University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate mastery of grammatical structure and syntax, formation of plural nouns, noun-adjective agreement, verb conjugation, through the application of the communicative pedagogy (teaching in context) in the use of the basic learning skills (reading, writing, speaking and listening) by: 2. Discussing personal relations and academic studies. 3. Giving and receiving directions to a destination and/or in order to complete a task. 4. Writing short essays (maximum 250 words) on specified topics. Credits: 3.00

Design and Innovation Minor

About the Program

Requirements for the Minor (15 credits)

A. Intro Design & Innovation (3-4 credits)

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety

of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

TLI 16100 - Prototyping In Engineering/Technology Education

Credit Hours: 3.00. Design, make, and innovate! This course provides basic instruction on the proper and safe use of tools and equipment used to prototype innovative ideas. This includes 3D printers, laser cutters/engravers, fabrication tools/equipment, CNC mills/routers, and microcontrollers/microcomputers.

Learning Outcomes: 1. Demonstrate the technical competencies to properly and safely operate common prototyping equipment and tools. 2. Apply knowledge of materials properties to select the appropriate materials for a desired prototype. 3. Create operations process flow charts for planning product development. 4. Test prototypes in real situations to gather data related to their performance. Credits: 3.00

MGMT 22000 - Making The Business Case

Credit Hours: 3.00. This course develops one's ability to address situations faced by managers. This involves collecting information, analyzing that information to determine what decision or action is required and then selling the recommended decision or action to the management team. Selling this is done using one's persuasive skills in both telling a story and illustrating that story.

Learning Outcomes: 1. Differentiate whether a situation calls for making a decision or solve a problem. 2. Identify important facts in case studies. 3. Organize facts found in case studies into issues that factor in the analysis of alternatives. 4. Evaluate alternative solutions to a decision in terms of how they address issues. 5. Recommend an alternative solution. 6. Create a plan of action that will put the recommendation in place. 7. Create presentations that have a story line flowing through them. 8. Create a slide deck that supports the story line of the presentation. 9. Demonstrate effective speaking and body

language when making presentations. Credits: 3.00

ENGR 13100 - Transforming Ideas To Innovation I (UCC: IL)

Credit Hours: 2.00. A partnership between Schools and Programs within the College of Engineering, introduces students to the engineering professions using multidisciplinary, societally relevant content. Developing engineering approaches to systems, generating and exploring creative ideas, and use of quantitative methods to support design decisions. Explicit model-development activities (engineering eliciting activities, EEAs) engage students in innovative thinking across the engineering disciplines at Purdue. Experiencing the process of design and analysis in engineering including how to work effectively in teams. Developing skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools (e.g., Excel and MATLAB).

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Describe the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Use a problem formulation and solving process to translate written problem statements into a mathematical model that allows for a logical comparison of approaches and tradeoffs in an engineering design. 3. Communicate technical information orally and visually and develop basic knowledge and introductory skills for cross-cultural communication. 4. Explain how an engineering problem solving process in related to a design process. 5. Apply a design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 6. Implement simple algorithmic solutions to engineering problems and in design using the most appropriate engineering tool. 7. Demonstrate appropriate knowledge and behaviors for effective and ethical membership on a technical team (i.e., teaming skills). 8. Exhibit a work ethic appropriate for the engineering profession. Credits: 2.00

ENGR 13200 - Transforming Ideas To Innovation II

Credit Hours: 2.00. A partnership between Schools and Programs within the College of Engineering continues building on the foundation developed in ENGR 13100. Students take a more in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. Extending skills in project management engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g., Excel and MATLAB).

Learning Outcomes: 1. Describe the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Apply engineering fundamentals and basic engineering science concepts to create feasible engineering solutions that are justifiable. 3. Use a problem identification process to create written engineering criteria to satisfy a problem. 4. Use an engineering formulation and solving process to translate an engineering scenario into a model. 5. Explain how an engineering problem solving process relates to a design process. 6. Design a process to communicate technical information orally and visually and demonstrate skills for cross-cultural communication. 7. Apply an engineering problem solving and design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 8. Apply a systems approach in solving engineering problems and in undertaking design projects. 9. Demonstrate appropriate knowledge and behaviors for effective and ethical membership on a technical team (i.e., teaming skills). 10. Exhibit a work ethic appropriate for the engineering profession. Credits: 2.00

B. Core Design & Innovation (6 credits)

TLI 36700 - Teaching Design And Innovation I

Credit Hours: 3.00. This course focuses on the development of appropriate engineering design knowledge and skill required to effectively teach middle and high school engineering/technology education courses by infusing engineering design into the curriculum. Students will use 3-D solid modeling software, rapid prototyping, and other design technologies as they engage in the engineering design process through an open-ended engineering design challenge.

Learning Outcomes: 1. Display the ability to teach students to develop skills for living in a knowledge-based, technological society using design-based pedagogical approaches. 2. Use the engineering design process to solve open-ended, ill-defined problems. 3. Demonstrate the ability to teach basic engineering design techniques. Credits: 3.00

TLI 46000 - Teaching Design And Innovation II

Credit Hours: 3.00. This course expands the engineering design process, incorporating rapid prototyping and other fabrication technologies to create a specified solution. The course emphasizes process flow chart planning and logistics of engineering/technology education laboratory management. Prototypes will be tested in real situations and data gathered on performance. Designs will be revised to reflect a deeper understanding of manufacturing and use, being sensitive to structure, function, and behavior from a systems-level perspective. Intellectual property, marketing, and infrastructure will be discussed.

Learning Outcomes: 1. Describe the complexity of implementing design solutions. 2. Select appropriate fabrication technologies. 3. Operationalize performance criteria into measurable variables. 4. Gather data to make rational decisions, which are transparent and justifiable. 5. Optimize design solutions and perform iteratively in the design process. Credits: 3.00

TECH 22000 - Designing Technology For People

Credit Hours: 3.00. Innovating in our complex world requires understanding people and the issues and challenges they face. This unique course brings together perspectives from technology and anthropology to address this by exploring ethnographic studies of people and technology interactions. Through this process, students will practice the problem scoping skills necessary to identify and define problems and begin to generate appropriate design solutions. In addition, students will learn how to observe and talk with people about technology and discuss a range of ways people use technology. Accordingly, the course will focus on human-centered design and how to empathize with people during the design process. This will allow students to learn how to identify opportunities for innovation that emerge when designers carefully observe and listen to humans using technology and/or experiencing problems with current technology. Note: This class engages the material in both the classroom and innovation labs.

Learning Outcomes: 1. Identify opportunities for innovation that emerge from ethnographic studies and divergent thinking approaches to design. 2. Apply diverse team approaches to address open-ended and ill-defined design problems. 3. Describe and apply ethical decision-making to real-world design settings. 4. Demonstrate documentation of the design process from ethnography through choosing a design idea to make, including fieldnotes, drawings and digital presentation techniques. Credits: 3.00

TECH 34000 - Prototyping Technology For People

Credit Hours: 3.00. Innovating in our complex world requires us to think strategically and make the best decisions possible for both designing and business development. Accordingly, this unique course brings together perspectives from technology and business management to iteratively prototype innovative solutions to student-selected problems. This process will include creating prototypes in a variety of media, using the appropriate methods/tools, as well as exploring the processes and biases related to how people process information and make decisions. This type of work will help to guide the innovation process by gaining insights from testing prototypes and interacting with people to deepen one's understanding of customer needs, market segments, costs of goods, competitor operations, and market strategies. At the conclusion of the course, students will pitch a viable design solution and business model for a validated problem to a variety of potential investors and/or stakeholders. Note: This class engages the material in both the classroom and innovation labs. Students of all levels of experience, will explore tools/programs related to computer aided design, 3D printing, app development, and digital prototyping.

Learning Outcomes: 1. Recognize biases in how people process information, conducting

user tests and interviews to gain insights from prototypes to make business development decisions. 2. Engage in decision-making strategies to develop prototypes in a variety of media (digital and/or physical) for the level of fidelity necessary to communicate, understand, and test innovative ideas/designs. 3. Select and use appropriate methods/tools/equipment to make decisions and prototype innovative ideas. 4. Revise designs to reflect a deepening understanding of customer needs, market segments, costs of goods, competitor operations, and market strategies. 5. Pitch a viable design solution/business model for a validated problem to a variety of potential investors and/or stakeholders. Credits: 3.00

ANTH 38400 - Designing For People: Anthropological Approaches

Credit Hours: 3.00. This course is about designing for people. You will use anthropological knowledge and skills to better understand human and technology interactions. With students from other fields, you will learn how to apply an anthropological perspective to human centered design and design with the needs of a specific user group in mind.

Learning Outcomes: 1. Identify opportunities for innovation that emerge from ethnographic studies and divergent thinking approaches to design. 2. Apply diverse team approaches to address open-ended and ill-defined design problems. 3. Describe and apply ethical decision-making to real-world design settings. 4. Demonstrate documentation of the design process from ethnography through choosing a design idea to make, including fieldnotes, drawings and digital presentation techniques. Credits: 3.00

MGMT 39100 - Strategic Thinking And Decision-Making

Credit Hours: 3.00. This course focuses on how to think strategically and make good business decisions. By the end of the class, you will be able to do the following: (1) Recognize biases in how people process information, conducting user tests and interviews to gain insights from prototypes to make business development decisions; (2) Engage in decision-making strategies to design/develop prototypes in a variety of media (digital and/or physical) for the appropriate level of fidelity necessary to communicate, understand, and test innovative ideas; (3) Select and use appropriate methods/tools/equipment to make decisions and design/prototype innovative ideas; (4) Pitch a viable solution for a validated problem to a variety of potential investors and/or stakeholders.

Learning Outcomes: 1. Recognize biases in how people process information, conducting user tests and interviews to gain insights from prototypes to make business development decisions. 2. Engage in decision-making strategies to design/develop prototypes in a variety of media (digital and/or physical) for the appropriate level of fidelity necessary to communicate, understand, and test innovative ideas. 3. Select and use appropriate methods/tools/equipment to make decisions and design/prototype innovative ideas. 4. Pitch a viable solution for a validated problem to a variety of potential investors and/or stakeholders. Credits: 3.00

C. Global/Cultural Experience (3 credits)

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can

provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

AD 39500 - History Of Design (UCC: STS)

Credit Hours: 3.00. A survey of the historical development of design from the industrial revolution to the present that examines the influence of new technologies, materials, and style on design practice as well as the role of design in shaping the technologies and things of everyday life. Throughout the course, students will analyze design within the broader social, cultural, and political context of production, consumption, and use.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Identify a range of styles from the 18th century to the present. 2. Critically analyze primary source material (artifacts/designed objects, images, and text). 3. Discuss important developments in the history of design. 4. Discuss the social, political, cultural, economic and technological context of design production, consumption, and use. Credits: 3.00

TECH 33000 - Technology And The Global Society

Credit Hours: 3.00. The intersection of technology, globalization, and society is at the core of this course. Students examine socio-cultural issues related to the development and use of technology across intercultural contexts, explore perspectives and principles behind global technology influences, and examine the complexities and ethical nuances of technology and innovation.

Learning Outcomes: 1. Reflect on the perceptions of cultural norms, interactions, gender roles, societal ethics, and religions in order to examine their potential impact on industry and society. 2. Evaluate digital media and socio-cultural information sources to predict their influence on individual and social interactions and perspectives. 3. Conduct formal and informal reflections about oneself and others, manage one's emotions in situations of differences, and apply techniques to bridge cultural differences. 4. Assess worldwide technology needs by examining global efforts, innovations, and issues that impact contemporary society. Credits: 3.00

D. Specialization (3 credits)

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

ANTH 38000 - Using Anthropology In The World

Credit Hours: 3.00. The use of anthropology in practical contexts. What anthropological practice is, how it originated, how it can be applied in non- academic and interdisciplinary contexts and careers. The main contemporary issues

surrounding anthropological practice, including training, ethics, relevance, and rigor. For majors and non-majors.

Learning Outcomes: 1. Describe applied anthropology and how the field has evolved over time. 2. Analyze the major issues, controversies, and opportunities of applied anthropology. 3. Identify key methods and skills that applied anthropologists use in their careers. 4. Explain how anthropology can be applied in non-academic and interdisciplinary settings. 5. Demonstrate how to prepare for a career in anthropological practice, and/or use anthropology in their future career. Credits: 3.00

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 39500 - History Of Design (UCC: STS)

Credit Hours: 3.00. A survey of the historical development of design from the industrial revolution to the present that examines the influence of new technologies, materials, and style on design practice as well as the role of design in shaping the technologies and things of everyday life. Throughout the course, students will analyze design within the broader social,

cultural, and political context of production, consumption, and use.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Identify a range of styles from the 18th century to the present. 2. Critically analyze primary source material (artifacts/designed objects, images, and text). 3. Discuss important developments in the history of design. 4. Discuss the social, political, cultural, economic and technological context of design production, consumption, and use. Credits: 3.00

TECH 33000 - Technology And The Global Society

Credit Hours: 3.00. The intersection of technology, globalization, and society is at the core of this course. Students examine socio-cultural issues related to the development and use of technology across intercultural contexts, explore perspectives and principles behind global technology influences, and examine the complexities and ethical nuances of technology and innovation.

Learning Outcomes: 1. Reflect on the perceptions of cultural norms, interactions, gender roles, societal ethics, and religions in order to examine their potential impact on industry and society. 2. Evaluate digital media and socio-cultural information sources to predict their influence on individual and social interactions and perspectives. 3. Conduct formal and informal reflections about oneself and others, manage one's emotions in situations of differences, and apply techniques to bridge cultural differences. 4. Assess worldwide technology needs by examining global efforts, innovations, and issues that impact contemporary society. Credits: 3.00

TLI 31400 - Leading Innovation In Organizations

Credit Hours: 3.00. This course provides the foundation for understanding the manner in which companies capture innovation and use it to set themselves apart from competitors. Topics covered include the attributes of organizations that are successful in fostering a culture of innovation; the characteristics and roles of leaders and members in innovative organizations; managerial processes and organizational systems that facilitate the successful development, commercialization, and adoption of innovative technologies, products, and services; and methods used to measure innovation-related outcomes.

Learning Outcomes: 1. Describe the characteristics of successful innovations. 2. Explain how innovations develop from ideas to successful outcomes. 3. Analyze practices and strategies that lead to the successful development and adoption of innovations. 4. Communicate how innovation strategies help organizations succeed in competitive markets. 5. Identify managerial behaviors that foster a culture of innovation among employees. 6. Differentiate the attributes of successful leaders and employees in innovative organizations. 7. Analyze methods used to measure innovation-related outcomes. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

MGMT 44810 - Technology Strategy

Credit Hours: 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to

develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage.

Learning Outcomes: 1. Improve ability to assess technology and innovation from a competitive perspective. 2. Learn about disruptive innovation and its effects on incumbents and new firms. 3. Consider internal processes for innovation management in existing firms. 4. Improve decision-making and skills with respect to technology and innovation. Credits: 3.00

TLI 16100 - Prototyping In Engineering/Technology Education

Credit Hours: 3.00. Design, make, and innovate! This course provides basic instruction on the proper and safe use of tools and equipment used to prototype innovative ideas. This includes 3D printers, laser cutters/engravers, fabrication tools/equipment, CNC mills/routers, and microcontrollers/microcomputers.

Learning Outcomes: 1. Demonstrate the technical competencies to properly and safely operate common prototyping equipment and tools. 2. Apply knowledge of materials properties to select the appropriate materials for a desired prototype. 3. Create operations process flow charts for planning product development. 4. Test prototypes in real situations to gather data related to their performance. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

TLI 31500 - New Product Development

Credit Hours: 3.00. This course introduces the process of technological innovation and new product development from concept to commercialization. Topics covered include ideation, R&D, prototyping (design and modeling), testing for quality, the patent process, intellectual property rights, marketing and cost evaluation.

Learning Outcomes: 1. Describe the process of innovation as it relates to new product development. 2. Identify quality standards and testing procedures for new products. 3. Describe the patent process. 4. Explain methods for protecting domestic and international intellectual property rights. 5. Describe the process for conducting market research. Credits: 3.00

Notes

Digital Natural Resources Minor

About the Minor

Requirements for the Minor (15 credits)

Data Acquisition (6 Credits)

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge

about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

AGRY 54500 - Remote Sensing Of Land Resources

Credit Hours: 3.00. Application of remote sensing and spatial databases for observing and managing land resources within the Earth System; analysis and interpretation of remotely sensed data in combination with field observations and other data sources; conceptualization and design of a global earth resources information system.

Learning Outcomes: 1. Evaluate, analyze, and apply the fundamentals of remote sensing related to sensor technologies, Multispectral/hyperspectral imaging, active and passive radar, LIDAR, GPS, preprocessing of remote sensing image data, Radiometric and geometric correction, data enhancement for visual interpretation, extraction of information from data, spatial and spectral feature extraction for analysis, Unsupervised and supervised classification, terrain modeling and sources of remote sensing data/information. Credits: 3.00

AT 30901 - Introduction To UAS Sensor Technology

Credit Hours: 3.00. This course introduces students to multiple forms of UAS sensors and core fundamentals of Remote Sensing and Geospatial Technology. Students will be introduced to basic data capture and processing techniques and to effectively apply different forms of UAS sensors to real-world applications.

Learning Outcomes: 1. Identify and define core geospatial and remote sensing technology concepts. 2. Effectively associate and relate UAS sensor technology with related portions of the electromagnetic spectrum. 3. Identify and explain geographic coordinate systems and projections. 4. Process and Create UAS data products within a Geographic Information System. Credits: 3.00

AT 10901 - Introduction To Uncrewed Aircraft System Operations

Credit Hours: 3.00. This course will provide students the aeronautical knowledge required to operate a small UAS in the National Airspace. Students are introduced to various aspects of uncrewed aviation operations, which includes UAS system types and components, regulations and operational approvals, and indoctrination to the civil and commercial applications of UAS. Through the use of UAS simulation technology, students will develop basic small UAS flight skills and successfully complete various UAS operational scenarios. Upon successful completion of the course students will be prepared to obtain a Federal Aviation Administration (FAA) Remote Pilot Certificate with a Small UAS Rating. Permission of department is required.

Learning Outcomes: 1. Obtain an FAA Remote Pilot Certificate with a Small UAS Rating. 2. Understand small UAS terminology and technology. 3. Comply with regulatory framework and understand various UAS approval processes. 4. Understand basic small UAS operating procedures. 5. Appreciate and gain perspective on how to safely operate UAS in the national airspace system. 6. Using simulation technology, demonstrate basic small UAS flight maneuvers and execute basic flight operations. Credits: 3.00

Data Analysis (3 Credits)

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

ASM 53200 - Introduction To Agricultural Informatics

Credit Hours: 3.00. We will overview current and emerging digital technologies with applications in agriculture, environment, and food systems. Students are expected to have a minimal computing and/or programming background, and those with no programming background should contact the instructor for guidance. Through a modular hands-on course design, students will incrementally learn user-centered technology design skills, computational thinking skills to evaluate, design, conceptualize, and implement informatics solutions to data-driven challenges. Students will gain programming skills in current data science and web development technology stacks (Python, HTML, CSS, SQL, Django), and design an informatics solution to problem in their own area of interest. This course supports professional development for students in pursuit of careers in digital product design or data-driven research.

Learning Outcomes: 1. Demonstrate core skills in user-centered technology design, exploratory data analysis, and programming for the web. 2. Formulate a data science problem and implement a data science solution through collecting, integrating, analyzing, and synthesizing publicly available data. 3. Critique and experiment with informatics approaches to solving data-driven challenges in disciplines related agriculture, environment, and food systems. 4. Design and develop a web application through application of new knowledge on data modeling, user interface design, and programming. 5. Design and conceptualize a novel informatics solution, applying design thinking and computational skills, to solve an open problem related to agriculture, environment, and food systems. Credits: 3.00

Data Ethics (3 Credits)

PHIL 20800 - Ethics Of Data Science (UCC: STS)

Credit Hours: 3.00. As applications of data science permeate more aspects of our lives, new and important ethical issues are arising. However, especially because we are entering uncharted territory, reasoning clearly about the ethical implications of data science isn't easy. This course provides students with the tools for doing so, including a conceptual framework for ethical reasoning in professional settings, as well as a procedure for case-study analysis that allows students to practice employing this conceptual framework. Together, these components help prepare students to be ethical professionals and responsible global citizens.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Identify ethical issues associated with applications of data science in a variety of professional settings, by reading assigned texts, viewing/listening to assigned media content, and participating in classroom and group discussions. 2. Apply general ethical principles to the specific, concrete actions of individuals, corporations, governments and other organizations. 3. Construct sound, well-reasoned arguments, and communicate them clearly, by participating in classroom and group discussions as well as writing assignments. 4. Develop a case study of their own, by submitting a written essay that applies the case study procedure. Credits: 3.00

ILS 23000 - Data Science And Society: Ethical Legal Social Issues

Credit Hours: 3.00. This course provides an introduction to Ethical, Legal Social Issues (ELSI) in Data Science. Students will be introduced to interdisciplinary theoretical and practical

frameworks that can aid in exploring the impact and role of Data Science in society. This is a writing intensive course. Students will work individually and on collaborative assignments.

Learning Outcomes: 1. Engage in current debates surrounding professional and research ethics, roles and responsibilities in Data Science. 2. Examine emerging legal and policy issues which impact Data Science. 3. Reflect critically on the relationship between Data Science and political, social and cultural change. 4. Learn collaboration, public engagement and scholarly communication skills. Credits: 3.00

Data Applications (3 Credits)

FNR 49800 - Special Assignments

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required.

Learning Outcomes: 1. Demonstrate ability to think critically regarding topic studied. 2. Use effective strategies to communicate knowledge regarding topic studied. Credits: 1.00 to 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

FNR 55800 - Remote Sensing Analysis And Applications

Credit Hours: 3.00. Advanced course in the use of remote sensing techniques emphasizing the physical principles behind the remote sensing of vegetative features, present-day instrument technology, spatial data processing and analysis algorithms, error analysis and accuracy assessment procedures, and multi-source data integration. Provides hands-on experience with forest canopy modeling, atmospheric modeling, image processing, and GIS software on microcomputer and workstation platforms.

Learning Outcomes: 1. Improve their understanding of remote sensing principles and the use of remote sensing technologies. 2. Master operational procedures of Erdas Imagine or other remote sensing software for advanced image analysis and classification. 3. Use remote sensing applications accurately in natural resources, including but not limited to land use mapping, vegetation responses to weather variations, urban environment, and forest measurements. Credits: 3.00

FNR 40100 - Limnology

Credit Hours: 3.00. Limnology is the study of the chemical, physical, geological, biological, and ecological processes that influence the structure and function of freshwater ecosystems. The course will focus on developing the understanding of key terms and mechanisms related to the basic understanding of limnological processes. Moreover, various applications and management considerations related to freshwater ecosystems will be presented.

Learning Outcomes: 1. Practice and develop critical thinking skills through in-class discussions and presentations. 2. Learn how to read and interpret the scientific literature. 3. Broaden their understanding of freshwater ecosystems, through lectures. Credits: 3.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the

important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance.

Learning Outcomes: 1. Able to understand the theory, applications (how theory is applied) can be used to study landscape and larger scale problems related to natural resources. 2. Know what a landscape is. 3. Know the methods to quantify landscape pattern. 4. Understand important terms in landscape ecology and biogeography. 5. Understand the causes (natural and human) of landscape pattern. 6. Understand the threats to biodiversity locally and globally. 7. Able to explain the theory of island biogeography. 8. Define sustainability and know how to calculate an ecological footprint. Credits: 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.

Learning Outcomes: 1. Know methods to quantify landscape pattern. 2. Use GIS to conduct simple and moderately complex analyses using common public domain databases. 3. Know where to get important geospatial data from the internet. 4. Work with US government data and understand the various levels of aggregation of spatial data. Credits: 1.00

Notes

Earth and Planetary Sciences Minor

The department is pulling out the Atmospheric minor from the larger EAPS minor to make it easier for students to create a clear and usable minor. That means the EAPS minor needs a name change and an update to the requirements to reflect the removal of the Atmospheric Science courses. This can benefit students within our department by allowing Atmospheric Science majors to add the Earth and Planetary minor. We see this benefiting others throughout the university, creating a clear path to an Earth and Planetary minor.

Requirements for the Minor (15 credits)

Required Course (3 credits)

EAPS 10500 - The Planets (UCC: SCI)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about the origin and characteristics of the bodies in our Solar System, including planets, moons, asteroids, comets, exoplanets beyond, and the search for extraterrestrial life. We'll discuss how solar systems form and die, the origin of the terrestrial versus giant planets and their orbits, the evolution of planetary surfaces due to asteroid impacts and volcanism, the development of atmospheres, the formation of planetary rings, the origin of moons, the hazards of space travel, and why Pluto IS a planet.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Place your home in context with the Universe (cosmic geography). 2. Understand how the solar system came to be. 3. Understand the basic structure of the solar system and Earth's place in it. 4. Understand the processes that shape the surfaces of the planets. 5. Learn about past, current, and future exploration of space. Credits: 3.00

EAPS 10900 - The Dynamic Earth

Credit Hours: 3.00. This course covers the formation and development of the solid earth, atmosphere, hydrosphere, and

bio-sphere. The course studies the whole earth as a system of many interacting parts and focuses on the changes within and between these parts. This course is intended for all majors in earth and atmospheric sciences.

Credits: 3.00

EAPS 11100 - Physical Geology (UCC: SCI)

Credit Hours: 3.00. Geologic processes and the development of land forms. Laboratory covers the study of minerals and rocks, the interpretations of topographic and geologic maps, and field investigations. CTL: Physical Geology

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

EAPS 11800 - Introduction To Earth Sciences

Credit Hours: 3.00. Introduction to a range of topics in Earth Science, including: Origin and geological history of Earth, including geological records of climate and evolution; Earth materials (minerals and rocks); Chemical and physical composition and structure of the Earth; Rock weathering, erosion, and sedimentary processes; Geological timescale; Geologic structures including their map and field expression; Tectonic processes; The hydrological cycle with emphasis on groundwater and physical and chemical oceanography; Energy and mineral resources; Astrobiology. (Required for Geology and Geophysics and Earth and Space Science Teaching majors.)

Credits: 3.00

Additional EAPS Coursework (12 credits)

Earth & Planetary Science Minor Course List

EAPS 10000 - Planet Earth (UCC: STS)

Credit Hours: 3.00. An introduction to the Geosciences-Earth science, oceanography, atmospheric science and astronomy. The course emphasizes topics (earthquakes, volcanoes, ocean pollution, climate change, severe weather, etc.) that are of general interest and relevance, and the interconnections between various Earth processes. CTL:IPS 1730 Earth Science

University Core Curriculum (UCC): (UCC: STS)

Credits: 3.00

EAPS 10400 - Oceanography (UCC: STS)

Credit Hours: 3.00. Origin of the oceans and marine life. Seafloor spreading and marine geology; currents, waves, and tides; marine organisms and ecology; beaches and nearshore life. Man's use and abuse of the sea, including contemporary problems and future opportunities. The role of oceans in climate and evolution of the biosphere.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Understand ocean and coastal processes. 2. Understand potential future impacts of ocean and other environmental changes. Credits: 3.00

EAPS 10500 - The Planets (UCC: SCI)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about the origin and characteristics of the bodies in our Solar System, including planets, moons, asteroids, comets, exoplanets beyond, and the search for extraterrestrial life. We'll discuss how solar systems form and die, the origin of the terrestrial versus giant planets and their orbits, the evolution of planetary surfaces due to asteroid impacts and volcanism, the development of atmospheres, the formation of planetary rings, the origin of moons, the hazards of space travel, and why Pluto IS a planet.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Place your home in context with the Universe (cosmic geography). 2. Understand how the solar system came to be. 3. Understand the basic structure of the solar system and Earth's place in it. 4. Understand the processes that shape the surfaces of the planets. 5. Learn about past, current, and future exploration of space. Credits: 3.00

EAPS 10600 - Geosciences In The Cinema (UCC: STS)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about natural hazards based on the depictions of such hazards in movies. Topics include earthquakes, tsunamis, volcanoes, tornadoes, hurricanes, climate change, asteroid impacts, space exploration, and wildfires. The course focuses on the accuracy of the depiction of natural hazards in the movies, the underlying processes that control their formation and the dangers they represent, how they influence society, and how students can prepare for them and keep themselves safe.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Understand how scientists explore natural hazards, make observations, and develop theories. 2. Explain the processes that control natural hazards and where and when they are likely to occur. 3.

Know the natural hazards inherent to a student's location and be able to plan how to keep themselves safe in the event of such an occurrence. 4. Critically assess the reasonableness of depictions of natural hazards in the media. Credits: 3.00

EAPS 10900 - The Dynamic Earth

Credit Hours: 3.00. This course covers the formation and development of the solid earth, atmosphere, hydrosphere, and bio-sphere. The course studies the whole earth as a system of many interacting parts and focuses on the changes within and between these parts. This course is intended for all majors in earth and atmospheric sciences.

Credits: 3.00

EAPS 11100 - Physical Geology (UCC: SCI)

Credit Hours: 3.00. Geologic processes and the development of land forms. Laboratory covers the study of minerals and rocks, the interpretations of topographic and geologic maps, and field investigations. CTL: Physical Geology

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 11200 - Earth Through Time (UCC: SCI)

Credit Hours: 3.00. The history of the planet Earth from its beginnings to the present. This course will explore the causes and effects of processes that have changed the Earth's surface and subsurface through time, the impacts of these changes on the evolution of life, and how scientist interpret Earth history from the geologic record. The laboratory will provide hands-on experience in interpreting various geologic and fossil records. This course may be taken on its own, or as a year-long lab series with EAPS 11100 . EAPS 11100 and EAPS 11200 will fulfill the two course sequence laboratory experience outside the major department.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 11600 - Earthquakes And Volcanoes (UCC: SCI)

Credit Hours: 3.00. A survey class on earthquakes and volcanoes. Topics include earthquake hazards and forecasting, the use of seismic waves to investigate the earth's interior, volcanoes and tectonics, volcanic hazards, and the influence of volcanoes on climate. Examples of recent and historic earthquakes and volcanic eruptions are presented.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 11800 - Introduction To Earth Sciences

Credit Hours: 3.00. Introduction to a range of topics in Earth Science, including: Origin and geological history of Earth, including geological records of climate and evolution; Earth materials (minerals and rocks); Chemical and physical composition and structure of the Earth; Rock weathering, erosion, and sedimentary processes; Geological timescale; Geologic structures including their map and field expression; Tectonic processes; The hydrological cycle with emphasis on groundwater and physical and chemical oceanography; Energy and mineral resources; Astrobiology. (Required for Geology and Geophysics and Earth and Space Science Teaching majors.)

Credits: 3.00

EAPS 12000 - Introduction To Geography (UCC: STS)

Credit Hours: 3.00. Introduction to the major themes of modern geography, designed to enhance your spatial thinking skills, geographic literacy, and to help you understand the relevance of geographic concepts and how they relate to our changing world. This course will expand your awareness of global issues and provide you with tools to understand how the world around you changes at local, regional, and global scales.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Interpret geographic data and identify and understand spatial relationships linking humans and the environment. 2. Use geographic tools introduced in the course (e.g. Google Earth, MapMaster). 3. Understand how and why people organize themselves and move as a function of economic, social, historical and cultural forces. 4. Understand how weather and climate are linked to natural and human induced climate change, and links between the atmosphere and biosphere through water and nutrient cycles. 5. Understand how processes within and on the Earth are reflected in the landscape and how erosions, transport and deposition re-shape landscapes. 6. Understand the resource concept and be able to make connections between distribution of resources and balancing competing interests. Credits: 3.00

EAPS 19100 - Introductory Topics In Earth And Atmospheric Science

Credit Hours: 1.00 to 3.00. Introductory special topics in earth and atmospheric sciences. Permission of instructor required.

Credits: 1.00 to 3.00

EAPS 24300 - Mineralogy

Credit Hours: 4.00. Elements of crystallography, physical and chemical properties of rock-forming minerals, and minerals of economic importance. Origin and occurrence of minerals. Prior course work in dynamic earth or physical geology is required.

Learning Outcomes: 1. Know the major element geochemistry of common rock forming minerals that occur in earth, the terrestrial planets, and in meteorites. 2. Understand that minerals form the geochemical reservoirs from which rock materials are derived. 3. Have competence in the rules of crystallography, be able to determine symmetry elements in 1-, 2-, and 3-demensions, and understand how to index different parts of crystals using common notations. 4. Identify rock forming minerals and selected accessory and ore minerals in hand sample. 5. Learn the theory and methods of optical mineralogy, spectroscopy, X-ray diffraction, and electron microbeam analysis. 6. Learn the thermodynamics phase equilibria in rock and mineral systems, and the basic petrology of igneous, metamorphic and sedimentary rocks. Credits: 4.00

EAPS 24400 - Earth Materials II

Credit Hours: 4.00. The study of common igneous, sedimentary, and metamorphic rocks. The origin and occurrence of rocks, weathering, and alteration processes. Prior course work in earth materials or mineralogy is required.

Credits: 4.00

EAPS 30900 - Computer-Aided Analysis For Geosciences

Credit Hours: 3.00. Application of computer analysis techniques including error analysis, line and surface fitting, spatial and temporal correlations, contouring, interpolation, and map projections. These methods are discussed in terms of specific geologic applications. All exercises and examples are developed using commercial mathematical software package. A three-hour-per-week computer laboratory tutorial provides hands-on experience with the techniques discussed in class. Prior course work in computer programming is required.

Learning Outcomes: 1. Carry out computational solutions to a given range of data analysis problems. 2. Select the appropriate analysis and visualization approaches when given a set of data. 3. Appraise and conclude the analysis results professionally. Credits: 3.00

EAPS 31900 - Exploring Earth Through Time

Credit Hours: 3.00. The course will explore the history of the Earth from its beginning 4.5 billion years ago to the present. Our understanding and insight into the history of the Earth has greatly expanded during the last several decades. Emphasis will be placed on the relationships of tectonic processes that shaped the surface of the Earth and the evolution of the Earth's biosphere. The course will also examine how the role of evolution of life has played in the history of the atmosphere and oceans.

Credits: 3.00

EAPS 32700 - Climate, Science And Society

Credit Hours: 3.00. This course will examine the broad problems of climate change by examining the relationship between science, politics, and society by using climate change as a lens through which to examine larger issues. Students will be encouraged to identify similar themes in their own experiences as emerging scientists, engineers and global leaders. Adequate preparation to write essays and perform basic arithmetic calculations needed. Prior knowledge of climate change science is not necessary.

