2.00

EDPS 21100 - Special Education Law, Policy, And Ethical Guidelines

Credit Hours: 3.00. This course provides opportunities for analysis and practical application of special education law and policy through discourse and advocacy. It is designed to provide students with a foundational understanding of special education, including the historical context for special education and the laws, policies, and ethical guidelines that have driven current special education legislation. Special education professionals hold multiple roles...teacher, case manager, general education consultant, instructional aid supervisor, researcher, and administrator to name a few. Moreover, there are numerous responsibilities required to successfully work in each of these roles and in this course we focus on law, policy, and ethical guidelines where they are relevant to special education pre-service teachers and support personnel.

Learning Outcomes: 1. Use observation, academic and personal engagement, and assessment data to develop and understanding of their students as learners at the individual and group level. 2. Demonstrate a strong knowledge of applicable federal, state, local laws, regulations, and policies pertaining to individuals with exceptionalities and how these

laws affect the delivery of services and supports. 3. Demonstrate the ability to advocate for resources and professional learning conditions to help individuals with exceptionalities meet instructional, behavioral, social, and transition goals and outcomes. 4. Demonstrate the knowledge to draft sound and ambitiously appropriate individualized education programs. 5. Demonstrate the ability to engage in professional activities and participate actively in peer and professional learning communities that benefit individuals with exceptionalities and families, colleagues and their own professional growth. 6. Demonstrate the ability to keep current with research and contemporary practices in multiple way. Credits: 3.00

EDPS 21200 - Collaboration And Family Engagement To Support Students With Disabilities

Credit Hours: 3.00. Students will learn strategies for communicating and collaborating with a variety of team members. Finally culture will be explored. Strategies for collaborating with family members, administrators, paraprofessionals and related service personnel will be explored. This course includes a field experience.

Learning Outcomes: 1. Differentiate between professional and personal perspectives that impact teamwork and collaboration. 2. Describe how cultural values, context (e.g., social expectations, home language, resources, etc.), and experiences impact families' educational involvement and student learning. 3. Describe the additional roles and potential stressors families of children with disabilities may experience. 4. Identify strategies and steps for developing home-school partnerships and facilitating communication with families and school personnel. 5. Identify roles and responsibilities of key members (e.g., speech, school counselor, general education, paraeducator, etc.) of the educational team. 6. Outline and describe strategies (e.g., collaborative goal setting, coteaching, planning, etc.) for training and problem solving. Credits: 3.00

EDPS 30500 - Special Education Seminar: Perspectives On Disability

Credit Hours: 1.00. This course is designed to broaden student understanding of disability by exploring across related fields including disability studies, neurodiversity, speech language development, and behavioral characteristics. The goal of this seminar is for students to make connections between special education theory and practice and theories and views of disability beyond special education. Through lecture, discussion, and reflection, students will learn about the construct of disability and how individual strengths, needs, services, and supports extend across the lifespan and beyond the special education classroom.

Learning Outcomes: 1. Identify key theories on disability and describe practices for how these theories can influence teacher practices across various education field placements. 2. Reflect critically on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 3. Complete a minimum of 20 hours in the required field experience setting. 4. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 30900 - Systematic And Explicit Instruction

Credit Hours: 3.00. Students will learn evidence based instructional strategies for students with disabilities. The key components of systematic and explicit instruction will be explored. Students will learn how to use explicit instructional strategies to foster engagement and motivation. Methods for implementing systematic instruction across academic, functional, communication, social, and behavior goals will be addressed. Additionally, implementation in a variety of settings including 1:1, small group, and large group settings will be explored. Planning for generalization and maintenance of skills will also be addressed.

Learning Outcomes: 1. Contrast and compare a range of pedagogical models (e.g. Constructivist, Cognitive, Behavioral, etc) in special education. 2. Use formative and summative assessment to identify students

current level of performance and inform instructional planning and decision making. 3. Identify instructional strategies necessary for promoting engagement, motivation, and opportunities to respond. 4. Identify components of systematic instruction. 5. Identify and implement a variety of strategies necessary for preparing the setting to support learning. 6. Demonstrate understanding of how to use flexible grouping to meet individual and large group needs. Credits: 3.00

EDPS 31100 - Supporting Exceptional Learners: Foundations And Mathematics

Credit Hours: 3.00. Teaching students with special needs requires the ability to locate evidence-based interventions, implement those interventions with fidelity, and track student performance over time. Mathematics is a content area in which success or failure yields major ramifications for postsecondary success. This course will cover the common math interventions employed for mild to severe disabilities across grade levels K-12.

Learning Outcomes: 1. Develop standards-based lesson plans for math that consider individual abilities, interests, learning environments, and cultural and linguistic factors. 2. Use technologies to support instructional assessment, planning, and delivery of mathematics for individuals with exceptionalities. 3. Identify strategies for teaching to mastery and promote generalization of learning in mathematics for both fluency and world problem solving. 4. Produce standards-based lesson plans for numeracy that incorporate evidence-based practices, classroom resources (e.g. peer and paraprofessional), and technological supports for use with students who have diverse learning needs. Credits: 3.00

EDPS 31200 - Inclusive Practices In Cross-Content Curriculum

Credit Hours: 3.00. This course aims to teach best practices for cross-content integration in an inclusive or self-contained classroom. It develops pre-service teacher understanding of core curricula along with how to integrate the curricula across subject areas. This course will also cover curricula to implement a well-rounded education (e.g., visual arts, dance, theater, music, etc.), provide methods for inclusive practices within the content, and discuss the implementation of collaborative approaches to cross-content planning and delivery.

Learning Outcomes: 1. Apply understanding of curricula across curricular content areas to develop integrated units of study which provide a well-rounded education. 2. Develop curricular content knowledge in order to develop learning progressions for individuals with exceptionalities. 3. Select appropriate curricula for individuals with exceptionalities across multiple content areas. 4. Teach cross-disciplinary knowledge and skills (e.g., critical and creative thinking, problem-solving) through integrated lesson planning and curricular units of study. 5. Implement cross-content curriculum across a wide range of settings through collaborative practices. Credits: 3.00

EDPS 40300 - Individual Social, Emotional, Behavioral Supports

Credit Hours: 3.00. This course is designed to prepare students with advanced knowledge and skills in designing and delivering individualized social-emotional and behavioral supports for learners. Emphasis will be placed on functional behavior assessment and function-based interventions and supports.

Learning Outcomes: 1. Identify the advanced principles of behavior and provide classroom examples. 2. Articulate the connection between social-emotional skills and challenging behavior. 3. Define learner behaviors. 4. Select an appropriate behavior measurement system for learner outcomes. 5. Measure and graph learner behavior. 6. Conduct a functional behavior assessment. 7. Develop and implement a behavior support plan. 8. Analyze learner data to guide educational programming decisions. Credits: 3.00

EDPS 42100 - Supporting Exceptional Learners: Social Studies And Science

Credit Hours: 3.00. This course is designed to prepare special educators to deliver social studies and science content to

children and adolescents with disabilities across PK-12 settings. It will also prepare special educators to make programmatic and instructional decisions related to least restrictive environment, appropriate educational supports, assistive technology, accommodations, and modification specific to science and social studies instruction. This course includes assignments that will be linked to EDPS 46100 the Special Education Student Teaching Residency.

Learning Outcomes: 1. Use knowledge of general and specialized social studies curricula to individualize learning for individuals with exceptionalities. 2. Use knowledge of general and specialized science curricula to individualize learning for individuals with exceptionalities. 3. Use strategies to enhance language development and communication skills of individuals with exceptionalities across social studies and science content area. Credits: 3.00

EDPS 32600 - Health, Wellness, And Adaptive Physical Education

Credit Hours: 3.00. Through a blend of theoretical knowledge and practical application, students will acquire the skills necessary to design and implement effective programs that promote overall student wellness. Students will gain a comprehensive understanding of health, wellness, and physical education of school-aged children with and without disabilities: emphasizing the importance of inclusive instruction. Additionally, students in this course will examine the responsibilities and opportunities for teachers in supporting and enhancing student health, with an emphasis on developing effective strategies for creating a healthy and safe learning environment for everyone.

Learning Outcomes: 1. Identify and explain how nutrition and common diseases promote health-related fitness and are associated with disease and injury prevention, for students with and without disabilities. 2. Identify and explain how, basic functions and structures of human body systems, including human growth and development, basic motor skills, movement patterns, and physical activities, promote participation and responsible behaviors and safety in various physical activities for students with and without disabilities. 3. Identify and describe the influence of family, peers, culture, media, technology, as well as student interpersonal relationships and communication, have on various health behaviors for students with and without disabilities. 4. Assess, design, and perform evidence-based health, wellness, and physical education instruction, for students with and without disabilities in promoting their overall health and physical well-being. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally

and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

Required Learner Specialty Pathway Concentration (9 credits)

Other Departmental/Program Course Requirements (21 credits)

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences

between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

Optional Concentration

GPA Requirements

Teacher Licensure Information

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and

schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

EDPS 21100 - Special Education Law, Policy, And Ethical Guidelines

Credit Hours: 3.00. This course provides opportunities for analysis and practical application of special education law and policy through discourse and advocacy. It is designed to provide students with a foundational understanding of special education, including the historical context for special education and the laws, policies, and ethical guidelines that have driven current special education legislation. Special education professionals hold multiple roles...teacher, case manager, general education consultant, instructional aid supervisor, researcher, and administrator to name a few. Moreover, there are numerous responsibilities required to successfully work in each of these roles and in this course we focus on law, policy, and ethical guidelines where they are relevant to special education pre-service teachers and support personnel.

Learning Outcomes: 1. Use observation, academic and personal engagement, and assessment data to develop and understanding of their students as learners at the individual and group level. 2. Demonstrate a strong knowledge of applicable federal, state, local laws, regulations, and policies pertaining to individuals with exceptionalities and how these laws affect the delivery of services and supports. 3. Demonstrate the ability to advocate for resources and professional learning conditions to help individuals with exceptionalities meet instructional, behavioral, social, and transition goals and outcomes. 4. Demonstrate the knowledge to draft sound and ambitiously appropriate individualized education programs. 5. Demonstrate the ability to engage in professional activities and participate actively in peer and professional learning communities that benefit individuals with exceptionalities and families, colleagues and their own professional growth. 6. Demonstrate the ability to keep current with research and contemporary practices in multiple way. Credits: 3.00

15 Credits

Spring 1st Year

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

EDPS 21200 - Collaboration And Family Engagement To Support Students With Disabilities

Credit Hours: 3.00. Students will learn strategies for communicating and collaborating with a variety of team members. Finally culture will be explored. Strategies for collaborating with family members, administrators, paraprofessionals and related service personnel will be explored. This course includes a field experience.

Learning Outcomes: 1. Differentiate between professional and personal perspectives that impact teamwork and collaboration. 2. Describe how cultural values, context (e.g., social expectations, home language, resources, etc.), and experiences impact families' educational involvement and student learning. 3. Describe the additional roles and potential stressors families of children with disabilities may experience. 4. Identify strategies and steps for developing home-school partnerships and facilitating communication with families and school personnel. 5. Identify roles and responsibilities of key members (e.g., speech, school counselor, general education, paraeducator, etc.) of the educational team. 6. Outline and describe strategies (e.g., collaborative goal setting, coteaching, planning, etc.) for training and problem solving. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives

have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDPS 33500 - Reading Instruction For Tier 1 And Tier 2

Credit Hours: 2.00 to 3.00. Given the needs of variety of needs of readers throughout the educational system, this class will focus on effective interventions from the primary grades through high school. Instructors will present a balance of theoretical and practitioner-oriented aspects of reading development and instruction. The course will also examine evidence-based science of reading approaches designed to ensure all students have access to effective, researched-based literacy instruction.

Learning Outcomes: 1. Establish an understanding of P-12 science of reading principles and practices. 2. Develop an understanding of effective Tier 1 and Tier 2 reading instruction. 3. Understand how to implement Tier 1 and Tier 2 reading practices in a classroom. 4. Establish an understanding of reading difficulties/disabilities. 5. Extend knowledge of unique needs of struggling readers. Credits: 2.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it

relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

13 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development.

4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 30900 - Systematic And Explicit Instruction

Credit Hours: 3.00. Students will learn evidence based instructional strategies for students with disabilities. The key components of systematic and explicit instruction will be explored. Students will learn how to use explicit instructional strategies to foster engagement and motivation. Methods for implementing systematic instruction across academic, functional, communication, social, and behavior goals will be addressed. Additionally, implementation in a variety of settings including 1:1, small group, and large group settings will be explored. Planning for generalization and maintenance of skills will also be addressed.

Learning Outcomes: 1. Contrast and compare a range of pedagogical models (e.g. Constructivist, Cognitive, Behavioral, etc) in special education. 2. Use formative and summative assessment to identify students current level of performance and inform instructional planning and decision making. 3. Identify instructional strategies necessary for promoting engagement, motivation, and opportunities to respond. 4. Identify components of systematic instruction. 5. Identify and implement a variety of strategies necessary for preparing the setting to support learning. 6. Demonstrate understanding of how to use flexible grouping to meet individual and large group needs. Credits: 3.00

EDPS 32600 - Health, Wellness, And Adaptive Physical Education

Credit Hours: 3.00. Through a blend of theoretical knowledge and practical application, students will acquire the skills necessary to design and implement effective programs that promote overall student wellness. Students will gain a comprehensive understanding of health, wellness, and physical education of school-aged children with and without disabilities: emphasizing the importance of inclusive instruction. Additionally, students in this course will examine the responsibilities and opportunities for teachers in supporting and enhancing student health, with an emphasis on developing effective strategies for creating a healthy and safe learning environment for everyone.

Learning Outcomes: 1. Identify and explain how nutrition and common diseases promote health-related fitness and are associated with disease and injury prevention, for students with and without disabilities. 2. Identify and explain how, basic functions and structures of human body systems, including human growth and development, basic motor skills, movement patterns, and physical activities, promote participation and responsible behaviors and

safety in various physical activities for students with and without disabilities. 3. Identify and describe the influence of family, peers, culture, media, technology, as well as student interpersonal relationships and communication, have on various health behaviors for students with and without disabilities. 4. Assess, design, and perform evidence-based health, wellness, and physical education instruction, for students with and without disabilities in promoting their overall health and physical well-being. Credits: 3.00

15 Credits

Fall 3rd Year

EDPS 30400 - Assessment And Transition (Data-Based Decision-Making)

Credit Hours: 3.00. This course addresses assessment techniques and transition planning in special education, with applications to curriculum. It includes norm-referenced and curriculum-based measurement, error analyses, observational ratings, data-based decision-making, and transition planning from early intervention to post-secondary settings.

Learning Outcomes: 1. Apply their understanding of specialized curricula to inform their programmatic and instructional decisions for individuals with exceptionalities across a variety of contexts and the continuum of placement options (CEC 3.2) 2. Develop, select, administer, analyze, and interpret multiple measures of student learning, behavior, and the classroom environment to evaluate and support classroom and school-based systems of intervention for students with and without exceptionalities (CEC 4.1). 3. Develop, select, and administer multiple, formal and informal, culturally and linguistically appropriate measures and procedures that are valid and reliable, to contribute to eligibility determination for special education services CEC 4.2). 4. Assess, collaboratively analyze, interpret, and communicate students' progress toward measurable outcomes, using technology as appropriate, to inform both short and long-term planning, and make ongoing adjustments to instruction (CEC 4.3). 5. Utilize appropriate progress monitoring skills in order to develop individualized education plans (IEPs) for students. Credits: 3.00

EDPS 40200 - P-12 Reading Methods For Exceptional Learners

Credit Hours: 2.00 to 3.00. This course is designed to meet the expectations of CEC, NCTQ, IDA and REPA 3 and prepare students in the science of reading for exceptional learners (including students with dyslexia and those with intensive needs) in Tiers 2 and 3. This course will provide implementation details on Response to Intervention (RTI) and Multi-tiered Systems of Support (MTSS). The course will present strategies and programs used in strategic and intensive intervention efforts for those learners needing additional, unique, and/or more focused remediation efforts. Topics will include understanding reading intervention research, the behavior analytic and learning sciences' contributions to understanding the reading process, the sequence of learning to read (systematic instruction), reading to learn, and the five components of reading instruction for P-12 learners. This course will specifically address the REPA 3 Standard: Focused work using (interventions that are direct, explicit, and multi-sensory) as a component of scientifically-based reading.

Learning Outcomes: 1. Review the five components of effective reading instruction for those in P-3 and those in grades 4-12. 2. Explain the models for remediation of prereading/reading difficulties and describe how they function: RTI, MTSS. 3. Describe and demonstrate how to use various screeners and progress monitoring assessments for P-12 students in Tiers 2 and 3. 4. Describe the meaning of direct and systematic instruction. 5. Demonstrate mastery of Corrective Reading sounds. 6. Demonstrate methods of increasing student engagement. 7. Discuss strategies to enhance content area reading performance. 8. Illustrate a scope and sequence for reading remediation for readers needing strategic and

intensive intervention. 9. Explain how reading instruction can be made more explicit for those needing more focused efforts 10. Demonstrate how to provide systematic and explicit small group/one-on-one reading instruction. 11. Describe Big Direct Instruction and published scientifically-based programs that are designed based on the science of reading instruction and demonstrate how they are implemented. 12. Describe the use of Universal Design for Learning and assistive technology approaches to increase access to reading materials and/or improve reading skills. Credits: 2.00 to 3.00

EDCI 36101 - Teaching Social Studies In K-2

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practice strategies for teaching social studies to children in the K-2 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how K-2 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the K-2 grades. Admission to Teacher Education is required.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the K-2 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the K-2 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the K-2 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36401 - Teaching Mathematics In K-2

Credit Hours: 2.00. This course focuses on teaching mathematics in the elementary school, grades K-2, and encouraging children as mathematical problem posers. Students learn what it means to teach math interactionally using children's ideas, beliefs, and experiences as primary resources. Eliciting and interpreting children's mathematical thinking as well as mathematical reasoning, problem solving, communication, and connections are foci. Admission to Teacher Education required.

Learning Outcomes: 1. Gain skill in assessing, evaluating, and responding to the diverse needs of K-2 learners in mathematics. 2. Identify, practice, and reflect on strategies of teaching mathematics to support K-2 students conceptual and procedural knowledge. 3. Analyze mathematics books and tasks for language demands, conceptual and procedural knowledge, and cross-curricular connections. 4. Reflect on the role of K-2 teachers and children's funds of knowledge in relation to their learning of mathematics. Credits: 2.00

EDCI 36501 - Teaching Science Through Design In Grades K-2

Credit Hours: 2.00. The aim of this lab-based course is to prepare students to teach science, engineering, and computational thinking with grade K-2 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade K through 2 learners. At least 9 credits of science content required.

Learning Outcomes: 1. List and contrast current models of science teaching and learning. 2. Demonstrate competence in the use of various learner-centered pedagogical strategies for culturally and linguistically diverse students. 3. Develop collaborative, inquiry based, cross-cultural, learner centered unit plans. 4. Demonstrate competence in assessing student learning and in developing plans of action to meet students' needs. 5. Implement pro-active strategies to establish a safe classroom environment in which all students are encouraged to participate and express their views. 6. Demonstrate competence in the use of instructional technologies to enhance student learning. 7. Demonstrate competence in integrating science, technology, engineering

practices and mathematics (STEM) across the curriculum to address culturally and socially relevant issues. 8. Demonstrate competence in developing unit plans that engage children in the use of the engineering design process to address culturally and socially relevant issues. 9. Demonstrate competence in developing activities that promote children's computational thinking. 10. Explain how his/her personal philosophy of teaching and learning contrasts with the College of Education mission: "We are committed to social justice and education of all the children of all the people - especially in the area of P=12 STEM education." 11. Participate actively in discussing regarding curriculum development and implementation designed to address the needs of culturally diverse learners. Credits: 2.00

EDPS 30500 - Special Education Seminar: Perspectives On Disability

Credit Hours: 1.00. This course is designed to broaden student understanding of disability by exploring across related fields including disability studies, neurodiversity, speech language development, and behavioral characteristics. The goal of this seminar is for students to make connections between special education theory and practice and theories and views of disability beyond special education. Through lecture, discussion, and reflection, students will learn about the construct of disability and how individual strengths, needs, services, and supports extend across the lifespan and beyond the special education classroom.

Learning Outcomes: 1. Identify key theories on disability and describe practices for how these theories can influence teacher practices across various education field placements. 2. Reflect critically on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 3. Complete a minimum of 20 hours in the required field experience setting. 4. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

16 Credits

Spring 3rd Year

EDCI 43400 - Literacy Teaching And Learning In Secondary Schools

Credit Hours: 2.00. Exploration and development of various instructional methods and materials appropriate for supporting adolescent literacy in secondary English (i.e., middle and high school English Language Arts), including the teaching of reading. Content-area literacy methods and materials are also addressed. Includes a field experience of up to 20 hours in a secondary English school setting.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of secondary English literacy. 2. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 3. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary English. Credits: 2.00

EDPS 36300 - Psychoeducational, Medical, And Physical Aspects Of Individuals With Disabilities

Credit Hours: 3.00. Introduction to characteristics of individuals with mild and severe intellectual disabilities: defining characteristics, etiological factors, assessment, social, legal and educational issues, and basic physical or medical disability management issues and techniques. Admission to Teacher Education Program, passage of Gates A required.

Learning Outcomes: 1. Demonstrate the knowledge of the roles and responsibilities of the educational team. 2. Demonstrate the knowledge of instructional strategies needed to promote independence. 3. Demonstrate the knowledge of motor tone and motor patterns. 4. Demonstrate the knowledge of proper positioning, lifting, and handling techniques. 5. Demonstrate the knowledge of feeding and toileting techniques. 6. Demonstrate the

knowledge of infection control. 7. Demonstrate the knowledge of assessment and monitoring techniques of major health conditions. Credits: 3.00

EDPS 30500 - Special Education Seminar: Perspectives On Disability

Credit Hours: 1.00. This course is designed to broaden student understanding of disability by exploring across related fields including disability studies, neurodiversity, speech language development, and behavioral characteristics. The goal of this seminar is for students to make connections between special education theory and practice and theories and views of disability beyond special education. Through lecture, discussion, and reflection, students will learn about the construct of disability and how individual strengths, needs, services, and supports extend across the lifespan and beyond the special education classroom.

Learning Outcomes: 1. Identify key theories on disability and describe practices for how these theories can influence teacher practices across various education field placements. 2. Reflect critically on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 3. Complete a minimum of 20 hours in the required field experience setting. 4. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 31100 - Supporting Exceptional Learners: Foundations And Mathematics

Credit Hours: 3.00. Teaching students with special needs requires the ability to locate evidence-based interventions, implement those interventions with fidelity, and track student performance over time. Mathematics is a content area in which success or failure yields major ramifications for postsecondary success. This course will cover the common math interventions employed for mild to severe disabilities across grade levels K-12.

Learning Outcomes: 1. Develop standards-based lesson plans for math that consider individual abilities, interests, learning environments, and cultural and linguistic factors. 2. Use technologies to support instructional assessment, planning, and delivery of mathematics for individuals with exceptionalities. 3. Identify strategies for teaching to mastery and promote generalization of learning in mathematics for both fluency and world problem solving. 4. Produce standards-based lesson plans for numeracy that incorporate evidence-based practices, classroom resources (e.g. peer and paraprofessional), and technological supports for use with students who have diverse learning needs. Credits: 3.00

EDPS 31200 - Inclusive Practices In Cross-Content Curriculum

Credit Hours: 3.00. This course aims to teach best practices for cross-content integration in an inclusive or self-contained classroom. It develops pre-service teacher understanding of core curricula along with how to integrate the curricula across subject areas. This course will also cover curricula to implement a well-rounded education (e.g., visual arts, dance, theater, music, etc.), provide methods for inclusive practices within the content, and discuss the implementation of collaborative approaches to cross-content planning and delivery.

Learning Outcomes: 1. Apply understanding of curricula across curricular content areas to develop integrated units of study which provide a well-rounded education. 2. Develop curricular content knowledge in order to develop learning progressions for individuals with exceptionalities. 3. Select appropriate curricula for individuals with exceptionalities across multiple content areas. 4. Teach cross-disciplinary knowledge and skills (e.g., critical and creative thinking, problem-solving) through integrated lesson planning and curricular units of study. 5. Implement cross-content curriculum across a wide range of settings through collaborative practices. Credits: 3.00

EDPS 40300 - Individual Social, Emotional, Behavioral Supports

Credit Hours: 3.00. This course is designed to prepare students with advanced knowledge and skills in designing and delivering individualized social-emotional and behavioral supports for learners. Emphasis will be placed on functional behavior

assessment and function-based interventions and supports.

Learning Outcomes: 1. Identify the advanced principles of behavior and provide classroom examples. 2. Articulate the connection between social-emotional skills and challenging behavior. 3. Define learner behaviors. 4. Select an appropriate behavior measurement system for learner outcomes. 5. Measure and graph learner behavior. 6. Conduct a functional behavior assessment. 7. Develop and implement a behavior support plan. 8. Analyze learner data to guide educational programming decisions. Credits: 3.00

18 Credits

Fall 4th Year

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDPS 46100 - Practicum In Strategies For Teaching Individuals With Disabilities

Credit Hours: 1.00 to 6.00. Practicum experience in assessment and teaching of individuals with disabilities. Experience in design, delivery, implementation, and evaluation of instruction. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A and B.

Learning Outcomes: 1. Provide instruction that is responsive to student differences and promotes development and learning for all students. 2. Match expectations to the unique characteristics, abilities, developmental levels, and behavior of students. 3. Identify characteristics of students with disabilities and design classroom accommodations. 4. Adjust instruction according to student needs and performances. 5. Use a variety of evidence-based instructional strategies. 6. Plan and deliver standards-based, data-driven differentiated instruction that actively engages students in the learning process. 7. Demonstrate an appreciation and concern for students as individuals and interact with them in positive ways that encourage and teach appropriate behavior. 8. Model effective use of language. 9. Demonstrate effective classroom and behavior management and establish a positive, productive, and safe learning environment with high expectations for all students. 10. Integrate instructional technology by creating instructional materials, delivering instruction using technology, or encouraging student use of technology in assignments. 11. Reflect on practices. 12. Engage in professional development activities to remain current with best practices. 13. Collaborate

effectively with colleagues, parents, and others to increase the effectiveness of instruction and engage in professional growth. Credits: 1.00 to 6.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 46300 - Teaching Individuals With Severe Disabilities

Credit Hours: 3.00. Education of individuals with severe or multiple disabilities. Application of innovative technology, design of individual educational programs, strategies and methods for instruction, evaluation of instruction, community-based instruction, generalization and maintenance of skills. Admission to Teacher Education Program, passage of Gate A required.

Learning Outcomes: 1. Demonstrate the knowledge of the various aspects of trial management. 2. Demonstrate the knowledge of the ability to record, graph, and interpret ongoing data of student performance. 3. Demonstrate the knowledge of the ability to apply the principles of learning and strategies of instruction. 4. Demonstrate the knowledge of the components of community referenced curriculum and community-based instruction. 5. Demonstrate the knowledge of the inclusionary/collaborative strategies for students with severe disabilities. Credits: 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 42100 - Supporting Exceptional Learners: Social Studies And Science

Credit Hours: 3.00. This course is designed to prepare special educators to deliver social studies and science content to children and adolescents with disabilities across PK-12 settings. It will also prepare special educators to make programmatic and instructional decisions related to least restrictive environment, appropriate educational supports, assistive technology, accommodations, and modification specific to science and social studies instruction. This course includes assignments that will be linked to EDPS 46100 the Special Education Student Teaching Residency.

Learning Outcomes: 1. Use knowledge of

general and specialized social studies curricula to individualize learning for individuals with exceptionalities. 2. Use knowledge of general and specialized science curricula to individualize learning for individuals with exceptionalities. 3. Use strategies to enhance language development and communication skills of individuals with exceptionalities across social studies and science content area. Credits: 3.00

16 Credits

Spring 4th Year

EDPS 49800 - Supervised Teaching- Special Education (UCC: OC)

Credit Hours: 1.00 to 16.00. A student planning to enroll in EDCI 49600, EDCI 49800, EDCI 49900; EDPS 49800, EDPS 49900, EDPS 56100, or EDPS 56600 in the spring or fall semester of any academic year must secure, complete, and submit a student teaching application form between the middle of September and November 1 preceding the academic year during which he or she will be enrolled in the course. Failure to file the application during or prior to this time will make it virtually impossible for the student to receive a student teaching assignment for that year. Application forms may be obtained in and submitted to Room 3241, Liberal Arts and Education Building. Teaching full time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A, B, and C.

University Core Curriculum (UCC): (UCC: OC) Credits: 1.00 to 16.00

12 Credits

Special Education/Elementary Education, BA

About the Program

Degree Requirements

Departmental/Program Major Requirements (94 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the

cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDPS 46100 - Practicum In Strategies For Teaching Individuals With Disabilities

Credit Hours: 1.00 to 6.00. Practicum experience in assessment and teaching of individuals with disabilities. Experience in design, delivery, implementation, and evaluation of instruction. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A and B.

Learning Outcomes: 1. Provide instruction that is responsive to student differences and promotes development and learning for all students. 2. Match expectations to the unique characteristics, abilities, developmental levels, and behavior of students. 3. Identify characteristics of students with disabilities and design classroom accommodations. 4. Adjust instruction according to student needs and performances. 5. Use a variety of evidence-based instructional strategies. 6. Plan and deliver standards-based, data-driven differentiated instruction that actively engages students in the learning process. 7. Demonstrate an appreciation and concern for students as individuals and interact with them in positive ways that encourage and teach appropriate behavior. 8. Model effective use of language. 9. Demonstrate effective classroom and behavior management and establish a positive, productive, and safe learning environment with high expectations for all students. 10. Integrate instructional technology by creating instructional materials, delivering instruction using technology, or encouraging student use of technology in assignments. 11. Reflect on practices. 12. Engage in professional development activities to remain current with best practices. 13. Collaborate effectively with colleagues, parents, and others to increase the effectiveness of instruction and engage in professional growth. Credits: 1.00 to 6.00

EDPS 49800 - Supervised Teaching- Special Education (UCC: OC)

Credit Hours: 1.00 to 16.00. A student planning to enroll in EDCI 49600, EDCI 49800, EDCI 49900; EDPS 49800, EDPS 49900, EDPS 56100, or EDPS 56600 in the spring or fall semester of any academic year must secure, complete, and submit a student teaching application form between the middle of September and November 1 preceding the academic year during which he or she will be enrolled in the course. Failure to file the application during or prior to this time will make it virtually impossible for the student to receive a student teaching assignment for that year. Application forms may be obtained in and submitted to Room 3241, Liberal Arts and Education Building. Teaching full time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A, B, and C.

University Core Curriculum (UCC): (UCC: OC)
Credits: 1.00 to 16.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)
Learning Outcomes: 1. Learn what it means to

teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 49600 - Student Teaching In The Elementary School (UCC: OC)

Credit Hours: 6.00 to 16.00. Full-time elementary classroom teaching experiences and a student teaching seminar under the mentorship of the classroom teacher and a University supervisor.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each child's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each child's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these

larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 33500 - Reading Instruction For Tier 1 And Tier 2

Credit Hours: 2.00 to 3.00. Given the needs of variety of needs of readers throughout the educational system, this class will focus on effective interventions from the primary grades through high school. Instructors will present a balance of theoretical and practitioner-oriented aspects of reading development and instruction. The course will also examine evidence-based

science of reading approaches designed to ensure all students have access to effective, researched-based literacy instruction.

Learning Outcomes: 1. Establish an understanding of P-12 science of reading principles and practices. 2. Develop an understanding of effective Tier 1 and Tier 2 reading instruction. 3. Understand how to implement Tier 1 and Tier 2 reading practices in a classroom. 4. Establish an understanding of reading difficulties/disabilities. 5. Extend knowledge of unique needs of struggling readers. Credits: 2.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 30400 - Assessment And Transition (Data-Based Decision-Making)

Credit Hours: 3.00. This course addresses assessment techniques and transition planning in special education, with applications to curriculum. It includes norm-referenced and curriculum-based measurement, error analyses, observational ratings, data-based decision-making, and transition planning from early intervention to post-secondary settings.

Learning Outcomes: 1. Apply their understanding of specialized curricula to inform their programmatic and instructional decisions for individuals with exceptionalities across a variety of contexts and the continuum of placement options (CEC 3.2) 2. Develop, select, administer, analyze, and interpret multiple measures of student learning, behavior, and the classroom environment to evaluate and support classroom and school-based systems of intervention for students with and without exceptionalities (CEC 4.1). 3. Develop, select, and administer multiple, formal and informal, culturally and linguistically appropriate measures and procedures that are valid and reliable, to contribute to eligibility determination for special education services CEC 4.2). 4. Assess, collaboratively analyze, interpret, and communicate students' progress toward measurable outcomes, using technology as appropriate, to inform both short and long-term planning, and make ongoing adjustments to instruction (CEC 4.3). 5. Utilize appropriate progress monitoring skills in order to develop individualized education plans (IEPs) for students. Credits: 3.00

EDPS 40200 - P-12 Reading Methods For Exceptional Learners

Credit Hours: 2.00 to 3.00. This course is designed to meet the expectations of CEC, NCTQ, IDA and REPA 3 and prepare students in the science of reading for exceptional learners (including students with dyslexia and those with intensive needs) in Tiers 2 and 3. This course will provide implementation details on Response to Intervention (RTI) and Multi-tiered Systems of Support (MTSS). The course will present strategies and programs used in strategic and intensive intervention efforts for those learners needing additional, unique, and/or more focused remediation efforts. Topics will include understanding reading intervention research, the behavior analytic and learning sciences' contributions to understanding the reading process, the sequence of learning to read (systematic instruction), reading to learn, and the five components of reading instruction for P-12 learners. This course will specifically address the REPA 3 Standard: Focused work using (interventions that are direct, explicit, and multi-sensory) as a component of scientifically-based reading.

Learning Outcomes: 1. Review the five components of effective reading instruction for those in P-3 and those in grades 4-12. 2. Explain the models for remediation of prereading/reading difficulties and describe how they function: RTI, MTSS. 3. Describe and demonstrate how to use various screeners and progress monitoring assessments for P-12 students in Tiers 2 and 3. 4. Describe the meaning of direct and systematic instruction. 5. Demonstrate mastery of Corrective Reading sounds. 6. Demonstrate methods of increasing student engagement. 7. Discuss strategies to enhance content area reading performance. 8. Illustrate a scope and sequence for reading remediation for readers needing strategic and intensive intervention. 9. Explain how reading instruction can be made more explicit for those needing more focused efforts 10. Demonstrate how to provide systematic and explicit small group/one-on-one reading instruction. 11. Describe Big Direct Instruction and published scientifically-based programs that are designed based on the science of reading instruction and demonstrate how they are implemented. 12. Describe the use of Universal Design for Learning and assistive technology approaches to increase access to reading materials and/or improve reading skills. Credits: 2.00 to 3.00

EDCI 36101 - Teaching Social Studies In K-2

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practice strategies for teaching social studies to children in the K-2 classroom. Students will work to identify

the most important social studies knowledge, skills and dispositions; investigate how K-2 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the K-2 grades. Admission to Teacher Education is required.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the K-2 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the K-2 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the K-2 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36102 - Teaching Social Studies In 3-6

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practices strategies for teaching social studies to children in the 3-6 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how 3-6 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the 3-6 grades.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the 3-6 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the 3-6 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the 3-6 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36401 - Teaching Mathematics In K-2

Credit Hours: 2.00. This course focuses on teaching mathematics in the elementary school, grades K-2, and encouraging children as mathematical problem posers. Students learn what it means to teach math interactionally using children's ideas, beliefs, and experiences as primary resources. Eliciting and interpreting children's mathematical thinking as well as mathematical reasoning, problem solving, communication, and connections are foci. Admission to Teacher Education required.

Learning Outcomes: 1. Gain skill in assessing, evaluating, and responding to the diverse needs of K-2 learners in mathematics. 2. Identify, practice, and reflect on strategies of teaching mathematics to support K-2 students conceptual and procedural knowledge. 3. Analyze mathematics books and tasks for language demands, conceptual and procedural knowledge, and cross-curricular connections. 4. Reflect on the role of K-2 teachers and children's funds of knowledge in relation to their learning of mathematics. Credits: 2.00

EDCI 36402 - Teaching Mathematics In Grades 3-6

Credit Hours: 2.00. Focuses on teaching mathematics in the elementary school grades 3-6. Students learn what it means to teach mathematics interactionally using children's ideas, beliefs, and experiences as primary resources. Mathematical reasoning, problem solving, communication, and connections are foci.

Learning Outcomes: 1. Develop, apply, analyze, and evaluate strategies of teaching mathematics and their relationships to your beliefs and knowledge about how children learn mathematics. 2. Know and analyze methods of assessing and responding to the needs of mathematics learners labeled in schools. 3. Analyze and apply student's mathematical conceptual understanding and procedural knowledge to the development of problem-solving based mathematics lessons. 4. Create and analyze instructional activities drawing from student's conceptual understanding and procedural knowledge as primary resources. Credits: 2.00

EDCI 36501 - Teaching Science Through Design In Grades K-2

Credit Hours: 2.00. The aim of this lab-based course is to prepare students to teach science, engineering, and computational thinking with grade K-2 learners by building on existing pedagogical and subject matter knowledge in science.

Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade K through 2 learners. At least 9 credits of science content required.

Learning Outcomes: 1. List and contrast current models of science teaching and learning. 2. Demonstrate competence in the use of various learner-centered pedagogical strategies for culturally and linguistically diverse students. 3. Develop collaborative, inquiry based, cross-cultural, learner centered unit plans. 4. Demonstrate competence in assessing student learning and in developing plans of action to meet students' needs. 5. Implement pro-active strategies to establish a safe classroom environment in which all students are encouraged to participate and express their views. 6. Demonstrate competence in the use of instructional technologies to enhance student learning. 7. Demonstrate competence in integrating science, technology, engineering practices and mathematics (STEM) across the curriculum to address culturally and socially relevant issues. 8. Demonstrate competence in developing unit plans that engage children in the use of the engineering design process to address culturally and socially relevant issues. 9. Demonstrate competence in developing activities that promote children's computational thinking. 10. Explain how his/her personal philosophy of teaching and learning contrasts with the College of Education mission: "We are committed to social justice and education of all the children of all the people - especially in the area of P=12 STEM education." 11. Participate actively in discussing regarding curriculum development and implementation designed to address the needs of culturally diverse learners. Credits: 2.00

EDCI 36502 - Teaching Science Through Design In Grades 3-6

Credit Hours: 2.00. The aim of this course is to prepare students to teach science, engineering, and computational thinking with grade 3-6 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade 3 through 6 learners. At least 9 credits of science content courses are required.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 2.00

EDPS 21100 - Special Education Law, Policy, And Ethical Guidelines

Credit Hours: 3.00. This course provides opportunities for analysis and practical application of special education law and policy through discourse and advocacy. It is designed to provide students with a foundational understanding of special education, including the historical context for special education and the laws, policies, and ethical guidelines that have driven current special education legislation. Special education professionals hold multiple roles...teacher, case manager, general education consultant, instructional aid supervisor, researcher, and administrator to name a few. Moreover, there are numerous responsibilities required to successfully work in each of these roles and in this course we focus on law, policy, and ethical guidelines where they are relevant to special education pre-service teachers and support personnel.

Learning Outcomes: 1. Use observation, academic and personal engagement, and assessment data to develop and understanding of their students as learners at the individual and group level. 2. Demonstrate a strong knowledge of applicable federal, state, local laws, regulations, and policies pertaining to individuals with exceptionalities and how these laws affect the delivery of services and supports. 3. Demonstrate the ability to advocate for resources and professional learning conditions to help individuals with exceptionalities meet instructional, behavioral,

social, and transition goals and outcomes. 4. Demonstrate the knowledge to draft sound and ambitiously appropriate individualized education programs. 5. Demonstrate the ability to engage in professional activities and participate actively in peer and professional learning communities that benefit individuals with exceptionalities and families, colleagues and their own professional growth. 6. Demonstrate the ability to keep current with research and contemporary practices in multiple way. Credits: 3.00

EDPS 21200 - Collaboration And Family Engagement To Support Students With Disabilities

Credit Hours: 3.00. Students will learn strategies for communicating and collaborating with a variety of team members. Finally culture will be explored. Strategies for collaborating with family members, administrators, paraprofessionals and related service personnel will be explored. This course includes a field experience.

Learning Outcomes: 1. Differentiate between professional and personal perspectives that impact teamwork and collaboration. 2. Describe how cultural values, context (e.g., social expectations, home language, resources, etc.), and experiences impact families' educational involvement and student learning. 3. Describe the additional roles and potential stressors families of children with disabilities may experience. 4. Identify strategies and steps for developing home-school partnerships and facilitating communication with families and school personnel. 5. Identify roles and responsibilities of key members (e.g., speech, school counselor, general education, paraeducator, etc.) of the educational team. 6. Outline and describe strategies (e.g., collaborative goal setting, coteaching, planning, etc.) for training and problem solving. Credits: 3.00

EDPS 30500 - Special Education Seminar: Perspectives On Disability

Credit Hours: 1.00. This course is designed to broaden student understanding of disability by exploring across related fields including disability studies, neurodiversity, speech language development, and behavioral characteristics. The goal of this seminar is for students to make connections between special education theory and practice and theories and views of disability beyond special education. Through lecture, discussion, and reflection, students will learn about the construct of disability and how individual strengths, needs, services, and supports extend across the lifespan and beyond the special education classroom.

Learning Outcomes: 1. Identify key theories on disability and describe practices for how these theories can influence teacher practices across various education field placements. 2. Reflect critically on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 3. Complete a minimum of 20 hours in the required field experience setting. 4. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 30900 - Systematic And Explicit Instruction

Credit Hours: 3.00. Students will learn evidence based instructional strategies for students with disabilities. The key components of systematic and explicit instruction will be explored. Students will learn how to use explicit instructional strategies to foster engagement and motivation. Methods for implementing systematic instruction across academic, functional, communication, social, and behavior goals will be addressed. Additionally, implementation in a variety of settings including 1:1, small group, and large group settings will be explored. Planning for generalization and maintenance of skills will also be addressed.

Learning Outcomes: 1. Contrast and compare a range of pedagogical models (e.g. Constructivist, Cognitive, Behavioral, etc) in special education. 2. Use formative and summative assessment to identify students current level of performance and inform instructional planning and decision making. 3. Identify instructional strategies necessary for promoting engagement, motivation, and opportunities to respond. 4. Identify components

of systematic instruction. 5. Identify and implement a variety of strategies necessary for preparing the setting to support learning. 6. Demonstrate understanding of how to use flexible grouping to meet individual and large group needs. Credits: 3.00

EDPS 31100 - Supporting Exceptional Learners: Foundations And Mathematics

Credit Hours: 3.00. Teaching students with special needs requires the ability to locate evidence-based interventions, implement those interventions with fidelity, and track student performance over time. Mathematics is a content area in which success or failure yields major ramifications for postsecondary success. This course will cover the common math interventions employed for mild to severe disabilities across grade levels K-12.

Learning Outcomes: 1. Develop standards-based lesson plans for math that consider individual abilities, interests, learning environments, and cultural and linguistic factors. 2. Use technologies to support instructional assessment, planning, and delivery of mathematics for individuals with exceptionalities. 3. Identify strategies for teaching to mastery and promote generalization of learning in mathematics for both fluency and world problem solving. 4. Produce standards-based lesson plans for numeracy that incorporate evidence-based practices, classroom resources (e.g. peer and paraprofessional), and technological supports for use with students who have diverse learning needs. Credits: 3.00

EDPS 31200 - Inclusive Practices In Cross-Content Curriculum

Credit Hours: 3.00. This course aims to teach best practices for cross-content integration in an inclusive or self-contained classroom. It develops pre-service teacher understanding of core curricula along with how to integrate the curricula across subject areas. This course will also cover curricula to implement a well-rounded education (e.g., visual arts, dance, theater, music, etc.), provide methods for inclusive practices within the content, and discuss the implementation of collaborative approaches to cross-content planning and delivery.

Learning Outcomes: 1. Apply understanding of curricula across curricular content areas to develop integrated units of study which provide a well-rounded education. 2. Develop curricular content knowledge in order to develop learning progressions for individuals with exceptionalities. 3. Select appropriate curricula for individuals with exceptionalities across multiple content areas. 4. Teach cross-disciplinary knowledge and skills (e.g., critical and creative thinking, problem-solving) through integrated lesson planning and curricular units of study. 5. Implement cross-content curriculum across a wide range of settings through collaborative practices. Credits: 3.00

EDPS 40300 - Individual Social, Emotional, Behavioral Supports

Credit Hours: 3.00. This course is designed to prepare students with advanced knowledge and skills in designing and delivering individualized social-emotional and behavioral supports for learners. Emphasis will be placed on functional behavior assessment and function-based interventions and supports.

Learning Outcomes: 1. Identify the advanced principles of behavior and provide classroom examples. 2. Articulate the connection between social-emotional skills and challenging behavior. 3. Define learner behaviors. 4. Select an appropriate behavior measurement system for learner outcomes. 5. Measure and graph learner behavior. 6. Conduct a functional behavior assessment. 7. Develop and implement a behavior support plan. 8. Analyze learner data to guide educational programming decisions. Credits: 3.00

EDPS 42100 - Supporting Exceptional Learners: Social Studies And Science

Credit Hours: 3.00. This course is designed to prepare special educators to deliver social studies and science content to children and adolescents with disabilities across PK-12 settings. It will also prepare special educators to make programmatic and instructional decisions related to least restrictive environment, appropriate educational supports, assistive technology, accommodations, and modification specific to science and social studies instruction. This course includes assignments that will be linked to EDPS 46100 the Special Education Student

Teaching Residency.

Learning Outcomes: 1. Use knowledge of general and specialized social studies curricula to individualize learning for individuals with exceptionalities. 2. Use knowledge of general and specialized science curricula to individualize learning for individuals with exceptionalities. 3. Use strategies to enhance language development and communication skills of individuals with exceptionalities across social studies and science content area. Credits: 3.00

EDCI 32602 - Teaching Literacy In 3-6

Credit Hours: 2.00. Students will build on material learned in EDCI 32501. They will concentrate on increasing student's literacy skills with a focus on fluency, phonics, strategic reading, vocabulary, literary analysis, content area reading, the writing process, and building comprehension skills. They will learn to select appropriate materials, employ strategies to meet the cognitive and affective literacy needs of all children, and create integrate, and use data from various forms of assessment to inform the teaching and learning process.

Learning Outcomes: 1. Demonstrate an understanding of theoretical and evidence-based foundations that guide reading, writing processes, and instruction. 2. Design developmentally appropriate instruction that addresses the needs of all learners. 3. Teach developmentally appropriate lessons/units in the school setting. 4. Assess student learning by designing/using/adjusting formative and summative assessments for your group of students, and pre-assessments. 5. Reflect and analyze your own teaching. Credits: 2.00

EDPS 32600 - Health, Wellness, And Adaptive Physical Education

Credit Hours: 3.00. Through a blend of theoretical knowledge and practical application, students will acquire the skills necessary to design and implement effective programs that promote overall student wellness. Students will gain a comprehensive understanding of health, wellness, and physical education of school-aged children with and without disabilities: emphasizing the importance of inclusive instruction. Additionally, students in this course will examine the responsibilities and opportunities for teachers in supporting and enhancing student health, with an emphasis on developing effective strategies for creating a healthy and safe learning environment for everyone.

Learning Outcomes: 1. Identify and explain how nutrition and common diseases promote health-related fitness and are associated with disease and injury prevention, for students with and without disabilities. 2. Identify and explain how, basic functions and structures of human body systems, including human growth and development, basic motor skills, movement patterns, and physical activities, promote participation and responsible behaviors and safety in various physical activities for students with and without disabilities. 3. Identify and describe the influence of family, peers, culture, media, technology, as well as student interpersonal relationships and communication, have on various health behaviors for students with and without disabilities. 4. Assess, design, and perform evidence-based health, wellness, and physical education instruction, for students with and without disabilities in promoting their overall health and physical well-being. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in

diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDCI 31103 - Integrating Media In The K-6 Classroom

Credit Hours: 3.00. This course prepares teacher candidates to select, evaluate, and integrate children's literature and media in K-6 classrooms. Focusing on high-quality, diverse texts and media, candidates will learn to choose materials that are developmentally appropriate and reflect the diversity of the world in which we live. Emphasis will be placed on the critical role literature and media play in fostering vocabulary development, enhancing critical thinking skills, and supporting literacy development across subjects. The course will focus on how K-6 students learn to use comprehension strategies independently and efficiently as they progress through elementary school fostering both their academic growth and their ability to engage with diverse texts.

Learning Outcomes: 1. Integrate literature and media into content area lessons to enhance vocabulary (including academic language skills), critical thinking, and comprehension. 2. Select and evaluate three trade books to read aloud during a math, a social studies, and a science lesson. 3. Identify instructional strategies supported by the Science of Reading that teach k-6 students' academic language skills, vocabulary knowledge, and reading and listening comprehension. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

Optional Concentrations

Other Departmental/Program Course Requirements (33 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

BIOL 20500 - Biology For Elementary School Teachers (UCC: SCI)

Credit Hours: 3.00. Unifying concepts of biology taught with materials appropriate for future elementary school teachers. Does not satisfy requirements for College of Science Majors. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

MA 13900 - Mathematics For Elementary Teachers III

Credit Hours: 3.00. Geometric, measurement and spatial reasoning in one, two and three dimensions as the basis for elementary school geometry. Metric and non-metric geometry, transformation geometry. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. Differentiate between various polygons based on number of sides and measures of angles. 2. Find the sum of the measures of the interior angles of a polygon. 3. Draw nets for polyhedra. 4. Differentiate between various types of polyhedra including all regular polyhedra. 5. Determine number of lines of symmetry for a plane figure and orders of rotational symmetry. 6. Determine number of planes of symmetry for a solid figure as well as axes of rotational symmetry. 7. Recognize and draw shapes that tessellate the plane and solid figures that tessellate space. 8. Determine dimensions of similar planar figures. 9. Determine surface area and volume of similar solid figures. 10. Construct perpendicular bisectors and parallel lines using a compass and straightedge. 11. Recognize and draw rigid motions of shapes including translations, reflections and rotations. 12. Determine area of plane figures and surface area and volume of solid figures. 13. Use the Pythagorean Theorem to determine diagonals of solid figures. Credits: 3.00

ECON 21900 - Economics For Future Elementary Teachers

Credit Hours: 3.00. A principles of economics course designed for future elementary and social studies teachers. The purpose of this course is to: 1) introduce the future teacher to basic economic concepts required by the Indiana Academic Standards for Social Studies, K-6, 2) learn methods for teaching these concepts in the K-6 curriculum, and 3) develop a catalog of curriculum materials appropriate for teaching economics in grades K-6. No credit for management students.

Learning Outcomes: 1. Identify and understand the basic concepts and principles of economics in order to teach at the elementary school level. 2. Develop an `Economic Way of Thinking? that can be utilized to make more efficient choices as consumers, and as voters. 3. Identify supplementary materials (DVDs, online and app-based resources, simulations, curriculum materials, etc.) that can be used in K-6 teaching or as a supplement in K-6 classrooms. 4. Apply this 'Economic Way of Thinking' in the analysis existing curriculum in K-6 economics, and of

everyday current events. 5. Utilize the basic concepts and principles of economics to design and develop new K-6 curriculum. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

EDCI 22200 - Knowing The World Through Mathematics (UCC: QR)

Credit Hours: 3.00. In this course, *Knowing the World Through Mathematics*, students will connect their situated experiences to larger trends in equity and social justice around the globe through mathematical investigations embedded in the context of the United Nations 2030 Agenda (United Nations, 2015). Students in this course will make use of mathematics and global policy documents to critically interpret, model, and represent world phenomena. Students will collaboratively analyze quantitative information gathered through trustworthy, globally representative data sets and individual survey and questionnaire items to investigate local experiences in relation to students' area(s) of interest. Students will learn about and utilize the GAISE Framework for Statistical Problem Solving (Franklin, et al., 2005) and the Four Dimensions of Equity in Mathematics Education (Gutiérrez, 2012) to ground their discussions and deliverables for *Knowing the World Through Mathematics*.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use a critical mathematics perspective to interpret world patterns, situations, and events. 2. Create mathematical models of world phenomena. 3. Use multiple mathematical representations to present global issues. 4. Identify and implement appropriate mathematical strategies to investigate world phenomena. 5. Express mathematical arguments related to world phenomena. 6. Use mathematics to explore global policy documents. 7. Explore world phenomena through quantitative (and qualitative) methods. Credits: 3.00

PHYS 23000 - Physical Science For Elementary Education (UCC: SCI)

Credit Hours: 3.00. The course is aimed at facilitating future elementary teachers to learn physical science that will prepare them to teach these concepts to future elementary students grades K-6. The course will be focused on learning physical science by doing science i.e. developing understanding by collaborative activities and discussion in the laboratory and lecture and communicating your ideas to others. The course will have one 50-minute lecture and two 110-minute laboratory meetings each week. The course content is consistent with the CAEP (Council for the Accreditation of Educator Preparation) K-6 Elementary Teacher Preparation Standards (Standard 2: Understanding and Applying Content and Curricular Knowledge for Teaching in *Physical Science* and *Engineering Design*) and

the NGSS (Next Generation Science Standards) Disciplinary Core Ideas (DCIs) for the Physical Sciences (*Physical Sciences* PS1, PS2, PS3, and PS4) as well as many of the Science and Engineering Practices (SEPs). The course will be divided into four units: 1) Matter and Interactions, 2) Motion and Stability, 3) Energy, and 4) Waves and their applications. All of these units will be delivered through the paradigm of solving engineering design problems. Engineering design involves many different practices: problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and apply physical science concepts (matter and interactions, motion and stability, energy, waves and their applications) at a level deeper than but necessary to teach elementary school. 2. Understand and apply the engineering design process, including problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions. Credits: 3.00

EAPS 31201 - Earth Systems Science For Elementary Teachers (UCC: SCI)

Credit Hours: 3.00. An Earth Systems Science perspective draws upon the wealth of Earth systems science research in both content and pedagogy. This approach has served as a guiding framework for how students learn, engage in, and develop deep understandings of the interconnections among Earth's many different systems of geosphere, hydrosphere, atmosphere, and biosphere and the important role that human civilization plays in affecting Earth's other systems. This course takes an Earth Systems Science approach - an emerging transdisciplinary endeavor - to build students' understanding of the structure and functioning of the Earth as a complex, adaptive system.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. View the Earth as a component of an interconnected system. 2. Investigate the accretion of the solar system and Earth and their respective histories. 3. Scale and model the solar system. 4. Model tectonic plates and different plate boundaries. 5. Analyze atmospheric conditions and make short-term weather predictions. 6. Recognize and evaluate Earth's resources. 7. Create a plan to address multiple interrelated challenges. 8. Evaluate the natural environment for anthropomorphic affects. 9. Develop critical thinking and problem-solving skills. 10. Apply guided-inquiry methods to learning. Credits: 3.00

GPA Requirements

Teacher Licensure Information

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

BIOL 20500 - Biology For Elementary School Teachers (UCC: SCI)

Credit Hours: 3.00. Unifying concepts of biology taught with materials appropriate for future elementary school teachers. Does not satisfy requirements for College of Science Majors. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

EDPS 21100 - Special Education Law, Policy, And Ethical Guidelines

Credit Hours: 3.00. This course provides opportunities for analysis and practical application of special education law and policy through discourse and advocacy. It is designed to provide students with a foundational understanding of special education, including the historical context for special education and the laws, policies, and ethical guidelines that have driven current special education legislation. Special education professionals hold multiple roles...teacher, case manager, general education consultant, instructional aid supervisor, researcher, and administrator to name a few. Moreover, there are numerous responsibilities required to successfully work in each of these roles and in this course we focus on law, policy, and ethical guidelines where they are relevant to special education pre-service teachers and support personnel.

Learning Outcomes: 1. Use observation, academic and personal engagement, and assessment data to develop and understanding of their students as learners at the individual and group level. 2. Demonstrate a strong

knowledge of applicable federal, state, local laws, regulations, and policies pertaining to individuals with exceptionalities and how these laws affect the delivery of services and supports. 3. Demonstrate the ability to advocate for resources and professional learning conditions to help individuals with exceptionalities meet instructional, behavioral, social, and transition goals and outcomes. 4. Demonstrate the knowledge to draft sound and ambitiously appropriate individualized education programs. 5. Demonstrate the ability to engage in professional activities and participate actively in peer and professional learning communities that benefit individuals with exceptionalities and families, colleagues and their own professional growth. 6. Demonstrate the ability to keep current with research and contemporary practices in multiple way. Credits: 3.00

18 Credits

Spring 1st Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

EDCI 22200 - Knowing The World Through Mathematics (UCC: QR)

Credit Hours: 3.00. In this course, *Knowing the World Through Mathematics*, students will connect their situated experiences to larger trends in equity and social justice around the globe

through mathematical investigations embedded in the context of the United Nations 2030 Agenda (United Nations, 2015). Students in this course will make use of mathematics and global policy documents to critically interpret, model, and represent world phenomena. Students will collaboratively analyze quantitative information gathered through trustworthy, globally representative data sets and individual survey and questionnaire items to investigate local experiences in relation to students' area(s) of interest. Students will learn about and utilize the GAISE Framework for Statistical Problem Solving (Franklin, et al., 2005) and the Four Dimensions of Equity in Mathematics Education (Gutiérrez, 2012) to ground their discussions and deliverables for *Knowing the World Through Mathematics*.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use a critical mathematics perspective to interpret world patterns, situations, and events. 2. Create mathematical models of world phenomena. 3. Use multiple mathematical representations to present global issues. 4. Identify and implement appropriate mathematical strategies to investigate world phenomena. 5. Express mathematical arguments related to world phenomena. 6. Use mathematics to explore global policy documents. 7. Explore world phenomena through quantitative (and qualitative) methods. Credits: 3.00

EDPS 21200 - Collaboration And Family Engagement To Support Students With Disabilities

Credit Hours: 3.00. Students will learn strategies for communicating and collaborating with a variety of team members. Finally culture will be explored. Strategies for collaborating with family members, administrators, paraprofessionals and related service personnel will be explored. This course includes a field experience.

Learning Outcomes: 1. Differentiate between professional and personal perspectives that impact teamwork and collaboration. 2. Describe how cultural values, context (e.g., social expectations, home language, resources, etc.), and experiences impact families' educational involvement and student learning. 3. Describe the additional roles and potential stressors families of children with disabilities may experience. 4. Identify strategies and steps for developing home-school partnerships and facilitating communication with families and school personnel. 5. Identify roles and responsibilities of key members (e.g., speech, school counselor, general education, paraeducator, etc.) of the educational team. 6. Outline and describe strategies (e.g., collaborative goal setting, coteaching, planning, etc.) for training and problem solving. Credits: 3.00

EAPS 31201 - Earth Systems Science For Elementary Teachers (UCC: SCI)

Credit Hours: 3.00. An Earth Systems Science perspective draws upon the wealth of Earth systems science research in both content and pedagogy. This approach has served as a guiding framework for how students learn, engage in, and develop deep understandings of the interconnections among Earth's many different systems of geosphere, hydrosphere, atmosphere, and biosphere and the important role that human civilization plays in affecting Earth's other systems. This course takes an Earth Systems Science approach - an emerging transdisciplinary endeavor - to build students' understanding of the structure and functioning of the Earth as a complex, adaptive system.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. View the Earth as a component of an interconnected system. 2. Investigate the accretion of the solar system and Earth and their respective histories. 3. Scale and model the solar system. 4. Model tectonic plates and different plate boundaries. 5. Analyze atmospheric conditions and make short-term weather predictions. 6. Recognize and evaluate Earth's resources. 7. Create a plan to address multiple interrelated challenges. 8. Evaluate the natural environment for anthropomorphic affects. 9. Develop critical thinking and problem-solving skills. 10. Apply guided-inquiry methods to learning. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of

multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

17 Credits

Fall 2nd Year

MA 13900 - Mathematics For Elementary Teachers III

Credit Hours: 3.00. Geometric, measurement and spatial reasoning in one, two and three dimensions as the basis for elementary school geometry. Metric and non-metric geometry, transformation geometry. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. Differentiate between various polygons based on number of sides and measures of angles. 2. Find the sum of the measures of the interior angles of a polygon. 3. Draw nets for polyhedra. 4. Differentiate between various types of polyhedra including all regular polyhedra. 5. Determine number of lines of symmetry for a plane figure and orders of rotational symmetry. 6. Determine number of planes of symmetry for a solid figure as well as axes of rotational symmetry. 7. Recognize and draw shapes that tessellate the plane and solid figures that tessellate space. 8. Determine dimensions of similar planar figures. 9. Determine surface area and volume of similar solid figures. 10. Construct perpendicular bisectors and parallel lines using a compass and straightedge. 11. Recognize and draw rigid motions of shapes including translations, reflections and rotations. 12. Determine area of plane figures and surface area and volume of solid figures. 13. Use the Pythagorean Theorem to determine diagonals of solid figures. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDPS 33500 - Reading Instruction For Tier 1 And Tier 2

Credit Hours: 2.00 to 3.00. Given the needs of variety of needs

of readers throughout the educational system, this class will focus on effective interventions from the primary grades through high school. Instructors will present a balance of theoretical and practitioner-oriented aspects of reading development and instruction. The course will also examine evidence-based science of reading approaches designed to ensure all students have access to effective, researched-based literacy instruction.

Learning Outcomes: 1. Establish an understanding of P-12 science of reading principles and practices. 2. Develop an understanding of effective Tier 1 and Tier 2 reading instruction. 3. Understand how to implement Tier 1 and Tier 2 reading practices in a classroom. 4. Establish an understanding of reading difficulties/disabilities. 5. Extend knowledge of unique needs of struggling readers. Credits: 2.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5.

Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

PHYS 23000 - Physical Science For Elementary Education (UCC: SCI)

Credit Hours: 3.00. The course is aimed at facilitating future elementary teachers to learn physical science that will prepare them to teach these concepts to future elementary students grades K-6. The course will be focused on learning physical science by doing science i.e. developing understanding by collaborative activities and discussion in the laboratory and lecture and communicating your ideas to others. The course will have one 50-minute lecture and two 110-minute laboratory meetings each week. The course content is consistent with the CAEP (Council for the Accreditation of Educator Preparation) K-6 Elementary Teacher Preparation Standards (Standard 2: Understanding and Applying Content and Curricular Knowledge for Teaching in *Physical Science* and *Engineering Design*) and the NGSS (Next Generation Science Standards) Disciplinary Core Ideas (DCIs) for the Physical Sciences (*Physical Sciences* PS1, PS2, PS3, and PS4) as well as many of the Science and Engineering Practices (SEPs). The course will be divided into four units: 1) Matter and Interactions, 2) Motion and Stability, 3) Energy, and 4) Waves and their applications. All of these units will be delivered through the paradigm of solving engineering design problems. Engineering design involves many different practices: problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and apply physical science concepts (matter and interactions, motion and stability, energy, waves and their applications) at a level deeper than but necessary to teach elementary school. 2. Understand and apply the engineering design process, including problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

16 Credits

Spring 2nd Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

ECON 21900 - Economics For Future Elementary Teachers

Credit Hours: 3.00. A principles of economics course designed for future elementary and social studies teachers. The purpose of this course is to: 1) introduce the future teacher to basic economic concepts required by the Indiana Academic Standards for Social Studies, K-6, 2) learn methods for teaching these concepts in the K-6 curriculum, and 3) develop a catalog of curriculum materials appropriate for teaching economics in grades K-6. No credit for management students.

Learning Outcomes: 1. Identify and understand the basic concepts and principles of economics in order to teach at the elementary school level. 2. Develop an `Economic Way of Thinking? that can be utilized to make more efficient choices as consumers, and as voters. 3. Identify supplementary materials (DVDs, online and app-based resources, simulations, curriculum materials, etc.) that can be used in K-6 teaching or as a supplement in K-6 classrooms. 4. Apply this 'Economic Way of Thinking' in the analysis existing curriculum in K-6 economics, and of everyday current events. 5. Utilize the basic concepts and principles of economics to design and develop new K-6 curriculum. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at

different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 30900 - Systematic And Explicit Instruction

Credit Hours: 3.00. Students will learn evidence based instructional strategies for students with disabilities. The key components of systematic and explicit instruction will be explored. Students will learn how to use explicit instructional strategies to foster engagement and motivation. Methods for implementing systematic instruction across academic, functional, communication, social, and behavior goals will be addressed. Additionally, implementation in a variety of settings including 1:1, small group, and large group settings will be explored. Planning for generalization and maintenance of skills will also be addressed.

Learning Outcomes: 1. Contrast and compare a range of pedagogical models (e.g. Constructivist, Cognitive, Behavioral, etc) in special education. 2. Use formative and summative assessment to identify students current level of performance and inform instructional planning and decision making. 3. Identify instructional strategies necessary for promoting engagement, motivation, and opportunities to respond. 4. Identify components of systematic instruction. 5. Identify and implement a variety of strategies necessary for preparing the setting to support learning. 6. Demonstrate understanding of how to use flexible grouping to meet individual and large group needs. Credits: 3.00

EDPS 32600 - Health, Wellness, And Adaptive Physical Education

Credit Hours: 3.00. Through a blend of theoretical knowledge and practical application, students will acquire the skills necessary to design and implement effective programs that promote overall student wellness. Students will gain a comprehensive understanding of health, wellness, and physical education of school-aged children with and without disabilities: emphasizing the importance of inclusive instruction. Additionally, students in this course will examine the responsibilities and opportunities for teachers in supporting and enhancing student health, with an emphasis on developing effective strategies for creating a healthy and safe learning environment for everyone.

Learning Outcomes: 1. Identify and explain how nutrition and common diseases promote health-related fitness and are associated with disease and injury prevention, for students with and without disabilities. 2. Identify and explain how, basic functions and structures of human body systems, including human growth and development, basic motor skills, movement patterns, and physical activities, promote participation and responsible behaviors and safety in various physical activities for students with and without disabilities. 3. Identify and describe the influence of family, peers, culture, media, technology, as well as student interpersonal relationships and communication, have on various health behaviors for students with and without disabilities. 4. Assess, design, and perform evidence-based health, wellness, and physical education instruction, for students with and without disabilities in promoting their overall health and physical well-being. Credits: 3.00

EDCI 31103 - Integrating Media In The K-6 Classroom

Credit Hours: 3.00. This course prepares teacher candidates to

select, evaluate, and integrate children's literature and media in K-6 classrooms. Focusing on high-quality, diverse texts and media, candidates will learn to choose materials that are developmentally appropriate and reflect the diversity of the world in which we live. Emphasis will be placed on the critical role literature and media play in fostering vocabulary development, enhancing critical thinking skills, and supporting literacy development across subjects. The course will focus on how K-6 students learn to use comprehension strategies independently and efficiently as they progress through elementary school fostering both their academic growth and their ability to engage with diverse texts.

Learning Outcomes: 1. Integrate literature and media into content area lessons to enhance vocabulary (including academic language skills), critical thinking, and comprehension. 2. Select and evaluate three trade books to read aloud during a math, a social studies, and a science lesson. 3. Identify instructional strategies supported by the Science of Reading that teach k-6 students' academic language skills, vocabulary knowledge, and reading and listening comprehension. Credits: 3.00

18 Credits

Fall 3rd Year

EDPS 30400 - Assessment And Transition (Data-Based Decision-Making)

Credit Hours: 3.00. This course addresses assessment techniques and transition planning in special education, with applications to curriculum. It includes norm-referenced and curriculum-based measurement, error analyses, observational ratings, data-based decision-making, and transition planning from early intervention to post-secondary settings.

Learning Outcomes: 1. Apply their understanding of specialized curricula to inform their programmatic and instructional decisions for individuals with exceptionalities across a variety of contexts and the continuum of placement options (CEC 3.2) 2. Develop, select, administer, analyze, and interpret multiple measures of student learning, behavior, and the classroom environment to evaluate and support classroom and school-based systems of intervention for students with and without exceptionalities (CEC 4.1). 3. Develop, select, and administer multiple, formal and informal, culturally and linguistically appropriate measures and procedures that are valid and reliable, to contribute to eligibility determination for special education services CEC 4.2). 4. Assess, collaboratively analyze, interpret, and communicate students' progress toward measurable outcomes, using technology as appropriate, to inform both short and long-term planning, and make ongoing adjustments to instruction (CEC 4.3). 5. Utilize appropriate progress monitoring skills in order to develop individualized education plans (IEPs) for students. Credits: 3.00

EDPS 40200 - P-12 Reading Methods For Exceptional Learners

Credit Hours: 2.00 to 3.00. This course is designed to meet the expectations of CEC, NCTQ, IDA and REPA 3 and prepare students in the science of reading for exceptional learners (including students with dyslexia and those with intensive needs) in Tiers 2 and 3. This course will provide implementation details on Response to Intervention (RTI) and Multi-tiered Systems of Support (MTSS). The course will present strategies and programs used in strategic and intensive intervention efforts for those learners needing additional, unique, and/or more focused remediation efforts. Topics will include understanding reading intervention research, the behavior analytic and learning sciences' contributions to understanding the reading process, the sequence of learning to read (systematic instruction), reading to learn, and the five components of reading instruction for P-12 learners. This course will specifically address the REPA 3 Standard: Focused work using (interventions that are direct, explicit, and multi-sensory) as a component of scientifically-based reading.

Learning Outcomes: 1. Review the five components of effective reading instruction for those in P-3 and those in grades 4-12. 2. Explain the models for remediation of prereading/reading difficulties and describe how they function: RTI, MTSS. 3. Describe and demonstrate how to use various screeners and progress monitoring assessments for P-12

students in Tiers 2 and 3. 4. Describe the meaning of direct and systematic instruction. 5. Demonstrate mastery of Corrective Reading sounds. 6. Demonstrate methods of increasing student engagement. 7. Discuss strategies to enhance content area reading performance. 8. Illustrate a scope and sequence for reading remediation for readers needing strategic and intensive intervention. 9. Explain how reading instruction can be made more explicit for those needing more focused efforts 10. Demonstrate how to provide systematic and explicit small group/one-on-one reading instruction. 11. Describe Big Direct Instruction and published scientifically-based programs that are designed based on the science of reading instruction and demonstrate how they are implemented. 12. Describe the use of Universal Design for Learning and assistive technology approaches to increase access to reading materials and/or improve reading skills. Credits: 2.00 to 3.00

EDCI 36101 - Teaching Social Studies In K-2

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practice strategies for teaching social studies to children in the K-2 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how K-2 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the K-2 grades. Admission to Teacher Education is required.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the K-2 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the K-2 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the K-2 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36401 - Teaching Mathematics In K-2

Credit Hours: 2.00. This course focuses on teaching mathematics in the elementary school, grades K-2, and encouraging children as mathematical problem posers. Students learn what it means to teach math interactionally using children's ideas, beliefs, and experiences as primary resources. Eliciting and interpreting children's mathematical thinking as well as mathematical reasoning, problem solving, communication, and connections are foci. Admission to Teacher Education required.

Learning Outcomes: 1. Gain skill in assessing, evaluating, and responding to the diverse needs of K-2 learners in mathematics. 2. Identify, practice, and reflect on strategies of teaching mathematics to support K-2 students conceptual and procedural knowledge. 3. Analyze mathematics books and tasks for language demands, conceptual and procedural knowledge, and cross-curricular connections. 4. Reflect on the role of K-2 teachers and children's funds of knowledge in relation to their learning of mathematics. Credits: 2.00

EDCI 36501 - Teaching Science Through Design In Grades K-2

Credit Hours: 2.00. The aim of this lab-based course is to prepare students to teach science, engineering, and computational thinking with grade K-2 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade K through 2 learners. At least 9 credits of science content required.

Learning Outcomes: 1. List and contrast current models of science teaching and learning. 2. Demonstrate competence in the use of various learner-centered pedagogical strategies for culturally and linguistically diverse students. 3. Develop collaborative, inquiry based, cross-cultural, learner centered unit plans. 4. Demonstrate competence in assessing student learning and in developing plans of action to

meet students' needs. 5. Implement pro-active strategies to establish a safe classroom environment in which all students are encouraged to participate and express their views. 6. Demonstrate competence in the use of instructional technologies to enhance student learning. 7. Demonstrate competence in integrating science, technology, engineering practices and mathematics (STEM) across the curriculum to address culturally and socially relevant issues. 8. Demonstrate competence in developing unit plans that engage children in the use of the engineering design process to address culturally and socially relevant issues. 9. Demonstrate competence in developing activities that promote children's computational thinking. 10. Explain how his/her personal philosophy of teaching and learning contrasts with the College of Education mission: "We are committed to social justice and education of all the children of all the people - especially in the area of P=12 STEM education." 11. Participate actively in discussing regarding curriculum development and implementation designed to address the needs of culturally diverse learners. Credits: 2.00

EDPS 30500 - Special Education Seminar: Perspectives On Disability

Credit Hours: 1.00. This course is designed to broaden student understanding of disability by exploring across related fields including disability studies, neurodiversity, speech language development, and behavioral characteristics. The goal of this seminar is for students to make connections between special education theory and practice and theories and views of disability beyond special education. Through lecture, discussion, and reflection, students will learn about the construct of disability and how individual strengths, needs, services, and supports extend across the lifespan and beyond the special education classroom.

Learning Outcomes: 1. Identify key theories on disability and describe practices for how these theories can influence teacher practices across various education field placements. 2. Reflect critically on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 3. Complete a minimum of 20 hours in the required field experience setting. 4. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 31200 - Inclusive Practices In Cross-Content Curriculum

Credit Hours: 3.00. This course aims to teach best practices for cross-content integration in an inclusive or self-contained classroom. It develops pre-service teacher understanding of core curricula along with how to integrate the curricula across subject areas. This course will also cover curricula to implement a well-rounded education (e.g., visual arts, dance, theater, music, etc.), provide methods for inclusive practices within the content, and discuss the implementation of collaborative approaches to cross-content planning and delivery.

Learning Outcomes: 1. Apply understanding of curricula across curricular content areas to develop integrated units of study which provide a well-rounded education. 2. Develop curricular content knowledge in order to develop learning progressions for individuals with exceptionalities. 3. Select appropriate curricula for individuals with exceptionalities across multiple content areas. 4. Teach cross-disciplinary knowledge and skills (e.g., critical and creative thinking, problem-solving) through integrated lesson planning and curricular units of study. 5. Implement cross-content curriculum across a wide range of settings through collaborative practices. Credits: 3.00

16 Credits

Spring 3rd Year

EDCI 36102 - Teaching Social Studies In 3-6

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the

field, and of best practices strategies for teaching social studies to children in the 3-6 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how 3-6 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the 3-6 grades.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the 3-6 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the 3-6 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the 3-6 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36402 - Teaching Mathematics In Grades 3-6

Credit Hours: 2.00. Focuses on teaching mathematics in the elementary school grades 3-6. Students learn what it means to teach mathematics interactionally using children's ideas, beliefs, and experiences as primary resources. Mathematical reasoning, problem solving, communication, and connections are foci.

Learning Outcomes: 1. Develop, apply, analyze, and evaluate strategies of teaching mathematics and their relationships to your beliefs and knowledge about how children learn mathematics. 2. Know and analyze methods of assessing and responding to the needs of mathematics learners labeled in schools. 3. Analyze and apply student's mathematical conceptual understanding and procedural knowledge to the development of problem-solving based mathematics lessons. 4. Create and analyze instructional activities drawing from student's conceptual understanding and procedural knowledge as primary resources. Credits: 2.00

EDCI 36502 - Teaching Science Through Design In Grades 3-6

Credit Hours: 2.00. The aim of this course is to prepare students to teach science, engineering, and computational thinking with grade 3-6 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade 3 through 6 learners. At least 9 credits of science content courses are required.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 2.00

EDPS 30500 - Special Education Seminar: Perspectives On Disability

Credit Hours: 1.00. This course is designed to broaden student understanding of disability by exploring across related fields including disability studies, neurodiversity, speech language development, and behavioral characteristics. The goal of this seminar is for students to make connections between special education theory and practice and theories and views of disability beyond special education. Through lecture, discussion, and reflection, students will learn about the construct of disability and how individual strengths, needs, services, and supports extend across the lifespan and beyond the special education classroom.

Learning Outcomes: 1. Identify key theories on disability and describe practices for how these theories can influence teacher practices across various education field placements. 2. Reflect critically on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 3. Complete a minimum of 20 hours in the required field experience setting. 4. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 31100 - Supporting Exceptional Learners: Foundations And Mathematics

Credit Hours: 3.00. Teaching students with special needs requires the ability to locate evidence-based interventions, implement those interventions with fidelity, and track student performance over time. Mathematics is a content area in which success or failure yields major ramifications for postsecondary

success. This course will cover the common math interventions employed for mild to severe disabilities across grade levels K-12.

Learning Outcomes: 1. Develop standards-based lesson plans for math that consider individual abilities, interests, learning environments, and cultural and linguistic factors. 2. Use technologies to support instructional assessment, planning, and delivery of mathematics for individuals with exceptionalities. 3. Identify strategies for teaching to mastery and promote generalization of learning in mathematics for both fluency and world problem solving. 4. Produce standards-based lesson plans for numeracy that incorporate evidence-based practices, classroom resources (e.g. peer and paraprofessional), and technological supports for use with students who have diverse learning needs. Credits: 3.00

EDPS 40300 - Individual Social, Emotional, Behavioral Supports

Credit Hours: 3.00. This course is designed to prepare students with advanced knowledge and skills in designing and delivering individualized social-emotional and behavioral supports for learners. Emphasis will be placed on functional behavior assessment and function-based interventions and supports.

Learning Outcomes: 1. Identify the advanced principles of behavior and provide classroom examples. 2. Articulate the connection between social-emotional skills and challenging behavior. 3. Define learner behaviors. 4. Select an appropriate behavior measurement system for learner outcomes. 5. Measure and graph learner behavior. 6. Conduct a functional behavior assessment. 7. Develop and implement a behavior support plan. 8. Analyze learner data to guide educational programming decisions. Credits: 3.00

EDCI 32602 - Teaching Literacy In 3-6

Credit Hours: 2.00. Students will build on material learned in EDCI 32501. They will concentrate on increasing student's literacy skills with a focus on fluency, phonics, strategic reading, vocabulary, literary analysis, content area reading, the writing process, and building comprehension skills. They will learn to select appropriate materials, employ strategies to meet the cognitive and affective literacy needs of all children, and create integrate, and use data from various forms of assessment to inform the teaching and learning process.

Learning Outcomes: 1. Demonstrate an understanding of theoretical and evidence-based foundations that guide reading, writing processes, and instruction. 2. Design developmentally appropriate instruction that addresses the needs of all learners. 3. Teach developmentally appropriate lessons/units in the school setting. 4. Assess student learning by designing/using/adjusting formative and summative assessments for your group of students, and pre-assessments. 5. Reflect and analyze your own teaching. Credits: 2.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

18 Credits

Fall 4th Year

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances

achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDPS 46100 - Practicum In Strategies For Teaching Individuals With Disabilities

Credit Hours: 1.00 to 6.00. Practicum experience in assessment and teaching of individuals with disabilities. Experience in design, delivery, implementation, and evaluation of instruction. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A and B.

Learning Outcomes: 1. Provide instruction that is responsive to student differences and promotes development and learning for all students. 2. Match expectations to the unique characteristics, abilities, developmental levels, and behavior of students. 3. Identify characteristics of students with disabilities and design classroom accommodations. 4. Adjust instruction according to student needs and performances. 5. Use a variety of evidence-based instructional strategies. 6. Plan and deliver standards-based, data-driven differentiated instruction that actively engages students in the learning process. 7. Demonstrate an appreciation and concern for students as individuals and interact with them in positive ways that encourage and teach appropriate behavior. 8. Model effective use of language. 9. Demonstrate effective classroom and behavior management and establish a positive, productive, and safe learning environment with high expectations for all students. 10. Integrate instructional technology by creating instructional materials, delivering instruction using technology, or encouraging student use of technology in assignments. 11. Reflect on practices. 12. Engage in professional development activities to remain current with best practices. 13. Collaborate effectively with colleagues, parents, and others to increase the effectiveness of instruction and engage in professional growth. Credits: 1.00 to 6.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security,

plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 42100 - Supporting Exceptional Learners: Social Studies And Science

Credit Hours: 3.00. This course is designed to prepare special educators to deliver social studies and science content to children and adolescents with disabilities across PK-12 settings. It will also prepare special educators to make programmatic and instructional decisions related to least restrictive environment, appropriate educational supports, assistive technology, accommodations, and modification specific to science and social studies instruction. This course includes assignments that will be linked to EDPS 46100 the Special Education Student Teaching Residency.

Learning Outcomes: 1. Use knowledge of general and specialized social studies curricula to individualize learning for individuals with exceptionalities. 2. Use knowledge of general and specialized science curricula to individualize learning for individuals with exceptionalities. 3. Use strategies to enhance language development and communication skills of individuals with exceptionalities across social studies and science content area. Credits: 3.00

12 Credits

Spring 4th Year

EDPS 49800 - Supervised Teaching- Special Education (UCC: OC)

Credit Hours: 1.00 to 16.00. A student planning to enroll in EDCI 49600, EDCI 49800, EDCI 49900; EDPS 49800, EDPS

49900, EDPS 56100, or EDPS 56600 in the spring or fall semester of any academic year must secure, complete, and submit a student teaching application form between the middle of September and November 1 preceding the academic year during which he or she will be enrolled in the course. Failure to file the application during or prior to this time will make it virtually impossible for the student to receive a student teaching assignment for that year. Application forms may be obtained in and submitted to Room 3241, Liberal Arts and Education Building. Teaching full time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A, B, and C.

University Core Curriculum (UCC): (UCC: OC)
Credits: 1.00 to 16.00

EDCI 49600 - Student Teaching In The Elementary School (UCC: OC)

Credit Hours: 6.00 to 16.00. Full-time elementary classroom teaching experiences and a student teaching seminar under the mentorship of the classroom teacher and a University supervisor.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Understand and address each child's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each child's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Speech, Language, and Hearing Sciences, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (33 credits)

SLHS Foundation Requirements (18 credits)

SLHS 11500 - Introduction To Communicative Disorders (UCC: STS)

Credit Hours: 3.00. Nature, systems, and causes of communicative disorders and the principal methods used for remediation.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

SLHS 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. (ENGL 22700) Credit will not also be awarded for both SLHS 22700 and LC 26100. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

SLHS 30200 - Hearing Science

Credit Hours: 3.00. An introduction to the scientific foundations of auditory sensation and perception. The course covers those aspects of acoustics most pertinent to understanding auditory processing of simple and complex sounds (e.g. speech and music), the anatomy and physiology of the peripheral and central auditory systems, and a range of auditory perceptual phenomena and their physiological correlates.

Learning Outcomes: 1. Define the physical parameters of sound waves and explain how waves propagate through a medium. 2. Characterize the effects of systems on signals in both the time and frequency domains. 3. Describe the transmissions of sound through the anatomical structures in the peripheral auditory system. 4. Describe the neural coding of simple and complex sounds. 5. Describe the fundamental aspects of auditory sensation and perception. 6. Describe the basic physiological correlates of auditory sensation and perception. Credits: 3.00

SLHS 30300 - Anatomy And Physiology Of The Speech Mechanism

Credit Hours: 3.00. This course provides an introduction to the anatomical and physiological bases of the speech mechanism with an emphasis on the neural, respiratory, laryngeal, and supralaryngeal subsystems.

Learning Outcomes: 1. Develop knowledge of the major subsystems underlying speech and language production. 2. Identify major anatomical structures associated with speech production. 3. Describe the physiology of speech production. Credits: 3.00

SLHS 30600 - Introduction To Phonetics

Credit Hours: 3.00. Credit will not be given for both SLHS 30600 and LING 31500. An introduction to articulatory phonetics, speech sounds in languages of the world, and principles and symbols of the International Phonetic Alphabet. Extensive practice in phonetic transcription.

Credits: 3.00

SLHS 30900 - Language Development (UCC: STS)

Credit Hours: 3.00. (PSY 42600) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Numerous examples illustrating the nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed.

University Core Curriculum (UCC): (UCC: STS)

Credits: 3.00

Area 1: Speech, Language, and Hearing Sciences Selective (15 credits)

SLHS Foundation Requirements (18 credits)

SLHS 11500 - Introduction To Communicative Disorders (UCC: STS)

Credit Hours: 3.00. Nature, systems, and causes of communicative disorders and the principal methods used for remediation.

University Core Curriculum (UCC): (UCC: STS)

Credits: 3.00

SLHS 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. (ENGL 22700) Credit will not also be awarded for both SLHS 22700 and LC 26100. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge.

Learning Outcomes: 1. Develop knowledge of the major subsystems underlying speech and language production. 2. Identify major anatomical structures associated with speech production. 3. Describe the physiology of speech production. Credits: 3.00

SLHS 30600 - Introduction To Phonetics

Credit Hours: 3.00. Credit will not be given for both SLHS 30600 and LING 31500. An introduction to articulatory phonetics, speech sounds in languages of the world, and principles and symbols of the International Phonetic Alphabet. Extensive practice in phonetic transcription.

Credits: 3.00

SLHS 30900 - Language Development (UCC: STS)

Credit Hours: 3.00. (PSY 42600) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Numerous examples illustrating the nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

15-16 Credits

15-16 Credits

Spring 2nd Year

SLHS 30200 - Hearing Science

Credit Hours: 3.00. An introduction to the scientific foundations of auditory sensation and perception. The course covers those aspects of acoustics most pertinent to understanding auditory processing of simple and complex sounds (e.g. speech and music), the anatomy and physiology of the peripheral and central auditory systems, and a range of auditory perceptual phenomena and their physiological correlates.

Learning Outcomes: 1. Define the physical parameters of sound waves and explain how waves propagate through a medium. 2. Characterize the effects of systems on signals in both the time and frequency domains. 3. Describe the transmissions of sound through the anatomical structures in the peripheral auditory system. 4. Describe the neural coding of simple and complex sounds. 5. Describe the fundamental aspects of auditory sensation and perception. 6. Describe the basic physiological correlates of auditory sensation and perception. Credits: 3.00

SLHS 30300 - Anatomy And Physiology Of The Speech Mechanism

Credit Hours: 3.00. This course provides an introduction to the anatomical and physiological bases of the speech mechanism with an emphasis on the neural, respiratory, laryngeal, and supralaryngeal subsystems.

Learning Outcomes: 1. Develop knowledge of the major subsystems underlying speech and language production. 2. Identify major anatomical structures associated with speech production. 3. Describe the physiology of speech production. Credits: 3.00

SLHS 30600 - Introduction To Phonetics

Credit Hours: 3.00. Credit will not be given for both SLHS 30600 and LING 31500. An introduction to articulatory phonetics, speech sounds in languages of the world, and principles and symbols of the International Phonetic Alphabet. Extensive practice in phonetic transcription.

Credits: 3.00

SLHS 30900 - Language Development (UCC: STS)

Credit Hours: 3.00. (PSY 42600) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Numerous examples illustrating the nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed.

SLHS 11500 - Introduction To Communicative Disorders (UCC: STS)

Credit Hours: 3.00. Nature, systems, and causes of communicative disorders and the principal methods used for remediation.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

15-17 Credits

15-17 Credits

About the Program

Statistics Honors, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (30-31 credits)

Required Major Courses (24 credits)

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem.

Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms,

graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus.

Credits: 3.00

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing.

Learning Outcomes: 1. Understand and able to use inference for standard parametric families of distributions; properties of estimators; Bayes and maximum likelihood estimation; sufficient statistics; properties of test of hypotheses; distribution theory for common statistics based on normal distributions. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)

Learning Outcomes: 1. Identify which discrete and continuous distributions are applicable in a given setting. 2. Use conditional probabilities, Bayes theorem, and conditional distributions. 3. Utilize joint distributions in the context of several random variables. 4. Apply the law of large numbers and the central limit theorem in asymptotic settings. 5. Derive moments and moment generating functions for discrete and continuous random variables. Credits: 3.00

STAT 51700 - Statistical Inference

Credit Hours: 3.00. A basic course in statistical theory covering standard statistical methods and their application. Estimation including unbiased, maximum likelihood and moment estimation; testing hypotheses for standard distributions and contingency tables; confidence intervals and regions; introduction to nonparametric tests and linear regression.

Learning Outcomes: 1. Understand the basic asymptotic theory including consistency and convergence in distribution. 2. Know how to

perform some elementary statistical inference such as estimation, confidence interval and hypothesis testing. 3. Be familiar with the maximum likelihood method to make statistical inference. 4. Know how to judge the quality of different estimators. 5. Know how to perform optimal tests of hypotheses. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of vector space, subspace, linear combination of vectors, linear dependence and linear independence, bases and dimension. 2. Perform rigorous proofs using the definitions of linear transformation and the null space and range of a linear transformation. 3. Exhibit a clear understanding of the relationship between composition of linear transformation and matrix multiplication. 4. Understand elementary matrices and their use in describing the solution set of a system of linear equations. 5. Understand that the determinant function on n x n matrices with entries in a field F is a function that may be defined recursively, and may be uniquely defined as an alternating multilinear form which takes the identity matrix to 1. 6. Perform rigorous proofs involving eigenvalues and eigenvectors. 7. Understand and be able to apply conditions for a linear operator on a finite-dimensional vector space to be diagonalizable. 8. Preform calculations with Gram-Schmidt, least squares and related topics. 9. Students should be able to do rigorous proofs involving inner product spaces and related topics. Credits: 3.00

MA 43200 - Elementary Stochastic Processes

Credit Hours: 3.00. An introduction to some classes of stochastic processes that arise in probabilistic models of time-dependent random processes. The main stochastic processes studied will be discrete time Markov chains and Poisson processes. Other possible topics covered may include continuous time Markov chains, renewal processes, queueing networks, and martingales.

Learning Outcomes: 1. Identify a verbal description of a stochastic process, identify the process as a Markov process and compute the transition matrix for the Markov process. 2. Compute the stationary distribution of a Markov process and use this to draw conclusions on the long-term asymptotic behavior of the stochastic process using appropriate limit theorems for Markov processes. 3. Understand what conditions are necessary to be able to apply the main limit theorems for Markov chains; also, students should be able to give examples of Markov chains where these limit theorems do not hold because the assumptions of the theorems are violated. 4. Calculate hitting

probabilities or expected hitting times of a Markov chain by solving a system of linear equations. 5. Know how to use mathematics software (e.g. Matlab) to perform computations for Markov chains on large state spaces. 6. Understand the thinning and superposition properties of Poisson processes and how to use these properties in computations. Credits: 3.00

Advanced Math Selective (3-4 credits)

MA 36600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 4.00. An introduction to ordinary differential equations with emphasis on problem solving and applications. The one-hour computer lab will give students an opportunity for hands-on experience with both the theory and applications of the subject.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the statement of the theorem of existence and uniqueness of solutions of first order differential equations and standard methods of solving linear, and some special non-linear, differential equations of first order. 2. Interpret solutions qualitatively. 3. Learn how to construct mathematical models. 4. Learn the standard methods of solving linear homogenous differential equations of constant coefficients of arbitrary order. 5. Learn methods to solve nonhomogeneous differential equations of constant coefficients of arbitrary order. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how they apply to systems of linear differential equations. 9. Learn how to analyze systems of nonlinear differential equations (optional). 10. Learn Laplace transforms and their applications to differential equations (optional). Credits: 4.00

MA 37500 - Introduction To Discrete Mathematics

Credit Hours: 3.00. Induction, permutations, combinations, finite probability, relations, graphs, trees, graph algorithms, recurrence relations, generating functions. Problem solving in all these areas. Credit granted for only one of MA 27600 and 37500.

Credits: 3.00

MA 42100 - Linear Programming And Optimization Techniques

Credit Hours: 3.00. Solution of linear programming problems by the simplex method, duality theory, transportation problems, assignment problems, network analysis, dynamic programming.

Credits: 3.00

MA 42500 - Elements Of Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions; differentiation of complex functions; power series, uniform convergence; integration, contour integrals; elementary conformal mapping.

Learning Outcomes: 1. Apply complex number theory and understand algebraic and geometric representations. 2. Solve complex equations and analyze limits, continuity, and differentiability. 3. Use Cauchy-Riemann equations to identify analytic functions. 4. Evaluate integrals using Cauchy's integral theorem and formula. 5. Apply the residue theorem for evaluating integrals in engineering and science problems. 6. Use Taylor and Laurent series to expand complex functions. 7. Solve boundary value problems in fluid dynamics, electrostatics, and potential theory. 8. Apply complex analysis techniques to engineering and science applications. Credits: 3.00

MA 42800 - Introduction To Fourier Analysis

Credit Hours: 3.00. Topics include: Fourier series, convolutions, kernels, summation methods, Fourier transforms, and applications to the wave, heat, and Laplace equations.

Learning Outcomes: 1. Know applications of Fourier series to problems in physics and other areas. 2. Know convergence theorems and

proofs for Fourier series. 3. Know the relationship between convolutions and Fourier series. 4. Know applications of Fourier transforms to problems in physics and other areas. Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

MA 44200 - Honors Real Analysis II

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces--continued from MA 44000. Topics include mappings of Euclidean spaces and their derivatives, multivariable chain rule, inverse function theorem and implicit function theorem, sets with content and integration in n dimensions, the integrability theorem, Jacobian and change of variables theorem, related topics.

Learning Outcomes: 1. Determine points at which derivatives exist and compute linear approximations for mappings of Euclidean spaces. 2. Perform rigorous applications of the multivariable chain rule, inverse function theorem and implicit function theorem in Euclidean spaces. 3. Apply the integrability theorem on the existence of Riemann integrals of functions in bounded sets in Euclidean spaces. 4. Perform rigorous applications of the change of variables theorem for integrals of functions on smooth transformations of domains in a Euclidean spaces. Credits: 3.00

MA 45000 - Algebra Honors

Credit Hours: 3.00. This course, which is essentially the first half of MA 55300, is recommended for students wanting a more substantial background in algebra than is afforded by MA 45300, in particular students intending to do graduate work in science or engineering. Topics include the elements of number theory and group theory; unique factorization in polynomial rings and in principal ideal domains.

Credits: 3.00

MA 52000 - Boundary Value Problems Of Differential Equations

Credit Hours: 3.00. Separation of variables; Fourier series; boundary value problems; Fourier transforms; Bessel functions; Legendre polynomials.

Credits: 3.00

MA 34900 - Signals And Systems For Mathematicians

Credit Hours: 3.00. This course introduces the mathematical framework for the description, analysis and processing of signals such as music, speech and images. Main topics covered include signal representations in different bases; continuous-time signal sampling; and signal processing by linear and time-invariant systems.

Learning Outcomes: 1. Describe and analyze continuous-time and discrete-time signals in different bases. 2. Understand the relation between a continuous-time signal and a sampling of that signal, including methods to reconstruct a continuous-time signal from its samples and applicability conditions. 3. Describe and analyze the properties of continuous-time and discrete time systems in different bases. 4. Construct linear and time-invariant systems to process continuous-time

and discrete-time signals. Credits: 3.00

MA 37400 - Mathematical Foundations For Machine Learning

Credit Hours: 3.00. This course combines data, computation, and inferential thinking to solve challenging problems. In this class, we explore key areas of machine learning including question formulation, statistical inference, predictive modeling, and decision making. Through a strong emphasis on data-centric computing, and quantitative critical thinking, this class covers key principles and techniques of machine learning. These include algorithms for machine learning methods including regression, classification, and clustering; and statistical concepts of measurement error and prediction.

Learning Outcomes: 1. Identify a machine learning related data-science problem, formulate questions, visualize the data, and identify features, and conduct statistical inference, and derive prediction algorithms. 2. Know how to use a computer programming tool (e.g. Python or Matlab) to draw samples from important distributions. 3. Understand linear machine learning models for regression problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for regression problems. 4. Understand linear machine learning models for classification problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for classification problems. 5. Know how to build kernel methods; in particular, Gaussian process methods, and how to use a computer programming tool (e.g. Python or Matlab) to implement kermel methods. 6. Understand the concept of mixture models and the Expectational-Maximization algorithm and how to use a computer programming tool (e.g. Python or Matlab) to implement mixture models and the Expectational-Maximization algorithm. 7. Understand the sampling methods and perform computations for Markov Chain Monte Carlo. Credits: 3.00

MA 49500 - Advanced Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Advanced topics courses in mathematics for undergraduates are given under this number. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 5.00

Statistics Selective (3 credits)

STAT 42000 - Introduction To Time Series

Credit Hours: 3.00. An introduction to time series analysis suitable for students of actuarial science, engineering, and the sciences. Model building and forecasting with ARMA and ARIMA models. Basic financial volatility models (ARCH and GARCH). Resampling methods for confidence intervals. Basics of spectral analysis, including spectral density estimation and periodograms.

Learning Outcomes: 1. Manage time series data; extract subset of time series data. 2. Visualize time series data. 3. Understand trend and correlation. 4. Model time series data. 5. Forecast of time series data. Credits: 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.

Learning Outcomes: 1. Acquire fluency in the language and techniques of modem quality control and its applications. 2. Conceptually understand the utility of statistics for quality control. 3. Apply control charts and experimental design techniques to solve real-life quality control problems. 4. Utilize appropriate Statistical software for statistical computation, visualization, control chart construction, and design of experiments. 5. Discuss what is learned in lecture and assignments through oral and written presentations. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

IE 53000 - Quality Control

Credit Hours: 3.00. Principles and practices of statistical quality control in industry. Control charts for measurements and for attributes. Acceptance sampling by attributes and by measurements. Standard sampling plans. Sequential analysis. Sampling inspection of continuous production.

Credits: 3.00

CS 37300 - Data Mining And Machine Learning

Credit Hours: 3.00. This course will introduce students to the field of data mining and machine learning, which sits at the interface between statistics and computer science. Data mining and machine learning focuses on developing algorithms to automatically discover patterns and learn models of large datasets. This course introduces students to the process and main techniques in data mining and machine learning, including exploratory data analysis, predictive modeling, descriptive modeling, and evaluation.

Learning Outcomes: 1. Identify key elements of data mining and machine learning algorithms. 2. Understand how algorithmic elements interact to impact performance. 3. Understand how to choose algorithms for different analysis tasks. 4. Analyze data in both an exploratory and targeted manner. 5. Implement and apply basic algorithms for supervised and unsupervised learning. 6. Accurately evaluate the performance of algorithms, as well as formulate and test hypotheses. Credits: 3.00

MA 37400 - Mathematical Foundations For Machine Learning

Credit Hours: 3.00. This course combines data, computation, and inferential thinking to solve challenging problems. In this class, we explore key areas of machine learning including question formulation, statistical inference, predictive modeling, and decision making. Through a strong emphasis on data-centric computing, and quantitative critical thinking, this class covers key principles and techniques of machine learning. These include algorithms for machine learning methods including regression, classification, and clustering; and statistical concepts of measurement error and prediction.

Learning Outcomes: 1. Identify a machine learning related data-science problem, formulate questions, visualize the data, and identify features, and conduct statistical inference, and derive prediction algorithms. 2. Know how to use a computer programming tool (e.g. Python or Matlab) to draw samples from important distributions. 3. Understand linear machine learning models for regression problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for regression problems. 4. Understand linear machine learning models for classification problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for classification problems. 5. Know how to build kernel methods; in particular, Gaussian process methods, and how to use a computer programming tool (e.g. Python or Matlab) to implement kermel methods. 6. Understand the concept of mixture models and the Expectational-Maximization algorithm and how to use a computer programming tool (e.g. Python or Matlab) to implement mixture models and the Expectational-Maximization algorithm. 7. Understand the sampling methods and perform computations for Markov Chain Monte Carlo. Credits: 3.00

TDM 10100 - The Data Mine Seminar I (UCC: IL)

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 20100 - The Data Mine Seminar III

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 30100 - The Data Mine Seminar V

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 40100 - The Data Mine Seminar VII

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science

and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 20200 - The Data Mine Seminar IV

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 30200 - The Data Mine Seminar VI

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits:

TDM 40200 - The Data Mine Seminar VIII

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

STAT 41800 - Computational Methods In Data Science

Credit Hours: 3.00. This course introduces essential computational methods in modern data science, focusing on simulation, resampling, Bayesian data analysis, and the utilization of large language models (LLMs) in data science workflows. Students will learn foundational simulation techniques, such as random variable generation through the inverse cumulative distribution function and rejection sampling. The course provides an overview of Frequentist and Bayesian inference, highlighting their theoretical foundations and practical applications. Key resampling methods, including bootstrapping and cross-validation, will be explored as tools for assessing variability, constructing confidence intervals, and validating predictive models. The course also emphasizes the practical and responsible use of LLMs in data science pipelines, including tasks such as text preprocessing, feature extraction, and leveraging pre-trained models to enhance data analysis and annotation. The course culminates in a capstone project where students will synthesize their learning by designing and implementing comprehensive solutions to real-world data science problems, demonstrating both theoretical understanding and practical implementation skills.

Learning Outcomes: 1. Apply simulation techniques, including Monte Carlo methods, transformation approaches, and rejection sampling, to analyze probabilistic behavior in data science applications. They will compare and evaluate Frequentist and Bayesian inference paradigms by examining their theoretical foundations, identify their strengths and limitations, and explain their roles in statistical modeling and decision-making. Students will design, implement, and assess resampling methods, focusing on both nonparametric and parametric forms of the bootstrap, to estimate variability, construct confidence intervals, and improve statistical estimates through bias correction techniques. They will learn the principles of cross-validation, analyze its role in model assessment, and apply it to compute model performance metrics, detect overfitting and underfitting, and select models with reliable predictive accuracy using Python libraries. 2. Construct and interpret posterior distributions and credible intervals, apply Markov Chain Monte Carlo methods to approximate posteriors, and evaluate the role of prior distributions in Bayesian inference. In addition, students will utilize large language models in creative and practical ways within data science workflows, such as contextual data augmentation, feature engineering, and integrating structured and unstructured data to enhance predictive models, addressing challenges such as privacy and reliability. The course will culminate in a capstone project where students will synthesize selected course topics to design, develop, and present robust solutions to real-world data science challenges. By integrating computational methods, statistical principles, and real-world datasets, students will demonstrate their ability to create effective, data-driven solutions that showcase

both theoretical understanding and applied expertise. Credits: 3.00

Other Departmental/Program Course Requirements (38-64 credits)

College of Science Additional Requirements

Computing (3-4 credits)

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge

datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

Laboratory Science (6-8 credits)

Mathematics (8-10 credits)

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

Statistics (3 credits)

Required Pre-Requisite Course (4-5 Credits)

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 27101 - Honors Multivariate Calculus (UCC: QR)

Credit Hours: 5.00. This course is the Honors version of MA 26100, Multivariate Calculus; it will also include a review of infinite series. The course is intended for first-year students who have credit for Calculus I and II. There will be a significant emphasis on conceptual explanation, but not on formal proof. Permission of department is required.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know techniques of vector algebra and be able to apply these to the geometry of space; in particular they will be able to find equations for lines and planes in space. 2. Find equations for standard surfaces in space. 3. Use vector methods to analyze motion in space, and calculate arc length and curvature. 4. Acquire a conceptual and computational knowledge of infinite series; in particular they will be able to test for convergence, and to do calculations with power series. 5. Understand the meaning of partial derivatives in various situations, and will be able to calculate with them. 6. Know the multivariable chain rule and its meaning, and will be able to apply it to calculate derivatives in various situations. 7. Know the meaning of directional derivatives and how to calculate them. 8. Find tangent planes. 9. Find and classify extreme values and saddle points and use the method of Lagrange multipliers. 10. Know the meaning of multiple integrals and how to calculate them. 11. Know the meaning of line integrals and surface integrals and how to calculate them. 12. Know

Green's theorem, Stokes' theorem, and the divergence theorem and their applications. Credits: 5.00

15-19 Credits

Spring 1st Year

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm

designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

15-18 Credits

Fall 2nd Year

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

15-18 Credits

Spring 2nd Year

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date. Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix

multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

15 Credits

Fall 3rd Year

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem.

Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs

using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus.

Credits: 3.00

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)

Learning Outcomes: 1. Identify which discrete and continuous distributions are applicable in a given setting. 2. Use conditional probabilities, Bayes theorem, and conditional distributions. 3. Utilize joint distributions in the context of several random variables. 4. Apply the law of large numbers and the central limit theorem in asymptotic settings. 5. Derive moments and moment generating functions for discrete and continuous random variables. Credits: 3.00

15-16 Credits

Spring 3rd Year

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing.

Learning Outcomes: 1. Understand and able to use inference for standard parametric families of distributions; properties of estimators; Bayes and maximum likelihood estimation; sufficient statistics; properties of test of hypotheses; distribution theory for common statistics based on normal distributions. Credits: 3.00

STAT 51700 - Statistical Inference

Credit Hours: 3.00. A basic course in statistical theory covering standard statistical methods and their application. Estimation including unbiased, maximum likelihood and moment estimation; testing hypotheses for standard distributions and contingency tables; confidence intervals and regions; introduction to nonparametric tests and linear regression.

Learning Outcomes: 1. Understand the basic asymptotic theory including consistency and convergence in distribution. 2. Know how to perform some elementary statistical inference such as estimation, confidence interval and hypothesis testing. 3. Be familiar with the maximum likelihood method to make statistical inference. 4. Know how to judge the quality of different estimators. 5. Know how to perform optimal tests of hypotheses. Credits: 3.00

15-16 Credits

Fall 4th Year

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

MA 43200 - Elementary Stochastic Processes

Credit Hours: 3.00. An introduction to some classes of stochastic processes that arise in probabilistic models of time-dependent random processes. The main stochastic processes studied will be discrete time Markov chains and Poisson processes. Other possible topics covered may include continuous time Markov chains, renewal processes, queueing networks, and martingales.

Learning Outcomes: 1. Identify a verbal description of a stochastic process, identify the process as a Markov process and compute the transition matrix for the Markov process. 2. Compute the stationary distribution of a Markov process and use this to draw conclusions on the long-term asymptotic behavior of the stochastic process using appropriate limit theorems for Markov processes. 3. Understand what conditions are necessary to be able to apply the main limit theorems for Markov chains; also, students should be able to give examples of Markov chains where these limit theorems do not hold because the assumptions of the theorems are violated. 4. Calculate hitting probabilities or expected hitting times of a Markov chain by solving a system of linear equations. 5. Know how to use mathematics software (e.g. Matlab) to perform computations for Markov chains on large state spaces. 6. Understand the thinning and superposition properties of Poisson processes and how to use these properties in computations. Credits: 3.00

12-15 Credits

Spring 4th Year

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of vector space, subspace, linear combination of vectors, linear dependence and linear independence, bases and dimension. 2. Perform rigorous proofs using the definitions of linear transformation and the null space and range of a linear transformation. 3. Exhibit a clear understanding of the relationship between composition of linear transformation and matrix multiplication. 4. Understand elementary matrices and their use in describing the solution set of a system of linear equations. 5. Understand that the determinant function on n x n matrices with entries in a field F is a function that may be defined recursively, and may be uniquely defined as an alternating multilinear form which takes the identity matrix to 1. 6. Perform rigorous proofs involving eigenvalues and eigenvectors. 7. Understand and be able to apply conditions for a linear operator on a finite-dimensional vector space to be diagonalizable. 8. Preform calculations with Gram-Schmidt,

least squares and related topics. 9. Students should be able to do rigorous proofs involving inner product spaces and related topics. Credits: 3.00

13-15 Credits

Statistics: Math Emphasis, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (30-31 credits)

Required Major Courses (24 credits)

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem.

Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus.

Credits: 3.00

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing.

Learning Outcomes: 1. Understand and able to use inference for standard parametric families of distributions; properties of estimators; Bayes and maximum likelihood estimation; sufficient statistics; properties of test of hypotheses; distribution theory for common statistics based on normal distributions. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)

Learning Outcomes: 1. Identify which discrete and continuous distributions are applicable in a given setting. 2. Use conditional probabilities, Bayes theorem, and conditional distributions. 3. Utilize joint distributions in the context of several random variables. 4. Apply the law of large numbers and the central limit theorem in asymptotic settings. 5. Derive moments and moment generating functions for discrete and

continuous random variables. Credits: 3.00

STAT 51700 - Statistical Inference

Credit Hours: 3.00. A basic course in statistical theory covering standard statistical methods and their application. Estimation including unbiased, maximum likelihood and moment estimation; testing hypotheses for standard distributions and contingency tables; confidence intervals and regions; introduction to nonparametric tests and linear regression.

Learning Outcomes: 1. Understand the basic asymptotic theory including consistency and convergence in distribution. 2. Know how to perform some elementary statistical inference such as estimation, confidence interval and hypothesis testing. 3. Be familiar with the maximum likelihood method to make statistical inference. 4. Know how to judge the quality of different estimators. 5. Know how to perform optimal tests of hypotheses. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of vector space, subspace, linear combination of vectors, linear dependence and linear independence, bases and dimension. 2. Perform rigorous proofs using the definitions of linear transformation and the null space and range of a linear transformation. 3. Exhibit a clear understanding of the relationship between composition of linear transformation and matrix multiplication. 4. Understand elementary matrices and their use in describing the solution set of a system of linear equations. 5. Understand that the determinant function on n x n matrices with entries in a field F is a function that may be defined recursively, and may be uniquely defined as an alternating multilinear form which takes the identity matrix to 1. 6. Perform rigorous proofs involving eigenvalues and eigenvectors. 7. Understand and be able to apply conditions for a linear operator on a finite-dimensional vector space to be diagonalizable. 8. Preform calculations with Gram-Schmidt, least squares and related topics. 9. Students should be able to do rigorous proofs involving inner product spaces and related topics. Credits: 3.00

MA 43200 - Elementary Stochastic Processes

Credit Hours: 3.00. An introduction to some classes of stochastic processes that arise in probabilistic models of time-dependent random processes. The main stochastic processes studied will be discrete time Markov chains and Poisson processes. Other possible topics covered may include continuous time Markov chains, renewal processes, queueing networks, and martingales.