Learning Outcomes: 1. Able to think logically and creatively. 2. Able to apply knowledge to practical situations. 3. Able to respond flexibly as situation changes. 4. Understand ethical issues, particularly in Science. 5. Appreciate diverse experiences, thoughts, backgrounds. 6. Understand and appreciate Science in the world environment. Credits: 3.00

EAPS 35200 - Structural Geology

Credit Hours: 3.00. This course deals with the nature and evolution of structures in rock deformed naturally by flow and fracture, as deduced from experimental, theoretical and field studies. Specific topics include: structures in three dimensions using descriptive geometry and stereonets, field measurements

of rock geometry, tensors, strain and stress, the theory of brittle and plastic rock behavior, theory and field observation of folds and faults, structural analysis of an outcrop, the structure and mechanics of mountain belts. Students will be expected to show competency with using a general set skills, techniques, and tools commonly used by professional geoscientists.

Learning Outcomes: 1. Interpret geologic structures in three dimensions using descriptive geometry, stereonets, and field measurements of rock geometry. 2. Evaluate quantitatively observations of the deformation in the crust using basic stress and strain theory, the theory of brittle and plastic rock behavior, theory and field observation of folds and faults, structural analysis of an outcrop. 3. Recognize the structures and give a mechanical explanation for the development of mountain belts. 4. Apply these skills in the field. Credits: 3.00

EAPS 35300 - Earth And Planetary Surface Processes

Credit Hours: 3.00. Introduction to a variety of topics in sediment transport and deposition, emphasizing linkages between active processes, landscape evolution, and the rock record. Comparisons will be made between surface processes occurring on Earth and other planetary bodies in the Solar System. Topics include: introductory fluid mechanics; sediment transport by water, ice, and wind, and the development of fluvial bed forms, glacial landscapes, and sand dunes; groundwater geochemistry and the development of karst and caves; impact cratering; comparative planetology. Each major topic is accompanied by field projects that emphasize local geologic history.

Learning Outcomes: 1. Apply fluid dynamics to sediment transport and rock dissolution using physics, chemistry, and calculus. 2. Use dimensionless variables (e.g., Reynolds number, Froude number, Shields number, Drag coefficient) to solve problems in diverse fluid flows (e.g., water, ice, wind, soil, and debris flows). 3. Identify and quantify processes responsible for shaping Indiana's landscape, including mega flooding, glaciation, wind, and karst. 4. Interpret landscape form in terms of geologic processes occurring in the Solar System. 5. Identify sedimentary structures and relate them to active surface processes. 6. Observe and measure active processes in the field. 7. Organize and write a formal scientific paper. Credits: 3.00

EAPS 35400 - Earth And Planetary Geophysics

Credit Hours: 3.00. This course will explore geophysical processes from the scales of individual stresses that deform rocks, to plate motions, to planetary-scale interiors and phenomena. Emphasis will be focused on sources of stress and how this stress is manifested, heat transfer, and fluid processes. Seismic waves, gravity data, planetary shape, and what information they provide about the interior of solid planets will be discussed. The course material will be applied to Earth, other rocky worlds like the Moon and Mars, and icy moons like Europa and Enceladus. This course is an introduction to geophysical processes and serves as a stepping-stone to upper level geophysics courses such as EAPS 35200, EAPS 45000, and EAPS 55700.

Learning Outcomes: 1. Describe the interior structures of Earth and other planets and large moons, and how we know them. 2. Describe how heat and fluids are transferred within the Earth and other planets and large moons. 3. Describe how interior processes in the Earth are ma09nifested in plate tectonics, and how they result in other tectonic regimes on other planets and large moons. 4. Apply quantitative skills to geophysical problems. 5. Critically evaluate a scientific study and orally communicate your evaluation. Credits: 3.00

EAPS 37500 - Great Issues - Fossil Fuels, Energy And Society

Credit Hours: 3.00. Prosperity of the 20th century was based on abundant and cheap energy; during the 21st century we will be faced with difficult challenges. Our society will face higher energy prices, decline of petroleum based fuels supplies, increased environmental effects of fossil fuels usage, and the challenge of solving the technological problems of developing alternative fuels. This course will review the structure, economics, and geopolitical issues faced by fossil fuel industries and the mitigation strategies that will be needed to change to low fossil fuel use society based on low polluting renewable energy sources. Counts for Great Issues course in College of Science for Juniors and Seniors.

Credits: 3.00

EAPS 39000 - Geologic Field Methods

Credit Hours: 3.00. Introduction to geologic mapping principles on quadrangle (7 1/2 min., 15 min., 1:250,000 scales) maps. Application of aerial photography, GPS, and GIS techniques. Emphasis on construction of cross sections, measurement of stratigraphic sections, and preparation of geologic reports. Several weekend field exercises will be required.

Credits: 3.00

EAPS 39100 - Topics In Earth And Atmospheric Sciences

Credit Hours: 1.00 to 4.00. Intermediate special topics in the earth and atmospheric sciences. Permission of instructor required.

Credits: 1.00 to 4.00

EAPS 47400 - Sedimentary Geology

Credit Hours: 4.00. Systematic study of continental and marine depositional environments. Interpretation of sedimentary facies, structures, and microfacies. Principles and applications of stratigraphy, including applications of paleontology, field relations, paleomagnetism, well logs, seismic reflections, and chemistry. Field investigations may be required. Prior course work in earth materials, mineralogy and petrology is required.

Learning Outcomes: 1. Understand core areas of sedimentary geology, and interpret a wide range of earth processes on different temporal and spatial scales. 2. Develop proficiency interpreting depositional processes and environments of ancient sedimentary strata through bedrock exposures, well logs, and drill cores. 3. Demonstrate skills of interpretive analysis and critical thinking with respect to geological problems involving temporal and spatial relationships. 4. Develop writing abilities through scientific reports that will be written individually, revised based on instructor and peer feedback, and subsequently integrated into a comprehensive basin analysis report. 5. Demonstrate competence in collecting scientific data, including field observations and field and analytical measurements. Specifically, demonstrate competency in collecting the following field datasets from outcrops: paleocurrent indicators, lithofacies associations, stratigraphic sections, and facies architectures. 6. Conduct effective independent and collaborative investigations. Specifically, develop your ability to work both independently and collaboratively during acquisition, analysis, and dissemination of scientific datasets as part of basin analysis project. Credits: 4.00

EAPS 51400 - Glacial And Quaternary Geology

Credit Hours: 3.00. Formation, dynamics, and regimen of glaciers. Erosional and depositional processes and landforms developed by alpine and continental glaciation. Glaciation of North America during the Ice Age, with emphasis on stratigraphy, soils, climates, biology, and physical changes resulting from glacial processes and environments. Application of glacial studies to agronomy, life sciences, climatology, oceanographic studies, and engineering problems. A one-day field investigation is required.

Credits: 3.00

EAPS 52600 - Introductory Geofluid Dynamics

Credit Hours: 3.00. Provides a fluid dynamics background for graduate students interested in atmospheric sciences, oceanography, mantle convection, hydrology, turbulence, or pollution. Topics covered include: basic assumptions and deviations of Navier Stokes equations, conservation laws, vorticity, divergence, waves, and applications in atmosphere, ocean, and geophysics.

Learning Outcomes: 1. Provide students a rigorous foundation in geofluid dynamics as well as the connections among math, physics, and real natural phenomena. 2. Students will become accustomed to applying the physical equations to real phenomena, and to presenting them in a concise way. 3. Understand the basic equations and physics in existing models which provides a broader and deeper understanding of the earth sciences. Credits: 3.00

EAPS 54200 - Economic Geology: Petroleum

Credit Hours: 3.00. Fundamental principles of the origin, migration, accumulation, exploration, and development of petroleum. Study of reservoir fluids, reservoir mechanics, and primary and secondary production techniques. Methods of prospect and leasehold evaluation and economic appraisal. Offered in alternate years.

Credits: 3.00

EAPS 55600 - Planetary Surface Processes

Credit Hours: 3.00. The application of petrology and structural geology to other planets. Topics include: theories of star and solar system formation, orbital dynamics and Kepler's laws, petrology and geochemistry of meteorites, age dating techniques, structure and composition of the terrestrial, giant, and icy planets, planetary surfaces, planetary atmospheres, and theories of the formation of the moon. Offered in alternate years. Prior course work in earth materials is required.

Learning Outcomes: 1. Understand the physical and chemical principles behind processes that modify planetary surfaces. 2. Identify planetary surface features in orbital imagery and use observational evidence to postulate their origin and modification histories. 3. Gain field experience with planetary surface processes and landforms at local planetary analog sites. 4. Propose a research topic (all students) and conduct a literature review (undergrads), or design and complete an original research project (grads) on that topic. Credits: 3.00

EAPS 55700 - Introduction To Seismology

Credit Hours: 3.00. Theory of propagation to seismic waves in elastic media. Solution of wave equations for compressional, shear, and surface waves. Analysis of travel-times, amplitudes, and attenuation of seismic waves in terms of ray and wave theory. Principles of the seismograph. Structure of the earth as determined by seismological studies. Investigation of the causes, effects, distribution, and characteristics of earthquakes. Earthquake prediction.

Credits: 3.00

EAPS 55900 - Topics In Seismology

Credit Hours: 1.00 to 3.00. This course covers current topics in seismology. Recent topics have included seismic structure of the crust and mantle, seismic anisotropy, and earthquake sources. Professor Nowack. Permission of instructor required.

Credits: 1.00 to 3.00

EAPS 57300 - Basin Analysis

Credit Hours: 3.00. Advanced study of tectonic evolution and stratigraphic history of sedimentary basins. Topics include formative mechanisms of different sedimentary basins; tectonic, eustatic, and climatic controls on basin stratigraphy; relationship of depositional systems to basin types; subsidence and thermal histories; and application of basin analysis to petroleum reservoir and ground water aquifer assessment. Required field trips. Offered in alternate years. Prior course work in sedimentology and stratigraphy is required.

Credits: 3.00

EAPS 57700 - Remote Sensing Of The Planets

Credit Hours: 3.00. Introduction to key planetary and Earth science satellite remote sensing datasets, including visible and thermal imagery, visible through mid-infrared spectroscopy, radar, gamma ray and neutron spectroscopy, and laser altimetry. Students will receive hands-on-experience with data acquisition, image processing in IDL, spectral analysis in ENVI and Davinci, crater counting, and geologic mapping in GIS programs. Includes 1-2 full-day field trips. Junior, Senior, or Graduate status required. Recommended minimum background for undergraduates: Introductory knowledge of Earth or planetary surface processes and basic programming skills.

Learning Outcomes: 1. Understand the underlying physical principles behind the interpretation of remote sensing data. 2. Gain proficiency in the acquisition, processing, and analysis of remote sensing data. 3. Gain field experience with using and ground truthing remote sensing data at planetary analog sites. 4. Propose a research topic, conduct a literature review, and design and complete an original research project. Credits: 3.00

EAPS 58000 - Geodynamics

Credit Hours: 3.00. This course will provide students with a first order understanding of geophysical processes by developing analytical solutions to a variety of geophysical and planetary thermo-mechanical problems. Topics will include stress and strain, rheology, elasticity and flexure, faulting, and conductive heat transfer, and fluid mechanics. We will develop governing analytical equations based on first order principles, such as the conservation of mass, energy, and momentum, and solve these equations for a number of boundary conditions.

Learning Outcomes: 1. Solve first-order analytical thermo-mechanical problems in geophysics and planetary science. 2. Understand the basis for more complex numerical solutions of thermo-mechanical problems in geophysics and planetary science. 3. Investigate the factors that control a variety of thermo-mechanical geophysical and planetary

processes. Credits: 3.00

EAPS 58400 - Hydrogeology

Credit Hours: 3.00. Investigates the qualitative and quantitative aspects of ground water location, occurrence, movement, evaluation, and development, and the influence of man upon this resource. Geologic and engineering aspects of ground water systems are discussed. Classroom teaching is complemented by problem sets and field trips.

Credits: 3.00

EAPS 59000 - Field Geology North America

Credit Hours: 2.00. Advanced study of tectonic evolution and stratigraphic history of specific geologic provinces. Particular emphasis on the relationship between tectonics, basin development, and sedimentation. Field component deals with application of field techniques used in basin analysis and structural studies. A 10-day field trip is required. Permission of instructor required.

Credits: 2.00

EAPS 59100 - Advanced Topics In Earth And Atmospheric Sciences

Credit Hours: 0.00 to 18.00. Specialized study offered on an individual basis or through specially arranged courses. Permission of instructor required.

Credits: 0.00 to 18.00

EAPS 36000 - Great Issues In Climate Change And Society

Credit Hours: 3.00. This course develops basic skills and knowledge critical to analyze issues of energy use, climate change, and sustainability that incorporate both societal and scientific perspectives. The goal of this course is not to arrive at particular consensus solutions to the problems associated with these issues but instead to foster an informed (through information literacy) debate that will ultimately be waged as solutions are sought. Working in teams the students work throughout the semester to complete a capstone teamwork project and a group presentation. Counts for Great Issues course in College of Science.

Learning Outcomes: 1. Understand/interpret the complex issues related to energy (production and use) policy and climate change. 2. Recognize the basic ethical, technological, political, and economic issues influencing the production of renewable and fossil energy. 3. Identify, distinguish, and use credible/factual information sources to establish a defensible viewpoint on these issues. Credits: 3.00

EAPS 52900 - Modeling Ecosystems And Biogeochemical Cycles

Credit Hours: 3.00. Process-based models are powerful tools for studying ecosystem dynamics and geochemical cycles in Earth System Sciences. In this course, we will explore how various components of ecosystems can be modeled following principles of biology, physics, and chemistry. We will also examine techniques for using modeling to study: 1) responses of the structure and functioning of ecosystems to changing climate, atmospheric composition, environmental conditions, and human activities; and 2) exchanges of major greenhouse gases (e.g., CO2, CH4, and N2O) between the atmosphere and the biosphere. During the course, we will go through the whole cycle of system modeling approach including model conceptualization, formulation, parameterization, sensitivity and uncertainty analysis, verification, and application.

Learning Outcomes: 1. Learn the whole cycle of system modeling approach including model conceptualization, formulation, parameterization, sensitivity and uncertainty analysis, verification, and application. 2. Learn how to model the key element cycles (e.g., C and N) between the atmosphere and terrestrial biosphere. Credits: 3.00

EAPS 51800 - Soil Biogeochemistry

Credit Hours: 3.00. This course will provide an introduction to the physical and microbial processes governing the cycling of photosynthetically-produced organic matter on land and in streams and rivers. Organic geochemical transformations in the soil and litter will be highlighted along with methods of characterization of the organic constituents. Biogeochemical concepts of stabilization and destabilization of soil organic matter and stress response of terrestrial ecosystems will be reinforced through manipulation of actual data sets.

Learning Outcomes: 1. Understand the basic mineral and organic chemistry of soils. 2. Understand the range of soil types and capacities to store organic matter. 3. Understand the natural and man-made stressors of soil organic matter and the range of impacts. 4. Understand the common analytical tools used to assess chemistry and health state of soils. 5. Understand how to structure and write and NSF-style proposal. 6. Understand the

need for hypothesis generation in developing a research proposal. 7. Be able to work in teams to analyze large data sets and develop and hone hypotheses. 8. Understand the mechanisms of soil stabilization and destabilization. 9. Understand the comparative role of different groups of microbes in the decay of plant-derived litter. Credits: 3.00

EAPS 20000 - Water World: Processes And Challenges In Global Hydrology (UCC: STS)

Credit Hours: 3.00. Introduction to the Hydrological Sciences designed for undergraduate students. Course uses an Earth-systems approach to emphasize the interconnections and feedback between the hydrosphere, geosphere, biosphere, and atmosphere. Course topics will include: global water-balance, techniques for measuring components of the water-balance, hydrological uncertainties, groundwater, surface-water, vadose zone, forest and watershed hydrology, global change hydrology, human and climate impacts on water resource, and water on the worlds.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Create, analyze, and evaluate water-balances. 2. Define and recognize the importance of the groundwater, surface-water, and vadose zone water systems, and explain interactions and interconnections between these three systems. 3. Evaluate human and climate impacts on water resources and explain how hydrological processes impact biodiversity and ecological functioning. 4. Create conceptual models for how these systems may change with growing human populations, land development and deforestation, and climate change. Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five

scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 31500 - Biogeochemistry

Credit Hours: 3.00. The course examines the main element cycles of Earth: carbon, oxygen/hydrogen, nitrogen, sulfur, phosphorous, and trace metals, and how they are interconnected from terrestrial, aquatic/ocean, and atmospheric perspectives. General chemistry concepts such as equilibrium, free energy, electrochemistry are used to understand the energetics of the cycles. Connection between the cycles and environmental problems, such as climate change and air pollution will be emphasized.

Learning Outcomes: 1. Construct a mental model of the Earth system and the flow of elements among different parts of the system. 2. Examine modern problems caused by human perturbation of the main biogeochemical cycles. 3. Perform basic research tasks and present scientific findings. Credits: 3.00

EAPS 39500 - Astrobiology

Credit Hours: 3.00. Course explores current ideas on how life originated on Earth and may have originated elsewhere in the universe. Lectures will cover zones of habitability in stellar systems, planetary surface and atmosphere evolution and the environment of the early Earth. Topics include how life on Earth functions and its earliest evolution, SETI, planetary quarantine, panspermia, mass extinctions and the potential for life elsewhere in our own solar system.

Learning Outcomes: 1. Know the outlines of how life developed on the Earth, the principal requirements for life to originate and persist, what features makes a planet (in our system or around other stars) habitable for life. 2. Understand how extrasolar planets are found and what limitations exist in our knowledge of those planets. 3. Understand how NASA is seeking for life on Mars and elsewhere in the solar system, why we are concerned about quarantining spacecraft and returned samples. 4. Acquainted with the rationale and methods of the SETI search for intelligent life in the universe. Credits: 3.00

EAPS 50700 - Introduction To Analysis And Computing With Geoscience Data

Credit Hours: 3.00. Course teaches computing techniques including error analysis, line and surface fitting, interpolation, map projections, geospatial and temporal correlations, signal processing, and visualization with discussions on specific and practical geoscience applications. Lectures with computer exercises and team project reporting using open-source computer software. Cannot get credit for both EAPS 50900 and EAPS 50700.

Learning Outcomes: 1. Carry out computational solutions to a given range of geoscience data analysis problems. 2. Select the appropriate analysis approaches when given a set of data. 3. Appraise and conclude the analysis results professionally. Credits: 3.00

EAPS 31201 - Earth Systems Science For Elementary Teachers (UCC: SCI)

Credit Hours: 3.00. An Earth Systems Science perspective draws upon the wealth of Earth systems science research in both content and pedagogy. This approach has served as a guiding framework for how students learn, engage in, and develop deep understandings of the interconnections among Earth's many different systems of geosphere, hydrosphere, atmosphere, and biosphere and the important role that human civilization plays in affecting Earth's other systems. This course

takes an Earth Systems Science approach - an emerging transdisciplinary endeavor - to build students' understanding of the structure and functioning of the Earth as a complex, adaptive system.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. View the Earth as a component of an interconnected system. 2. Investigate the accretion of the solar system and Earth and their respective histories. 3. Scale and model the solar system. 4. Model tectonic plates and different plate boundaries. 5. Analyze atmospheric conditions and make short-term weather predictions. 6. Recognize and evaluate Earth's resources. 7. Create a plan to address multiple interrelated challenges. 8. Evaluate the natural environment for anthropomorphic affects. 9. Develop critical thinking and problem-solving skills. 10. Apply guided-inquiry methods to learning. Credits: 3.00

EAPS 50600 - Cosmochemistry And Geochemistry

Credit Hours: 3.00. The course focuses on the chemical processes involved in the formation and evolution of our solar system and our planet. The course includes discussion of nucleosynthesis and chemical abundances, the origin and composition of various planetary objects and their constituent materials, and the distribution and cycling of elements within and between different Earth systems, including the solid Earth, atmosphere, and oceans.

Learning Outcomes: 1. Understand the cosmochemical model for solar system formation. 2. Become familiar with the inventory of planetary materials in our solar system and understand their characteristics. 3. Understand what causes the first order distribution of elements in different parts of the Earth and other planetary bodies. 4. Apply principles of thermodynamics and reaction kinetics to predict the physical and chemical characteristics of Earth and planetary materials. 5. Understand how chemical exchange between the solid earth, biosphere, and ocean-atmosphere affect the evolution of the Earth system. 6. Analyze laboratory data to gain insight geochemical and cosmochemical processes. 7. Identify outstanding questions in the primary cosmochemistry and geochemistry literature and propose what new observations, data, and/or models could be used to address these questions. Credits: 3.00

EAPS 36700 - Survey Of Planetary Atmospheres

Credit Hours: 3.00. This course is intended to serve as an introduction to the diversity of planetary atmospheres in our solar system and beyond for those without an atmospheric science background. Topics to be covered in this class include: The basic structure and properties of an atmosphere, how planetary atmospheres form / are eroded, the balance of radiation and its effect on atmospheric motions, the presence and formation of hazes, clouds, and aerosols, fundamental atmospheric compositions and chemistry, the connections between planetary interiors, surfaces, and atmospheres, and how we measure and interpret observations of exoplanet atmospheres. To achieve this, we will learn about Earth's atmosphere and us our terrestrial template to compare, contrast, and explore the atmospheres of other astronomical bodies.

Learning Outcomes: 1. Gain familiarity with the different types of planetary bodies and the atmospheres that are present on them. 2. Recall the main properties of planetary atmospheres in our solar system. 3. Identify and apply the general properties of the atmospheres. 4. Understand the effect of radiation and distribution of energy in an atmosphere. 5. Recognize the importance of chemical reactions and pathways. 6. Identify the ways in which atmospheres are formed, lost, and evolved. 7. Make simple predictions about the atmospheres of exoplanets based on an assessment of our understanding of the solar system. Credits: 3.00

Notes

Economics Minor

Requirements for the Minor (15 credits)

Required Courses (6 credits)

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

Intermediate Theory Course (3 credits)

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

Economics Electives - Choose Two (6 credits)

ECON 49900 - Economics Capstone Research

Credit Hours: 3.00. The course combines experiential learning with a hands-on research project that unfolds over the course of a semester, serving as a culminating experience at the end of their degree program. The overarching objective of the capstone project is for students to understand how business problems can be addressed with empirical methods. This course is designed to help students develop a more comprehensive and integrative understanding of the major, apply their knowledge to develop and execute a methodologically rigorous research a project, and demonstrate their mastery of critical thinking and research skills they have acquired throughout their time in the major. In addition to a paper, completion of the research project may involve the presentation of the findings in a seminar or workshop setting.

Learning Outcomes: 1. Complete a high quality research paper that applies Economic analysis to a topic of particular interest to the student. 2. Develop a deep understanding of the roles that Economic theory and/or empirical analysis (Econometrics) play in creating high-quality economic analysis. 3. Identify the economics literature (journals, books, monographs, etc.) that relates to the research topic considered. Credits: 3.00

ECON 47100 - Behavioral Economics

Credit Hours: 3.00. Students learn about human behavior in economic environments, with a strong emphasis on classroom laboratory exercises. Topics considered include behavior in a variety of markets - for example, markets with price controls, markets for financial assets and auction markets -- and behavior in social dilemmas that arise when people try to provide public goods voluntarily or when sellers try to conspire to fix prices. Students will also learn how people bargain with, trust each other, and show social preferences towards others. Decision-making and anomalies for risky and uncertain choices will also be covered.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to human behavior in various economic environments based on classroom laboratory exercises. 2. Understand the perspective provided by economic analysis in social exchanges that involve bargaining, trust, and uncertainty. 3. Identify insights experimental economics provides concerning individuals' behavior in markets. Credits: 3.00

ECON 46600 - International Economics

Credit Hours: 3.00. Analyzes topics in international economics, using more advantage techniques and more detailed treatment than in ECON 37000 or 37100. While coverage varies somewhat with instructor, some topics could include: economic growth, innovation and technology transfer, and the role of multinational corporations.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade and finances. 2. Understand the perspective provided by economic analysis regarding the interaction between economic growth and international trade. 3. Identify insights economics analysis provides concerning the benefits and costs of technology transfer and the role of multinational corporations. Credits: 3.00

ECON 46100 - Industrial Organization

Credit Hours: 3.00. This course examines the determinants of firm and market structure and the resulting market performance in imperfectly-competitive markets. Advanced topics include advertising, research and development, imperfectly competitive international markets, and market integration. Emphasis is placed on using theoretical models of firm and industry behavior to explain and analyze real-world examples of firm behavior.

Learning Outcomes: 1. Use basic versions of the models economists use to analyze imperfectly competitive markets. 2. Recognize the results of empirical tests of those models, in the laboratory and using real-world data. 3. Recognize the implications of these models for public policy toward business competition. Credits: 3.00

ECON 45100 - Game Theory

Credit Hours: 3.00. In the course, economic, political, and social interactions are represented as games, in which strategies and resulting outcomes can be analyzed. The

analysis of these interactions is then used to demonstrate how one can make optimal decisions under uncertainty. This course uses Calculus.

Learning Outcomes: 1. Model strategic interactions as a game. 2. Describe behavior in games using strategies. 3. Calculate the Nash equilibrium of a game. 4. Predict behavior in different games. 5. Explain the role of uncertainty in strategic interactions. Credits: 3.00

ECON 39000 - Junior Level Problems In Economics

Credit Hours: 1.00 to 4.00. Investigation into a specific topic area of economics. Permission of instructor required.

Credits: 1.00 to 4.00

ECON 38500 - Labor Economics

Credit Hours: 3.00. The purpose of this course is to introduce important topics, theories, institutions, and policy issues relating to the functioning of labor markets. Topics to be considered include labor supply decisions, investments in human capital, compensating wage differentials, labor contract theory, unions, compensation programs, signaling in labor markets, the economics of unemployment, and government employment, retirement, and workplace safety.

Learning Outcomes: 1. Distinguish the major determinants of labor market participation and hours worked. 2. Analyze how welfare programs and business cycles affect labor supply. 3. Derive the short and long term demand for labor. 4. Construct a detailed demand and supply model of the labor market. 5. Find the equilibrium labor market outcomes in the context of the neoclassical model 6. Analyze the role played by jobs' and workers' characteristics in generating wage differentials. 7. Develop a schooling model that explains human capital investment. 8. Distinguish factors that affect earnings inequality and labor market discrimination. Credits: 3.00

ECON 38000 - Money And Banking

Credit Hours: 3.00. The course analyzes the economics of money, monetary systems, investments, and financial intermediaries in modern industrial economies. Topics considered include the origin of money and the banking industry, financial asset markets, the role of central banks, and the effects of various monetary policies. The theory will be presented side by side with current economic and financial news, and the students will learn how to track financial and economic data via The Wall Street Journal.

Learning Outcomes: 1. Understand economic analysis, through developing the economic intuition necessary to organize concepts and facts, and draw conclusions through use of inductive and deductive logic. 2. Evaluate current developments and financial news, using economic analysis to think critically about how to interpret current events. 3. Use economic analysis to predict likely changes in the economy and financial system. Credits: 3.00

ECON 37000 - International Trade

Credit Hours: 3.00. Develops an understanding of the economics of globalization, including the movement of goods, people, capital, and ideas across countries. Using the tools of intermediate economic theory, we discuss the benefits and costs of globalization, the implications of globalization for wages, earnings, and national welfare, and their intersection with government policies.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade, including the movement of goods, people, capital, and ideas across countries. 2. Understand the perspective provided by economic analysis regarding globalization of economies, including the implications for wages, earnings and national welfare. 3. Identify insights economics analysis provides concerning the benefits and costs of globalization and the implications for government policies. Credits: 3.00

ECON 36500 - History Of Economic Thought

Credit Hours: 3.00. The course traces the development of theories of value and economic growth from the seventeenth century to Karl Marx. Among the authors studied are the mercantilists, Hume, Smith, Ricardo, and Marx. Excerpts from the original works are read and evaluated in light of modern theory.

Credits: 3.00

ECON 36100 - Antitrust And Regulation

Credit Hours: 3.00. This course studies the influence of laws and regulations on market performance and on the functioning of a free-enterprise system. The focus is on two types of government policies: antitrust law and economic regulation. Antitrust laws define the rules by which firms are supposed to compete. Regulations may require that firms obtain approval to set prices, change prices, or enter new markets. They may require firms to adhere to environmental or safety standards. The focus is on current topics in both areas, including comparison of U.S. practice with that of European Union and elsewhere.

Learning Outcomes: 1. Demonstrate a basic understanding of economics as applied to antitrust and government regulation of firms, including comparisons of U.S. practice with that of the European Union and elsewhere. 2. Understand the perspective provided by economic analysis regarding the interplay between government regulation and firms' decisions regarding such factors as pricing, market entry, and the extent/form of competition. 3. Identify insights economic analysis provides concerning the creation and implementation of optimal regulation of business. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts

and theories to real world phenomena and policies. Credits: 3.00

ECON 36700 - Law And Economics

Credit Hours: 3.00. It has become increasingly clear to economists, legal scholars and political scientists that it is impossible to understand economic institutions without first having an understanding of the legal framework within which they operate. Similarly, it is impossible to understand the impact of law on society without first having an understanding of economic principles. This problem is further complicated by the fact that there are often ambiguities in the written law that lead to significant differences between what the law appears to say and how the law is interpreted in the courts. This course is designed to give the student an understanding of both legal and economic principles and the relationship between them. Finally, through the use of economic analysis, the student will acquire the tools to predict the likely outcomes of particular laws and how they will affect their family and business decisions.

Learning Outcomes: 1. Understand better the relationship of Law and Economics, two different disciplines that both directly impact the business climate. 2. Learn how the concepts taught in this class apply in a real world setting. Credits: 3.00

ECON 32500 - Economics Of Sports

Credit Hours: 3.00. This class applies economic principles to the professional sports entertainment industry and its derivative input markets. The class begins by examining the microeconomics of demand for (by fans) and supply of (by teams) sports entertainment. The labor markets for the primary input, athletic talent, receive significant attention. Coordination among economic agents, taking the forms of leagues, players' unions, and government, is considered at the end of the class, with an emphasis on how they affect the efficiency of the markets related to sports entertainment. Quantitative empirical analysis is emphasized throughout the class. This is not a sports trivia or fantasy sports strategy class.

Learning Outcomes: 1. Solve models of how fans, teams, and players behave. 2. Describe and evaluate the structures of the markets for sports outputs and inputs, e.g., players. 3. Explain information presented in quantitative forms, e.g., equations, graphs, tables. 4. Analyze the effects of leagues' or governmental polices on market efficiency. 5. Communicate conclusions about sports output and input markets in numerical, graphical, tabular, and written forms. Credits: 3.00

ECON 36200 - Health Economics

Credit Hours: 3.00. This course is designed to introduce upper level undergraduate students in economics to the field of health economics. We will analyze health and health care theories, institutions, and key policy issues using tools from intermediate microeconomic theory. The course begins with an analysis of health care as a commodity and why health is different from other consumer goods. The course then examines the demand for and the production of health and health care, and the behavior and organization of health care providers. The discussion then switches to information asymmetries and the functioning of health insurance markets. Afterwards, the course turns to the analysis of government involvement in the health care system. The class concludes with an examination of medical care systems around the world, paying particular attention to the U.S. health care system.

Learning Outcomes: 1. Describe the main economic theories relating to health and health care markets. 2. Apply economic theory to the analysis of health care policy and institutions. 3. Construct a detailed demand and supply model of the health insurance market. 4. Critically evaluate key policy issues in health and health care from an economic perspective. Credits: 3.00

ECON 37600 - Economics Of The European Union

Credit Hours: 3.00. Current economic structure of the European Union, and the economic challenges it is now facing.

Learning Outcomes: 1. Understand the background and current economic structure of the European Union, as well as the economic challenges it is now facing. Credits: 3.00

ECON 48500 - Economics Of Racial And Gender Discrimination

Credit Hours: 3.00. This course focuses on quantifying the extent of, and determining the underlying causes of racial and gender disparities in the labor market. Topics include the impact of prejudice on labor market outcomes, statistical discrimination, early childhood factors and differences in environment, and fertility and reproductive technology.

Learning Outcomes: 1. Quantify racial and gender disparities in economic outcomes. 2.

Recognize the differences and importance of disparities that control and do not control for observable factors. 3. Understand the difference between prejudice and discrimination, and the extent to which prejudice can cause discrimination. 4. Assess how discrimination can occur even in the absence of prejudice. 5. Evaluate the impact of policies designed to reduce disparities, such as affirmative action. Credits: 3.00

ECON 32200 - Economics Of Public Policy

Credit Hours: 3.00. The examination and analysis of public finance practices and problems in the federal fiscal system. Government activities that involve spending and taxation are analyzed applying basic principles of economics. Topics include public education, social security, healthcare, environment and tax systems. State and local government issues are also addressed.

Learning Outcomes: 1. Explain how the provision of government goods and services through political institutions differs from market provision of goods and services. 2. Examine and analyze taxes and subsidies with and without market failure. 3. Examine and analyze various types of government expenditures on public education, health care, social security, income assistance, unemployment compensation, etc. 4. Explain how cost-benefit analysis can be used to help government choose among alternative investment projects. 5. Examine and analyze the impact of various types of taxes on the economy. Credits: 3.00

Notes

Electrical and Computer Engineering Minor

Requirements for the Minor (18 credits)

Applying for the Minor

Required Courses (15 credits)

ECE 26400 - Advanced C Programming

Credit Hours: 3.00. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures. A basic knowledge of the UNIX operating system and an introductory C programming course; C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions.

Learning Outcomes: 1. Ability to read and write C programs that use files. 2. Ability to read and write C programs that use structures. 3. Ability to read and write C programs that use dynamic data structures. Credits: 3.00

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive

elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

ECE 20008 - Electrical Engineering Fundamentals II Lab

Credit Hours: 1.00. This is a course in electronic measurement, circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments including discrete semiconductor measurement, transistor amplifiers, motor control, and operational amplifier internals. The experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20002 Electrical Engineering Fundamentals II; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in other courses.