Learning Outcomes: 1. Identify a verbal description of a stochastic process, identify the process as a Markov process and compute the transition matrix for the Markov process. 2. Compute the stationary distribution of a Markov

process and use this to draw conclusions on the long-term asymptotic behavior of the stochastic process using appropriate limit theorems for Markov processes. 3. Understand what conditions are necessary to be able to apply the main limit theorems for Markov chains; also, students should be able to give examples of Markov chains where these limit theorems do not hold because the assumptions of the theorems are violated. 4. Calculate hitting probabilities or expected hitting times of a Markov chain by solving a system of linear equations. 5. Know how to use mathematics software (e.g. Matlab) to perform computations for Markov chains on large state spaces. 6. Understand the thinning and superposition properties of Poisson processes and how to use these properties in computations. Credits: 3.00

Advanced Math Selective (3-4 credits)

MA 36600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 4.00. An introduction to ordinary differential equations with emphasis on problem solving and applications. The one-hour computer lab will give students an opportunity for hands-on experience with both the theory and applications of the subject.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the statement of the theorem of existence and uniqueness of solutions of first order differential equations and standard methods of solving linear, and some special non-linear, differential equations of first order. 2. Interpret solutions qualitatively. 3. Learn how to construct mathematical models. 4. Learn the standard methods of solving linear homogenous differential equations of constant coefficients of arbitrary order. 5. Learn methods to solve nonhomogeneous differential equations of constant coefficients of arbitrary order. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how they apply to systems of linear differential equations. 9. Learn how to analyze systems of nonlinear differential equations (optional). 10. Learn Laplace transforms and their applications to differential equations (optional). Credits: 4.00

MA 37500 - Introduction To Discrete Mathematics

Credit Hours: 3.00. Induction, permutations, combinations, finite probability, relations, graphs, trees, graph algorithms, recurrence relations, generating functions. Problem solving in all these areas. Credit granted for only one of MA 27600 and 37500.

Credits: 3.00

MA 42100 - Linear Programming And Optimization Techniques

Credit Hours: 3.00. Solution of linear programming problems by the simplex method, duality theory, transportation problems, assignment problems, network analysis, dynamic programming.

Credits: 3.00

MA 42500 - Elements Of Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions; differentiation of complex functions; power series, uniform convergence; integration, contour integrals; elementary conformal mapping.

Learning Outcomes: 1. Apply complex number theory and understand algebraic and geometric representations. 2. Solve complex equations and analyze limits, continuity, and differentiability. 3. Use Cauchy-Riemann equations to identify analytic functions. 4. Evaluate integrals using Cauchy's integral theorem and formula. 5. Apply the residue theorem for evaluating integrals in engineering and science problems. 6. Use Taylor and Laurent series to expand complex functions. 7. Solve boundary value problems in fluid dynamics, electrostatics, and potential theory. 8. Apply complex analysis techniques to

engineering and science applications. Credits: 3.00

MA 42800 - Introduction To Fourier Analysis

Credit Hours: 3.00. Topics include: Fourier series, convolutions, kernels, summation methods, Fourier transforms, and applications to the wave, heat, and Laplace equations.

Learning Outcomes: 1. Know applications of Fourier series to problems in physics and other areas. 2. Know convergence theorems and proofs for Fourier series. 3. Know the relationship between convolutions and Fourier series. 4. Know applications of Fourier transforms to problems in physics and other areas. Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

MA 44200 - Honors Real Analysis II

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces--continued from MA 44000. Topics include mappings of Euclidean spaces and their derivatives, multivariable chain rule, inverse function theorem and implicit function theorem, sets with content and integration in n dimensions, the integrability theorem, Jacobian and change of variables theorem, related topics.

Learning Outcomes: 1. Determine points at which derivatives exist and compute linear approximations for mappings of Euclidean spaces. 2. Perform rigorous applications of the multivariable chain rule, inverse function theorem and implicit function theorem in Euclidean spaces. 3. Apply the integrability theorem on the existence of Riemann integrals of functions in bounded sets in Euclidean spaces. 4. Perform rigorous applications of the change of variables theorem for integrals of functions on smooth transformations of domains in a Euclidean spaces. Credits: 3.00

MA 45000 - Algebra Honors

Credit Hours: 3.00. This course, which is essentially the first half of MA 55300, is recommended for students wanting a more substantial background in algebra than is afforded by MA 45300, in particular students intending to do graduate work in science or engineering. Topics include the elements of number theory and group theory; unique factorization in polynomial rings and in principal ideal domains.

Credits: 3.00

MA 45401 - Galois Theory Honors

Credit Hours: 3.00. This course will give a thorough introduction to Galois theory. Galois theory is a fundamental tool in many areas of mathematics, including number theory and algebraic geometry. This course will increase students' mathematical maturity and prepare them for graduate school. Topics include finite extension fields and their symmetries, ruler and compass constructions, complex roots of unity, solvable groups, and the solvability of polynomial equations by arithmetic and radical operations. This course is intended for third- or fourth-year students who have taken MA 45000 (Algebra Honors) or MA 45300 (Elements of Algebra I).

Learning Outcomes: 1. Know the historical background of Galois theory. 2. Know the classical version which addresses questions about roots of polynomials and the modern

formulation in terms of abstract algebra. 3. Know about finite extension fields and their symmetries. 4. Know how Galois theory answers ancient questions about ruler and compass constructions. 5. Know about cyclotomic fields generated by complex roots of unity. 6. Know how Galois theory answers questions about the solvability of polynomial equations by arithmetic and radical operations. Credits: 3.00

MA 45300 - Elements Of Algebra I

Credit Hours: 3.00. Fundamental properties of integers, polynomials, groups, rings, and fields, with emphasis on problem solving and applications. Not open to students with credit in MA 45000.

Learning Outcomes: 1. Demonstrate knowledge of: divisibility properties of integers and polynomials, structure theory of groups and examples of groups, structure theory of rings and examples of rings, basic theory of fields. 2. Demonstrate knowledge of the proofs of facts covered in the course. Credits: 3.00

MA 34900 - Signals And Systems For Mathematicians

Credit Hours: 3.00. This course introduces the mathematical framework for the description, analysis and processing of signals such as music, speech and images. Main topics covered include signal representations in different bases; continuous-time signal sampling; and signal processing by linear and time-invariant systems.

Learning Outcomes: 1. Describe and analyze continuous-time and discrete-time signals in different bases. 2. Understand the relation between a continuous-time signal and a sampling of that signal, including methods to reconstruct a continuous-time signal from its samples and applicability conditions. 3. Describe and analyze the properties of continuous-time and discrete time systems in different bases. 4. Construct linear and time-invariant systems to process continuous-time and discrete-time signals. Credits: 3.00

MA 37400 - Mathematical Foundations For Machine Learning

Credit Hours: 3.00. This course combines data, computation, and inferential thinking to solve challenging problems. In this class, we explore key areas of machine learning including question formulation, statistical inference, predictive modeling, and decision making. Through a strong emphasis on data-centric computing, and quantitative critical thinking, this class covers key principles and techniques of machine learning. These include algorithms for machine learning methods including regression, classification, and clustering; and statistical concepts of measurement error and prediction.

Learning Outcomes: 1. Identify a machine learning related data-science problem, formulate questions, visualize the data, and identify features, and conduct statistical inference, and derive prediction algorithms. 2. Know how to use a computer programming tool (e.g. Python or Matlab) to draw samples from important distributions. 3. Understand linear machine learning models for regression problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for regression problems. 4. Understand linear machine learning models for classification problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for classification problems. 5. Know how to build kernel methods; in particular, Gaussian process methods, and how to use a computer programming tool (e.g. Python or Matlab) to implement kermel methods. 6. Understand the concept of mixture models and the Expectational-Maximization algorithm and how to use a computer programming tool (e.g. Python or Matlab) to implement mixture models and the Expectational-Maximization algorithm. 7. Understand the sampling methods and perform computations for Markov Chain Monte Carlo. Credits: 3.00

MA 49500 - Advanced Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Advanced topics courses in mathematics for undergraduates are given under this number. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 5.00

Statistics Selective (3 credits)

STAT 42000 - Introduction To Time Series

Credit Hours: 3.00. An introduction to time series analysis suitable for students of actuarial science, engineering, and the sciences. Model building and forecasting with ARMA and ARIMA models. Basic financial volatility models (ARCH and GARCH). Resampling methods for confidence intervals. Basics of spectral analysis, including spectral density estimation and periodograms.

Learning Outcomes: 1. Manage time series data; extract subset of time series data. 2. Visualize time series data. 3. Understand trend and correlation. 4. Model time series data. 5. Forecast of time series data. Credits: 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.

Learning Outcomes: 1. Acquire fluency in the language and techniques of modem quality control and its applications. 2. Conceptually understand the utility of statistics for quality control. 3. Apply control charts and experimental design techniques to solve real-life quality control problems. 4. Utilize appropriate Statistical software for statistical computation, visualization, control chart construction, and design of experiments. 5. Discuss what is learned in lecture and assignments through oral and written presentations. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

IE 53000 - Quality Control

Credit Hours: 3.00. Principles and practices of statistical quality control in industry. Control charts for measurements and for attributes. Acceptance sampling by attributes and by measurements. Standard sampling plans. Sequential analysis. Sampling inspection of continuous production.

Credits: 3.00

CS 37300 - Data Mining And Machine Learning

Credit Hours: 3.00. This course will introduce students to the field of data mining and machine learning, which sits at the interface between statistics and computer science. Data mining and machine learning focuses on developing algorithms to automatically discover patterns and learn models of large datasets. This course introduces students to the process and main techniques in data mining and machine learning, including exploratory data analysis, predictive modeling, descriptive modeling, and evaluation.

Learning Outcomes: 1. Identify key elements of data mining and machine learning algorithms. 2. Understand how algorithmic elements interact to impact performance. 3. Understand how to choose algorithms for different analysis tasks. 4. Analyze data in both an exploratory and targeted manner. 5. Implement and apply basic algorithms for supervised and unsupervised learning. 6. Accurately evaluate the performance of algorithms, as well as formulate

and test hypotheses. Credits: 3.00

MA 37400 - Mathematical Foundations For Machine Learning

Credit Hours: 3.00. This course combines data, computation, and inferential thinking to solve challenging problems. In this class, we explore key areas of machine learning including question formulation, statistical inference, predictive modeling, and decision making. Through a strong emphasis on data-centric computing, and quantitative critical thinking, this class covers key principles and techniques of machine learning. These include algorithms for machine learning methods including regression, classification, and clustering; and statistical concepts of measurement error and prediction.

Learning Outcomes: 1. Identify a machine learning related data-science problem, formulate questions, visualize the data, and identify features, and conduct statistical inference, and derive prediction algorithms. 2. Know how to use a computer programming tool (e.g. Python or Matlab) to draw samples from important distributions. 3. Understand linear machine learning models for regression problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for regression problems. 4. Understand linear machine learning models for classification problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for classification problems. 5. Know how to build kernel methods; in particular, Gaussian process methods, and how to use a computer programming tool (e.g. Python or Matlab) to implement kermel methods. 6. Understand the concept of mixture models and the Expectational-Maximization algorithm and how to use a computer programming tool (e.g. Python or Matlab) to implement mixture models and the Expectational-Maximization algorithm. 7. Understand the sampling methods and perform computations for Markov Chain Monte Carlo. Credits: 3.00

TDM 10100 - The Data Mine Seminar I (UCC: IL)

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 20100 - The Data Mine Seminar III

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3.

Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 30100 - The Data Mine Seminar V

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 40100 - The Data Mine Seminar VII

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 20200 - The Data Mine Seminar IV

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting,

manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 30200 - The Data Mine Seminar VI

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 40200 - The Data Mine Seminar VIII

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

Other Departmental/Program Course Requirements (38-64 credits)

College of Science Additional Requirements

Computing (3-4 credits)

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained

for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

Laboratory Science (6-8 credits)

Mathematics (8-10 credits)

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A"

or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

Statistics (3 credits)

Required Pre-Requisite Courses (4-5 credits)

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 27101 - Honors Multivariate Calculus (UCC: QR)

Credit Hours: 5.00. This course is the Honors version of MA 26100, Multivariate Calculus; it will also include a review of infinite series. The course is intended for first-year students who have credit for Calculus I and II. There will be a significant emphasis on conceptual explanation, but not on formal proof. Permission of department is required.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know techniques of vector algebra and be able to apply these to the geometry of space; in particular they will be able to find equations for lines and planes in space. 2. Find equations for standard surfaces in space. 3. Use vector methods to analyze motion in space, and calculate arc length and curvature. 4. Acquire a conceptual and computational knowledge of infinite series; in particular they will be able to test for convergence, and to do calculations with power series. 5. Understand the meaning of partial derivatives in various situations, and will be able to calculate with them. 6. Know the multivariable chain rule and its meaning, and will be able to apply it to calculate derivatives in various situations. 7. Know the meaning of directional derivatives and how to calculate them. 8. Find tangent planes. 9. Find and classify extreme values and saddle points and use the method of Lagrange multipliers. 10. Know the meaning of multiple integrals and how to calculate them. 11. Know the meaning of line integrals and surface integrals and how to calculate them. 12. Know Green's theorem, Stokes' theorem, and the divergence theorem and their applications. Credits: 5.00

14-17 Credits

Spring 1st Year

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the meaning of multiple integrals and how to calculate them. 11. Know the meaning of line integrals and surface integrals and how to calculate them. 12. Know Green's theorem, Stokes' theorem, and the divergence theorem and their applications. Credits: 5.00

15-16 Credits

Spring 2nd Year

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

15 Credits

Fall 3rd Year

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem.

Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus.

Credits: 3.00

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)

Learning Outcomes: 1. Identify which discrete and continuous distributions are applicable in a given setting. 2. Use conditional probabilities, Bayes theorem, and conditional distributions. 3. Utilize joint distributions in the context of several random variables. 4. Apply the law of large numbers and the central limit theorem in asymptotic settings. 5. Derive moments and moment generating functions for discrete and continuous random variables. Credits: 3.00

15-16 Credits

Spring 3rd Year

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing.

Learning Outcomes: 1. Understand and able to use inference for standard parametric families of distributions; properties of estimators; Bayes and maximum likelihood estimation; sufficient statistics; properties of test of hypotheses;

distribution theory for common statistics based on normal distributions. Credits: 3.00

STAT 51700 - Statistical Inference

Credit Hours: 3.00. A basic course in statistical theory covering standard statistical methods and their application. Estimation including unbiased, maximum likelihood and moment estimation; testing hypotheses for standard distributions and contingency tables; confidence intervals and regions; introduction to nonparametric tests and linear regression.

Learning Outcomes: 1. Understand the basic asymptotic theory including consistency and convergence in distribution. 2. Know how to perform some elementary statistical inference such as estimation, confidence interval and hypothesis testing. 3. Be familiar with the maximum likelihood method to make statistical inference. 4. Know how to judge the quality of different estimators. 5. Know how to perform optimal tests of hypotheses. Credits: 3.00

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of vector space, subspace, linear combination of vectors, linear dependence and linear independence, bases and dimension. 2. Perform rigorous proofs using the definitions of linear transformation and the null space and range of a linear transformation. 3. Exhibit a clear understanding of the relationship between composition of linear transformation and matrix multiplication. 4. Understand elementary matrices and their use in describing the solution set of a system of linear equations. 5. Understand that the determinant function on n x n matrices with entries in a field F is a function that may be defined recursively, and may be uniquely defined as an alternating multilinear form which takes the identity matrix to 1. 6. Perform rigorous proofs involving eigenvalues and eigenvectors. 7. Understand and be able to apply conditions for a linear operator on a finite-dimensional vector space to be diagonalizable. 8. Preform calculations with Gram-Schmidt, least squares and related topics. 9. Students should be able to do rigorous proofs involving inner product spaces and related topics. Credits: 3.00

15 Credits

Fall 4th Year

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

MA 43200 - Elementary Stochastic Processes

Credit Hours: 3.00. An introduction to some classes of stochastic processes that arise in probabilistic models of time-dependent random processes. The main stochastic processes studied will be discrete time Markov chains and Poisson processes. Other possible topics covered may include continuous time Markov chains, renewal processes, queueing networks, and martingales.

Learning Outcomes: 1. Identify a verbal description of a stochastic process, identify the process as a Markov process and compute the transition matrix for the Markov process. 2. Compute the stationary distribution of a Markov

process and use this to draw conclusions on the long-term asymptotic behavior of the stochastic process using appropriate limit theorems for Markov processes. 3. Understand what conditions are necessary to be able to apply the main limit theorems for Markov chains; also, students should be able to give examples of Markov chains where these limit theorems do not hold because the assumptions of the theorems are violated. 4. Calculate hitting probabilities or expected hitting times of a Markov chain by solving a system of linear equations. 5. Know how to use mathematics software (e.g. Matlab) to perform computations for Markov chains on large state spaces. 6. Understand the thinning and superposition properties of Poisson processes and how to use these properties in computations. Credits: 3.00

12-15 Credits

Spring 4th Year

13-16 Credits

Studio Arts and Technology, BA

About the Program

Degree Requirements

Departmental/Program Major Courses (48 credits)

A. Studio Arts and Technology Fundamental Courses (15 credits)

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts

from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 11900 - Color Photography

Credit Hours: 3.00. Introductory course in creative use of color photographic processes and studio practices. Emphasis is on the acquisition of digital cameras, studio, and digital printing skills which enable students to successfully perceive and structure images reflecting color's formal, symbolic, and emotional impact.

Learning Outcomes: 1. Apply knowledge of capturing and processing color digital imagery. 2. Demonstrate learned skills in color correction and image enhancement using image-editing software. 3. Illustrate understanding of conceptual dialogue using photography and color, and compile a portfolio of images that reflect the understanding. Credits: 3.00

B. Art History courses (6 credits)

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 30701 - History Of Contemporary Photography

Credit Hours: 3.00. This course examines evolution of major themes in contemporary photography (Digital era to Present) from a variety of aesthetic, social, and cultural perspectives, fostering an awareness of pertinent theoretical issues.

Learning Outcomes: 1. Learning the history of contemporary art photography from the digital revolution to present. 2. Learning photography's multiple roles including technique and utilitarian function, sociopolitical context, and aesthetics, especially photography in the digital age. 3. Ability to recognize the characteristics of significant photographic works from 1980-present. 4. Understanding of how photographic pictures may reflect ideas and values of a given culture period. Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

AD 38400 - Contemporary Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of the visual arts from the 1940's to the present, designed to help students understand the cultural, social, and historical dynamics that

influence artistic creation, and reflect upon the artists' role in contemporary societies.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist, or artwork. 4. Discuss historical events, social forces, and cultural trends that have had an influence on a particular style, artist, or artwork. 5. Develop analytical and writing skills through textual studies of primary and secondary sources, as well as written exercises. Credits: 3.00

C. Studio Arts and Technology Core (9 credits)

2D Extended Media

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 22000 - Computers In Art

Credit Hours: 3.00. Introduction to computer graphics concepts and the electronic image as a fine art form. Emphasis is placed on personal expression, using the computer as a two-dimensional art tool.

Learning Outcomes: 1. Demonstrate individualized forms of creative expression through the use of computers and art. 2. Create a series of creative projects incorporating a range of digital techniques. 3. Critique and assess their creative work and the work of their peers. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

Craft/Material Studies

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 26200 - Jewelry And Metalwork I

Credit Hours: 3.00. An introduction to the design and execution of hand-wrought jewelry and metalwork.

Learning Outcomes: 1. Plan, and design functional and meaningful original small-scale metal objects and jewelry. 2. Create small scale metal sculptures and jewelry. 3. Demonstrate skill in sawing, filing, sanding and soldering and apply these techniques to produce small-scale metal sculptures and jewelry. Credits: 3.00

AD 27000 - Constructed Textiles

Credit Hours: 3.00. A beginning class in non-loom constructed textile techniques such as macram and card-weaving. Emphasis on three-dimensional design in fiber using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 27100 - Dyed Textiles

Credit Hours: 3.00. Beginning course in non-screen fabric dyeing techniques such as tie-dye and batik. Survey of historical surface design for contemporary interpretations in both two and three dimensions.

Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will be introduced to contemporary sculptors and their work with the aims of providing a historical background for the study and appreciation of sculpture as a medium and providing resources that students can relate to their own creative processes as artists. 2. Students will proceed through an individually developed series of problems and solutions. Where appropriate, additional historical and contemporary references related to the individual students' specific creative investigations will be provided. 3. Technical demonstration will also be provided as needed by individual students. Credits: 3.00

Art, Culture, and Technology

AD 23600 - Lighting Fundamentals For Photography

Credit Hours: 3.00. Introductory course in understanding electronic strobe lighting. Begins with a review of basic lighting principles and a series of problem-solving assignments, which introduce control, and applications of electronic strobe lighting. Still life photography and portraiture are emphasized and covers on-location lighting.

Learning Outcomes: 1. Gain an understanding of the basic principles of light and how to use those principles to light photographic subject matter. 2. Gain a basic understanding of the function of photographic lighting equipment. 3. Compile a portfolio of images that demonstrate a skill set learned regarding product and portrait and simple space lighting. Credits: 3.00

AD 26700 - Digital Imaging

Credit Hours: 3.00. An introductory course in the creative generation and digital enhancement of photo-related imagery. Emphasis is on the development of technical and critical thinking skills, as well as fostering an awareness of pertinent theoretical issues in digital age.

Learning Outcomes: 1. Gain knowledge of intermediate and advanced Photoshop. 2. Gain an understanding of constructed image making in photography using Photoshop. 3. Understand contemporary artists whose photographic works generated through computer manipulation. 4. Gain knowledge of theoretical and historical concerns regarding post photography. Credits: 3.00

AD 30400 - Video Art

Credit Hours: 3.00. Introduction to digital video as a creative medium for artistic expression. Students will record, digitize, edit and distribute digital video content and author a digital portfolio of their work in the form of an interactive DVD.

Learning Outcomes: 1. Analyze key ideas in the field of Video Art by preparing a research presentation on the practice of an individual video artist or collective. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Create a variety of video artworks by the creative use of the video camera, editing strategies and postproduction techniques. Credits: 3.00

AD 32600 - Physical Computing

Credit Hours: 3.00. Introduction to electronics and computer vision for artists. Students learn to create expressive audiovisual systems that can respond to events in the physical world (movement, light/temperature change, sound, touch, etc.) through custom interfaces.

Learning Outcomes: 1. Analyze key ideas in the field of Physical Computing by preparing a research presentation on the practice of an individual artist or collective. 2. Critique their own creative work as well as the work of their peers through group discussions. 3. Produce a variety of interactive artworks by the creative use of the Arduino microcontroller, simple electronic circuitry, and coding techniques. Credits: 3.00

AD 33400 - New Media Culture

Credit Hours: 3.00. This lecture course provides a historical overview of the development of new media art. In their research, project papers, and practical assignments, students explore issues of media criticism, technology's impact on culture and society and visions of media utopias.

Learning Outcomes: 1. Summarize the key characteristics of new media based on course texts and artistic examples. 2. Analyze and critique new media-related texts and cultural productions through group discussion and oral presentation. 3. Apply project-based methods to respond creatively and critically to the material history and social context of new media. Credits: 3.00

AD 36300 - Documentary Photography

Credit Hours: 3.00. This course is an introduction to the great tradition of documentary photography. Students learn to see the world around them in a new way and produce a documentary project. The course requires reading and writing about photography, as well as making photography on a regular basis. The class emphasis is on thinking about why people photograph, what photographs do and do not mean to us, and on doing documentary work, on telling stories with photographs.

Learning Outcomes: 1. Understand the history of documentary photography. 2. Demonstrate a narrative photography experimented through personal, social, cultural, topographical politics. Credits: 3.00

2D Extended Media

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 22000 - Computers In Art

Credit Hours: 3.00. Introduction to computer graphics concepts and the electronic image as a fine art form. Emphasis is placed on personal expression, using the computer as a two-dimensional art tool.

Learning Outcomes: 1. Demonstrate individualized forms of creative expression through the use of computers and art. 2. Create a series of creative projects incorporating a range of digital techniques. 3. Critique and assess their creative work and the work of their peers. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

D. Portfolio Assessment (required, no credit)

E. Studio Arts and Technology Areas of Concentration (15 credits)

2D Extended Media

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

AD 30000 - Life Drawing II

Credit Hours: 3.00. Emphasis is given to organizing the figure in pictorial space.

Learning Outcomes: 1. Draw successful figure drawings through use of gesture, exploration of media, and application of basic art and design principles. 2. Apply expressive and conceptual frameworks to develop their artistic voices. 3. Apply critical thinking skills both as a group and on their own. Credits: 3.00

AD 33300 - Photo Silk Screen

Credit Hours: 3.00. Advanced study of the techniques of photo silkscreen and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 36500 - Intermediate Painting

Credit Hours: 3.00. A studio course concentrating on the development of conceptual and technical skills of painting. This course is designed to help individual students gain a greater awareness of their personal creative goals and to foster means of expression.

Credits: 3.00

AD 36800 - Etching And Intaglio Printmaking

Credit Hours: 3.00. An introduction to the techniques of etching, engraving, aquatint, drypoint, collagraph, monoprint, and related processes. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 36900 - Lithographic Printmaking

Credit Hours: 3.00. An introduction to the techniques of stone and plate lithography. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 40000 - Advanced Painting

Credit Hours: 3.00. A studio course concentrating on the development of an advanced body of work built upon the conceptual and technical skills of painting. This course is designed to help individual students gain a greater awareness of their personal creative goals and to foster means of expression.

Credits: 3.00

AD 46800 - Printmaking III

Credit Hours: 3.00. Advanced studies in selected printmaking processes including relief, silkscreen, lithography, intaglio and book arts. Emphasis on color printmaking, photomechanical methods, fine art conceptual issues, creativity, and professional practices.

Learning Outcomes: 1. Create strong contemporary personal work in printmaking with expressive and original ideas. 2. Cultivate personal style through self-directed artist research, image development and experimentation in printmaking. 3. Demonstrate advanced technical skill in one or more printmaking mediums. 4. Acquire advanced technical skills to create multi-colored prints utilizing color, layering, and registration. 5. Describe and critique the work of professional printmaking artists, self and peers. Credits: 3.00

AD 31400 - Experimental Drawing

Credit Hours: 3.00. Individual development of students' drawing abilities and skills at intermediate and advanced levels, emphasizing drawing as primary means of expression, experimentation with materials, and exposure to many different modes of creating in the area of drawing.

Learning Outcomes: 1. Communicate visually through the use of a variety of drawing materials, some structured assignments, and individual projects. 2. Form an understanding of historical and contemporary artists' use of drawing as a primary means of expression. 3. Build a vocabulary integral to the critical thinking process. Credits: 3.00

Craft/Material Studies

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 26200 - Jewelry And Metalwork I

Credit Hours: 3.00. An introduction to the design and execution of hand-wrought jewelry and metalwork.

Learning Outcomes: 1. Plan, and design functional and meaningful original small-scale metal objects and jewelry. 2. Create small scale metal sculptures and jewelry. 3. Demonstrate skill in sawing, filing, sanding and soldering and apply these techniques to produce small-scale metal sculptures and jewelry. Credits: 3.00

AD 27000 - Constructed Textiles

Credit Hours: 3.00. A beginning class in non-loom constructed textile techniques such as macram and card-weaving. Emphasis on three-dimensional design in fiber using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 27100 - Dyed Textiles

Credit Hours: 3.00. Beginning course in non-screen fabric dyeing techniques such as tie-dye and batik. Survey of historical surface design for contemporary interpretations in both two and three dimensions.

Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will be introduced to contemporary sculptors and their work with the aims of providing a historical background for the study and appreciation of sculpture as a medium and providing resources that students can relate to their own creative processes as artists. 2. Students will proceed through an individually developed series of problems and solutions. Where appropriate, additional historical and contemporary references related to the individual students' specific creative investigations will be provided. 3. Technical demonstration will also be provided as needed by individual students. Credits: 3.00

AD 34200 - Ceramics II

Credit Hours: 3.00. A continuation of AD 24200 ; according to student needs in creating ceramic forms, a variety of in-depth experiences: experimental kiln building and firing techniques, methods of ceramic construction, surface treatment, and clay and glaze formulation.

Credits: 3.00

AD 36200 - Jewelry And Metalwork

Credit Hours: 3.00. Lost wax casting and mold making, mechanisms and stone setting for jewelry and metalwork.

Learning Outcomes: 1. Students will be able to design and make wax and non-wax models for jewelry and small metal projects by reductive, addictive, and construction processes. 2. Students will learn to sprue, invest and cast their models by the lost wax centrifugal and vacuum casting methods. 3. They will learn to make waste molds and reusable rubber molds to produce their jewelry projects. 4. They will learn to make mechanisms for jewelry and settings for incorporating stones or other nonmetal materials into their jewelry. Credits: 3.00

AD 37000 - Woven Textiles

Credit Hours: 3.00. A beginning course in loom-woven textiles and pattern drafting. Emphasis on two- and three-dimensional design in fiber, using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 40400 - Moldmaking And/Or Wheel-Throwing Production Techniques In Ceramics

Credit Hours: 3.00 to 6.00. This course will teach mold-making or wheel-throwing (depending on the individual student's interest) with a view to creating ceramic objects suitable for commercial mass-production. Both tableware and/or sculptural objects will be explored. For the wheel-throwing option the students must have at least one year of high school throwing or AD 24200 with a grade of at least "B" or permission of instructor. For the mold making and casting option only, students must be an Art and Design student or have permission of instructor.

Learning Outcomes: 1. The student will learn how to design a model, make the model from

clay, make a mold of the designed model (or found object), cast and assemble cast ceramics pieces for possible commercial mass-production. If choosing the wheel-throwing option, the student will learn advanced techniques of throwing and assembling parts to make either functional and sculptural objects for mass-production. 2. Students will also learn simple glazing techniques, and have the option of learning how to screen print and use decals on their final products. Credits: 3.00 to 6.00

AD 44200 - Ceramics III

Credit Hours: 3.00. A continuation of AD 34200 ; according to student needs in creating ceramic forms, a variety of in-depth experiences: experimental kiln building and firing techniques, methods of ceramic construction, surface treatment, and clay and glaze formulation.

Credits: 3.00

AD 46200 - Metalsmithing

Credit Hours: 3.00. Metal forming and metalsmithing processes for small metal objects and jewelry.

Learning Outcomes: 1. Identify and utilize traditional jewelry and metalsmithing tools and materials in art metal projects. 2. Design and construct specialized tooling for metalworks. 3. Utilize newly developed tools into the fabrication of jewelry and other metal projects. Credits: 3.00

AD 47000 - Advanced Studies In Textiles

Credit Hours: 3.00. A textile seminar and studio course in advanced textile design, with the purpose of developing a personal direction and competence in textiles as fiber art.

Credits: 3.00

Art, Culture, and Technology

AD 23600 - Lighting Fundamentals For Photography

Credit Hours: 3.00. Introductory course in understanding electronic strobe lighting. Begins with a review of basic lighting principles and a series of problem-solving assignments, which introduce control, and applications of electronic strobe lighting. Still life photography and portraiture are emphasized and covers on-location lighting.

Learning Outcomes: 1. Gain an understanding of the basic principles of light and how to use those principles to light photographic subject matter. 2. Gain a basic understanding of the function of photographic lighting equipment. 3. Compile a portfolio of images that demonstrate a skill set learned regarding product and portrait and simple space lighting. Credits: 3.00

AD 26700 - Digital Imaging

Credit Hours: 3.00. An introductory course in the creative generation and digital enhancement of photo-related imagery. Emphasis is on the development of technical and critical thinking skills, as well as fostering an awareness of pertinent theoretical issues in digital age.

Learning Outcomes: 1. Gain knowledge of intermediate and advanced Photoshop. 2. Gain an understanding of constructed image making in photography using Photoshop. 3. Understand contemporary artists whose photographic works generated through computer manipulation. 4. Gain knowledge of theoretical and historical concerns regarding post photography. Credits: 3.00

AD 30400 - Video Art

Credit Hours: 3.00. Introduction to digital video as a creative medium for artistic expression. Students will record, digitize, edit and distribute digital video content and author a digital portfolio of their work in the form of an interactive DVD.

Learning Outcomes: 1. Analyze key ideas in the field of Video Art by preparing a research presentation on the practice of an individual video artist or collective. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Create a variety of video artworks by the creative use of the video camera, editing strategies and postproduction techniques. Credits: 3.00

AD 32600 - Physical Computing

Credit Hours: 3.00. Introduction to electronics and computer vision for artists. Students learn to create expressive audiovisual systems that can respond to events in the physical world (movement, light/temperature change, sound, touch, etc.) through custom interfaces.

Learning Outcomes: 1. Analyze key ideas in the field of Physical Computing by preparing a research presentation on the practice of an individual artist or collective. 2. Critique their own creative work as well as the work of their peers through group discussions. 3. Produce a variety of interactive artworks by the creative use of the Arduino microcontroller, simple electronic circuitry, and coding techniques. Credits: 3.00

AD 33400 - New Media Culture

Credit Hours: 3.00. This lecture course provides a historical overview of the development of new media art. In their research, project papers, and practical assignments, students explore issues of media criticism, technology's impact on culture and society and visions of media utopias.

Learning Outcomes: 1. Summarize the key characteristics of new media based on course texts and artistic examples. 2. Analyze and critique new media-related texts and cultural productions through group discussion and oral presentation. 3. Apply project-based methods to respond creatively and critically to the material history and social context of new media. Credits: 3.00

AD 33700 - Commercial And Professional Practice In Photography

Credit Hours: 3.00. This course introduces students the skills necessary to attain entry-level employment in the photographic field and familiarizes students with the vocabulary, procedures, and working realities specific to occupations in the field of photography in the areas of photo-journalism, magazine illustration, advertising/web design, and fine arts. Permission of department required.

Learning Outcomes: 1. To prepare materials related to practical application within photographic industry. 2. To learn techniques and strategies for job searches, interviewing, and developing portfolio presentation skills. 3. To produce three parts portfolio consisting of a print portfolio, on-line web portfolio, and job interview portfolio. Credits: 3.00

AD 36101 - The Constructed Image

Credit Hours: 3.00. An intermediate level course focusing on the production of creative images constructed in the studio and in the field. Projects will address the planning and design of photographic images through the use of set design, styling, and post-production. Students will investigate both historical and contemporary trends in the art of the photographically-constructed image.

Learning Outcomes: 1. Construct and compose images using set design, styling, collage, and photomontage. 2. Develop communication skills to successfully interpret proposals and instructions from clients. 3. Analyze theoretical and historical concerns regarding constructed images and demonstrate an understanding of those concerns. 4. Develop visual communication and conceptual image making skills. 5. Develop techniques of creating photographically constructed images and demonstrate an understanding of those techniques. Credits: 3.00

AD 41700 - Variable Topics In Electronic And Time-Based Art

Credit Hours: 3.00. Examination of thematic or specialized topics reflecting the most recent developments and contemporary artistic practices in Electronic and Time-Based Art. Permission of department required.

Learning Outcomes: 1. Use essential tools and techniques for generating, sketching and realizing ideas in the field of new media art using DIY strategies, commercial as well as open source software and hardware solutions for creative production. 2. Able to analyze key works and artists in the emerging field of Electronic and Time-Based Art. Credits: 3.00

AD 42100 - Advanced Studies In Photography And Related Media I

Credit Hours: 3.00. The first of two advanced level courses in photography/related media focusing on production of a formally and conceptually coherent body of work. Course emphasizes

development of studio and critical thinking skills, and initiates investigation of the creative process.

Learning Outcomes: 1. Create a photographic series using advanced techniques and processes. 2. Evaluate the work of contemporary working photographers. 3. Define photographic terminology related to a contemporary and commercial photography practice. Credits: 3.00

AD 38100 - Alternative Photographic Processes

Credit Hours: 3.00. This course is designed to explore methods and concepts for creating photographs using alternative and historic processes. Through technical workshops and assigned projects students will become well-versed in medium and large format film cameras, as well as various 19th century processes.

Learning Outcomes: 1. Know various types of 19th century photographic processes. 2. Know large format photographic cameras. 3. Understand visual language and aesthetics of early photographic processes and printing methods. Credits: 3.00

AD 33100 - Digital Video Production And Aesthetics

Credit Hours: 3.00. This course is a basic studio introduction to video production and how video can be used as an artistic medium in conjunction with the students' photography. Topics include video/film formats, lighting, audio, editing, distribution, experimental, commercial and music video, production paperwork and extensive time spent on mastering the camera. Classes will consist of hands-on demonstrations, and critiques.

Learning Outcomes: 1. Demonstrate DSLR cameras. 2. Demonstrate basic to intermediate lighting for Video Production. 3. Obtain knowledge on commercial video production: music video and commercial advertisement video. Credits: 3.00

AD 36300 - Documentary Photography

Credit Hours: 3.00. This course is an introduction to the great tradition of documentary photography. Students learn to see the world around them in a new way and produce a documentary project. The course requires reading and writing about photography, as well as making photography on a regular basis. The class emphasis is on thinking about why people photograph, what photographs do and do not mean to us, and on doing documentary work, on telling stories with photographs.

Learning Outcomes: 1. Understand the history of documentary photography. 2. Demonstrate a narrative photography experimented through personal, social, cultural, topographical politics. Credits: 3.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

2D Extended Media

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional

practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

AD 30000 - Life Drawing II

Credit Hours: 3.00. Emphasis is given to organizing the figure in pictorial space.

Learning Outcomes: 1. Draw successful figure drawings through use of gesture, exploration of media, and application of basic art and design principles. 2. Apply expressive and conceptual frameworks to develop their artistic voices. 3. Apply critical thinking skills both as a group and on their own. Credits: 3.00

AD 33300 - Photo Silk Screen

Credit Hours: 3.00. Advanced study of the techniques of photo silkscreen and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 36500 - Intermediate Painting

Credit Hours: 3.00. A studio course concentrating on the development of conceptual and technical skills of painting. This course is designed to help individual students gain a greater awareness of their personal creative goals and to foster means of expression.

Credits: 3.00

AD 36800 - Etching And Intaglio Printmaking

Credit Hours: 3.00. An introduction to the techniques of etching, engraving, aquatint, drypoint, collagraph, monoprint, and related processes. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 36900 - Lithographic Printmaking

Credit Hours: 3.00. An introduction to the techniques of stone and plate lithography. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 40000 - Advanced Painting

Credit Hours: 3.00. A studio course concentrating on the development of an advanced body of work built upon the conceptual and technical skills of painting. This course is designed to help individual students gain a greater awareness of their personal creative goals and to foster means of expression.

Credits: 3.00

AD 46800 - Printmaking III

Credit Hours: 3.00. Advanced studies in selected printmaking processes including relief, silkscreen, lithography, intaglio and book arts. Emphasis on color printmaking, photomechanical methods, fine art conceptual issues, creativity, and professional practices.

Learning Outcomes: 1. Create strong contemporary personal work in printmaking with expressive and original ideas. 2. Cultivate personal style through self-directed artist research, image development and experimentation in printmaking. 3. Demonstrate advanced technical skill in one or more printmaking mediums. 4. Acquire advanced technical skills to create multi-colored prints utilizing color, layering, and registration. 5. Describe and critique the work of professional printmaking artists, self and peers. Credits: 3.00

AD 31400 - Experimental Drawing

Credit Hours: 3.00. Individual development of students' drawing abilities and skills at intermediate and advanced levels, emphasizing drawing as primary means of expression, experimentation with materials, and exposure to many different modes of creating in the area of drawing.

Learning Outcomes: 1. Communicate visually through the use of a variety of drawing materials, some structured assignments, and individual projects. 2. Form an understanding of historical and contemporary artists' use of drawing as a primary means of expression. 3. Build a vocabulary integral to the critical thinking process. Credits: 3.00

F. Studio Arts Professional Practice/Senior Exhibition (3 credits)

AD 49900 - Studio Arts Professional Practice/Senior Exhibition

Credit Hours: 3.00. Study of professional practice in the contemporary art world: ethics, gallery, exhibition, studio practice, writing, visual documentation, and business of art. Seniors meet throughout spring semester to organize, install, and de-install Fine Arts Senior Exhibition.

Learning Outcomes: 1. Develop a professional artist statement and resume. 2. Identify and discuss trends in contemporary professional art practices. 3. Design a digital art portfolio. 4. Demonstrate skills necessary to organize and install art exhibitions. Credits: 3.00

A. Studio Arts and Technology Fundamental Courses (15 credits)

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio

project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 11900 - Color Photography

Credit Hours: 3.00. Introductory course in creative use of color photographic processes and studio practices. Emphasis is on the acquisition of digital cameras, studio, and digital printing skills which enable students to successfully perceive and structure images reflecting color's formal, symbolic, and emotional impact.

Learning Outcomes: 1. Apply knowledge of capturing and processing color digital imagery. 2. Demonstrate learned skills in color correction and image enhancement using image-editing software. 3. Illustrate understanding of conceptual dialogue using photography and color, and compile a portfolio of images that reflect the understanding. Credits: 3.00

Electives (38-47 credits)

Spring 1st Year

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 11900 - Color Photography

Credit Hours: 3.00. Introductory course in creative use of color photographic processes and studio practices. Emphasis is on the acquisition of digital cameras, studio, and digital printing skills which enable students to successfully perceive and structure images reflecting color's formal, symbolic, and emotional impact.

Learning Outcomes: 1. Apply knowledge of capturing and processing color digital imagery. 2. Demonstrate learned skills in color correction and image enhancement using image-editing software. 3. Illustrate understanding of conceptual dialogue using photography and color, and compile a portfolio of images that reflect the understanding. Credits: 3.00

Fall 2nd Year

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 30701 - History Of Contemporary Photography

Credit Hours: 3.00. This course examines evolution of major themes in contemporary photography (Digital era to Present) from a variety of aesthetic, social, and cultural perspectives, fostering an awareness of pertinent theoretical issues.

Learning Outcomes: 1. Learning the history of contemporary art photography from the digital revolution to present. 2. Learning photography's multiple roles including technique and utilitarian function, sociopolitical context, and aesthetics, especially photography in the digital age. 3.

Ability to recognize the characteristics of significant photographic works from 1980-present. 4. Understanding of how photographic pictures may reflect ideas and values of a given culture period. Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

AD 38400 - Contemporary Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of the visual arts from the 1940's to the present, designed to help students understand the cultural, social, and historical dynamics that influence artistic creation, and reflect upon the artists' role in contemporary societies.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist, or artwork. 4. Discuss historical events, social forces, and cultural trends that have had an influence on a particular style, artist, or artwork. 5. Develop analytical and writing skills through textual studies of primary and secondary sources, as well as written exercises. Credits: 3.00

About the Program

Supply Chain & Operations Management, BS

About the Program

Degree Requirements

Department/Program Major Courses (77 credits)

Required Major Courses (56 credits)

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or

networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help

students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other

courses and in one's professional career. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 46300 - Supply Chain Analytics

Credit Hours: 3.00. This course focuses on rigorous quantitative decision-making in supply chain management. It covers optimization (linear, nonlinear, and integer), stochastics/probability, and simulation. The coursework is conducted through experiential learning activities based on real-world data, proficiency with analytics software, and operation research case studies. MGMT 30600 is highly recommended but not required. Basic Calculus, Statistics, and Excel literacy are required.

Learning Outcomes: 1. Gain analytical insights on major supply chain tradeoffs. 2. Know supply chain functions: demand forecasting, procurement, inventory, transportation, pricing, contract, revenue management, reverse supply chain and integration of multiple functions. 3. Know a systematic set of analytical methodologies to use effectively in their future careers. Credits: 3.00

MGMT 46400 - Logistics: Concepts And Models

Credit Hours: 3.00. The course familiarizes students with main concepts and models of business logistics management. Through the course, students develop an ability to design, improve, and manage logistics operations such as Inventory, Transportation, Warehousing, and Logistics Network Design. Since logistics decisions often require certain trade-offs to be made, students develop necessary quantitative and qualitative analytical skills to improve their decision-making. At the end of the course, students should be able to analyze logistics strategy of a firm, identify problems and tradeoffs in different logistics functions, formulate the corresponding models, identify quantitative methods to solve it, obtain results and interpret them for small-size problems using standard spreadsheet software, communicate the results to a broader audience using business language, discuss issues and challenges in same-day delivery, humanitarian logistics, physical internet.

Learning Outcomes: 1. Know vocabulary of Logistics, and Supply Chain. 2. Design, improve and manage processes by learning decision making tools. 3. Become familiar with the key issues and problems facing an operations manager. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce,

and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MGMT 46600 - Project Management

Credit Hours: 3.00. This course seeks to introduce different phases of managing projects from conception to termination with particular emphasis on quantitative tools for planning, scheduling, resource allocation, monitoring, and control. In addition, topics such as risk management, quality management and procurement management will be covered. Students will also gain a working knowledge of MSProject software.

Learning Outcomes: 1. Provide in-depth exposure to the use of project management tools and philosophies. 2. Demonstrate a realistic experience using these tools to plan and control a project. 3. Know basic steps in project planning: work breakdown, scheduling, resource allocation, information systems, and control. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

ECON 30100 - Managerial Economics

Credit Hours: 3.00. This course provides students with essential tools from intermediate microeconomic theory to support effective decision-making in business and institutional settings. By exploring fundamental economic concepts such as marginal analysis, profit maximization, cost minimization, and pricing strategies, students will enhance their strategic thinking and managerial capabilities. The course addresses key topics including consumer behavior, demand, production and costs, factor demand, market structure, and strategic behavior, equipping students to tackle complex business challenges and make sound economic decisions. By the end of the course, students will have developed the skills to determine optimal strategies in various market conditions, preparing them to succeed as informed business managers.

Learning Outcomes: 1. Learn how to identify goals and constraints, and use inductive and deductive reasoning to draw logical conclusions. 2. Recognize the nature and importance of profits in directing resources to their highest value in use. 3. Understand how incentives shape individual and institutional

decisions. 4. Understand the functioning of markets in managing individual and social allocation of scarce resources. 5. Recognize the importance of time value of money in making sound managerial decisions. 6. Learn the value of "thinking at the margin" when we seek to reach optimal outcomes. Credits: 3.00

MGMT 46501 - Strategic Sourcing And Procurement Operations Analytics

Credit Hours: 3.00. This elective course will serve as an important complement to the existing OM modules (e.g., MGMT 36100 Operations Management) to introduce more in-depth knowledge about supply chain management to undergraduate students, especially those major in SC&OM, focusing on strategic sourcing and procurement operations which are the building blocks for supply chain operations. More specifically, this course will introduce procure-to-pay process, category management, supplier selection and evaluation, supplier relationship management, vertical integration, global sourcing, outsourcing, auctioning, supply contract design and negotiation, business ethics, legal and compliance issues, etc. Sourcing and procurement is the major job title for supply chain operations jobs in the industry and our course can also help students to get the professional certificate of sourcing and procurement. Hence, it may also help senior students prepare for the job placements. Learning Outcomes: 1. Master the working knowledge and vocabulary of strategic sourcing and procurement. 2. Know how to design and manage the business process in sourcing operations. 3. Know how to align sourcing strategies with corporate strategies. 4. Know how to model the key decision-making process of sourcing operations. 5. Apply data analytics techniques to develop sourcing strategies. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work. University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

Major Selectives I (12 credits)

MGMT 46200 - Advanced Manufacturing Planning And Control Systems

Credit Hours: 3.00. The course examines key concepts in the planning, control, and improvement of processes in manufacturing and service operations. Specific topics covered in the course include: (i) Product/service characteristics that provide value to customers and competitive priorities, (ii) Role of processes and key operations choices to support the competitive priorities, (iii) Process analysis and scheduling, (iv) Throughput principles to deal with adverse impacts of process uncertainties and bottlenecks, (v) Managing capacity and lead times, (vi) Throughput principles to deal with wastes and errors, including the Toyota Production System and Lean Operations, and (vii) Coordinating material/order flows in supply chain - MRP, and Resources and Production Planning - Aggregate Production Planning. The class uses a combination of lectures, cases, simulations, outside speakers, experiential exercises, and student presentations. An important component of the course is a hands-on exercise where students in teams of seven or eight design and run a production process to meet demand for a quality-conscious customer. The teams then present the lessons learned to the class.

Learning Outcomes: 1. Learn the details of production planning, master scheduling, materials planning, short range capacity planning, production floor execution, and quality control. Credits: 3.00

MGMT 45200 - Manufacturing Strategy And Process Innovation

Credit Hours: 3.00. This course examines the management challenges posed by the growth in worldwide manufacturing capabilities, markets, and competition and by rapid advances in technology and the concomitant decline in product life cycles. The manufacturing function is considered within a broader context encompassing design, engineering, purchasing, marketing, and customer service in an effort to assess the degree to which existing management structures successfully meet the challenges arising from the changing manufacturing environment.

Learning Outcomes: 1. Identify the tradeoffs made between operations flexibility and cost. 2. Identify proper alignment between manufacturing strategy and business strategy. 3. Identify the pros and cons of different types of plant network strategies. 4. Identify the behavioral issues associated with implementation of rigid project management tools. 5. Identify the potential long term implications of outsourcing on the development of competition. Credits: 3.00

MGMT 40500 - Six Sigma And Quality Analytics

Credit Hours: 3.00. The course is an undergraduate elective offered as part of the Center for Manufacturing Management Enterprises (CMME) quality initiatives. Provides an overview of various tools and methods for total quality management.

Learning Outcomes: 1. Make data driven conclusions and decisions for quality management operations through working on various business cases. 2. Apply previously gained statistical knowledge to understand and to analyze data. 3. Gain some advanced analytical technics such as Analysis of Variances (ANOVA) and Design of Experiment (DOE) to optimize obtaining data and learnings. 4. Master a simple yet powerful MINITAB software to carry out complex tasks. Credits: 3.00

MGMT 26100 - Introduction To Supply Chain Management

Credit Hours: 3.00. This course seeks to introduce general concepts in supply chain management, including procurement, supply planning, demand planning, and logistics. This course is designed around a corporate partnership to provide students with the opportunity to collaborate on solving a large-scale supply chain challenge. In the first five weeks of the semester, students will be introduced to basics of SCM through lectures,

cases, and assignments. Beginning in the sixth week, students will form teams to work on a real-world case presented by the corporate partner, a complex problem broken down into six learning areas, each with a corresponding deliverable.

Learning Outcomes: 1. Define, measure, and recommend improvements to an organization's supply chain. 2. Gain experience in applying these skills to a real-world business problem. 3. Learn about the different aspects of supply chain management. Credits: 3.00

MGMT 46800 - Supply Chain Technology

Credit Hours: 3.00. The course will introduce the major SCM information systems and technologies utilized by industry leaders to integrate SCM operations and achieve coordination within and across various business functions. The students will learn how to manage SCM operations, including: sales & distribution, materials management, production planning and control, warehouse management, retail operations. The course will provide students the opportunity to study, analyze, and observe the information systems and technology tools. Topics include Enterprise Resource Planning Systems (ERP), Blockchain, Warehouse Management System (WMS), Transportation Management Systems (TMS), Internet of Things (IOT) in retail. The students will learn how to use the SAP software to execute SCM operations. The course will review the technology implementation process and how such projects should be organized and managed.

Learning Outcomes: 1. Learn how to manage SCM operations, including: sales & distribution, materials management, production planning and control, warehouse management, retail operations. Methods of Evaluation: HWs, Quizzes. 2. Study, analyze, and observe the information systems and technology tools. Methods of Evaluation: Case studies, lab sessions, online discussions. 3. Learn how to use the SAP software to execute SCM operations. Methods of Evaluation: Lab exercises, team workshop, games. Credits: 3.00

MGMT 46900 - Supply Chain & Operations Analytics Consulting

Credit Hours: 3.00. This supply chain experiential learning course aims to provide students opportunities to apply theories and methods learned from supply chain and operations management courses to tackle real-world supply chain problems. A salient feature of this course is that it consists of two pillars. The first pillar is the partnerships with leading companies (e.g., Wabash, Corteva and Rolls Royce) to offer project opportunities and assign internal experts to advise student teams. Students will have opportunities to visit company sites, interact with domain experts, and present their findings to leadership teams. The second pillar is the partnership with a group of Purdue alumni to leverage their extensive supply chain consulting and corporate leadership experiences to advise students the consultation approach to problem-solving: how to approach problems, engage stakeholders, and professionally manage project delivery processes as internal or external consultants for business organizations.

Learning Outcomes: 1. Apply knowledge and skills learned in classes to real-world supply chain and operations problems. 2. Identify and approach real-world supply chain problems. 3. Collect, process and analyze real-world data. 4. Communicate and interact with supply chain executives. 5. Manage supply chain projects as a consultant. Credits: 3.00

Major Selectives II (6 credits)

CNIT 17500 - Visual Programming

Credit Hours: 3.00. This course introduces event-driven application development and programming using a visual programming environment. Topics include problem solving and program design, control structures, objects and events, user interface construction, documentation, and program testing. Credit may be established in only one of: CPT 15500 or CPT 17500 or CPT 25000. PC literacy required.

Learning Outcomes: 1. Demonstrate a basic knowledge of OOP and GUI design. 2. Manipulate the numeric and textual data in a program. 3. Use the right coding structure, sequential, selection and repetition, to solve a problem. 4. Store and manipulate large amount of data in a program. Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained

for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 42110 - Marketing Analytics

Credit Hours: 3.00. This course covers essential decision models and strategic metrics that form the cornerstone of marketing analytics. Using the insight gained in the course, students can predict the outcome of marketing plans to boost return on marketing investment (ROMI). The course emphasizes hands-on learning so students can immediately apply the econometric tools and techniques on a variety of marketing applications. A number of relevant topics are discussed, such as market sizing, forecasting and positioning,

promotion budget allocation, and profit maximization. The final piece of this course is guiding the students on how best to craft data-driven presentations to key stakeholders through the use of an experiential learning project provided by an external client.

Learning Outcomes: 1. Enhance the student's knowledge on Advanced Modeling Techniques, such as how and when to apply Logistic Regression, Logit, Multinomial Logit, Ordinal Logit, and Tobit. 2. Showcase situations across a variety of marketing topics (pricing, sales, advertising, new product development, etc.) where analytical methods can bring greater insight to the marketing practitioner. 3. Apply the above information to a real-world consulting project and deliver not only managerial insights, but also a data-driven presentation. Credits: 3.00

MGMT 42710 - Digital Marketing Strategy

Credit Hours: 3.00. Digital marketing is where marketing meets the internet, wireless devices, and other digital media. The course covers a variety of topics including online advertising, search engine optimization, participation in social media, online listening and monitoring, and web & social media analytics. Through a combination of lecture, case studies, hands-on exercises, and course projects, students develop capabilities in designing, implementing, and evaluating digital marketing strategies. Students can also gain hand-on learning experience in the course by participating in an online marketing project. In the online marketing project, each student team is given $50 to promote a chosen business or organization via online or social media platform (including search engine advertising and online display advertising).