Learning Outcomes: 1. Ability to competently select, use, and automate electronic measurement instruments. 2. Design, wire, and troubleshoot electronic circuits. 3. Ability to simulate electronic circuits. 4. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 5. Demonstrate knowledge of laboratory safety precautions. 6. Maintain laboratory notes and create professional experiment reports. Credits: 1.00

Selective Course - Choose One (3-4 credits)

ECE 30100 - Signals And Systems

Credit Hours: 3.00. Classification, analysis and design of systems in both the time- and frequency-domains. Continuous-time linear systems: Fourier Series, Fourier Transform, bilateral Laplace Transform. Discrete-time linear systems: difference equations, Discrete-Time Fourier Transform, bilateral Z-Transform. Sampling, quantization, and discrete-time processing of continuous-time signals. Discrete-time nonlinear systems: median-type filters, threshold decomposition. System design examples such as the compact disc player and AM

radio.

Learning Outcomes: 1. Able to classify signals (e.g., periodic, even) and systems (e.g., causal, linear) and an understanding of the difference between discrete and continuous time signals and systems. 2. Able to determine the impulse response of a differential or difference equation. 3. Able to determine the response of linear systems to any input signal by convolution in the time domain. 4. Understand the definitions and basic properties (e.g., time-shift, modulation, Parseval's Theorem) of Fourier series, Fourier transforms, bilateral Laplace transforms, Z transforms, and discrete time Fourier transforms and an ability to compute the transforms and inverse transforms of basic examples using methods such as partial fractions expansions. 5. Able to determine the response of linear systems to any input signal by transformation to the frequency domain, multiplication, and inverse transformation to the time domain, an ability to apply the Sampling theorem, reconstruction, aliasing, and Nyquist's theorem to represent continuous-time signal in discrete time so that they can be processed by digital computers. Credits: 3.00

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 32100 - Electromechanical Motion Devices

Credit Hours: 3.00. The general theory of electromechanical motion devices relating electric variables and electromagnetic forces. The basic concepts and operational behavior of DC, induction, brushless DC, and stepper motors used in control applications are presented.

Learning Outcomes: 1. Analyze/design electromagnetic circuits/devices. 2. Understand the concepts and principles of electromagnetic energy conversion. 3. Understand the concept of time-varying transformations in the analysis of time-varying systems. 4. Analyze dc machines. 5. Understand converters for dc drives. 6. Analyze brushless dc machines. 7. Analyze induction machines. Credits: 3.00

ECE 36800 - Data Structures

Credit Hours: 3.00. Provides insight into the use of data structures. Topics include stacks, queues and lists, trees, graphs, sorting, searching, and hashing.

Learning Outcomes: 1. Understand various basic data structures, including stacks, queues, and trees. 2. Able to analyze time complexity and space complexity of algorithms. 3. Able to apply appropriate sorting and searching algorithms for a given application. 4. Able to apply graph theoretic techniques, data structures and algorithms for problem solving. 5. Able to design and implement appropriate data structures and algorithms for engineering applications. Credits: 3.00

ECE 36200 - Microprocessor Systems And Interfacing

Credit Hours: 4.00. An introduction to basic computer organization, microprocessor instruction sets, assembly language programming, and microcontroller peripherals.

Learning Outcomes: 1. Show ability to program a microcontroller to perform various tasks. 2. Show an ability to interface a microcontroller to various devices. 3. Show an ability to effectively utilize microcontroller peripheral. 4. Show an ability to design and implement a microcontroller-based embedded system. Credits: 4.00

ECE 30411 - Electromagnetics I

Credit Hours: 3.00. This course is a continued study of vector calculus, electrostatics, magnetostatics, and Maxwell's Equations. It serves as an introduction to electromagnetic

waves and transmission lines, which is continued in ECE 30412.

Learning Outcomes: 1. Work with electrostatic fields and find electric and potential fields from charge distributions including the presence of dielectric materials. 2. Work with magnetostatic fields and find magnetic fields from current distributions including the presence of magnetic materials. 3. Work with time varying fields including wave propagation. 4. Work with transmission lines in the time and frequency domains. Credits: 3.00

Electrical Engineering Technology Minor

About the Program

Requirements for the Minor (15 credits)

Required Courses (15 credits)

ECE 20700 - Electronic Measurement Techniques

Credit Hours: 1.00. Experimental exercises in the use of laboratory instruments. Voltage, current, impedance, frequency, and wave form measurements. Frequency and transient response. Elements of circuit modeling and design.

Credits: 1.00

ECET 17700 - Data Acquisition And Systems Control

Credit Hours: 3.00. Fundamental electrical parameters and measurement techniques are introduced. These are then applied to implementing power interfaces, actuators and sensors. Modules that provide signal conditioning, data conversion, filtering and controllers are evaluated. A full, closed loop control system is built and evaluated.

Learning Outcomes: 1. Make laboratory measurements using digital multi-meters, oscilloscopes, and a microcomputer. 2. Implement and evaluate the performance of each of the following elements at the module level while calculating key circuit parameters: Switching and linear power interfaces; Light, sound, motion, and temperature actuators and sensors; Amplifiers, signal conversion, and filters. On/off, linear, and computer controllers. 3. Evaluate the static and the dynamic performance of a closed loop system constructed of the elements from items 1 and 2 above. Credits: 3.00

ECET 17900 - Introduction To Digital Systems

Credit Hours: 3.00. This course introduces computing systems and defines the major classes of computing devices. Sequential and concurrent operations, along with logic and control structures, are covered. Knowledge of fundamental computing principles is discovered. Common software tools are used to create, test, and debug systems. Systems are constructed from standard blocks with a focus on subsystem operation and performance, troubleshooting/debugging and testing. Common applications of embedded systems are introduced.

Learning Outcomes: 1. Develop and utilize algorithms and flowcharts to create microcontroller applications to solve a given problem. 2. Apply the fundamental control structures and logic operations to control program flow within microcontroller applications. 3. Demonstrate the ability to convert numbers between number systems (bases) and compute arithmetic operations within microcontroller applications. 4. Utilize the primary tools used to create, test, and debug computing system hardware and software components. 5. Construct electronic hardware systems to solve a given microcontroller problem. Credits: 3.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and

Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

ECET 22700 - DC And Pulse Electronics

Credit Hours: 3.00. Capacitors, inductors, oscillators, rectifiers, bipolar and MOSFET power switches, switching power supplies, half-and full-H bridges, switching audio power amplifiers, and linear regulators are studied. Computer-aided analysis of circuits is utilized.

Learning Outcomes: 1. Explain the characteristics of capacitors, inductors, rectifier diodes, Zener diodes, IC regulators, bipolar junction transistors (BJTs), field effect transistors (MOSFETS), and general purpose operational amplifiers. 2. Apply the principles of circuit analysis to the following: switching and linear power supplies, op-amp based amplifiers, BJT and MOSFET switches, Class D amplifier, wave shape generators, RC and RL circuits. 3. Simulate circuits and compare actual data to simulated data. 4. Construct electronic circuit according to a given schematic. 5. Measure electrical parameters, using digital multimeters, signal generators, and oscilloscopes. 6. Interpret laboratory experiment data. Credits: 3.00

ECET 27700 - AC And Power Electronics

Credit Hours: 3.00. AC Circuits including the j operator, phasors, reactance and impedance are studies. Circuit laws, network theorems, and the application of circuit analysis techniques to amplifiers used in power electronics, including power MOS devices, thyristors, and other appropriate applications. Computer-aided analysis of circuits is used.

Learning Outcomes: 1. Calculate phasor and time domain representation of a sine wave. 2. Analyze series, parallel and series-parallel passive and active AC circuits. 3. Analyze multi-loop, multi-source AC circuits using advanced techniques. 4. Analyze and design given series and parallel resonance circuits. 5. Compute the average voltage, rms voltage and power produced by a wide variety of waveshapes using integral definitions. 6. Describe the linear performance of MOS devices. 7. Analyze and design linear power amplifiers using op amps and MOS devices. 8. Apply thyristors, snubbing, thyristor triggers and proportional interfaces. 9. Evaluate the performance of a variety of AC circuits, using appropriate standard laboratory measurement procedures and simulations. Credits: 3.00

ECET 27900 - Embedded Digital Systems

Credit Hours: 3.00. A course emphasizing the advanced applications of embedded digital systems. Topics include embedded system architecture, use of advanced programmable counter/timer arrays, analog interfaces, serial communication, and interrupts.

Learning Outcomes: 1. Solve problems by the application of C programs emphasizing I/O and peripherals. 2. Demonstrate knowledge and skill in the application of parallel ports, counter-timers, programmable counter arrays, serial ports and interrupts. 3. Demonstrate a conceptual understanding of embedded microcontroller system hardware system design. 4. Demonstrate the use of software development tools such as an editor, an assembler, a C compiler, a linker and locator, an object-to-hex converter, etc. 5. Demonstrate fluency in the language of advanced microprocessors. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts,

devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

Pre-Requisite Information

CNIT 10500 - Introduction To C Programming

Credit Hours: 3.00. This course is an introduction to computer programming using the "C" language. The emphasis is on structured programming principles, and understanding the basic concepts that apply to engineering problems. Among topics covered in this course are: problem solving using top down design, using flowcharts to explain the program logic, selection structure, repetition structure, bitwise operations, arrays, pointers, strings, passing arguments, and sequential files.

Learning Outcomes: 1. Practice and apply basic programming concepts in weekly labs and assignments. 2. Construct programming solutions using different coding structures in C. 3. Illustrate the ability to design and build user defined functions in C. 4. Practice the use of one-dimensional Arrays, Struct, and Files in C programing. Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 24000 - Programming In C

Credit Hours: 3.00. The UNIX environment, C development cycle, data representation, operators, program structure, recursion, macros, C preprocessor, pointers and addresses, dynamic memory allocation, structures, unions, typedef, bit-fields, pointer/structure applications, UNIX file abstraction, file access, low-level I/O, concurrency.

Learning Outcomes: 1. Understand programming principles and techniques for problem solving in the C programming language. Credits: 3.00

Notes

Availability

Electronic and Time-Based Art Minor

Requirements for the Minor (15 credits)

A. Introduction to ETB (6 credits)

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 30400 - Video Art

Credit Hours: 3.00. Introduction to digital video as a creative medium for artistic expression. Students will record, digitize, edit and distribute digital video content and author a digital portfolio of their work in the form of an interactive DVD.

Learning Outcomes: 1. Analyze key ideas in the field of Video Art by preparing a research presentation on the practice of an individual video artist or collective. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Create a variety of video artworks by the creative use of the video camera, editing strategies and postproduction techniques. Credits: 3.00

B. ETB Culture and Theory (3 credits)

AD 33400 - New Media Culture

Credit Hours: 3.00. This lecture course provides a historical overview of the development of new media art. In their research, project papers, and practical assignments, students explore issues of media criticism, technology's impact on culture and society and visions of media utopias.

Learning Outcomes: 1. Summarize the key characteristics of new media based on course texts and artistic examples. 2. Analyze and critique new media-related texts and cultural productions through group discussion and oral presentation. 3. Apply project-based methods to respond creatively and critically to the material history and social context of new media. Credits: 3.00

C. ETB Selectives- Choose Two (6 credits)

AD 32600 - Physical Computing

Credit Hours: 3.00. Introduction to electronics and computer vision for artists. Students learn to create expressive audiovisual systems that can respond to events in the physical world (movement, light/temperature change, sound, touch, etc.) through custom interfaces.

Learning Outcomes: 1. Analyze key ideas in the field of Physical Computing by preparing a research presentation on the practice of an individual artist or collective. 2. Critique their own creative work as well as the work of their peers through group discussions. 3. Produce a variety of interactive artworks by the creative use of the Arduino microcontroller, simple electronic circuitry, and coding techniques. Credits: 3.00

AD 41700 - Variable Topics In Electronic And Time-Based Art

Credit Hours: 3.00. Examination of thematic or specialized

topics reflecting the most recent developments and contemporary artistic practices in Electronic and Time-Based Art. Permission of department required.

Learning Outcomes: 1. Use essential tools and techniques for generating, sketching and realizing ideas in the field of new media art using DIY strategies, commercial as well as open source software and hardware solutions for creative production. 2. Able to analyze key works and artists in the emerging field of Electronic and Time-Based Art. Credits: 3.00

Notes

Engineering and Public Policy Minor

A minor in Engineering and Public Policy is available to students in the College of Engineering.

Requirements for the Minor (21 credits)

Required Courses (15 credits)

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the

environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

IDE 49500 - Special Topics In Interdisciplinary Engineering

Credit Hours: 1.00 to 4.00. Primarily designed for interdisciplinary engineering subject areas for which there is no specific course offered, but for which there is sufficient student interest to justify teaching a specialized course on a trial basis. May be repeated for credit as long as the topic being taught is not repeated.

Credits: 1.00 to 4.00

ME 49200 - Technology And Values

Credit Hours: 3.00. The impact of science and technology on personal and societal value systems. The special responsibility of engineers. Practical methods for using human values to guide future technological developments. Societal problems considered: warfare, energy, overpopulation, resource depletion, and environmental degradation. Interdisciplinary approaches stressed. Offered in alternate years.

Credits: 3.00

PHIL 27000 - Biomedical Ethics (UCC: STS)

Credit Hours: 3.00. An examination of the moral problems raised by developments in medicine and the biomedical sciences. Topics include abortion, reproductive technologies, euthanasia and physician-assisted suicide, experiments involving human subjects, and health care delivery.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

POL 12000 - Introduction To Public Policy And Public Administration (UCC: BSS)

Credit Hours: 3.00. An introduction to the fields of public policy and public administration. Processes of policy formation and administration are examined. Different approaches to evaluating and improving public policies are discussed.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

PHIL 20700 - Ethics For Technology, Engineering, And Design (UCC: STS)

Credit Hours: 3.00. This course is designed to increase your understanding of professional and ethical responsibilities in national, international, and cross-cultural environments, helping you to anticipate, understand, and navigate issues that will likely arise in your working life as an engineer or designer. The focus of the course is on developing the ability to apply a general ethical framework to new and unique situations, including those arising from the global cultural

context of modern engineering. The course covers how this ethical framework should be constituted, and provides practice in applying this a framework to specific, concrete cases. Together, these components work toward your development as a better engineer and a more responsible global citizen. The readings, case studies, and exercises are geared towards the development of a well-researched original case study that you will present to the class, which is informed by your past experiences and future aspirations related to engineering.
University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Develop an understanding of professional and ethical responsibilities in technology, engineering, and design (TED). 2. Understand and assess ethical problems in TED contexts. 3. Analyze and assess the impact of engineering solutions in global, economic, environmental, and societal contexts. 4. Understand the effects of technological engineering and design solutions in different cultural environments. 5. Apply abstract ethical frameworks to concrete situations. 6. Develop critical thinking skills. 7. Develop and deploy analytical skills in ethical contexts. 8. Develop skills in analytical writing and in clear and precise oral communication.
Credits: 3.00

Additional Courses (6 credits)*

Public Policy (3 credits)

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.
University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

POL 32300 - Comparative Environmental Policy

Credit Hours: 3.00. Comparative study of environmental policy development and processes in industrialized democracies, former and current communist states, and developing nations.
Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.
University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 42300 - International Environmental Policy

Credit Hours: 3.00. Environmental policy development in the international arena, with attention to international law, international organizations, and transboundary environmental problems.
Credits: 3.00

POL 42500 - Environmental Law And Politics

Credit Hours: 3.00. This course provides an introduction to statutory and case law relating to environmental policy. Regulatory schemes in environmental policy and the legal framework for environmental regulation are presented. Market alternatives to various regulatory mechanisms will also be treated.
Credits: 3.00

POL 52300 - Environmental Politics And Public Policy

Credit Hours: 3.00. The political problems of natural resource use and environmental quality. Theoretical foundations for environmental policy and its evaluation, the political context of environmental policy, principles of administering environmental policies, and the significance of international law and institutions for environmental policies.
Credits: 3.00

Technical (3 credits)

CE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution,

noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

CE 36100 - Transportation Engineering

Credit Hours: 3.00. Transportation functions; transportation systems, including land, air, and marine modes; transportation system elements, including traveled way, vehicle, controls, and terminals; techniques of transportation system planning, design, and operation.

Credits: 3.00

CE 45700 - Air Pollution Control And Design

Credit Hours: 3.00. Fundamental concepts and design procedures for the removal of particulates, gases, and toxic air pollutants from waste gas streams. Problem assessment; characterization of exhaust gas streams; fan characteristics.

Credits: 3.00

CEM 48500 - Legal Aspects Of Construction Engineering

Credit Hours: 3.00. This course will cover legal principles and landmark cases relevant to civil and construction engineering. Specific subjects covered include contracts, torts, agency, professional liability, labor laws, insurance, expert testimony, arbitration, patents and copyrights, sureties and ethics.

Learning Outcomes: 1. Read, comprehend and interpret construction contract plans and specifications for lock and dam facilities and other inland navigation structures. Through detailed study of project plans and specs as well as construction photos, students will be taken through the process of building these facilities from planning through construction. 2. Understand how a lock and dam facility functions. 3. Identify various components of lock and dam structures. 4. Understand various types of marine equipment necessary to construct a navigation facility in the dry or wet. Credits: 3.00

EEE 30000 - Environmental And Ecological Systems Modeling

Credit Hours: 3.00. Introduction to computational methods for describing physical, chemical, and microbiological processes that occur in natural and engineered aqueous systems, including rivers and lakes, and within water and wastewater treatment systems. Emphases on understanding and conceptualizing important processes, data analysis, algorithm development, and competency in the use of programming tools.

Learning Outcomes: 1. Apply simple models to natural and engineered systems. 2. Identify processes critical to proper formulation of ecological and environmental models. 3. Formulate models to analyze specific issues concerning natural waters and wastewaters. 4. Encode model algorithms into common software packages. 5. List limitations and assumptions of classic and self-formulated models. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical

responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

ABE 58000 - Advanced Processes In Biological Engineering

Credit Hours: 3.00. Physical and chemical structure of biomass. Reaction kinetics of hydrolysis of hemicellulose and cellulose to fermentable sugars. Fundamentals of ethanol production by fermentation. Separation of fermentation products into pure components.

Learning Outcomes: 1. Analyze bioprocesses using engineering design principles, bioreactor simulations, application of basic separations methods, and applying engineering economic analysis. 2. Develop process models for batch and continuous fermentation, cell culture, and enzymatic bioreactors. 3. Analyze the impact of fundamental advances in bio-sciences on bioprocess engineering and the environment, and the potential of these advances to solve societal problems. 4. Understand the impact of biosafety and regulatory considerations on process design. Credits: 3.00

ME 51400 - Fundamentals Of Wind Energy

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet, turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component machine and off-design performance. Inspection trip to industrial plan required.

Learning Outcomes: 1. Introduce students to the technology and economics of converting wind energy to electricity. 2. Inform students to the environmental concerns of wind energy. 3. Understand principles of wind turbine aerodynamics. 4. Develop the ability to design optimum blading. 5. Develop the ability to evaluate a potential site in terms of wind energy. 6. Understand wind turbine structural dynamics issues. Credits: 3.00

ME 52900 - Sustainable Energy Options And Analysis

Credit Hours: 3.00. This course develops an understanding of the current energy situation and impacts of energy choices on economics and sustainability metrics. A range of different technologies and approaches are presented for meeting future energy needs. Students learn how to assess the potential for alternative energy technologies in terms of economic and sustainability metrics and gain experience in assessing different energy technologies for specific case studies.

Learning Outcomes: 1. Gain an understanding of the current energy situation and impacts of energy choices on economics and sustainability metrics. 2. Gain an understanding of alternative technologies for meeting future energy needs. 3. Learn how to assess the potential for alternative energy technologies in terms of economic and sustainability metrics. 4. Gain experience in assessing different energy technologies. Credits: 3.00

EEE 45600 - Wastewater Treatment Processes

Credit Hours: 3.00. (CE 45600) Fundamental design principles and practice of wastewater treatment to prepare students for designing wastewater treatment systems. The major topics include design and construction process, preliminary treatment

of wastewater, primary treatment, wastewater microbiology, secondary treatment, nitrogen removal, phosphorus removal, attached microbial growth, secondary settling, disinfection and post-aeration, tertiary treatment, and wastewater plant residuals management.

Learning Outcomes: 1. Understand design principles and practice of wastewater treatment. 2. Apply the knowledge to select the best process to treat wastewater. 3. Design a wastewater treatment component or process to meet water quality goals. 4. Critically review relevant literature or contemporary issues in wastewater treatment. Credits: 3.00

CE 45600 - Wastewater Treatment Processes

Credit Hours: 3.00. (EEE 45600) Fundamental design principles and practice of wastewater treatment to prepare students for designing wastewater treatment systems. The major topics include design and construction process, preliminary treatment of wastewater, primary treatment, wastewater microbiology, secondary treatment, nitrogen removal, phosphorus removal, attached microbial growth, secondary settling, disinfection and post-aeration, tertiary treatment, and wastewater plant residuals management.

Learning Outcomes: 1. Understand design principles and practice of wastewater treatment. 2. Apply the knowledge to select the best process to treat wastewater. 3. Design a wastewater treatment component or process to meet water quality goals. 4. Critically review relevant literature or contemporary issues in wastewater treatment. Credits: 3.00

EEE 38000 - Environmental Chemodynamics

Credit Hours: 3.00. Introduction to chemical thermodynamics and general equilibrium processes in environmental and ecological engineering systems. Introduction to the first and second laws of thermodynamics; properties of pure substances; ideal and real gases; thermodynamic cycles and processes; heat transfer and combustion; and chemical equilibrium in aquatic solutions, including equilibria between phases and reaction equilibria. Emphasis is on understanding and conceptualizing important processes, and competency in thermodynamic calculations.

Learning Outcomes: 1. Apply the First and Second Laws of thermodynamics to closed and open systems. 2. Understand, identify, and quantify the environmental impacts of closed and open systems, based on mass and energy transfer. 3. Analyze full-scale systems, and compare actual and theoretical operation. 4. Understand the structure and reactivity of environmentally relevant organic compounds. 5. Calculate concentrations of different components in equilibrium and non-equilibrium environmental systems. Credits: 3.00

Notes

English Minor

Requirements for the Minor (15 credits)

A. Required English Course - Choose One (3-4 credits)

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research

and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

B. 20000 Level or Above (11-12 credits)

Notes

Environmental and Ecological Engineering Minor

Requirements for the Minor (17-18 credits)

Required Courses (11-12 credits)

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight

into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase your communication skills by creating and presenting a poster. Credits: 3.00

CE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

ENTM 31100 - Insect Ecology

Credit Hours: 3.00. Insect ecology investigates the fundamental concepts of ecology as they relate to insects, including insect interactions, other insects and their environment. Topics include population and community ecology, plant-insect interactions, insect biodiversity and biogeography, and theoretical and applied ecology. Examples from current entomological and ecological studies are used. Completion of college biology or an introductory course in entomology is recommended.

Learning Outcomes: 1. Comprehend ecological principles at different scales of biological organization, from the individual to the population to the community to the ecosystem.

2. Understand the mechanisms that mediate interactions of insects with their biotic and abiotic environments. 3. Appreciate the importance of insects as stabilizing and destabilizing components of food webs. 4. Recognize the value and application of insect ecology n solving real-world problems. 5. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

FNR 20100 - Marine Biology

Credit Hours: 3.00. An introduction to the major groups of marine organisms and their habitats. Emphasis on application of ecological principles to the conservation of important marine species. Offered in even-numbered years.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems.

3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population

and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

BIOL 48300 - Great Issues: Environmental And Conservation Biology

Credit Hours: 3.00. Concerned with the application of ecological principles to environmental issues, the course introduces fundamental ecology, emphasizing the interplay of theoretical models, natural history, and experimentation. New research developments are stressed, with the outlook for application to environmental management and restoration. Whole-biosphere issues, such as the loss of biological diversity, frame a focus at the population level to understand local and global extinction and community stability. In-depth case studies of endangered ecosystems (both temperate and tropical), with computer modeling, field trips, and discussions of policy formulation, demonstrate the range of tools and information necessary to accomplish coexistence of humans with the rest of nature.

Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

EEE 53000 - Life Cycle Assessment: Principles And Applications

Credit Hours: 3.00. This course covers the basic concept of life cycle thinking, framework and computational structure of process and economic input-output based life cycle assessment (LCA), state-of-the-art LCA software tools, industrial case studies, and recent advances in LCA methodology. Students are required to complete a group project that could potentially facilitate the adaptation of LCA tools in engineering research, education, or practice.

Learning Outcomes: 1. Conduct an LCA study using state-of-the-art software tools and databases according to ISO I4040 standards. 2. Identify the limitations and weakness of an existing LCA study. 3. Develop customized inventory dataset using information available in literature and current inventory databases. 4. Develop a simplified yet functional LCA

software tool tailored for an enterprise or organization. 5. Combine LCA results with economic and social impact analysis to support decision making. Credits: 3.00

FNR 58600 - Urban Ecology

Credit Hours: 3.00. Urbanization is on the rise, transforming natural ecosystems into coupled human-natural ecosystems that encompass complex, novel functional and structural characteristics shaped by people and the inherent environment. Through local field trips and readings of the primary scientific literature, we examine the unique characteristics of coupled human-natural ecosystems. The course is designed to be broadly accessible to students from a variety of backgrounds, interests, and majors who are interested in environmental science and engineering and emphasizes the importance of incorporating an ecological perspective in environmental engineering and natural resource management. This course covers fundamental principles of ecology as applied in urban and other coupled human-natural systems with emphasis on the impacts of modern industrial society on ecosystem structure and function. Organizing themes addressed in this class include macroscale processes, systems thinking, and topics related to urban systems.

Learning Outcomes: 1. Describe and diagram flows of matter and energy in coupled human and natural systems. 2. Discuss how drivers in each cycle change across an urban-rural gradient. 3. Describe the changes to natural ecosystems imposed by urbanization and other forms of global change (climate change, altered biogeochemical cycling, invasive species, mass extinction, etc.). 4. Compare and contrast urban and rural ecosystem structure and function, including diversity and distribution of organisms, landcover types, and ecosystem services. 5. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 6. Describe the key components of the following ecological concepts and apply them to an analysis of urban vs rural ecosystems: a. resistance and resilience b. dynamic equilibrium c. alternate stable states d. disturbance and succession Credits: 3.00

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.

Learning Outcomes: 1. Design engineering and manufacturing systems with reduced environmental and ecological impact using industrial ecology principles. 2. Describe principles of life cycle analysis (LCA), including its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. Identify common relationships and dynamics in complex systems, including environmental systems, socio-economic systems, and engineered systems. 4. Conduct a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 5. Quantify the physical inputs and outputs of specific engineering processes that comprise a product life cycle. 6. Demonstrate awareness of the roles and responsibilities of stakeholders in complex contemporary environmental issues. 7. Identify implicit and explicit impacts on various stakeholder groups from policies and decisions on environmental issues and engineering solutions. 8. Develop an equitable engineering design proposal. Credits: 3.00

Selective Courses (6 credits minimum)

Notes

Environmental Politics and Policy Minor

Requirements for the Minor (12 credits)

Required Course (3 credits)

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

Selective Courses - Choose Three (9 credits)

POL 32300 - Comparative Environmental Policy

Credit Hours: 3.00. Comparative study of environmental policy development and processes in industrialized democracies, former and current communist states, and developing nations.

Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

POL 42300 - International Environmental Policy

Credit Hours: 3.00. Environmental policy development in the international arena, with attention to international law, international organizations, and transboundary environmental problems.

Credits: 3.00

POL 42500 - Environmental Law And Politics

Credit Hours: 3.00. This course provides an introduction to statutory and case law relating to environmental policy. Regulatory schemes in environmental policy and the legal framework for environmental regulation are presented. Market alternatives to various regulatory mechanisms will also be treated.

Credits: 3.00

POL 42800 - The Politics Of Regulation

Credit Hours: 3.00. Politics and policies of federal and state regulatory agencies. Explanations of regulatory agency behavior, arguments for and against government regulation, and alternatives to government regulation.

Credits: 3.00

POL 42900 - Contemporary Political Problems

Credit Hours: 3.00. Contemporary political problems in the United States affecting the interpretation of democracy, human rights and welfare, social pressures, and intergovernmental relations.

Credits: 3.00

POL 52000 - Special Topics In Public Policy

Credit Hours: 3.00. This is a course focused on a specific current public policy topic, chosen for its contemporary political relevance, which varies from semester to semester. In general, each topic will be examined in terms of its historical roots, past policy initiatives, present policy proposals, and its enduring political and social challenges.

Credits: 3.00

POL 52300 - Environmental Politics And Public Policy

Credit Hours: 3.00. The political problems of natural resource use and environmental quality. Theoretical foundations for environmental policy and its evaluation, the political context of environmental policy, principles of administering environmental policies, and the significance of international law and institutions for environmental policies.

Credits: 3.00

Notes

Event and Meeting Management Minor

Requirements for the Minor (15 credits)

Required Courses (15 credits)

HTM 17300 - Tourism Systems

Credit Hours: 3.00. Tourism is a global phenomenon impacting destination communities, incorporating a range of hospitality-related businesses and organizations, and enriching the lives of tourists and residents alike. This course examines key elements of tourism systems, how these elements interact to deliver unique travel experiences, and how destination stakeholders can use tourism for sustainable development. The course will strengthen students' understanding of tourism systems while preparing them to successfully engage in it for a variety of career options in tourism and hospitality industries.

Learning Outcomes: 1. Explain the tourism system including the roles of travelers, tourism businesses and destinations, and other tourism system components. 2. Describe the impacts of tourism and the basic components of sustainable tourism practices. 3. Identify the key principles of destination marketing and management. 4. Describe key factors that influence consumer travel behavior including personal, interpersonal, and environmental factors. 5. Describe how to apply experience design principles to develop tourism products, services, and experiences. Credits: 3.00

HTM 16200 - Introduction To Event And Meeting Planning Industry

Credit Hours: 3.00. Upon completion of this course, students will have a comprehensive overview of the event and meeting industry. Topics will include the supply and demand side of event and meeting management, the basic planning process needed for any event or meeting, sustainability, business ethics, and keeping pace with current industry trends through guest lectures from event and meeting planners.

Learning Outcomes: 1. Develop a comprehensive overview of the essential supply and demand components of the event industry including corporations, associations, and the government in terms of organization, type, decision makers, attendees, and marketing efforts. 2. Compare and contrast the advantages and disadvantages of major venues of hotels, convention centers, conference centers, cruise ships, and unusual venues to those who demand and plan events. 3. Identify the key players and pioneers of the event planning industry. 4. Identify the basic needs of event planners and consumers. 5. Identify the basic principles and concepts of sustainability as applied to the event management industry. 6. Summarize the major characteristics of event planning with respect to planning, directing, organizing, controlling and assessing events. 7. Identify ethical business practices associated with the event industry. Credits: 3.00

HTM 26200 - Festivals And Special Events

Credit Hours: 3.00. This course offers a comprehensive overview of the theory and procedures associated with the coordination of festivals and special events. Essential topics will include the conceptualization, planning, coordination, sponsorship, marketing, funding, staffing, legal issues, and assessment of festivals and special events. Students will gain hands-on experience by volunteering to work a minimum of six hours to set up, help coordinate, or tear down a large-scale festival or special event.

Learning Outcomes: 1. Classify the types and purpose of festivals and special events. 2. Compare and contrast traditional events and meetings to festivals and special events. 3. Develop a basic understanding of the size and scope and the employment potential of festivals and special events. 4. Describe the key steps necessary to plan, manage, staff, organize, and assess the stated objectives of a festival or special event. 5. Knowledge of economic, financial, and accounting principles and

practices of festivals and special events. 6. Apply the principles of sustainability to festivals and special events. 7. Read relevant research and apply it to festival and special events management. 8. Differentiate between ethical and non-ethical business practices. Credits: 3.00

HTM 36200 - Event And Meeting Management

Credit Hours: 3.00. The principles and practices of event and meeting management will be covered in this course, including: strategic event planning process, project management, risk management, financial management, human resources, stakeholder management, meeting or event design, site location and management, marketing, professionalism, and ethics. Students will gain hands-on experience planning, directing, organizing and controlling a small-scale event.

Learning Outcomes: 1. Determine the purpose of a meeting and identify the relationship of a meeting to organizational strategy. 2. Develop and manage a budget for a meeting/event. 3. Develop the complete plan to meet the goals and objectives of the event (such as reserving rooms, securing meeting space, transportation, and food and beverage). 4. Review the event to determine if the goals and objectives were met. 5. Differentiate between ethical and non-ethical business practices. 6. Work with a team to plan, direct, organize and control a small scale event. Credits: 3.00

HTM 46200 - Advanced Event And Meeting Management

Credit Hours: 3.00. Advanced aspects of meeting and event management principles and practices will be covered in this course. A focus is placed on: strategic planning, project management, finance and risk management, event design, site management, and ethics.

Learning Outcomes: 1. Formulate mission, goals and objectives to ensure effective meeting management and monitor and evaluate activities to ensure they meet desired outcomes and contribute to event effectiveness and sustainability. 2. Management meeting or event to achieve mission, goals and quality standards within the meeting's scope, time and budget. 3. Prepare and determine program components and sequence; development selection criteria for, negotiate and execute contracts for speakers; determine food and beverage requirements; design environment (themes and decor) and requirements for staging and technical equipment and production; develop admittance credential systems and related crowd management control systems. 4. Develop, monitor and revise project budget; monitor revenue streams and cash flow; make ongoing effective decisions and wise resource allocations; manage registration processes. 5. Identify and analyze risks for a specific meeting. 6. Develop and implement risk management plans to reduce the probability and impact of undesirable situations. 7. Differentiate between ethical and non-ethical business practices. Credits: 3.00

Notes

Farm Management Minor

Requirements for the Minor (18 credits)

Required Courses (13 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 31000 - Farm Organization

Credit Hours: 3.00. Economic factors controlling success in farming; types of farming; business records and analysis; adjustment in organization to meet changing economic conditions; organization and management of successful farms.

Credits: 3.00

AGEC 41100 - Farm Management

Credit Hours: 4.00. Principles of farm organization and management, farmer interviews, and the application of computerized farm decision-making methods.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 4.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

Selective Courses (5 credits)

AGEC 22000 - Economics Of Agricultural Markets

Credit Hours: 3.00. This class provides an overview of U.S. and international agricultural markets, and develops a framework for analyzing those markets. Concepts include determination of agricultural prices, spatial dimensions of agricultural markets, and trade; temporal dimensions of agricultural markets, and futures and options markets; and public policy in agricultural markets.

Credits: 3.00

AGEC 30500 - Agricultural Prices

Credit Hours: 3.00. Analysis of prices and the movement of farm product prices; relations of farm product prices to farm input and other prices; conceptual and statistical analysis of agricultural supply and demand relationships; application of price analysis, price forecasting, agricultural outlook, agricultural policy; adjustment of farming to new price conditions.

Learning Outcomes: 1. Understand economic principles that determine prices in markets. 2. Provide knowledge of markets and the entities and factors that impact market equilibrium outcomes. 3. Apply economic principles and empirical estimation tools to inform decision-making. Credits: 3.00

AGEC 32100 - Principles Of Commodity Marketing

Credit Hours: 3.00. An in-depth background on the origin, operation, and application of futures and options in risk management for agriculture. Covers grain, livestock, and yield futures and options. Applications of futures and options to price and yield risk management is provided. Comparison of expected results from various risk management alternatives and decision-making processes to use in selecting a risk management strategy.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.

Learning Outcomes: 1. Manipulate and use spreadsheets. 2. Formulate linear programming problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6. Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming

solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

AGEC 41000 - Agricultural Policy

Credit Hours: 3.00. Economic analysis of U.S. food and agricultural policy; current and past farm legislation; international trade; agricultural policies in selected countries; domestic and foreign food assistance; structural change; agricultural research policy; macroeconomic linkages with the agricultural sector; and emerging environmental policy issues, land and water use.

Learning Outcomes: 1. Understand the role of government interventions in the farm and food system. 2. Apply economic principles to the analysis of government interventions. 3. Delineate between economic and values-based arguments in assessment of policies. 4. Understand the breadth, complexity and importance of 'Agricultural Policy'. Credits: 3.00

AGEC 41200 - Farm Business Management Workshop

Credit Hours: 1.00 to 3.00. Making decisions regarding the organization and operation of farm businesses with which students will be associated after graduation. Areas of decision-making include enterprise selection, farm growth, organizing large-scale farms, communication, labor management, machinery management, operating agreements, legal organization, and tax strategies.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 1.00 to 3.00

AGEC 42100 - Advanced Commodity Marketing

Credit Hours: 3.00. Application of commodity marketing principles to grain, livestock, and other commodity sectors. Applications include hedging, speculation, risk management, and fundamental and technical price analysis. Examination and testing of pricing strategies and the development of commodity marketing plans.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 42400 - Financial Management Of Agricultural Business

Credit Hours: 3.00. A study of the major types of financial decisions made by agriculturally related firms, including investment in inventory, receivables and cash, property, plant, and equipment; sources and types of short-term, intermediate, and long-term capital; legal patterns of the business organization, emphasis on implementation involving agribusiness case problems.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply

social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 42500 - Estate Planning And Property Transfer

Credit Hours: 3.00. The ownership and transfer of farm business property. Includes tax and other implications of life estates, trust arrangements, sale of property, and charitable contributions.

Credits: 3.00

AGEC 45000 - International Agricultural Trade

Credit Hours: 3.00. Study of U.S. agricultural trade with emphasis on international trade theory, exchange rates and their determination, relationships between domestic agricultural policies and trade policies, and analysis of institutional arrangements for world trade in agricultural products.

Learning Outcomes: 1. Explain the rationale for international trade in a variety of economic models. 2. Assess the models in terms of their assumptions and implications. 3. Discuss supplementary research that qualifies and extends the basic models. 4. Discuss the implications of international trade policies, institutions and agreements for international trade, especially trade in food and agricultural products. Credits: 3.00

AGEC 45500 - Agricultural Law

Credit Hours: 3.00. Selected general legal topics (courts, contracts, torts, property and commercial law) with emphasis on farming problems (e.g., landowner-tenant, grain contracts, fences, and animal liability) and cases.

Credits: 3.00

AGEC 45600 - Federal Income Tax Law

Credit Hours: 3.00. Introduction to the federal income tax laws applicable to individuals and small business with emphasis on the farming business. The course includes management implications and the policy basis for the tax law system. Techniques and practice for the preparation of selected forms will be included. There will be limited exposure to taxation of partnerships, corporations, estates, and to federal gift and estate tax law.

Learning Outcomes: 1. Develop an understanding of the federal income tax law: for individuals and small businesses and for economic and financial decision making. 2. Gain an understanding of the management opportunities for the income tax law and how they can be applied by individuals, families, and small businesses. 3. Develop the ability to analyze facts for tax law alternatives and to communicate tax planning alternatives. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

AGEC 52400 - Agricultural Finance

Credit Hours: 3.00. Designed to provide students the concepts and tools to apply financial management principles to farm businesses. Topics include financing alternatives, preparation and interpretation of financial statements, and capital investment analysis using discounted cash flows.

Learning Outcomes: 1. Prepare, interpret, and analyze financial statements used for agricultural businesses. 2. Analyze and suggest methods to improve the financial performance of agricultural businesses. 3. Evaluate capital investments using discounted cash flow methods. 4. Describe and analyze the risk and returns faced by agricultural businesses. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures, compensation, administration, and collective bargaining. Credits: 3.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

TLI 15200 - Business Principles For Organizational Leadership

Credit Hours: 3.00. This course will introduce the topic of applied organization leadership in the context of working organizations. Topics include basic functions, structures, and operations of organizations, and an introduction to reading and understanding balance sheets, cash flow statements, and profit-loss statements.

Learning Outcomes: 1. Identify the business information that organizational leaders are expected to know to comprehensively manage the function and operation of profit and not-profit organizations. 2. Describe the major functions of business, including: operations, finance, marketing, and information technology. 3. Interpret balance sheets, cash flow statements, and profit-loss statements. 4. Explore how organizations use technology to become competitive entities in global business environments. Credits: 3.00

Notes

Fermentation Sciences Minor

About the Minor

Requirements for the Minor (18 credits)

Required Courses (3 credits)

FS 16300 - Introduction To Fermentation Sciences

Credit Hours: 3.00. This course will provide an overview of the use of microorganisms in the food, pharmaceutical and chemical industries. The course will introduce fundamental concepts associated to the microbiological transformation of various substrates to produce desirable products such as foods, beverages, pharmaceuticals or chemical compounds. As an introductory course, the scientific principles of fermentation processes will be gradually introduced through the analysis of familiar fermented food products, such as bread, cheese, beer, wine, cocoa, coffee, etc. Once the fundamental concepts are learned, examples of advanced fermentation technology for production of pharmaceutical products and fine chemicals will be presented.

Learning Outcomes: 1. Explain the role of microorganisms in the transformation of various substrates into desirable products. 2. Identify the type of microorganism (bacteria, yeast or mold) involved in the production of various fermented foods and beverages. 3. Explain the impact of environmental processing conditions (T, pH, aw, O2) on microbial growth. 4. Recognize the similarities across a wide variety of products made through fermentation. Credits: 3.00

Minor Selectives - Choose Two (6 credits)

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BCHM 46200 - Metabolism

Credit Hours: 3.00. A lecture course to provide students with a broad and thorough understanding of core metabolic pathways and how they are resulted. Anabolic and catabolic processes of metabolic pathways will be studied at the biochemical, structural, genetic and molecular levels. Students will learn to appreciate how the various metabolic pathways are integrated and how the fundamental metabolic pathways relate to medicine, agriculture and human disease.

Learning Outcomes: 1. Students will understand the molecular principles of life based on the core disciplines of biology, chemistry and physics. 2. Students will understand the contributions of our discipline to society, including improvements to medicine, agriculture, the economy and the environment. Credits: 3.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection

and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to

efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

BCHM 56100 - General Biochemistry I

Credit Hours: 3.00. This course provides upper-division undergraduate and graduate students with basic understanding of biochemical and structural properties of amino acids, nucleic acids, lipids, and carbohydrates. This course allows students to connect the relationship between structure and function of biomolecules. In addition, students learn to understand enzyme properties, enzyme mechanism of action, and enzyme regulation.

Learning Outcomes: 1. Understand the molecular principles of life based on the core disciplines of biology, chemistry and physics. 2. Understand the scientific method. They will be able to develop hypotheses, design experiments, and critically analyze results to create new knowledge. 3. Learn to be skilled laboratory scientists. They will perform a wide variety of biochemical and molecular techniques. 4. Understand the contributions of our discipline to society, including improvements to medicine, agriculture, the economy and the environment. Credits: 3.00

Additional Courses (9 credits)

ABE 30400 - Biological Engineering Laboratory

Credit Hours: 3.00. Laboratory course focused on bioprocessing topics such as fluid flow, mixing, rheology, hydrolysis, and fermentation of biomaterials. Students will participate in design of experiments, system set up, data collection, statistical data analysis, and presentation of results.

Learning Outcomes: 1. Understand and analyze the flow behavior in biological systems. 2. Understand and analyze enzymatic reasons in biological systems. 3. Understand and analyze fermentation processes. 4. Understand and analyze mixing and heat transfer in biological systems. 5. Collect and analyze rheological properties. 6. Design and safely execute experiments in a process laboratory. 7. Collection and statistical analysis of experimental data. 8. Present the results of analysis in the form of written report and oral presentation. Credits: 3.00

FS 47000 - Wine Appreciation

Credit Hours: 3.00. A study of wine production and marketing principles with an emphasis upon consumption responsibility. Historical perspectives form the foundations for wine classification systems and traditional serving procedures. Cardinal scale sensory evaluations are conducted in relationship to various food pairings. Must be 21 years of age or older to register for this course. Permission of department required.

Learning Outcomes: 1. Understand the nature of wine - its production, history, uses and related responsibilities. 2. Develop the ability to recognize different classes, types, and origins of wines. 3. Learn proper etiquette and tasting techniques. 4. Gain direct experience, both individually and as part of a team, in adopting these manners and methods. Credits: 3.00

FS 49100 - Special Assignments In Food Science

Credit Hours: 1.00 to 3.00. Open primarily to qualified seniors who desire to study special problems in science not covered in regular coursework. Permission of instructor required.

Credits: 1.00 to 3.00

GER 28000 - German Special Topics

Credit Hours: 3.00. Selected topics on the civilization and culture of German speaking countries. Lectures and readings all in English. No knowledge of German necessary.

Learning Outcomes: 1. Students will explore in depth a particular aspect of life in German-speaking countries, leading to their increased

understanding not only of those cultures, but also, by comparison, of their own culture. Credits: 3.00

ABE 58000 - Advanced Processes In Biological Engineering

Credit Hours: 3.00. Physical and chemical structure of biomass. Reaction kinetics of hydrolysis of hemicellulose and cellulose to fermentable sugars. Fundamentals of ethanol production by fermentation. Separation of fermentation products into pure components.

Learning Outcomes: 1. Analyze bioprocesses using engineering design principles, bioreactor simulations, application of basic separations methods, and applying engineering economic analysis. 2. Develop process models for batch and continuous fermentation, cell culture, and enzymatic bioreactors. 3. Analyze the impact of fundamental advances in bio-sciences on bioprocess engineering and the environment, and the potential of these advances to solve societal problems. 4. Understand the impact of biosafety and regulatory considerations on process design. Credits: 3.00

ABE 59100 - Special Topics

Credit Hours: 0.00 to 4.00. Primarily designed for students (two or more) desiring credit from subject areas for which no specific course, workshop, or individual study plan is offered. Area of study will deal with topics that have enough student interest to justify the formalized teaching of a specialized topic. The course may be repeated by a student as long as the topic being taught is not repeated. Permission of instructor required.

Credits: 0.00 to 4.00

FS 59100 - Special Topics

Credit Hours: 1.00 to 3.00. Specialized topics not covered in other courses will be offered as one-credit minicourses. Topics, requirements, and credits will be determined yearly. Permission of instructor required.

Credits: 1.00 to 3.00

ABE 22600 - Biotechnology Laboratory I (UCC: STS)

Credit Hours: 2.00. Focuses on nucleic acid manipulation. Modules include, making a eukaryotic library, identifying clones, sub-cloning into a bacterial expression vector and verification of the clone's identity by restriction analysis and DNA sequencing. Basic laboratory techniques (solution making, buffer preparation, good safety techniques), sterile technique and compliance procedures.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Perform techniques currently used in cell, molecular, and microbiology, while understanding the rationale behind the specific approaches. 2. Explain the experimental basis of techniques used, indicating the significance of the work, presenting, calculating, and discussing the data, and drawing conclusions. 3. Given a specific biological question, the student will be able to determine appropriate applications of specific cell, molecular, and microbiological techniques. 4. Gain experience in dissecting and extracting pertinent information from scientific journal articles. Credits: 2.00

ANTH 25600 - Archaeology Of Beer

Credit Hours: 3.00. Alcoholic beverages are an important aspect of foodways, the cultural practices and values surrounding food and drink. This course provides an overview of the ancient origins of beer and other alcoholic beverages globally, and examines the cultural context and social role of these innovations through a combination of archaeology, material culture studies, historical texts, and ethnography. In addition to examining archaeological case studies of the production and consumption of beer and other alcoholic beverages, topics to be covered include: evolution of brewing and fermenting technology, biology and chemistry of brewing and fermentation, residue and materials analysis, origins of agriculture, emergence of social complexity, sexual division of labor, social identity (gender, class, ethnicity), and recent trends in production and consumption.

Learning Outcomes: 1. Identify the role of Anthropology in understanding the production and consumption of alcohol in cultures past and present. 2. Evaluate several different theoretical and methodological approaches within the field of Archaeology. 3. Assess and debate the role that the innovation of alcohol might have played in the origins of agriculture and social complexity in different times and places in the past. 4. Analyze and explain innovations in brewing technology over time. 5. Describe and

explain the way in which identity is shaped by the production and consumption of beer. These learning outcomes will be achieved by reading, evaluating, and summarizing course material (lectures, readings, and films) at regular intervals throughout the course and by engaging in regular group discussions. 6. Outcomes will be assessed by examining student performance on quizzes, exams, and article summaries, as well as participation in class discussion. Credits: 3.00

FS 37200 - Fermentation Microbiology

Credit Hours: 3.00. This course explores the principles underlying the design of microbes for their use in biotechnological applications. This project-based course will teach students fundamental molecular biology techniques, important parameters for strain selection and genetic engineering, and reactor design and operation in bioprocessing. Additionally, this course will cover today's diverse bioengineering goals and tools and the role of microbial biotechnology in society.

Learning Outcomes: 1. Articulate the concept of microbial cell factories and the relationship of microorganisms to food and industrial fermentations. 2. Identify genetic and environmental approaches to control the products, rate, and yield of bioconversion. 3. Understand microbial metabolic pathways and how they are engineered. 4. Design genetic strategies to engineer microbes. 5. Read primary literature relevant to fermentation biotechnology. Credits: 3.00

FS 37300 - Fermentation Microbiology Laboratory

Credit Hours: 1.00. The course provides a laboratory-based experiential learning experience with the learning of fundamental aspects of genetic, physiological and substrate manipulation to achieve product formation in industrial microbes.

Learning Outcomes: 1. Understand the genetic manipulation and physiological factors involved in successful fermentation approaches. 2. Apply various methods of monitoring growth of various bioreactor formats. 3. Manipulate and correlate growth with yield of organisms and products. 4. Identify the basic problems which cause fermentation processes to fail and understand the reasons for failure. 5. Create and troubleshoot a simple fermentation process. Credits: 1.00

FS 38100 - Industrial Fermentation Products

Credit Hours: 1.00. Industrial Fermentation Products introduces students to microbial fermentations employed in the biofuels and fine chemicals industry and their role in the larger bioeconomy. Students will be introduced to diverse final products, technical challenges in the sector, and the individuals and companies working to solve them. We end our five-week module with a field trip to a local biorefinery plant.

Learning Outcomes: 1. Identify the key products of industrial fermentations and their markets. 2. Articulate the major technical and economic challenges facing the industrial fermentations sector. 3. Research and understand fermentation production processes for a specific molecule of interest. 4. Interact with fermentation scientists in the biofuels, biochemicals, and polymers sector. Credits: 1.00

FS 38300 - Fermented Beverage Products

Credit Hours: 1.00. This course will allow students to learn and integrate concepts from microbiology, biochemistry, and processing used in the production of representative fermented beverages. Students will learn how to design and make specific fermented beverages. Must be 21 years of age or older. Permission of department required.

Learning Outcomes: 1. Explain the role of specific microorganisms (lactic acid bacteria, yeasts) in the transformation of specific substrates into fermented beverages. 2. Explain the chemical and biochemical changes whereby specific substrates are converted into fermented beverages. 3. Understand the interdisciplinary nature of fermentative processes by integrating food safety, nutrition, microbiology, economic, and regulatory considerations in process design. 4. Design a laboratory scale process to

produce a fermented beverage of their choice. Credits: 1.00

FS 40100 - Fermentation Processing

Credit Hours: 2.00. The Integration of fermentation core concepts; the application of bioprocess engineering principles to biological systems; topics covering enzyme kinetics, fermentation, downstream processing, and integrated bioprocesses important to industries.

Learning Outcomes: 1. Understand applications and solve problems relating to the use of enzymes for industrial bioprocessing. 2. Apply engineering principles to address issues in fermentation processes. 3. Analyze and identify limiting factors in a bioprocess. 4. Explain and solve problems relating to mass and energy balances in biological reactors. 5. Explain how fermentation processing is used in various fields. Credits: 2.00

FS 40200 - Fermentation Processing Laboratory

Credit Hours: 1.00. The essential concepts of industrial bioprocessing with a focus on the physiology of fermentation; a series of laboratory experiments that follow value-adding processes from conception to completion.

Learning Outcomes: 1. Learn laboratory techniques, to design and conduct experiments, and to analyze and interpret data. 2. Design appropriate bioreactor models based upon bioproducts and other process criteria. 3. Conduct fermentation experiments with process optimization and scale-up. 4. Model the growth of microorganisms in batch, fed-batch, and continuous flow processes. 5. Gain an overview of the fermentation industry. Credits: 1.00

ABE 32700 - Biotechnology Laboratory II

Credit Hours: 2.00. The course is a Course Undergraduate Research Experience (CURE), more specifically, a part of the Howard Hughes Medical Institute's (HHMI) (http://www.hhmi.org/grants/sea/) Science Education Alliance and is an authentic research experience. Students engage in hands-on discovery as scientists with the ultimate objective of contributing new mycobacteriophage genomes to the scientific literature and public databases (www.phagesdb.org and the Purdue institution page can be found here: https://phagesdb.org/institutions/PURD/).

Learning Outcomes: 1. Analyze the genetic code of a unique phage in order to determine potential genes. 2. Discover the genomic organization of their unique phage. 3. Use algorithms to define potential genes, assign putative functions to them, and determine the order in which they appear in the genome. 4. Read and discuss scientific literature related to their research project. 5. Share the information gathered with others in the scientific community. Credits: 2.00

Film & Video Studies Minor

Requirements for the Minor (15 credits)

A. Required course (3 credits)

FLM 24100 - Foundations Of Cinema Production

Credit Hours: 3.00. The course introduces students to the principles and practice of professional video production. Through lectures, viewing, discussions, and laboratory exercises, students will acquire the tools necessary to transform their concepts, or those of their clients, into successful video productions.

Learning Outcomes: 1. Summarize the cinema production process. 2. Apply visual storytelling concepts and techniques to the cinema production process. 3. Plan and create productions, making use of the cinema process. 4. Identify a variety of professional and career opportunities. Credits: 3.00

B. Choose Two (6 credits)

FR 33000 - French Cinema (UCC: HUM)

Credit Hours: 3.00. A general survey of major French cinematic trends from the earliest examples (Melies, Lumiere) to the New Wave (Chabrol, Truffaut, Resnais, Godard, etc.), with a discussion of the historical, social, political, aesthetic, and literary contexts. The French film in relation to world cinema.

The relationship between the French cinema and French literature. Reading and analysis of scripts and historical and critical materials. Knowledge of French not required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

GER 33000 - German Cinema (UCC: HUM)

Credit Hours: 3.00. Viewing and analysis of major German contributions to the cinema from the earliest period to the present. Emphasis on relevant aesthetic theories and on the schools of literature and painting that served as sources. Evaluation of the German film on the basis of social, artistic, and political criteria. Knowledge of German not required.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify and describe the major movements and trends of German film history of the 20th and 21st centuries. 2. Analyze the cinematography of representative German films. 3. Interpret the explicit and implicit meanings of representative German films. Credits: 3.00

ITAL 33000 - The Italian Cinema (UCC: HUM)

Credit Hours: 3.00. The development and evolution of Italian cinema after World War II. The class will center on the viewing and discussion of films and will survey a broad spectrum of directors and styles. Knowledge of Italian not required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ITAL 33300 - The Spirit Of Italian Comedy (UCC: HUM)

Credit Hours: 3.00. This course explores various types of Italian comedy, focusing on theater and cinema. Particular emphasis will be given to Renaissance theater, commedia dell'arte, Goldoni, Pirnadello, Dario Fo, and to the new generation of Italian comedians. In English.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

JPNS 33000 - Japanese Cinema

Credit Hours: 3.00. A survey of the development of Japanese cinema after World War II. The class focuses on the viewing and discussion of the films and examines a variety of directors with different styles and thematic messages.

Credits: 3.00

LC 33300 - The Middle Ages On Film (UCC: HUM)

Credit Hours: 3.00. Introduction to the Middle Ages through films in various languages and genres from the beginning of film history to the present. Reading literary, historical, legal, and film theory texts in conjunction with the films, students critically analyze representations of the Middle Ages and the cultural context from which these emerge.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

PTGS 33000 - Brazilian, Portuguese, And African Cinema

Credit Hours: 3.00. Screening and analysis of selected films from Portuguese-speaking countries: Brazil, Portugal, Angola, Mozambique, Cape Verde, Guinea-Bissau, S. Tome and Principe, with discussion of their cultural contexts (colonial/post-colonial societies; cross-Atlantic relationships; racial diversity; minority/majority issues). Knowledge of Portuguese not required.

Credits: 3.00

RUSS 33000 - Russian And East European Cinema (UCC: HUM)

Credit Hours: 3.00. Viewing and analysis of significant Russian and East European films. Evolution of the Russian and East European cinema, its place in world cinema, and its relation to cultural, political, and social trends. Cinematic adaptation of literary and theatrical works. Knowledge of Russian or East European languages not required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

SPAN 33000 - Spanish And Latin American Cinema (UCC: HUM)

Credit Hours: 3.00. Screening and analysis of selected Spanish and Latin American films with readings and discussions relative to their historical, social, political, aesthetic, literary, and linguistic contexts. No knowledge of Spanish required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

CHNS 33000 - Introduction To Chinese Cinema (UCC: HUM)

Credit Hours: 3.00. This course surveys the development of the Chinese cinema from its beginning to the present. Films from the mainland as well as Taiwan and Hong Kong will be examined in-depth for their aesthetic quality and techniques, and equally important, against their socio-historical, political, economic and cultural contexts. The class is conducted in English. Films are all in Chinese with English subtitles.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Become familiar with the cinema syntax. 2. Understand the development of Chinese cinema in a global context. 3. Understand modern Chinese society and culture through cinema. 4. Develop a critical mind over the political, social and cultural issues presented in cinema. Credits: 3.00

LC 33800 - Language Through Films

Credit Hours: 3.00. The course critically explores language(s) via the medium of cinema where language plays a key role in the film. It is intended to introduce students to the fundamental place language occupies within human experience, to advance knowledge of some of the features of the system of language, develop a sharper ear for language, a better understanding of its nature, and a livelier interest in all its manifestations. The course will be taught in English and films will be shown with subtitles.

Learning Outcomes: 1. Identify the main building blocks of language. 2. Examine the universal characteristics of the many languages humans speak. 3. Appraise the relationship between language, cognition, emotion and world view. 4. Re-evaluate their thinking regarding the acquisition of a second language. 5. Access the significant position language plays within societies and cultures. Credits: 3.00

ARAB 33000 - The Middle East On Film

Credit Hours: 3.00. This course offers an introduction to films produced in the Middle East and on Middle Eastern Cultures. In this class, we will view films from the Arab world, including North Africa, and the large Middle Eastern region. Parallel to film screening, students will read critical and analytical material that provide background as well as commentary and analysis of cultural and historical contexts on content of films and their making. The course will examine a series of topics such as identity politics, religious affiliation, gender, immigration, belonging, homeland and exile. We will also situate the films within the aesthetic traditions of production and reception and analyze how they provide critical perspectives and insights in central issues in the cultures of Middle Eastern cultures. The overarching goal of the class is to provide students with a solid understanding of the function of cinema and films in representation of the evolution and transformation of the cultures and societies of the region and the issues central to how communal and individual identities in the Middle Eastern region are shaped. The class will also equip the students with skills to analyze meaning making and the role of technical aspects such as cinematography, body language, script, setting and acting in the creation of characters. All films will be screened with English subtitles.

Learning Outcomes: 1. Assess formal and technical elements of Middle Eastern film cultures. 2. Analyze how social and cultural themes are represented in visual means and through the screen. 3. Identify and explain the important aspects of film making in the film industries of the region. 4. Construct critical responses to how cinematic work uses aesthetics to mediate culture. 5. Evaluate the role of films in articulating major shifts and movements in the cultures of the region. Credits: 3.00

KOR 33000 - Introduction To Korean Cinema

Credit Hours: 3.00. This course examines Korean society and culture through cinematic representations. Through film, the course provides a broad understanding of the major social and political changes in Korean society, as well as a brief history of Korean cinema and the transformations in the structure of the Korean film industry. Students will learn to identify major directors such as Park Chan-wook, Lee Chang-dong, and Bong Joon-ho, films, and genres. All films will be screened with English subtitles.

Learning Outcomes: 1. Appreciate how film can be understood and used as a cultural and social form that can explain Korean society and culture. 2. Build an understanding of various cinematographic techniques. 3. Learn how to interpret a broad-based understanding of contemporary Korean culture and social issues. 4. Identify elements of genre in Korean cinema through facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 5. Develop and communicate their ideas orally and in writing. Credits: 3.00

FLM 29103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

C. Choose Two (6 credits)

AAS 47300 - Blacks In Hollywood Film

Credit Hours: 3.00. A history of the representation of blacks in mainstream film throughout the twentieth century.

Credits: 3.00

ENGL 27600 - Shakespeare On Film (UCC: HUM)

Credit Hours: 3.00. Considers the relation of the written text of five or six Shakespeare plays to multiple film versions from a wide variety of times and cultures, e.g., the United States, England, France, Italy, Japan, Denmark, India, and Russia. Typically offered Fall Spring Summer.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explore a selected set of Shakespeare's plays through a comparative analytical lens. 2. Compare and contrast various film versions of Shakespeare's plays in their respective contexts. 3. Respond to the films and written texts through reflective and critical writings and discussions. Credits: 3.00

ENGL 28600 - The Movies (UCC: HUM)

Credit Hours: 3.00. Introduction to the movies from classic to contemporary films. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to classic and contemporary films. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about classic and contemporary films based on appropriate use of evidence. Credits: 3.00

ENGL 38600 - History Of Film To 1950

Credit Hours: 3.00. This survey crosses the divide between the silent film era and the "talkies" to explore narrative, experimental, and documentary styles of feature films from the 1890s to 1950.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to film from its origins through the mid-twentieth century. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-1950 films based on appropriate use of evidence. Credits: 3.00

ENGL 38700 - History Of Film Since 1950

Credit Hours: 3.00. A survey of narrative, experimental, and documentary styles of feature films from the mid-twentieth century to the present.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to films from the mid-twentieth century. 2. Identify and articulate connections among these topics and conventions as they relate to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about post-1950 films based on appropriate use of evidence. Credits: 3.00

ITAL 33500 - Italian-American Cinema

Credit Hours: 3.00. This course offers an overview of the major filmmakers associated with the representation of Italian Americans in the United States film world. Students will view and discuss major filmmakers and their films, and will write critical essays on film topics. Conducted in English.

Credits: 3.00

EAPS 10600 - Geosciences In The Cinema (UCC: STS)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about natural hazards based on the depictions of such hazards in movies. Topics include earthquakes, tsunamis, volcanoes, tornadoes, hurricanes, climate change, asteroid impacts, space exploration, and

wildfires. The course focuses on the accuracy of the depiction of natural hazards in the movies, the underlying processes that control their formation and the dangers they represent, how they influence society, and how students can prepare for them and keep themselves safe.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Understand how scientists explore natural hazards, make observations, and develop theories. 2. Explain the processes that control natural hazards and where and when they are likely to occur. 3. Know the natural hazards inherent to a student's location and be able to plan how to keep themselves safe in the event of such an occurrence. 4. Critically assess the reasonableness of depictions of natural hazards in the media. Credits: 3.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.

Learning Outcomes: 1. Appreciate the ideological work that entertainment and mass cultural texts such as popular films perform. 2. Analyze popular visual texts including film and video for the meanings and power relations they invoke. 3. Apply feminist and queer theorizing of gender, gender identity, and sexuality to visual texts. 4. Assess the intersectional impact that popular film and cinema have had on women and sexual minorities. 5. Understand the ways that American popular film, particularly those produced in Hollywood for mass distribution, has shared American culture and global relationships since the inception of cinema in the late 19th century. Credits: 3.00

FLM 29108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

A. Required course (3 credits)

FLM 24100 - Foundations Of Cinema Production

Credit Hours: 3.00. The course introduces students to the principles and practice of professional video production. Through lectures, viewing, discussions, and laboratory exercises, students will acquire the tools necessary to transform their concepts, or those of their clients, into successful video productions.

Learning Outcomes: 1. Summarize the cinema production process. 2. Apply visual storytelling concepts and techniques to the cinema production process. 3. Plan and create productions, making use of the cinema process. 4. Identify a variety of professional and career opportunities. Credits: 3.00

KOR 33000 - Introduction To Korean Cinema

Credit Hours: 3.00. This course examines Korean society and culture through cinematic representations. Through film, the course provides a broad understanding of the major social and political changes in Korean society, as well as a brief history of Korean cinema and the transformations in the structure of the Korean film industry. Students will learn to identify major directors such as Park Chan-wook, Lee Chang-dong, and Bong Joon-ho, films, and genres. All films will be screened with English subtitles.

Learning Outcomes: 1. Appreciate how film can be understood and used as a cultural and social form that can explain Korean society and culture. 2. Build an understanding of various cinematographic techniques. 3. Learn how to interpret a broad-based understanding of contemporary Korean culture and social issues. 4. Identify elements of genre in Korean cinema through facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 5. Develop and communicate their ideas orally and in writing. Credits: 3.00

FLM 29103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

C. Choose Two (6 credits)

AAS 47300 - Blacks In Hollywood Film

Credit Hours: 3.00. A history of the representation of blacks in mainstream film throughout the twentieth century.

Credits: 3.00

ENGL 27600 - Shakespeare On Film (UCC: HUM)

Credit Hours: 3.00. Considers the relation of the written text of five or six Shakespeare plays to multiple film versions from a wide variety of times and cultures, e.g., the United States, England, France, Italy, Japan, Denmark, India, and Russia. Typically offered Fall Spring Summer.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Explore a selected set of Shakespeare's plays through a comparative analytical lens. 2. Compare and contrast various film versions of Shakespeare's plays in their respective contexts. 3. Respond to the films and written texts through reflective and critical writings and discussions. Credits: 3.00

ENGL 28600 - The Movies (UCC: HUM)

Credit Hours: 3.00. Introduction to the movies from classic to contemporary films. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to classic and contemporary films. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about classic and contemporary films based on appropriate use of evidence. Credits: 3.00

ENGL 38600 - History Of Film To 1950

Credit Hours: 3.00. This survey crosses the divide between the silent film era and the "talkies" to explore narrative, experimental, and documentary styles of feature films from the 1890s to 1950.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to film from its origins through the mid-twentieth century. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-1950 films based on appropriate use of evidence. Credits: 3.00

ENGL 38700 - History Of Film Since 1950

Credit Hours: 3.00. A survey of narrative, experimental, and documentary styles of feature films from the mid-twentieth century to the present.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to films from the mid-twentieth century. 2. Identify and articulate connections among these topics and conventions as they relate to their diverse

historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about post-1950 films based on appropriate use of evidence. Credits: 3.00

ITAL 33500 - Italian-American Cinema

Credit Hours: 3.00. This course offers an overview of the major filmmakers associated with the representation of Italian Americans in the United States film world. Students will view and discuss major filmmakers and their films, and will write critical essays on film topics. Conducted in English.

Credits: 3.00

EAPS 10600 - Geosciences In The Cinema (UCC: STS)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about natural hazards based on the depictions of such hazards in movies. Topics include earthquakes, tsunamis, volcanoes, tornadoes, hurricanes, climate change, asteroid impacts, space exploration, and wildfires. The course focuses on the accuracy of the depiction of natural hazards in the movies, the underlying processes that control their formation and the dangers they represent, how they influence society, and how students can prepare for them and keep themselves safe.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Understand how scientists explore natural hazards, make observations, and develop theories. 2. Explain the processes that control natural hazards and where and when they are likely to occur. 3. Know the natural hazards inherent to a student's location and be able to plan how to keep themselves safe in the event of such an occurrence. 4. Critically assess the reasonableness of depictions of natural hazards in the media. Credits: 3.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.

Learning Outcomes: 1. Appreciate the ideological work that entertainment and mass cultural texts such as popular films perform. 2. Analyze popular visual texts including film and video for the meanings and power relations they invoke. 3. Apply feminist and queer theorizing of gender, gender identity, and sexuality to visual texts. 4. Assess the intersectional impact that popular film and cinema have had on women and sexual minorities. 5. Understand the ways that American popular film, particularly those produced in Hollywood for mass distribution, has shared American culture and global relationships since the inception of cinema in the late 19th century. Credits: 3.00

FLM 29108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

A. Required course (3 credits)

FLM 24100 - Foundations Of Cinema Production

Credit Hours: 3.00. The course introduces students to the principles and practice of professional video production. Through lectures, viewing, discussions, and laboratory exercises, students will acquire the tools necessary to transform their concepts, or those of their clients, into successful video productions.

Learning Outcomes: 1. Summarize the cinema production process. 2. Apply visual storytelling concepts and techniques to the cinema production process. 3. Plan and create

productions, making use of the cinema process. 4. Identify a variety of professional and career opportunities. Credits: 3.00

Finance Minor

About the Minor

Requirements for the Minor (15 credits)

Required Courses (9 credits)

MGMT 41300 - Corporate Finance

Credit Hours: 3.00. The course provides the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending, or investment banking setting. Topics include corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition, and mergers/acquisition.

Learning Outcomes: 1. Know the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending or investment banking system through study of topics including corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition and mergers/acquisition. Credits: 3.00

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

Additional Courses - Choose Two: (6 credits)

MGMT 41601 - Corporate Mergers And Acquisitions

Credit Hours: 3.00. The financial analysis of corporate acquisitions, mergers, and reorganizations including asset acquisitions, joint ventures, spin-offs, sell-offs, equity carve-outs, bankruptcy proceedings and reorganizations, and corporate governance. The course uses a combination of lectures, readings, and case analysis.