Learning Outcomes: 1. Enable students to rethink marketing in the evolving digital age. 2. Develop capabilities in designing, implementing, and evaluating digital marketing strategies. 3. Understand major tools of digital marketing by gaining hands-on learning experience of search engine advertising tools by participating in a Google sponsored online marketing challenge competition. Credits: 3.00

MGMT 28800 - Programming For Business Applications

Credit Hours: 3.00. This course will cover the fundamentals of business rules and logic in a business application development context. Students will acquire these skills using computer programming. A modern programming language will be used to learn and reinforce logical concepts, including abstraction, process flow, variable assignment, and control structures, as well as proper programming and application development practices, including documentation.

Learning Outcomes: 1. Understand and apply basic technical knowledge to managerial problems. 2. Successfully write, test, and run computer programs designed to address managerial problems. Credits: 3.00

MGMT 47400 - Predictive Analytics

Credit Hours: 3.00. Students build and evaluate predictive models to support regression-type and classification-type business problems using popular industry tools (e.g., RStudio, SAS Enterprise Miner). Methods covered include multiple linear regression, ridge regression, lasso, CART, logistic regression, LDA/QDA, SVM, and ensemble methods such as random forests.

Learning Outcomes: 1. Generate a valid predictive analytics solution by following a structured process. 2. Demonstrate practical understanding of frequently used predictive analytics techniques. 3. Demonstrate a working knowledge of RStudio and SAS Enterprise Miner to build an access predictive models. 4. Demonstrate project poster and presentation of a predictive analytics solution to a business problem. Credits: 3.00

MGMT 47300 - Data Mining

Credit Hours: 3.00. Students follow a structured analytical process using popular industry tools (e.g., RStudio, Tableau, SQL) to identify, visualize, and summarize relationships within large data sets to support business problems. More focus is on descriptive analytics which includes business segmentation and clustering methods, but also introduces two predictive analytic methods, decision trees, and neural networks.

Learning Outcomes: 1. Demonstrate working knowledge of relationship databases, SQL queries, and efficient sampling. 2. Demonstrate working knowledge of RStudio to perform EDA, visualization, and data mining techniques. 3. Demonstrate working knowledge of data

visualization and exploration using Tableau. 4. Demonstrate practical understanding of popular unsupervised and supervised learning methods. Credits: 3.00

MGMT 48800 - Data-Driven Decisions In Digital Markets

Credit Hours: 3.00. This course analyzes the changes in business models that have been enabled by Internet technologies, and exposes students to hands-on data analyses to quantify the impact these technologies and business models have on firms, economies, and people. A programming course such as MGMT 28800 Programming for Business Applications or MGMT 38800 Python for Business or CS 17600 Data Engineering in Python or CS 17700 Programming with Multimedia Objects or CNIT 17500 Visual Programming or CS 18000 Problem Solving & Object Oriented Programming and a statistics course such as STAT 30301 Probability & Statistics for Business or MGMT 30500 Business Statistics is highly recommended.

Learning Outcomes: 1. Recognize the role of business models and data-driven decisions in digital markets. 2. Measure, evaluate, and improve online technology usage, advertisement campaigns, and product pricing to meet specific business objective like better serving customers, customer acquisition, quantifying network effects, etc. 3. Analyze the sheer amount of data ("traces") collected by businesses from different touch points - Google Glass, Apple Watch, smart phones, or simple computing devices - and make critical business decisions. Credits: 3.00

MGMT 42120 - Data & AI-Driven Marketing

Credit Hours: 3.00. Marketing is increasingly evolving from traditional approaches to leveraging big data and artificial intelligence (AI) to make strategic decisions and drive impactful campaigns. This course offers an immersive exploration into the intersection of data science, artificial intelligence, and marketing strategies, providing students with the knowledge and skills to thrive in the digital era. It will discuss uses of data science tools and AI algorithms in marketing applications, such as personalized marketing, sentiment analysis, and ad campaign optimization. Students will also gain hands-on experience on applying the methods to real-world data.

Learning Outcomes: 1. Identify modern statistical & machine learning methods required for marketing using big data. 2. Carry out applying statistical and machine learning methods to improve major marketing decisions. 3. Implement statistical and machine learning methods in Python using real-world data. Credits: 3.00

Cultural Competency Selectives (3 credits)

Other Departmental/Program Course Requirements (29-43 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments.

CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of

social behaviors and inequalities. Credits: 3.00

CS 18200 - Foundations Of Computer Science

Credit Hours: 3.00. Logic and proofs; sets, functions, relations, sequences and summations; number representations; counting; fundamentals of the analysis of algorithms; graphs and trees; proof techniques; recursion; Boolean logic; finite state machines; pushdown automata; computability and undecidability.

Learning Outcomes: 1. Understand discrete mathematical tools, facts, and reasoning relevant to computer science. Credits: 3.00

CS 24000 - Programming In C

Credit Hours: 3.00. The UNIX environment, C development cycle, data representation, operators, program structure, recursion, macros, C preprocessor, pointers and addresses, dynamic memory allocation, structures, unions, typedef, bit-fields, pointer/structure applications, UNIX file abstraction, file access, low-level I/O, concurrency.

Learning Outcomes: 1. Understand programming principles and techniques for problem solving in the C programming language. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation

techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is

primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity,

coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of

good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.

Learning Outcomes: 1. Use accounting data to make business decisions. 2. Evaluate firm and managerial financial performance. 3. Develop pro forma financial statements. 4. Model specific accounting line items using excel. 5. Present summarized information in Tableau. Credits: 3.00

MGMT 22300 - Marketing Excel Fundamentals And Data Analytics

Credit Hours: 3.00. This course provides marketing students with essential skills in data management, visualization, and analysis using Microsoft Excel. Students will explore how to leverage data analytics to inform marketing strategies, optimize campaign performance, and drive decision-making. Hands-on training includes using Excel functions, tables, charts, and PivotTables, with a focus on practical, real-world marketing applications such as segmentation analysis, customer profiling, and campaign ROI assessment.

Learning Outcomes: 1. Apply Excel functions to process and analyze marketing data effectively. 2. Create data visualizations that effectively communicate insights to marketing teams and stakeholders. 3. Analyze marketing data using advanced analytical techniques to optimize campaign performance. 4. Develop proficiency in cleaning, validating, and consolidating marketing data for enhanced decision-making. Credits: 3.00

MGMT 24500 - Introduction To Finance With Excel

Credit Hours: 3.00. This course introduces essential Excel skills for finance, including data organization, basic calculations, and summary analysis. Through hands-on projects, students develop practical spreadsheets and formatting skills for real-world applications. No prior Excel experience is required.

Learning Outcomes: 1. Identify and explain the main functionality of Microsoft Excel and other spreadsheet programs. 2. Design effective and professional data presentation using table operations, formatting, and visuals. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and text functions. Credits: 3.00

MGMT 23500 - Data Tools For Business

Credit Hours: 3.00. This course covers the fundamentals of data use and analysis. Students will acquire these skills using a common business suite application for data handling. Students will also be introduced to application software or modern programming language that interacts with the business suite application and its data to allow for data analysis, management, and presentation for solving business problems.

Learning Outcomes: 1. Identify and explain the main terminology, concepts, and design of a data-oriented business-suite application and the data it manages. 2. Develop and implement data management solutions by creating application models, commands, and functions using a data-oriented business-suite application. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions,

conditional functions, statistical functions, financial functions, and analysis functions. 4. Execute and evaluate advanced data management activities such as text manipulation, database functions, and macros to improve data workflows. 5. Integrate and implement third-party data management applications with a data-oriented business-suite application to perform data analysis, management, and presentation, addressing complex business problems. Credits: 3.00

Electives (0-14 credits)

Optional Concentration for Supply Chain & Operations Management, BS

Sample 4-Year Plan

Fall 1st Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different

audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

14-21 Credits

Spring 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to

informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits:

4.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with

transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

16-21 Credits

Fall 2nd Year

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

13-15 Credits

Spring 2nd Year

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their

business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

15 Credits

Fall 3rd Year

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by

modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

ECON 30100 - Managerial Economics

Credit Hours: 3.00. This course provides students with essential tools from intermediate microeconomic theory to support effective decision-making in business and institutional settings. By exploring fundamental economic concepts such as marginal analysis, profit maximization, cost minimization, and pricing strategies, students will enhance their strategic thinking and managerial capabilities. The course addresses key topics including consumer behavior, demand, production and costs, factor demand, market structure, and strategic behavior, equipping students to tackle complex business challenges and make sound economic decisions. By the end of the course, students will have developed the skills to determine optimal strategies in various market conditions, preparing them to succeed as informed business managers.

Learning Outcomes: 1. Learn how to identify goals and constraints, and use inductive and deductive reasoning to draw logical conclusions. 2. Recognize the nature and importance of profits in directing resources to their highest value in use. 3. Understand how incentives shape individual and institutional decisions. 4. Understand the functioning of markets in managing individual and social allocation of scarce resources. 5. Recognize the importance of time value of money in making sound managerial decisions. 6. Learn the value of "thinking at the margin" when we seek to reach optimal outcomes. Credits: 3.00

MGMT 46501 - Strategic Sourcing And Procurement Operations Analytics

Credit Hours: 3.00. This elective course will serve as an important complement to the existing OM modules (e.g., MGMT 36100 Operations Management) to introduce more in-depth knowledge about supply chain management to undergraduate students, especially those major in SC&OM, focusing on strategic sourcing and procurement operations which are the building blocks for supply chain operations. More specifically, this course will introduce procure-to-pay process, category management, supplier selection and evaluation, supplier relationship management, vertical integration, global sourcing, outsourcing, auctioning, supply contract design and negotiation, business ethics, legal and compliance issues, etc. Sourcing and procurement is the major job title for supply chain operations jobs in the industry and our course can also help students to get the professional certificate of sourcing and procurement. Hence, it may also help senior students prepare for the job placements.

Learning Outcomes: 1. Master the working knowledge and vocabulary of strategic sourcing and procurement. 2. Know how to design and manage the business process in sourcing operations. 3. Know how to align sourcing strategies with corporate strategies. 4. Know how to model the key decision-making process of sourcing operations. 5. Apply data analytics techniques to develop sourcing strategies. Credits: 3.00

15 Credits

Spring 3rd Year

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise

marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 46300 - Supply Chain Analytics

Credit Hours: 3.00. This course focuses on rigorous quantitative decision-making in supply chain management. It covers optimization (linear, nonlinear, and integer), stochastics/probability, and simulation. The coursework is conducted through experiential learning activities based on real-world data, proficiency with analytics software, and operation research case studies. MGMT 30600 is highly recommended but not required. Basic Calculus, Statistics, and Excel literacy are required.

Learning Outcomes: 1. Gain analytical insights on major supply chain tradeoffs. 2. Know supply chain functions: demand forecasting, procurement, inventory, transportation, pricing, contract, revenue management, reverse supply chain and integration of multiple functions. 3. Know a systematic set of analytical methodologies to use effectively in their future careers. Credits: 3.00

MGMT 46600 - Project Management

Credit Hours: 3.00. This course seeks to introduce different phases of managing projects from conception to termination with particular emphasis on quantitative tools for planning, scheduling, resource allocation, monitoring, and control. In addition, topics such as risk management, quality management and procurement management will be covered. Students will also gain a working knowledge of MSProject software.

Learning Outcomes: 1. Provide in-depth exposure to the use of project management tools and philosophies. 2. Demonstrate a realistic experience using these tools to plan and control a project. 3. Know basic steps in project planning: work breakdown, scheduling, resource allocation, information systems, and control. Credits: 3.00

15 Credits

Fall 4th Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective,

industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

MGMT 46400 - Logistics: Concepts And Models

Credit Hours: 3.00. The course familiarizes students with main concepts and models of business logistics management. Through the course, students develop an ability to design, improve, and manage logistics operations such as Inventory, Transportation, Warehousing, and Logistics Network Design. Since logistics decisions often require certain trade-offs to be made, students develop necessary quantitative and qualitative analytical skills to improve their decision-making. At the end of the course, students should be able to analyze logistics strategy of a firm, identify problems and tradeoffs in different logistics functions, formulate the corresponding models, identify quantitative methods to solve it, obtain results and interpret them for small-size problems using standard spreadsheet software, communicate the results to a broader audience using business language, discuss issues and challenges in same-day delivery, humanitarian logistics, physical internet.

Learning Outcomes: 1. Know vocabulary of Logistics, and Supply Chain. 2. Design, improve and manage processes by learning decision making tools. 3. Become familiar with the key issues and problems facing an operations manager. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

15 Credits

Spring 4th Year

15 Credits

Supply Chain & Sales Engineering Technology, BS

About the Program

Degree Requirements

Department/Program Major Courses (46 credits)

Required Department Courses (46 credits)

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 34200 - Warehouse And Inventory Management

Credit Hours: 3.00. A course designed to develop understanding of types of warehouses, methods of organizing the warehouse environment, and determining efficient inventory control procedures. Technology applications related to the management of warehouse and inventory stock-keeping units (SKU) are investigated. Storage of inventory, placement of inventory, picking, packing, shipping, and other internal logistics management topics will be explored.

Learning Outcomes: 1. Identify activities associated with inventory and warehouse management. 2. Explain the relationship of inventory and warehouse management to supply chain management with other various functional areas, including corporate strategy. 3. Design various warehouse activities under given circumstances. 4. Describe material/distribution requirements planning (MRP/DRP) systems. Credits: 3.00

IET 34300 - Technical And Service Selling

Credit Hours: 3.00. A study of sales models and techniques for technical and service sales in business-to-business environments, including development of channel relationships, long-term sales agreements, customer relationship

management efforts, total cost of ownership tools and complex sales presentations. Covers critical sales skills such as e-economy sales and marketing, lead management, building credibility, consultative selling, ethical negotiations, and sustainable product management.

Learning Outcomes: 1. Explain the roles of technical and service sales in business to business channels. 2. Describe the relationship between personal selling and marketing. 3. Describe critical influencing factors on organizational buyer behavior. 4. Describe various types of buying situations and typical sales agreements. 5. Demonstrate a personal selling communication model. 6. Describe customer relationship management. Credits: 3.00

IET 34350 - Business To Business Sales Management

Credit Hours: 3.00. This course covers key topics in sales management while emphasizing customer relationship management, sales productivity, and the effects of technology on the sales function. Topics include analyzing multiple channel models; establishing sales plans; incentivizing and motivating the sales force; and evaluating, monitoring, and managing the effectiveness of the sales force.

Learning Outcomes: 1. Describe the responsibilities and challenges of sales in the management role. 2. Describe strategic sales planning; supporting sales recruitment, hiring, and training, evaluation and performance feedback. 3. Demonstrate a variety of data analytic techniques to forecast sales, establish sales goals, and create budgets. 4. Explain sales productivity measures used to establish and manage sales territories. 5. Describe the appropriate use of technology in managing sales. Credits: 3.00

IET 41400 - Financial Analysis For Technology Systems

Credit Hours: 3.00. The course provides students with financial tools needed by managers in technical and service fields. Topics include financial statement analysis, using common-sized statements and financial ratios; the strategic profit model; total cost of ownership; pricing for profitability; margin management; cash flow cycles; and budgeting. A corporate financial analysis project is typically required.

Learning Outcomes: 1. Describe the key components of income statements and balance sheets. 2. Calculate financial ratios necessary to evaluate corporate performance. 3. Calculate typical complex business transactions. 4. Prepare a cash budget for a company. 5. Recommend courses of action for maintaining a stable cash flow. 6. Calculate and interpret the strategic profit model. 7. Evaluate and select the best corporate investment opportunity. Credits: 3.00

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed.

Learning Outcomes: 1. Explain key concepts of operations planning and management. 2. Explain the importance of enterprise resource planning (ERP) in technology systems management and supply chain operations. 3. Apply quantitative methods to solve operations management problems. 4. Define a problem, develop solution alternatives, and communicate findings to appropriate audiences. Credits: 3.00

IET 43630 - Design Of Experiments

Credit Hours: 3.00. Introduction to statistical design of experiments. The course examines the difference between single, multivariate, and factorial experimental designs. Concepts of optimization and response surface methodologies are introduced. The course focuses on interpreting and communicating experimental results.

Learning Outcomes: 1. Formulate null and alternate hypotheses. 2. Apply appropriate statistical tests. 3. Design an appropriate experiment to test a hypothesis. 4. Differentiate between main effects and interaction effects. 5.

Distinguish between factorial and fractional factorial designs. 6. Apply response surface methodology. Credits: 3.00

IET 43640 - Lean Six Sigma

Credit Hours: 3.00. A study of the Lean Six Sigma quality and process improvement methodology, using the define, measure, analyze, improve, and control (DMAIC) process. The course addresses advanced topics in statistical quality; introduces quality management concepts as they pertain to the Lean Six Sigma methodology; and provides preparation for the Green Belt Certification exam.

Learning Outcomes: 1. Explain how Lean Six Sigma principles are used for process improvement. 2. Apply the DMAIC method to solve technical systems problems. 3. Design/conduct experiments. 4. Analyze/interpret experiment results. 5. Communicate experiment findings. Credits: 3.00

IET 44275 - Global Transportation And Logistics Management

Credit Hours: 3.00. A study of the various aspects of logistics. The development, implementation, and control of physical transportation systems, product distribution, warehousing, and inventory policy models will be emphasized. A working knowledge of third and fourth-party logistics and transportation strategies will be analyzed. The impact of logistics and transportation in the global environment will be discussed.

Learning Outcomes: 1. Describe the role of logistics and its relationship to other functional areas of business within a single firm and within the supply chain. 2. Explain various management and control techniques in logistics. 3. Apply statistical principles to evaluate the relative worth of cost-savings initiatives in the logistics industry. 4. Describe how enterprise resource planning (ERP) systems are used to manage logistics and transportation functions. Credits: 3.00

IET 44500 - Strategic Supply Chain Management

Credit Hours: 3.00. A course designed to build upon previous courses with subjects related to managing a distribution enterprise. Modules in sales management, financial analysis, strategic planning, logistics, purchasing, and the legalities of distributor and manufacturer relationships will be combined with case studies to provide students with practice in establishing policy and making decisions from the manager's point of view. Field trips may be required.

Learning Outcomes: 1. Develop, evaluate, and implement business strategies needed to successfully manage supply chain operations. 2. Describe a strategic planning model appropriate for use in supply chain operations. 3. Apply concepts, models, and methods that are useful in strategic development. 4. Apply analytics and techniques for strategic decision-making. 5. Develop business evaluation and critical thinking skills. 6. Describe the basic philosophies underlying ethical decision making. Credits: 3.00

ENGT 48100 - Engineering Technology Capstone II

Credit Hours: 3.00. This is the second course of two-term capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of the design solution. 5. Present final solution recommendations. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3.

Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

IET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

Other Departmental Courses (69 Credits)

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide

constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

CGT 11000 - Technical Graphics Communications

Credit Hours: 3.00. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial views, working drawings, dimensioning practices, and section views.

Learning Outcomes: 1. Describe the importance of engineering/technical graphics in the design of made products. 2. Communicate engineering ideas using visual techniques. 3. Utilize two and three dimensional geometry for engineering and technical applications. 4. Apply basic industry graphics standards to engineering design. 5. Sketch basic freehand representations of technical concepts. 6. Demonstrate proficiency using basic 3D computer-aided design (CAD) processes. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

ENGT 10500 - Industrial Technology Introduction To Design

Credit Hours: 3.00. This course develops students' problem-solving skills, with emphasis placed upon the concept of developing a three-dimensional model of an object. Students focus on the application of visualization processes and tools currently used in the design and manufacturing environments.

Learning Outcomes: 1. Apply the engineering design process to real-world problems. 2. Create detailed technical drawings. 3. Present design solutions to stakeholders. 4. Explore the economic, environmental, and societal impact of engineering solutions. Credits: 3.00

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-

assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration.

Learning Outcomes: 1. Describe the fundamentals of robotics. 2. Create robot programs for various applications. 3. Implement robot applications that use peripheral devices or sensors. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with

comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality

management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection.

Learning Outcomes: 1. Demonstrate ability to function effectively in teams. 2. Document and manage a project using accepted project management principles. 3. Identify strategies for managing organizational stakeholders. 4. Demonstrate effective oral and written communication skills. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs,

behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

Fall 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

CGT 11000 - Technical Graphics Communications

Credit Hours: 3.00. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial views, working drawings, dimensioning practices, and section views.

Learning Outcomes: 1. Describe the importance of engineering/technical graphics in the design of made products. 2. Communicate engineering ideas using visual techniques. 3. Utilize two and three dimensional geometry for engineering and technical applications. 4. Apply basic industry graphics standards to engineering design. 5. Sketch basic freehand representations of technical concepts. 6. Demonstrate proficiency using basic 3D computer-aided design (CAD) processes. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

ENGT 10500 - Industrial Technology Introduction To Design

Credit Hours: 3.00. This course develops students' problem-solving skills, with emphasis placed upon the concept of developing a three-dimensional model of an object. Students focus on the application of visualization processes and tools currently used in the design and manufacturing environments.

Learning Outcomes: 1. Apply the engineering design process to real-world problems. 2. Create detailed technical drawings. 3. Present design solutions to stakeholders. 4. Explore the economic, environmental, and societal impact of engineering solutions. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

14 Credits

Spring 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts;

critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain

strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

16 Credits

Fall 2nd Year

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

16 Credits

Spring 2nd Year

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection.

Learning Outcomes: 1. Demonstrate ability to function effectively in teams. 2. Document and manage a project using accepted project management principles. 3. Identify strategies for managing organizational stakeholders. 4. Demonstrate effective oral and written communication skills. Credits: 3.00

IET 34200 - Warehouse And Inventory Management

Credit Hours: 3.00. A course designed to develop understanding of types of warehouses, methods of organizing the warehouse environment, and determining efficient inventory control procedures. Technology applications related to the management of warehouse and inventory stock-keeping units

(SKU) are investigated. Storage of inventory, placement of inventory, picking, packing, shipping, and other internal logistics management topics will be explored.

Learning Outcomes: 1. Identify activities associated with inventory and warehouse management. 2. Explain the relationship of inventory and warehouse management to supply chain management with other various functional areas, including corporate strategy. 3. Design various warehouse activities under given circumstances. 4. Describe material/distribution requirements planning (MRP/DRP) systems. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

15 Credits

Fall 3rd Year

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 34300 - Technical And Service Selling

Credit Hours: 3.00. A study of sales models and techniques for technical and service sales in business-to-business environments, including development of channel relationships, long-term sales agreements, customer relationship management efforts, total cost of ownership tools and complex sales presentations. Covers critical sales skills such as e-economy sales and marketing, lead management, building credibility, consultative selling, ethical negotiations, and sustainable product management.

Learning Outcomes: 1. Explain the roles of technical and service sales in business to business channels. 2. Describe the relationship between personal selling and marketing. 3. Describe critical influencing factors on organizational buyer behavior. 4. Describe various types of buying situations and typical sales agreements. 5. Demonstrate a personal selling communication model. 6. Describe customer relationship management. Credits: 3.00

IET 44275 - Global Transportation And Logistics Management

Credit Hours: 3.00. A study of the various aspects of logistics. The development, implementation, and control of physical transportation systems, product distribution, warehousing, and inventory policy models will be emphasized. A working knowledge of third and fourth-party logistics and transportation strategies will be analyzed. The impact of logistics and transportation in the global environment will be discussed.

Learning Outcomes: 1. Describe the role of logistics and its relationship to other functional areas of business within a single firm and within the supply chain. 2. Explain various management and control techniques in logistics. 3. Apply statistical principles to evaluate the relative worth of cost-savings initiatives in the logistics industry. 4. Describe how enterprise resource planning (ERP) systems are used to manage logistics and transportation functions. Credits: 3.00

15 Credits

Spring 3rd Year

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration.

Learning Outcomes: 1. Describe the fundamentals of robotics. 2. Create robot programs for various applications. 3. Implement robot applications that use peripheral devices or sensors. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

IET 34350 - Business To Business Sales Management

Credit Hours: 3.00. This course covers key topics in sales management while emphasizing customer relationship management, sales productivity, and the effects of technology on the sales function. Topics include analyzing multiple channel models; establishing sales plans; incentivizing and motivating the sales force; and evaluating, monitoring, and managing the effectiveness of the sales force.

Learning Outcomes: 1. Describe the responsibilities and challenges of sales in the management role. 2. Describe strategic sales planning; supporting sales recruitment, hiring, and training, evaluation and performance feedback. 3. Demonstrate a variety of data analytic techniques to forecast sales, establish sales goals, and create budgets. 4. Explain sales productivity measures used to establish and manage sales territories. 5. Describe the appropriate use of technology in managing sales. Credits: 3.00

IET 43630 - Design Of Experiments

Credit Hours: 3.00. Introduction to statistical design of

experiments. The course examines the difference between single, multivariate, and factorial experimental designs. Concepts of optimization and response surface methodologies are introduced. The course focuses on interpreting and communicating experimental results.

Learning Outcomes: 1. Formulate null and alternate hypotheses. 2. Apply appropriate statistical tests. 3. Design an appropriate experiment to test a hypothesis. 4. Differentiate between main effects and interaction effects. 5. Distinguish between factorial and fractional factorial designs. 6. Apply response surface methodology. Credits: 3.00

IET 43640 - Lean Six Sigma

Credit Hours: 3.00. A study of the Lean Six Sigma quality and process improvement methodology, using the define, measure, analyze, improve, and control (DMAIC) process. The course addresses advanced topics in statistical quality; introduces quality management concepts as they pertain to the Lean Six Sigma methodology; and provides preparation for the Green Belt Certification exam.

Learning Outcomes: 1. Explain how Lean Six Sigma principles are used for process improvement. 2. Apply the DMAIC method to solve technical systems problems. 3. Design/conduct experiments. 4. Analyze/interpret experiment results. 5. Communicate experiment findings. Credits: 3.00

15 Credits

Fall 4th Year

IET 41400 - Financial Analysis For Technology Systems

Credit Hours: 3.00. The course provides students with financial tools needed by managers in technical and service fields. Topics include financial statement analysis, using common-sized statements and financial ratios; the strategic profit model; total cost of ownership; pricing for profitability; margin management; cash flow cycles; and budgeting. A corporate financial analysis project is typically required.

Learning Outcomes: 1. Describe the key components of income statements and balance sheets. 2. Calculate financial ratios necessary to evaluate corporate performance. 3. Calculate typical complex business transactions. 4. Prepare a cash budget for a company. 5. Recommend courses of action for maintaining a stable cash flow. 6. Calculate and interpret the strategic profit model. 7. Evaluate and select the best corporate investment opportunity. Credits: 3.00

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed.

Learning Outcomes: 1. Explain key concepts of operations planning and management. 2. Explain the importance of enterprise resource planning (ERP) in technology systems management and supply chain operations. 3. Apply quantitative methods to solve operations management problems. 4. Define a problem, develop solution alternatives, and communicate findings to appropriate audiences. Credits: 3.00

ENGT 48000 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

15 Credits

Spring 4th Year

IET 44500 - Strategic Supply Chain Management

Credit Hours: 3.00. A course designed to build upon previous courses with subjects related to managing a distribution enterprise. Modules in sales management, financial analysis, strategic planning, logistics, purchasing, and the legalities of distributor and manufacturer relationships will be combined with case studies to provide students with practice in establishing policy and making decisions from the manager's point of view. Field trips may be required.

Learning Outcomes: 1. Develop, evaluate, and implement business strategies needed to successfully manage supply chain operations. 2. Describe a strategic planning model appropriate for use in supply chain operations. 3. Apply concepts, models, and methods that are useful in strategic development. 4. Apply analytics and techniques for strategic decision-making. 5. Develop business evaluation and critical thinking skills. 6. Describe the basic philosophies underlying ethical decision making. Credits: 3.00

ENGT 48100 - Engineering Technology Capstone II

Credit Hours: 3.00. This is the second course of two-term capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of the design solution. 5. Present final solution recommendations. Credits: 3.00

14 Credits

Sustainable Food and Farming Systems, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (26 credits)

Required Major Courses (11 credits)

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural

enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and biomes. 3. Understand the ecological processes of vegetation succession. 4. Understand the role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

SFS 35100 - SFS Capstone Project

Credit Hours: 1.00. The SFS Capstone Project is a directed-learning course that will require students to prepare and present a sustainability analysis of a farm enterprise, most likely the enterprise at which they conduct their required summer internship, and this may be an internship approved at an operation other than a farm. Students will be required to analyze and enterprise taking into account its economic, environmental and social sustainability, and its broader role in sustaining the local and regional economy, environment and community. The analysis will be prepared as a paper and a presentation that will be given to the undergraduates of the SFS program at an SFS program meeting. The paper and the presentation will be prepared in consultation with a faculty mentor from the SFS program committee and will be graded by the faculty mentor. Completion of an approved work or internship experience.

Learning Outcomes: 1. Analyze complex concepts. 2. Think critically about systems and

business operations from a range of different economic and social contexts. 3. Develop written and oral communication skills. Credits: 1.00

Major Selectives (15 credits)

Ecology/Environment Selective (3 credits)

Pest Management Selectives (6 credits)

Systems Modules Selective (6 credits)

Other Departmental/Program Course Requirements (71-72 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience

and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 34900 - Soil Ecology

Credit Hours: 3.00. An introductory course that will cover the basic concepts of soil ecology. Biological diversity and the interactions between and within biotic and abiotic components of the soil ecosystem, nutrient cycling, and genetic engineering are introduced.

Credits: 3.00

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience

and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

ANSC 10200 - Introduction To Animal Agriculture (UCC: STS)

Credit Hours: 3.00. A study of animal agriculture emphasizing the efficient production of animal food products from poultry, dairy and meat animals. Credit cannot be obtained for both ANSC 10100 and 10200. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by Department of Animal Sciences. This course is required for ANSC majors classified as Freshman and Sophomores.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 20700 - The Microbial World

Credit Hours: 3.00. This course delivers a broad synthesis of microbiology, discussing all taxa of the microbial world. The course also discusses a wide range of subjects related to microbiology, including medical microbiology, but it has a strong emphasis on the botanical and environmental sciences. One particular characteristic that separates it from other microbiology courses is the reduced emphasis upon bacteriology, with discussions of the protists and viruses and, especially of the fungi, occurring in greater detail than the other general microbiology courses available.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 3.00

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises

illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required.

Credits: 1.00 to 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12.

Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical

processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical

models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.
University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

AGRY 56500 - Soils And Landscapes

Credit Hours: 3.00. Soils as natural components of landscapes, geomorphology and soil characteristics; processes of soil formation; principal soils of Indiana, their adaptations, limitations, productivity and use; global soil distributions; application of GPS and mobile GIS in the field. This course requires two all-day field trips. Students will pay individual meal expenses when necessary.
Credits: 3.00

AGRY 58000 - Soil And Rhizosphere Microbiology

Credit Hours: 3.00. Soils are complex ecosystems that host a diverse array of organisms, which interact with and respond to their environment. This course explores the ecology, evolution, and functions of soil microbes, with a particular focus on their interactions with plants. Through this course, students will gain an understanding of the metabolic processes and life-history strategies of archaea, bacteria, fungi, and viruses in soil, root, and rhizosphere compartments. Students will also survey the microbiomes of diverse soil ecosystems, such as forests, agroecosystems, and grasslands, and learn principles of soil microbiology and biogeochemistry. In addition, students will acquire practical knowledge about the methods used for characterizing microbes in soil and plant systems.
Learning Outcomes: 1. Demonstrate understanding of the ecology and physiology of major groups of bacteria, archaea, fungi, and viruses found in soils, the rhizosphere, and roots. 2. Compare and contrast soil and rhizosphere microbiomes, and their differences between the managed versus natural ecosystems. 3. Use verbal and basic mathematical descriptions to explain theories related to microbial growth, survival, and symbioses. 4. Predict the occurrence of microbial processes and soil conditions that govern the cycling of carbon, nitrogen, phosphorus, sulfur, and metals in soils and relate this knowledge to ecosystem functions. 5. Envision potential applications for soil and root-borne microbes in natural resource management, such as agriculture, forestry, and soil conservation. 6. Apply knowledge of plant-microbe interactions to develop hypotheses, design experiments, and select appropriate study methods. 7. Recognize and select appropriate resources and tools to effectively analyze microbiome data. Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab

prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

ANSC 24000 - Principles Of Animal Production

Credit Hours: 3.00. A comprehensive overview of production systems including life cycles and animal requirements for non-ruminant and ruminant farm animals species. How animal production is affected by the environment, availability of resources, and market access will emphasized. Data requirements and interpretation for decision making will be highlighted.

Learning Outcomes: 1. Recall basic production terminology. 2. Explain production methodology from a scientific basis. 3. Identify and summarize scientific publications. 4. Identify what information is needed to make a decision. 5. Describe data needed to answer question/solve problem. 6. Evaluate validity of sources. 7. Demonstrate ability to manipulate data and make graphs/figures. 8. Describe aspects of a management system(s). 9. Propose animal production systems within given environments(s). Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human

nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

HORT 32100 - Hydroponics Systems

Credit Hours: 3.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in controlled environment agriculture (CEA). This course offers students foundational information and hands-on experience on hydroponic and soilless cultivation of horticultural crops. Production practices, growing systems, new technologies, and current challenges are discussed.

Learning Outcomes: 1. Describe essential components of single-pass and recirculating hydroponic systems. 2. Compare different substrates and hydroponic system designs. 3. Interpret water quality analysis results and recommend corrections. 4. Create nutrient solutions using salts or mixed fertilizers. 5. Evaluate the importance of water quality, dissolved oxygen, salinity, and pH management for hydroponics. 6. Select hydroponic systems for production of leafy greens, herbs, and vegetable crops. 7. Apply solution chemistry knowledge and plant biology concepts to manage hydroponic systems. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Electives (22-23 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in

cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions.

6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 Credits

Spring 1st Year

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of

creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7.

Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

16-17 Credits

Fall 2nd Year

ANSC 10200 - Introduction To Animal Agriculture (UCC: STS)

Credit Hours: 3.00. A study of animal agriculture emphasizing the efficient production of animal food products from poultry, dairy and meat animals. Credit cannot be obtained for both ANSC 10100 and 10200. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by Department of Animal Sciences. This course is required for ANSC majors classified as Freshman and Sophomores.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 30100 - Agroecology

Credit Hours: 3.00. This course introduces students to the application of ecological concepts to food production systems and farm management. We will consider species interactions, nutrient and water cycles, regenerative practices, alternative approaches to agriculture, and ecosystem services provided to and by agro-ecosystems.

Learning Outcomes: 1. Understand key connections between ecology and agriculture. 2. Apply the agro-ecosystem concept to farming systems. 3. Discuss the relative strengths and weaknesses of conventional and alternative forms of agriculture. 4. Understand the effect of farm management practices on primary productivity, nutrient cycling, and species interaction. 5. Evaluate ecosystem services provided to and by agro-ecosystems. 6. Consider the role of social factors on farming systems. 7. Discuss the potential for ecologically based agriculture to address farming issues at local, regional, and global levels. Credits: 3.00

ANSC 24000 - Principles Of Animal Production

Credit Hours: 3.00. A comprehensive overview of production systems including life cycles and animal requirements for non-ruminant and ruminant farm animals species. How animal production is affected by the environment, availability of resources, and market access will emphasized. Data requirements and interpretation for decision making will be highlighted.

Learning Outcomes: 1. Recall basic production terminology. 2. Explain production methodology from a scientific basis. 3. Identify and summarize scientific publications. 4. Identify what information is needed to make a decision. 5. Describe data needed to answer question/solve problem. 6. Evaluate validity of sources. 7. Demonstrate ability to manipulate data and make graphs/figures. 8. Describe aspects of a management system(s). 9. Propose animal production systems within given environments(s). Credits: 3.00

15 Credits

Spring 2nd Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The

behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

BTNY 20700 - The Microbial World

Credit Hours: 3.00. This course delivers a broad synthesis of microbiology, discussing all taxa of the microbial world. The course also discusses a wide range of subjects related to microbiology, including medical microbiology, but it has a strong emphasis on the botanical and environmental sciences. One particular characteristic that separates it from other microbiology courses is the reduced emphasis upon bacteriology, with discussions of the protists and viruses and, especially of the fungi, occurring in greater detail than the other general microbiology courses available.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great

activities and opportunities that Purdue has to offer. Credits: 1.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and biomes. 3. Understand the ecological processes of vegetation succession. 4. Understand the role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the

molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

16-17 Credits

Fall 3rd Year

AGRY 34900 - Soil Ecology

Credit Hours: 3.00. An introductory course that will cover the basic concepts of soil ecology. Biological diversity and the interactions between and within biotic and abiotic components of the soil ecosystem, nutrient cycling, and genetic engineering are introduced.

Credits: 3.00

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific

method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 56500 - Soils And Landscapes

Credit Hours: 3.00. Soils as natural components of landscapes, geomorphology and soil characteristics; processes of soil formation; principal soils of Indiana, their adaptations, limitations, productivity and use; global soil distributions; application of GPS and mobile GIS in the field. This course requires two all-day field trips. Students will pay individual meal expenses when necessary.

Credits: 3.00

AGRY 58000 - Soil And Rhizosphere Microbiology

Credit Hours: 3.00. Soils are complex ecosystems that host a diverse array of organisms, which interact with and respond to their environment. This course explores the ecology, evolution, and functions of soil microbes, with a particular focus on their interactions with plants. Through this course, students will gain an understanding of the metabolic processes and life-history strategies of archaea, bacteria, fungi, and viruses in soil, root, and rhizosphere compartments. Students will also survey the microbiomes of diverse soil ecosystems, such as forests, agroecosystems, and grasslands, and learn principles of soil microbiology and biogeochemistry. In addition, students will acquire practical knowledge about the methods used for characterizing microbes in soil and plant systems.

Learning Outcomes: 1. Demonstrate understanding of the ecology and physiology of major groups of bacteria, archaea, fungi, and viruses found in soils, the rhizosphere, and roots. 2. Compare and contrast soil and rhizosphere microbiomes, and their differences between the managed versus natural ecosystems. 3. Use verbal and basic mathematical descriptions to explain theories related to microbial growth, survival, and symbioses. 4. Predict the occurrence of microbial processes and soil conditions that govern the cycling of carbon, nitrogen, phosphorus, sulfur, and metals in soils and relate this knowledge to ecosystem functions. 5. Envision potential applications for soil and root-borne microbes in natural resource management, such as agriculture, forestry, and soil conservation. 6. Apply knowledge of plant-microbe interactions to develop hypotheses, design experiments, and select appropriate study methods. 7. Recognize and select appropriate resources and tools to effectively analyze microbiome data. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze

book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

15 Credits

Spring 3rd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required.

Credits: 1.00 to 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab

prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 31900 - Controlled Environment Production Of Horticultural Crops

Credit Hours: 3.00. This course combines production principles with environmental concepts and advances in technology to provide a comprehensive training in sustainable production of herbaceous ornamentals and vegetables in controlled environment systems. The laboratory instruction provides hands-on experience with the practice of growing crops under controlled environments by combining the learning from lab prep with the use of technology to control environment during production.

Learning Outcomes: 1. Become familiar with best management practices for growing herbaceous ornamentals and vegetables that improve sustainability in controlled environments. 2. Learn how above and below ground environments interact with crop production. 3. Learn basics about the state-of-the-art technologies used in controlled environment agricultural production to monitor and control environments. 4. Interact with industry professionals to gain first-hand knowledge about careers and development in commercial horticulture. 5. Gain sufficient background in science, technology and regulations required to become entrepreneurs, next generation growers and researchers in the controlled environment agriculture industry. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

15 Credits

Fall 4th Year

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial

terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

SFS 35100 - SFS Capstone Project

Credit Hours: 1.00. The SFS Capstone Project is a directed-learning course that will require students to prepare and present a sustainability analysis of a farm enterprise, most likely the enterprise at which they conduct their required summer internship, and this may be an internship approved at an operation other than a farm. Students will be required to analyze and enterprise taking into account its economic, environmental and social sustainability, and its broader role in sustaining the local and regional economy, environment and community. The analysis will be prepared as a paper and a presentation that will be given to the undergraduates of the SFS program at an SFS program meeting. The paper and the presentation will be prepared in consultation with a faculty mentor from the SFS program committee and will be graded by the faculty mentor. Completion of an approved work or internship experience.

Learning Outcomes: 1. Analyze complex concepts. 2. Think critically about systems and business operations from a range of different economic and social contexts. 3. Develop written and oral communication skills. Credits: 1.00

16 Credits

Spring 4th Year

Departmental/Program Major Course Requirements (39 credits)

A. Foundation Studies (21 credits)

1. Required Courses (17 credits)

THTR 16400 - Introduction To Theatre Organization And Management

Credit Hours: 2.00. A theoretical study of performing arts management and backstage operations from audition through performance. Techniques of scheduling, production management, stage management, technical direction, house management, safety issues, and emergency procedures.

Credits: 2.00

THTR 20100 - Theatre Appreciation (UCC: HUM)

Credit Hours: 3.00. Understanding and appreciation of the theatre's role in the modern world, dramatic structure and analysis, the actor, director, designer, and critic; attendance at current stage productions; class discussion of production elements. CTL:IFA 1302 Theatre Appreciation

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

THTR 38000 - Histories Of Theatre

Credit Hours: 3.00. Variable topics in theatre and performance history. Emphasis on the study of the works, aesthetics, and innovations of a theatrical form/genre alongside social, cultural, economic, and political contexts.

Credits: 3.00

THTR 38100 - Theatre And Performance Historiography

Credit Hours: 3.00. Historiographic analysis of theatre, drama, and performance of the 20th and 21st centuries. Emphasis on the relationship between modern and contemporary performance to world history from social, political, and cultural perspectives. Course includes both written and practical components. Prerequisites: THTR 201, THTR 271.

Learning Outcomes: 1. Interpret plays, performances, and performance theory from the

20th and 21st century. 2. Analyze theatre and performance histories through a combination of historical research, critical questioning, and practical application. 3. Demonstrate how political, economic, and cultural structures impact theatre and performance histories of the 20th and 21st Century. 4. Demonstrate skills in research, collaboration, and oral presentation. Credits: 3.00

THTR 13300 - Acting I

Credit Hours: 3.00. Beginning training and exercises in the basic elements of acting, including vocal and physical preparation, sensory awareness, releasing the imagination, and a basic understanding of action an objective. Staging exercises and terminology are emphasized.

Learning Outcomes: 1. Become familiar with the techniques and practices of acting: vocal and physical techniques, analysis and interpretation. 2. Understand the concepts of given circumstances, action, objective, obstacle, character and conflict, and utilize these in basic scene work. 3. Communicate the play's idea through the medium of character in a scene from a published play. Credits: 3.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

THTR 44000 - Directing: Page To Stage

Credit Hours: 3.00. This course focuses on theoretical and practical understanding of the essential principles and fundamentals of directing for the stage. Students will learn a proven directorial methodology and engage in essential research and written and practical presentations throughout. Permission of instructor required.

Learning Outcomes: 1. Identify, classify, and critique elements of drama and the requirements of production with depth and imagination. 2. Analyze plays for production. 3. Articulate aspects of student's own personal aesthetic orally, visually, and in writing. 4. Integrate skills in play analysis, intuitive contemplation, research, composition techniques, and various rehearsal strategies to stage dramatic texts. 5. Evaluate creative decisions and processes. Credits: 3.00

2. Foundation Practicums (4 credits)

THTR 16000 - Introduction To Scene Design And Technology

Credit Hours: 2.00. This course is designed to introduce the students to the process and tools of scene design and technology.

Credits: 2.00

THTR 16100 - Introduction To Costume Design And Technology

Credit Hours: 2.00. Introduction to analytical, artistic, and practical skills required when creating costumes for theatre. Beginning training in elements and principles of design, rendering and presentation skills. Elementary instruction in costume construction, including hand and machine sewing, costume crafts, and basic patterning.

Credits: 2.00

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design.

Credits: 2.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of

a sound crew. Credits: 2.00

B. Theatre Immersions (3 credits)

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 33600 - Rehearsal And Performance II

Credit Hours: 1.00 or 2.00. The study and practice of rehearsal techniques and stage performance. Students will be assigned to acting and stage management duties in experimental and major stage productions. Permission of instructor required.

Credits: 1.00 or 2.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 53600 - Advanced Problems In Acting

Credit Hours: 2.00 or 3.00. Advanced study of selected problems in acting, including detailed role and play analyses, thorough rehearsals and critiques of performance. Permission of instructor required.

Credits: 2.00 or 3.00

C. Theatre and Perfomance Selectives (12 credits)

1. Studies in Theatre and Performance

THTR 38000 - Histories Of Theatre

Credit Hours: 3.00. Variable topics in theatre and performance history. Emphasis on the study of the works, aesthetics, and innovations of a theatrical form/genre alongside social, cultural, economic, and political contexts.

Credits: 3.00

DANC 37900 - The Art Of Protest: An Examination Of The Role Of Arts, Artists, Activism, & Social Transformation

Credit Hours: 3.00. Throughout history, art has been used to advocate for political movements and provoke social action and transformation. This course examines the role of the arts and the artist and their relationship to activism throughout history and beyond. We will investigate how art has been used as a tool to transform cultural perspectives, alter policies, and promote social change. We will explore a range of artists whose methodologies, materials and approach challenge the cultural norms. From printmakers to musicians, to choreographers, to performance artists, students will engage and evaluate the act of art-making as a tactic of resistance and the responses to those acts. We will investigate readings that argue for and against the need for artists to make work that politically challenge their society. Once a foundation of knowledge has been laid, we will turn to the creative process through an investigation of materials and practices - performance, mixed media, and photography. Students will research, watch, discuss, create, and perform their own projects that promote social transformation.

Learning Outcomes: 1. Demonstrate effective oral and written communication in formal assignments, critical analysis, and class presentations. 2. Demonstrate through creative projects how art, culture, and activism have a direct and interactive relationship. 3. Investigate and critically engage with artists whose work transform cultural perspectives, alter policies, provide socio-political commentary, and promote social change. 4. Analyze seminal art and historical and philosophical texts that articulate the role and importance of political art. Credits: 3.00

THTR 48400 - Performance, Media, And Technology

Credit Hours: 3.00. This course explores the intersection of performance, media, and technology from the early 20th century through present day, examining how technological innovations have transformed performance practices and audience

experiences.

Learning Outcomes: 1. Describe the historical development of media and technology in 20th and 21st-century performance. 2. Apply theories of liveness, remediation, intermediality, and mediatization toward analysis of contemporary performance practices. 3. Assess the impacts of new media on concepts such as narrative, space, text, and embodiment. 4. Generate strategies for conceptualizing projects that integrate media into performance. Credits: 3.00

2. Design for Theatre and Performance

THTR 35400 - Painting For The Stage

Credit Hours: 3.00. The principles and practice of painting for the stage. Study of tools, media, and techniques used in traditional scenic painting, costume painting, and the creation of dimensionality on various surfaces. Offered alternate years.

Credits: 3.00

THTR 36000 - Scenic Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into an environment for dramatic action. Emphasis on the interrelationship among all aspects of production and how the scenic element becomes a building block toward total picturization. Offered alternate years.

Credits: 3.00

THTR 36100 - Costume Design

Credit Hours: 3.00. Theory and principles of design specifically applied to stage costume design. Emphasis on the interrelationship of all aspects of production and how the costume becomes a building block toward total picturization. Offered in alternate years.

Credits: 3.00

THTR 36200 - Light Design

Credit Hours: 3.00. A project course in utilizing the principles of design as they can convey an environment and its qualities to further dramatic action. Emphasis on the interrelationship among all aspects of production and how light becomes a building block toward total picturization. Offered in alternate years.

Credits: 3.00

3. Acting for Theatre and Performance

THTR 23300 - Acting II

Credit Hours: 3.00. Continued development of the basic acting tools of objectives, actions, justification, and personalization; continued vocal and physical work; introduction of script and character analysis; and the introduction of audition techniques. The course will use material from contemporary dramatic literature in the rehearsal process. Prerequisite: THTR 133. Instructor permission required for non-majors.

Learning Outcomes: 1. Practice and incorporate relaxation, physical, vocal, and sense memory exercises into a daily warm-up. 2. See, connect, and respond to a partner within improvised scenarios. 3. Read plays with insight and imagine the experience of the characters in the given circumstance of a play. 4. Analyze and break scenes down into beats, with each beat having a clear action and objective. 5. Analyze, rehearse and publicly perform an open scene, and a contemporary monologue and scene. Credits: 3.00

THTR 33300 - Acting III

Credit Hours: 3.00. Application of foundational acting techniques to specific disciplines. May be repeated for credit. Instructor permission required for non-majors.

Learning Outcomes: 1. Identify, define, describe and demonstrate the basic principles of the craft of acting. 2. Identify, define, describe and demonstrate the basic terminology of stage technique. 3. Identify, define and describe the basic principles of script & character analysis. 4. Read, investigate, interpret and articulate your analysis of specific plays from the canon of 20th and 21st Century realistic dramatic literature. 5. Develop critical thinking as it applies to your own work, your peers' work and in production work. Credits: 3.00

THTR 43300 - Acting IV

Credit Hours: 3.00. Adaptation of acting techniques to professional applications.

Learning Outcomes: 1. Develop and demonstrate the application of metrical analysis. 2. Identify the poetic devices in classical text and demonstrate these in performance. 3. Demonstrate critical thinking skills of analysis, interpretation and application. 4. Analyze Shakespeare's characters in reference to their historical period. 5. Develop a systematic approach for performing classical text. Credits: 3.00

D. Upper Level Electives in Theatre and Performance (3 credits)

Optional Concentrations

Electives (47-56 credits)

Additional Information

Sample 4-Year Plan

Fall 1st Year

THTR 20100 - Theatre Appreciation (UCC: HUM)

Credit Hours: 3.00. Understanding and appreciation of the theatre's role in the modern world, dramatic structure and analysis, the actor, director, designer, and critic; attendance at current stage productions; class discussion of production elements. CTL:IFA 1302 Theatre Appreciation

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

THTR 13300 - Acting I

Credit Hours: 3.00. Beginning training and exercises in the basic elements of acting, including vocal and physical preparation, sensory awareness, releasing the imagination, and a basic understanding of action an objective. Staging exercises and terminology are emphasized.

Learning Outcomes: 1. Become familiar with the techniques and practices of acting: vocal and physical techniques, analysis and interpretation. 2. Understand the concepts of given circumstances, action, objective, obstacle, character and conflict, and utilize these in basic scene work. 3. Communicate the play's idea through the medium of character in a scene from a published play. Credits: 3.00

15-16 Credits

Spring 1st Year

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 16400 - Introduction To Theatre Organization And Management

Credit Hours: 2.00. A theoretical study of performing arts management and backstage operations from audition through performance. Techniques of scheduling, production management, stage management, technical direction, house management, safety issues, and emergency procedures.

Credits: 2.00

THTR 33600 - Rehearsal And Performance II

Credit Hours: 1.00 or 2.00. The study and practice of rehearsal techniques and stage performance. Students will be assigned to acting and stage management duties in experimental and major stage productions. Permission of instructor required.

Credits: 1.00 or 2.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 53600 - Advanced Problems In Acting

Credit Hours: 2.00 or 3.00. Advanced study of selected problems in acting, including detailed role and play analyses, thorough rehearsals and critiques of performance. Permission of instructor required.

Credits: 2.00 or 3.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

14-17 Credits

Fall 2nd Year

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 33600 - Rehearsal And Performance II

Credit Hours: 1.00 or 2.00. The study and practice of rehearsal techniques and stage performance. Students will be assigned to acting and stage management duties in experimental and major stage productions. Permission of instructor required.

Credits: 1.00 or 2.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 53600 - Advanced Problems In Acting

Credit Hours: 2.00 or 3.00. Advanced study of selected problems in acting, including detailed role and play analyses, thorough rehearsals and critiques of performance. Permission of instructor required.

Credits: 2.00 or 3.00

15-17 Credits

Spring 2nd Year

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 33600 - Rehearsal And Performance II

Credit Hours: 1.00 or 2.00. The study and practice of rehearsal techniques and stage performance. Students will be assigned to acting and stage management duties in experimental and major stage productions. Permission of instructor required.

Credits: 1.00 or 2.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 53600 - Advanced Problems In Acting

Credit Hours: 2.00 or 3.00. Advanced study of selected problems in acting, including detailed role and play analyses, thorough rehearsals and critiques of performance. Permission of instructor required.

Credits: 2.00 or 3.00

16-18 Credits

Fall 3rd Year

THTR 38100 - Theatre And Performance Historiography

Credit Hours: 3.00. Historiographic analysis of theatre, drama, and performance of the 20th and 21st centuries. Emphasis on the relationship between modern and contemporary performance to world history from social, political, and cultural perspectives. Course includes both written and practical components. Prerequisites: THTR 201, THTR 271.

Learning Outcomes: 1. Interpret plays, performances, and performance theory from the 20th and 21st century. 2. Analyze theatre and performance histories through a combination of historical research, critical questioning, and practical application. 3. Demonstrate how political, economic, and cultural structures impact theatre and performance histories of the 20th and 21st Century. 4. Demonstrate skills in research, collaboration, and oral presentation. Credits: 3.00

15 Credits

Spring 3rd Year

15 Credits

Fall 4th Year

THTR 44000 - Directing: Page To Stage

Credit Hours: 3.00. This course focuses on theoretical and practical understanding of the essential principles and fundamentals of directing for the stage. Students will learn a proven directorial methodology and engage in essential research and written and practical presentations throughout. Permission of instructor required.

Learning Outcomes: 1. Identify, classify, and critique elements of drama and the requirements of production with depth and imagination. 2. Analyze plays for production. 3. Articulate aspects of student's own personal aesthetic orally, visually, and in writing. 4. Integrate skills in play analysis, intuitive contemplation, research, composition techniques, and various rehearsal strategies to stage dramatic texts. 5. Evaluate creative decisions and processes. Credits: 3.00

Themed Entertainment Design, BS (Indianapolis Only)

About the Program

Degree Requirements

Departmental/Program Major Courses (76 credits)

Required Major Courses (49 credits)

CGT 11200 - Sketching For Visualization And Communication

Credit Hours: 3.00. This course applies fundamental computer graphics concepts of visualization, communication, and creativity within a sketching metaphor. Exercises and projects in graphic theory, problem solving, and sketching skill development provide students with activities that focus on further development within the discipline. A variety of sketching techniques are used to gather critical information and transform data into effective communication instruments.

Learning Outcomes: 1. Awaken creativity and problem-solving through the means of sketching. 2. Develop fine motor skills: Becoming a artisan. 3. Explore Aesthetics as it pertains to sketching. 4. Learn and practice professional methods of look development. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

CGT 11800 - Fundamentals Of Imaging Technology

Credit Hours: 3.00. This course provides a foundation for the development and use of raster and vector images for a variety of industries. Full-color images and illustrations are produced using computer technologies, with a focus on both technical and aesthetic aspects. Topics include color theory and perception, surface and lighting analysis, rendering techniques, and technical characteristics.