Learning Outcomes: 1. Understand the processes of valuation, negotiation, and financial outcomes of transactions involving mergers and acquisitions. Credits: 3.00

MGMT 41500 - International Financial Management

Credit Hours: 3.00. The course explores financial decision

making in an international framework from the perspective of the management of a multinational corporation. Topics covered include the international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations.

Learning Outcomes: 1. Students will learn about financial decision making in an international framework from the perspective of the management of a multinational corporation through topics such as international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations. Credits: 3.00

MGMT 41200 - Financial Institutions And Markets

Credit Hours: 3.00. Introduction to financial markets and management of financial institutions. Emphasis on determinants of interest rates, and measurement and management of financial risk. Concentration on management of depository firms such as banks and savings and loans.

Learning Outcomes: 1. Students will be introduced to financial markets and management of financial institutions through learning about determinants of interest rates, and measurement and management of financial risk, with particular attention on management of depository firms such as banks and savings and loans. Credits: 3.00

MGMT 41250 - Fixed Income Securities

Credit Hours: 3.00. This course includes examination of fixed income securities institutions that invest, roles in institution, portfolios and math associated with assessing characteristics of fixed income securities.

Learning Outcomes: 1. Examine management of fixed income securities. 2. Examine portfolios and risk management strategies. 3. Demonstrate use of simulation models for risk assessment. Credits: 3.00

MGMT 41350 - Venture Capital And Entrepreneurial Finance

Credit Hours: 3.00. This course includes descriptions of markets for start-up businesses, venture capital financial structures, valuation of start-ups, role of venture capital in economic development and business growth strategies.

Learning Outcomes: 1. Evaluate start-up ventures and understand the markets for early-stage businesses. 2. Value these companies using Discounted Cash Flow models, markets multipliers and other industry-specific valuation methods. Credits: 3.00

MGMT 41150 - Futures And Options

Credit Hours: 3.00. The course covers basic features and pricing of derivative securities such as forwards, futures, and options.

Learning Outcomes: 1. Understand the basic features and pricing of commonly used derivative products. 2. Develop necessary analytical tools needed to make good managerial decisions using derivatives. Credits: 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

MGMT 41650 - Financial Engineering

Credit Hours: 3.00. The objective of this course is to develop necessary skills to value and hedge a wide variety of derivative contracts traded in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous time. Some basic knowledge of stochastic processes would be helpful, but not essential: what needed will be covered in class. The analytic valuation and hedging of derivatives using the modern martingale methods will be the main focus of the course. Applications will include forwards, futures, and options on stocks, bonds and foreign currencies. The numerical methods such as parameter estimation, Monte Carlo simulations, discretization schemes as well as the conditional volatility estimation techniques will also be addressed. In addition to the valuation and hedging derivatives, course also

covers Value-at-Risk, credit risk, modeling the term structure of interest rates and the construction of the VIX index using the S&P 500 index options obtained from the IvyDB OptionMetric database.

Learning Outcomes: 1. Value and hedge commonly traded financial derivatives. 2. Outline and design new financial derivatives. 3. Develop the VIX index using options data. Credits: 3.00

MGMT 41220 - FinTech

Credit Hours: 3.00. Dramatic development in technology is fundamentally transforming all aspects of financial intermediation including lending, payment services, investments and trading. The goal of the course is to introduce these new developments to students with the emphasis on underlying economic mechanisms. We will start with talking about fiat money but quickly delve into cryptocurrencies and their applications. We will talk about tokens, smart contracts, automated market making and how applications of these concepts are transforming financial services and financial inclusion. We will cover these topics by analyzing real companies and contrast them with traditional players in the financial system.

Learning Outcomes: 1. Understand fundamentals of blockchain and cryptocurrencies. 2. Understand tokenization, smart contracts, and automated market makers. 3. Evaluate implications of decentralized finance on banking, fund raising, financial markets and financial inclusion. 4. Develop skills to analyze various business models in the Fintech space. 5. Create a case study on a real Fintech company. Credits: 3.00

Note

Food and Agribusiness Management Minor

Requirements for the Minor (18 credits)

Required Courses (9 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

Selective Courses (9 credits)

AGEC 30500 - Agricultural Prices

Credit Hours: 3.00. Analysis of prices and the movement of farm product prices; relations of farm product prices to farm input and other prices; conceptual and statistical analysis of agricultural supply and demand relationships; application of price analysis, price forecasting, agricultural outlook, agricultural policy; adjustment of farming to new price conditions.

Learning Outcomes: 1. Understand economic principles that determine prices in markets. 2. Provide knowledge of markets and the entities and factors that impact market equilibrium outcomes. 3. Apply economic principles and empirical estimation tools to inform decision-making. Credits: 3.00

AGEC 32100 - Principles Of Commodity Marketing

Credit Hours: 3.00. An in-depth background on the origin, operation, and application of futures and options in risk management for agriculture. Covers grain, livestock, and yield futures and options. Applications of futures and options to price and yield risk management is provided. Comparison of expected results from various risk management alternatives and decision-making processes to use in selecting a risk management strategy.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test

hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 32700 - Principles Of Food And Agribusiness Marketing

Credit Hours: 3.00. This course is a study of the major components of marketing decisions made by food and agribusiness firms. The course examines the marketing process, market research, marketing opportunities, and marketing strategies. Students will work on developing skills for evaluating and making marketing decisions.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 3. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 4. Demonstrate the ability to work effectively as part of a problem-solving team. 5. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 6. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

AGEC 33300 - Food Distribution - A Retailing Perspective

Credit Hours: 3.00. Distribution factors that affect the food industry. Particular attention to the food wholesaling and retailing sectors. Presentation of economic tools to evaluate performance in the food industry. Discussion of the relative importance of each of the major departments in the modern supermarket. Discussion of current and future industry prototypes.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.

Learning Outcomes: 1. Manipulate and use spreadsheets. 2. Formulate linear programming

problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6. Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

AGEC 41000 - Agricultural Policy

Credit Hours: 3.00. Economic analysis of U.S. food and agricultural policy; current and past farm legislation; international trade; agricultural policies in selected countries; domestic and foreign food assistance; structural change; agricultural research policy; macroeconomic linkages with the agricultural sector; and emerging environmental policy issues, land and water use.

Learning Outcomes: 1. Understand the role of government interventions in the farm and food system. 2. Apply economic principles to the analysis of government interventions. 3. Delineate between economic and values-based arguments in assessment of policies. 4. Understand the breadth, complexity and importance of 'Agricultural Policy'. Credits: 3.00

AGEC 42100 - Advanced Commodity Marketing

Credit Hours: 3.00. Application of commodity marketing principles to grain, livestock, and other commodity sectors. Applications include hedging, speculation, risk management, and fundamental and technical price analysis. Examination and testing of pricing strategies and the development of commodity marketing plans.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 42400 - Financial Management Of Agricultural Business

Credit Hours: 3.00. A study of the major types of financial decisions made by agriculturally related firms, including investment in inventory, receivables and cash, property, plant, and equipment; sources and types of short-term, intermediate, and long-term capital; legal patterns of the business organization, emphasis on implementation involving agribusiness case problems.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 42700 - Advanced Agribusiness Marketing

Credit Hours: 3.00. Application of marketing principles to market planning, research, and analysis. Development of strategic marketing plans for agribusiness.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze date, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to

develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 43000 - Agricultural And Food Business Strategy

Credit Hours: 3.00. An advanced course in business planning and strategy for potential agribusiness and food firm managers. Focuses on development of viable business strategy in the context of the firm's market and its internal condition. Makes extensive use of case studies that document management dilemmas of agribusiness firms, ranging from those providing inputs to agricultural producers to firms involved in the retail distribution of food.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 43100 - Advanced Industrial Sales And Marketing

Credit Hours: 4.00. Advanced presentation techniques, sales management and analysis, improving communication skills, study of industrial marketing strategies, interaction with industry executives, and strategies for career development. Requires class trips. Students will pay individual lodging or meal expenses when necessary. Permission of instructor required.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 4.00

AGEC 45000 - International Agricultural Trade

Credit Hours: 3.00. Study of U.S. agricultural trade with emphasis on international trade theory, exchange rates and their determination, relationships between domestic agricultural policies and trade policies, and analysis of institutional arrangements for world trade in agricultural products.

Learning Outcomes: 1. Explain the rationale for international trade in a variety of economic models. 2. Assess the models in terms of their assumptions and implications. 3. Discuss supplementary research that qualifies and extends the basic models. 4. Discuss the implications of international trade policies, institutions and agreements for international trade, especially trade in food and agricultural products. Credits: 3.00

AGEC 45100 - Applied Econometrics

Credit Hours: 3.00. Application of strategies to economic problems. Simple and multiple regression, dummy variables, logit analysis, time series, and forecasting.

Learning Outcomes: 1. Learn how to estimate and interpret linear regression models. 2. Learn how to test hypotheses based on regression coefficients. 3. Learn how to develop forecasts abased on regression models. Credits: 3.00

AGEC 45500 - Agricultural Law

Credit Hours: 3.00. Selected general legal topics (courts, contracts, torts, property and commercial law) with emphasis on farming problems (e.g., landowner-tenant, grain contracts, fences, and animal liability) and cases.

Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

AGEC 52400 - Agricultural Finance

Credit Hours: 3.00. Designed to provide students the concepts and tools to apply financial management principles to farm businesses. Topics include financing alternatives, preparation and interpretation of financial statements, and capital investment analysis using discounted cash flows.

Learning Outcomes: 1. Prepare, interpret, and analyze financial statements used for agricultural businesses. 2. Analyze and suggest methods to improve the financial performance of agricultural businesses. 3. Evaluate capital investments using discounted cash flow methods. 4. Describe and analyze the risk and returns faced by agricultural businesses. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures,

compensation, administration, and collective bargaining. Credits: 3.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

TLI 15200 - Business Principles For Organizational Leadership

Credit Hours: 3.00. This course will introduce the topic of applied organization leadership in the context of working organizations. Topics include basic functions, structures, and operations of organizations, and an introduction to reading and understanding balance sheets, cash flow statements, and profit-loss statements.

Learning Outcomes: 1. Identify the business information that organizational leaders are expected to know to comprehensively manage the function and operation of profit and not-profit organizations. 2. Describe the major functions of business, including: operations, finance, marketing, and information technology. 3. Interpret balance sheets, cash flow statements, and profit-loss statements. 4. Explore how organizations use technology to become competitive entities in global business environments. Credits: 3.00

Notes

Food Science Minor

Requirements for the Minor (18 credits)

Required Courses (11 credits)

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

FS 34100 - Food Processing I

Credit Hours: 2.00. Applications of the fundamentals of food engineering, microbiology, and chemistry to methods of food processing and preservation; emphasis will be on processing concepts, preparation for food processing, food formulation, and thermal processing.

Learning Outcomes: 1. Explain the sources of variability of raw food materials and their impact on food processing operations. 2. List and describe the major methods covered in class to control deterioration and spoilage in foods. 3. Identify the conditions under which important pathogens are commonly inactivated, killed, or

made harmless in foods. 4. Identify conditions including sanitation practices under which microorganisms are commonly inactivated, killed, or made harmless in foods. 5. Demonstrate use mass and energy balances for a food process. 6. Explain the transport processes and unit operations involved in processing a particular food. 7. Identify the principles and current practices of processing techniques and the effects of processing parameters in product quality. 8. Predict changes in food quality during storage or processing. 9. Understand the requirements for water utilization and waste management in food and food processing. Credits: 2.00

FS 36200 - Food Microbiology

Credit Hours: 3.00. Microbiology of foods, with emphasis on the conditions for growth of microorganisms and degradation of food components, preservation methods, use of Hazard Analysis and Critical Control Point (HACCP) concepts, and microorganisms associated with foodborne illness, and modern detection methods.

Learning Outcomes: 1. Students should be able to identify the major components of food that affect microbial growth, to identify degradation in foods when microorganisms grow. 2. Students will be able to explain how preservations methods affect microbes in food, to explain major foodborne pathogens and under what conditions they thrive, to use microbiological information and molecular techniques to solve practical problems of the food industry. Credits: 3.00

FS 45300 - Food Chemistry

Credit Hours: 3.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Understand the importance of food chemistry and the relationship of food chemistry to other food science areas. 2. Understand the structures and functions of major food components, including water, proteins, carbohydrates, lipids, vitamins, and minerals. 3. Understand major reactions occurring with macronutrients (water, proteins, carbohydrates, lipids) in foods and impacts on shelf-life. 4. Identify the major components and reactions occurring in major food groups, including fruits, vegetables, grains, legumes, red meats, poultry, eggs, fish, and shellfish. 5. Be able to describe types and uses of basic sensory tests. 6. Be able to identify functions of most or all ingredients listed on the ingredient label of a food product. 7. Be able to discuss alternative ingredient choices for food products. 8. Be able to write a scientific abstract using IFT formatting. Credits: 3.00

Selective Courses (7 credits)

ANSC 35100 - Meat Science

Credit Hours: 3.00. Study of muscle and meat, principles involved in the conversion of living animals to meat and by-products; efficient utilization of all types of meat as food.

Credits: 3.00

ANSC 35101 - Meat Science Laboratory

Credit Hours: 1.00. Application of scientific principles to the meat industry, with emphasis on all aspects of processing including: harvest; carcass grading and evaluation; fabrication; cured, smoked, and comminuted meat products; quality control; product development; and retail and food service merchandising.

Credits: 1.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain

the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

Notes

Foods and Nutrition Minor

About the Minor

Requirements for the Minor (15 credits)

A. Required Courses (6 credits)

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

B. Additional Courses (9 credits)

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional

literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 39000 - Independent Undergraduate Research

Credit Hours: 1.00 to 3.00. Individual research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 49000 - Independent Undergraduate Research

Credit Hours: 1.00 to 4.00. Independent research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 4.00

NUTR 53400 - Human Sensory Systems And Food Evaluation

Credit Hours: 3.00. Overview of human chemosensory (taste, smell, chemesthetic) mechanisms and function, as well as procedural and statistical methods for evaluating the sensory responsiveness of people and the sensory properties of foods.

Credits: 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Assess how chemical structures and reactions influence sensory and analytical properties of food. 3. Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives. 5. Design, report on, and critique food experiments using the scientific method. Credits: 2.00

Notes

Forensic Sciences Minor

Requirements for the Minor (20 credits)

Required Courses (11 credits)

ENTM 22810 - Forensic Investigation (UCC: SCI)

Credit Hours: 4.00. Forensic science investigation, crime scene management and field data collection techniques. Includes crime scene recognition and the documentation, collection, preservation, and processing of crime scene evidence. Emphasizes the place of field data collection as the first step in a sequence that takes evidence from scene to the lab for analysis and finally into the court of law.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 3. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. Credits: 4.00

ENTM 22820 - Forensic Analysis (UCC: SCI)

Credit Hours: 4.00. Forensic science evidence analysis, crime lab evidence management and data analysis techniques. Focuses on the accuracy, precision and integrity in evidence analysis for a survey of forensic disciplines. Emphasizes the place of forensic analysis as a necessary second step in a sequence that takes evidence from scene, to the lab for analysis and finally into the court of law.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Appreciate the scope of science in forensic analysis. 2. Develop an understanding of the scientific method in the context of the law. 3. Develop an understanding of the particulars for each forensic sub-discipline. 4. Experience the basic techniques employed by the sub-disciplines reviewed. Credits: 4.00

ENTM 22830 - Forensic Testimony And Ethics

Credit Hours: 3.00. The final course in the forensic science program core, focuses on the legal ramifications that arise when forensic science is applied at the crime scene, in the crime lab and in the courtroom. Students are introduced to ethical issues that form the basis of all scientific investigations and the role of scientists as expert witnesses in maintaining the moral integrity of our justice system.

Learning Outcomes: 1. Recognize how science and the legal system interact throughout a case life history, and the role played in presenting scientific conclusions at trial. 2. Identify the ethical issues associated with scientific investigations at the scene, including the ability to avoid bias and correct for problems before a

case is compromised. 3. Identify the ethical issues associated with scientific investigations at the lab, including the ability to avoid bias and correct for problems before a case is compromised. 4. Identify the ethical issues associated with avoiding bias, correcting for errors and providing testimony as an expert scientific witness. Credits: 3.00

Selective Courses (9 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental

principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan and perform an experiment. Credits: 1.00

AGRY 33500 - Weather And Climate

Credit Hours: 3.00. An introductory course in meteorology and climatology with applications to daily life. The study of the fundamental physical principles behind weather and climate and how they apply to the homeowner and the world citizen. Emphasis is on how to interpret weather conditions and forecasts, what controls the wide range of climates in the world, and what the future may hold.

Credits: 3.00

AGRY 34900 - Soil Ecology

Credit Hours: 3.00. An introductory course that will cover the basic concepts of soil ecology. Biological diversity and the interactions between and within biotic and abiotic components of the soil ecosystem, nutrient cycling, and genetic engineering are introduced.

Credits: 3.00

AGRY 35500 - Soil Morphology And Geography

Credit Hours: 2.00. This course features field experience in advanced techniques in soil morphology including the study of the relationship of soils to landscaped, common parent materials of Midwest and classification of soils in the Soil Taxonomy. Course material emphasizes the development of detailed descriptions of soil properties and how these properties directly impact the interpretations and recommendations for land use options. Use and management of soils based on landscape position and morphology will be covered including on-site waste disposal, homes with basements as well as road and street construction. Collegiate soil judging is a portion of the subject matter discussed. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 2.00

AGRY 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (NRES 38500) Designed as an upper level introductory course covering environmental soil chemistry concepts in framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or math background. (el.5).

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for

lifelong learning. Credits: 4.00

BCHM 22100 - Analytical Biochemistry

Credit Hours: 3.00. Discussion of qualitative and quantitative analysis of biological compounds including pH measurement and control, spectrophotometry, measurement of radioactivity; theoretical basis of various separation techniques, including chromatography and electrophoresis; application of these methods to separation and analysis of biological compounds. Laboratory sessions will provide practical experience in the use of these methods. This course is designed for biochemistry majors.

Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Credits: 3.00

BCHM 30900 - Biochemistry Laboratory

Credit Hours: 1.00. Experiments that introduce methods for analysis and separation of biological molecules and that illustrate the biochemical and metabolic concepts covered in BCHM 30700.

Credits: 1.00

BCHM 32200 - Analytical Biochemistry II

Credit Hours: 2.00. Modern biochemical techniques for the purification and characterization of biological proteins. This is a project-oriented course where students begin by purifying a recombinant enzyme by affinity chromatography and then characterize various biochemical properties of the enzyme throughout the semester. Emphasis will be placed on quantitative analyses, including measurements of enzyme activity and inhibition, molecular interactions, and oligomeric state. Students will learn basic principles of designing assays to measure biochemical phenomena. Use of bioinformatics and computational modeling tools for protein structure analysis will be integrated. The course will culminate with preparation of a manuscript-style report describing the enzyme characterization.

Learning Outcomes: 1. Understand the molecular principles of life based on the core disciplines of biology, chemistry and physics. 2. Skilled laboratory scientists performing a wide variety of biochemical and molecular techniques. 3. Understand the scientific method. Understand the concepts and importance of hypotheses, experimental design to test hypotheses, and data analysis in the creation of new knowledge. 4. Acquire information literacy: the ability to locate, evaluate, and utilize information in the disciplines of biochemistry and molecular biology that is required for research, data analysis, and communication. 5. Communicate scientific knowledge, experiments and conclusions effectively as writers. 6. Understand the contributions of our discipline to society, including improvements to medicine, agriculture, the economy and the environment.

Credits: 2.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

ENTM 21000 - Introduction To Insect Behavior (UCC: SCI)

Credit Hours: 3.00. Description and introductory analysis of innate and learned insect behavior, including basic orientations and movements, behavioral periodicity, communication, chemical and structural defenses, host selection and feeding, reproduction, and insect societies. General biology and introductory entomology are desirable, but not essential.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

ENTM 33500 - Introduction To Insect Identification

Credit Hours: 4.00. This class is designed for learning more about the collection and identification of adult insects. Emphasis will be placed on collection and sampling techniques, the preparation of specimens for future study, and identification.

Learning Outcomes: 1. Use keys and other published resources to identify unknown insects to the correct family and by-sight identification. 2. Collect a diversity of insects and related arthropods and to prepare specimens to professional standards. 3. State the scientific names, critical taxonomic characters, natural history and biology, unique or interesting behaviors, ecological role, taxonomic relationships and impacts on human activities of selected families. Credits: 4.00

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana.

Credits: 3.00

FNR 30500 - Conservation Genetics

Credit Hours: 3.00. Fundamentals and principles of genetics, including Mendelian inheritance, genetic mapping & linkage, DNA fingerprinting, phylogeography, and speciation. Topics cover the theoretical and empirical evidence illustrating how mutation, migration, drift, and natural selection influence the evolution of genes in natural populations. Designed for ecologists and natural resource professionals.

Learning Outcomes: 1. Develop conceptual understanding of modern genetics and the use of molecular markers in studies of wildlife/fisheries/forest management, ecology, and evolutionary biology. 2. Explore how genetic information is used in sportfish stockings, wildlife reintroductions, and selective harvest of native trees. 3. Recognize and predict the genetic ramifications of these artificial activities. 4. Compare these effects to the consequences of natural disturbances. (e.g., glaciations). Credits: 3.00

FNR 34100 - Wildlife Habitat Management

Credit Hours: 3.00. Principles, practices, and justification of the habitat management approach to the manipulation of wildlife populations.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 34800 - Wildlife Investigational Techniques

Credit Hours: 3.00. An introduction to current wildlife research techniques that are used in managing populations and habitats. Laboratory and field exercises are used to gather and analyze data; basic data analysis and written dissemination of results is emphasized.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate

hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

PSY 33500 - Stereotyping And Prejudice

Credit Hours: 3.00. This course examines the topics of stereotyping, prejudice, and discrimination from a social psychological perspective. Relying on empirical findings and relevant theoretical approaches, the course moves beyond lay opinions to explore the social psychological foundations and forms of stereotyping and prejudice, and to examine various strategies for reducing intergroup biases.

Credits: 3.00

PSY 35000 - Abnormal Psychology

Credit Hours: 3.00. Various forms of mental disorders from the standpoint of their origin, treatment, prevention, social significance, and relation to problems of normal human adjustment. CTL:ISH 1023 Abnormal Psychology

Learning Outcomes: 1. Demonstrate an understanding of the historical, ethical, and cultural contexts of psychopathology. 2. Compare and contrast major historical and contemporary theoretical perspectives on psychopathology. 3. Demonstrate an understanding of the scientific bases of the etiology, assessment, classification, diagnosis, and treatment of psychopathology. Credits: 3.00

PSY 42800 - Drugs And Behavior

Credit Hours: 3.00. Discussion of the variety of drugs that affect the nervous system and behavior. Emphasis will be upon a discussion of the physiological and pharmacological bases for the use and misuse of drugs in our society.

Credits: 3.00

PSY 44300 - Aggression And Violence

Credit Hours: 3.00. An intensive examination of the nature of human aggression. Among the topics covered will be (1) theoretical perspectives concerning such behavior; (2) social conditions that encourage its performance; and (3) means for its prevention and control.

Credits: 3.00

ANTH 31000 - Mortuary Practices Across Cultures

Credit Hours: 3.00. Explores how death is treated or has been treated in diverse world cultures and time periods. Death is viewed as an expression of social behavior and as an expression of symbolic meaning.

Credits: 3.00

ANTH 33600 - Human Variation

Credit Hours: 3.00. Biological differences between human individuals and groups, causes of variations, the role of genetics, concepts of race, and the interrelationship between the social and biological meanings of race will be considered.

Learning Outcomes: 1. Describe the scientific basis of human diversity from evolutionary and biocultural perspectives. 2. Evaluate statements in scientific literature about biological and cultural variation. 3. Explain how humans are continuing to change. 4. Analyze articles in the popular press that deal with human differences. Credits: 3.00

ANTH 42500 - Archaeological Method And Theory

Credit Hours: 3.00. Introduction to the theory and methods of contemporary American archaeology. Basic field and laboratory methods are placed in the context of theoretical viewpoints and problems. Major theoretical issues in the field are explored, showing the integration of American archaeology with anthropology.

Learning Outcomes: 1. Summarize the history of archaeology and theoretical frameworks used in interpreting the past. 2. Discuss field and laboratory techniques that archaeologists use to analyze material remains from the archaeological record and reconstruct past human behavior. 3. Describe prehistoric cultural practices including diet and subsistence, migrations, social and political organization. 4. Identify the contributions of archaeology to today's society through various professions inside and outside academic settings. Credits: 3.00

ANTH 42800 - Field Methods In Archaeology

Credit Hours: 1.00 to 9.00. Introduces basic field and laboratory methods in contemporary archaeology: methods of site survey, mapping, and excavation through the excavation of archaeological sites; the basics of archaeological data analysis and classification, and the computer-based analysis of archaeological data. Permission of instructor required.

Learning Outcomes: 1. Describe, document, and record archaeological data and their spatial relationships in the field. 2. Apply basic archaeological field methods, including excavation, mapping, and data recording. 3. Practice database management, including sorting and labeling artifacts and samples, and maintaining a catalog of data. Credits: 1.00 to 9.00

ANTH 43600 - Human Evolution

Credit Hours: 3.00. This class examines the fossil evidence for human evolution and theories proposed to explain the development that led from the origin of primates to modern humans. This course will include lectures, exercises with fossil casts, presentation, and discussions.

Learning Outcomes: 1. Explain the analytical and research methods used in hominin paleobiology. 2. Identify important research questions within human paleobiology as well as theoretical approaches and methods used to evaluate them. 3. Describe the relevant fossil evidence to investigate the evolution of the primate lineage. 4. Demonstrate understanding of evolutionary processes, particularly those that shaped the biocultural evolution of modern humans. 5. Evaluate interpretations of the hominin fossil record and appraise the strengths and weaknesses of current debates in human evolution. Credits: 3.00

HSCI 33300 - Introduction To Immunology

Credit Hours: 3.00. Introduction to Immunology will meet twice weekly and provide an overview of this evolving field of science with an emphasis on the clinical implications and application of learned knowledge. The immunologic mechanisms associated with the normal and abnormal immune response will be discussed and students will put this knowledge into practice by directing their own case study. In addition, a number of common clinical concerns with respect to immunity will be reviewed. Furthermore, we will explore the critical role our knowledge of this branch of science plays in patient diagnosis, treatment and care both now and in the future.

Learning Outcomes: 1. Have solid understanding of the science of Immunology and the Immune Response. 2. Have an appreciation for the complexity of the immune system, its cellular components, its regulation and implications of its dysfunction. 3. Have a clearer understanding of the clinical applications and implications of the immune response. 4. Have enhanced knowledge of the course material. 5. Have the ability to transfer the written word into practical application of its principles. Credits: 3.00

POL 42500 - Environmental Law And Politics

Credit Hours: 3.00. This course provides an introduction to statutory and case law relating to environmental policy. Regulatory schemes in environmental policy and the legal framework for environmental regulation are presented. Market alternatives to various regulatory mechanisms will also be treated.

Credits: 3.00

POL 42800 - The Politics Of Regulation

Credit Hours: 3.00. Politics and policies of federal and state regulatory agencies. Explanations of regulatory agency behavior, arguments for and against government regulation, and alternatives to government regulation.

Credits: 3.00

SOC 32400 - Criminology

Credit Hours: 3.00. (CRJU 32400) Nature and cause of crime; methods of dealing with adult and juvenile offenders, consideration of present programs for the social treatment of crime in the light of needed changes.

Learning Outcomes: 1. Develop a sociological perspective on crime. 2. Comprehend the foundational terms, theories, and concepts of criminology. 3. Think critically about current issues related to crime. Credits: 3.00

SOC 32700 - Crime, Deviance And Mass Media

Credit Hours: 3.00. Various forms of mass media are used to explore the sociology of crime and deviance. Topics may include white collar crime, juvenile delinquency, street crime, sexuality and sexual orientation, hate crimes, deviance and community. Assignments include quizzes and short papers.

Learning Outcomes: 1. Able to identify concepts associated with specific theoretical perspectives and be able to describe these concepts. 2. Able to use these concepts to the media forms presented in the class. 3. Use the concepts to craft explanations for characters' actions in the fictional films. 4. Able to conduct analyses of the news that conform to accepted methodological standards of quantitative and qualitative research. Credits: 3.00

SOC 32800 - Criminal Justice

Credit Hours: 3.00. Introduction to institutionalized responses of society to the problem of crime. Analysis of the administration of justice in each of the major components of the criminal justice system and laws regulating their operations. Some consideration given to comparative criminal justice. CTL:ISH 1030 Introduction To Criminal Justice

Learning Outcomes: 1. Demonstrate an understanding of the Criminal Justice System in the United States, including the relationships between federal, state and local units of government. 2. Demonstrate an understanding of the pathway which an individual follows from first arrest to incarceration. 3. Demonstrate an understanding of the differential criminalization and sanctions connected to domestic, street, and corporate forms of violence and crime. 4. Demonstrate an understanding of the influence of class, race/ethnicity and gender in criminal justice. 5. Demonstrate an understanding of the major policy debates regarding crime control and criminal justice. Credits: 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion.

Learning Outcomes: 1. Apply sociological approaches and concepts to the study of hate and violence. 2. Identify some of the causes of hate and violence, as well as the forces that perpetuate hate and violence. 3. Identify and critically evaluate institutional responses to hate and violence. 4. Empirically examine an organized effort to work against hate and violence. Credits: 3.00

SOC 41900 - Sociology Of Law

Credit Hours: 3.00. Provides an overview of American legal thought and legal processes. Major topics include definitions of law; anthropological studies of law; origin and development of law; jurisprudence; police behavior; lawyers and courts; deterrent and labeling effects of legal sanctions.

Learning Outcomes: 1. Understand how official law and law-in-action can differ. 2. Identify key theories in sociology of law. 3. Apply socio-legal theoretical concepts to real-world examples. Credits: 3.00

SOC 42600 - Social Deviance And Control

Credit Hours: 3.00. Sociological and social psychological study of social control and social deviance. Emphasis on theoretical frameworks and empirical research. Consideration also given to specific areas such as substance abuse, suicide, violence, and deviant collective behavior.

Learning Outcomes: 1. Develop a sociological perspective on deviance and social control. 2. Comprehend the foundational theories, concepts, and terms involved in the study of deviance and social control. 3. Think critically about current issues related to deviance and social control. Credits: 3.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are

emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand

the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical

competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role

of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

BIOL 41500 - Introduction To Molecular Biology

Credit Hours: 3.00. An introduction to modern molecular biology techniques and how they are used to address current topics in gene regulation. Emphasis will be placed on experimental procedures and model systems, such as site-directed mutagenesis of isolated genes and their subsequent introduction into prokaryotic and eukaryotic cells. Topics will address the molecular control mechanisms associated with DNA replication, RNA transcription, RNA processing, and differential gene expression.

Credits: 3.00

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

BIOL 43900 - Laboratory In General Microbiology

Credit Hours: 2.00. Includes enrichment cultures to isolate microorganisms, studies of cell composition, measurements of cell growth, and examination of enzyme regulation.

Credits: 2.00

BIOL 44400 - Human Medical Genetics

Credit Hours: 3.00. An intermediate-level survey course of human genetics with a balanced review of both Mendelian and molecular aspects. Review of current development and application of DNA technology emphasized.

Learning Outcomes: 1. Describe the basic principles of human genetics in the context of human diseases. 2. Acquire the capability to comprehend and learn new discoveries in human medical genetics. 3. Develop a foundation to analyze social and ethical consequences of the advancement in human medical genetics. 4. Acquire the basic knowledge in human medical genetics to succeed in professional or graduate degrees in the medical fields. Credits: 3.00

BIOL 47800 - Introduction To Bioinformatics

Credit Hours: 3.00. (CS 47800) Bioinformatics is broadly defined as the study of molecular biological information, targeting particularly the enormous volume of DNA sequence and functional complexity embedded in entire genomes. Topics will include understanding the evolutionary organization of genes (genomics), the structure and function of gene products (proteomics), and the dynamics of gene expression in biological processes (transcriptomics). Inherently, bioinformatics is interdisciplinary, melding various applications of computational science with biology. This jointly taught course introduces analytical methods from biology, statistics and computer science that are necessary for bioinformatics investigations. The course is intended for junior and senior undergraduates from various science backgrounds. Our objective is to develop the skills of both tool users and tool designers in this important new field of research.

Learning Outcomes: 1. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 2. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 4. Demonstrate knowledge of the path leading to specific careers in biology. 5. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 6. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design, collect data, statistically analyze data, and interpret results. 7. Demonstrate an understanding of laboratory skills used in genetics. 8. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 9. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. Credits: 3.00

CHM 22400 - Introductory Quantitative Analysis

Credit Hours: 4.00. Introduction to titrimetric, gravimetric, and instrumental methods of analysis; principles of separation processes, including chromatography; recognition and evaluation of possible sources of error. Required of students majoring in biology who do not take CHM 32100 .

Credits: 4.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems.

2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

CHM 26500 - Organic Chemistry Laboratory I

Credit Hours: 2.00. Similar to CHM 26300 except that a larger number and more sophisticated organic syntheses are required. The preparations are designed not only to illustrate the classical reactions discussed in CHM 26100 or 26505, but to allow for an extrapolation of the principles involved to other systems.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Document scientific information and experimental data and write scientific reports, with graphical presentation of data. 4. Plan and perform chemical transformations. 5. Recognize and use chemical instrumentation and spectroscopy. 6. Identify and handle hazardous materials. Credits: 2.00

CHM 26505 - Organic Chemistry I

Credit Hours: 3.00. A comprehensive study of the chemical principles underlying aliphatic and aromatic compounds. The syntheses and reactions of these materials are discussed. Modern theory and stereochemistry are stressed to illustrate the logic inherent in the subject matter and to demonstrate the predictability of many chemical transformations. Recommended for students majoring in chemistry.