Learning Outcomes: 1. Combine typography, images, colors, and other design elements to create organized visual relationships. 2. Communicate new ideas formulating them into visual concepts. 3. Apply the principles of color, resolution, and imaging formats effectively. 4. Adapt digital images for print, web, animation, and software apps. Credits: 3.00

CGT 14700 - Visual Effects Introduction

Credit Hours: 3.00. This course introduces students to the visual effects techniques using common methodologies and tools. Topics include procedural frameworks, 3D pipeline implementation, vector operations, and simulating physical phenomena for entertainment graphics. Special emphasis is placed on achieving aesthetically please entertainment-grade graphics using visual effects techniques.

Learning Outcomes: 1. Describe visual effects pipeline. 2. Implement simple simulations using common visual effects tools and techniques. 3. Explore options for visual effects career pathways. 4. Create aesthetically pleasing visual effects using production tools and techniques. Credits: 3.00

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT

professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals, and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

CGT 20500 - Portfolio Review

Credit Hours: 0.00. Portfolio review for students in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

CGT 40500 - Senior Portfolio Review

Credit Hours: 0.00. Portfolio review for seniors in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

CGT 30505 - Portfolio II

Credit Hours: 0.00. Students present online portfolios, and the course instructors review and give feedback to help direct students' online presence in efforts to meet industry standards.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

CGT 12300 - Animation Foundations

Credit Hours: 3.00. In this course, students are introduced to the core concepts and principles of animated motion. The course includes an overview of animation history and the evolution of animation technology. Principles of animation production are explored through practical exercises executed in a range of animation software types. These exercises will familiarize students with different approaches to creating animated motion, with a focus on keyframed digital animation.

Learning Outcomes: 1. Identify the sequence of major milestones in the history of animation technology, style and industry. 2. Demonstrate fundamental animation skills and principles including anticipation, squash & stretch, timing, easing and motion arcs. 3. Create animated images of objects and characters in digital animation software that communicate believable motion. 4. Arrange and manipulate geometric objects and systems in digital animation software, creating a range of defined outputs including still images and image sequences suitable for animation workflows. Credits: 3.00

CGT 44200 - Production For Computer Animation

Credit Hours: 3.00. An applied course covering advanced spline modeling techniques, lighting techniques, applied shading, motion dynamics and controllers, particle systems, application customization programming, and pre-production development and planning. Study of emerging advancements in computer animation and spatial graphic technologies will be included.

Learning Outcomes: 1. Identify career opportunities in computer graphics and related

industries. 2. Assess, classify and critique peer and professional-level portfolios in relation to industry roles 3. Define major project outcomes that align with specific career pathways. 4. Develop and manage production plans for a major entertainment graphics project. 5. Manage teams or individual tasks to execute defined goals within entertainment graphics projects. 6. Create professional portfolio or showreel pieces that demonstrate industry relevant skills. Credits: 3.00

CGT 25100 - Principles Of Creative Design

Credit Hours: 3.00. This course is an exploration of conceptualization and problem-solving using the integration of type and image as both visual and verbal communication. Topics such as systems of organization, visual hierarchy, creativity, typography, color, and navigation are introduced and explored.

Credits: 3.00

CGT 31300 - Digital Painting I For Computer Graphics

Credit Hours: 3.00. This course introduces students to digital painting techniques for graphical visualization and communication. Topics include industry standard practices and instruction in digital brush creation, digital mark making, value under painting, color palettes, and lighting and rendering to produce various computer graphics.

Credits: 3.00

CGT 40700 - Current And Future Trends In Themed Attraction Design

Credit Hours: 3.00. Students will learn about current trends in immersive attractions. Current technologies will be explored that can be used to enhance the narrative in a themed immersive space. Students will explore technologies, narrative techniques and integration of engineering.

Credits: 3.00

CGT 11700 - Illustrating For Visualization And Communication

Credit Hours: 3.00. This foundation course stresses the use of pictorial illustration for visualization and communication. Various projection systems are introduced with discussion focusing on the appropriate use of view and system utilized to accentuate and provide clear communication. A variety of digital tools are used to construct, extract and render pictorial views using vector and raster tools.

Credits: 3.00

CGT 20400 - Introduction To Themed Attraction Design

Credit Hours: 3.00. An introduction to immersive attraction; including the consideration of operations, graphics, engineering, technology and design. Students will apply their knowledge in narration and graphic principles to concept projects in immersive spaces.

Credits: 3.00

CGT 32800 - Business Of Themed Entertainment

Credit Hours: 3.00. This course provides an insider's look at the skills needed to succeed in themed entertainment industry as well as provide an overview of the experience economy. Students will get an insider understanding of the project process, working with outside vendors, team communication, common constraints and budgeting.

Credits: 3.00

CGT 31700 - Planning And Communicating Themed Attraction Design

Credit Hours: 3.00. Building on students knowledge of narrative creation and design, students will learn about the fundamentals of operations, graphics, engineering, technology and design to create theme-based immersive attractions. This course will focus on design concepts, technical design, management and creation of immersive experiences.

Credits: 3.00

CGT 36700 - Previsualization In Themed Entertainment

Credit Hours: 3.00. This course provides an overview of themed entertainment development from concept to previsualization and communication. Students will have the opportunity to take initial concepts for themed experiences and visualize them to communicate to multiple external audiences.

Credits: 3.00

CGT Entertainment Selectives (15 credits)

Other Departmental/Program Course Requirements (40 credits)

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences.

Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business

documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify

substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in

quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Technical Selectives (12 credits)

Transfer Credit Policy

Sample 4-Year Plan

Fall 1st Year

CGT 11200 - Sketching For Visualization And Communication

Credit Hours: 3.00. This course applies fundamental computer graphics concepts of visualization, communication, and creativity within a sketching metaphor. Exercises and projects in graphic theory, problem solving, and sketching skill development provide students with activities that focus on further development within the discipline. A variety of sketching techniques are used to gather critical information and transform data into effective communication instruments.

Learning Outcomes: 1. Awaken creativity and problem-solving through the means of sketching. 2. Develop fine motor skills: Becoming a artisan. 3. Explore Aesthetics as it pertains to sketching. 4. Learn and practice professional methods of look development. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

CGT 11800 - Fundamentals Of Imaging Technology

Credit Hours: 3.00. This course provides a foundation for the development and use of raster and vector images for a variety of industries. Full-color images and illustrations are produced using computer technologies, with a focus on both technical and aesthetic aspects. Topics include color theory and perception, surface and lighting analysis, rendering techniques, and technical characteristics.

Learning Outcomes: 1. Combine typography, images, colors, and other design elements to create organized visual relationships. 2. Communicate new ideas formulating them into visual concepts. 3. Apply the principles of color, resolution, and imaging formats effectively. 4. Adapt digital images for print, web, animation, and software apps. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

CGT 12300 - Animation Foundations

Credit Hours: 3.00. In this course, students are introduced to the core concepts and principles of animated motion. The course includes an overview of animation history and the evolution of animation technology. Principles of animation production are explored through practical exercises executed in a range of animation software types. These exercises will familiarize students with different approaches to creating animated motion, with a focus on keyframed digital animation.

Learning Outcomes: 1. Identify the sequence of major milestones in the history of animation technology, style and industry. 2. Demonstrate fundamental animation skills and principles including anticipation, squash & stretch, timing, easing and motion arcs. 3. Create animated

images of objects and characters in digital animation software that communicate believable motion. 4. Arrange and manipulate geometric objects and systems in digital animation software, creating a range of defined outputs including still images and image sequences suitable for animation workflows. Credits: 3.00

CGT 11700 - Illustrating For Visualization And Communication

Credit Hours: 3.00. This foundation course stresses the use of pictorial illustration for visualization and communication. Various projection systems are introduced with discussion focusing on the appropriate use of view and system utilized to accentuate and provide clear communication. A variety of digital tools are used to construct, extract and render pictorial views using vector and raster tools.

Credits: 3.00

15 Credits

Spring 1st Year

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CGT 25100 - Principles Of Creative Design

Credit Hours: 3.00. This course is an exploration of conceptualization and problem-solving using the integration of type and image as both visual and verbal communication. Topics such as systems of organization, visual hierarchy, creativity, typography, color, and navigation are introduced and explored.

Credits: 3.00

CGT 20400 - Introduction To Themed Attraction Design

Credit Hours: 3.00. An introduction to immersive attraction; including the consideration of operations, graphics, engineering, technology and design. Students will apply their knowledge in narration and graphic principles to concept projects in immersive spaces.

Credits: 3.00

15 Credits

Fall 2nd Year

CGT 14700 - Visual Effects Introduction

Credit Hours: 3.00. This course introduces students to the visual effects techniques using common methodologies and tools. Topics include procedural frameworks, 3D pipeline

implementation, vector operations, and simulating physical phenomena for entertainment graphics. Special emphasis is placed on achieving aesthetically please entertainment-grade graphics using visual effects techniques.

Learning Outcomes: 1. Describe visual effects pipeline. 2. Implement simple simulations using common visual effects tools and techniques. 3. Explore options for visual effects career pathways. 4. Create aesthetically pleasing visual effects using production tools and techniques. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

15 Credits

Spring 2nd Year

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals,

and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 20500 - Portfolio Review

Credit Hours: 0.00. Portfolio review for students in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CGT 32800 - Business Of Themed Entertainment

Credit Hours: 3.00. This course provides an insider's look at the skills needed to succeed in themed entertainment industry as well as provide an overview of the experience economy. Students will get an insider understanding of the project process, working with outside vendors, team communication, common constraints and budgeting.

Credits: 3.00

CGT 31700 - Planning And Communicating Themed Attraction Design

Credit Hours: 3.00. Building on students knowledge of narrative creation and design, students will learn about the fundamentals of operations, graphics, engineering, technology and design to create theme-based immersive attractions. This course will focus on design concepts, technical design, management and creation of immersive experiences.

Credits: 3.00

17 Credits

Fall 3rd Year

CGT 44200 - Production For Computer Animation

Credit Hours: 3.00. An applied course covering advanced spline modeling techniques, lighting techniques, applied shading, motion dynamics and controllers, particle systems, application customization programming, and pre-production development and planning. Study of emerging advancements in computer animation and spatial graphic technologies will be included.

Learning Outcomes: 1. Identify career opportunities in computer graphics and related industries. 2. Assess, classify and critique peer and professional-level portfolios in relation to industry roles 3. Define major project outcomes that align with specific career pathways. 4. Develop and manage production plans for a major entertainment graphics project. 5. Manage teams or individual tasks to execute defined goals within entertainment graphics projects. 6. Create professional portfolio or showreel pieces that demonstrate industry relevant skills. Credits: 3.00

CGT 36700 - Previsualization In Themed Entertainment

Credit Hours: 3.00. This course provides an overview of themed entertainment development from concept to previsualization and communication. Students will have the opportunity to take initial concepts for themed experiences and visualize them to communicate to multiple external audiences.

Credits: 3.00

15 Credits

Spring 3rd Year

CGT 30505 - Portfolio II

Credit Hours: 0.00. Students present online portfolios, and the course instructors review and give feedback to help direct students' online presence in efforts to meet industry standards.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

CGT 31300 - Digital Painting I For Computer Graphics

Credit Hours: 3.00. This course introduces students to digital painting techniques for graphical visualization and communication. Topics include industry standard practices and instruction in digital brush creation, digital mark making, value under painting, color palettes, and lighting and rendering to produce various computer graphics.

Credits: 3.00

15 Credits

Fall 4th Year

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

CGT 40700 - Current And Future Trends In Themed Attraction Design

Credit Hours: 3.00. Students will learn about current trends in immersive attractions. Current technologies will be explored that can be used to enhance the narrative in a themed immersive space. Students will explore technologies, narrative techniques and integration of engineering.

Credits: 3.00

14 Credits

Spring 4th Year

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 40500 - Senior Portfolio Review

Credit Hours: 0.00. Portfolio review for seniors in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

14 Credits

Turf Management and Science, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (39 credits)

Required Major Courses (18 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

AGRY 51000 - Turfgrass Science

Credit Hours: 3.00. An advanced course in turfgrass management which focuses on the management requirements of intensively cultured turfgrass areas, with a specific emphasis on golf course and athletic fields. Interrelationships among soil, plant and atmospheric environments, management practices and turfgrass quality will be stressed.

Credits: 3.00

AGRY 51200 - Integrated Turfgrass Systems

Credit Hours: 3.00. Integration of agronomic principles for professionally managing golf courses, athletic complexes, lawn care companies, and sod production facilities in an efficient and environmentally friendly manner. Emphasizes independent thinking and team cooperation for understanding the social, ethical, and economical aspects underlying the daily agronomic management decisions, including construction, establishment, cultural practices, fertilization, and pest management. Course meets for weeks 1-10.

Credits: 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed.

Credits: 3.00

HORT 21100 - Fundamentals Of Turfgrass Culture Laboratory

Credit Hours: 1.00. (AGRY 21100) Companion lab to AGRY 21000. Laboratory exercises will focus on turfgrass and seed anatomy, morphology, identification as well as the hands-on basic principles of turfgrass culture. Designed for the student who intends to pursue a career in turfgrass management and plans to enroll in AGRY 51000. Enrollment preference will be given to Turfgrass Science Majors.

Credits: 1.00

Major Selectives (21 credits)

Other Departmental/Program Course Requirements (74-76 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to

undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems.

4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is

on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

PHYS 21400 - The Nature Of Physics (UCC: SCI)

Credit Hours: 3.00. Development of basic concepts and theories in physics; a terminal survey course designed for non-science majors. CTL:IPS 1750 Survey Of Physical Science

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to

apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (5-7 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application

problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15-16 Credits

Spring 1st Year

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

15 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

16 Credits

Spring 2nd Year

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed.

Credits: 3.00

HORT 21100 - Fundamentals Of Turfgrass Culture Laboratory

Credit Hours: 1.00. (AGRY 21100) Companion lab to AGRY 21000. Laboratory exercises will focus on turfgrass and seed anatomy, morphology, identification as well as the hands-on basic principles of turfgrass culture. Designed for the student who intends to pursue a career in turfgrass management and plans to enroll in AGRY 51000. Enrollment preference will be given to Turfgrass Science Majors.

Credits: 1.00

15 Credits

Fall 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

AGRY 51000 - Turfgrass Science

Credit Hours: 3.00. An advanced course in turfgrass management which focuses on the management requirements of intensively cultured turfgrass areas, with a specific emphasis on golf course and athletic fields. Interrelationships among soil, plant and atmospheric environments, management practices and turfgrass quality will be stressed.

Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

15 Credits

Spring 3rd Year

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

PHYS 21400 - The Nature Of Physics (UCC: SCI)

Credit Hours: 3.00. Development of basic concepts and theories in physics; a terminal survey course designed for non-science majors. CTL:IPS 1750 Survey Of Physical Science

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media.
Credits: 4.00

15-16 Credits

Fall 4th Year

AGRY 51200 - Integrated Turfgrass Systems

Credit Hours: 3.00. Integration of agronomic principles for professionally managing golf courses, athletic complexes, lawn care companies, and sod production facilities in an efficient and environmentally friendly manner. Emphasizes independent thinking and team cooperation for understanding the social, ethical, and economical aspects underlying the daily agronomic management decisions, including construction, establishment, cultural practices, fertilization, and pest management. Course meets for weeks 1-10.

Credits: 3.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

AGRY 51400 - Environmental Stress Management For Turfgrass

Credit Hours: 1.00. Designed for students who desire an understanding of how environmental stresses influence turfgrass growth and how they can be managed with cultural practices. The course covers current research findings in stress management and integrates turfgrass environmental physiology with turfgrass management.

Learning Outcomes: 1. Demonstrate ability to identify problems, analyze data and derive

conclusions. 2. Demonstrate critical thinking and the ability to write and speak with effectiveness. 3. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 1.00

16 Credits

Spring 4th Year

12-14 Credits

Unmanned Aerial Systems, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (64 credits)

Required Major Courses (64 credits)

AT 10000 - Introduction To Aviation Technology

Credit Hours: 1.00. An introduction to the Department of Aviation Technology and its curricula as well as an overview of the aviation industry and associated careers. Aviation safety practices and human factors issues are discussed. An overview of aviation regulations and the regulatory process is included.

Learning Outcomes: 1. Recall key facts about the School of Aviation and Transportation Technology (SATT) and curricula. 2. Describe the aviation industry and career opportunities within the industry. 3. Identify key components of the aviation regulatory process. 4. Examine safety and human-factors elements of the aviation industry. Credits: 1.00

AT 10200 - Aviation Business

Credit Hours: 3.00. A discussion of the financial structure and operation of the aviation industry including aircraft and aerospace design parameters, as well as aviation financial and industrial processes. The course will cover material relevant to the overall structure of the aviation industry including history, current status of aerospace manufacturers, commercial airlines, and general aviation as well as governmental aviation agencies and international aviation. Commercialization of space and current issues in aviation will also be covered.

Learning Outcomes: 1. Understand the historical background of the numerous aspects of the air transportation industry. 2. Explain the general concepts of the national and international aviation legal system. 3. Describe the overall design and operation concepts of airports. 4. Understand the concepts utilized in air traffic control. 5. Describe the international aviation weather observation and dissemination system. 6. Understand the role of aviation as it relates to environmental problems. Credits: 3.00

AT 10300 - Aerospace Vehicle Propulsion And Tracking Systems

Credit Hours: 3.00. This course is an introduction to propulsion systems used in aerospace vehicles. The student will learn terminology, component parts, and operational theory of propulsion systems. Course topics covered are reciprocating and turbine engine operation theory as well as rocket propulsion systems. including electrical, fuel, fire, ignition and lubrication. Operational and regulatory fuel requirements are discussed. Emerging technologies and environmental practices will be explored.

Learning Outcomes: 1. Demonstrate familiarity with the theory, principles of operation, types of aeronautical propulsion systems. 2. Understand various manufacturer and FAA publications concerning maintenance of aircraft power plants and accessories. 3. Understand safety issues associated with fuels, energy, and their interaction with environmental polices. Credits: 3.00

AT 10600 - Basic Aircraft Science

Credit Hours: 3.00. An introduction to federal regulatory systems and associated publications. Includes aircraft nomenclature, theory of flight, and fundamentals of the aviation industry. Introduces weight and balance procedures. Permission

of department required.

Learning Outcomes: 1. Able to correctly identify the major components of an aircraft, know the proper names of these components, and be able to explain the fundamentals of why aircraft are configured as they are. 2. Able to accurately calculate the lift and drag of an airfoil, and be able to explain the effects of atmospheric conditions on the airfoil. 3. Explain the characteristics of subsonic, transonic, and supersonic flight, be able to identify the associated shock waves, and be able to describe the characteristics and effects of these shock waves. 4. Define the basic types of helicopter rotor systems, explain how movements of helicopters are controlled, and be able to explain helicopter rotor aerodynamics. 5. Define the proper conditions for weighing an aircraft, understand the proper technical documents needed and be able to calculate an aircraft's weight and balance. 6. Demonstrate the ability to analyze and distill, in writing, information in a dynamic environment. Credits: 3.00

AT 20200 - Aerospace Vehicle Systems Design, Analysis And Operations

Credit Hours: 3.00. Introduction to the design and engineering analysis of various systems found on modern aircraft and aerospace vehicles. Operational theory will also be presented for specific aircraft. Systems include electric power distribution, digital data, instrumentation, hydraulic, pneumatic, environmental, flight management, and autoflight.

Learning Outcomes: 1. Describe transport category aircraft systems. 2. Diagram the basic electrical and electronic systems design on modern airacraft. 3. Understand how major aircraft systems work together. Credits: 3.00

AT 20300 - Aviation Operations Management

Credit Hours: 3.00. This course provides a forum for investigating contemporary issues facing the aviation and aerospace industries. Major topics include aviation operation, human resources, fiscal, and technology management.

Learning Outcomes: 1. Understand the operational aspects of managing a large aerospace enterprise. 2. Describe airline and aerospace operations financing. 3. Discuss the trends in technology and the future roles and possibilities of various technical implementations in the industry. Credits: 3.00

AT 26502 - Aircraft Electrical Systems

Credit Hours: 3.00. An in-depth study of aircraft electrical components, both individually and as systems in the aircraft. DC electrical circuits, series and parallel circuits, magnetism, and electromagnetism are covered, as are DC power systems, schematics, and aircraft wiring practices. Aircraft charging systems, main power distribution, solid state electronics, batteries, and motors are also discussed.

Learning Outcomes: 1. Develop an understanding of electrical principles as they relate to aircraft system operation. 2. Construct, analyze, and isolate faults in circuits. 3. Demonstrate troubleshooting procedures for direct currently electrical aircraft components and power distribution circuits. Credits: 3.00

AT 33502 - Avionics Systems

Credit Hours: 3.00. This course covers the theory of operation and applications of common electrical components used in various aircraft circuits. The theory and mathematical relationships of alternating current, reactance, impedance, and phase shift are examined. Operational theory, installation practices, and troubleshooting concepts of common aircraft communication and navigation systems are investigated.

Learning Outcomes: 1. Demonstrate the theory of operation and application of common electrical components used in various aircraft circuits. 2. Demonstrate the operational theory, installation practices, and troubleshooting concepts of common aircraft communication and navigation systems. 3. Explain the theory and mathematical relationship of alternating current, reactance, impedance, and phase shift. Credits: 3.00

AT 20900 - Autonomous Aircraft Technology And Maintenance I

Credit Hours: 3.00. This course introduces fundamental concepts of autonomous aircraft technology and maintenance. Topics include history, airframe and powerplant selection, regulations governing uncrewed systems, airspace descriptions, safety, autonomous system programming and calibration, data package options, weather, system maintenance and repair, manual flight training, and aerodynamics and flight controls for autonomous aircraft.

Learning Outcomes: 1. Reflect on the history of UAS and project the future growth of UAS. 2. Analyze data sources to determine flight feasibility and mitigate hazards. 3. Collaborate effectively as a crew member both in the lab and in the field. 4. Design and print flight ready 3D model. 5. Assess airspace and flight feasibility by submission of FAA waiver application. 6. Demonstrate effective design choices. Credits: 3.00

AT 21900 - Autonomous Aircraft Technology And Maintenance II

Credit Hours: 3.00. This course will further develop skills and understanding of autonomous aircraft technology and maintenance. Emphasis will be on design, selection, construction, flight test, evaluation, and repair, of stabilized uncrewed aircraft. Students will work hands-on with open-source flight controllers to perform autonomous missions. Additionally, students will design and deploy scenario-specific sensors using student-constructed rotorcraft. Students will be expected to demonstrate their sensor payload through lab and field demonstration and professional documentation.

Learning Outcomes: 1. Apply flight principles to building a UAS capable of performing a specific operation. 2. Analyze and compare flight characteristics of UAS under different environmental and physical conditions. 3. Predict and compare flight characteristics of UAS using different components and configurations. 4. Integrate custom sensor payload into UAS design. 5. Safely and efficiently coordinate automated flights with team members. 6. Develop an enterprise-ready online user manual for UAS and sensor payload. Credits: 3.00

AT 31900 - Uncrewed Aircraft Systems: Applications, Data, And Documentation

Credit Hours: 3.00. Focused on applying uncrewed aircraft technology to specific data gathering missions. Sensor types, mounting selection, and control will be demonstrated. Emphasis will be placed on sensor payloads, mission planning, and data acquisition. Post-flight data processing and analysis will be conducted using GIS and Remote Sensing software applications. All specifications and procedures will be documented in an industry-accepted format.

Learning Outcomes: 1. Develop missions for fully autonomous aircraft. 2. Monitor and control system performance in real-time. 3. Conduct post-flight data analysis, with system performance evaluation and optimization. Credits: 3.00

AT 40900 - Advanced Air Mobility: Management And Operations

Credit Hours: 3.00. UAS capstone course. Application of AAM technologies across multiple commercial-type operations, including certification, application, and management. A demonstration of the cumulative knowledge and skills learned in previous UAS courses. Requires current FAA Part 107 Remote Pilot Certificate.

Learning Outcomes: 1. Demonstrate the application of safety and risk management principles to AAM operations. 2. Examine the AAM entrepreneurial ecosystem and formulate a business prospectus based on current industry trends and regulatory policy. 3. Assess technical data sources to evaluate system health, to include ground and flight testing, troubleshooting, maintenance and repair, system configuration and payload integration. 4. Demonstrate the ability to plan, manage, and execute various AAM missions safely, legally, and efficiently. Credits: 3.00

AT 41901 - Advanced Air Mobility Capstone

Credit Hours: 3.00. The conclusion and demonstration of the cumulative knowledge and skills learned within the UAS curriculum. Students will engage in a series of assignments that will guide them toward proposing and researching a capstone project that demonstrates knowledge gained in UAS and AAM topics. Students are expected to focus on the development of deliverable products that demonstrate their skills as effective UAS operators.

Learning Outcomes: 1. Engage in applied UAS

and AAM research that applies skills and knowledge gained in UAS curriculum. 2. Focus on deliverable products that demonstrate marketable skills as a UAS pilot and operator. 3. Develop a strong foundation upon which to pursue UAS and AAM in the workplace or further graduate research. Credits: 3.00

AT 30901 - Introduction To UAS Sensor Technology

Credit Hours: 3.00. This course introduces students to multiple forms of UAS sensors and core fundamentals of Remote Sensing and Geospatial Technology. Students will be introduced to basic data capture and processing techniques and to effectively apply different forms of UAS sensors to real-world applications.

Learning Outcomes: 1. Identify and define core geospatial and remote sensing technology concepts. 2. Effectively associate and relate UAS sensor technology with related portions of the electromagnetic spectrum. 3. Identify and explain geographic coordinate systems and projections. 4. Process and Create UAS data products within a Geographic Information System. Credits: 3.00

AT 10901 - Introduction To Uncrewed Aircraft System Operations

Credit Hours: 3.00. This course will provide students the aeronautical knowledge required to operate a small UAS in the National Airspace. Students are introduced to various aspects of uncrewed aviation operations, which includes UAS system types and components, regulations and operational approvals, and indoctrination to the civil and commercial applications of UAS. Through the use of UAS simulation technology, students will develop basic small UAS flight skills and successfully complete various UAS operational scenarios. Upon successful completion of the course students will be prepared to obtain a Federal Aviation Administration (FAA) Remote Pilot Certificate with a Small UAS Rating. Permission of department is required.

Learning Outcomes: 1. Obtain an FAA Remote Pilot Certificate with a Small UAS Rating. 2. Understand small UAS terminology and technology. 3. Comply with regulatory framework and understand various UAS approval processes. 4. Understand basic small UAS operating procedures. 5. Appreciate and gain perspective on how to safely operate UAS in the national airspace system. 6. Using simulation technology, demonstrate basic small UAS flight maneuvers and execute basic flight operations. Credits: 3.00

AT 11901 - Uncrewed Aerial Systems: Safety And Risk Management

Credit Hours: 3.00. This course discusses the fundamental concepts of Safety and Risk Management and their application to UAS operations. The course will provide insight into strategies for developing and implementing a formal safety management system (SMS) that effectively supports an organization's UAS operations. In addition, students will gain an understanding of ethical decision-making and its relationship to safety. Laboratory exercises provide students practical application of this knowledge to various UAS operational scenarios, which includes utilizing SMS principles in assessing risks and developing appropriate mitigations. Must possess a valid FAA Part 107 Remote Pilot Certificate.

Learning Outcomes: 1. Understand and demonstrate the application of safety and risk management principles to UAS operations. 2. Exemplify the UAS regulatory environment, which includes related regulatory approval and waiver processes. 3. Understand and apply technical data sources to evaluate UAS airworthiness and system health, to include ground and flight testing, troubleshooting, maintenance and repair. 4. Demonstrate the ability to plan and safely complete basic UAS missions that are regulatory compliant. 5. Understand and demonstrate ethical decision-making. Credits: 3.00

Other Departmental /Program Course Requirements (37 credits)

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions

and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance

test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective

sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Sample 4-Year Plan

Fall 1st Year

AT 10000 - Introduction To Aviation Technology

Credit Hours: 1.00. An introduction to the Department of Aviation Technology and its curricula as well as an overview of the aviation industry and associated careers. Aviation safety practices and human factors issues are discussed. An overview of aviation regulations and the regulatory process is included.

Learning Outcomes: 1. Recall key facts about the School of Aviation and Transportation Technology (SATT) and curricula. 2. Describe the aviation industry and career opportunities within the industry. 3. Identify key components of the aviation regulatory process. 4. Examine safety and human-factors elements of the aviation industry. Credits: 1.00

AT 10600 - Basic Aircraft Science

Credit Hours: 3.00. An introduction to federal regulatory systems and associated publications. Includes aircraft nomenclature, theory of flight, and fundamentals of the aviation industry. Introduces weight and balance procedures. Permission of department required.

Learning Outcomes: 1. Able to correctly identify the major components of an aircraft, know the proper names of these components, and be able to explain the fundamentals of why aircraft are configured as they are. 2. Able to accurately calculate the lift and drag of an airfoil, and be able to explain the effects of atmospheric conditions on the airfoil. 3. Explain the characteristics of subsonic, transonic, and supersonic flight, be able to identify the associated shock waves, and be able to describe the characteristics and effects of these shock waves. 4. Define the basic types of helicopter rotor systems, explain how movements of helicopters are controlled, and be able to explain helicopter rotor aerodynamics. 5. Define the proper conditions for weighing an aircraft, understand the proper technical documents needed and be able to calculate an aircraft's weight and balance. 6. Demonstrate the ability to analyze and distill, in writing, information in a dynamic environment. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

AT 10901 - Introduction To Uncrewed Aircraft System Operations

Credit Hours: 3.00. This course will provide students the aeronautical knowledge required to operate a small UAS in the National Airspace. Students are introduced to various aspects of uncrewed aviation operations, which includes UAS system types and components, regulations and operational approvals, and indoctrination to the civil and commercial applications of UAS. Through the use of UAS simulation technology, students will develop basic small UAS flight skills and successfully complete various UAS operational scenarios. Upon successful completion of the course students will be prepared to obtain a Federal Aviation Administration (FAA) Remote Pilot Certificate with a Small UAS Rating. Permission of department is required.

Learning Outcomes: 1. Obtain an FAA Remote Pilot Certificate with a Small UAS Rating. 2. Understand small UAS terminology and technology. 3. Comply with regulatory framework and understand various UAS approval processes. 4. Understand basic small UAS operating procedures. 5. Appreciate and gain perspective on how to safely operate UAS in the national airspace system. 6. Using simulation technology, demonstrate basic small UAS flight maneuvers and execute basic flight operations. Credits: 3.00

16 Credits

Spring 1st Year

AT 10200 - Aviation Business

Credit Hours: 3.00. A discussion of the financial structure and operation of the aviation industry including aircraft and aerospace design parameters, as well as aviation financial and industrial processes. The course will cover material relevant to the overall structure of the aviation industry including history, current status of aerospace manufacturers, commercial airlines, and general aviation as well as governmental aviation agencies and international aviation. Commercialization of space and current issues in aviation will also be covered.

Learning Outcomes: 1. Understand the historical background of the numerous aspects of the air transportation industry. 2. Explain the general concepts of the national and international aviation legal system. 3. Describe the overall design and operation concepts of airports. 4. Understand the concepts utilized in air traffic control. 5. Describe the international aviation weather observation and dissemination system. 6. Understand the role of aviation as it relates to environmental problems. Credits: 3.00

AT 10300 - Aerospace Vehicle Propulsion And Tracking Systems

Credit Hours: 3.00. This course is an introduction to propulsion systems used in aerospace vehicles. The student will learn terminology, component parts, and operational theory of propulsion systems. Course topics covered are reciprocating and turbine engine operation theory as well as rocket propulsion systems. including electrical, fuel, fire, ignition and lubrication. Operational and regulatory fuel requirements are discussed. Emerging technologies and environmental practices will be explored.

Learning Outcomes: 1. Demonstrate familiarity with the theory, principles of operation, types of aeronautical propulsion systems. 2. Understand various manufacturer and FAA publications concerning maintenance of aircraft power plants and accessories. 3. Understand safety issues associated with fuels, energy, and their interaction with environmental polices. Credits: 3.00

AT 26502 - Aircraft Electrical Systems

Credit Hours: 3.00. An in-depth study of aircraft electrical components, both individually and as systems in the aircraft. DC electrical circuits, series and parallel circuits, magnetism, and electromagnetism are covered, as are DC power systems, schematics, and aircraft wiring practices. Aircraft charging systems, main power distribution, solid state electronics, batteries, and motors are also discussed.

Learning Outcomes: 1. Develop an understanding of electrical principles as they relate to aircraft system operation. 2. Construct, analyze, and isolate faults in circuits. 3. Demonstrate troubleshooting procedures for direct currently electrical aircraft components and power distribution circuits. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and

trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

AT 11901 - Uncrewed Aerial Systems: Safety And Risk Management

Credit Hours: 3.00. This course discusses the fundamental concepts of Safety and Risk Management and their application to UAS operations. The course will provide insight into strategies for developing and implementing a formal safety management system (SMS) that effectively supports an organization's UAS operations. In addition, students will gain an understanding of ethical decision-making and its relationship to safety. Laboratory exercises provide students practical application of this knowledge to various UAS operational scenarios, which includes utilizing SMS principles in assessing risks and developing appropriate mitigations. Must possess a valid FAA Part 107 Remote Pilot Certificate.

Learning Outcomes: 1. Understand and demonstrate the application of safety and risk management principles to UAS operations. 2. Exemplify the UAS regulatory environment, which includes related regulatory approval and waiver processes. 3. Understand and apply technical data sources to evaluate UAS airworthiness and system health, to include ground and flight testing, troubleshooting, maintenance and repair. 4. Demonstrate the ability to plan and safely complete basic UAS missions that are regulatory compliant. 5. Understand and demonstrate ethical decision-making. Credits: 3.00

15 Credits

Fall 2nd Year

AT 20200 - Aerospace Vehicle Systems Design, Analysis And Operations

Credit Hours: 3.00. Introduction to the design and engineering analysis of various systems found on modern aircraft and aerospace vehicles. Operational theory will also be presented for specific aircraft. Systems include electric power distribution, digital data, instrumentation, hydraulic, pneumatic, environmental, flight management, and autoflight.

Learning Outcomes: 1. Describe transport category aircraft systems. 2. Diagram the basic electrical and electronic systems design on modern airacraft. 3. Understand how major aircraft systems work together. Credits: 3.00

AT 33502 - Avionics Systems

Credit Hours: 3.00. This course covers the theory of operation and applications of common electrical components used in various aircraft circuits. The theory and mathematical relationships of alternating current, reactance, impedance, and phase shift are examined. Operational theory, installation practices, and troubleshooting concepts of common aircraft communication and navigation systems are investigated.

Learning Outcomes: 1. Demonstrate the theory of operation and application of common electrical components used in various aircraft circuits. 2. Demonstrate the operational theory, installation practices, and troubleshooting concepts of common aircraft communication and navigation systems. 3. Explain the theory and mathematical relationship of alternating current, reactance, impedance, and phase shift. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary

methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

AT 20900 - Autonomous Aircraft Technology And Maintenance I

Credit Hours: 3.00. This course introduces fundamental concepts of autonomous aircraft technology and maintenance. Topics include history, airframe and powerplant selection, regulations governing uncrewed systems, airspace descriptions, safety, autonomous system programming and calibration, data package options, weather, system maintenance and repair, manual flight training, and aerodynamics and flight controls for autonomous aircraft.

Learning Outcomes: 1. Reflect on the history of UAS and project the future growth of UAS. 2. Analyze data sources to determine flight feasibility and mitigate hazards. 3. Collaborate effectively as a crew member both in the lab and in the field. 4. Design and print flight ready 3D model. 5. Assess airspace and flight feasibility by submission of FAA waiver application. 6. Demonstrate effective design choices. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

16 Credits

Spring 2nd Year

AT 20300 - Aviation Operations Management

Credit Hours: 3.00. This course provides a forum for investigating contemporary issues facing the aviation and aerospace industries. Major topics include aviation operation, human resources, fiscal, and technology management.

Learning Outcomes: 1. Understand the operational aspects of managing a large aerospace enterprise. 2. Describe airline and aerospace operations financing. 3. Discuss the trends in technology and the future roles and possibilities of various technical implementations in the industry. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be

introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

AT 21900 - Autonomous Aircraft Technology And Maintenance II

Credit Hours: 3.00. This course will further develop skills and understanding of autonomous aircraft technology and maintenance. Emphasis will be on design, selection, construction, flight test, evaluation, and repair, of stabilized uncrewed aircraft. Students will work hands-on with open-source flight controllers to perform autonomous missions. Additionally, students will design and deploy scenario-specific sensors using student-constructed rotorcraft. Students will be expected to demonstrate their sensor payload through lab and field demonstration and professional documentation.

Learning Outcomes: 1. Apply flight principles to building a UAS capable of performing a specific operation. 2. Analyze and compare flight characteristics of UAS under different environmental and physical conditions. 3. Predict and compare flight characteristics of UAS using different components and configurations. 4. Integrate custom sensor payload into UAS design. 5. Safely and efficiently coordinate automated flights with team members. 6. Develop an enterprise-ready online user manual for UAS and sensor payload. Credits: 3.00

15 Credits

Fall 3rd Year

AT 30901 - Introduction To UAS Sensor Technology

Credit Hours: 3.00. This course introduces students to multiple forms of UAS sensors and core fundamentals of Remote Sensing and Geospatial Technology. Students will be introduced to basic data capture and processing techniques and to effectively apply different forms of UAS sensors to real-world applications.

Learning Outcomes: 1. Identify and define core geospatial and remote sensing technology concepts. 2. Effectively associate and relate UAS sensor technology with related portions of the electromagnetic spectrum. 3. Identify and explain geographic coordinate systems and projections. 4. Process and Create UAS data products within a Geographic Information System. Credits: 3.00

15 Credits

Spring 3rd Year

AT 31900 - Uncrewed Aircraft Systems: Applications, Data, And Documentation

Credit Hours: 3.00. Focused on applying uncrewed aircraft technology to specific data gathering missions. Sensor types, mounting selection, and control will be demonstrated. Emphasis will be placed on sensor payloads, mission planning, and data acquisition. Post-flight data processing and analysis will be conducted using GIS and Remote Sensing software applications. All specifications and procedures will be documented in an industry-accepted format.

Learning Outcomes: 1. Develop missions for fully autonomous aircraft. 2. Monitor and control system performance in real-time. 3. Conduct post-flight data analysis, with system performance evaluation and optimization. Credits: 3.00

15 Credits

Fall 4th Year

AT 40900 - Advanced Air Mobility: Management And Operations

Credit Hours: 3.00. UAS capstone course. Application of AAM technologies across multiple commercial-type operations, including certification, application, and management. A demonstration of the cumulative knowledge and skills learned in previous UAS courses. Requires current FAA Part 107 Remote Pilot Certificate.

Learning Outcomes: 1. Demonstrate the application of safety and risk management principles to AAM operations. 2. Examine the AAM entrepreneurial ecosystem and formulate a business prospectus based on current industry trends and regulatory policy. 3. Assess technical data sources to evaluate system health, to include ground and flight testing, troubleshooting, maintenance and repair, system configuration and payload integration. 4. Demonstrate the ability to plan, manage, and execute various AAM missions safely, legally, and efficiently. Credits: 3.00

15 Credits

Spring 4th Year

AT 41901 - Advanced Air Mobility Capstone

Credit Hours: 3.00. The conclusion and demonstration of the cumulative knowledge and skills learned within the UAS curriculum. Students will engage in a series of assignments that will guide them toward proposing and researching a capstone project that demonstrates knowledge gained in UAS and AAM topics. Students are expected to focus on the development of deliverable products that demonstrate their skills as effective UAS operators.

Learning Outcomes: 1. Engage in applied UAS and AAM research that applies skills and knowledge gained in UAS curriculum. 2. Focus on deliverable products that demonstrate marketable skills as a UAS pilot and operator. 3. Develop a strong foundation upon which to pursue UAS and AAM in the workplace or further graduate research. Credits: 3.00

13 Credits

UX Design, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (45 credits)

CGT 11800 - Fundamentals Of Imaging Technology

Credit Hours: 3.00. This course provides a foundation for the development and use of raster and vector images for a variety of industries. Full-color images and illustrations are produced using computer technologies, with a focus on both technical and aesthetic aspects. Topics include color theory and perception, surface and lighting analysis, rendering techniques, and technical characteristics.

Learning Outcomes: 1. Combine typography, images, colors, and other design elements to create organized visual relationships. 2. Communicate new ideas formulating them into visual concepts. 3. Apply the principles of color, resolution, and imaging formats effectively. 4. Adapt digital images for print, web, animation, and software apps. Credits: 3.00

CGT 14100 - Internet Foundations Technologies And Development

Credit Hours: 3.00. (CNIT 14100) The course explores the history, architecture, and development of the World Wide Web. Current tagging and scripting languages are covered in a tool-independent environment. Topics also include authoring tools, design, graphic and multimedia formats, and commerce, implementation, and security issues. PC literacy required.

Learning Outcomes: 1. Develop web content using client-side technologies. 2. Create production documentation to meet project requirements. 3. Create media for successful inclusion on websites. 4. Deploy web application to common servers and mobile

platforms. 5. Evaluate finished solution against criteria set forth in production-documentation for the provided project. Credits: 3.00

CGT 17207 - User Experience Design Experience Studio I

Credit Hours: 3.00. This course allows students to practice as a UX designer in a company-like environment. Students learn about the roles they can pursue and build foundational collaboration and project management skills. Projects utilize a human-centered design approach to provide a rich user experience.

Learning Outcomes: 1. Participate actively and contribute to team activities. 2. Identify and use project management tools. 3. Explore areas of UX specialization. 4. Explain project objectives in a professional manner. Credits: 3.00

CGT 27207 - User Experience Design Experience Studio II

Credit Hours: 3.00. This course allows students to practice as a UX designer in a company-like environment. Students continue to develop their abilities and contribute significantly to projects. Projects utilize a human-centered design approach to provide a rich user experience.

Learning Outcomes: 1. Articulate the skills needed to pursue a career in data visualization. 2. Understand the need for visualization skills and identify area in data visualization that interests them for future study. 3. Demonstrate the ability to interpret, recognize, appreciate, and understand information presented through visible actions, objects, and symbols. 4. Demonstrate their ability to work in a team environment, articulate and co-presenting results. Credits: 3.00

CGT 37207 - User Experience Design Experience Studio III

Credit Hours: 3.00. This course provides students with opportunities to explore opportunities in a company-like environment. Students are knowledgeable project members and beginning to transition into subject matter experts and managers. Projects utilize human-centered design principles to provide a rich user experience.

Learning Outcomes: 1. Create and manage teams, resources, and activities. 2. Create and manage project strategy. 3. Demonstrate depth in one or more UX specializations. 4. Champion UX approaches to diverse stakeholders in a professional manner. Credits: 3.00

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals, and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project

specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

CGT 41201 - Contemporary Problems In Applied Computer Graphics II

Credit Hours: 2.00. CGT 41201 is the second course in the CGT applied computer graphics capstone sequence with a focus on execution and evaluation of the senior capstone project. Emphasis will be placed on industry engagement for the execution of the project plan that was developed in CGT 41101. Students will work in teams to execute the project plan; develop and execute a project evaluation plan, and make a professional final presentation to industry members, faculty, and peers. Students will execute a project refinement process based on feedback received and incorporate that into a final presentation and project report. CGT 41201 will be taught in a seminar format with one meeting per week focused on project status checks, evaluation plan development and execution, and project presentations.

Learning Outcomes: 1. Execute a project plan to produce a substantial graphics product. 2. Develop and execute an evaluation plan of their capstone project. 3. Develop professional presentations incorporating external feedback and project results. 4. Produce a major project report for their capstone project, including project management, rationale, and substantial findings. Credits: 2.00

CGT 27000 - Introduction To Data Visualization

Credit Hours: 3.00. This course is designed for students with little or no background in Data Visualization. It provides an introductory examination of data visualization through lecture, readings and hands-on experience with current visualization tools. Students will obtain an overview of the various types of data, the fundamentals of the visualization process for information and scientific visualization, and examine detail visualizations workflows that aim to answer "when" (temporal data), "where" (geospatial data), "what" (topical data), and "with whom" (trees and networks) questions when visualizing data. After taking the course students will have both the theoretical foundation and practical skills needed to create insightful visualizations for a wide range of data types.

Learning Outcomes: 1. Differentiate between information and scientific visualization. 2. Appreciate the visualization process. 3. Identify five major information visualization types: charts, tables, graphs, geospatial maps and network maps. 4. Articulate which visualization tool to use for specific data formats. 5. Compare and evaluate different techniques of data representation. Credits: 3.00

CGT 37208 - User Experience Design Studio V: Specialization

Credit Hours: 3.00. This course prepares students to lead complex and strategic design projects. Students become proficient in the most advanced approaches, methods and techniques of human-centered design. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct expert analysis using expert data gathering and analysis techniques to inform design decisions. 2. Create a variety of concepts for situations, clients, and problems to advance stakeholder strategies and goals. 3. Demonstrate advanced application and evaluation of visual and interaction design principles by using advanced prototyping techniques to create working interactive digital prototypes. 4. Demonstrate the ability to lead UX teams through the user-centered design processes, employing appropriate approaches, processes and methodologies. 5. Practice human-centered design in concordance with their personal design philosophy. Credits: 3.00

CGT 17208 - User Experience Design Studio I: Fundamentals (UCC: STS)

Credit Hours: 3.00. Introduction to the fundamental components of human-centered design, focusing on interactive computer systems. Students learn the basic tenets and methods of user-centered design, including usability and visual design principles, user research, and low-fidelity prototyping. The course is platform-independent and encourages students to experiment with new and emerging technologies.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Conduct basic analysis of situations, clients, and problems using data gathering and analysis techniques. 2. Articulate

problem statements. 3. Create concepts that address the issues in the problem statement. 4. Demonstrate basic application of principles of visual and interaction design to create low-fidelity prototypes. 5. Apply the fundamental components of user-centered design. 6. Articulate the core values of user-centered design. Credits: 3.00

CGT 27108 - User Experience Design Studio II: Screen

Credit Hours: 3.00. Intermediate exploration of various approaches to human-centered design. Students learn intermediate research and design methods and create high-fidelity prototypes. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct intermediate analysis of situations, clients, and problems using multiple approaches to problem framing. 2. Create a variety of concepts that address the issues in the problem statement. 3. Use intermediate data gathering and analysis techniques to inform design decisions. 4. Demonstrate intermediate application of principles of visual and interaction design to create high-fidelity prototypes. 5. Distinguish among major approaches to user-centered design. 6. Compare and contrast the core values of various approaches to user-centered design. Credits: 3.00

CGT 37108 - User Experience Design Studio IV: Strategy

Credit Hours: 3.00. Advanced exploration of strategic human-centered design that aligns user experience with organizational strategy and business goals, using approaches such as agile, waterfall, and lean UX. Students utilize visual, information, and usability principles as well as various approaches and methods of human-centered design to create interactive digital prototypes. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct expert analysis using advanced data gathering and analysis techniques to inform design decisions. 2. Create a variety of concepts for situations, clients, and problems that aligns with the client organizational strategy and business goals. 3. Demonstrate fluent application and evaluation of visual and interaction design principles by using advanced prototyping techniques to create interactive prototypes. 4. Demonstrate the ability to make recommendations for appropriate major design approaches and methodologies that fit a particular design situation and team. 5. Articulate their design identity and personal design philosophy. Credits: 3.00

CGT 27208 - User Experience Design Studio III: Cross-Channel

Credit Hours: 3.00. Advanced exploration of cross-channel approaches to human-centered design such as service design that span digital and physical experiences. Students utilize principles of usability and user experience to create and evaluate physical prototypes. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct advanced analysis. 2. Create a variety of concepts that address the issues of situations, clients, and problems that demonstrate an awareness of multiple user touchpoints. 3. Use physically-based techniques for data gathering and analysis to inform design decisions. 4. Demonstrate application of human factors principles to create physical prototypes. 5. Distinguish among popular processes and methodologies for UX. 6. Explain how design philosophy impacts design practice. Credits: 3.00

Other Departmental/Program Course Requirements (66 credits)

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments.

CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the

historical, and the contemporary. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level

required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CGT 27000 - Introduction To Data Visualization

Credit Hours: 3.00. This course is designed for students with little or no background in Data Visualization. It provides an introductory examination of data visualization through lecture, readings and hands-on experience with current visualization tools. Students will obtain an overview of the various types of data, the fundamentals of the visualization process for information and scientific visualization, and examine detail visualizations workflows that aim to answer "when" (temporal data), "where" (geospatial data), "what" (topical data), and "with whom" (trees and networks) questions when visualizing data. After taking the course students will have both the theoretical foundation and practical skills needed to create insightful visualizations for a wide range of data types.

Learning Outcomes: 1. Differentiate between information and scientific visualization. 2. Appreciate the visualization process. 3. Identify five major information visualization types: charts, tables, graphs, geospatial maps and network maps. 4. Articulate which visualization tool to use for specific data formats. 5. Compare and evaluate different techniques of data representation. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

15 Credits

Spring 1st Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

CGT 17207 - User Experience Design Experience Studio I

Credit Hours: 3.00. This course allows students to practice as a UX designer in a company-like environment. Students learn about the roles they can pursue and build foundational collaboration and project management skills. Projects utilize a human-centered design approach to provide a rich user experience.

Learning Outcomes: 1. Participate actively and contribute to team activities. 2. Identify and use project management tools. 3. Explore areas of UX specialization. 4. Explain project objectives in a professional manner. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CGT 17208 - User Experience Design Studio I: Fundamentals (UCC: STS)

Credit Hours: 3.00. Introduction to the fundamental components

of human-centered design, focusing on interactive computer systems. Students learn the basic tenets and methods of user-centered design, including usability and visual design principles, user research, and low-fidelity prototyping. The course is platform-independent and encourages students to experiment with new and emerging technologies.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Conduct basic analysis of situations, clients, and problems using data gathering and analysis techniques. 2. Articulate problem statements. 3. Create concepts that address the issues in the problem statement. 4. Demonstrate basic application of principles of visual and interaction design to create low-fidelity prototypes. 5. Apply the fundamental components of user-centered design. 6. Articulate the core values of user-centered design. Credits: 3.00

15 Credits

Fall 2nd Year

CGT 27207 - User Experience Design Experience Studio II

Credit Hours: 3.00. This course allows students to practice as a UX designer in a company-like environment. Students continue to develop their abilities and contribute significantly to projects. Projects utilize a human-centered design approach to provide a rich user experience.

Learning Outcomes: 1. Articulate the skills needed to pursue a career in data visualization. 2. Understand the need for visualization skills and identify area in data visualization that interests them for future study. 3. Demonstrate the ability to interpret, recognize, appreciate, and understand information presented through visible actions, objects, and symbols. 4. Demonstrate their ability to work in a team environment, articulate and co-presenting results. Credits: 3.00

CGT 27108 - User Experience Design Studio II: Screen

Credit Hours: 3.00. Intermediate exploration of various approaches to human-centered design. Students learn intermediate research and design methods and create high-fidelity prototypes. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct intermediate analysis of situations, clients, and problems using multiple approaches to problem framing. 2. Create a variety of concepts that address the issues in the problem statement. 3. Use intermediate data gathering and analysis techniques to inform design decisions. 4. Demonstrate intermediate application of principles of visual and interaction design to create high-fidelity prototypes. 5. Distinguish among major approaches to user-centered design. 6. Compare and contrast the core values of various approaches to user-centered design. Credits: 3.00

15 Credits

Spring 2nd Year

CGT 27207 - User Experience Design Experience Studio II

Credit Hours: 3.00. This course allows students to practice as a UX designer in a company-like environment. Students continue to develop their abilities and contribute significantly to projects. Projects utilize a human-centered design approach to provide a rich user experience.

Learning Outcomes: 1. Articulate the skills needed to pursue a career in data visualization. 2. Understand the need for visualization skills and identify area in data visualization that interests them for future study. 3. Demonstrate the ability to interpret, recognize, appreciate, and understand information presented through visible actions, objects, and symbols. 4. Demonstrate their ability to work in a team environment, articulate and co-presenting results. Credits: 3.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals, and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 27208 - User Experience Design Studio III: Cross-Channel

Credit Hours: 3.00. Advanced exploration of cross-channel approaches to human-centered design such as service design that span digital and physical experiences. Students utilize principles of usability and user experience to create and evaluate physical prototypes. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct advanced analysis. 2. Create a variety of concepts that address the issues of situations, clients, and problems that demonstrate an awareness of multiple user touchpoints. 3. Use physically-based techniques for data gathering and analysis to inform design decisions. 4. Demonstrate application of human factors principles to create physical prototypes. 5. Distinguish among popular processes and methodologies for UX. 6. Explain how design philosophy impacts design practice. Credits: 3.00

16 Credits

Fall 3rd Year

CGT 37207 - User Experience Design Experience Studio III

Credit Hours: 3.00. This course provides students with opportunities to explore opportunities in a company-like environment. Students are knowledgeable project members and beginning to transition into subject matter experts and managers. Projects utilize human-centered design principles to provide a rich user experience.

Learning Outcomes: 1. Create and manage teams, resources, and activities. 2. Create and manage project strategy. 3. Demonstrate depth in one or more UX specializations. 4. Champion UX approaches to diverse stakeholders in a professional manner. Credits: 3.00

CGT 37108 - User Experience Design Studio IV: Strategy

Credit Hours: 3.00. Advanced exploration of strategic human-centered design that aligns user experience with organizational strategy and business goals, using approaches such as agile, waterfall, and lean UX. Students utilize visual, information, and usability principles as well as various approaches and methods of human-centered design to create interactive digital prototypes. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct expert analysis using advanced data gathering and analysis techniques to inform design decisions. 2. Create a variety of concepts for situations, clients, and problems that aligns with the client organizational strategy and business goals. 3. Demonstrate fluent application and evaluation of visual and interaction design principles by using advanced prototyping techniques to create interactive prototypes. 4. Demonstrate the ability to make recommendations for appropriate major design approaches and methodologies that fit a particular design situation and team. 5. Articulate their design identity and personal design philosophy. Credits: 3.00

15 Credits

Spring 3rd Year

CGT 37207 - User Experience Design Experience Studio III

Credit Hours: 3.00. This course provides students with opportunities to explore opportunities in a company-like environment. Students are knowledgeable project members and beginning to transition into subject matter experts and managers. Projects utilize human-centered design principles to provide a rich user experience.

Learning Outcomes: 1. Create and manage teams, resources, and activities. 2. Create and manage project strategy. 3. Demonstrate depth in one or more UX specializations. 4. Champion UX approaches to diverse stakeholders in a professional manner. Credits: 3.00

CGT 37208 - User Experience Design Studio V: Specialization

Credit Hours: 3.00. This course prepares students to lead complex and strategic design projects. Students become proficient in the most advanced approaches, methods and techniques of human-centered design. The course is platform-independent and encourages students to experiment with new and emerging technologies.

Learning Outcomes: 1. Conduct expert analysis using expert data gathering and analysis techniques to inform design decisions. 2. Create a variety of concepts for situations, clients, and problems to advance stakeholder strategies and goals. 3. Demonstrate advanced application and evaluation of visual and interaction design principles by using advanced prototyping techniques to create working interactive digital prototypes. 4. Demonstrate the ability to lead UX teams through the user-centered design processes, employing appropriate approaches, processes and methodologies. 5. Practice human-centered design in concordance with their personal design philosophy. Credits: 3.00

15 Credits

Fall 4th Year

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

14 Credits

Spring 4th Year

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 41201 - Contemporary Problems In Applied Computer Graphics II

Credit Hours: 2.00. CGT 41201 is the second course in the CGT applied computer graphics capstone sequence with a focus on execution and evaluation of the senior capstone project. Emphasis will be placed on industry engagement for the execution of the project plan that was developed in CGT 41101. Students will work in teams to execute the project plan; develop and execute a project evaluation plan, and make a professional final presentation to industry members, faculty, and peers. Students will execute a project refinement process based on

feedback received and incorporate that into a final presentation and project report. CGT 41201 will be taught in a seminar format with one meeting per week focused on project status checks, evaluation plan development and execution, and project presentations.

Learning Outcomes: 1. Execute a project plan to produce a substantial graphics product. 2. Develop and execute an evaluation plan of their capstone project. 3. Develop professional presentations incorporating external feedback and project results. 4. Produce a major project report for their capstone project, including project management, rationale, and substantial findings. Credits: 2.00

15 Credits

Veterinary Nursing, BSVN

About the Program

Degree Requirements

Departmental/Program Major Courses (87 credits)

BMS 33100 - Pharmacology-VN

Credit Hours: 1.50. This course introduces the concepts of drugs used in the different body systems. Mechanisms of action, side effects, and therapeutic applications are presented.

Learning Outcomes: 1. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases of the GI tract. 2. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases of cardiovascular system. 3. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases of the respiratory tract. 4. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases of the endocrine systems. 5. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary anti-inflammatory drugs. 6. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases/conditions of the nervous system. 7. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary anti-parasitic drugs. Credits: 1.50

BMS 23300 - Introduction To Pharmacology-VN

Credit Hours: 0.50. This course introduces the concepts and terminology of pharmacology including basic terminology, pharmacokinetics, and pharmacodynamics.

Learning Outcomes: "1. Explain what the different types of drugs names are. 2. Recognize the characteristics of different solid and liquid dosage formulations. 3. Explain the significance of the terminology used in drug references to describe drugs. 4. List and describe the criteria for acceptable extra-label use of drugs. 5. Describe the difference between OTC and prescription drugs. 6. Explain the factors that affect movement of drug molecules throughout the body. 7. Describe the requirements for prescriptions and drug labels. 8. Describe the characteristics of each route of drug administration. 9. Read and write abbreviations commonly used in drug orders accurately. 10. Explain physiological factors that change the way drugs move through the body. 11. Describe regulations and warnings surrounding dispensing containers. 12.

Describe factors that alter the way drugs are absorbed, distributed, metabolized, and excreted. 13. Describe reasons and procedures for handling and storing drugs. 14. Explain the interaction between drugs and receptors and how that produces cellular effects. 15. Describe legal requirements for dispensing and storage of controlled substances. 16. Describe how pharmacokinetics and pharmacodynamics impact every drug treatment. 17. Describe special storage and handling requirements for cytotoxic and hazardous drugs. 18. Describe the issues surrounding and guidelines required for acceptable drug compounding. Credits: 0.50

BMS 23200 - Physiology-VN

Credit Hours: 2.00. Basic mammalian physiology, which covers general physiological processes with emphasis on domestic animals. Laboratory experiences and demonstrations form a major part of the laboratory instruction.

Learning Outcomes: 1. Describe and explain the functions of body fluids. The types of formed elements in blood and their functions. 2. Describe and explain the functions of the central and peripheral nervous systems. 3. Describe and explain the types of muscles in the body and their functions. 4. Describe and explain the regulation of the functions of the heart, lungs, kidneys, endocrine glands and gonads. 5. Describe and explain the regulation of blood pressure, gas exchange in the lungs and acid-base balance. 6. Describe and explain the hormonal regulation of metabolic processes and reproduction. Credits: 2.00

BMS 23100 - Anatomy-VN

Credit Hours: 4.00. Gross and microscopic study of body systems and topographic relationships in major animal species. Laboratory consists of dissection as well as study of living animals.

Learning Outcomes: 1. Identify the Musculoskeletal. Students will be able to identify, draw and describe function of, in models, radiographs and live animals: major bones and bony prominences; major muscles; major nerves; major blood vessels associated with limbs; and describe long bone development. 2. Identify the Thorax. Students will be able to identify, draw and describe, in models, radiographs and live animals: position of lungs, esophagus, trachea, major vessels, nerves and heart; pathway of blood through heart; position of thoracic and pleural cavities; and important topography. 3. Identify the Abdomen. Students will be able to identify, draw and describe, in models, radiographs and live animals: position of major GI and reproductive organs, major vessels, and nerves; GI and UG development; position of abdominal and peritoneal cavities; and important topography. 4. Identify the Head and Neck. Students will be able to identify and describe, in models, radiographs and live animals: major bones of skull; number teeth; major cavities of skull; major features of the eye and ear; major glands, vessels and nerves of the neck and skull; major topography of the head and neck; and major parts and function of the brain. Credits: 4.00

CPB 48000 - Seminar In Animal Welfare And Human-Animal Interaction-VN

Credit Hours: 2.00. This course will be required for students involved in the interdisciplinary Animal Welfare and Societal Concerns program of study. Seminar in Animal Welfare and Human-Animal Interaction is for discussion of current topics in animal welfare and other areas involving the interaction of humans and animals. Outside speakers will present their perspectives in various areas. Journal articles will also be presented and discussed.

Learning Outcomes: 1. Demonstrate the use of human-animal interaction theories and science to explain common human-animal interactions. 2. Demonstrate the use of an animal welfare conceptual framework and scientific components to assess an animal welfare situation (Lord et al., 2017). 3. Synthesize, formulate and communicate an informed view of

contemporary or emerging human-animal interaction and animal welfare issues, including scientific and sociological influences and professional responsibilities. Credits: 2.00

CPB 35200 - Parasitology-VN

Credit Hours: 2.00. Biology and life cycles of selected protozoan, helminth, and arthropod parasites of veterinary importance. Emphasis will be placed on laboratory procedures for the identification of common parasites of domestic and laboratory animals.

Learning Outcomes: 1. Identify gross and microscopic parasite stages that help in disease diagnosis. 2. Select and perform the appropriate assays used in laboratory diagnosis of parasitic infections. 3. Summarize parasite life cycle, pathogenesis and clinical signs of various parasitic diseases. 4. Advocate the methods of parasite control and prevention. 5. Create a safety plan to prevent zoonotic disease transmission. Credits: 2.00

CPB 35100 - Microbiology-VN

Credit Hours: 2.00. Biology and laboratory identification of bacteria and fungi that cause infectious diseases in animals. Emphasis will be placed on the collection of specimens for culture, the isolation and identification of pathogenic organisms, and antibiotic susceptibility testing. Procedures and commercial systems available to veterinary practices will be utilized.

Learning Outcomes: 1. Select appropriate samples for laboratory diagnostics of infectious disease. 2. Perform basic microbiological techniques used in the laboratory setting of a veterinary hospital. (for example: Gram stain, catalase test, oxidase test, inoculate an agar plate for isolated colonies, Kirby Bauer test). 3. Identify organisms from an "unknown sample" using a variety of tests. 4. Create a shortlist of differential diagnoses for infectious disease cases. 5. Implement biosafety protocols (for example: personal protective equipment, isolation of animals). 6. Differentiate the biology of bacteria, viruses, and fungi. 7. Prevent and control the spread or introduction of infectious diseases. 8. Explain zoonotic diseases to laypeople. Credits: 2.00

CPB 25500 - Clinical Pathology-VN

Credit Hours: 4.00. Basic instruction in clinical pathology, including theory and techniques of hematology, clinical chemistry, urinalysis, cytology, and specimen handling.

Learning Outcomes: 1. Have a clinically relevant working knowledge and mastery of laboratory skills related to erythrocytes (red blood cells) of common domestic and exotic species covered in this course. This includes the ability to: A. Describe, or identify from questions, features of RBC production, function and circulation as described in lectures and labs; B. Correctly describe and identify from photomicrographs or microscopy the morphology of normal and abnormal RBCs; C. Define anemia and classify anemia by mechanisms and RBC indices; D. Accurately perform laboratory analysis of blood samples to produce relevant erythrocyte data for an erythrogram. 2. Have a clinically relevant working knowledge and mastery of laboratory skills related to leukocytes (white blood cells) of common domestic and exotic species covered in this course. This includes the ability to: A. Describe, or identify from questions, features of WBC production, function and circulation as described in lectures and labs; B. Correctly describe and identify from photomicrographs or microscopy the morphology of normal and abnormal WBCs; C. Accurately describe abnormal leukograms using proper medical terminology and categorize the clinical significance of these abnormalities (e.g., inflammation, stress, excitement, neoplasia, etc.); D. Accurately perform laboratory analysis of blood samples to produce relevant leukocyte data for a leukogram. 3. Have a clinically relevant working knowledge and mastery of laboratory skills related to platelets

(thrombocytes) of common domestic and exotic species covered in this course. This includes the ability to: A. Describe or identify from questions features of platelet production, function and circulation as described in lectures and labs; B. Correctly describe and identify from photomicrographs or microscopy the morphology of normal and abnormal platelets/thrombocytes; C. Define thrombocytopenia and thrombocytosis and describe major mechanisms for each; D. Accurately perform laboratory analysis of blood samples to provide accurate estimates of platelet numbers. 4. Have a clinically relevant working knowledge and mastery of laboratory skills related to analysis of urine. This includes the ability to: A. Accurately perform a complete urinalysis including the physical, chemical and sediment examination; B. Identify normal and abnormal urine elements by microscopy, gross visual examination and photographs. 5. Have a clinically relevant working knowledge and mastery of laboratory skills related to diagnostic cytology. This includes the ability to: A. Collect and process fluids, skin and subcutaneous samples, and vaginal cytologic preparations; B. Correctly classify cytologic preparations as normal, malignant or inflammatory; C. Recognize and describe normal and abnormal leukocytes in cytologic preps. This includes visual recognition and/or description of the following features: macrophage activation, neutrophil degeneration, lymphocyte reactivity; D. Recognize and distinguish between bacteria & fungal organisms; E. Classify stages of the reproductive cycle based on vaginal cytology from dogs and cats. 6. Correctly associate specific clinical chemistry tests with their primary organ of involvement (e.g., kidney, liver, etc.), process (e.g., acid-base) or class of analyte (e.g., electrolytes). 7. Have a clinically relevant working knowledge and mastery of the physiology of hemostasis and how that relates to common laboratory tests for hemostasis disorders. This includes the ability to: A. Correctly categorize the role of key elements of hemostasis into primary hemostasis, secondary hemostasis, anticoagulation or fibrinolysis; B. Select appropriate tests to assess disorders of primary hemostasis, secondary hemostasis, anticoagulation or fibrinolysis. 8. Have a clinically relevant working knowledge and mastery of in-house serologic testing. Credits: 4.00

VCS 22200 - Dentistry-VN

Credit Hours: 1.00. This course is an introduction to veterinary dentistry for the technician, with emphasis on basic dental anatomy, pathologies and treatments, dental charting, intraoral radiography, dental cleaning and periodontal disease management.

Learning Outcomes: 1. Identify tooth anatomy and perform dental charting. 2. Recognize common pathologies and understand treatment approaches. 3. Perform oral exams and dental cleaning. 4. Produce diagnostic intraoral radiographs. 5. Develop and provide client education. Credits: 1.00

VCS 22300 - Surgical Nursing-VN

Credit Hours: 1.50. This course is an introduction to the surgical environment and all aspects related to the principles of asepsis and the practice of sterile technique. Students will learn using a variety of teaching modalities (lecture, group work, laboratory experience).

Learning Outcomes: 1. Identify basic surgical instruments. 2. Explain the principles of aseptic technique. 3. Perform the duties of surgical nurse. 4. Perform the duties of the circulating nurse. 5. Explain procedures to prepare items for sterilization and the techniques used for sterilization. 6. Demonstrate bandaging techniques for both large and small animal patients. 7. Identify the phases of wound healing. Credits: 1.50

VCS 22400 - Small Animal Nursing I

Credit Hours: 2.00. This course will introduce students to nursing and diagnostic techniques for small animals and the body response to disease.

Learning Outcomes: 1. Recognize and report conditions of hospitalized small animal patients. 2. Provide appropriate nursing care to hospitalized patients. 3. Place IV catheters in small animal patients and administer fluids appropriately. 4. Perform diagnostic procedures and exams for small animal patients. 5. Provide technical assistance to a DVM for diagnostics and therapeutics. 6. Recognize emergent conditions and provide appropriate treatment. 7. Perform basic training techniques with dogs. Credits: 2.00

VCS 22500 - Large Animal Nursing I

Credit Hours: 2.00. This course builds on concepts learning in VCS 22100 related to normal, healthy large animal patients. It also introduces the students to higher level patient care for the large animal patient.

Learning Outcomes: 1. Identify and explain the nursing concepts of hospitalized and post-op LA patients. 2. Select and apply nursing concepts to the LA patient. 3. Place an IV catheter in a large animal patient and identify the problems that can occur from long term catheterization. 4. Describe milking procedures and the tests used to identify problems. 5. Collect diagnostic samples from large animals. 6. Administer medications via common routes to large animals. 7. Calculate fluid therapy rates for LA patients. 8. Identify the appropriate uses for bandages, splints, casts. 9. Identify the steps utilized in intensive neonatal care and medical emergencies. Credits: 2.00

VCS 22600 - Principles Of Anesthesia-VN

Credit Hours: 2.00. This course is an introduction to surgical nursing and anesthesia. The principles of asepsis and sterile technique will be introduced and demonstrated by staff and in some cases, practiced by the student. The basics of anesthesia will be introduced and practiced by the student.

Learning Outcomes: 1. Identify basic surgical instruments. 2. State the principles of aseptic technique. 3. Identify breaks in aseptic technique. 4. Perform open gloving. 5. Perform aseptic personnel scrub; gowning and closed gloving. 6. Identify the parts of an anesthesia machine. 7. Know the function of the above parts. 8. Trace the flow of oxygen through an anesthetic machine, with rebreathing and nonbreathing systems. 9. Identify rebreathing and nonbreathing systems. 10. Practice monitoring principles and identify normal parameters. 11. Identify a variety of analgesic and anesthetic drugs. 12. Begin to identify and state the uses and classifications of these drugs. 13. Perform general anesthesia; from physical exam through recovery. Credits: 2.00

VCS 22800 - Small And Large Animal Nutrition-VN

Credit Hours: 1.00. This course will introduce students to an overview of nutritional concepts as it applies to common domestic small and large animal species and selected exotic companion/avian pets. Basic concepts for understanding nutritional needs for all species will be introduced as well as therapeutic use of diets as it relates to animal nursing.

Learning Outcomes: 1. Assess normal nutritional requirements of the animal (ruminant vs. monogastric) as they apply to physiological processes. 2. Explain BCS evaluation as it relates to obesity, weight loss, and weight management programs. 3. Identify adult, pediatric and geriatric nutritional needs. 4. Describe the changing nutritional needs from pediatric stages to adulthood. 5. Define specific differences in diets based upon breed (large vs. small, selected breed well dog needs). 6. Compare, contrast and analyze food labels. 7. Evaluate diets and dietary supplements, nutraceuticals, hay, feed and pasture management. 8. Plan and perform nutritional counseling/weight management programs by educating clients on dietary needs of pets and

livestock, incorporating the roles of the technician and veterinarian. Credits: 1.00

VCS 25200 - Diagnostic Imaging-VN

Credit Hours: 2.00. Provides an introduction to imaging of domestic animals. Emphasis will be placed on radiological principles and techniques, darkroom procedures and design, preparing technique charts for various X-ray units, animal positioning, and radiation safety.

Learning Outcomes: 1. Recall and apply diagnostic imaging guidelines and safety procedures. 2. Produce diagnostic images of soft tissue and orthopedic projections of both small and large animal patients. 3. Produce diagnostic images of skull projections of small animal patients. 4. Perform diagnostic contrast studies of the circulatory, renal and gastrointestinal systems. 5. Utilize computed and digital imaging systems to produce diagnostic images of both large and small animal patients. 6. Assist with performing diagnostic ultrasound scans of small animal patients. 7. Possess a basic understanding and introductory working knowledge of CT, MRI and Nuclear Medicine scanning procedures on both small and large animal patients. Credits: 2.00

VCS 32100 - Large Animal Nursing II

Credit Hours: 2.00. This course build on concepts learned in VCS 22100 and VCS 22500 related to normal, healthy large animals patients. It also introduces the student to higher level patient care for the large animal patient.

Learning Outcomes: 1. Identify the key principles associated with herd health management. 2. Understand the role of regulatory issues in large animal medicine. 3. Demonstrate an understanding of the common diseases affecting large animal species. 4. Develop an understanding of naturally occurring toxic plants. Credits: 2.00

VCS 32200 - Small Animal Nursing II

Credit Hours: 2.00. This course will cover management of hospitalized patients, client education, and preventative medicine programs. Emphasis will be on the role of the veterinary technician in the veterinary hospital.

Learning Outcomes: 1. Describe basic information about small animal medicine conditions to clients. 2. Educate clients regarding preventative small animal medicine. 3. Utilize knowledge of small animal medical conditions to provide nursing care to patients. 4. Utilize knowledge of small animal medical conditions to anticipate DVM needs for diagnosis and treatment of hospitalized patients. Credits: 2.00

VCS 46700 - Medical Equipment & Maintenance-VN

Credit Hours: 2.00. A laboratory in the utilization, care, and maintenance of electronic equipment used in veterinary diagnostics.

Learning Outcomes: 1. Develop an integrated knowledge base of the functions of the selected equipment. 2. Select, evaluate, and adjust selected equipment to ensure proper function and provide maximum benefit to ensure safety of the patient and staff. 3. Recognize and respond appropriately to the selected equipment malfunctions or inappropriate equipment setup to ensure proper function and provide maximum benefit to ensure safety of the patient and staff. Credits: 2.00

VM 24100 - Occupational & Public Health I

Credit Hours: 1.00. This course will cover selected zoonotic diseases, occupational hazards and safety issues, related to the veterinary health care team and veterinary facility.

Learning Outcomes: 1. Select and utilize the appropriate measures to prevent occupational safety incidents and facility safety incidents. 2. Mitigate the effects of an occupational safety incident or facility safety incident. 3. Understand where to find current information related to veterinary medical occupational hazards. 4. Effectively communicate appropriate safety principles to colleagues. Credits: 1.00

VM 24300 - Clinic Rotations I

Credit Hours: 1.50. This course will provide the basic learning situations for developing the techniques required of veterinary technicians in pharmacy, radiology, surgery, medical nursing, and ancillary areas. Total clinic hours 9/week.

Learning Outcomes: 1. Become acquainted with clinical areas, personnel, responsibilities and basic procedures. 2. Perform basic nursing duties as they are learned in concurrent courses and by experience. 3. Become familiar with the veterinary team concept and its benefit to patient care. Credits: 1.50

VM 24400 - Clinical Rotations II

Credit Hours: 1.50. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Performed basic nursing duties learned in previous courses and as they are learned in concurrent courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care benefits. Credits: 1.50

VM 24900 - Clinical Rotations III

Credit Hours: 3.50. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities, and basic procedures. 2. Performed nursing duties learned in previous courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care benefits. Credits: 3.50

VM 32300 - Laboratory Animals & Exotic Pet Medicine-VN

Credit Hours: 2.00. This course will cover the proper methods of restraint, daily care, nursing techniques, and housing needs for the common species of laboratory animals.

Learning Outcomes: 1. Understand nutritional requirements, physiological data, anesthesia, blood collection, drug administration, handling, sexing, and common diseases of laboratory rodents, primates, and lagomorphs as well as non-traditional pets including small mammals, fish, amphibians, reptiles, and birds. 2. Familiarization with laboratory housing, environmental control, and environmental enrichment concepts. 3. Familiarization with basic genetics and breeding programs of laboratory animals. 4. Understand sanitation and hygiene procedures as they relate to laboratory animal management. 5. Introduce concepts of experimental methodology and regulatory compliance within laboratory animal medicine. 6. Introduce wildlife triage and wildlife nursing techniques. Credits: 2.00

VM 34300 - Clinic Rotations IV-VN

Credit Hours: 5.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Performed nursing duties learned in previous courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care benefits. Credits: 5.00

VM 34400 - Clinic Rotations V-VN

Credit Hours: 5.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Performed nursing duties learned in previous courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care

benefits. Credits: 5.00

VM 34500 - Veterinary Management Topics I-VN

Credit Hours: 1.50. The course will introduce students to concepts related to working in and managing a veterinary practice. Emphasis will be on client communication and education as well as facilitating a job search, interviewing and cover letter and resume creation.

Learning Outcomes: 1. Create a professional cover letter and resume. 2. Properly prepare for and participate in employment interviews. 3. Utilize techniques that build excellent relationships by exceeding client expectations, providing great client service and building a rapport with clients. 4. Utilize techniques for handling emotional or difficult clients. 5. Utilize techniques for working with special needs clients. 6. Explain the grief process. 7. Discuss professionalism and legal and ethical issues related to the veterinary technology profession. 8. Describe the ways in which fees are set for products and services at a veterinary clinic. 9. Define marketing and describe how marketing strategies can be used in a veterinary clinic setting. 10. Describe inventory management strategies. 11. Identify professional organizations related to veterinary technology and veterinary practice management. Credits: 1.50

VM 39000 - Practicum

Credit Hours: 4.00. Veterinary technologist level off-campus experience in one area of interest totaling 480 hours over 12 weeks.

Credits: 4.00

VM 44100 - Occupational & Public Health II-VN

Credit Hours: 1.00. The course covers selected aspects of public health and safety related to the veterinary health care team, patient, client and public.

Learning Outcomes: 1. Able to select and utilize the appropriate measures to assist in preventing problems or mitigate their effects. 2. Able to seek, select, compile and effectively communicate appropriate material to their colleagues, the clients and public. Credits: 1.00

VM 44200 - Veterinary Management Topics II-VN

Credit Hours: 1.50. This course is a continuation of the first veterinary practice management course. It will introduce students to concepts related to leading a veterinary medical team and managing the day-to-day management of the veterinary practice. Emphasis will be on human resources, marketing and financial management.

Learning Outcomes: 1. Describe the attributes of a good leader. 2. Create a personal financial plan (i.e. budget) use credit wisely. 3. Describe strategies for recruiting, managing, and motivating employees. 4. Utilize techniques for proper delegation of work within a veterinary facility. 5. Create effective client surveys. 6. Use social media to effectively market a veterinary facility. 7. Create and interpret financial statements. 8. Describe techniques used for controlling expenses at a veterinary facility. 9. Assess a veterinary facility's financial performance by utilizing industry benchmarks. Credits: 1.50

VM 44300 - Clinic Rotations VI-VN

Credit Hours: 2.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increase awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Perform nursing duties learned in previous courses and by experience. 3. Participate in the utilization of the veterinary team concepts and contributed to its patient care benefits. Credits: 2.00

VM 44500 - Senior Project-VN

Credit Hours: 4.00. This is an independent study course in which the student engages in learning activities to enhance their knowledge in a particular area of veterinary technology of their choosing, demonstrate effective oral and written communication, and apply analysis, integration, and syntheses to achieve a solution.

Learning Outcomes: 1. Acquisition of knowledge at the veterinary technologist level in an area of interest or focus. 2. Demonstrate effective oral communication. 3. Demonstrate effective written communication. 4. Demonstrate the ability to analyze, integrate, and synthesize a solution to solve a problem. Credits: 4.00

VM 41001 - International Practicum

Credit Hours: 4.00. The student will experience an integrated employment situation combined with veterinary team interaction to augment his/her specialized CoVM clinical learning experiences. The student will work under the direct supervision of a licensed veterinarian or credentialed veterinary technician designee of tech veterinarian. The student is required to complete a pre-departure orientation with the PVM Director of International Programs.

Learning Outcomes: 1. Perform technical duties in medical and surgical nursing, imaging, laboratory procedures, anesthesia, and client interaction when working in a practice setting. 2. Perform tech duties required of the position in the industry setting. 3. Observe and record the case cycle concept of vet med in its components of history, assessment, problem listing, interventions and actions, potential problems encountered, patient outcomes and evaluations, and discharge planning as it pertains to veterinary nursing. 4. Identify and critically address management issues. 5. Create and deliver an oral presentation. 6. Develop communication skills. Credits: 4.00

VM 20100 - Medical Math And Terminology For Veterinary Nursing

Credit Hours: 1.50. A didactic course which presents the basic skills that will be used in all nursing courses and in the overall curriculum. In addition, the course introduces medical math and terminology used in veterinary medicine. Students will complete exercises utilizing math concepts for dosage calculations, conversions, proper notation, dispensing medications, fluid therapy calculations, and percent solutions. Students will use medical terminology including prefixes, roots, and suffixes of medical terms to complete exercises. This knowledge will be utilized in didactic courses and labs as well as in clinical rotations. Students will learn normal temperature, pulse and respiration values for various species. There will be both in-class and study components.

Learning Outcomes: 1. Utilize medical math to calculate drug dosages, dispense medications, fluid therapy rates, and percent solutions. 2. Apply medical math concepts to perform conversions and use proper notation. 3. Understand and utilize medical terminology in didactic classes, laboratories, and clinic rotations. 4. Know normal temperature, pulse and respiration values for various species and report abnormalities. 5. Apply diversity and inclusion skills as they apply in veterinary medicine. 6. Discuss compassion fatigue and euthanasia in veterinary medicine. Credits: 1.50

CPB 46400 - Clinical Toxicology-VN

Credit Hours: 2.00. The common toxicants and advanced topics on the drugs most commonly encountered in veterinary medicine. Emphasis is on mechanisms, indications, contraindications, and proper applications and handling of these drugs. Permission of department required.

Learning Outcomes: 1. Appropriately use and understand common terminology used in toxicology and clinical toxicology. 2. Describe the medical rationale and specific drugs used as emetics, cathartics, and other compounds used to decrease animal exposure to ingested toxicants. 3. Ask the appropriate questions during a history to help better identify toxicosis cases and to identify potential sources for intoxication. 4. Describe the mechanism of action for commonly encountered drug toxicants, herbal/diet supplement intoxications, household toxicants, insecticides, rodenticides, herbicides, toxic plants, and toxic animal envenomation. 5. Describe the general presenting clinical appearance and any key clinical signs characteristic of common veterinary toxicants. 6. Describe the diagnostics and treatment protocols used for common veterinary toxicants. 7. Identify means by which clients/animal owners can reduce the risk of intoxicant of animals by toxicants. Credits: 2.00

VM 34210 - Integrations-VN

Credit Hours: 2.00. This course will give an introduction to problem-based learning of the nursing process (patient evaluations, interventions, and desire resolutions) using a case-based approach. This course will integrate foundational knowledge from anatomy, physiology, and information in the veterinary nursing courses. This course will draw on fundamentals and concepts learned from all courses to this point including pharmacology, diagnostic imaging, parasitology, small animal nursing, and large animal nursing, so as to enable you to apply knowledge of understanding of clinical cases. Cases will involve different domestic animal species.

Learning Outcomes: 1. Integrate and apply knowledge from foundational coursework. 2. Identify and apply the components of the veterinary nursing process. 3. Follow evidence-based medicine practices and relate to patient case scenarios. 4. Utilize critical thinking skills to apply the veterinary nursing process to patient case scenarios. 5. Use verbal and written communication skills appropriately with other members of the veterinary team. Credits: 2.00

VCS 21100 - Veterinary Nursing Techniques For The Large Animal

Credit Hours: 2.00. This course will introduce students to concepts related to normal, healthy, large animal patients. This course includes both lecture and laboratory components.

Learning Outcomes: 1. Describe and apply common methods of restraint used for large animals. 2. Take a detailed patient history and perform a thorough physical exam. 3. Discuss well-patient care with clients, including vaccinations that are recommended for large animal species. 4. Collect diagnostic samples from large animals. 5. Administer medications via common routes to large animals. 6. Identify common breeds of horses, cattle, swine, goats and sheep. Credits: 2.00

VCS 21000 - Veterinary Nursing Techniques For The Small Animal

Credit Hours: 2.00. This course will introduce students to concepts related to normal, healthy, small animal patients. This course includes both lecture and laboratory components.

Learning Outcomes: 1. Describe and implement common restraint techniques used for various small animal species. 2. Measure the temperature, pulse, and respiratory rates, and provide an explanation of the normal parameters. 3. Identify and explain different sites for injections and venipuncture. 4. Identify common breeds of canines and felines and describe normal behavior of each species. 5. Conduct a comprehensive patient history and perform a thorough, standardized physical examination. 6. Engage in discussions with clients about routine preventive care, including recommended vaccinations for different large animal species. Credits: 2.00

VM 12000 - Introduction To Veterinary Nursing I

Credit Hours: 1.00. This is the first in a two-course sequence for first-year Veterinary Nursing students. This course will introduce students to the Veterinary Nursing program and profession focusing on new student integration, providing resources available on campus to facilitate student success, and entry-level professional skill development. Students will learn and apply professional attributes of the veterinary medical professional.

Learning Outcomes: 1. Develop effective interpersonal communications skills to increase their ability to communicate within the veterinary medical team. 2. Explore career options within the field of Veterinary Nursing. 3. Cultivate a shared sense of community at Purdue through relationships with peers and instructors. 4. Broaden awareness and knowledge of opportunities and challenges involved in veterinary nursing. 5. Understand the importance of being engaged in veterinary nursing as a new student. 6. Expand knowledge of the available resources offered by Purdue University, the College of Veterinary Medicine, and the Veterinary Nursing Program that facilitate student success. 7. Demonstrate proper classroom etiquette and how to conduct

oneself appropriately when interacting with faculty, academic advisors, DVM students, upperclassmen, and other members of the campus community. Credits: 1.00

VM 12100 - Introduction To Veterinary Nursing II

Credit Hours: 1.00. This is the second in a two-course sequence for first-year Veterinary Nursing students. This course introduces the various opportunities within the veterinary healthcare profession as well as a general introduction to the attributes and traits of veterinary medical professionals. Students will learn about veterinary clinical education and expectations and continue to explore the profession by speaking with current professionals and observing current practices.

Learning Outcomes: 1. Broaden awareness and knowledge of opportunities and challenges involved in veterinary nursing. 2. Understand attributes and traits of veterinary medical professionals and be able to apply those in a clinical education setting. 3. Explore the Veterinary Nursing Profession by speaking with current professional(s) and observing current practices. Credits: 1.00

Veterinary Nursing Selectives

Other Program Course Requirements (35-38 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 31800 - Principles Of Persuasion

Credit Hours: 3.00. Persuasion and its effects, ranging from individual influences to societal impacts. Various perspectives and models of persuasion are examined, including classical and modern approaches. Both theoretical and pragmatic considerations are introduced.

Learning Outcomes: 1. List the major areas of study in the field of persuasion. 2. Analyze and critique persuasive techniques. 3. Apply theories of persuasion to explain everyday circumstances. Credits: 3.00

COM 32000 - Small Group Communication

Credit Hours: 3.00. A study of group thinking and problem-solving methods; participation in, and evaluation of, committee, and informal discussion groups. Focus on the roles, networks, and messages employed by small group communicators.

Credits: 3.00

COM 32400 - Introduction To Organizational Communication

Credit Hours: 3.00. An introduction to fundamental concepts and basic research related to communication behavior in

organizational settings. Units cover message processing, leadership communication, communication climates, communication training, and communication audits. Students participate in an organizational simulation in some sections.

Learning Outcomes: 1. Use the vocabulary of concepts and theories related to organizational communication. 2. List historical, current, and future communication issues facing organizations. 3. Apply theoretical perspectives and concepts to organizational communication situations and settings. 4. Reflect on their own experience with organizations. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages

business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ENGL 42201 - Writing For The Health And Human Sciences

Credit Hours: 3.00. This course applies rhetorical principles to the writing of health, hospitality, nutrition and other related fields. It will prepare students to write in diverse modalities for technical, professional and lay audiences.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Employ theories and approaches of medical and science writing to adapt to the rapidly changing industries of healthcare and public health. 4. Compose effective healthcare and public health documents with an awareness of the accessibility and usability needs of patients, providers and caregivers. 5. Communicate complex healthcare and public health information while writing both individually and in teams. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health,

industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical

bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 15300 - College Algebra (UCC: QR)

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Correctly perform algebraic operations, to solve algebraic equations of degree two, to perform operations with exponents and radicals. 2. Sketch graphs of certain polynomial, exponential and logarithmic functions. 3. Solve systems of equations and inequalities. Credits: 3.00

COM 37800 - Introduction To Health Communication

Credit Hours: 3.00. This course will serve as an introduction to the many ways that communication shapes health and health practices. Course content includes: 1) current healthcare structure in the United States; 2) communication in the healthcare organization; 3) provider-patient communication; 4) patient-support provider communication; 5) models of health behavior change and campaigns; and 6) crisis communication and health.

Learning Outcomes: 1. Identify and apply theories relevant to health communication. 2. Identify how communication practices shape and affect health. 3. Provide a comparative analysis of issues of diversity in healthcare. 4. Tailor health communication materials to improve health literacy. 5. Design and implement health campaign. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and

successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience

chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience

chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of

the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15300 - College Algebra (UCC: QR)

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Correctly perform algebraic operations, to solve algebraic equations of degree two, to perform operations with exponents and radicals. 2. Sketch graphs of certain polynomial, exponential and logarithmic functions. 3. Solve systems of equations and inequalities. Credits: 3.00

VM 24100 - Occupational & Public Health I

Credit Hours: 1.00. This course will cover selected zoonotic diseases, occupational hazards and safety issues, related to the veterinary health care team and veterinary facility.

Learning Outcomes: 1. Select and utilize the appropriate measures to prevent occupational safety incidents and facility safety incidents. 2. Mitigate the effects of an occupational safety incident or facility safety incident. 3. Understand where to find current information related to veterinary medical occupational hazards. 4. Effectively communicate appropriate safety principles to colleagues. Credits: 1.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in

lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

VM 12000 - Introduction To Veterinary Nursing I

Credit Hours: 1.00. This is the first in a two-course sequence for first-year Veterinary Nursing students. This course will introduce students to the Veterinary Nursing program and profession focusing on new student integration, providing resources available on campus to facilitate student success, and entry-level professional skill development. Students will learn and apply professional attributes of the veterinary medical professional.

Learning Outcomes: 1. Develop effective interpersonal communications skills to increase their ability to communicate within the veterinary medical team. 2. Explore career options within the field of Veterinary Nursing. 3. Cultivate a shared sense of community at Purdue through relationships with peers and instructors. 4. Broaden awareness and knowledge of opportunities and challenges involved in veterinary nursing. 5. Understand the importance of being engaged in veterinary nursing as a new student. 6. Expand knowledge of the available resources offered by Purdue University, the College of Veterinary Medicine, and the Veterinary Nursing Program that facilitate student success. 7. Demonstrate proper classroom etiquette and how to conduct oneself appropriately when interacting with faculty, academic advisors, DVM students, upperclassmen, and other members of the campus community. Credits: 1.00

15-17 Credits

Spring 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not

permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

VM 20100 - Medical Math And Terminology For Veterinary Nursing

Credit Hours: 1.50. A didactic course which presents the basic skills that will be used in all nursing courses and in the overall curriculum. In addition, the course introduces medical math and terminology used in veterinary medicine. Students will complete exercises utilizing math concepts for dosage calculations, conversions, proper notation, dispensing medications, fluid therapy calculations, and percent solutions. Students will use medical terminology including prefixes, roots, and suffixes of medical terms to complete exercises. This knowledge will be utilized in didactic courses and labs as well as in clinical rotations. Students will learn normal temperature, pulse and respiration values for various species. There will be both in-class and study components.

Learning Outcomes: 1. Utilize medical math to calculate drug dosages, dispense medications, fluid therapy rates, and percent solutions. 2. Apply medical math concepts to perform conversions and use proper notation. 3. Understand and utilize medical terminology in didactic classes, laboratories, and clinic rotations. 4. Know normal temperature, pulse and respiration values for various species and report abnormalities. 5. Apply diversity and inclusion skills as they apply in veterinary medicine. 6. Discuss compassion fatigue and euthanasia in veterinary medicine. Credits: 1.50

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic

theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

VM 12100 - Introduction To Veterinary Nursing II

Credit Hours: 1.00. This is the second in a two-course sequence for first-year Veterinary Nursing students. This course introduces the various opportunities within the veterinary healthcare profession as well as a general introduction to the attributes and traits of veterinary medical professionals. Students will learn about veterinary clinical education and expectations and continue to explore the profession by speaking with current professionals and observing current practices.

Learning Outcomes: 1. Broaden awareness and knowledge of opportunities and challenges involved in veterinary nursing. 2. Understand

attributes and traits of veterinary medical professionals and be able to apply those in a clinical education setting. 3. Explore the Veterinary Nursing Profession by speaking with current professional(s) and observing current practices. Credits: 1.00

15.5-16.5 Credits

Fall 2nd Year

BMS 23200 - Physiology-VN

Credit Hours: 2.00. Basic mammalian physiology, which covers general physiological processes with emphasis on domestic animals. Laboratory experiences and demonstrations form a major part of the laboratory instruction.

Learning Outcomes: 1. Describe and explain the functions of body fluids. The types of formed elements in blood and their functions. 2. Describe and explain the functions of the central and peripheral nervous systems. 3. Describe and explain the types of muscles in the body and their functions. 4. Describe and explain the regulation of the functions of the heart, lungs, kidneys, endocrine glands and gonads. 5. Describe and explain the regulation of blood pressure, gas exchange in the lungs and acid-base balance. 6. Describe and explain the hormonal regulation of metabolic processes and reproduction. Credits: 2.00

BMS 23100 - Anatomy-VN

Credit Hours: 4.00. Gross and microscopic study of body systems and topographic relationships in major animal species. Laboratory consists of dissection as well as study of living animals.

Learning Outcomes: 1. Identify the Musculoskeletal. Students will be able to identify, draw and describe function of, in models, radiographs and live animals: major bones and bony prominences; major muscles; major nerves; major blood vessels associated with limbs; and describe long bone development. 2. Identify the Thorax. Students will be able to identify, draw and describe, in models, radiographs and live animals: position of lungs, esophagus, trachea, major vessels, nerves and heart; pathway of blood through heart; position of thoracic and pleural cavities; and important topography. 3. Identify the Abdomen. Students will be able to identify, draw and describe, in models, radiographs and live animals: position of major GI and reproductive organs, major vessels, and nerves; GI and UG development; position of abdominal and peritoneal cavities; and important topography. 4. Identify the Head and Neck. Students will be able to identify and describe, in models, radiographs and live animals: major bones of skull; number teeth; major cavities of skull; major features of the eye and ear; major glands, vessels and nerves of the neck and skull; major topography of the head and neck; and major parts and function of the brain. Credits: 4.00

VCS 22200 - Dentistry-VN

Credit Hours: 1.00. This course is an introduction to veterinary dentistry for the technician, with emphasis on basic dental anatomy, pathologies and treatments, dental charting, intraoral radiography, dental cleaning and periodontal disease management.

Learning Outcomes: 1. Identify tooth anatomy and perform dental charting. 2. Recognize common pathologies and understand treatment approaches. 3. Perform oral exams and dental cleaning. 4. Produce diagnostic intraoral radiographs. 5. Develop and provide client education. Credits: 1.00

VCS 22300 - Surgical Nursing-VN

Credit Hours: 1.50. This course is an introduction to the surgical environment and all aspects related to the principles of asepsis and the practice of sterile technique. Students will learn using a variety of teaching modalities (lecture, group work, laboratory experience).

Learning Outcomes: 1. Identify basic surgical

instruments. 2. Explain the principles of aseptic technique. 3. Perform the duties of surgical nurse. 4. Perform the duties of the circulating nurse. 5. Explain procedures to prepare items for sterilization and the techniques used for sterilization. 6. Demonstrate bandaging techniques for both large and small animal patients. 7. Identify the phases of wound healing. Credits: 1.50

VM 24300 - Clinic Rotations I

Credit Hours: 1.50. This course will provide the basic learning situations for developing the techniques required of veterinary technicians in pharmacy, radiology, surgery, medical nursing, and ancillary areas. Total clinic hours 9/week.

Learning Outcomes: 1. Become acquainted with clinical areas, personnel, responsibilities and basic procedures. 2. Perform basic nursing duties as they are learned in concurrent courses and by experience. 3. Become familiar with the veterinary team concept and its benefit to patient care. Credits: 1.50

VCS 21100 - Veterinary Nursing Techniques For The Large Animal

Credit Hours: 2.00. This course will introduce students to concepts related to normal, healthy, large animal patients. This course includes both lecture and laboratory components.

Learning Outcomes: 1. Describe and apply common methods of restraint used for large animals. 2. Take a detailed patient history and perform a thorough physical exam. 3. Discuss well-patient care with clients, including vaccinations that are recommended for large animal species. 4. Collect diagnostic samples from large animals. 5. Administer medications via common routes to large animals. 6. Identify common breeds of horses, cattle, swine, goats and sheep. Credits: 2.00

VCS 21000 - Veterinary Nursing Techniques For The Small Animal

Credit Hours: 2.00. This course will introduce students to concepts related to normal, healthy, small animal patients. This course includes both lecture and laboratory components.

Learning Outcomes: 1. Describe and implement common restraint techniques used for various small animal species. 2. Measure the temperature, pulse, and respiratory rates, and provide an explanation of the normal parameters. 3. Identify and explain different sites for injections and venipuncture. 4. Identify common breeds of canines and felines and describe normal behavior of each species. 5. Conduct a comprehensive patient history and perform a thorough, standardized physical examination. 6. Engage in discussions with clients about routine preventive care, including recommended vaccinations for different large animal species. Credits: 2.00

14 Credits

Spring 2nd Year

BMS 23300 - Introduction To Pharmacology-VN

Credit Hours: 0.50. This course introduces the concepts and terminology of pharmacology including basic terminology, pharmacokinetics, and pharmacodynamics.

Learning Outcomes: "1. Explain what the different types of drugs names are. 2. Recognize the characteristics of different solid and liquid dosage formulations. 3. Explain the significance of the terminology used in drug references to describe drugs. 4. List and describe the criteria for acceptable extra-label use of drugs. 5. Describe the difference between OTC and prescription drugs. 6. Explain the factors that affect movement of drug molecules throughout the body. 7. Describe the requirements for prescriptions and drug labels. 8. Describe the characteristics of each route of drug administration. 9. Read and write abbreviations commonly used in drug orders accurately. 10. Explain physiological factors that

change the way drugs move through the body. 11. Describe regulations and warnings surrounding dispensing containers. 12. Describe factors that alter the way drugs are absorbed, distributed, metabolized, and excreted. 13. Describe reasons and procedures for handling and storing drugs. 14. Explain the interaction between drugs and receptors and how that produces cellular effects. 15. Describe legal requirements for dispensing and storage of controlled substances. 16. Describe how pharmacokinetics and pharmacodynamics impact every drug treatment. 17. Describe special storage and handling requirements for cytotoxic and hazardous drugs. 18. Describe the issues surrounding and guidelines required for acceptable drug compounding. Credits: 0.50

CPB 25500 - Clinical Pathology-VN

Credit Hours: 4.00. Basic instruction in clinical pathology, including theory and techniques of hematology, clinical chemistry, urinalysis, cytology, and specimen handling. Learning Outcomes: 1. Have a clinically relevant working knowledge and mastery of laboratory skills related to erythrocytes (red blood cells) of common domestic and exotic species covered in this course. This includes the ability to: A. Describe, or identify from questions, features of RBC production, function and circulation as described in lectures and labs; B. Correctly describe and identify from photomicrographs or microscopy the morphology of normal and abnormal RBCs; C. Define anemia and classify anemia by mechanisms and RBC indices; D. Accurately perform laboratory analysis of blood samples to produce relevant erythrocyte data for an erythrogram. 2. Have a clinically relevant working knowledge and mastery of laboratory skills related to leukocytes (white blood cells) of common domestic and exotic species covered in this course. This includes the ability to: A. Describe, or identify from questions, features of WBC production, function and circulation as described in lectures and labs; B. Correctly describe and identify from photomicrographs or microscopy the morphology of normal and abnormal WBCs; C. Accurately describe abnormal leukograms using proper medical terminology and categorize the clinical significance of these abnormalities (e.g., inflammation, stress, excitement, neoplasia, etc.); D. Accurately perform laboratory analysis of blood samples to produce relevant leukocyte data for a leukogram. 3. Have a clinically relevant working knowledge and mastery of laboratory skills related to platelets (thrombocytes) of common domestic and exotic species covered in this course. This includes the ability to: A. Describe or identify from questions features of platelet production, function and circulation as described in lectures and labs; B. Correctly describe and identify from photomicrographs or microscopy the morphology of normal and abnormal platelets/thrombocytes; C. Define thrombocytopenia and thrombocytosis and describe major mechanisms for each; D. Accurately perform laboratory analysis of blood samples to provide accurate estimates of platelet numbers. 4. Have a clinically relevant working knowledge and mastery of laboratory skills related to analysis of urine. This includes the ability to: A. Accurately perform a complete urinalysis including the physical, chemical and sediment examination; B. Identify normal and abnormal urine elements by microscopy, gross visual examination and photographs. 5. Have a clinically relevant working knowledge and mastery of laboratory skills related to diagnostic cytology. This includes the ability to: A. Collect and process fluids, skin and subcutaneous samples, and vaginal cytologic preparations; B.

Correctly classify cytologic preparations as normal, malignant or inflammatory; C. Recognize and describe normal and abnormal leukocytes in cytologic preps. This includes visual recognition and/or description of the following features: macrophage activation, neutrophil degeneration, lymphocyte reactivity; D. Recognize and distinguish between bacteria & fungal organisms; E. Classify stages of the reproductive cycle based on vaginal cytology from dogs and cats. 6. Correctly associate specific clinical chemistry tests with their primary organ of involvement (e.g., kidney, liver, etc.), process (e.g., acid-base) or class of analyte (e.g., electrolytes). 7. Have a clinically relevant working knowledge and mastery of the physiology of hemostasis and how that relates to common laboratory tests for hemostasis disorders. This includes the ability to: A. Correctly categorize the role of key elements of hemostasis into primary hemostasis, secondary hemostasis, anticoagulation or fibrinolysis; B. Select appropriate tests to assess disorders of primary hemostasis, secondary hemostasis, anticoagulation or fibrinolysis. 8. Have a clinically relevant working knowledge and mastery of in-house serologic testing. Credits: 4.00

VCS 22400 - Small Animal Nursing I

Credit Hours: 2.00. This course will introduce students to nursing and diagnostic techniques for small animals and the body response to disease.

Learning Outcomes: 1. Recognize and report conditions of hospitalized small animal patients. 2. Provide appropriate nursing care to hospitalized patients. 3. Place IV catheters in small animal patients and administer fluids appropriately. 4. Perform diagnostic procedures and exams for small animal patients. 5. Provide technical assistance to a DVM for diagnostics and therapeutics. 6. Recognize emergent conditions and provide appropriate treatment. 7. Perform basic training techniques with dogs. Credits: 2.00

VCS 22500 - Large Animal Nursing I

Credit Hours: 2.00. This course builds on concepts learning in VCS 22100 related to normal, healthy large animal patients. It also introduces the students to higher level patient care for the large animal patient.

Learning Outcomes: 1. Identify and explain the nursing concepts of hospitalized and post-op LA patients. 2. Select and apply nursing concepts to the LA patient. 3. Place an IV catheter in a large animal patient and identify the problems that can occur from long term catheterization. 4. Describe milking procedures and the tests used to identify problems. 5. Collect diagnostic samples from large animals. 6. Administer medications via common routes to large animals. 7. Calculate fluid therapy rates for LA patients. 8. Identify the appropriate uses for bandages, splints, casts. 9. Identify the steps utilized in intensive neonatal care and medical emergencies. Credits: 2.00

VCS 22600 - Principles Of Anesthesia-VN

Credit Hours: 2.00. This course is an introduction to surgical nursing and anesthesia. The principles of asepsis and sterile technique will be introduced and demonstrated by staff and in some cases, practiced by the student. The basics of anesthesia will be introduced and practiced by the student.

Learning Outcomes: 1. Identify basic surgical instruments. 2. State the principles of aseptic technique. 3. Identify breaks in aseptic technique. 4. Perform open gloving. 5. Perform aseptic personnel scrub; gowning and closed gloving. 6. Identify the parts of an anesthesia machine. 7. Know the function of the above parts. 8. Trace the flow of oxygen through an anesthetic machine, with rebreathing and nonbreathing systems. 9. Identify rebreathing and nonbreathing systems. 10. Practice monitoring principles and identify normal

parameters. 11. Identify a variety of analgesic and anesthetic drugs. 12. Begin to identify and state the uses and classifications of these drugs. 13. Perform general anesthesia; from physical exam through recovery. Credits: 2.00

VCS 25200 - Diagnostic Imaging-VN

Credit Hours: 2.00. Provides an introduction to imaging of domestic animals. Emphasis will be placed on radiological principles and techniques, darkroom procedures and design, preparing technique charts for various X-ray units, animal positioning, and radiation safety.

Learning Outcomes: 1. Recall and apply diagnostic imaging guidelines and safety procedures. 2. Produce diagnostic images of soft tissue and orthopedic projections of both small and large animal patients. 3. Produce diagnostic images of skull projections of small animal patients. 4. Perform diagnostic contrast studies of the circulatory, renal and gastrointestinal systems. 5. Utilize computed and digital imaging systems to produce diagnostic images of both large and small animal patients. 6. Assist with performing diagnostic ultrasound scans of small animal patients. 7. Possess a basic understanding and introductory working knowledge of CT, MRI and Nuclear Medicine scanning procedures on both small and large animal patients. Credits: 2.00

VM 24400 - Clinical Rotations II

Credit Hours: 1.50. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Performed basic nursing duties learned in previous courses and as they are learned in concurrent courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care benefits. Credits: 1.50

14 Credits

Summer between 2nd and 3rd Year

VM 24900 - Clinical Rotations III

Credit Hours: 3.50. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities, and basic procedures. 2. Performed nursing duties learned in previous courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care benefits. Credits: 3.50

3.5 Credits

Fall 3rd Year

BMS 33100 - Pharmacology-VN

Credit Hours: 1.50. This course introduces the concepts of drugs used in the different body systems. Mechanisms of action, side effects, and therapeutic applications are presented.

Learning Outcomes: 1. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases of the GI tract. 2. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases of cardiovascular system. 3. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases of the respiratory tract. 4. Identify, describe the mechanisms of action, and describe the major side effects,

contraindications or warnings for common veterinary drugs used to treat diseases of the endocrine systems. 5. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary anti-inflammatory drugs. 6. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary drugs used to treat diseases/conditions of the nervous system. 7. Identify, describe the mechanisms of action, and describe the major side effects, contraindications or warnings for common veterinary anti-parasitic drugs. Credits: 1.50

VCS 22800 - Small And Large Animal Nutrition-VN

Credit Hours: 1.00. This course will introduce students to an overview of nutritional concepts as it applies to common domestic small and large animal species and selected exotic companion/avian pets. Basic concepts for understanding nutritional needs for all species will be introduced as well as therapeutic use of diets as it relates to animal nursing.

Learning Outcomes: 1. Assess normal nutritional requirements of the animal (ruminant vs. monogastric) as they apply to physiological processes. 2. Explain BCS evaluation as it relates to obesity, weight loss, and weight management programs. 3. Identify adult, pediatric and geriatric nutritional needs. 4. Describe the changing nutritional needs from pediatric stages to adulthood. 5. Define specific differences in diets based upon breed (large vs. small, selected breed well dog needs). 6. Compare, contrast and analyze food labels. 7. Evaluate diets and dietary supplements, nutraceuticals, hay, feed and pasture management. 8. Plan and perform nutritional counseling/weight management programs by educating clients on dietary needs of pets and livestock, incorporating the roles of the technician and veterinarian. Credits: 1.00

VCS 32100 - Large Animal Nursing II

Credit Hours: 2.00. This course build on concepts learned in VCS 22100 and VCS 22500 related to normal, healthy large animals patients. It also introduces the student to higher level patient care for the large animal patient.

Learning Outcomes: 1. Identify the key principles associated with herd health management. 2. Understand the role of regulatory issues in large animal medicine. 3. Demonstrate an understanding of the common diseases affecting large animal species. 4. Develop an understanding of naturally occurring toxic plants. Credits: 2.00

VCS 32200 - Small Animal Nursing II

Credit Hours: 2.00. This course will cover management of hospitalized patients, client education, and preventative medicine programs. Emphasis will be on the role of the veterinary technician in the veterinary hospital.

Learning Outcomes: 1. Describe basic information about small animal medicine conditions to clients. 2. Educate clients regarding preventative small animal medicine. 3. Utilize knowledge of small animal medical conditions to provide nursing care to patients. 4. Utilize knowledge of small animal medical conditions to anticipate DVM needs for diagnosis and treatment of hospitalized patients. Credits: 2.00

VM 32300 - Laboratory Animals & Exotic Pet Medicine-VN

Credit Hours: 2.00. This course will cover the proper methods of restraint, daily care, nursing techniques, and housing needs for the common species of laboratory animals.

Learning Outcomes: 1. Understand nutritional requirements, physiological data, anesthesia, blood collection, drug administration, handling, sexing, and common diseases of laboratory rodents, primates, and lagomorphs as well as non-traditional pets including small mammals, fish, amphibians, reptiles, and birds. 2. Familiarization with laboratory housing, environmental control, and environmental

enrichment concepts. 3. Familiarization with basic genetics and breeding programs of laboratory animals. 4. Understand sanitation and hygiene procedures as they relate to laboratory animal management. 5. Introduce concepts of experimental methodology and regulatory compliance within laboratory animal medicine. 6. Introduce wildlife triage and wildlife nursing techniques. Credits: 2.00

VM 34300 - Clinic Rotations IV-VN

Credit Hours: 5.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Performed nursing duties learned in previous courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care benefits. Credits: 5.00

13.5 Credits

Spring 3rd Year

CPB 35200 - Parasitology-VN

Credit Hours: 2.00. Biology and life cycles of selected protozoan, helminth, and arthropod parasites of veterinary importance. Emphasis will be placed on laboratory procedures for the identification of common parasites of domestic and laboratory animals.

Learning Outcomes: 1. Identify gross and microscopic parasite stages that help in disease diagnosis. 2. Select and perform the appropriate assays used in laboratory diagnosis of parasitic infections. 3. Summarize parasite life cycle, pathogenesis and clinical signs of various parasitic diseases. 4. Advocate the methods of parasite control and prevention. 5. Create a safety plan to prevent zoonotic disease transmission. Credits: 2.00

CPB 35100 - Microbiology-VN

Credit Hours: 2.00. Biology and laboratory identification of bacteria and fungi that cause infectious diseases in animals. Emphasis will be placed on the collection of specimens for culture, the isolation and identification of pathogenic organisms, and antibiotic susceptibility testing. Procedures and commercial systems available to veterinary practices will be utilized.