Learning Outcomes: 1. Draw the structures (geometries and structures) of carbon-based molecules) using acceptable representations and identify common classes of organic compounds. 2. Draw and recognize resonance forms of a structure (resonance structures) and assess their importance. 3. Determine the

name of organic compounds by using the IUPAC naming system. Predict the structure when given the name. Recognize its common name. 4. Recognize the 3-dimensional shapes of molecules, as determined by structural conformation and stereochemistry. 5. Use mass spectrometry and IR and NMR spectroscopy to determine the structures of organic molecules. 6. Describe chemical processes with energy diagrams, and apply thermodynamics and kinetics toward understanding reactions and mechanisms. 7. Compare the differences between substitution (SN 1, SN2) and elimination (E1,E2) reactions. 8. Describe the important reactions of alkenes and alkynes and the mechanisms by which they occur. Credits: 3.00

CHM 26700 - Organic Chemistry Laboratory I Honors

Credit Hours: 2.00. Laboratory experiments designed to accompany the lecture material of CHM 26505, but at an advanced level. Modern instrumentation is introduced to supplement the usual elementary laboratory techniques of organic chemistry. Multistep syntheses are employed to illustrate and supplement the reactions discussed in CHM 26505.

Learning Outcomes: 1. Able to use theory to understand/predict experimental observations. 2. Able to demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Able to document scientific information and experimental data and write scientific reports, with graphical presentation of data. 4. Able to plan and perform chemical transformations. 5. Able to recognize and use chemical instrumentation and spectroscopy. 6. Able to identify and handle hazardous materials. Credits: 2.00

CHM 32100 - Analytical Chemistry I

Credit Hours: 4.00. Quantitative measurements on complex chemical systems that show matrix effects or require isolation of a component prior to its determination; general approaches to quantitative problems at the trace level; critical comparisons of competitive procedures with emphasis on principles of separation processes, including chromatography; recognition and evaluation of possible sources of error; approaches for optimizing conditions so as to minimize time and/or effort required to attain prescribed levels of accuracy and precision. Required of students majoring in chemistry.

Credits: 4.00

CHM 32300 - Analytical Chemistry I Honors

Credit Hours: 4.00. Open to students in the chemistry honors program. Topical coverage similar to CHM 32100. Laboratory will include a group of core experiments plus special experiments designed by students and staff to study original problems related to analytical chemistry.

Credits: 4.00

CHM 33300 - Principles Of Biochemistry

Credit Hours: 3.00. Structure and function of biologically important molecules. Intended for students in life sciences.

Learning Outcomes: 1. Able to use theory to understand/predict experimental observations. 2. Able to have a molecular understanding of chemical reactivity in biochemical systems. 3. Able to carry out calculations related to Biochemistry. 4. Able to understand energetics and kinetics of biochemical transformations. 5. Able to apply concepts of general chemistry and organic chemistry to biochemical systems. Credits: 3.00

CNIT 42000 - Basic Cyber Forensics

Credit Hours: 3.00. This course introduces students to the fundamentals of cyber forensics and cyber-crime scene analysis. The various laws and regulations dealing with computer forensic analysis are discussed. Students are introduced to the emerging international standards for cyber forensic analysis, as well as a formal methodology for conducting computer forensic investigations.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify the various components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss

various social issues associated with computers and information systems. Credits: 3.00

CNIT 45500 - Network Security

Credit Hours: 3.00. This course explores business, conceptual, and technological aspects of network security for voice and data networks. The course deals with the analysis, design, implementation, and management issues surrounding effective network security. Key concepts and technology include virus protection, firewalls, authentication, encryption, wireless security, security protocols, physical security, and network security architecture and policy development.

Learning Outcomes: 1. Evaluate information technology systems to determine security weakness. 2. Design and implement secure information technology infrastructure. 3. Analyze and design packet filter solutions for typical information technology solutions. Credits: 3.00

CNIT 45600 - Wireless Security And Management

Credit Hours: 3.00. This course is an advanced course concerning security and management issues as they apply to wireless networking. Students will gain knowledge on the problems and solutions the wireless industry face when implementing large scale networks. Issues addressed include encryption weaknesses, security methodology tradeoffs, large scale network management techniques and systems, and advanced wireless network architecture. The laboratory portion of the course enforces the learning outcomes with hands-on experiences in implementing secure, manageable complex wireless networks.

Learning Outcomes: 1. Implement solutions for centralized wireless network management approaches. 2. Design networks exploring tradeoffs between various security and management models and tools. 3. Demonstrate knowledge of currently available penetration testing tools. 4. Extend the security and management domains to large-scale wireless (WWAN) networks. Credits: 3.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 21800 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, primarily for technology students.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Analyze physical circumstances according to Newton's Laws of motion properly. 2. Apply basic conservation laws and and to recognize the circumstances in which they apply. 3. Use physical terms such as energy, acceleration, momentum, impulse, velocity, etc., properly. Credits: 4.00

PHYS 21900 - General Physics II (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, primarily for technology students.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Learn the basic theory and application of electricity, magnetism, dc and ac circuits; geometrical and physical optics; topics in modern physics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the

important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

AGRY 58000 - Soil And Rhizosphere Microbiology

Credit Hours: 3.00. Soils are complex ecosystems that host a diverse array of organisms, which interact with and respond to their environment. This course explores the ecology, evolution, and functions of soil microbes, with a particular focus on their interactions with plants. Through this course, students will gain an understanding of the metabolic processes and life-history strategies of archaea, bacteria, fungi, and viruses in soil, root, and rhizosphere compartments. Students will also survey the microbiomes of diverse soil ecosystems, such as forests, agroecosystems, and grasslands, and learn principles of soil microbiology and biogeochemistry. In addition, students will acquire practical knowledge about the methods used for characterizing microbes in soil and plant systems.

Learning Outcomes: 1. Demonstrate understanding of the ecology and physiology of major groups of bacteria, archaea, fungi, and viruses found in soils, the rhizosphere, and roots. 2. Compare and contrast soil and rhizosphere microbiomes, and their differences between the managed versus natural ecosystems. 3. Use verbal and basic mathematical descriptions to explain theories related to microbial growth, survival, and symbioses. 4. Predict the occurrence of microbial processes and soil conditions that govern the cycling of carbon, nitrogen, phosphorus, sulfur, and metals in soils and relate this knowledge to ecosystem functions. 5. Envision potential applications for soil and root-borne microbes in natural resource management, such as agriculture, forestry, and soil conservation. 6. Apply knowledge of plant-microbe interactions to develop hypotheses, design experiments, and select appropriate study methods. 7. Recognize and select appropriate resources and tools to effectively analyze microbiome data. Credits: 3.00

ANTH 53400 - Human Osteology

Credit Hours: 3.00. Anatomy of the human skeleton and dentition. Detailed study of skeletal elements and teeth, morphology, function, disease, and pathology. Identification of human remains with regard to age at death, gender, growth, and development in biocultural context.

Credits: 3.00

ANTH 53500 - Foundations Of Biological Anthropology

Credit Hours: 3.00. Covers topics in biological anthropology, applying to both living and extinct humans and to non-human primates. Topics include: evolutionary theory; genetics; human variation and the race concept; intersections of biology and culture; fossils and paleoanthropology; ecology and speciation, primate behavior, and theories on the social behavior of early and contemporary humans.

Learning Outcomes: 1. Meet the Graduate School learning objectives of knowledge, communication, critical thinking, and ethical research through the goals listed here. 2. Learn about contemporary theory in biological anthropology from 1980s to the present. 3. Understand when and how various theoretical positions and logics of interpretation have emerged. 4. Review several genres of anthropological writing to understand biological anthropology, and review representation of human and non-human primates and their ecology and evolutionary history. 5. Analyze a series of case studies that illustrate dominant positions and fissures in biological anthropological thought and practices. 6. Gain an understanding of how theory works and how to work with different theories in their own research. Credits: 3.00

ANTH 58900 - Archaeology And Materials Science

Credit Hours: 3.00. This course provides instruction in the methods and theories used by archaeologists and materials scientists to study ancient and historic technology. The course focuses on the analysis and interpretation of archaeological artifacts and provides opportunities for hands-on learning.

Learning Outcomes: 1. Gain a more nuanced understanding of, and appreciation for, contemporary technology and materials science. 2. Understand the historical development of theory in anthropology and archaeology related to the study of technology. 3. Understand the role of materials science in contemporary archaeological studies. 4. Able to critique the application of scientific and materials science methods to the analysis of archaeological material through a discussion of case studies. 5. Demonstrate the ability to write a research proposal that incorporates the use of materials science in investigating past technology. 6. Understand the relationship between Culture and Technology and appreciate the impact of this relationship on the environment and issues of sustainability. Credits: 3.00

ANTH 59200 - Selected Topics In Anthropology

Credit Hours: 1.00 to 3.00. Topics vary.

Credits: 1.00 to 3.00

BCHM 56100 - General Biochemistry I

Credit Hours: 3.00. This course provides upper-division undergraduate and graduate students with basic understanding of biochemical and structural properties of amino acids, nucleic acids, lipids, and carbohydrates. This course allows students to connect the relationship between structure and function of biomolecules. In addition, students learn to understand enzyme properties, enzyme mechanism of action, and enzyme regulation.

Learning Outcomes: 1. Understand the molecular principles of life based on the core disciplines of biology, chemistry and physics. 2. Understand the scientific method. They will be able to develop hypotheses, design experiments, and critically analyze results to create new knowledge. 3. Learn to be skilled laboratory scientists. They will perform a wide variety of biochemical and molecular techniques. 4. Understand the contributions of our discipline to society, including improvements to medicine, agriculture, the economy and the environment. Credits: 3.00

BCHM 56200 - General Biochemistry II

Credit Hours: 3.00. This course provides upper-division undergraduate and graduate students with an understanding of core metabolic pathways. Anabolic and catabolic processes of metabolic pathways are studied. Biochemical and structural

knowledge is used to determine how enzymes and coenzymes are needed to regulate and control metabolic pathways.

Learning Outcomes: 1. Understand the molecular principles of life based on the core disciplines of biology, chemistry and physics. 2. Understand the contributions of our discipline to society, including improvements to medicine, agriculture, the economy and the environment. Credits: 3.00

BIOL 53300 - Medical Microbiology

Credit Hours: 3.00. Host-parasite relationships. Immunology. Bacteria and viruses associated with infectious diseases.

Credits: 3.00

BIOL 58000 - Evolution

Credit Hours: 3.00. A study of evolution as a basic concept of the biological sciences; an examination of current methods of experimentation within the area, as well as evidences for the possible mechanisms of evolutionary change.

Credits: 3.00

CHM 53300 - Introductory Biochemistry

Credit Hours: 3.00. A rigorous one-semester introduction to biochemistry.

Credits: 3.00

CNIT 51100 - Foundations In Homeland Security Studies

Credit Hours: 3.00. An interdisciplinary course addressing prevention, mitigation, preparation, response, and recovery from catastrophic events that threaten private and public sector resources and infrastructures. Course contents will include: characteristics of security; personal/corporate perspectives; identification of assets; assessing cost/benefits of protecting assets; risk assessment and risk management; crisis decision making; emergency management resources and response infrastructures; best practices in emergency management and risk and crisis communication; business continuity; and the importance of a collaborative response. Case studies include the 9-11 attacks and Hurricane Katrina. External experts will present and career opportunities will be discussed. Permission of instructor required.

Learning Outcomes: 1. Understand principles and interdisciplinary issues within Homeland Security. 2. Apply information and information systems to homeland security issues. 3. Apply phases of emergency management to business in difference areas. 4. As an individual and part of a group, perform risk assessment and apply to various fields. 5. Prepare professional homeland security communications in students various home field of study. Credits: 3.00

CNIT 51200 - Managing Resources And Applications For Homeland Security

Credit Hours: 3.00. An interdisciplinary course providing examples and practice in applying and managing the resources, including technologies, used in the private and public sectors for homeland security programs. Course contents will include: terrorism; corporate security; biosecurity; health care preparedness; personal/community preparedness; risk transfer; and information security and privacy. Additional content includes discussion of local, state, and federal preparedness programs issues in the public/private sectors that are designed to ensure survival during a continuum of emergency events, and continued practice in using collaborative application of team building skills. Permission of instructor required.

Learning Outcomes: 1. Apply business continuity and redundancy in information systems to disasters and emergencies. 2. Apply examples and practice in homeland security. 3. Understand resource process to solve homeland security problems. 4. Interact with subject matter experts and apply homeland security principles. Credits: 3.00

CNIT 55700 - Advanced Research Topics In Cyber Forensics

Credit Hours: 3.00. Provides students at the advanced degree level the opportunity to expand their knowledge of cyber forensics. Students are expected to have fundamental understanding of cyber forensics and digital forensic science. The emphasis is on directed learning and scholarly inquiry. Possible research topics range from law and public policy to software and/or hardware development. Permission of instructor required.

Credits: 3.00

ENTM 52500 - Medical And Veterinary Entomology

Credit Hours: 3.00. Introduction to the biology and control of arthropods of medical and veterinary importance, and coverage of the natural history and abatement of selected arthropod-related diseases, including arboviral encephalitis, filariasis, leishmaniasis, Lyme disease, malaria, plague, spotted fever, trypanosomiasis, and myasis. Offered in odd-numbered years.

Credits: 3.00

HSCI 56000 - Toxicology

Credit Hours: 3.00. (MCMP 56000) Introduction to general principles of toxicology, target organ toxicity, and safety evaluation. Covers toxicity of metals, solvents, pesticides, gases, dusts, and food additives.

Credits: 3.00

MGMT 53200 - Forensic Accounting And Fraud Examination

Credit Hours: 3.00. This course is designed to help students apply their accounting, auditing, information systems and communication skills to detect financial fraud and unauthorized reporting acts to prepare and present a fraud case for criminal proceedings or civil litigation. These skills are highly valued in the rapidly growing field of forensic accounting. Upon completing this course, students will understand the role of forensic accountants in examining financial records for fraud and detecting insurance fraud; in providing litigation support; and in capturing digital evidence. This course will also review material related to the Certified Fraud Examiner (CFE) exam. Throughout the course, students will have opportunities to improve their written and oral communication skills, particularly as they relate to communication in the legal settings associated with investigating accounting.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas: Students will be able to demonstrate their understanding of business functional areas through homework assignments, examinations and team projects that require analysis or development of fraud detection plans and litigation support. 2. Develop current business technologies and use common business technology and software in essential tasks: Students will be able to demonstrate their understanding of how people in organizations use common technology and software to commit fraud through homework assignments, examinations and team projects. They will also be able to demonstrate their ability to use software to detect fraud and other irregular transactions. 3. Become familiar with the ethical issues that individuals face in organizations: Ethical behavior is a key factor in preventing fraud. Students will be able to demonstrate their ability to identify signs of unethical behavior and how it manifests itself in financial fraud through homework assignments, examinations and team projects. 4. Students will develop effective written and oral communication skills: Students will be able to demonstrate effective oral and written communication skills through class participation and the writing and presentation of team projects. 5. Develop the leadership and teamwork skills to function effectively in a diverse cross-functional environment: Students will demonstrate their leadership and teamwork skills by effectively working as a team to produce and present team projects. 6. Achieve depth of understanding and applications of financial reporting. Students will demonstrate their understanding of accounting systems through homework assignments, examinations and team projects that require a deep understanding of accounting rules and procedures and the technology that individuals use to keep financial records. Credits: 3.00

CHM 33900 - Biochemistry: A Molecular Approach

Credit Hours: 3.00. This is a comprehensive one-semester biochemistry course that emphasizes molecules and molecular reaction mechanisms, building upon the principles conveyed in general chemistry and organic chemistry. This course is designed to cover the essential elements of biochemistry traditionally covered in a two semester series. Topics to be covered include: Amino acids, peptides and proteins, molecular models and structure-function relationships, enzymes, enzyme kinetics and enzyme mechanisms, carbohydrates and carbohydrate metabolism, aerobic metabolism, lipids and membranes, lipid metabolism, nitrogen metabolism and integration and regulation of metabolism. Special emphasis will be placed on connections between biochemical principles and the fields of medicine, human health and disease, nutrition and biotechnology. This course should serve as excellent preparation for higher-level biochemistry courses as well as standardized pre-health professional exams. CHM 33900 was designed as the 4lh semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, this course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability

to think as a scientist. 2. Demonstrate the ability to communicate well in writing. 3. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 4. Employ knowledge of the general components of prokaryotic and eukaryotic cells, such as molecular, microscopic, macroscopic, and three-dimensional structure, to explain how different components contribute to cellular and organismal function. 5. Demonstrate knowledge of how biomolecules contribute to the structure and function of cells.. 6. Demonstrate knowledge of molecular interactions and their importance in biological systems. 7. Demonstrate knowledge of the principles of chemical thermodynamics and kinetics that drive biological processes in the context of space (i.e., compartmentation) and time: enzyme-catalyzed reactions and metabolic pathways, regulation, integration, and the chemical logic of sequential reaction steps. 8. Recognize major types of functional groups and chemical reactions that occur in biological systems. 9. Apply understanding of the concepts of chemical reactivity and chemical kinetics to predict biochemical processes. 10. Apply knowledge of the chemistry of covalent carbon compounds to explain the molecular mechanisms of biochemical enzyme reactions. 11. Demonstrate knowledge of thermodynamic criteria for spontaneity of physical processes and chemical reactions and the relationship of thermodynamics to chemical equilibrium as they apply to biological systems. 12. Explain maintenance of homeostasis in living organisms by using principles of mass transport, energy balance, and feedback and control systems. Credits: 3.00

CHM 33901 - Biochemistry Laboratory

Credit Hours: 1.00. CHM 33901 is a laboratory course based on two modules from the Undergraduate Research Inspired Experimental Chemistry Alternatives (URIECA) developed at MIT that are designed to introduce students to cutting-edge research topics in biochemistry. The course provides students with a research-inspired laboratory experience that introduces standard biochemical techniques in the context of investigating a current research topic, for example, acquired resistance to cancer drugs. Techniques include protein expression, purification, and gel analysis, PCR, site-directed mutagenesis, kinase activity assays, and protein structure viewing. CHM 33901 was designed as the 4th semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, the course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data. 4. Demonstrate understanding of the process of scientific inquiry, and explain how scientific knowledge is discovered and validated. 5. Develop observational and interpretive skills through hands-on laboratory or field. 6. Demonstrate ability to measure with precision, accuracy, and safety. 7. Operate basic biochemistry laboratory instrumentation for scientific measurement. 8. Articulate scientific questions and hypotheses, design experiments, acquire data, perform data analysis, and present results in project-based research. 9. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 10. Make quantitative/structural measurements and interpret results. 11. Demonstrate the ability to work on a team. 12. Demonstrate the ability to communicate well, both orally and in writing. Credits: 1.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary

adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

ANTH 40500 - Ethnographic Methods

Credit Hours: 3.00. This course introduces students to the basic methods of ethnographic research: the collection, analysis, and presentation of data derived from the systematic, direct observation of human behavior and interviewing of key informants. Students are required to complete a field project.

Learning Outcomes: 1. Identify and synthesize key theoretical and methodological approaches to ethnographic field work in the following broad domains: 1) research ethics, 2) data collection (field notes, participant observation, interviewing, visual and digital methods), 3) data management, and 4) communication of research results. 2. Demonstrate scientific and scholarly literacy through critical discussion,

production of scholarly reports, and public dissemination of research efforts. 3. Develop qualitative competence and problem solving skills in an active learning environment through practical data collection and processing exercises. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

ENTM 25300 - Insect Physiology And Biochemistry

Credit Hours: 4.00. Introductory course in insect cell biology, biochemistry, and physiology including structures and functions of insect internal and external tissues and organs. A year of college biology or equivalent knowledge is expected.

Learning Outcomes: 1. Understand (i) the structure and functions of insect cells, the major internal organ systems of insects, the insect integument, and homeostatic mechanisms; (ii) insect development and reproduction, and their endocrine control; and (iii) the neural mechanisms that underlie the interactions of insects with their environment and coordinated behavior. 2. Understand the physical and chemical principles underpinning animal physiology. 3. Understand the dependence of function on structure in physiology and biochemistry. 4. Acquire familiarity with commonly used experimental procedures for research in insect physiology and biochemistry. Credits: 4.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

ENTM 32820 - Medico-Legal Entomology

Credit Hours: 3.00. This course explores the main topics covered under medico-legal entomology (MLE). Specifically, the course will focus on the role that insects play in abuse, neglect, and death investigations. Students will experience rearing and identifying the major forensically important insect groups associated with medico-legal investigations. Finally, students will gain an appreciation of the scope of MLE through the analysis of two mock cases.

Learning Outcomes: 1. Establish an understanding of how insects are in used in legal investigations. 2. Define and defend the types of insect evidence presented in abuse & neglect cases. 3. Define and defend the types of insect evidence presented in death investigations. 4. Explain how insects are used to answer various questions in legal investigations. 5. Collect, rear and identify forensically important specimens. 6. Identify forensically important specimens down to family, genus or species level. 7. Demonstrate and explain proper collection techniques from decomposing remains. 8. Demonstrate and explain proper rearing techniques for forensically important insects. 9. Experience medico-legal entomology. 10. Compare and

explain the life cycle of forensically important flies. 11. Analyze two medico-legal scenes. 12. Compose forensic entomology case reports. Credits: 3.00

ENTM 42820 - Carrion Ecology

Credit Hours: 3.00. This course explores how carrion interact with the environment and other organisms during the decomposition process. Focus will be given to an understanding of the process itself, how investigators collect information about the process, and how research is conducted into the process of decomposition. Students will carry out an experiment and write their results up in the format of a peer reviewed article.

Learning Outcomes: 1. Explain the process of decomposition. 2. Describe and distinguish the stages of vertebrate decomposition, including when those stages begin and end and what variables define a given stage. 3. Describe and explain the abiotic factors that influence decomposition. 4. Describe and explain the biotic factors that influence decomposition. 5. Explain the nutrient flow through a carrion resource, including how various living organisms take advantage of such resources. 6. Experience carrion ecology field techniques. 7. Measure the abiotic factors that influence decomposition. 8. Measure the biotic factors that influence decomposition. 9. Evaluate a decomposition scene and strategize site data collection. 10. Identify the species the animals that frequent a carrion source. 11. Develop and implement a research project. 12. Plan, propose and defend a scientific research project related to carrion ecology. 13. Build a budget for a research project. 14. Build a collection strategy SOP for a research project. 15. Conduct a proposed research project. 16. Analyze the results of a research project. 17. Write-up, print and submit a research paper on your project, using the format for INSTARS or JPUR. Credits: 3.00

Notes

Forest Ecosystems Minor

Requirements for the Minor (18 credits)

Required Courses (12 credits)

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and

fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 33800 - Introduction To Silviculture

Credit Hours: 3.00. This course introduces the common silvicultural systems used in North American forests for forestry and wildlife habitat management objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures present theoretical concepts in order to allow students to understand forest management practices, while the recitation portion of this course reviews these concepts in light of wildlife habitat management, biodiversity, and other non-timber resources. The recitation is writing-intensive requiring several reflection papers on assigned readings and a semester-ending term paper on a subject of the student's choosing. Credit cannot be earned for both FNR 33800 and FNR 43900. Permission of department required.

Learning Outcomes: 1. Be familiar with technical silvicultural terminology. 2. Describe the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices affect soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Locate, summarize and evaluate primary and selected secondary literature sources in regards to silvicultural effects on non-timber resources. Credits: 3.00

Selective Courses (6 credits)

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

FNR 23000 - The World's Forests And Society (UCC: STS)

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Comprehend the complexity of the forests worldwide and understand their variety, distribution, ecological functioning, and role in developing societies and communities. 2. Provide a global perspective of forests' social and economic values, their multiple uses, and the variety of products derived from them. 3. Understand the most critical factors threatening forests and related natural resources in developing and developed countries. 4. Understand the strong connection between forests and related natural resource fields (ecology, wildlife, forest products, sustainability, etc.). Credits: 3.00

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms.

27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

FNR 53600 - Ecology Of Disturbance

Credit Hours: 2.00. Advanced lecture- and discussion-based class examining how disturbance shapes the composition and structure of communities and landscapes across major terrestrial biomes. Students will examine and discuss the relationships between disturbance intensity, frequency, and spatial extent and how these characteristics affect ecological processes and ecologically-based management of forest and grassland ecosystems. The class will also examine the synergistic effects of multiple disturbances and the restoration of endemic disturbance regimes in contemporary ecosystems. Course is reading intensive; students will read and discuss on average 3-8 journal articles per week.

Learning Outcomes: 1. Describe how disturbance shapes community composition and structure for several major terrestrial biomes. 2. Understand how disturbance regulates biological diversity across terrestrial and aquatic ecosystems. 3. Understand the relationship between disturbance intensity, frequency, and spatial extent and how those factors affect management of forest and grassland ecosystems. 4. Describe the synergistic nature of disturbance and identify how disturbance factors interact across a landscape. 5. Describe how contemporary and restored disturbance regimes may facilitate or suppress the spread of invasive species. 6. Understand how management activities can mimic endemic disturbance regimes to promote biodiversity and sustainability. Credits: 2.00

FNR 53601 - Ecology Of Disturbance Practicum

Credit Hours: 1.00. This course is the practicum for FNR 53600 , hence enrollment is contingent upon enrollment in FNR 53600 . Course consists of a one or two-week long field trip to a remote site; prior trips have been taken to the Great Smokey National Park over spring break. Course requires an additional travel fee, depending on location visited.

Learning Outcomes: 1. How disturbance shapes community composition and the distribution of species across landscapes. 2. How alterations to endemic disturbance regimes affect the composition, structure, and function of ecosystems. 3. How interactions between natural disturbance and invasion of exotic species influence forest community development. 4. Management that uses natural disturbance to restore and maintain biotic communities and ecosystems. Credits: 1.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

Notes

French Cultural Studies Minor

About the Minor

Requirements for the Minor (15 credits)

French Language Courses (6 credits)

FR 30100 - French Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of French speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in France and the other French-speaking countries from various sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze French language in specific contexts by reading French texts. 2. Analyze French language in specific contexts by listening to audio recordings and watching videos of spoken French. 3. Compose French texts by focusing on a set of grammatical rules and standards in the language. 4. Produce extended discourse in spoken French in the form of dialogues and presentations. 5. Compare and contrast French culture with other cultures through interaction with French oral and written texts. Credits: 3.00

FR 30200 - French Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in French on the basis of materials dealing with the ideas and events that have shaped present-day France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

Content Courses (6 credits)

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

FR 54900 - French Literature And Film

Credit Hours: 3.00. An examination of the interrelationships of contemporary French literature and film. Discussion of the potential of each medium as an art form, problems of visual transposition of literary works, and extension of literary concepts such as Dadaism and Surrealism into cinema. Permission of department required.

Credits: 3.00

FR 58100 - French Culture

Credit Hours: 3.00. Development of the cultural life of the French people as reflected in architecture, art, history, literature, music, and philosophy. Lectures in French.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 58200 - Francophone Cultures

Credit Hours: 3.00. Examines at least three French-speaking regions outside of France (e.g., Caribbean, Maghreb, Quebec, West Africa), including contemporary civilization and the development of cultures throughout history. Explores trends in society, daily life, the arts, and the ideas. Lectures in French.

Credits: 3.00

Required Capstone Course (3 credits)

FR 48000 - French Civilization

Credit Hours: 3.00. The study of modern French life, with special emphasis on the customs and daily life of the people. Lectures in French.

Credits: 3.00

Notes

French Minor

About the Minor

Requirements for the Minor (15 credits)

A. Required French Language Courses (6 credits)

FR 30100 - French Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of French speaking, listening, reading, and writing abilities, using materials

dealing primarily with everyday life and civilization in France and the other French-speaking countries from various sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze French language in specific contexts by reading French texts. 2. Analyze French language in specific contexts by listening to audio recordings and watching videos of spoken French. 3. Compose French texts by focusing on a set of grammatical rules and standards in the language. 4. Produce extended discourse in spoken French in the form of dialogues and presentations. 5. Compare and contrast French culture with other cultures through interaction with French oral and written texts. Credits: 3.00

FR 30200 - French Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in French on the basis of materials dealing with the ideas and events that have shaped present-day France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

B. Required French Literature Course (3 credits)

FR 24100 - Introduction To The Study Of French Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from France and the Francophone world; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in French.

Credits: 3.00

C. French Electives (6 credits)

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

FR 39400 - Special Topics In French Literature

Credit Hours: 3.00. Studies a particular aspect in French literature (e.g., theme, device, character type, motif, place) by reading a varied selection of works of different genres, styles and/or periods. Readings, discussion, and papers in French.

Credits: 3.00

FR 39600 - Special Topics In French Language Science

Credit Hours: 3.00. Examines a particular aspect entailed in the study of French language, e.g., language acquisition and teaching, language in society, regional dialects of France, French around the world, French creoles. Conducted in French.

Credits: 3.00

FR 40100 - French Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of French speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FR 40200 - French Level VIII (UCC: HUM)

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in French. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FR 44300 - Introduction To Francophone Literature

Credit Hours: 3.00. The study of the most representative Francophone poets, playwrights, and novelists from various countries, such as Leopold Senghor, Aime Cesaire, Jacques Romain, Gabrielle Roy, Michel Tremblay, Mohamed Dib.

Credits: 3.00

FR 48000 - French Civilization

Credit Hours: 3.00. The study of modern French life, with special emphasis on the customs and daily life of the people. Lectures in French.

Credits: 3.00

FR 52700 - Etudes de Style

Credit Hours: 3.00. Study of the expression of affective and artistic values in literary French. Detailed grammatical analyses and study of stylistic procedures. Comparison with English usage. Introduction to explication de texte as an approach to literature. Permission of department required.

Credits: 3.00

FR 54900 - French Literature And Film

Credit Hours: 3.00. An examination of the interrelationships of contemporary French literature and film. Discussion of the potential of each medium as an art form, problems of visual transposition of literary works, and extension of literary concepts such as Dadaism and Surrealism into cinema. Permission of department required.

Credits: 3.00

FR 56100 - The Structure Of French I: Phonetics And Phonology

Credit Hours: 3.00. This course presents the sound system of French by examining descriptive and theoretical issues in the patterning of segments on various levels (phonetics, phonemics, morphology, etc.). Students will study current phonological and phonetic issues in recent literature. Credit will not be given for both FR 35100 and 56100.

Credits: 3.00

FR 56200 - The Structure Of French II: Syntax And Morphosyntax

Credit Hours: 3.00. This course presents descriptive and theoretical issues concerning the grammatical structure of French, dealing both with word-level phenomena (inflectional and derivational morphology, etc.) and with phrase-, sentence-, and discourse-level phenomena (syntactic structure, sentence constituents, word order, etc.). Credit will not be given for both FR 36200 and 56200.

Credits: 3.00

FR 56300 - History Of The French Language

Credit Hours: 3.00. A survey of the historical development of the French language from Vulgar Latin to the present and of the French language of today as a reflection of past cultural and socio-political conditions. Knowledge of a Romance language or of Latin is recommended but not required.

Credits: 3.00

FR 56400 - Introduction To Old French

Credit Hours: 3.00. Introduction to the study of Old French. Phonetic, syntactic, and stylistic questions will be addressed through the analysis of original texts.

Credits: 3.00

FR 58100 - French Culture

Credit Hours: 3.00. Development of the cultural life of the French people as reflected in architecture, art, history, literature, music, and philosophy. Lectures in French.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 58200 - Francophone Cultures

Credit Hours: 3.00. Examines at least three French-speaking regions outside of France (e.g., Caribbean, Maghreb, Quebec, West Africa), including contemporary civilization and the development of cultures throughout history. Explores trends in society, daily life, the arts, and the ideas. Lectures in French.

Credits: 3.00

FR 59400 - Special Topics In French Literature

Credit Hours: 1.00 to 4.00. Special topics in French Literature. Permission of instructor required.

Credits: 1.00 to 4.00

FR 42400 - Professional French III

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Discuss the main aspects of the French professional world, notably the role of the French government. 2. Present professional interests verbally and in writing (such as conduct and have a job interview, compose resume and write a cover letter to answer a specific job offer). 3. Accomplish simple administrative tasks in French (write a professional letter, give/answer a phone call, make an appointment, etc.). 4. Behave appropriately in a French professional context. Credits: 3.00

FR 32400 - Professional French II

Credit Hours: 3.00. Practical reading, writing, speaking, and

listening comprehension skills at an intermediate level will be developed toward the use of French for business purposes. Course materials cover daily business dealing as well as national and international trade.

Learning Outcomes: 1. Discuss specific aspects of the French professional world, such as the role of the French government in the economy. 2. Accomplish administrative tasks in French (write a professional letter, reports, etc.). 3. Behave appropriately in a French professional context. Credits: 3.00

Notes

Furniture Design Minor

Requirements for the Minor (18 credits)

Required Courses (12 credits)

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses.

Learning Outcomes: 1. Learn the identifying macro characteristics of commercially important woody biomaterials (color, odor, cellular arrangement, grain patterns, character marks, etc.) through laboratory exercises and field trips. 2. Learn the cellular structure and arrangement of woody biomaterials. 3. Know the manufacturing characteristics and uses of woody biomaterials. 4. Identify upon sight the major commercial hardwood and softwood species produced in North America. Credits: 3.00

FNR 41910 - Furniture Product Development And Strength Design

Credit Hours: 3.00. Qualitative and quantitative principles of furniture construction, product development methodology and strength design principles, furniture performance testing, product sustainability and end of life options (LCA, computer-based applications and solutions). Course features laboratory evaluating, furniture joints and furniture structures.

Learning Outcomes: 1. Identify and specify appropriate furniture constructions. 2. Determine whether furniture has adequate strength, stiffness, and durability. 3. Determine whether furniture will meet existing performance standards. 4. Determine product sustainability. Credits: 3.00

FNR 48410 - Sustainable Wood Products, Furniture Design And Manufacturing

Credit Hours: 3.00. This project-based course explains principles of product development, furniture construction, strength design, performance testing, and product sustainability (life cycle analysis and end-of-life options). The course familiarizes students with methods such as Computer-Aided Design (CAD), Computer-Aided Manufacturing (CAM), Computer Numerical Control (CNC) router operation, rapid prototyping, and basics of secondary wood products manufacturing, to build an actual product.

Learning Outcomes: 1. Understand Computer Aided Design (CAD). 2. Understand Computer Aided Manufacturing (CAM). 3. Understand CNC router operation. 4. Understand rapid prototyping. 5. Understand the basics of secondary wood products manufacturing. 6. Understand the principles of sustainable product development. Credits: 3.00

AD 34000 - Furniture Development

Credit Hours: 3.00. This course is an introduction to furniture design. The focus of this course is information relevant to furniture design including: basic ergonomics, structural techniques and materials and processes. Additional pertinent information regarding new and ongoing design trends will be explored. A mid-semester field trip to a major furniture manufacturer and/or design studio is offered. Students will design and build two of the following objects: a small freestanding shelving unit, small table, bench, table top object or

stool. Students must pass mandatory portfolio review for this course.