Learning Outcomes: 1. Select appropriate samples for laboratory diagnostics of infectious disease. 2. Perform basic microbiological techniques used in the laboratory setting of a veterinary hospital. (for example: Gram stain, catalase test, oxidase test, inoculate an agar plate for isolated colonies, Kirby Bauer test). 3. Identify organisms from an "unknown sample" using a variety of tests. 4. Create a shortlist of differential diagnoses for infectious disease cases. 5. Implement biosafety protocols (for example: personal protective equipment, isolation of animals). 6. Differentiate the biology of bacteria, viruses, and fungi. 7. Prevent and control the spread or introduction of infectious diseases. 8. Explain zoonotic diseases to laypeople. Credits: 2.00

VM 34400 - Clinic Rotations V-VN

Credit Hours: 5.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increased awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Performed nursing duties learned in previous courses and by experience. 3. Participated in the utilization of the veterinary team concept and contributed to its patient care benefits. Credits: 5.00

VM 34500 - Veterinary Management Topics I-VN

Credit Hours: 1.50. The course will introduce students to concepts related to working in and managing a veterinary practice. Emphasis will be on client communication and

education as well as facilitating a job search, interviewing and cover letter and resume creation.

Learning Outcomes: 1. Create a professional cover letter and resume. 2. Properly prepare for and participate in employment interviews. 3. Utilize techniques that build excellent relationships by exceeding client expectations, providing great client service and building a rapport with clients. 4. Utilize techniques for handling emotional or difficult clients. 5. Utilize techniques for working with special needs clients. 6. Explain the grief process. 7. Discuss professionalism and legal and ethical issues related to the veterinary technology profession. 8. Describe the ways in which fees are set for products and services at a veterinary clinic. 9. Define marketing and describe how marketing strategies can be used in a veterinary clinic setting. 10. Describe inventory management strategies. 11. Identify professional organizations related to veterinary technology and veterinary practice management. Credits: 1.50

VM 34210 - Integrations-VN

Credit Hours: 2.00. This course will give an introduction to problem-based learning of the nursing process (patient evaluations, interventions, and desire resolutions) using a case-based approach. This course will integrate foundational knowledge from anatomy, physiology, and information in the veterinary nursing courses. This course will draw on fundamentals and concepts learned from all courses to this point including pharmacology, diagnostic imaging, parasitology, small animal nursing, and large animal nursing, so as to enable you to apply knowledge of understanding of clinical cases. Cases will involve different domestic animal species.

Learning Outcomes: 1. Integrate and apply knowledge from foundational coursework. 2. Identify and apply the components of the veterinary nursing process. 3. Follow evidence-based medicine practices and relate to patient case scenarios. 4. Utilize critical thinking skills to apply the veterinary nursing process to patient case scenarios. 5. Use verbal and written communication skills appropriately with other members of the veterinary team. Credits: 2.00

15.5 Credits

Summer between 3rd and 4th Year

VM 39000 - Practicum

Credit Hours: 4.00. Veterinary technologist level off-campus experience in one area of interest totaling 480 hours over 12 weeks.

Credits: 4.00

VM 41001 - International Practicum

Credit Hours: 4.00. The student will experience an integrated employment situation combined with veterinary team interaction to augment his/her specialized CoVM clinical learning experiences. The student will work under the direct supervision of a licensed veterinarian or credentialed veterinary technician designee of tech veterinarian. The student is required to complete a pre-departure orientation with the PVM Director of International Programs.

Learning Outcomes: 1. Perform technical duties in medical and surgical nursing, imaging, laboratory procedures, anesthesia, and client interaction when working in a practice setting. 2. Perform tech duties required of the position in the industry setting. 3. Observe and record the case cycle concept of vet med in its components of history, assessment, problem listing, interventions and actions, potential problems encountered, patient outcomes and evaluations, and discharge planning as it pertains to veterinary nursing. 4. Identify and critically address management issues. 5. Create and deliver an oral presentation. 6. Develop communication skills. Credits: 4.00

4 Credits

Fall 4th Year

CPB 48000 - Seminar In Animal Welfare And Human-Animal Interaction-VN

Credit Hours: 2.00. This course will be required for students involved in the interdisciplinary Animal Welfare and Societal Concerns program of study. Seminar in Animal Welfare and Human-Animal Interaction is for discussion of current topics in animal welfare and other areas involving the interaction of humans and animals. Outside speakers will present their perspectives in various areas. Journal articles will also be presented and discussed.

Learning Outcomes: 1. Demonstrate the use of human-animal interaction theories and science to explain common human-animal interactions. 2. Demonstrate the use of an animal welfare conceptual framework and scientific components to assess an animal welfare situation (Lord et al., 2017). 3. Synthesize, formulate and communicate an informed view of contemporary or emerging human-animal interaction and animal welfare issues, including scientific and sociological influences and professional responsibilities. Credits: 2.00

VCS 46700 - Medical Equipment & Maintenance-VN

Credit Hours: 2.00. A laboratory in the utilization, care, and maintenance of electronic equipment used in veterinary diagnostics.

Learning Outcomes: 1. Develop an integrated knowledge base of the functions of the selected equipment. 2. Select, evaluate, and adjust selected equipment to ensure proper function and provide maximum benefit to ensure safety of the patient and staff. 3. Recognize and respond appropriately to the selected equipment malfunctions or inappropriate equipment setup to ensure proper function and provide maximum benefit to ensure safety of the patient and staff. Credits: 2.00

VM 44100 - Occupational & Public Health II-VN

Credit Hours: 1.00. The course covers selected aspects of public health and safety related to the veterinary health care team, patient, client and public.

Learning Outcomes: 1. Able to select and utilize the appropriate measures to assist in preventing problems or mitigate their effects. 2. Able to seek, select, compile and effectively communicate appropriate material to their colleagues, the clients and public. Credits: 1.00

VM 44200 - Veterinary Management Topics II-VN

Credit Hours: 1.50. This course is a continuation of the first veterinary practice management course. It will introduce students to concepts related to leading a veterinary medical team and managing the day-to-day management of the veterinary practice. Emphasis will be on human resources, marketing and financial management.

Learning Outcomes: 1. Describe the attributes of a good leader. 2. Create a personal financial plan (i.e. budget) use credit wisely. 3. Describe strategies for recruiting, managing, and motivating employees. 4. Utilize techniques for proper delegation of work within a veterinary facility. 5. Create effective client surveys. 6. Use social media to effectively market a veterinary facility. 7. Create and interpret financial statements. 8. Describe techniques used for controlling expenses at a veterinary facility. 9. Assess a veterinary facility's financial performance by utilizing industry benchmarks. Credits: 1.50

VM 44300 - Clinic Rotations VI-VN

Credit Hours: 2.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.

Learning Outcomes: 1. Increase awareness of clinical areas, personnel, responsibilities and basic procedures. 2. Perform nursing duties learned in previous courses and by experience. 3. Participate in the utilization of the veterinary team concepts and contributed to its patient care benefits. Credits: 2.00

CPB 46400 - Clinical Toxicology-VN

Credit Hours: 2.00. The common toxicants and advanced topics on the drugs most commonly encountered in veterinary

medicine. Emphasis is on mechanisms, indications, contraindications, and proper applications and handling of these drugs. Permission of department required.

Learning Outcomes: 1. Appropriately use and understand common terminology used in toxicology and clinical toxicology. 2. Describe the medical rationale and specific drugs used as emetics, cathartics, and other compounds used to decrease animal exposure to ingested toxicants. 3. Ask the appropriate questions during a history to help better identify toxicosis cases and to identify potential sources for intoxication. 4. Describe the mechanism of action for commonly encountered drug toxicants, herbal/diet supplement intoxications, household toxicants, insecticides, rodenticides, herbicides, toxic plants, and toxic animal envenomation. 5. Describe the general presenting clinical appearance and any key clinical signs characteristic of common veterinary toxicants. 6. Describe the diagnostics and treatment protocols used for common veterinary toxicants. 7. Identify means by which clients/animal owners can reduce the risk of intoxicant of animals by toxicants. Credits: 2.00

12.5-15.5 Credits

Spring 4th Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 31800 - Principles Of Persuasion

Credit Hours: 3.00. Persuasion and its effects, ranging from individual influences to societal impacts. Various perspectives and models of persuasion are examined, including classical and modern approaches. Both theoretical and pragmatic considerations are introduced.

Learning Outcomes: 1. List the major areas of study in the field of persuasion. 2. Analyze and critique persuasive techniques. 3. Apply theories of persuasion to explain everyday circumstances. Credits: 3.00

COM 32000 - Small Group Communication

Credit Hours: 3.00. A study of group thinking and problem-solving methods; participation in, and evaluation of, committee, and informal discussion groups. Focus on the roles, networks, and messages employed by small group communicators.

Credits: 3.00

COM 32400 - Introduction To Organizational Communication

Credit Hours: 3.00. An introduction to fundamental concepts and basic research related to communication behavior in organizational settings. Units cover message processing, leadership communication, communication climates, communication training, and communication audits. Students participate in an organizational simulation in some sections.

Learning Outcomes: 1. Use the vocabulary of concepts and theories related to organizational communication. 2. List historical, current, and future communication issues facing organizations. 3. Apply theoretical perspectives and concepts to organizational communication

situations and settings. 4. Reflect on their own experience with organizations. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ENGL 42201 - Writing For The Health And Human Sciences

Credit Hours: 3.00. This course applies rhetorical principles to the writing of health, hospitality, nutrition and other related fields. It will prepare students to write in diverse modalities for technical, professional and lay audiences.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Employ theories and approaches of medical and science writing to adapt to the rapidly changing industries of healthcare and public health. 4. Compose effective healthcare and public health documents with an awareness of the accessibility and usability needs of patients, providers and caregivers. 5. Communicate complex healthcare and public health information while writing both individually and in teams. Credits: 3.00

VM 44500 - Senior Project-VN

Credit Hours: 4.00. This is an independent study course in which the student engages in learning activities to enhance their

knowledge in a particular area of veterinary technology of their choosing, demonstrate effective oral and written communication, and apply analysis, integration, and syntheses to achieve a solution.

Learning Outcomes: 1. Acquisition of knowledge at the veterinary technologist level in an area of interest or focus. 2. Demonstrate effective oral communication. 3. Demonstrate effective written communication. 4. Demonstrate the ability to analyze, integrate, and synthesize a solution to solve a problem. Credits: 4.00

COM 37800 - Introduction To Health Communication

Credit Hours: 3.00. This course will serve as an introduction to the many ways that communication shapes health and health practices. Course content includes: 1) current healthcare structure in the United States; 2) communication in the healthcare organization; 3) provider-patient communication; 4) patient-support provider communication; 5) models of health behavior change and campaigns; and 6) crisis communication and health.

Learning Outcomes: 1. Identify and apply theories relevant to health communication. 2. Identify how communication practices shape and affect health. 3. Provide a comparative analysis of issues of diversity in healthcare. 4. Tailor health communication materials to improve health literacy. 5. Design and implement health campaign. Credits: 3.00

17 Credits

Visual Arts Design Education, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (45 credits)

A. Art & Design Required Courses (27 credits)

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Students will be

introduced to contemporary sculptors and their work with the aims of providing a historical background for the study and appreciation of sculpture as a medium and providing resources that students can relate to their own creative processes as artists. 2. Students will proceed through an individually developed series of problems and solutions. Where appropriate, additional historical and contemporary references related to the individual students' specific creative investigations will be provided. 3. Technical demonstration will also be provided as needed by individual students. Credits: 3.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

B. Art & Design Sequence (9 credits)

Interior Design

AD 12500 - Introduction To Interior Design (UCC: HUM)

Credit Hours: 3.00. Introductory survey of interior spaces and their impact upon the physical, social, psychological, and aesthetic needs of people. Critical evaluation of concepts in the interior design profession and related fields will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Apply concept that well-designed environments are products of a design process that encompasses both functionality and aesthetics. 2. Describe how interior environments can influence human behavior. 3. Relate the sociological, psychological, physiological, and economic aspects to the design of interiors. 4. Identify and use professional terminology in the field of interior design. Credits: 3.00

AD 13000 - Interior Design Communication

Credit Hours: 3.00. Spatial studies, conceptual ideation, and methods of communicating in various two- and three-dimensional media.

Learning Outcomes: 1. Produce basic design drawing and architectural lettering. 2. Apply the use of line weights when sketching and drawing when visualizing design ideas. 3. Explain architectural and interior design vocabulary. 4. Construct one- and two-point perspectives. 5. Apply basic skills and knowledge of AutoCAD Drafting Software. Credits: 3.00

AD 23000 - Interior Design I

Credit Hours: 3.00. Study of behavior patterns, perceptions, needs, and usage of three-dimensional space through conceptual solutions to human environments. Interior design theory and application of design process through analysis, research, and synthesis will be explored.

Learning Outcomes: 1. Develop design communication skills through freehand and instrument drawing tools that can be used in both design and presentation work. 2. Explore a wide range of drawing media such as pencil, markers, and colored pencils to develop design communication skills. 3. Develop the ability to make informed and sensitive decisions regarding the use of color in presentation work. 4. Further develop speed and accuracy in constructing perspectives and renderings. Credits: 3.00

Visual Communication Design

AD 20500 - Design III

Credit Hours: 3.00. Problems in two- and three-dimensional

design, utilizing a variety of tools, materials, and processes. Study is made of the interaction between designer and society, involving concepts in art, psychology, technology, anthropology, and history.

Learning Outcomes: 1. Demonstrate a practical understanding of visual communication design. 2. Modify visual hierarchies to convey ideas clearly and effectively. 3. Apply professional approaches to design problem-solving. 4. Utilize visual language vocabulary and design knowledge to communicate ideas. 5. Identify and explain the basics of typography, page structure, and sequencing. Credits: 3.00

AD 20600 - Studio In Visual Communication Design

Credit Hours: 3.00. Investigation of visual communication design theory, history, skills, and methodology, as well as preparation of art and mechanicals for graphic arts reproduction.

Learning Outcomes: 1. Transition from fundamental design skills to advanced graphic design applications. 2. Introduce layout/grid systems and their theoretical and practical applications. 3. Introduce students to the fundamentals of typography, exploring the relationships between type and image. 4. Increase proficiency in graphic software in the context of graphic design projects. 5. Gain a better understanding of the history of graphic design. 6. Develop more advanced problem-solving skills. 7. Prepare students for the Sophomore Review, and advanced junior- and senior-level design courses. Credits: 3.00

AD 39500 - History Of Design (UCC: STS)

Credit Hours: 3.00. A survey of the historical development of design from the industrial revolution to the present that examines the influence of new technologies, materials, and style on design practice as well as the role of design in shaping the technologies and things of everyday life. Throughout the course, students will analyze design within the broader social, cultural, and political context of production, consumption, and use.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Identify a range of styles from the 18th century to the present. 2. Critically analyze primary source material (artifacts/designed objects, images, and text). 3. Discuss important developments in the history of design. 4. Discuss the social, political, cultural, economic and technological context of design production, consumption, and use. Credits: 3.00

Industrial Design

AD 14600 - Design Drawing I

Credit Hours: 3.00. Problems in the skills and methods of professional design drawing. Emphasis on development of drawing as a conceptual tool and as part of the design process. Concentration on the media and techniques used in contemporary design drawing.

Learning Outcomes: 1. Identify and apply the fundamentals of industrial design drawing, including line quality, perspective, and proportions. 2. Develop a habit of regular drawing exercises and warm-ups to enhance their creativity and skill. 3. Apply design drawing techniques to effectively communicate and visualize design concepts. 4. Understand the basics of presentations and storytelling. 5. Demonstrate entry-level research to product design. Credits: 3.00

AD 21500 - Materials And Processes

Credit Hours: 3.00. An introductory course in the selection of materials and processes as relevant to design, with laboratory experiences in the safe and proper use of tools and equipment. Required of students wishing extensive access to A&D tools and equipment.

Learning Outcomes: 1. Demonstrate proper and safe handling of tools and machinery through design fabrication. 2. Develop and apply time management skills to manage a rigorous workload effectively. 3. Produce designs that reflect aesthetic and material awareness through curated projects. Credits: 3.00

AD 23500 - Materials And Processes II

Credit Hours: 3.00. Problems in three-dimensional design, incorporating materials, production processes, and applications of current technology, emphasizing aspects of society and technology. An introduction to complete industrial design problems, including problem definition, concepts, resource information, design development, final proposals, and presentation techniques.

Learning Outcomes: 1. Apply knowledge of design for manufacturing and use of materials by creating and fabricating selected projects. 2. Evaluate the aesthetics, ergonomics, and manufacturability of designs by participating in in-class design critiques. 3. Utilize skills to analyze an existing product and redesign it with an expanded function. Credits: 3.00

C. Art History Courses (9 credits)

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

AD 38400 - Contemporary Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of the visual arts from the 1940's to the present, designed to help students understand the cultural, social, and historical dynamics that influence artistic creation, and reflect upon the artists' role in contemporary societies.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist, or artwork. 4. Discuss historical events, social forces, and cultural trends that have had an influence on a particular style, artist, or artwork.

5. Develop analytical and writing skills through textual studies of primary and secondary sources, as well as written exercises. Credits: 3.00

Professional Education Requirements (46 credits)

Art Education Courses (11 credits)

AD 20200 - Introduction To Art Education

Credit Hours: 2.00. Lectures, readings, and discussions covering the history, theory, and professional literature of art education.

Learning Outcomes: 1. Analyze children's artistic development to understand its stages and implications for teaching. 2. Evaluate works of art and learn how to develop that ability in their students. 3. Analyze components of visual arts curriculum, assessment, and art education programming. 4. Demonstrate knowledge and skill with teaching techniques appropriate for various teaching levels. 5. Compare art instruction at various levels of public -school education. Credits: 2.00

AD 30200 - Theory And Practice Of Elementary School Art

Credit Hours: 3.00. Theory and practice of art education for elementary school from early childhood through middle childhood. Restricted to art education majors.

Credits: 3.00

AD 30300 - Art In Middle/Junior High Schools

Credit Hours: 3.00. Theory and practice of art education for early adolescent students in the middle/junior high school.

Credits: 3.00

AD 40200 - Art In Secondary School

Credit Hours: 3.00. Theory and practice of art education for adolescent and young adult students in the secondary school. Required prior to professional semester.

Credits: 3.00

Education Courses (35 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as

each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching

experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

15-16 Credits

Spring 1st Year

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.
University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

AD 20200 - Introduction To Art Education

Credit Hours: 2.00. Lectures, readings, and discussions covering the history, theory, and professional literature of art education.
Learning Outcomes: 1. Analyze children's artistic development to understand its stages and implications for teaching. 2. Evaluate works of art and learn how to develop that ability in their students. 3. Analyze components of visual arts curriculum, assessment, and art education programming. 4. Demonstrate knowledge and skill with teaching techniques appropriate for various teaching levels. 5. Compare art instruction at various levels of public -school education. Credits: 2.00

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I
University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.
University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will be introduced to contemporary sculptors and their work with the aims of providing a historical background for the study and appreciation of sculpture as a medium and providing resources that students can relate to their own creative processes as artists. 2. Students will proceed through an individually developed series of problems and solutions. Where appropriate, additional historical and contemporary references related to the individual students'

specific creative investigations will be provided. 3. Technical demonstration will also be provided as needed by individual students. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

16-17 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 30300 - Art In Middle/Junior High Schools

Credit Hours: 3.00. Theory and practice of art education for early adolescent students in the middle/junior high school.

Credits: 3.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific

differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

17-18 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

AD 30200 - Theory And Practice Of Elementary School Art

Credit Hours: 3.00. Theory and practice of art education for elementary school from early childhood through middle childhood. Restricted to art education majors.

Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by

contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

AD 38400 - Contemporary Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of the visual arts from the 1940's to the present, designed to help students understand the cultural, social, and historical dynamics that influence artistic creation, and reflect upon the artists' role in contemporary societies.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist, or artwork. 4. Discuss historical events, social forces, and cultural trends that have had an influence on a particular style, artist, or artwork. 5. Develop analytical and writing skills through textual studies of primary and secondary sources, as well as written exercises. Credits: 3.00

14 Credits

Spring 3rd Year

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

AD 40200 - Art In Secondary School

Credit Hours: 3.00. Theory and practice of art education for adolescent and young adult students in the secondary school. Required prior to professional semester.

Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an

overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

17 Credits

Fall 4th Year

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

18 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Visual Arts Education, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (45 credits)

A. Art & Design Courses (18 credits)

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and

computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Students will be introduced to contemporary sculptors and their work with the aims of providing a historical background for the study and appreciation of sculpture as a medium and providing resources that students can relate to their own creative processes as artists. 2. Students will proceed through an individually developed series of problems and solutions. Where appropriate, additional historical and contemporary references related to the individual students' specific creative investigations will be provided. 3. Technical demonstration will also be provided as needed by individual students. Credits: 3.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

B. Studio Courses (18 credits)

Group 1 - Required Courses (12 credits)

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 26200 - Jewelry And Metalwork I

Credit Hours: 3.00. An introduction to the design and execution of hand-wrought jewelry and metalwork.

Learning Outcomes: 1. Plan, and design functional and meaningful original small-scale metal objects and jewelry. 2. Create small scale metal sculptures and jewelry. 3. Demonstrate skill in sawing, filing, sanding and soldering and apply these techniques to produce small-scale metal sculptures and jewelry. Credits: 3.00

Group 2 - Choose One (3 credits)

AD 27000 - Constructed Textiles

Credit Hours: 3.00. A beginning class in non-loom constructed textile techniques such as macram and card-weaving. Emphasis on three-dimensional design in fiber using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 27100 - Dyed Textiles

Credit Hours: 3.00. Beginning course in non-screen fabric dyeing techniques such as tie-dye and batik. Survey of historical surface design for contemporary interpretations in both two and three dimensions.

Credits: 3.00

AD 37000 - Woven Textiles

Credit Hours: 3.00. A beginning course in loom-woven textiles and pattern drafting. Emphasis on two- and three-dimensional design in fiber, using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

Group 3 - Choose One (3 credits)

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and

analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

AD 36800 - Etching And Intaglio Printmaking

Credit Hours: 3.00. An introduction to the techniques of etching, engraving, aquatint, drypoint, collagraph, monoprint, and related processes. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

C. Art History Courses (9 credits)

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

AD 38400 - Contemporary Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of the visual arts from the 1940's to the present, designed to help students understand the cultural, social, and historical dynamics that influence artistic creation, and reflect upon the artists' role in contemporary societies.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist, or artwork. 4. Discuss historical events, social

forces, and cultural trends that have had an influence on a particular style, artist, or artwork. 5. Develop analytical and writing skills through textual studies of primary and secondary sources, as well as written exercises. Credits: 3.00

Professional Requirements (46 credits)

Art Education Courses (11 credits)

AD 20200 - Introduction To Art Education

Credit Hours: 2.00. Lectures, readings, and discussions covering the history, theory, and professional literature of art education.

Learning Outcomes: 1. Analyze children's artistic development to understand its stages and implications for teaching. 2. Evaluate works of art and learn how to develop that ability in their students. 3. Analyze components of visual arts curriculum, assessment, and art education programming. 4. Demonstrate knowledge and skill with teaching techniques appropriate for various teaching levels. 5. Compare art instruction at various levels of public -school education. Credits: 2.00

AD 30200 - Theory And Practice Of Elementary School Art

Credit Hours: 3.00. Theory and practice of art education for elementary school from early childhood through middle childhood. Restricted to art education majors.

Credits: 3.00

AD 30300 - Art In Middle/Junior High Schools

Credit Hours: 3.00. Theory and practice of art education for early adolescent students in the middle/junior high school.

Credits: 3.00

AD 40200 - Art In Secondary School

Credit Hours: 3.00. Theory and practice of art education for adolescent and young adult students in the secondary school. Required prior to professional semester.

Credits: 3.00

Education Requirements (35 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts.

Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as

each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching

experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

15-16 Credits

Spring 1st Year

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.
University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

AD 20200 - Introduction To Art Education

Credit Hours: 2.00. Lectures, readings, and discussions covering the history, theory, and professional literature of art education.
Learning Outcomes: 1. Analyze children's artistic development to understand its stages and implications for teaching. 2. Evaluate works of art and learn how to develop that ability in their students. 3. Analyze components of visual arts curriculum, assessment, and art education programming. 4. Demonstrate knowledge and skill with teaching techniques appropriate for various teaching levels. 5. Compare art instruction at various levels of public -school education. Credits: 2.00

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I
University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.
University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will be introduced to contemporary sculptors and their work with the aims of providing a historical background for the study and appreciation of sculpture as a medium and providing resources that students can relate to their own creative processes as artists. 2. Students will proceed through an individually developed series of problems and solutions. Where appropriate, additional historical and contemporary references related to the individual students'

specific creative investigations will be provided. 3. Technical demonstration will also be provided as needed by individual students. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 20002 - Special Populations Seminar: English Language Learners And Students With Gifts And Talents

Credit Hours: 1.00. This seminar is focused on special populations of learners for teacher education majors with an emphasis on students who are English learners and students with gifts, talents, and creativity. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms with ELLs and students with gifts, creativity, and talents. This seminar is intended to be taken concurrently with EDPS 24000 and EDCI 37001.

Learning Outcomes: 1. Identify connections between educational theory to educational practice as related to ELLs and students with GCT. 2. Demonstrate active listening and constructive peer feedback during seminar sessions and in the field. 3. Engage in mentoring activities related to teaching and learning in a community of peers and professionals. 4. Reflect on their own learning, gaining insight into themselves and their interactions with the classroom as teachers of ELLs and students with GCTs. 5. Complete a minimum of 30 hours in a school-based clinical experience including classroom observations, tutoring, assisting teachers, small and large group instruction and practicing the duties of a teacher who works with ELLs and students with

GCTs. 6. Demonstrate the professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

16-17 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 30300 - Art In Middle/Junior High Schools

Credit Hours: 3.00. Theory and practice of art education for early adolescent students in the middle/junior high school.

Credits: 3.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken

concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

17-18 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes,

fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

AD 30200 - Theory And Practice Of Elementary School Art

Credit Hours: 3.00. Theory and practice of art education for elementary school from early childhood through middle childhood. Restricted to art education majors.

Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

AD 38400 - Contemporary Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of the visual arts from the 1940's to the present, designed to help students understand the cultural, social, and historical dynamics that influence artistic creation, and reflect upon the artists' role in contemporary societies.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist, or artwork. 4. Discuss historical events, social forces, and cultural trends that have had an influence on a particular style, artist, or artwork. 5. Develop analytical and writing skills through textual studies of primary and secondary sources, as well as written exercises. Credits: 3.00

16 Credits

Spring 3rd Year

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure

with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

AD 36800 - Etching And Intaglio Printmaking

Credit Hours: 3.00. An introduction to the techniques of etching, engraving, aquatint, drypoint, collagraph, monoprint, and related processes. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 40200 - Art In Secondary School

Credit Hours: 3.00. Theory and practice of art education for adolescent and young adult students in the secondary school. Required prior to professional semester.

Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an

inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

17 Credits

Fall 4th Year

AD 26200 - Jewelry And Metalwork I

Credit Hours: 3.00. An introduction to the design and execution of hand-wrought jewelry and metalwork.

Learning Outcomes: 1. Plan, and design functional and meaningful original small-scale metal objects and jewelry. 2. Create small scale metal sculptures and jewelry. 3. Demonstrate skill in sawing, filing, sanding and soldering and apply these techniques to produce small-scale metal sculptures and jewelry. Credits: 3.00

AD 27000 - Constructed Textiles

Credit Hours: 3.00. A beginning class in non-loom constructed textile techniques such as macram and card-weaving. Emphasis on three-dimensional design in fiber using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 27100 - Dyed Textiles

Credit Hours: 3.00. Beginning course in non-screen fabric dyeing techniques such as tie-dye and batik. Survey of historical surface design for contemporary interpretations in both two and three dimensions.

Credits: 3.00

AD 37000 - Woven Textiles

Credit Hours: 3.00. A beginning course in loom-woven textiles and pattern drafting. Emphasis on two- and three-dimensional design in fiber, using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom

processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

18 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Visual Communication Design, BFA

About the Program

Degree Requirements

Departmental/Program Major Courses (78 credits)

A. Art & Design Core (12 credits)

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the

application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 39500 - History Of Design (UCC: STS)

Credit Hours: 3.00. A survey of the historical development of design from the industrial revolution to the present that examines the influence of new technologies, materials, and style on design practice as well as the role of design in shaping the technologies and things of everyday life. Throughout the course, students will analyze design within the broader social, cultural, and political context of production, consumption, and use.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Identify a range of styles from the 18th century to the present. 2. Critically analyze primary source material (artifacts/designed objects, images, and text). 3. Discuss important developments in the history of design. 4. Discuss the social, political, cultural, economic and technological context of design production, consumption, and use. Credits: 3.00

B. Visual Communication Design Core (35 credits)

AD 20500 - Design III

Credit Hours: 3.00. Problems in two- and three-dimensional design, utilizing a variety of tools, materials, and processes. Study is made of the interaction between designer and society, involving concepts in art, psychology, technology, anthropology, and history.

Learning Outcomes: 1. Demonstrate a practical understanding of visual communication design. 2. Modify visual hierarchies to convey ideas clearly and effectively. 3. Apply professional approaches to design problem-solving. 4. Utilize visual language vocabulary and design knowledge to communicate ideas. 5. Identify and explain the basics of typography, page structure, and sequencing. Credits: 3.00

AD 20600 - Studio In Visual Communication Design

Credit Hours: 3.00. Investigation of visual communication design theory, history, skills, and methodology, as well as preparation of art and mechanicals for graphic arts reproduction.

Learning Outcomes: 1. Transition from fundamental design skills to advanced graphic design applications. 2. Introduce layout/grid systems and their theoretical and practical applications. 3. Introduce students to the fundamentals of typography, exploring the relationships between type and image. 4. Increase proficiency in graphic software in the context of graphic design projects. 5. Gain a better understanding of the history of graphic design. 6. Develop more advanced problem-solving skills. 7. Prepare students for the Sophomore Review, and advanced junior- and senior-level design courses. Credits: 3.00

AD 22800 - Visual Communication Design Computing I

Credit Hours: 3.00. An introductory course in visual design computing programs used in the study and production of visual communication design.

Learning Outcomes: 1. Develop skills using industry standard design software specifically Adobe Illustrator and Adobe InDesign. 2. Experiment with and iterate through image-making utilizing various methods and vector-based digital techniques. 3. Strengthen conceptual image-making skills. 4. Increase ability to generate and choose intensely metaphoric imagery to enhance visual

communication. 5. Understand and use design terminology and design principles. 6. Strengthen attention to detail and craft knowledge. Credits: 3.00

AD 22900 - Visual Communication Design Computing II

Credit Hours: 3.00. An intermediate course in visual design computing programs used in the study and production of visual communication design.

Learning Outcomes: 1. Develop skills using industry standard design software specifically Adobe Photoshop and Adobe XD. 2. Experiment with and iterate through image-making utilizing various methods and pixel-based digital techniques. 3. Strengthen conceptual image-making skills. 4. Understand and use design terminology and design principles. 5. Strengthen attention to detail and craft knowledge. Credits: 3.00

AD 31800 - Fundamentals Of Interactive Multimedia Design

Credit Hours: 3.00. Fundamental issues of interactive multimedia design: Animation, interface design, and experience design from a visual communications perspective.

Learning Outcomes: 1. Produce proposals, storyboards, and project reports. 2. Propose and implement visual communication design strategies for digital media projects. 3. Produce design solutions by applying compositional, typographical, and design elements and principles of new media design. 4. Apply design skills associated with the use of interface design (GUI). 5. Apply design skills associated with the use of digital color theory based on the RGB and HSB Color systems. 6. Apply design skills associated with the use of experience design concepts. 7. Continue to develop computing skills (Illustrator, Photoshop, AdobeAero, etc.). 8. Develop design skills to work collaboratively, presential, and remotely. 9. Develop illustrational and story-telling design abilities. Credits: 3.00

AD 31900 - Web Design For Visual Communication

Credit Hours: 3.00. Introduction to web-based design from a visual communication application.

Learning Outcomes: 1. Design web application prototypes by proposing creative concepts and producing media assets. 2. Apply visual storytelling to web design by incorporating visual communication strategies. 3. Demonstrate teamwork skills in web design by participating in group discussions while sharing ideas and receiving feedback for project improvement. Credits: 3.00

AD 33200 - Visual Communication Design I

Credit Hours: 3.00. A course designed to introduce the student to projects that will develop an understanding of basic problem-solving techniques in the areas of publication and promotional graphics. Acceptance into professional VCD sequence via mandatory portfolio review.

Learning Outcomes: 1. Provide opportunities to explore the elements and principles of design and process as they relate to typography and letter forms. 2. Engage students' conceptual skills in branding design. 3. Further strengthen students' ability to create effective visual communications by way of complex problems emphasizing critical thinking, design process and presentation. Credits: 3.00

AD 36600 - Visual Communication Design II

Credit Hours: 3.00. Field trips may be required. The study of corporate graphics and visual identity programs.

Learning Outcomes: 1. Build expertise in problem-solving and expanding a brand visually based on market research. 2. Practice synthesizing research, critical dialogue (feedback), and Critiques within an iterative design process. 3. Develop skills to construct/combine graphic form using various digital tools, software, and screen-based media as well as print and 3D objects. 4. Create system designs and brand identities. 5.

Strengthen attention to detail and craft knowledge. 6. Strengthen ability to pitch ideas and create viable solutions for real-world clients. Credits: 3.00

AD 43100 - Visual Communication Design III

Credit Hours: 3.00. The advanced study of communication concepts of poster and poster application in current media.

Learning Outcomes: 1. Demonstrate the ability to initiate and develop creative concepts; evaluate creative work; apply current technology; and communicate effectively. Credits: 3.00

AD 43200 - Visual Communication Design IV

Credit Hours: 3.00. The study of product identity, packaging, and branding.

Learning Outcomes: 1. Demonstrate ability to initiate and develop creative concepts; present and evaluate creative work; apply current technology related to the profession. Credits: 3.00

AD 43400 - Professional Practice For Visual Communication Designers

Credit Hours: 2.00. Specific professional practice topics for the visual communication designer. Topics include contracts, professional associations, ethics, portfolio and resume preparation, self-promotion and exhibition of creative work, the job market and the future of the profession. Field trips may be required.

Learning Outcomes: 1. Develop proficiency in the use of career search media and tools. 2. Develop a practical understanding of the visual communications job market. 3. Seek functional solutions that meet specific visual communication career goals 4. Develop an expanded ability to generate contacts and leads for employment or graduate school. 5. Strengthen student's design portfolio through review and organization of contents. Credits: 2.00

AD 52000 - Student Visual Design Service

Credit Hours: 3.00. The course simulates the operation of a professional design studio affording the opportunity for hands-on experience in the development of a graphic product from concept to finish and include contact with clients, and printers.

Learning Outcomes: 1. Design and produce portfolio banner to be shown in the Senior Portfolio Exhibition. 2. Produce branding theme, schedule, marketing strategy, for the Senior Portfolio Exhibition. 3. Market, install and takedown the Senior Portfolio Exhibition. 4. Examine current market trends and assess their influence on magazine content and design decisions. 5. Create a comprehensive magazine design that showcases a range of skills in publication typography, page layout and image development. Credits: 3.00

AD 22901 - Visual Communication Design Sophomore Review

Credit Hours: 0.00. Sophomore Review is a qualifying assessment supervised by faculty members to monitor student learning and progress. Students who do not pass the review will be ineligible for Visual Communication Design upper-level studio courses. Permission from department required.

Learning Outcomes: 1. Present selected projects and design portfolio to the Visual Communication Design faculty members. 2. Be assessed by faculty to identify the student's strengths, abilities, and areas of needed improvement. Credits: 0.00

C. Visual Communication Design Supportive Requirement (19 credits)

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to

artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 23400 - Art And Design Internship Preparation

Credit Hours: 1.00. Introduction and preparation for Art & Design Internship experience. Students will develop a resume, cover letter, and other resources in their search for a suitable internship placement.

Learning Outcomes: 1. Students will have the opportunity for design work experience from the internship program that will familiarize the students with the culture and environment of the professional studio and professional practice. Credits: 1.00

AD 26700 - Digital Imaging

Credit Hours: 3.00. An introductory course in the creative generation and digital enhancement of photo-related imagery. Emphasis is on the development of technical and critical thinking skills, as well as fostering an awareness of pertinent theoretical issues in digital age.

Learning Outcomes: 1. Gain knowledge of intermediate and advanced Photoshop. 2. Gain an understanding of constructed image making in photography using Photoshop. 3. Understand contemporary artists whose photographic works generated through computer manipulation. 4. Gain knowledge of theoretical and historical concerns regarding post photography. Credits: 3.00

AD 30400 - Video Art

Credit Hours: 3.00. Introduction to digital video as a creative medium for artistic expression. Students will record, digitize, edit and distribute digital video content and author a digital portfolio of their work in the form of an interactive DVD.

Learning Outcomes: 1. Analyze key ideas in the field of Video Art by preparing a research presentation on the practice of an individual video artist or collective. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Create a variety of video artworks by the creative use of the video camera, editing strategies and postproduction techniques. Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical

events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

D. Visual Communication Design Selectives (12 credits)

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

AD 14600 - Design Drawing I

Credit Hours: 3.00. Problems in the skills and methods of professional design drawing. Emphasis on development of drawing as a conceptual tool and as part of the design process. Concentration on the media and techniques used in contemporary design drawing.

Learning Outcomes: 1. Identify and apply the fundamentals of industrial design drawing, including line quality, perspective, and proportions. 2. Develop a habit of regular drawing exercises and warm-ups to enhance their creativity and skill. 3. Apply design drawing techniques to effectively communicate and visualize design concepts. 4. Understand the basics of presentations and storytelling. 5. Demonstrate entry-level research to product design. Credits: 3.00

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 22000 - Computers In Art

Credit Hours: 3.00. Introduction to computer graphics concepts and the electronic image as a fine art form. Emphasis is placed on personal expression, using the computer as a two-dimensional art tool.

Learning Outcomes: 1. Demonstrate individualized forms of creative expression through the use of computers and art. 2. Create a series of creative projects incorporating a range of digital techniques. 3. Critique and assess their creative work and the work of their peers. Credits: 3.00

AD 23600 - Lighting Fundamentals For Photography

Credit Hours: 3.00. Introductory course in understanding

electronic strobe lighting. Begins with a review of basic lighting principles and a series of problem-solving assignments, which introduce control, and applications of electronic strobe lighting. Still life photography and portraiture are emphasized and covers on-location lighting.

Learning Outcomes: 1. Gain an understanding of the basic principles of light and how to use those principles to light photographic subject matter. 2. Gain a basic understanding of the function of photographic lighting equipment. 3. Compile a portfolio of images that demonstrate a skill set learned regarding product and portrait and simple space lighting. Credits: 3.00

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 24600 - Design Drawing II

Credit Hours: 3.00. Continuation of the work done in A&D 245. Emphasis on development of skills and presentation quality design drawing.

Credits: 3.00

AD 26200 - Jewelry And Metalwork I

Credit Hours: 3.00. An introduction to the design and execution of hand-wrought jewelry and metalwork.

Learning Outcomes: 1. Plan, and design functional and meaningful original small-scale metal objects and jewelry. 2. Create small scale metal sculptures and jewelry. 3. Demonstrate skill in sawing, filing, sanding and soldering and apply these techniques to produce small-scale metal sculptures and jewelry. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

AD 27000 - Constructed Textiles

Credit Hours: 3.00. A beginning class in non-loom constructed textile techniques such as macram and card-weaving. Emphasis

on three-dimensional design in fiber using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Students will be introduced to contemporary sculptors and their work with the aims of providing a historical background for the study and appreciation of sculpture as a medium and providing resources that students can relate to their own creative processes as artists. 2. Students will proceed through an individually developed series of problems and solutions. Where appropriate, additional historical and contemporary references related to the individual students' specific creative investigations will be provided. 3. Technical demonstration will also be provided as needed by individual students. Credits: 3.00

AD 32600 - Physical Computing

Credit Hours: 3.00. Introduction to electronics and computer vision for artists. Students learn to create expressive audiovisual systems that can respond to events in the physical world (movement, light/temperature change, sound, touch, etc.) through custom interfaces.

Learning Outcomes: 1. Analyze key ideas in the field of Physical Computing by preparing a research presentation on the practice of an individual artist or collective. 2. Critique their own creative work as well as the work of their peers through group discussions. 3. Produce a variety of interactive artworks by the creative use of the Arduino microcontroller, simple electronic circuitry, and coding techniques. Credits: 3.00

AD 33400 - New Media Culture

Credit Hours: 3.00. This lecture course provides a historical overview of the development of new media art. In their research, project papers, and practical assignments, students explore issues of media criticism, technology's impact on culture and society and visions of media utopias.

Learning Outcomes: 1. Summarize the key characteristics of new media based on course texts and artistic examples. 2. Analyze and critique new media-related texts and cultural productions through group discussion and oral presentation. 3. Apply project-based methods to respond creatively and critically to the material history and social context of new media. Credits: 3.00

AD 34200 - Ceramics II

Credit Hours: 3.00. A continuation of AD 24200 ; according to student needs in creating ceramic forms, a variety of in-depth experiences: experimental kiln building and firing techniques, methods of ceramic construction, surface treatment, and clay and glaze formulation.

Credits: 3.00

AD 36101 - The Constructed Image

Credit Hours: 3.00. An intermediate level course focusing on the production of creative images constructed in the studio and in the field. Projects will address the planning and design of photographic images through the use of set design, styling, and post-production. Students will investigate both historical and contemporary trends in the art of the photographically-constructed image.

Learning Outcomes: 1. Construct and compose images using set design, styling, collage, and photomontage. 2. Develop communication skills to successfully interpret proposals and instructions from clients. 3. Analyze theoretical and historical concerns regarding constructed images and demonstrate an understanding of those concerns. 4. Develop visual communication and conceptual image making skills. 5. Develop techniques of creating photographically constructed images and demonstrate an understanding of those techniques. Credits: 3.00

AD 36200 - Jewelry And Metalwork

Credit Hours: 3.00. Lost wax casting and mold making, mechanisms and stone setting for jewelry and metalwork.

Learning Outcomes: 1. Students will be able to design and make wax and non-wax models for jewelry and small metal projects by reductive, addictive, and construction processes. 2. Students will learn to sprue, invest and cast their models by the lost wax centrifugal and vacuum casting methods. 3. They will learn to make waste molds and reusable rubber molds to produce their jewelry projects. 4. They will learn to make mechanisms for jewelry and settings for incorporating stones or other nonmetal materials into their jewelry. Credits: 3.00

AD 36500 - Intermediate Painting

Credit Hours: 3.00. A studio course concentrating on the development of conceptual and technical skills of painting. This course is designed to help individual students gain a greater awareness of their personal creative goals and to foster means of expression.

Credits: 3.00

AD 36800 - Etching And Intaglio Printmaking

Credit Hours: 3.00. An introduction to the techniques of etching, engraving, aquatint, drypoint, collagraph, monoprint, and related processes. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 37000 - Woven Textiles

Credit Hours: 3.00. A beginning course in loom-woven textiles and pattern drafting. Emphasis on two- and three-dimensional design in fiber, using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 38400 - Contemporary Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of the visual arts from the 1940's to the present, designed to help students understand the cultural, social, and historical dynamics that influence artistic creation, and reflect upon the artists' role in contemporary societies.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist, or artwork. 4. Discuss historical events, social forces, and cultural trends that have had an influence on a particular style, artist, or artwork. 5. Develop analytical and writing skills through textual studies of primary and secondary sources, as well as written exercises. Credits: 3.00

AD 40000 - Advanced Painting

Credit Hours: 3.00. A studio course concentrating on the development of an advanced body of work built upon the conceptual and technical skills of painting. This course is designed to help individual students gain a greater awareness of their personal creative goals and to foster means of expression.

Credits: 3.00

AD 41700 - Variable Topics In Electronic And Time-Based Art

Credit Hours: 3.00. Examination of thematic or specialized topics reflecting the most recent developments and contemporary artistic practices in Electronic and Time-Based Art. Permission of department required.

Learning Outcomes: 1. Use essential tools and techniques for generating, sketching and realizing ideas in the field of new media art using DIY strategies, commercial as well as open source software and hardware solutions for creative production. 2. Able to analyze key works and artists in the emerging field of Electronic and Time-Based Art. Credits: 3.00

AD 44200 - Ceramics III

Credit Hours: 3.00. A continuation of AD 34200 ; according to student needs in creating ceramic forms, a variety of in-depth experiences: experimental kiln building and firing techniques, methods of ceramic construction, surface treatment, and clay and glaze formulation.

Credits: 3.00

AD 46200 - Metalsmithing

Credit Hours: 3.00. Metal forming and metalsmithing processes

for small metal objects and jewelry.

Learning Outcomes: 1. Identify and utilize traditional jewelry and metalsmithing tools and materials in art metal projects. 2. Design and construct specialized tooling for metalworks. 3. Utilize newly developed tools into the fabrication of jewelry and other metal projects. Credits: 3.00

AD 47000 - Advanced Studies In Textiles

Credit Hours: 3.00. A textile seminar and studio course in advanced textile design, with the purpose of developing a personal direction and competence in textiles as fiber art.

Credits: 3.00

AD 47800 - Internship In Art And Design

Credit Hours: 1.00 to 8.00. Intensive exposure to professional experience through supervised internship in art-and-design-related firms, departments, or studios. Consent to enroll, amount of credit, placement, and evaluation to be approved and coordinated by department.

Learning Outcomes: 1. Experience culture and environment of a professional studio and professional practice related to their major course of study in Art and Design. Credits: 1.00 to 8.00

COM 10200 - Introduction To Communication Theory

Credit Hours: 3.00. Overview of approaches treating communication as an individual, functional activity and as a social, structuring activity. Covers definitions and models of communication, core processes (interpretations, sending, receiving), structures (language, nonverbal behavior), and key contexts (personal, organizational, public).

Credits: 3.00

COM 25600 - Introduction To Advertising

Credit Hours: 3.00. An analysis of commercial persuasion from colonial times to the era of mass communication. The course examines the structure of advertising messages, how they are adapted to specific audiences, and the social settings in which they occur.

Credits: 3.00

COM 26100 - Introduction To Digital Video Production

Credit Hours: 3.00. Basic production principles and practices. Emphasis on preplanning and conceptualizing skills in addition to practical production techniques. Required for admission to all television production courses. Permission of department required.

Credits: 3.00

COM 31800 - Principles Of Persuasion

Credit Hours: 3.00. Persuasion and its effects, ranging from individual influences to societal impacts. Various perspectives and models of persuasion are examined, including classical and modern approaches. Both theoretical and pragmatic considerations are introduced.

Learning Outcomes: 1. List the major areas of study in the field of persuasion. 2. Analyze and critique persuasive techniques. 3. Apply theories of persuasion to explain everyday circumstances. Credits: 3.00

COM 33600 - Advertising Media Strategy

Credit Hours: 3.00. Theory and practice of advertising as applied to advertising media strategy. Students build on a foundation of integrated marketing communication to develop digital advertising campaigns.

Learning Outcomes: 1. Explain how practitioners develop advertising campaigns. 2. Design and execute digital marketing plans. 3. Offer suggestions and feedback to classmates in a constructive manner. Credits: 3.00

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

AD 51200 - Interaction Design Studies

Credit Hours: 3.00. This course examines concepts and methods for interaction design (IXD). It emphasizes a human-centered perspective and explores fundamental components involved in IXD research. Students will explore a wide range of literature and implement IXD theories in multi-disciplinary collaborative projects.

Learning Outcomes: 1. Understand the fundamental architecture and principles of the interaction design. 2. Be familiar with a range of research interests in the domain and start to consider the thesis research topic. 3. Be aware of the diversity of research areas, methodologies and practices relevant to the interaction design program, and be exposed to work of researchers beyond the university, drawn from regional and international venues, to keep informed about updated research achievements. 4. Identify and apply compositional theory to interaction design practice. 5. Develop the ability to articulate intention in work through design iteration. 6. Organize and conduct a design process within an interdisciplinary team. 7. Have a working level of programming fluency, in order to independently produce a working prototype that satisfies given design requirements. 8. Assess and improve production value through design practice, optimization, and media technique. 9. Explore creative process, perception, and problem solving. Credits: 3.00

AD 52200 - Interaction Design Evaluation

Credit Hours: 3.00. This course builds a foundation for interaction designers to conduct evaluation research. Students start from analyzing evaluation cases on interactive designs and systems to employing evaluation in design projects using quantitative, qualitative, or mixed methods of inquiry.

Learning Outcomes: 1. Identify the need, justification, and goal of conducting an evaluation. 2. Understand systematic knowledge, logical-deductive processes and various research types, and recognize causes & effects, systematic bias and measurement/observation errors in research. 3. Be familiar with different kinds of qualitative and quantitative research methods and how they differ from each other. Build up reliable knowledge for them. 4. Understand the structure of paradigms, theories, concepts, hypotheses, constructs, variables and data. 5. Be familiar with the techniques such as observation, interviews, contamination, exogenous effects, and unobtrusive measures. 6. Be able to organize quantitative and qualitative data, and use analysis software such as SPSS and ALTAS.ti to find patterns. 7. Present the evaluation outcomes, and try to organize and write research papers based on the analysis. Credits: 3.00

AD 54200 - Information Visualization Design

Credit Hours: 3.00. This course starts from exploring visual perception and attention theories, studying modern visualization technologies and toolkits, and reviewing evolving visualization research. Students work on small exercises, and then accomplish complicated virtual and physical visualization projects for information representation and communication.

Learning Outcomes: 1. Learn the principals involved in information visualization. Gain a background that will aid the design of new, innovative visualizations. 2. Learn about the variety of existing techniques and systems in information visualization. 3. Build a sound foundation in human visual perception and how it relates to creating effective information visualization. 4. Proceed through graph and map-making best practices toward advanced topics of data structure and programmatic visualizations. 5. Gain experience describing and critiquing the methods and approaches of data visualization through presentations and critiques. 6. Understand the key design principles for creating information visualizations. 7. Explore the communication and narrative potential of information visualizations. 8. Develop skills in critiquing visualization techniques as applied to particular tasks. 9. Evaluate information visualizations tools. 10.Design new, innovative visualizations. Credits: 3.00

ENTR 31000 - Marketing And Management For New Ventures

Credit Hours: 3.00. This course builds on the foundational skills developed in ENTR 20000 (prerequisite course) to bring students through the process of launching a new venture. Students work in teams to develop and validate business models for potential startups. This occurs through experiential activities including gathering feedback from potential customers, creating forecasts, developing a go-to-market strategy, and pitching to investors. Students can choose ENTR 31000, ENTR 31500, or ENTR 32500 to serve as the second required core course for the Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Validate new business concepts and business models. 2. Conduct primary market research with prospective customers. 3. Apply the financial knowledge necessary for sales forecasting and cash flow management. 4. Evaluate methods to acquire and manage financial resources for a proposed venture. 5. Persuade investors and partners to support an entrepreneurial venture. 6. Identify and recruit talent for an entrepreneurial team. 7. Participate effectively as a team member or leader. Credits: 3.00

MGMT 42300 - New Product Development

Credit Hours: 3.00. Provides an overview of the new product development process. Detailed insights are provided in the "fuzzy front end" of this process. Targeting positioning, and product decisions are also covered. The second half of the course completes the marketing mix and covers various market testing and product launch issues.

Learning Outcomes: 1. Understand new product development process. 2. Analyze new product development cases. 3. Develop and test a new product idea. Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn about the marketing-decision making process. Credits: 3.00

COM 47800 - Health Communication Campaigns

Credit Hours: 3.00. This course is an introduction to the

processes and theories that are used to design both informational and persuasive health communication campaigns. The course will also introduce students to proper evaluation procedures to determine a campaign's efficacy. Students will be able to contribute to their portfolios by applying theory and primary research in the construction of a health communication campaign plan for a client.

Learning Outcomes: 1. Identify and perform the various stages of implementing a health communication campaign through course readings, discussions, and the creation of their final projects. 2. Apply formative research techniques and analyze relevant data in the creation of their final projects. 3. Identify the major theories and their essential components used in building health communication campaigns, and apply their components in course assignments. 4. Assess prior and current campaign efforts to understand their effectiveness and also recognize their limitations. Credits: 3.00

AD 33100 - Digital Video Production And Aesthetics

Credit Hours: 3.00. This course is a basic studio introduction to video production and how video can be used as an artistic medium in conjunction with the students' photography. Topics include video/film formats, lighting, audio, editing, distribution, experimental, commercial and music video, production paperwork and extensive time spent on mastering the camera. Classes will consist of hands-on demonstrations, and critiques.

Learning Outcomes: 1. Demonstrate DSLR cameras. 2. Demonstrate basic to intermediate lighting for Video Production. 3. Obtain knowledge on commercial video production: music video and commercial advertisement video. Credits: 3.00

AD 36300 - Documentary Photography

Credit Hours: 3.00. This course is an introduction to the great tradition of documentary photography. Students learn to see the world around them in a new way and produce a documentary project. The course requires reading and writing about photography, as well as making photography on a regular basis. The class emphasis is on thinking about why people photograph, what photographs do and do not mean to us, and on doing documentary work, on telling stories with photographs.

Learning Outcomes: 1. Understand the history of documentary photography. 2. Demonstrate a narrative photography experimented through personal, social, cultural, topographical politics. Credits: 3.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

AD 11900 - Color Photography

Credit Hours: 3.00. Introductory course in creative use of color photographic processes and studio practices. Emphasis is on the acquisition of digital cameras, studio, and digital printing skills which enable students to successfully perceive and structure images reflecting color's formal, symbolic, and emotional impact.

Learning Outcomes: 1. Apply knowledge of capturing and processing color digital imagery. 2. Demonstrate learned skills in color correction and image enhancement using image-editing software. 3. Illustrate understanding of conceptual dialogue using photography and color, and compile a portfolio of images that reflect the understanding. Credits: 3.00

ENTR 31500 - Business Planning For Social Entrepreneurship

Credit Hours: 3.00. This course builds on entrepreneurship concepts and skills developed in ENTR 20000 (prerequisite course) to understand the differences, benefits, and opportunities associated with social impact business models. Students work in teams on experiential activities including gathering customer feedback, creating forecasts, developing a strategy, and pitching to stakeholders and investors. Students can choose ENTR 31000, ENTR 31500, or ENTR 32500 to serve as the second required core course for the Certificate in

Entrepreneurship and Innovation.

Learning Outcomes: 1. Develop convincing social enterprise business models. 2. Conduct feasibility analysis. 3. Create pro-forma financial statements. 4. Understand legal, regulatory, and ethical issues social entrepreneurs face. 5. Understand the process of recruiting, hiring, and developing a new venture team. 6. Identify sources of funding and investor needs. 7. Persuade potential investors to support a social impact venture. 8. Participate effectively as a team member or leader. Credits: 3.00

E. Other Program Requirements (Required, No Credit)

Sophomore Portfolio Review

AD 22901 - Visual Communication Design Sophomore Review

Credit Hours: 0.00. Sophomore Review is a qualifying assessment supervised by faculty members to monitor student learning and progress. Students who do not pass the review will be ineligible for Visual Communication Design upper-level studio courses. Permission from department required.

Learning Outcomes: 1. Present selected projects and design portfolio to the Visual Communication Design faculty members. 2. Be assessed by faculty to identify the student's strengths, abilities, and areas of needed improvement. Credits: 0.00

Elective (14-24 credits)

GPA Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

15-17 Credits

Spring 1st Year

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.
Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.
University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 26700 - Digital Imaging

Credit Hours: 3.00. An introductory course in the creative generation and digital enhancement of photo-related imagery. Emphasis is on the development of technical and critical thinking skills, as well as fostering an awareness of pertinent theoretical issues in digital age.
Learning Outcomes: 1. Gain knowledge of intermediate and advanced Photoshop. 2. Gain an understanding of constructed image making in photography using Photoshop. 3. Understand contemporary artists whose photographic works generated through computer manipulation. 4. Gain knowledge of theoretical and historical concerns regarding post photography. Credits: 3.00

15-16 Credits

Fall 2nd Year

AD 20500 - Design III

Credit Hours: 3.00. Problems in two- and three-dimensional design, utilizing a variety of tools, materials, and processes. Study is made of the interaction between designer and society, involving concepts in art, psychology, technology, anthropology, and history.
Learning Outcomes: 1. Demonstrate a practical understanding of visual communication design. 2. Modify visual hierarchies to convey ideas clearly and effectively. 3. Apply professional approaches to design problem-solving. 4. Utilize visual language vocabulary and design knowledge to communicate ideas. 5. Identify and explain the basics of typography, page structure, and sequencing. Credits: 3.00

AD 22800 - Visual Communication Design Computing I

Credit Hours: 3.00. An introductory course in visual design computing programs used in the study and production of visual communication design.
Learning Outcomes: 1. Develop skills using industry standard design software specifically Adobe Illustrator and Adobe InDesign. 2. Experiment with and iterate through image-making utilizing various methods and vector-based digital techniques. 3. Strengthen conceptual image-making skills. 4. Increase ability to generate and choose intensely metaphoric imagery to enhance visual communication. 5. Understand and use design terminology and design principles. 6. Strengthen attention to detail and craft

knowledge. Credits: 3.00

AD 23400 - Art And Design Internship Preparation

Credit Hours: 1.00. Introduction and preparation for Art & Design Internship experience. Students will develop a resume, cover letter, and other resources in their search for a suitable internship placement.

Learning Outcomes: 1. Students will have the opportunity for design work experience from the internship program that will familiarize the students with the culture and environment of the professional studio and professional practice. Credits: 1.00

AD 39500 - History Of Design (UCC: STS)

Credit Hours: 3.00. A survey of the historical development of design from the industrial revolution to the present that examines the influence of new technologies, materials, and style on design practice as well as the role of design in shaping the technologies and things of everyday life. Throughout the course, students will analyze design within the broader social, cultural, and political context of production, consumption, and use.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Identify a range of styles from the 18th century to the present. 2. Critically analyze primary source material (artifacts/designed objects, images, and text). 3. Discuss important developments in the history of design. 4. Discuss the social, political, cultural, economic and technological context of design production, consumption, and use. Credits: 3.00

16-19 Credits

Spring 2nd Year

AD 20600 - Studio In Visual Communication Design

Credit Hours: 3.00. Investigation of visual communication design theory, history, skills, and methodology, as well as preparation of art and mechanicals for graphic arts reproduction.

Learning Outcomes: 1. Transition from fundamental design skills to advanced graphic design applications. 2. Introduce layout/grid systems and their theoretical and practical applications. 3. Introduce students to the fundamentals of typography, exploring the relationships between type and image. 4. Increase proficiency in graphic software in the context of graphic design projects. 5. Gain a better understanding of the history of graphic design. 6. Develop more advanced problem-solving skills. 7. Prepare students for the Sophomore Review, and advanced junior- and senior-level design courses. Credits: 3.00

AD 22900 - Visual Communication Design Computing II

Credit Hours: 3.00. An intermediate course in visual design computing programs used in the study and production of visual communication design.

Learning Outcomes: 1. Develop skills using industry standard design software specifically Adobe Photoshop and Adobe XD. 2. Experiment with and iterate through image-making utilizing various methods and pixel-based digital techniques. 3. Strengthen conceptual image-making skills. 4. Understand and use design terminology and design principles. 5. Strengthen attention to detail and craft knowledge. Credits: 3.00

AD 22901 - Visual Communication Design Sophomore Review

Credit Hours: 0.00. Sophomore Review is a qualifying assessment supervised by faculty members to monitor student learning and progress. Students who do not pass the review will be ineligible for Visual Communication Design upper-level studio courses. Permission from department required.

Learning Outcomes: 1. Present selected projects and design portfolio to the Visual Communication Design faculty members. 2. Be assessed by faculty to identify the student's strengths, abilities, and areas of needed improvement. Credits: 0.00

15-16 Credits

Fall 3rd Year

AD 31800 - Fundamentals Of Interactive Multimedia Design

Credit Hours: 3.00. Fundamental issues of interactive multimedia design: Animation, interface design, and experience design from a visual communications perspective.

Learning Outcomes: 1. Produce proposals, storyboards, and project reports. 2. Propose and implement visual communication design strategies for digital media projects. 3. Produce design solutions by applying compositional, typographical, and design elements and principles of new media design. 4. Apply design skills associated with the use of interface design (GUI). 5. Apply design skills associated with the use of digital color theory based on the RGB and HSB Color systems. 6. Apply design skills associated with the use of experience design concepts. 7. Continue to develop computing skills (Illustrator, Photoshop, AdobeAero, etc.). 8. Develop design skills to work collaboratively, presential, and remotely. 9. Develop illustrational and story-telling design abilities. Credits: 3.00

AD 33200 - Visual Communication Design I

Credit Hours: 3.00. A course designed to introduce the student to projects that will develop an understanding of basic problem-solving techniques in the areas of publication and promotional graphics. Acceptance into professional VCD sequence via mandatory portfolio review.

Learning Outcomes: 1. Provide opportunities to explore the elements and principles of design and process as they relate to typography and letter forms. 2. Engage students' conceptual skills in branding design. 3. Further strengthen students' ability to create effective visual communications by way of complex problems emphasizing critical thinking, design process and presentation. Credits: 3.00

AD 38300 - Modern Art (UCC: HUM)

Credit Hours: 3.00. A comprehensive overview of Modern art from Impressionism to Surrealism, designed to help students understand the radical transformations art and society underwent in that period, and reflect upon the influence of new technologies, scientific discoveries, and world events on artistic creation.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Recognize artworks, artists, and movements, list specific information that distinguishes them, and recall their major contributions. 2. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 3. Compare and contrast them by perceiving and reflecting on their differences and similarities. 4. Interpret statements made about Modern art by contextualizing and analyzing and selecting artworks to illustrate your comments. 5. Apply the knowledge acquired to analyze and write about artworks not studied in class. 6. Develop analytical and writing skills through weekly writing exercises. Credits: 3.00

18 Credits

Spring 3rd Year

AD 31900 - Web Design For Visual Communication

Credit Hours: 3.00. Introduction to web-based design from a visual communication application.

Learning Outcomes: 1. Design web application prototypes by proposing creative concepts and producing media assets. 2. Apply visual storytelling to web design by incorporating visual communication strategies. 3. Demonstrate teamwork skills in web design by participating in group discussions while sharing ideas and receiving feedback for project improvement. Credits: 3.00

AD 36600 - Visual Communication Design II

Credit Hours: 3.00. Field trips may be required. The study of corporate graphics and visual identity programs.

Learning Outcomes: 1. Build expertise in problem-solving and expanding a brand visually based on market research. 2. Practice synthesizing research, critical dialogue (feedback), and Critiques within an iterative design process. 3. Develop skills to construct/combine graphic form using various digital tools, software, and screen-based media as well as print and 3D objects. 4. Create system designs and brand identities. 5. Strengthen attention to detail and craft knowledge. 6. Strengthen ability to pitch ideas and create viable solutions for real-world clients. Credits: 3.00

12 Credits

Fall 4th Year

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 43100 - Visual Communication Design III

Credit Hours: 3.00. The advanced study of communication concepts of poster and poster application in current media.

Learning Outcomes: 1. Demonstrate the ability to initiate and develop creative concepts; evaluate creative work; apply current technology; and communicate effectively. Credits: 3.00

AD 43400 - Professional Practice For Visual Communication Designers

Credit Hours: 2.00. Specific professional practice topics for the visual communication designer. Topics include contracts, professional associations, ethics, portfolio and resume preparation, self-promotion and exhibition of creative work, the job market and the future of the profession. Field trips may be required.

Learning Outcomes: 1. Develop proficiency in the use of career search media and tools. 2. Develop a practical understanding of the visual communications job market. 3. Seek functional solutions that meet specific visual communication career goals 4. Develop an expanded ability to generate contacts and leads for employment or graduate school. 5. Strengthen student's design portfolio through review and organization of contents. Credits: 2.00

15-17 Credits

Spring 4th Year

AD 30400 - Video Art

Credit Hours: 3.00. Introduction to digital video as a creative medium for artistic expression. Students will record, digitize, edit and distribute digital video content and author a digital portfolio of their work in the form of an interactive DVD.

Learning Outcomes: 1. Analyze key ideas in the field of Video Art by preparing a research presentation on the practice of an individual video artist or collective. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Create a variety of video artworks by the

creative use of the video camera, editing strategies and postproduction techniques. Credits: 3.00

AD 43200 - Visual Communication Design IV

Credit Hours: 3.00. The study of product identity, packaging, and branding.

Learning Outcomes: 1. Demonstrate ability to initiate and develop creative concepts; present and evaluate creative work; apply current technology related to the profession. Credits: 3.00

AD 52000 - Student Visual Design Service

Credit Hours: 3.00. The course simulates the operation of a professional design studio affording the opportunity for hands-on experience in the development of a graphic product from concept to finish and include contact with clients, and printers.

Learning Outcomes: 1. Design and produce portfolio banner to be shown in the Senior Portfolio Exhibition. 2. Produce branding theme, schedule, marketing strategy, for the Senior Portfolio Exhibition. 3. Market, install and takedown the Senior Portfolio Exhibition. 4. Examine current market trends and assess their influence on magazine content and design decisions. 5. Create a comprehensive magazine design that showcases a range of skills in publication typography, page layout and image development. Credits: 3.00

14-17 Credits

Web Programming & Design, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (48 credits)

Required Major Courses (36 credits)

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

CGT 11800 - Fundamentals Of Imaging Technology

Credit Hours: 3.00. This course provides a foundation for the development and use of raster and vector images for a variety of industries. Full-color images and illustrations are produced using computer technologies, with a focus on both technical and aesthetic aspects. Topics include color theory and perception, surface and lighting analysis, rendering techniques, and technical characteristics.

Learning Outcomes: 1. Combine typography, images, colors, and other design elements to create organized visual relationships. 2. Communicate new ideas formulating them into visual concepts. 3. Apply the principles of color, resolution, and imaging formats effectively. 4. Adapt digital images for print, web, animation, and software apps. Credits: 3.00

CGT 14100 - Internet Foundations Technologies And Development

Credit Hours: 3.00. (CNIT 14100) The course explores the history, architecture, and development of the World Wide Web. Current tagging and scripting languages are covered in a tool-independent environment. Topics also include authoring tools, design, graphic and multimedia formats, and commerce, implementation, and security issues. PC literacy required.

Learning Outcomes: 1. Develop web content using client-side technologies. 2. Create

production documentation to meet project requirements. 3. Create media for successful inclusion on websites. 4. Deploy web application to common servers and mobile platforms. 5. Evaluate finished solution against criteria set forth in production-documentation for the provided project. Credits: 3.00

CGT 35300 - Principles Of Interactive And Dynamic Media

Credit Hours: 3.00. This course explores the development of interactive and dynamic media components for web and interactive media products. The course examines the design, creation and integration of 2D animation, 2D games, text, sound, video, programming, and databases for use in web and other interactive media.

Learning Outcomes: 1. Develop skills and proficiency in creating interactive components using HTML5, JavaScript libraries, and CSS. 2. Demonstrate understanding of JavaScript programming. 3. Develop beginning to moderately complex front-end designs. 4. Understand the emerging capabilities of delivering Web content. 5. Extend the ability to systematically develop content for the Web, from concept to implementation. Credits: 3.00

CGT 45600 - Advanced Web Programming, Development And Data Integration

Credit Hours: 3.00. This course presents the advanced technologies available for use on the World Wide Web and within corporate intranet environments. Emphasis and discussion is focused on the advantages and disadvantages of these technologies as well as on implementation to create unique solutions for business and industry. Strategies for planning, development, and implementation will be discussed and demonstrated. Significant time is spent on advanced programming and scripting as well as manipulation and visualization of data from various sources, including robust database management systems. Students are required to plan, design and implement a major project.

Learning Outcomes: 1. Demonstrate understanding of ASP.NET, C#, and the .NET Framework. 2. Create and compile advanced dynamic web projects using ASP.NET technology. 3. Demonstrate understanding of advanced database applications and SQL. 4. Show understanding of the logic behind advanced web applications. 5. Integrate front-end and back-end technologies in developing professional web applications. Credits: 3.00

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals, and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 37000 - Interactive Data Visualization

Credit Hours: 3.00. Data visualization is the art and science of putting quantitative numbers into pictorial or graphical format that are easy for users to understand, use, and take action upon the data. In this course, we will learn basic data visualization design principles, theories, data management skills, and fundamental web technologies to design and develop web based interactive date visualizations. The students will be able to design the proper visual representations of the data based on the data's characteristics, business needs, and prospective users.

Learning Outcomes: 1. Demonstrate understating of different types of data, their characteristics, relations, and business purpose. 2. Compare and choose proper visualization methods to represent the data based on the characteristic and purpose. 3. Apply perception theories and design principles in visualization design. 4. Utilize web toolkits and technologies to develop simple data visualization. 5. Develop an interaction information visualization system to represent data from different aspects. Credits: 3.00

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

CGT 41201 - Contemporary Problems In Applied Computer Graphics II

Credit Hours: 2.00. CGT 41201 is the second course in the CGT applied computer graphics capstone sequence with a focus on execution and evaluation of the senior capstone project. Emphasis will be placed on industry engagement for the execution of the project plan that was developed in CGT 41101. Students will work in teams to execute the project plan; develop and execute a project evaluation plan, and make a professional final presentation to industry members, faculty, and peers. Students will execute a project refinement process based on feedback received and incorporate that into a final presentation and project report. CGT 41201 will be taught in a seminar format with one meeting per week focused on project status checks, evaluation plan development and execution, and project presentations.

Learning Outcomes: 1. Execute a project plan to produce a substantial graphics product. 2. Develop and execute an evaluation plan of their capstone project. 3. Develop professional presentations incorporating external feedback and project results. 4. Produce a major project report for their capstone project, including project management, rationale, and substantial findings. Credits: 2.00

CGT 17208 - User Experience Design Studio I: Fundamentals (UCC: STS)

Credit Hours: 3.00. Introduction to the fundamental components of human-centered design, focusing on interactive computer systems. Students learn the basic tenets and methods of user-centered design, including usability and visual design principles, user research, and low-fidelity prototyping. The course is platform-independent and encourages students to experiment with new and emerging technologies.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Conduct basic analysis of situations, clients, and problems using data gathering and analysis techniques. 2. Articulate problem statements. 3. Create concepts that address the issues in the problem statement. 4. Demonstrate basic application of principles of visual and interaction design to create low-fidelity prototypes. 5. Apply the fundamental components of user-centered design. 6. Articulate the core values of user-centered design. Credits: 3.00

CGT 35600 - Web Programming, Development And Data Integration

Credit Hours: 3.00. A course focusing on the development of dynamic content and applications to facilitate information distribution. The course stresses development strategies for managing the rapidly changing information of corporations and organizations for just-in-time distribution, using authoring programs to create interactive multimedia products that utilize database management systems, file systems, and XML to provide a method for visualizing and manipulating that data. Significant time is spent on intermediate to advanced programming and scripting.

Learning Outcomes: 1. Demonstrate an understanding of how to use server-side

technology to develop dynamic database-driven websites and personalize content for users. 2. Integrate server-side and client-side technology in developing web applications. 3. Demonstrate an understanding of the logic behind web applications. 4. Create projects using server-side technologies to be used in a database-driven Web project. 5. Show understanding of basic database design, theory, and application. Credits: 3.00

CGT 11505 - Scripting And Computational Thinking

Credit Hours: 3.00. This course introduces the students to computer programming, computational thinking, and the mathematics of graphics programming. The act of programming is viewed through the lenses of Decomposition, Pattern Matching, Abstraction and Algorithms and then applied to writing some simple games in current scripting languages. No prior programming experience is required. The principal objective of the course is to provide a working knowledge of programming fundamentals to game designers and artists as well as to prepare game programmers for more advanced game programming coursework. As computer programming is an applied discipline, this course uses an active learning approach that combines lecture time with extensive lab assignments.

Learning Outcomes: 1. Apply the elements of computational thinking to programming tasks. 2. Use scripting languages in a well-structured way to implement math-based graphical solutions. 3. Use scripting languages to create gameplay within a game engine. 4. Use the mathematics of 2D and 3D graphics programming. Credits: 3.00

CGT 25300 - Front-End Web Development

Credit Hours: 3.00. This is a course in Front-End Web Development that emphasizes the importance of JavaScript, its libraries, and other front-end technologies in crafting engaging and interactive user interfaces. The JavaScript programming language has been the backbone of modern front-end web development. It enables developers to create dynamic content that enriches the user experience and interaction on websites. This course will cover the fundamental ideas of JavaScript. Students will learn to use the Document Object Model (DOM) in JavaScript to make web pages that can update and change in real-time. Students will also explore various JavaScript libraries or other front-end technologies that help streamline the development process and allow for the creation of complex user interfaces with less code.

Learning Outcomes: 1. Develop skills and proficiency in creating professional interactive components using HTML, JavaScript, JavaScript libraries, and CSS. 2. Demonstrate understanding of front-end programming. 3. Create interactive front-end user interfaces for websites. 4. Systematically develop content for the Web, from concept to implementation. 5. Further enhance cognitive skills in problem-solving, debugging, and programming. Credits: 3.00

Major Selectives* - Choose three courses (12 credits)

Other Departmental/Program Course Requirements (61 credits)

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective,

industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation,

international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Sample 4-Year Plan

Fall 1st Year

CGT 11800 - Fundamentals Of Imaging Technology

Credit Hours: 3.00. This course provides a foundation for the development and use of raster and vector images for a variety of industries. Full-color images and illustrations are produced using computer technologies, with a focus on both technical and aesthetic aspects. Topics include color theory and perception, surface and lighting analysis, rendering techniques, and technical characteristics.

Learning Outcomes: 1. Combine typography, images, colors, and other design elements to create organized visual relationships. 2. Communicate new ideas formulating them into visual concepts. 3. Apply the principles of color, resolution, and imaging formats effectively. 4. Adapt digital images for print, web, animation, and software apps. Credits: 3.00

CGT 14100 - Internet Foundations Technologies And Development

Credit Hours: 3.00. (CNIT 14100) The course explores the history, architecture, and development of the World Wide Web. Current tagging and scripting languages are covered in a tool-independent environment. Topics also include authoring tools, design, graphic and multimedia formats, and commerce, implementation, and security issues. PC literacy required.

Learning Outcomes: 1. Develop web content using client-side technologies. 2. Create production documentation to meet project requirements. 3. Create media for successful inclusion on websites. 4. Deploy web application to common servers and mobile platforms. 5. Evaluate finished solution against criteria set forth in production-documentation for the provided project. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CGT 11505 - Scripting And Computational Thinking

Credit Hours: 3.00. This course introduces the students to computer programming, computational thinking, and the mathematics of graphics programming. The act of programming is viewed through the lenses of Decomposition, Pattern Matching, Abstraction and Algorithms and then applied to writing some simple games in current scripting languages. No prior programming experience is required. The principal objective of the course is to provide a working knowledge of programming fundamentals to game designers and artists as well as to prepare game programmers for more advanced game programming coursework. As computer programming is an applied discipline, this course uses an active learning approach that combines lecture time with extensive lab assignments.

Learning Outcomes: 1. Apply the elements of computational thinking to programming tasks. 2. Use scripting languages in a well-structured way to implement math-based graphical solutions. 3. Use scripting languages to create gameplay within a game engine. 4. Use the mathematics of 2D and 3D graphics programming. Credits: 3.00

15 Credits

Spring 1st Year

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting

appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CGT 17208 - User Experience Design Studio I: Fundamentals (UCC: STS)

Credit Hours: 3.00. Introduction to the fundamental components of human-centered design, focusing on interactive computer systems. Students learn the basic tenets and methods of user-centered design, including usability and visual design principles, user research, and low-fidelity prototyping. The course is platform-independent and encourages students to experiment with new and emerging technologies.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Conduct basic analysis of situations, clients, and problems using data gathering and analysis techniques. 2. Articulate problem statements. 3. Create concepts that address the issues in the problem statement. 4. Demonstrate basic application of principles of visual and interaction design to create low-fidelity prototypes. 5. Apply the fundamental components of user-centered design. 6. Articulate the core values of user-centered design. Credits: 3.00

15 Credits

Fall 2nd Year

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

CGT 25300 - Front-End Web Development

Credit Hours: 3.00. This is a course in Front-End Web Development that emphasizes the importance of JavaScript, its libraries, and other front-end technologies in crafting engaging and interactive user interfaces. The JavaScript programming language has been the backbone of modern front-end web development. It enables developers to create dynamic content that enriches the user experience and interaction on websites. This course will cover the fundamental ideas of JavaScript. Students will learn to use the Document Object Model (DOM) in JavaScript to make web pages that can update and change in real-time. Students will also explore various JavaScript libraries or other front-end technologies that help streamline the development process and allow for the creation of complex user interfaces with less code.

Learning Outcomes: 1. Develop skills and proficiency in creating professional interactive components using HTML, JavaScript, JavaScript libraries, and CSS. 2. Demonstrate understanding of front-end programming. 3. Create interactive front-end user interfaces for websites. 4. Systematically develop content for the Web, from concept to implementation. 5. Further enhance cognitive skills in problem-solving, debugging, and programming. Credits: 3.00

16 Credits

Spring 2nd Year

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals, and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 37000 - Interactive Data Visualization

Credit Hours: 3.00. Data visualization is the art and science of putting quantitative numbers into pictorial or graphical format that are easy for users to understand, use, and take action upon the data. In this course, we will learn basic data visualization design principles, theories, data management skills, and fundamental web technologies to design and develop web based interactive date visualizations. The students will be able to design the proper visual representations of the data based on the data's characteristics, business needs, and prospective users.

Learning Outcomes: 1. Demonstrate understating of different types of data, their characteristics, relations, and business purpose. 2. Compare and choose proper visualization methods to represent the data based on the characteristic and purpose. 3. Apply perception theories and design principles in visualization design. 4. Utilize web toolkits and technologies to develop simple data visualization. 5. Develop an interaction information visualization system to represent data from different aspects. Credits: 3.00

16 Credits

Fall 3rd Year

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical,

and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

CGT 35600 - Web Programming, Development And Data Integration

Credit Hours: 3.00. A course focusing on the development of dynamic content and applications to facilitate information distribution. The course stresses development strategies for managing the rapidly changing information of corporations and organizations for just-in-time distribution, using authoring programs to create interactive multimedia products that utilize database management systems, file systems, and XML to

provide a method for visualizing and manipulating that data. Significant time is spent on intermediate to advanced programming and scripting.

Learning Outcomes: 1. Demonstrate an understanding of how to use server-side technology to develop dynamic database-driven websites and personalize content for users. 2. Integrate server-side and client-side technology in developing web applications. 3. Demonstrate an understanding of the logic behind web applications. 4. Create projects using server-side technologies to be used in a database-driven Web project. 5. Show understanding of basic database design, theory, and application. Credits: 3.00

15 Credits

Spring 3rd Year

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

CGT 45600 - Advanced Web Programming, Development And Data Integration

Credit Hours: 3.00. This course presents the advanced technologies available for use on the World Wide Web and within corporate intranet environments. Emphasis and discussion is focused on the advantages and disadvantages of these technologies as well as on implementation to create unique solutions for business and industry. Strategies for planning, development, and implementation will be discussed and demonstrated. Significant time is spent on advanced programming and scripting as well as manipulation and visualization of data from various sources, including robust database management systems. Students are required to plan, design and implement a major project.

Learning Outcomes: 1. Demonstrate understanding of ASP.NET, C#, and the .NET Framework. 2. Create and compile advanced dynamic web projects using ASP.NET technology. 3. Demonstrate understanding of advanced database applications and SQL. 4. Show understanding of the logic behind advanced web applications. 5. Integrate front-end and back-end technologies in developing professional web applications. Credits: 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

15 Credits

Fall 4th Year

CGT 35300 - Principles Of Interactive And Dynamic Media

Credit Hours: 3.00. This course explores the development of interactive and dynamic media components for web and interactive media products. The course examines the design, creation and integration of 2D animation, 2D games, text, sound, video, programming, and databases for use in web and other interactive media.

Learning Outcomes: 1. Develop skills and proficiency in creating interactive components using HTML5, JavaScript libraries, and CSS. 2. Demonstrate understanding of JavaScript programming. 3. Develop beginning to moderately complex front-end designs. 4. Understand the emerging capabilities of

delivering Web content. 5. Extend the ability to systematically develop content for the Web, from concept to implementation. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

16 Credits

Spring 4th Year

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 41201 - Contemporary Problems In Applied Computer Graphics II

Credit Hours: 2.00. CGT 41201 is the second course in the CGT applied computer graphics capstone sequence with a focus on execution and evaluation of the senior capstone project. Emphasis will be placed on industry engagement for the execution of the project plan that was developed in CGT 41101. Students will work in teams to execute the project plan; develop and execute a project evaluation plan, and make a professional final presentation to industry members, faculty, and peers. Students will execute a project refinement process based on feedback received and incorporate that into a final presentation and project report. CGT 41201 will be taught in a seminar format with one meeting per week focused on project status checks, evaluation plan development and execution, and project presentations.

Learning Outcomes: 1. Execute a project plan to produce a substantial graphics product. 2. Develop and execute an evaluation plan of their capstone project. 3. Develop professional presentations incorporating external feedback and project results. 4. Produce a major project report for their capstone project, including project management, rationale, and substantial findings. Credits: 2.00

12 Credits

Wildlife, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (63-64 credits)

Required Major Courses (55-56 credits)

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

FNR 30500 - Conservation Genetics

Credit Hours: 3.00. Fundamentals and principles of genetics, including Mendelian inheritance, genetic mapping & linkage, DNA fingerprinting, phylogeography, and speciation. Topics cover the theoretical and empirical evidence illustrating how mutation, migration, drift, and natural selection influence the evolution of genes in natural populations. Designed for ecologists and natural resource professionals.

Learning Outcomes: 1. Develop conceptual understanding of modern genetics and the use of molecular markers in studies of wildlife/fisheries/forest management, ecology, and evolutionary biology. 2. Explore how genetic information is used in sportfish stockings, wildlife reintroductions, and selective harvest of native trees. 3. Recognize and predict the genetic ramifications of these artificial activities. 4. Compare these effects to the consequences of natural disturbances. (e.g., glaciations). Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 34100 - Wildlife Habitat Management

Credit Hours: 3.00. Principles, practices, and justification of the habitat management approach to the manipulation of wildlife populations.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 34800 - Wildlife Investigational Techniques

Credit Hours: 3.00. An introduction to current wildlife research techniques that are used in managing populations and habitats. Laboratory and field exercises are used to gather and analyze data; basic data analysis and written dissemination of results is emphasized.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37300 - Wildlife Practicum

Credit Hours: 4.00. Specific field instruction in wildlife science and management. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Able to identify the common birds seen and heard on the campus of Covenant Point and surrounding areas. 2. Able to set up mist nets, remove birds safely from the nets and take down and store the equipment properly. 3. Able to safely handle and measure birds, mark them with leg bands and record appropriate data. 4. Create and maintain a field notebook of their observations and activities during the week. 5. Able to lay out a small mammal trapping grid and properly place traps. 6. Able to remove small mammals from live traps, mark those animals, measure them for identification and release them. 7. Able to operate a telemetry to receiver to estimate the location of a radio collar via triangulation and use homing technique to find that transmitter. 8. Able to identify bat roosting habitat, use acoustic recorders to detect bats and use software to identify bat species from recorded calls. 9. Able to track small mammals using both spool and line and fluorescent powder techniques. 10. Able to develop a null hypothesis about habitat selection and use a chi square test for independence to accept or reject that null hypothesis. 11. Perform current techniques for sampling herpetofanua and macroinvertebrates. 12. Describe and perform herpetofanual marking techniques. 13. Identify

anuran species by call. 14. Identify and dissect larval amphibians. 15. Identify macroinvertebrate species in lentic and lotic habitats. 16. Describe common diseases of amphibians. Credits: 4.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 44700 - Vertebrate Population Dynamics

Credit Hours: 4.00. Estimation and analysis of populations; computer modeling of sampling methods, population dynamics, population and habitat management. Knowledge of computer programming not required.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 4.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 52700 - Ecotoxicology

Credit Hours: 2.00. This course covers theoretical and applied approaches to the science of ecotoxicology, including application of the tools and procedures used to understand toxicant fate and effects in free-ranging animals and ecosystems. Students are expected to be knowledgeable in chemistry, biology, and animal physiology.

Learning Outcomes: 1. Review of basic ecotoxicological principles. 2. Know the various types, sources and environmental fate and effects of contaminants. 3. Know the modes of toxicant uptake, transformation, storage and depuration. 4. Know the dose/concentration-response, exposure routes. 5. Know the factors that influence toxicity. 6. Know the contaminant distribution, bioaccumulation, and

biomagnifications. 7. Know the biomarkers of exposure and effects: Molecular to ecosystem-levels. 8. Know the basic principles in aquatic toxicity testing. 9. Know the common toxicity assays using invertebrates, fish, amphibians, birds, and mammals (in vitro, in vivo, mesocosms, and in situ bioassays). 10. Know the field case studies: Complex effluents (sewage and paper mills); Persistent Bioaccumulative Toxicants (PCBs, PAHs, dioxins); Endocrine disrupting chemicals; Heavy metals; Nutrients and pathogens. 11.Statistical analyses of toxicity data. 12.Introduction to ecological risk assessment. Credits: 2.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 52800 - Wildlife And Environmental Forensics

Credit Hours: 2.00. Theoretical and applied approaches to the science of wildlife and environmental forensics. General introduction on environmental forensics followed by discussion of different types of investigations. Includes application of tools and procedures used to solve crimes, including morphological, chemical and biological analysis of evidence. All material will be discussed in relation to criminal investigation. (Offered in even-numbered years)

Learning Outcomes: 1. Explain the history and scope of environmental forensics. 2. Explain the critical steps needed during a crime scene investigation. 3. Apply field and laboratory techniques used for crime scene investigations. Credits: 2.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

FNR 46500 - History And Role Of Hunting In North American Wildlife Conservation

Credit Hours: 1.00. Introduction to the social, economic and wildlife management importance of hunting and how it relates to North American wildlife conservation. History of hunting and the North American Model of wildlife conservation, contrasted with those of European nations. Students will be required to participate in or observe hunting-related activities outside of class. This exercise is conducted off-campus on local Purdue-maintained properties.

Learning Outcomes: 1. Understand the history and role of hunting in North America. 2. Understand the economic impacts of hunting to wildlife conservation. 3. Examine how hunting influences wildlife management. 4. Examine the relationship of hunter demographics, ethics, public perception, and animal rights issues to hunting. 5. Apply the tenets of the North American Model of Wildlife Conservation to management and conservation challenges. 6. Experience hunting through first-hand activities. 7. Articulate the impacts of hunting to peers and constituents. Credits: 1.00

FNR 38400 - Statistics For Natural Resources

Credit Hours: 3.00. Methods of statistical analysis and modeling for data and problems encountered in natural resources conservation, science and management. Emphasis is on application of methods and interpretation of results in the context of natural resource problems. Topics include introductory sampling design, exploratory analyses, general linear models, generalized linear models, introduction to resampling methods, likelihood-based model selection, and model goodness-of-fit.

Learning Outcomes: 1. Describe the importance of proper design and analysis when seeking answers/solutions to a broad array of natural

resources issues. 2. Independently assess the relative merits of multiple analysis approaches when presented with data collected to improve our understanding of a particular process or pattern in natural resources. 3. Fit and evaluate regression models for quantitative and categorical response variables with an appropriate underlying probabilistic structure. Credits: 3.00

FNR 52900 - Disease Ecology

Credit Hours: 3.00. Study of the ecological and evolutionary complexity inherent to host-pathogen interactions. Includes case studies from a diverse array of systems, including plants, animals, aquatic and terrestrial systems. Emphasis is on the interactions between multiple hosts and pathogens within complex, dynamic environments. Introduction to parasite and pathogen diversity, host-pathogen coevolution, community ecology and the importance of pathogens in conservation and management.

Learning Outcomes: 1. Evaluate the roles played by the diversity of parasites and pathogens found in complex natural systems. 2. Apply the foundational principles of disease ecology - the importance of hosts, pathogens, and the environment - to understanding disease dynamics in natural systems. 3. Evaluate the strengths and weaknesses of different modeling approaches in disease ecology. 4. Understand how disease models are used in management and conservation. 5. Apply both ecological and evolutionary theory to examine the impact of infectious disease on host populations, communities, and ecosystems. 6. Demonstrate an understanding of patterns in pathogen diversity and abundance across landscape to regional scales. 7. Articulate understanding of disease ecology through written and oral communication. 8. Demonstrate an understanding of the scientific literature and an ability to critically evaluate this research for an interdisciplinary topic. Credits: 3.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance.

Learning Outcomes: 1. Able to understand the theory, applications (how theory is applied) can be used to study landscape and larger scale problems related to natural resources. 2. Know what a landscape is. 3. Know the methods to quantify landscape pattern. 4. Understand important terms in landscape ecology and biogeography. 5. Understand the causes (natural and human) of landscape pattern. 6. Understand the threats to biodiversity locally and globally. 7. Able to explain the theory of island biogeography. 8. Define sustainability and know how to calculate an ecological footprint. Credits: 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.

Learning Outcomes: 1. Know methods to quantify landscape pattern. 2. Use GIS to conduct simple and moderately complex analyses using common public domain

databases. 3. Know where to get important geospatial data from the internet. 4. Work with US government data and understand the various levels of aggregation of spatial data. Credits: 1.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

Major Selectives (8 credits)

Other Departmental /Program Course Requirements (50-52 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the

plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the

application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities,

and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to

species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of

functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

Electives (4-7 credits)

Supplemental List

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including

diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions.

Credits: 4.00

14-16 Credits

Spring 1st Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team.
Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form

opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

16 Credits

Fall 2nd Year

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a

combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

13 Credits

Spring 2nd Year

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

FNR 34800 - Wildlife Investigational Techniques

Credit Hours: 3.00. An introduction to current wildlife research techniques that are used in managing populations and habitats. Laboratory and field exercises are used to gather and analyze data; basic data analysis and written dissemination of results is emphasized.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and

interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data

concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

15 Credits

Summer Session

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37300 - Wildlife Practicum

Credit Hours: 4.00. Specific field instruction in wildlife science and management. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Able to identify the common birds seen and heard on the campus of Covenant Point and surrounding areas. 2. Able to set up mist nets, remove birds safely from the nets and take down and store the equipment properly. 3. Able to safely handle and measure birds, mark them with leg bands and record appropriate data. 4. Create and maintain a field notebook of their observations and activities during the week. 5. Able to lay out a small mammal trapping grid and properly place traps. 6. Able to remove small mammals from live traps, mark those animals, measure them for identification and release them. 7. Able to operate a telemetry to receiver to estimate the location of a radio collar via triangulation and use homing technique to find that transmitter. 8. Able to identify bat roosting habitat, use acoustic recorders to detect bats and use software to identify bat species from recorded calls. 9. Able to track small mammals using both spool and line and fluorescent powder techniques. 10. Able to develop a null hypothesis about habitat selection and use a chi square test for independence to accept or reject that null hypothesis. 11. Perform current techniques for sampling herpetofanua and macroinvertebrates. 12. Describe and perform herpetofanual marking techniques. 13. Identify anuran species by call. 14. Identify and dissect larval amphibians. 15. Identify macroinvertebrate species in lentic and lotic habitats. 16. Describe common diseases of

amphibians. Credits: 4.00

6 Credits

Fall 3rd Year

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 34100 - Wildlife Habitat Management

Credit Hours: 3.00. Principles, practices, and justification of the habitat management approach to the manipulation of wildlife populations.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

15 Credits

Spring 3rd Year

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize

case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 38400 - Statistics For Natural Resources

Credit Hours: 3.00. Methods of statistical analysis and modeling for data and problems encountered in natural resources conservation, science and management. Emphasis is on application of methods and interpretation of results in the context of natural resource problems. Topics include introductory sampling design, exploratory analyses, general linear models, generalized linear models, introduction to resampling methods, likelihood-based model selection, and model goodness-of-fit.

Learning Outcomes: 1. Describe the importance of proper design and analysis when seeking answers/solutions to a broad array of natural resources issues. 2. Independently assess the relative merits of multiple analysis approaches when presented with data collected to improve our understanding of a particular process or pattern in natural resources. 3. Fit and evaluate regression models for quantitative and categorical response variables with an appropriate underlying probabilistic structure. Credits: 3.00

13-14 Credits

Fall 4th Year

FNR 44700 - Vertebrate Population Dynamics

Credit Hours: 4.00. Estimation and analysis of populations; computer modeling of sampling methods, population dynamics, population and habitat management. Knowledge of computer programming not required.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 4.00

FNR 52700 - Ecotoxicology

Credit Hours: 2.00. This course covers theoretical and applied approaches to the science of ecotoxicology, including application of the tools and procedures used to understand toxicant fate and effects in free-ranging animals and ecosystems. Students are expected to be knowledgeable in chemistry, biology, and animal physiology.

Learning Outcomes: 1. Review of basic ecotoxicological principles. 2. Know the various types, sources and environmental fate and effects of contaminants. 3. Know the modes of toxicant uptake, transformation, storage and depuration. 4. Know the dose/concentration-response, exposure routes. 5. Know the factors that influence toxicity. 6. Know the contaminant distribution, bioaccumulation, and biomagnifications. 7. Know the biomarkers of exposure and effects: Molecular to ecosystem-levels. 8. Know the basic principles in aquatic toxicity testing. 9. Know the common toxicity assays using invertebrates, fish, amphibians,

birds, and mammals (in vitro, in vivo, mesocosms, and in situ bioassays). 10. Know the field case studies: Complex effluents (sewage and paper mills); Persistent Bioaccumulative Toxicants (PCBs, PAHs, dioxins); Endocrine disrupting chemicals; Heavy metals; Nutrients and pathogens. 11.Statistical analyses of toxicity data. 12.Introduction to ecological risk assessment. Credits: 2.00

FNR 52800 - Wildlife And Environmental Forensics

Credit Hours: 2.00. Theoretical and applied approaches to the science of wildlife and environmental forensics. General introduction on environmental forensics followed by discussion of different types of investigations. Includes application of tools and procedures used to solve crimes, including morphological, chemical and biological analysis of evidence. All material will be discussed in relation to criminal investigation. (Offered in even-numbered years)

Learning Outcomes: 1. Explain the history and scope of environmental forensics. 2. Explain the critical steps needed during a crime scene investigation. 3. Apply field and laboratory techniques used for crime scene investigations. Credits: 2.00

FNR 46500 - History And Role Of Hunting In North American Wildlife Conservation

Credit Hours: 1.00. Introduction to the social, economic and wildlife management importance of hunting and how it relates to North American wildlife conservation. History of hunting and the North American Model of wildlife conservation, contrasted with those of European nations. Students will be required to participate in or observe hunting-related activities outside of class. This exercise is conducted off-campus on local Purdue-maintained properties.

Learning Outcomes: 1. Understand the history and role of hunting in North America. 2. Understand the economic impacts of hunting to wildlife conservation. 3. Examine how hunting influences wildlife management. 4. Examine the relationship of hunter demographics, ethics, public perception, and animal rights issues to hunting. 5. Apply the tenets of the North American Model of Wildlife Conservation to management and conservation challenges. 6. Experience hunting through first-hand activities. 7. Articulate the impacts of hunting to peers and constituents. Credits: 1.00

FNR 52900 - Disease Ecology

Credit Hours: 3.00. Study of the ecological and evolutionary complexity inherent to host-pathogen interactions. Includes case studies from a diverse array of systems, including plants, animals, aquatic and terrestrial systems. Emphasis is on the interactions between multiple hosts and pathogens within complex, dynamic environments. Introduction to parasite and pathogen diversity, host-pathogen coevolution, community ecology and the importance of pathogens in conservation and management.

Learning Outcomes: 1. Evaluate the roles played by the diversity of parasites and pathogens found in complex natural systems. 2. Apply the foundational principles of disease ecology - the importance of hosts, pathogens, and the environment - to understanding disease dynamics in natural systems. 3. Evaluate the strengths and weaknesses of different modeling approaches in disease ecology. 4. Understand how disease models are used in management and conservation. 5. Apply both ecological and evolutionary theory to examine the impact of infectious disease on host populations, communities, and ecosystems. 6. Demonstrate an understanding of patterns in pathogen diversity and abundance across landscape to regional scales. 7. Articulate understanding of disease ecology through written and oral communication. 8. Demonstrate an understanding of the scientific literature and an ability to critically evaluate this research for an interdisciplinary topic. Credits: 3.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at

subcontinental to global) for the purposes of managing plants and animals of global importance.

Learning Outcomes: 1. Able to understand the theory, applications (how theory is applied) can be used to study landscape and larger scale problems related to natural resources. 2. Know what a landscape is. 3. Know the methods to quantify landscape pattern. 4. Understand important terms in landscape ecology and biogeography. 5. Understand the causes (natural and human) of landscape pattern. 6. Understand the threats to biodiversity locally and globally. 7. Able to explain the theory of island biogeography. 8. Define sustainability and know how to calculate an ecological footprint. Credits: 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.

Learning Outcomes: 1. Know methods to quantify landscape pattern. 2. Use GIS to conduct simple and moderately complex analyses using common public domain databases. 3. Know where to get important geospatial data from the internet. 4. Work with US government data and understand the various levels of aggregation of spatial data. Credits: 1.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

13-16 Credits

Spring 4th Year

FNR 30500 - Conservation Genetics

Credit Hours: 3.00. Fundamentals and principles of genetics, including Mendelian inheritance, genetic mapping & linkage, DNA fingerprinting, phylogeography, and speciation. Topics cover the theoretical and empirical evidence illustrating how mutation, migration, drift, and natural selection influence the evolution of genes in natural populations. Designed for ecologists and natural resource professionals.

Learning Outcomes: 1. Develop conceptual understanding of modern genetics and the use of molecular markers in studies of wildlife/fisheries/forest management, ecology, and evolutionary biology. 2. Explore how genetic information is used in sportfish stockings, wildlife reintroductions, and selective harvest of native trees. 3. Recognize and predict the genetic ramifications of these artificial activities. 4. Compare these effects to the consequences of natural disturbances. (e.g., glaciations). Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness;

determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

12 Credits

Women's, Gender & Sexuality Studies, BA

About the Program

Degree Requirements

Departmental/Program Major Courses (24 credits)

A. Women's Studies Required Courses (9 credits)

WGSS 48000 - Feminist Theory

Credit Hours: 3.00. Intensive study of a variety of contemporary and international feminist theories from an interdisciplinary perspective. Provides an overview of major trends, critical approaches, and diverse viewpoints in the field of feminist theory.

Credits: 3.00

WGSS 38000 - Comparative Studies In Gender And Culture (UCC: BSS)

Credit Hours: 3.00. This course expands students' understanding of gender issues by exploring the multicultural diversity of women's lives. It examines how race, class, sexuality, and culture interact and shape society and ecology in the United States and in a global context.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the diversity of feminist thought within the U.S. and globally. 2. Summarize the following concepts: 1) sex and gender; 2) social construction and essentialism; 3) oppression; 4) privilege; 6) resistance and social activism. 3. Analyze how gender operates as system of social stratification and differentiation in major arenas of social life such as home and family, work, politics, education, and sexuality across various cultural contexts.

4. Define some of the multi and trans-cultural interactions among gender, race, class, sexuality, and national belonging and some of the ways in which ""woman/women"" and ""man/men"" is a constructed category that is historically and culturally shaped. 5. Demonstrate an understanding of activist awareness and commitment to women's and LGBTQ+ issues from a multi/trans-cultural and global perspective. 6. Make explicit connections between matters discussed in this class and the events and interactions of your daily life. Credits: 3.00

WGSS 28000 - Women's, Gender, And Sexuality Studies: An Introduction (UCC: BSS/HUM)

Credit Hours: 3.00. An introductory survey of the concepts and research data in the new scholarship on women. Topics covered include biology, sexuality, socialization, family and work, creativity, and politics.

University Core Curriculum (UCC): (UCC: BSS/HUM) Credits: 3.00

B. Women's Studies Selectives (9 credits)

WGSS 49900 - Independent Study In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of the instructor in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 49200 - Practicum In Women's, Gender, and Sexuality Studies

Credit Hours: 2.00 to 4.00. This course is designed to integrate knowledge derived from women's studies scholarship with practical experience. Students will define their own projects in consultation with women's studies faculty. Periodic conferences and written reports required. Permission of instructor required.

Credits: 2.00 to 4.00

WGSS 48300 - Feminisms In Global Perspective

Credit Hours: 3.00. Explores feminist struggles through the writings of First and Third World feminist scholars. Focuses on feminist projects within and against colonial, nationalist, religious and global contexts. Includes Third World feminist critiques of Western feminisms.

Credits: 3.00

WGSS 48200 - Interdisciplinary Studies In Sexuality

Credit Hours: 3.00. This course offers an interdisciplinary introduction to recent work in lesbian and gay studies in various fields, including literature, history, film, cultural theory, medicine, law, and studies of sexuality.

Learning Outcomes: 1. Develop an in-depth understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally. 4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

WGSS 38300 - Women, Work, And Labor

Credit Hours: 3.00. Examines race, class and gender issues as they affect working women in America. Covering women's work from domestic labor to informal economies to factories, topics include women's participation in trade unions, wage inequalities, family leave policies and sexual harassment.

Learning Outcomes: 1. Have acquired a broad comprehension of the work, including economic activity often not recognized as "work", that women typically have performed or is typically associated with women, world-wide and since the onset of industrialization. 2. Be capable of evaluating current global economic and cultural systems that impact what kinds of labor contemporary women perform, the conditions under which they work, and the nature of the gendered systems of labor that prevail in the U.S. and elsewhere. 3. Gain appreciation for the significance of women's unpaid or underpaid care-work, relational work, affective labor, and the "reproductive" labor underpinning global capitalism and industrialism. 4. Place their own personal lives and contexts within an analytical framework informed by feminist, Marxist, and intersectional perspectives on work and labor. Credits: 3.00

WGSS 38200 - Love, Sex And Sexuality

Credit Hours: 3.00. Explores intimate relationships and marriage practices in Western and non-Western societies from a historical and comparative perspective. Examines the changes in love and marriage in Greco-Roman societies, medieval and modern Europe, China, India and the Muslim world, among others.

Credits: 3.00

WGSS 38100 - Women Of Color In The United States

Credit Hours: 3.00. Explores the diversity of racial and ethnic groups in the United States with a particular emphasis on the histories, experiences, and cultural contributions of women of color. Provides a broad introduction to the intersections of gender, race and ethnicity.

Credits: 3.00

WGSS 28200 - Introduction To LGBTQ Studies (UCC: BSS)

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding of the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

WGSS 28100 - Variable Topics In Women's, Gender, And Sexuality Studies

Credit Hours: 1.00 to 4.00. This course examines in-depth particular topics from the introductory course in Women's Studies. It addresses gender issues for both men and women. Possible topics include gender and popular culture, women's bodies, body image, and health, masculinities, queering gender and gender transgression.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality,

race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 59900 - Selected Topics In Women's Gender And Sexuality Studies

Credit Hours: 3.00. A study of selected topics taught by an instructor in whose particular field of specialization the content of the course falls. Permission of instructor required.

Learning Outcomes: 1. Understand the influence of men's views and control of women's participation in sport across age, race/ethnicity and sexual orientation. 2. Understand feminist perspectives on sport. 3. Clarify the meaning of one's own sport experience. 4. Appreciate the contributions of pioneering women in creating opportunities for women today. 5. Identify obligations to those in future generations regarding access to future sport participation. 6. Understand and appreciate the differences in experiences and perceptions of others through group work and class discussions. 7. Lean how gender ideologies impact women and men's access to sport. 8. Interrogate masculinity and femininity in order to understanding how gender is constructed in and through sport. 9. Enhance students critical thinking and analytical skills Credits: 3.00

WGSS 39000 - Variable Topics In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Variable topics under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.

Learning Outcomes: 1. Appreciate the ideological work that entertainment and mass cultural texts such as popular films perform. 2. Analyze popular visual texts including film and video for the meanings and power relations they invoke. 3. Apply feminist and queer theorizing of gender, gender identity, and sexuality to visual texts. 4. Assess the intersectional impact that popular film and cinema have had on women and sexual minorities. 5. Understand the ways that American popular film, particularly those produced in Hollywood for mass distribution, has shared American culture and global relationships since the inception of cinema in the late 19th century. Credits: 3.00

AGR 29000 - Special Topics In Agriculture

Credit Hours: 0.00 to 3.00. Presentation of subject matter not available in other courses offered by the college. The specific topic that is offered will be indicated on the student's academic record.

Learning Outcomes: 1. Learning outcomes addressed include communication, critical thinking, and professional development. Credits: 0.00 to 3.00

Student Qualifications

Applications in Data Science Certificate

About the Certificate

Requirements for the Certificate (16 credits)

Core Courses (10 credits)

Foundation in Statistical Methods (3 credits)

CHE 32000 - Statistical Modeling And Quality Enhancement

Credit Hours: 3.00. Statistical modeling methods, design of experiments, error analysis, curve fitting and regression, analysis of variance, confidence intervals, quality control and enhancement: emphasizes preparation for designing chemical engineering laboratory experiments and analyzing data.

Learning Outcomes: 1. Utilize the concepts of probability for use with the normal and t distributions, confidence intervals, and hypothesis testing. 2. Apply least squares fitting of data by use of linear algebra with computers. 3. Apply regression and model building from data with experimental error obtained with replicates to establish an adequate model. 4. Design experiments for single and multiple factors and apply regression to model the results. 5. Apply propagation of error and sources of variation or variance components. 6. Apply statistical quality control and improvement with various charts such as average, range, and cusum (concepts of consumer and producer risk and capability index are included). Credits: 3.00

ECE 30200 - Probabilistic Methods In Electrical And Computer Engineering

Credit Hours: 3.00. An introductory treatment including probability of events, discrete and continuous random variables, multiple random variables, sums of random variables and long-term averages, and elementary random processes. Applications involving uniform, Gaussian, exponential, geometric and related random variables. Introduction to parameter estimation and hypothesis testing. Discussion of wide-sense stationary random processes, including correlation functions, spectral densities and the response of linear time invariant systems. Course examples are drawn from signal processing, wireless communications, system reliability, and data science.

Credits: 3.00

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

COM 30400 - Quantitative Methods For Communication Research

Credit Hours: 3.00. Introduction to the development and application of quantitative research methods pertinent to communication problems. Fundamental concepts of problem identification, reliability and validity of both measurement and research design, and statistical analyses of data.

Credits: 3.00

COM 41100 - Communication And Social Networks

Credit Hours: 3.00. This course explores the growing area of networks. The class focuses on understanding how social structure influences our everyday life by examining the ways individuals, groups, and entities are tied together. Permission of instructor required.

Learning Outcomes: 1. Understand the foundation of social network theory and analysis. 2. Read work in the area of networks. 3. Learn how networks are related to the social phenomena of your own personal interest. 4. Gather basic understanding of gathering network data. Credits: 3.00

POL 30000 - Introduction To Political Analysis (UCC: IL)

Credit Hours: 3.00. An introduction to the study of politics, its basic concepts and major areas of concern; also review of important research techniques, including methods of data collection and analysis.

University Core Curriculum (UCC): (UCC: IL)
Credits: 3.00

BIOL 39500 - Special Assignments

Credit Hours: 0.00 to 18.00. Reading, discussions, written reports, seminar presentations, and field or laboratory work provided for enrichment in special areas of the biological sciences. Permission of instructor required.

Credits: 0.00 to 18.00

BIOL 49500 - Special Assignments

Credit Hours: 0.00 to 18.00. Readings, discussions, written reports, seminar presentations, and field or laboratory work provided for enrichment in special areas of the biological sciences. Permission of instructor required.

Credits: 0.00 to 18.00

PHYS 49000 - Special Assignments

Credit Hours: 1.00 to 3.00. Reading, laboratory work, or research in special areas of physics. Intended for upperclass students. Permission of instructor required.

Credits: 1.00 to 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability.

Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 49000 - Topics In Statistics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading course or special topics course at the senior level for undergraduates are given under this number. Permission of instructor required.

Credits: 1.00 to 5.00

BIOL 59500 - Special Assignments

Credit Hours: 0.00 to 18.00. Special work, such as directed reading, independent study or research, supervised library, laboratory, or field work, or presentation of material not available in the formal courses of the department. The field in which work is offered will be indicated in the student's record. Permission of instructor required.

Credits: 0.00 to 18.00

POL 50100 - Political Science: Methodology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to political science data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis. Permission of instructor required.

Credits: 3.00

STAT 50100 - Experimental Statistics I

Credit Hours: 3.00. Concepts and methods of applied statistics. Exploratory analysis of data. Sample design and experimental design. Normal distributions. Sampling distributions. Confidence intervals and tests of hypotheses for one and two samples. Inference for contingency tables, regression and correlation, and one-way analysis of variance. Use of the SAS statistical software. Intended primarily for students who have not had calculus. Not open to students in mathematical sciences or engineering. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: College Algebra.

Learning Outcomes: 1. Produce and identify basic statistical analyses. 2. Discuss statistical terminology (speak statistics). 3. Use SAS to run basic statistical analyses and interpret corresponding SAS output. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2.

Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

BIOL 58210 - Ecological Statistics

Credit Hours: 3.00. This course covers topics that are useful for successfully designing and analyzing statistically observational and experimental studies in ecology, animal behavior, evolutionary biology, forestry, wildlife sciences, fisheries, etc. Some topics are: differences between hypotheses and predictions, design of an ecological study, general linear models, assumptions, different types of designs (factorial, nested, repeated measures, blocks, split-plots, etc.), fitting models to data, etc. The course will focus on the conceptual understanding of these topics (e.g., interpreting the results of statistical tests) and practice with statistical programs and real datasets.