Learning Outcomes: 1. Increase knowledge of materials and processes including furniture design construction methods. 2. Gain a basic understanding of ergonomics. 3. Increase aesthetic sensibility. 4. Develop an awareness of contemporary issues and trends in furniture design. 5. Design and build an original piece of furniture by the end of the class. Credits: 3.00

Selective Courses (6 Credits)

AD 21500 - Materials And Processes

Credit Hours: 3.00. An introductory course in the selection of materials and processes as relevant to design, with laboratory experiences in the safe and proper use of tools and equipment. Required of students wishing extensive access to A&D tools and equipment.

Learning Outcomes: 1. Demonstrate proper and safe handling of tools and machinery through design fabrication. 2. Develop and apply time management skills to manage a rigorous workload effectively. 3. Produce designs that reflect aesthetic and material awareness through curated projects. Credits: 3.00

AD 22800 - Visual Communication Design Computing I

Credit Hours: 3.00. An introductory course in visual design computing programs used in the study and production of visual communication design.

Learning Outcomes: 1. Develop skills using industry standard design software specifically Adobe Illustrator and Adobe InDesign. 2. Experiment with and iterate through image-making utilizing various methods and vector-based digital techniques. 3. Strengthen conceptual image-making skills. 4. Increase ability to generate and choose intensely metaphoric imagery to enhance visual communication. 5. Understand and use design terminology and design principles. 6. Strengthen attention to detail and craft knowledge. Credits: 3.00

AD 25600 - Presentation Techniques

Credit Hours: 3.00. Studio preparing students for project presentations. Classes will cover graphic techniques, including page layout, typography, portfolio formats, perspective drawings, photography, and verbal communication.

Learning Outcomes: 1. Create original designs using iterative visualization techniques to improve and refine their design concepts. 2. Develop computer-aided design skills to present these design concepts. 3. Demonstrate 3-D computer modeling skills. 4. Demonstrate computer rendering skills. Credits: 3.00

MET 10200 - Production Design And Specifications

Credit Hours: 3.00. The design, evaluation, and documentation of engineering specifications required of manufacturability and assembly are introduced. Emphasis is on CAD-based details, assemblies, design layouts, equipment installations, and related industrial practices.

Learning Outcomes: 1. Follow current American National Standards practices in generating a complete assembly/detail dimensioned set of drawings. 2. Use references to verify design intent by calculating and documenting via standard practices, allowable limits and multi-part fits. 3. Seek answers to questions on technical specification, company procedures, products or services. Credits: 3.00

AD 53500 - Furniture Design

Credit Hours: 3.00. Examination of furniture design trends and designers. Explore materials and manufacturing processes. Design and build a full-size seating unit. Shop skills required. Permission of instructor required.

Credits: 3.00

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling

and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

Note

German Minor

Requirements for the Minor (15 credits)

A. German Language Courses (6 credits)

GER 30100 - German Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of German speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Germany from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 30200 - German Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in German on the basis of materials dealing with the ideas and events that have shaped present-day Germany. Conducted primarily in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German.

Learning Outcomes: 1. Identify and use science- and engineering-related German vocabulary. 2. Read, understand, and discuss specific articles about science and engineering In German. 3. Speak and write about specific topics in science and engineering Inn German. 4. Gain cultural knowledge and competence in the German business world, specifically the world of science and engineering. Credits: 3.00

B. German Literature Course (3 credits)

GER 24100 - Introduction To The Study Of German Literature

Credit Hours: 3.00. An introduction to the study of German literature based on an overview of the formal elements of poetry, fiction, and drama as well as basic concepts of literary theory. Texts in German; conducted primarily in German.

Learning Outcomes: 1. Identify common characteristics of primary literary genres (e.g. prose, poetry, drama) as exhibited during one or more time periods in German-language cultures. 2. Discuss (in German) selected literary works that are written in German in respect to their main themes and to devices that help writers convey the texts' meaning, such as symbolism, metaphor, irony, and allusion. 3. Compose (in German, with the aid of a dictionary) analytical essays that examine the relationship between the content, style, and sociohistorical context of selected literary texts. Credits: 3.00

C. German Electives (6 credits)

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German.

Learning Outcomes: 1. Identify and use science- and engineering-related German vocabulary. 2. Read, understand, and discuss specific articles about science and engineering In German. 3. Speak and write about specific topics in science and engineering Inn German. 4. Gain cultural knowledge and competence in the German business world, specifically the world of science and engineering. Credits: 3.00

GER 34100 - German Literature I: From The Middle Ages To The 18th Century

Credit Hours: 3.00. Reading and discussion of selected texts (poetry, prose, dramatic texts, cultural documents, and artworks) in German from the Middle Ages to the Eighteenth Century.

Credits: 3.00

GER 34200 - German Literature II: From The 18th Century To The 21st Century

Credit Hours: 3.00. Reading and discussion of selected texts in German with the dual context of literary movements and historical developments between the 18th and 21st centuries.

Credits: 3.00

GER 40100 - German Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of German speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in Germany. Conducted in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 40200 - German Level VIII (UCC: HUM)

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in German. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted in German.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Compose essays in German after reading authentic German articles and books. 2. Discuss current events in German based on print and media sources from German-speaking countries. 3. Formulate arguments during debate in German through group discussion. 4. State their opinions in German on recordings, television shows, and texts. 5. Describe information in German from graphs, charts, diagrams, and pictures. Credits: 3.00

GER 42400 - Business German

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Learn and practice vocabulary and cultural knowledge that is applicable to business situations in German-speaking countries. 2. Compare business practices in German-speaking countries with those in the United States, and will be able to discuss the similarities and differences in German. Credits: 3.00

GER 48000 - German Civilization

Credit Hours: 3.00. The study of modern German life, with special emphasis on the daily life and customs of the people. Lectures in German.

Credits: 3.00

GER 49800 - Advanced Topics In German

Credit Hours: 3.00. Special topics on literature, linguistics and culture of contemporary German-speaking countries. Conducted in German.

Credits: 3.00

GER 52400 - German For International Trade

Credit Hours: 3.00. A broad spectrum of business and cultural materials to prepare students for work in international firms. Intensive study of technical terminology used in business transactions; stylistics in business correspondence and report writing; training for accurate oral expression in business negotiations.

Credits: 3.00

GER 56100 - The Structure Of German I: Phonology And Derivational Morphology

Credit Hours: 3.00. Linguistic analysis of German, focusing on phonetics, phonology, and word structure. The course will treat various problems of pronunciation, structural sound patterns, and word derivation. One weekly class is devoted to theoretical issues affecting German phonology and morphology. Credit will not be given for both GER 36100 and 56100.

Credits: 3.00

GER 56200 - The Structure Of German II: Inflectional Morphology And Syntax

Credit Hours: 3.00. Linguistic analysis of German, focusing on inflectional morphology, syntax, and semantics. The course will present the grammatical structure of German, dealing with word-level phenomena (inflectional morphology), and phrase- and sentence-level phenomena (constituents, word order, syntactic structure, etc.). Credit will not be given for both GER 36200 and 56200.

Credits: 3.00

GER 56300 - History Of The German Language

Credit Hours: 3.00. A survey of the development of the German language, with emphasis on the factors and events that brought about the ultimate unification of the major German dialects into the standard form of the present. The German language of today as a reflection of past cultural and sociopolitical conditions.

Credits: 3.00

GER 58100 - German Culture

Credit Hours: 3.00. The development of the cultural life in German-speaking lands as reflected in architecture, art, history, literature, music, and philosophy. Lectures in German.

Credits: 3.00

Notes

Global Engineering Studies Minor

About the Minor

Requirements for the Minor

Core Requirements

GEARE Students

ENGR 29701 - Global Engineering Orientation

Credit Hours: 1.00. Forum in preparation of study and work abroad. Understanding of cultural differences and collaborating across cultural boundaries, professionalism and ethics in foreign work and academic environments, leadership and teamwork options in foreign environments. Permission of instructor required.

Learning Outcomes: 1. Be provided with foundation in global engineering communication skills. 2. Outline teamwork and leadership opportunities available through participation in the global engineering community. 3. Be provided with globally diverse and multicultural experiences and discuss case studies to prepare them for upcoming international internships and semester study abroad. 4. Identify resources available for academic studies and industrial work experience abroad. 5. Develop a strong ethical framework and cultural sensitivity to prepare for the global professional workplace. Credits: 1.00

ENGR 39700 - Global Engineering Experience

Credit Hours: 1.00. Forum for students participating in an international internship or study abroad experience. Students will complete weekly guided writing assignments during the first 15 weeks of their international experience. Assignments will aid students with integration into the host community. Students will demonstrate increased awareness of the nature and complexities of intercultural communication by applying various theories to their lived experiences. To be taken concurrently with international internship/study abroad experience. Permission of instructor is required.

Learning Outcomes: 1. Apply cultural theories to their personal experiences. 2. Deepen understanding of cultural differences, inter-cultural communication and their cultural competency. 3. Develop strategies to bridge cultural gaps and the ability to identify, manage,

communicate and apply emotions effectively and appropriately. 4. Understand challenges of studying or working in a foreign country and develop a strong ethical framework and cultural sensitivity to succeed in a global workplace. Credits: 1.00

ENGR 49700 - Global Engineering Capstone

Credit Hours: 1.00. Forum for students returning from international internship and/or study abroad experience. Students will explore personal development resulting from the international experience as it relates to changes in world-view, understanding of culture, interpersonal skills and career aspirations. They will learn to highlight international experiences on resumes and in interviews. Students will apply and share their cultural knowledge through structured activities and summarize their entire global experience through a poster presentation. To be taken in semester following international internship/study abroad experience. Permission of instructor is required.

Learning Outcomes: 1. Identify skills gained through the international experience. 2. Able to highlight experiences on resumes and in interviews. 3. Apply skills to current and future inter-cultural situations and develop a strong ethical framework and cultural sensitivity to succeed in a global workplace. Credits: 1.00

NON-GEARE Students

ENGR 29701 - Global Engineering Orientation

Credit Hours: 1.00. Forum in preparation of study and work abroad. Understanding of cultural differences and collaborating across cultural boundaries, professionalism and ethics in foreign work and academic environments, leadership and teamwork options in foreign environments. Permission of instructor required.

Learning Outcomes: 1. Be provided with foundation in global engineering communication skills. 2. Outline teamwork and leadership opportunities available through participation in the global engineering community. 3. Be provided with globally diverse and multicultural experiences and discuss case studies to prepare them for upcoming international internships and semester study abroad. 4. Identify resources available for academic studies and industrial work experience abroad. 5. Develop a strong ethical framework and cultural sensitivity to prepare for the global professional workplace. Credits: 1.00

ENGR 49700 - Global Engineering Capstone

Credit Hours: 1.00. Forum for students returning from international internship and/or study abroad experience. Students will explore personal development resulting from the international experience as it relates to changes in world-view, understanding of culture, interpersonal skills and career aspirations. They will learn to highlight international experiences on resumes and in interviews. Students will apply and share their cultural knowledge through structured activities and summarize their entire global experience through a poster presentation. To be taken in semester following international internship/study abroad experience. Permission of instructor is required.

Learning Outcomes: 1. Identify skills gained through the international experience. 2. Able to highlight experiences on resumes and in interviews. 3. Apply skills to current and future inter-cultural situations and develop a strong ethical framework and cultural sensitivity to succeed in a global workplace. Credits: 1.00

COM 30301 - Mentored Intercultural Communication Experience

Credit Hours: 1.00 to 3.00. This class is intended as a companion to a study abroad or international internship experience. Through a series of guided assignments that integrate experiential activities embedded in the host community with reflective writing that solicits feedback from both peers and an intercultural mentor, students will be challenged to develop intercultural competencies while living in a different culture.

Learning Outcomes: 1. Demonstrate awareness of their own cultural rules and biases by explicitly articulating in reflections and discussions how their experiences have shaped their attitudes and behaviors. 2. Exhibit understanding of cultural differences in verbal and nonverbal communication by successfully completing tasks with team members from other cultural and linguistic backgrounds. 3. Interpret

experiences from more than one perspective by seeking out answers to questions about another culture, suspending judgement about another system of values and norms for behavior, and expressing empathy for another point of view. 4. Present effective arguments about their development of intercultural competencies during their study abroad by setting and assessing the achievement of intercultural learning goals and constructing a narrative that illustrates their new skills to prospective employers. Credits: 1.00 to 3.00

Global Engineering Experiences (GEE) - Choose two

Other Global Experience

Appendix A: Cultural Knowledge Courses

African

HIST 21000 - The Making Of Modern Africa (UCC: HUM)

Credit Hours: 3.00. This course provides students with a comprehensive introduction to modern African history from 1800 to the present. Using a variety of films, novels and scholarly resources, we will examine the major historical forces that have shaped African lives over the last two centuries. Emphasis will be placed on African experiences of slavery, colonialism, liberation struggles, and post-independence national building. Students will also learn to analyze contemporary African issues within a larger historical context.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand modern African history and the state of Africa today. 2. Learn how to interpret historical texts from a number of different epistemic positions (i.e. paying attention to race, class, gender, sexuality, nation and other axes of ""difference""). 3. Expect to develop stronger writing skills, as well as to improve on critical thinking and oral articulation. Credits: 3.00

HIST 44100 - Africa In The Twentieth Century

Credit Hours: 3.00. A problem-oriented course in the modern history of Africa from 1880 to 1975. It analyzes origins of African nationalism, European colonialism, racial conflict, and war leading to the independence revolution of the 1960s and 1970s.

Credits: 3.00

Arabic

ARAB 23900 - Arab Women Writers (UCC: HUM)

Credit Hours: 3.00. Survey of Arab women writers from North Africa, the Middle East, and Arab communities in the Western world. Emphasis on issues of sexuality, marriage, work, travel and immigration. Conducted in English; no knowledge of Arabic required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ARAB 28000 - Arabic Culture (UCC: HUM)

Credit Hours: 3.00. A historical and literary survey of defining characteristics of Arabic culture from pre-Islamic times to the modern period.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 24300 - South Asian History And Civilizations (UCC: HUM)

Credit Hours: 3.00. Survey history of India, Pakistan, and Bangladesh, from the origins of South Asian civilization to the present. Topics include ancient India, the Mughal Empire, the colonial experience, the independence movement, and conflict and popular culture.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 24600 - Modern Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course explores the political, social, and cultural factors that have contributed to the formation of the modern Middle East. Course includes short stories and a selection of documentary films from the region.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

Chinese

CHNS 28000 - Topics In Chinese Civilization And Culture (UCC: HUM)

Credit Hours: 3.00. Selected topics on Chinese civilization and culture including history and geography, Confucianism, contemporary China, education, family, international cultural and economic cooperation. Course materials also cover most current issues on and in Chinese-speaking communities. Lectures in English.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24100 - East Asia In The Modern World (UCC: HUM)

Credit Hours: 3.00. The response of China, Japan, and Korea to the coming of the West in modern times, with special stress on the effect of Western ideas and machines. Approximately 1600 to the present.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 34000 - Modern China (UCC: HUM)

Credit Hours: 3.00. Chinese history from the Qing Dynasty (1644) to the present, with emphasis on the period since 1800. Attention given to internal developments and China's response to Western thought and material accomplishments. Nationalism and communism in the twentieth century are examined.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 35900 - Gender In East Asian History (UCC: HUM)

Credit Hours: 3.00. Examination of the construction of tradition and modernity in East Asia through the lens of gender. Topics include the influence of "Confucian" ethics; gender and imperialism, nationalism and revolution; and social change in the aftermath of war and decolonization.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

Classics

GREK 10200 - Ancient Greek Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of the study of Attic Greek grammar and reading of connected prose of the Classical period.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Learn basics of reading and translating ancient Greek, completing their introduction to core vocabulary, grammar, and syntax. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending their vocabulary through etymological connections. Credits: 3.00

GREK 20200 - Ancient Greek Level IV (UCC: HUM)

Credit Hours: 3.00. Upper intermediate reading course in ancient Greek, designed to consolidate students' knowledge of grammar and syntax, broaden vocabulary, and develop precision and confidence in reading and translation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Reinforce and extend skills as readers and translators by studying archaic, classical or post-classical Greek literature. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending vocabulary through etymological connections. Credits: 3.00

European

HIST 10300 - Introduction To The Medieval World (UCC: HUM)

Credit Hours: 3.00. Barbarians, kings, queens, peasants, witches, saints, teachers, students, heretics, Moslems, Jews, Christians, love, death, monks, farm life, city life, ordinary men, women, and children as Europe develops from A.D. 500 to 1500.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 32900 - History Of Women In Modern Europe (UCC: HUM)

Credit Hours: 3.00. This course examines women's

experiences and constructions of femininity in Europe from 1789 to the present, including women in revolutions, state intervention in the family, changing ideas of sexuality, women's movements, women in socialism and fascism, and women in war.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will understand the history of women in modern Europe from 1789 to the present by analyzing women's experiences and the social and cultural constructions of femininity as well as the different contexts of class, ethnicity, and nationality in the history of European women. 2. They will think historically and critically about women's participation in revolutions; state interventions in the family; working lives of women; ideals and practices of sexuality; the middle-class model of domesticity and women's responses to it; the role of women and femininity in imperialism; women in socialism, under fascism, and in the transition from communism to capitalism; women's experiences of two world wars; and the rise of feminist movements and contemporary feminisms in Europe. 3. Students will understand the difference between secondary and primary sources. They will read and interpret primary source materials, including fiction, autobiography, and other historical documents including those written by women. 4. Students will develop their critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 33700 - Europe Since 1945

Credit Hours: 3.00. This course traces the history of Europe, west and east, from 1945 to the present. Once viewed as a success story, culminating in the collapse of eastern European communism, developments after 1990 - such as the breakup of Yugoslavia, the European debt crisis, and the War in Ukraine - call this simplistic narrative into question. This course will consider Cold War division, decolonization, and political protest alongside democratization and economic recovery.

Learning Outcomes: 1. Explain broad themes in postwar European history, including the Cold War as geopolitical process and a historical framework, the role of decolonization in shaping European politics, the impact of social movements, and the distinctions and overlaps between different economic systems. 2. Read historical scholarship for arguments, evidence, and contributions to the field and assess their effectiveness in these areas. 3. Craft a persuasive argument supported by primary and secondary source evidence that makes an intervention into the historical literature on a chosen topic. 4. Interpret a diverse range of historical sources and assess their utility in understanding the past, paying attention to form, perspective, and limitations. 5. Present historical research clearly and accessibly to different audiences using a variety of media formats. Credits: 3.00

HIST 41300 - Modern European Imperialism: Repression And Resistance

Credit Hours: 3.00. This course examines the expansion, transformation and collapse of 19th and 20th-century European empires, focusing on colonial encounters and relationships. Students should come to the course familiar with major developments, events and themes in modern European and/or global history.

Learning Outcomes: 1. Contextualize and compare important events and moments in the history of European imperialism and decolonization. 2. Analyze and evaluate how historians interpret the past, and examine how this past continues to shape the present. 3. Analyze an array of historical sources and types of evidence, historical narratives, first-person accounts and commentaries, scholarly interpretations, visual imagery and fictional portrayals, as well as the setting in which these sources were produced. 4. Craft original arguments supported by historical and textual evidence in class discussions and weekly writing assignments. Credits: 3.00

HIST 40300 - Europe In The Reformation

Credit Hours: 3.00. A study of decay and renewal in European society, 1300 to 1650. Concentrates on the Protestant and Catholic Reformation and religious wars, but also covers the Northern Renaissance, the New Monarchies, and the discovery and exploration of the New World.

Credits: 3.00

French

FR 33000 - French Cinema (UCC: HUM)

Credit Hours: 3.00. A general survey of major French cinematic trends from the earliest examples (Melies, Lumiere) to the New Wave (Chabrol, Truffaut, Resnais, Godard, etc.), with a discussion of the historical, social, political, aesthetic, and literary contexts. The French film in relation to world cinema. The relationship between the French cinema and French literature. Reading and analysis of scripts and historical and critical materials. Knowledge of French not required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 40500 - The French Revolution And Napoleon

Credit Hours: 3.00. A study of revolutionary France from the fall of the ancient regime to the Congress of Vienna. Divided in emphasis between the period of the revolution and the era of Napoleon, the course stresses social, political, ideological, and institutional developments.

Credits: 3.00

German

GER 28000 - German Special Topics

Credit Hours: 3.00. Selected topics on the civilization and culture of German speaking countries. Lectures and readings all in English. No knowledge of German necessary.

Learning Outcomes: 1. Students will explore in depth a particular aspect of life in German-speaking countries, leading to their increased understanding not only of those cultures, but also, by comparison, of their own culture.
Credits: 3.00

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German.

Learning Outcomes: 1. Identify and use science- and engineering-related German vocabulary. 2. Read, understand, and discuss specific articles about science and engineering In German. 3. Speak and write about specific topics in science and engineering Inn German. 4. Gain cultural knowledge and competence in the German business world, specifically the world of science and engineering. Credits: 3.00

HIST 32300 - German History (UCC: HUM)

Credit Hours: 3.00. A survey of German history from the earliest times until the present. After a brief description of the medieval empire, we will turn to the Germany of Bismarck and Hitler and its successor states. A recurring theme will be the struggle between forces of liberalism and democracy and those of authoritarianism and militarism.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

Italian

ITAL 28100 - The Italian Renaissance And Its Scientific And Cultural Impact On Western Civilization (UCC: HUM)

Credit Hours: 3.00. This course introduces students to the most important cultural and scientific writings of the Italian Renaissance, and shows the pivotal influence of the Renaissance on the development of Western civilization as a whole. Classes and readings entirely in English; no knowledge of Italian needed.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Become acquainted with the canonical works of the Italian Renaissance that have had a major influence on modern Western thought and will develop a broad understanding of the Renaissance. 2. Become familiar with different literary genres such as poetry, comedy, novellas, treatises and dialogues, and will develop the tools necessary to approach them critically within the cultural and political context that produced them. 3. Improve their critical and writing skills. Credits: 3.00

ITAL 33000 - The Italian Cinema (UCC: HUM)

Credit Hours: 3.00. The development and evolution of Italian cinema after World War II. The class will center on the viewing and discussion of films and will survey a broad spectrum of directors and styles. Knowledge of Italian not required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ITAL 33300 - The Spirit Of Italian Comedy (UCC: HUM)

Credit Hours: 3.00. This course explores various types of Italian comedy, focusing on theater and cinema. Particular emphasis will be given to Renaissance theater, commedia dell'arte, Goldoni, Pirnadello, Dario Fo, and to the new generation of Italian comedians. In English.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ITAL 33500 - Italian-American Cinema

Credit Hours: 3.00. This course offers an overview of the major filmmakers associated with the representation of Italian Americans in the United States film world. Students will view and discuss major filmmakers and their films, and will write critical essays on film topics. Conducted in English.

Credits: 3.00

Japanese

HIST 34300 - Traditional Japan (UCC: HUM)

Credit Hours: 3.00. The course considers Japanese civilization from its origins to the establishment of the Tokugawa Shogun (1603). Divided between political and cultural history, it will emphasize the development of traditional institutions in Japanese society, religion, philosophy, art, and literature.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 34400 - History Of Modern Japan (UCC: HUM)

Credit Hours: 3.00. A survey of Japanese history from the nineteenth century to the present, including Japan's response to Western expansionism, the formation of the modern state, political parties, industrialization, the Pacific War, the American Occupation, the postwar "economic miracle," and Japan today.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

JPNS 28000 - Introduction To Modern Japanese Civilization

Credit Hours: 3.00. A survey of modern Japanese culture. Various aspects are covered, such as geography, economy, society, the political system, family, education, traditional arts, business, and language. Current issues will be discussed in a timely manner. Lectures in English.

Credits: 3.00

Latin American

HIST 27100 - Introduction To Colonial Latin American History (1492-1810) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the principle historical themes of Latin America during the colonial period (roughly, from 1492 to 1810). No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Demonstrate a grasp of the historical forces that in many ways laid the foundation for present-day Latin America. 2. Express understanding of how these major political, social, economic, and cultural issues unfolded in different ways in Latin America, with respect to region, time, and culture. Credits: 3.00

HIST 27200 - Introduction To Modern Latin American History (1810 To The Present) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the study of the major economic, political, social, and cultural processes that shaped modern Latin American nations since independence. No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a broad understanding of the modern history of Latin America. 2. Become familiar with the major economic, political, social, and cultural processes that shaped the nations of the continent. Credits: 3.00

Russian

RUSS 33000 - Russian And East European Cinema (UCC: HUM)

Credit Hours: 3.00. Viewing and analysis of significant Russian and East European films. Evolution of the Russian and East European cinema, its place in world cinema, and its relation to cultural, political, and social trends. Cinematic adaptation of literary and theatrical works. Knowledge of Russian or East European languages not required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

Spanish

SPAN 33000 - Spanish And Latin American Cinema (UCC: HUM)

Credit Hours: 3.00. Screening and analysis of selected Spanish and Latin American films with readings and discussions relative to their historical, social, political, aesthetic, literary, and linguistic contexts. No knowledge of Spanish required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

SPAN 39800 - Special Topics In Spanish

Credit Hours: 1.00 to 3.00. Studies of particular aspects of Spanish (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussions, and papers in Spanish.

Learning Outcomes: 1. Recognize and apply a broad range of hospitality and tourism-related vocabulary. 2. Read, understand, and discuss specific hospitality and tourism topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific problems in hospitality and tourism in Spanish. Credits: 1.00 to 3.00

Notes

Global Food and Agriculture Systems Minor

About the Minor

Requirements for the Minor (18 credits)

Required Courses (6 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life.
Credits: 3.00

AGEC 22000 - Economics Of Agricultural Markets

Credit Hours: 3.00. This class provides an overview of U.S. and international agricultural markets, and develops a framework for analyzing those markets. Concepts include determination of agricultural prices, spatial dimensions of agricultural markets, and trade; temporal dimensions of agricultural markets, and futures and options markets; and public policy in agricultural markets.

Credits: 3.00

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium

outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

Additional Courses - Choose Four (12 credits)

AGEC 25000 - Economic Geography Of World Food And Resources (UCC: BSS)

Credit Hours: 3.00. A study of the important issues and economic decisions about worldwide resource use for food and fiber production as influenced by geography, climate, history, social institutions, national self-interest, and the environment.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 30500 - Agricultural Prices

Credit Hours: 3.00. Analysis of prices and the movement of farm product prices; relations of farm product prices to farm input and other prices; conceptual and statistical analysis of agricultural supply and demand relationships; application of price analysis, price forecasting, agricultural outlook, agricultural policy; adjustment of farming to new price conditions.

Learning Outcomes: 1. Understand economic principles that determine prices in markets. 2. Provide knowledge of markets and the entities and factors that impact market equilibrium outcomes. 3. Apply economic principles and empirical estimation tools to inform decision-making. Credits: 3.00

AGEC 32100 - Principles Of Commodity Marketing

Credit Hours: 3.00. An in-depth background on the origin, operation, and application of futures and options in risk management for agriculture. Covers grain, livestock, and yield futures and options. Applications of futures and options to price and yield risk management is provided. Comparison of expected results from various risk management alternatives and decision-making processes to use in selecting a risk management strategy.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 33300 - Food Distribution - A Retailing Perspective

Credit Hours: 3.00. Distribution factors that affect the food industry. Particular attention to the food wholesaling and retailing sectors. Presentation of economic tools to evaluate performance in the food industry. Discussion of the relative importance of each of the major departments in the modern supermarket. Discussion of current and future industry prototypes.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates

knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 34000 - International Economic Development

Credit Hours: 3.00. This course is designed to introduce students to issues and problems related to international economic development. Topics covered include a description of the current situation in developing countries and the history of growth and development. The course is grounded in the body of theory associated with economic development, but concentrates on the many practical problems such as poverty, population growth, urbanization, education and the environment. The three areas with the greatest attention are agricultural development, international trade, and policy analysis for developing countries.

Learning Outcomes: 1. Build an appreciation for the conditions and constraints of contemporary life in developing countries. 2. Have your own notions of what it means to live in poverty, the challenges of improving welfare, and the role of economics in development. 3. Demonstrate how economic principles, models, and analysis can help evaluate and refine approaches to improving human welfare in developing countries. 4. Develop the ability to analyze and write about real-world problems and solutions. The course, particularly the assignments, will allow you to acquire technical skills that will contribute to your future professional work. Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGEC 41000 - Agricultural Policy

Credit Hours: 3.00. Economic analysis of U.S. food and agricultural policy; current and past farm legislation; international trade; agricultural policies in selected countries; domestic and foreign food assistance; structural change; agricultural research policy; macroeconomic linkages with the agricultural sector; and emerging environmental policy issues, land and water use.

Learning Outcomes: 1. Understand the role of government interventions in the farm and food system. 2. Apply economic principles to the analysis of government interventions. 3. Delineate between economic and values-based arguments in assessment of policies. 4. Understand the breadth, complexity and importance of 'Agricultural Policy'. Credits: 3.00

AGEC 42100 - Advanced Commodity Marketing

Credit Hours: 3.00. Application of commodity marketing principles to grain, livestock, and other commodity sectors. Applications include hedging, speculation, risk management, and fundamental and technical price analysis. Examination and testing of pricing strategies and the development of commodity marketing plans.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate

critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 45000 - International Agricultural Trade

Credit Hours: 3.00. Study of U.S. agricultural trade with emphasis on international trade theory, exchange rates and their determination, relationships between domestic agricultural policies and trade policies, and analysis of institutional arrangements for world trade in agricultural products.

Learning Outcomes: 1. Explain the rationale for international trade in a variety of economic models. 2. Assess the models in terms of their assumptions and implications. 3. Discuss supplementary research that qualifies and extends the basic models. 4. Discuss the implications of international trade policies, institutions and agreements for international trade, especially trade in food and agricultural products. Credits: 3.00

AGEC 52600 - International Food And Agribusiness Marketing Strategy

Credit Hours: 3.00. Students will develop their analytical, decision-making, and communication skills related to marketing management of food systems in the world economy. They will analyze a foreign market's potential and market entry strategies; compare consumer differences and similarities across markets; define issues related to marketing mix standardization or adaptation; and evaluate effects of economic, social, and legal environments on marketing strategy.

Credits: 3.00

AGEC 53200 - World Food Problems

Credit Hours: 3.00. This course focuses on the multi-disciplinary challenges that exist in meeting the food and nutrition needs of a growing world population. The course aims to instill an appreciation of the importance of economics, food production and technology, trade, culture, communication, political processes and institutions, demography and related factors in determining adequate food availability and health globally. Permission of instructor required.

Learning Outcomes: 1. Understand global food production and consumption, food trade and its history including: the major plants produced and consumed; where they are grown; patterns and extent of global food trade; major food animals and animal production systems; countries involved in food trade; urbanization and food transportation; and effects of post-harvest processing on food trade and availability. 2. Understand basics of world population growth and its relationship to past and future food production and consumption globally. 3. Understand what malnutrition looks like, where it occurs, how it is measured, and the interactions between malnutrition (both under nutrition and obesity) and human health. 4. Understand the basic economic principles that affect consumer food costs and consumption patterns globally. 5. Understand how culture, communication and politics influence food availability, world food problems and malnutrition. 6. Predict, based on available information, likely scenarios for the future of world food problems and malnutrition. Credits: 3.00

Notes

Global Liberal Arts Studies Minor

Requirements for the Minor (15 credits)

A. Required Courses (6 credits)

GSLA 10100 - Global Awareness

Credit Hours: 3.00. This course surveys a range of global issues to develop an understanding and appreciation of the major geographical and cultural areas of the world and the issues that both unite and divide such areas and their people. The course will examine key political, economic, social, historical and cultural patterns that define our modern world. It encourages students to raise 'big' questions about what

processes and institutions helped constitute the modern moment, as well as about the dynamic interactions between our social world and the natural one. This is a gateway course for prospective Global Studies Majors and Minors.

Learning Outcomes: 1. Develop critical thinking. 2. Develop cultural competence. 3. Understand communication across cultures. 4. Develop ethical decision making. Credits: 3.00

GSLA 30100 - Theories Of Global Studies (UCC: HUM)

Credit Hours: 3.00. The course is designed to introduce students to the major schools of thought in Global and International Studies. It provides students with critical tools to explore the interconnectedness of our world from multiple perspectives. The course will expose students to a variety of international scholars who have understood Global Studies to be more than globalization. Instead, it introduces contested issues and contradictory positions concerning the meaning and significance of globalization.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Gain an understanding of key theoretical approaches to the question of globalization and its role in the discipline of Global Studies. 2. Learn how to evaluate competing and opposing analytical frameworks. 3. Apply a theoretical framework to a concrete problem or case. Credits: 3.00

B. Additional Courses - Choose Two (6 credits)

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 23000 - Gender Across Cultures (UCC: BSS)

Credit Hours: 3.00. Explores gender and sexuality from a cross-cultural perspective. Draws on case studies to explore the complexities of women's and men's lives. Examines gender hierarchies, gender in a globalized world, and the cultural construction of sexuality and gender.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain how culture influences the social constructions of sex, gender, and sexuality. 2. Recognize the diversity of genders and sexualities globally and over time. 3. Demonstrate understanding of how gender intersects with other social processes and institutions. 4. Identify the role of power structures, violence, and inequity in constructing and maintaining gender conventions. Credits: 3.00

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

COM 22400 - Communicating In The Global Workplace (UCC: BSS)

Credit Hours: 3.00. This introductory course explores

communication issues that arise in the global workplace. The course develops an appreciation of the relationship among culture, communication, and ways of organizing and doing business.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Critically analyze communication issues arising in culturally diverse organizations in the global environment by utilizing conceptual and theoretical frameworks. 2. Develop intercultural competencies for better managing communication issues in the global workplace by developing practical strategies for contemporary organizations operating in multiple cultures. 3. Explain macro social trends that are impacting global organizations by illustrating current examples. Credits: 3.00

CMPL 26700 - World Literature: From 1700 A D To The Present (UCC: HUM)

Credit Hours: 3.00. (ENGL 26700) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

CMPL 26600 - World Literature: From The Beginnings To 1700 A D (UCC: HUM)

Credit Hours: 3.00. (ENGL 26600) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 36500 - Literature And Imperialism (UCC: HUM)

Credit Hours: 3.00. A study through cultural and theoretical works of the impact of imperialism on the ruling nations.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism/colonialism. 2. Develop a foundational knowledge of the historical contexts of and theoretical approaches to literary texts: gain an introductory knowledge of postcolonial literary theory. 3. Improve close reading and textual analysis skills. 4. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule.

Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex

understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

GER 28000 - German Special Topics

Credit Hours: 3.00. Selected topics on the civilization and culture of German speaking countries. Lectures and readings all in English. No knowledge of German necessary.

Learning Outcomes: 1. Students will explore in depth a particular aspect of life in German-speaking countries, leading to their increased understanding not only of those cultures, but also, by comparison, of their own culture. Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 34901 - The First World War (UCC: HUM)

Credit Hours: 3.00. This course is designed to explore the origins, course, meaning, and lasting legacy of World War I.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students are expected to understand the origins, course, and results of World War I. 2. Students are expected to understand the consequences that the war had on today's world. Credits: 3.00

HIST 35100 - The Second World War (UCC: HUM)

Credit Hours: 3.00. A study of the diplomacy, economic mobilization, and military operations of World War II, 1939-1945.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 38400 - History Of Aviation (UCC: HUM/STS)

Credit Hours: 3.00. A comparative history of human flight and air power (in Europe, the Americas, and Asia) from its origin in the early inventors and pilots, through its reflection in the popular media, to the global development of civil and military aviation.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 38700 - History Of The Space Age (UCC: HUM/STS)

Credit Hours: 3.00. The historical interaction between human values and space exploration in the contemporary age, focusing on issues of global interdependence. Topics include the international competition in rocketry, the Cold War in space, the moon missions, space disasters, and satellite technology.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HTM 37200 - Global Tourism Geography (UCC: BSS)

Credit Hours: 3.00. Introduction and analysis of specific world travel destinations, including the exploration of geographic features, customs and tradition, population centers, visitor attractions, political, religious, language and other cultural differences as these relate to the hospitality and travel industry. The course is designed to teach students specific geographic knowledge and develop a deeper understanding and empathy for cultural values and traditions that exist outside their own culture.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify and explain the interactions of tourism with the culture, economy, and environment of global destinations. 2. Identify international travel patterns and explain their impact on tourism management in promoting cultural understanding and global peace. 3. Locate

various countries, major cities, natural wonders, historic sites and other tourism attractions, both man-made and natural. 4. Describe how the physical environment in specific geographic regions affects the ability of humans to live there and influences inbound and outbound travel. 5. Explain how political, economic, and environmental factors affect travel both positively and negatively. 6. Explain international travel patterns and identify the major travel generating and travel receiving areas. 7. Compare and contrast different cultures throughout the world with your home culture. Identify and explain key differences and their influence on travel. 8. Identify and explain the key elements of interdependence required for the existence of modern day world travel.
Credits: 3.00

LC 37100 - Phonetics Of Foreign Languages

Credit Hours: 3.00. Introduction to articulatory phonetics for students of foreign languages. Mechanisms of production of speech sounds. Production and discrimination of sounds of other languages; contrast with English sounds; practice in pronunciation and phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be awarded for more than one of SLHS 30600 , LING 31500 , and LC 37100.
Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.
University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

POL 13000 - Introduction To International Relations (UCC: BSS)

Credit Hours: 3.00. An analysis of the fundamentals of international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics
University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 14100 - Governments Of The World (UCC: BSS)

Credit Hours: 3.00. An introduction to the politics and government in selected foreign countries. The course presents the tools and background needed to understand contemporary events in the world beyond the United States. Readings and discussions pay special attention to democratization and development.
University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 23200 - Contemporary Crises In International Relations

Credit Hours: 3.00. The focus of this course will be on major world crises, such as in the Middle East and Southern Africa, and ways in which these crises may be analyzed.
Credits: 3.00

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.
University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.
University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 43000 - Selected Problems In International Relations

Credit Hours: 3.00. An in-depth analysis of selected problems in international relations.
Credits: 3.00

POL 43300 - International Organization

Credit Hours: 3.00. A study of the structure and functions of the United Nations and associated agencies, with an emphasis on the role of this system in contemporary international relations.
Learning Outcomes: 1. Define and explain the

theoretical significance of certain international relations concepts used by scholars and policy-makers to analyze world affairs. These include but are not limited to: IGO, NGO, sovereignty, transnationalism, networks, humanitarian missions, G-77, international security, United Nations, peacekeeping, international institutions, realism, anarchy, constructivism, multilateralism, human rights. 2. Understand the history, structure and purposes of the United Nations in some detail. 3. Identify ways in which international politics may be reflected in, and shaped by, the politics within particular international organizations like the UN, both by observing UN politics and through an experiential in-class simulation. 4. Identify and evaluate ways the international system may be changing, and why. 5. Read course materials and reflect on their meaning, both in writing and discussion. 6. Choose an international ""problem,"" analyze ways to solve it, and present your ideas and analysis. Credits: 3.00

POL 43500 - International Law

Credit Hours: 3.00. A study of international legal theories, principles, and practices, with an emphasis on the role and utility of law in contemporary international relations.

Credits: 3.00

POL 43900 - United States Foreign Policy Making

Credit Hours: 3.00. An analysis of the decision-making process in United States foreign policy.

Credits: 3.00

SOC 33800 - Global Social Movements

Credit Hours: 3.00. Explores dynamics of social movements in the world; emphasizes movements in non-western world. Examines emergences of movements, mobilization, tactical actions and consequences, and formal and informal organizations within movements to understand how international, national and local structures affect people.

Credits: 3.00

WGSS 48300 - Feminisms In Global Perspective

Credit Hours: 3.00. Explores feminist struggles through the writings of First and Third World feminist scholars. Focuses on feminist projects within and against colonial, nationalist, religious and global contexts. Includes Third World feminist critiques of Western feminisms.

Credits: 3.00

EAPS 12000 - Introduction To Geography (UCC: STS)

Credit Hours: 3.00. Introduction to the major themes of modern geography, designed to enhance your spatial thinking skills, geographic literacy, and to help you understand the relevance of geographic concepts and how they relate to our changing world. This course will expand your awareness of global issues and provide you with tools to understand how the world around you changes at local, regional, and global scales.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Interpret geographic data and identify and understand spatial relationships linking humans and the environment. 2. Use geographic tools introduced in the course (e.g. Google Earth, MapMaster). 3. Understand how and why people organize themselves and move as a function of economic, social, historical and cultural forces. 4. Understand how weather and climate are linked to natural and human induced climate change, and links between the atmosphere and biosphere through water and nutrient cycles. 5. Understand how processes within and on the Earth are reflected in the landscape and how erosions, transport and deposition re-shape landscapes. 6. Understand the resource concept and be able to make connections between distribution of resources and balancing competing interests. Credits: 3.00

ECON 37000 - International Trade

Credit Hours: 3.00. Develops an understanding of the economics of globalization, including the movement of goods, people, capital, and ideas across countries. Using the tools of intermediate economic theory, we discuss the benefits and costs of globalization, the implications of globalization for wages, earnings, and national welfare, and their intersection with government policies.

Learning Outcomes: 1. Demonstrate a basic

understanding of Economics as applied to international trade, including the movement of goods, people, capital, and ideas across countries. 2. Understand the perspective provided by economic analysis regarding globalization of economies, including the implications for wages, earnings and national welfare. 3. Identify insights economics analysis provides concerning the benefits and costs of globalization and the implications for government policies. Credits: 3.00

AMST 10100 - America And The World (UCC: WC)

Credit Hours: 3.00. This course examines the evolution of American culture as the United States transitioned from a relatively isolated country at the end of the 19th century to an active shaper of a global community by the 21st century. We will examine ways in which American Culture shaped and was shaped by international relationships that transcend nation states. We will explore reactions to, and the results of, the spread of American culture both inside and outside the United States. By studying traditional cultural forms like art, music, design, literature, film, and technology the course will build a foundation from which to understand the configuration of American culture. Yet the course will also emphasize American culture expression, that in the forms of television, advertising, sport, cartoons, social media, video games, fashion, food, drugs, and automobiles, have transcended the geographical boundaries of the United States to engage in global interplays of material cultural exchange.

University Core Curriculum (UCC): (UCC: WC)
Learning Outcomes: 1. Identify the major themes and issues prompted by the term American Culture. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest American identities. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Recognize important issues that occur among peoples in an increasingly interconnected and interdependent world. 5. Develop the skills to analyze aspects of American culture using interdisciplinary source materials, research methodologies, and intellectual approaches. 6. Reach independent conclusions based on that analysis, and communicate them effectively verbally and in writing. Credits: 3.00

CHNS 28100 - Introduction To Chinese Food Culture

Credit Hours: 3.00. Selected topics on Chinese food history, production, preparation, festivals, as well as food in literature, film, business and folk beliefs. Discussion will also include civilization and food as cultural diplomacy. Lectures in English.

Learning Outcomes: 1. Knowledge of evolution of Chinese food history. 2. Learn main concepts of Chinese cooking and gastronomy. 3. Acquire appreciation of the important food-related works in Chinese literature. 4. Learn current trend of food culture in China. 5. Acquire appreciation and understand cultural and historical aspects on major Chinese teas, wines, and snacks in association with their respective geographic features; folk beliefs on medicinal usages of Chinese teas and wines; and the etiquette regarding tea art, wine drinking, drinker's wager game, and snack serving. Credits: 3.00

HEBR 38000 - Israel And The Modern World: Cinema, Literature, History And Politics (UCC: HUM)

Credit Hours: 3.00. Critical survey/exploration of major traits of Israeli culture through a variety of media: literature, film and music, in the larger context of Judaism, Zionism, as well as the creation of a new state and culture. Conducted in English; no knowledge of Hebrew is necessary.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Understand the depth of Modern Israel cultural, political and historical complexity. 2. Understand the richness of Israeli culture. 3. Understand Israeli political-social problems and its influence on world affairs. 4. Development of modern Israeli cinema and literature in reference to their historical and political groundings. 5. Mastery of major historical events, major films, major literary figures, and major social/political problems. Credits: 3.00

HIST 32105 - Spain: The First Global Empire, 1469-1713

Credit Hours: 3.00. This course examines the history of Spain's global empire from the unification of the kingdoms of Castile and Aragon to the War of the Spanish Succession. Topics include Spain's European possessions, overseas empire, ruling dynasty, society, and culture.

Learning Outcomes: 1. Assess the mechanisms that made the Spanish imperial system successful and, likewise, appraise its inherit weaknesses. 2. Distinguish the different stages in the development of the Spanish empire. 3. Judge the extent of the Spanish empire's impact on international politics and regional histories. 4. Evaluate the substantial cultural output of the period. Credits: 3.00

POL 43801 - International Human Rights

Credit Hours: 3.00. This course exposes students to the politics of international human rights through reading, lectures, film, discussion, and student research. Topics include the concept of human rights, international law related to the protection of human rights, empirical research on political and economic causes of human rights violations in individual countries, and research on prevention efforts and remedies for past violations. This political science course is also part of Purdue's Human Rights Minor program.

Learning Outcomes: 1. Comprehend the interrelated legal and philosophical concepts pertaining to human rights as understood in theory and practice. 2. Analyze particular historical and ongoing situations of human rights violations. 3. Evaluate causes of and solutions for international human rights violations. Credits: 3.00

POL 33500 - China And The Challenges Of Globalization (UCC: BSS)

Credit Hours: 3.00. Globalization is a very popular topic, resulting in a lot of loose and poorly thought-through talk and writing around the subject. The view taken in this course is that to understand current processes of globalization we need to examine it in less broad and amorphous ways by focusing on its specific manifestations. Thus, this course focuses on how China has managed the challenges of globalization. China is a particularly useful case study because it failed the challenges of globalization in the late 19th and early 20th centuries. For an ancient civilization such as China, this failure had tremendous impact on its national pride. The Chinese refer to this historical juncture as the "century of shame." Towards the end of the 20th century and the onset of the 21st, China faced again the challenges of globalization and has arisen to the tasks in a spectacular fashion, transforming a largely rural and agriculture economy into the world's second largest economic power. This amazing transformation is leading some to proclaim that the 21st century will belong to China!

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recall basic facts about China's geography, people, economy, and culture. 2. Identify key historical moments in China's engagement with globalization. 3. Demonstrate a clear grasp of the concept of globalization and contending definitions of it. 4. Apply knowledge to explain how China has dealt with challenges of globalization. Credits: 3.00

ENGL 34400 - Environmental Ethics, Policy, And Sustainability

Credit Hours: 3.00. Environmental Ethics, Policy and Sustainability is an interdisciplinary course designed to open new pathways into ethical and eco-critical inquiry in the Anthropocene age. The course analyzes disciplinary differences in approaching the ethical, the human, and environmental problems such as sustainability, development, biodiversity, global security, and climate change. Students will explore what it means to be ethical in and through an interrogation of our contemporary conceptions of what it means to be human. These interrogations in turn will prompt us to reconsider human creations such as knowledge, culture, and technology, which will push us to genuinely think how humans as a species situate their creations within the realm of what they call Nature. Students will be introduced to the history of environmental studies in the discipline, to the rise of what is now known as "postcolonial ecocriticism" to theoretical inquiry into modern technology, and to other recent developments in the fields of environmental studies.

Learning Outcomes: 1. Learn, describe, and relate key developments in environmental ethics. 2. Distinguish and translate different perspectives concerning ethical challenges. 3. Comprehend the efficacies of environmental positions, and learn to push the boundaries of different disciplinary approaches to environmental dilemmas. 4. Evaluate the limitations of positions and the complex frameworks surrounding ethical problems in order to offer more imaginative and resilient

solutions. Credits: 3.00

AD 38200 - A Global History Of Modern Art

Credit Hours: 3.00. A study of artistic circulations and cultural exchanges between Europe, Asia, Africa, and the Middle East since the 18th century, designed to examine the history of modern art in a global and critical way.

Learning Outcomes: 1. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 2. Compare and contrast them by perceiving and reflecting on their differences and similarities. 3. Interpret statements made about global artistic circulations by contextualizing and analyzing them and selecting artworks to illustrate their comments. 4. Apply knowledge acquired to analyze and write about artworks not studies in class. 5. Build knowledge and understanding of global art and develop analytical and written skills. Credits: 3.00

CMPL 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (LC 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities.

Learning Outcomes: 1. Trace how various cultures have shaped our contemporary models of higher education through written and oral assignments. 2. Describe how literary texts from various cultures provided the catalyst for major political and social events throughout history. 3. Identify the impact that literary endeavors have in the development of scientific, medical, corporate, environmental and political ideas. 4. Articulate clearly why a Liberal Arts education that focuses on languages and intercultural competency is both valuable and marketable in today's global context. Credits: 3.00

HIST 27800 - Money, Trade, And Power: The History Of Capitalism

Credit Hours: 3.00. This course examines the origins of capitalist institutions and their changes over time, including banks, joint-stock companies, and modern corporations -- all viewed with respect to their impact on industrialization, colonial expansion, business cycles, and the emergence of a global economy.

Learning Outcomes: 1. Explain the history of capitalism based on a combination of readings, course lectures, and course discussions. 2. Develop compelling historical arguments and demonstrate your understanding of the course material through examinations. 3. Write clear and concise analytical papers based on templates and feedback supplied by the professor. Credits: 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

LC 26700 - World Literature: From 1700 A D To The Present

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

Learning Outcomes: 1. Demonstrate knowledge

of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

LC 26600 - World Literature: From The Beginnings to 1700 A D

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

JPNS 48500 - Culinary Culture Of Japan

Credit Hours: 3.00. Advanced-level language and culture course about the food of Japan. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of Japan. Students will further develop their speaking, listening, reading and writing abilities in Japanese. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience. Conducted entirely in Japanese. Permission of department required.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Japanese about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance. 5. Examine the Japanese food heritage and impact in the United States. Credits: 3.00

KOR 38100 - Introduction To Korean Food Culture

Credit Hours: 3.00. This course is an advanced-level language and culture course that uses food as a lens for understanding the history, cultures, and society of Korea. It covers gastronomy, history, ideologies of modern Korean cuisine, and other aspects of daily life related to Korean traditions. Through this course, students will enhance their proficiency in speaking, listening, reading, and writing in Korean. They will explore a range of topics connected to the eating, making, and representation of food. The primary language of instruction will be Korean, with some supplementary reading material in English.

Learning Outcomes: 1. Interpret the culture, history, and ideologies of modern Korea through the lens of food. 2. Discuss diet, cooking, eating and food culture topics using a broad range of vocabulary and advanced grammatical structures. 3. Identify main cultural trends in food production and consumption. 4. Recognize main ingredient, food categories and their historical significance in Korean diets. Credits: 3.00

ITAL 38100 - Italian And Italian American Food Culture (UCC: HUM)

Credit Hours: 3.00. This course provides a comprehensive exploration of the rich and diverse food cultures of Italy and Italian American communities. Through a combination of historical, cultural, visual, and culinary perspectives, students will gain an in-depth understanding of the traditions, influences, and innovations that have shaped Italian and Italian-American cuisine.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify and articulate the historical and cultural significance of Italian and Italian American food traditions. 2. Summarize evidence, such as cookbooks, food memoirs, and other cultural artifacts, to understand the complexity of the human experience as expressed through food. 3. Interpret and critique culinary works, exploring the intersection of food, culture, and art. 4. Critically compare texts, recipes, and culinary practices within the cultural, intellectual, and historical contexts of Italy and the Italian American experience. 5. Reflect on the impact

of socio-cultural and historical factors on the development of Italian and Italian American cuisine. Credits: 3.00

C. Option 1 or 2 (3 credits)

1. Additional Course from Section B (3 credits)

2. International Experience (3 credits)

SCLA 49000 - Directed Reading

Credit Hours: 1.00 to 3.00. Designed for a student to work with an instructor on a topic of special interest.

Credits: 1.00 to 3.00

1. Additional Course from Section B (3 credits)

A. Required Courses (6 credits)

GSLA 10100 - Global Awareness

Credit Hours: 3.00. This course surveys a range of global issues to develop an understanding and appreciation of the major geographical and cultural areas of the world and the issues that both unite and divide such areas and their people. The course will examine key political, economic, social, historical and cultural patterns that define our modern world. It encourages students to raise 'big' questions about what processes and institutions helped constitute the modern moment, as well as about the dynamic interactions between our social world and the natural one. This is a gateway course for prospective Global Studies Majors and Minors.

Learning Outcomes: 1. Develop critical thinking. 2. Develop cultural competence. 3. Understand communication across cultures. 4. Develop ethical decision making. Credits: 3.00

GSLA 30100 - Theories Of Global Studies (UCC: HUM)

Credit Hours: 3.00. The course is designed to introduce students to the major schools of thought in Global and International Studies. It provides students with critical tools to explore the interconnectedness of our world from multiple perspectives. The course will expose students to a variety of international scholars who have understood Global Studies to be more than globalization. Instead, it introduces contested issues and contradictory positions concerning the meaning and significance of globalization.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Gain an understanding of key theoretical approaches to the question of globalization and its role in the discipline of Global Studies. 2. Learn how to evaluate competing and opposing analytical frameworks. 3. Apply a theoretical framework to a concrete problem or case. Credits: 3.00

Notes

Requirements for the Minor (15 credits)

A. Required Courses (6 credits)

GSLA 10100 - Global Awareness

Credit Hours: 3.00. This course surveys a range of global issues to develop an understanding and appreciation of the major geographical and cultural areas of the world and the issues that both unite and divide such areas and their people. The course will examine key political, economic, social, historical and cultural patterns that define our modern world. It encourages students to raise 'big' questions about what processes and institutions helped constitute the modern moment, as well as about the dynamic interactions between our social world and the natural one. B. Additional Courses - Choose Two (6 credits)

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 23000 - Gender Across Cultures (UCC: BSS)

Credit Hours: 3.00. Explores gender and sexuality from a cross-cultural perspective. Draws on case studies to explore the complexities of women's and men's lives. Examines gender hierarchies, gender in a globalized world, and the cultural construction of sexuality and gender.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain how culture influences the social constructions of sex, gender, and sexuality. 2. Recognize the diversity of genders and sexualities globally and over time. 3. Demonstrate understanding of how gender intersects with other social processes and institutions. 4. Identify the role of power structures, violence, and inequity in constructing and maintaining gender conventions. Credits: 3.00

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

COM 22400 - Communicating In The Global Workplace (UCC: BSS)

Credit Hours: 3.00. This introductory course explores communication issues that arise in the global workplace. The course develops an appreciation of the relationship among culture, communication, and ways of organizing and doing business.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Critically analyze communication issues arising in culturally diverse organizations in the global environment by utilizing conceptual and theoretical frameworks. 2. Develop intercultural competencies for better managing communication issues in the global workplace by developing practical strategies for contemporary organizations operating in multiple cultures. 3. Explain macro social trends that are impacting global organizations by illustrating current examples. Credits: 3.00

CMPL 26700 - World Literature: From 1700 A D To The Present (UCC: HUM)

Credit Hours: 3.00. (ENGL 26700) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

CMPL 26600 - World Literature: From The Beginnings To 1700 A D (UCC: HUM)

Credit Hours: 3.00. (ENGL 26600) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 36500 - Literature And Imperialism (UCC: HUM)

Credit Hours: 3.00. A study through cultural and theoretical works of the impact of imperialism on the ruling nations.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism/colonialism. 2. Develop a foundational knowledge of the historical contexts of and theoretical approaches to literary texts: gain an introductory knowledge of postcolonial literary theory. 3. Improve close reading and textual analysis skills. 4. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule.

Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

GER 28000 - German Special Topics

Credit Hours: 3.00. Selected topics on the civilization and culture of German speaking countries. Lectures and readings all in English. No knowledge of German necessary.

Learning Outcomes: 1. Students will explore in depth a particular aspect of life in German-speaking countries, leading to their increased understanding not only of those cultures, but also, by comparison, of their own culture. Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 34901 - The First World War (UCC: HUM)

Credit Hours: 3.00. This course is designed to explore the origins, course, meaning, and lasting legacy of World War I.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students are expected to understand the origins, course, and results of World War I. 2. Students are expected to understand the consequences that the war had on today's world. Credits: 3.00

HIST 35100 - The Second World War (UCC: HUM)

Credit Hours: 3.00. A study of the diplomacy, economic mobilization, and military operations of World War II, 1939-1945.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 38400 - History Of Aviation (UCC: HUM/STS)

Credit Hours: 3.00. A comparative history of human flight and air power (in Europe, the Americas, and Asia) from its origin in the early inventors and pilots, through its reflection in the popular media, to the global development of civil and military aviation.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 38700 - History Of The Space Age (UCC: HUM/STS)

Credit Hours: 3.00. The historical interaction between human values and space exploration in the contemporary age, focusing on issues of global interdependence. Topics include the international competition in rocketry, the Cold War in space, the moon missions, space disasters, and satellite technology.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HTM 37200 - Global Tourism Geography (UCC: BSS)

Credit Hours: 3.00. Introduction and analysis of specific world travel destinations, including the exploration of geographic features, customs and tradition, population centers, visitor attractions, political, religious, language and other cultural differences as these relate to the hospitality and travel industry. The course is designed to teach students specific geographic knowledge and develop a deeper understanding and empathy for cultural values and traditions that exist outside their own culture.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify and explain the interactions of tourism with the culture, economy, and environment of global destinations. 2. Identify international travel patterns and explain their impact on tourism management in promoting cultural understanding and global peace. 3. Locate various countries, major cities, natural wonders, historic sites and other tourism attractions, both man-made and natural. 4. Describe how the physical environment in specific geographic regions affects the ability of humans to live there and influences inbound and outbound travel. 5. Explain how political, economic, and environmental factors affect travel both positively and negatively. 6. Explain international travel patterns and identify the major travel generating and travel receiving areas. 7. Compare and contrast different cultures throughout the world with your home culture. Identify and explain key differences and their influence on travel. 8. Identify and explain the key elements of interdependence required

for the existence of modern day world travel.
Credits: 3.00

LC 37100 - Phonetics Of Foreign Languages

Credit Hours: 3.00. Introduction to articulatory phonetics for students of foreign languages. Mechanisms of production of speech sounds. Production and discrimination of sounds of other languages; contrast with English sounds; practice in pronunciation and phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be awarded for more than one of SLHS 30600 , LING 31500 , and LC 37100.

Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

POL 13000 - Introduction To International Relations (UCC: BSS)

Credit Hours: 3.00. An analysis of the fundamentals of international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 14100 - Governments Of The World (UCC: BSS)

Credit Hours: 3.00. An introduction to the politics and government in selected foreign countries. The course presents the tools and background needed to understand contemporary events in the world beyond the United States. Readings and discussions pay special attention to democratization and development.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 23200 - Contemporary Crises In International Relations

Credit Hours: 3.00. The focus of this course will be on major world crises, such as in the Middle East and Southern Africa, and ways in which these crises may be analyzed.

Credits: 3.00

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 43000 - Selected Problems In International Relations

Credit Hours: 3.00. An in-depth analysis of selected problems in international relations.

Credits: 3.00

POL 43300 - International Organization

Credit Hours: 3.00. A study of the structure and functions of the United Nations and associated agencies, with an emphasis on the role of this system in contemporary international relations.

Learning Outcomes: 1. Define and explain the theoretical significance of certain international relations concepts used by scholars and policy-makers to analyze world affairs. These include but are not limited to: IGO, NGO, sovereignty, transnationalism, networks, humanitarian missions, G-77, international security, United Nations, peacekeeping, international institutions, realism, anarchy, constructivism, multilateralism, human rights. 2. Understand the history, structure and purposes of the United Nations in some detail. 3. Identify ways in which international politics may be reflected in, and shaped by, the politics within particular international organizations like the UN, both by observing UN politics and through an

experiential in-class simulation. 4. Identify and evaluate ways the international system may be changing, and why. 5. Read course materials and reflect on their meaning, both in writing and discussion. 6. Choose an international ""problem,"" analyze ways to solve it, and present your ideas and analysis. Credits: 3.00

POL 43500 - International Law

Credit Hours: 3.00. A study of international legal theories, principles, and practices, with an emphasis on the role and utility of law in contemporary international relations.

Credits: 3.00

POL 43900 - United States Foreign Policy Making

Credit Hours: 3.00. An analysis of the decision-making process in United States foreign policy.

Credits: 3.00

SOC 33800 - Global Social Movements

Credit Hours: 3.00. Explores dynamics of social movements in the world; emphasizes movements in non-western world. Examines emergences of movements, mobilization, tactical actions and consequences, and formal and informal organizations within movements to understand how international, national and local structures affect people.

Credits: 3.00

WGSS 48300 - Feminisms In Global Perspective

Credit Hours: 3.00. Explores feminist struggles through the writings of First and Third World feminist scholars. Focuses on feminist projects within and against colonial, nationalist, religious and global contexts. Includes Third World feminist critiques of Western feminisms.

Credits: 3.00

EAPS 12000 - Introduction To Geography (UCC: STS)

Credit Hours: 3.00. Introduction to the major themes of modern geography, designed to enhance your spatial thinking skills, geographic literacy, and to help you understand the relevance of geographic concepts and how they relate to our changing world. This course will expand your awareness of global issues and provide you with tools to understand how the world around you changes at local, regional, and global scales.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Interpret geographic data and identify and understand spatial relationships linking humans and the environment. 2. Use geographic tools introduced in the course (e.g. Google Earth, MapMaster). 3. Understand how and why people organize themselves and move as a function of economic, social, historical and cultural forces. 4. Understand how weather and climate are linked to natural and human induced climate change, and links between the atmosphere and biosphere through water and nutrient cycles. 5. Understand how processes within and on the Earth are reflected in the landscape and how erosions, transport and deposition re-shape landscapes. 6. Understand the resource concept and be able to make connections between distribution of resources and balancing competing interests. Credits: 3.00

ECON 37000 - International Trade

Credit Hours: 3.00. Develops an understanding of the economics of globalization, including the movement of goods, people, capital, and ideas across countries. Using the tools of intermediate economic theory, we discuss the benefits and costs of globalization, the implications of globalization for wages, earnings, and national welfare, and their intersection with government policies.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade, including the movement of goods, people, capital, and ideas across countries. 2. Understand the perspective provided by economic analysis regarding globalization of economies, including the implications for wages, earnings and national welfare. 3. Identify insights economics analysis provides concerning the benefits and costs of globalization and the implications for government policies. Credits: 3.00

AMST 10100 - America And The World (UCC: WC)

Credit Hours: 3.00. This course examines the evolution of

American culture as the United States transitioned from a relatively isolated country at the end of the 19th century to an active shaper of a global community by the 21st century. We will examine ways in which American Culture shaped and was shaped by international relationships that transcend nation states. We will explore reactions to, and the results of, the spread of American culture both inside and outside the United States. By studying traditional cultural forms like art, music, design, literature, film, and technology the course will build a foundation from which to understand the configuration of American culture. Yet the course will also emphasize American culture expression, that in the forms of television, advertising, sport, cartoons, social media, video games, fashion, food, drugs, and automobiles, have transcended the geographical boundaries of the United States to engage in global interplays of material cultural exchange.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Identify the major themes and issues prompted by the term American Culture. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest American identities. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Recognize important issues that occur among peoples in an increasingly interconnected and interdependent world. 5. Develop the skills to analyze aspects of American culture using interdisciplinary source materials, research methodologies, and intellectual approaches. 6. Reach independent conclusions based on that analysis, and communicate them effectively verbally and in writing. Credits: 3.00

CHNS 28100 - Introduction To Chinese Food Culture

Credit Hours: 3.00. Selected topics on Chinese food history, production, preparation, festivals, as well as food in literature, film, business and folk beliefs. Discussion will also include civilization and food as cultural diplomacy. Lectures in English.

Learning Outcomes: 1. Knowledge of evolution of Chinese food history. 2. Learn main concepts of Chinese cooking and gastronomy. 3. Acquire appreciation of the important food-related works in Chinese literature. 4. Learn current trend of food culture in China. 5. Acquire appreciation and understand cultural and historical aspects on major Chinese teas, wines, and snacks in association with their respective geographic features; folk beliefs on medicinal usages of Chinese teas and wines; and the etiquette regarding tea art, wine drinking, drinker's wager game, and snack serving. Credits: 3.00

HEBR 38000 - Israel And The Modern World: Cinema, Literature, History And Politics (UCC: HUM)

Credit Hours: 3.00. Critical survey/exploration of major traits of Israeli culture through a variety of media: literature, film and music, in the larger context of Judaism, Zionism, as well as the creation of a new state and culture. Conducted in English; no knowledge of Hebrew is necessary.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Understand the depth of Modern Israel cultural, political and historical complexity. 2. Understand the richness of Israeli culture. 3. Understand Israeli political-social problems and its influence on world affairs. 4. Development of modern Israeli cinema and literature in reference to their historical and political groundings. 5. Mastery of major historical events, major films, major literary figures, and major social/political problems. Credits: 3.00

HIST 32105 - Spain: The First Global Empire, 1469-1713

Credit Hours: 3.00. This course examines the history of Spain's global empire from the unification of the kingdoms of Castile and Aragon to the War of the Spanish Succession. Topics include Spain's European possessions, overseas empire, ruling dynasty, society, and culture.

Learning Outcomes: 1. Assess the mechanisms that made the Spanish imperial system successful and, likewise, appraise its inherit weaknesses. 2. Distinguish the different stages in the development of the Spanish empire. 3. Judge the extent of the Spanish empire's impact on international politics and regional histories. 4. Evaluate the substantial cultural output of the period. Credits: 3.00

POL 43801 - International Human Rights

Credit Hours: 3.00. This course exposes students to the politics of international human rights through reading, lectures, film, discussion, and student research. Topics include the concept of human rights, international law related to the protection of human rights, empirical research on political and economic causes of human rights violations in individual countries, and research on prevention efforts and remedies for past violations. This political science course is also part of Purdue's Human Rights Minor program.

Learning Outcomes: 1. Comprehend the interrelated legal and philosophical concepts pertaining to human rights as understood in theory and practice. 2. Analyze particular historical and ongoing situations of human rights violations. 3. Evaluate causes of and solutions for international human rights violations. Credits: 3.00

POL 33500 - China And The Challenges Of Globalization (UCC: BSS)

Credit Hours: 3.00. Globalization is a very popular topic, resulting in a lot of loose and poorly thought-through talk and writing around the subject. The view taken in this course is that to understand current processes of globalization we need to examine it in less broad and amorphous ways by focusing on its specific manifestations. Thus, this course focuses on how China has managed the challenges of globalization. China is a particularly useful case study because it failed the challenges of globalization in the late 19th and early 20th centuries. For an ancient civilization such as China, this failure had tremendous impact on its national pride. The Chinese refer to this historical juncture as the "century of shame." Towards the end of the 20th century and the onset of the 21st, China faced again the challenges of globalization and has arisen to the tasks in a spectacular fashion, transforming a largely rural and agriculture economy into the world's second largest economic power. This amazing transformation is leading some to proclaim that the 21st century will belong to China!

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Recall basic facts about China's geography, people, economy, and culture. 2. Identify key historical moments in China's engagement with globalization. 3. Demonstrate a clear grasp of the concept of globalization and contending definitions of it. 4. Apply knowledge to explain how China has dealt with challenges of globalization. Credits: 3.00

ENGL 34400 - Environmental Ethics, Policy, And Sustainability

Credit Hours: 3.00. Environmental Ethics, Policy and Sustainability is an interdisciplinary course designed to open new pathways into ethical and eco-critical inquiry in the Anthropocene age. The course analyzes disciplinary differences in approaching the ethical, the human, and environmental problems such as sustainability, development, biodiversity, global security, and climate change. Students will explore what it means to be ethical in and through an interrogation of our contemporary conceptions of what it means to be human. These interrogations in turn will prompt us to reconsider human creations such as knowledge, culture, and technology, which will push us to genuinely think how humans as a species situate their creations within the realm of what they call Nature. Students will be introduced to the history of environmental studies in the discipline, to the rise of what is now known as "postcolonial ecocriticism" to theoretical inquiry into modern technology, and to other recent developments in the fields of environmental studies.

Learning Outcomes: 1. Learn, describe, and relate key developments in environmental ethics. 2. Distinguish and translate different perspectives concerning ethical challenges. 3. Comprehend the efficacies of environmental positions, and learn to push the boundaries of different disciplinary approaches to environmental dilemmas. 4. Evaluate the limitations of positions and the complex frameworks surrounding ethical problems in order to offer more imaginative and resilient solutions. Credits: 3.00

AD 38200 - A Global History Of Modern Art

Credit Hours: 3.00. A study of artistic circulations and cultural exchanges between Europe, Asia, Africa, and the Middle East since the 18th century, designed to examine the history of modern art in a global and critical way.

Learning Outcomes: 1. Identify and explain historical events, social forces, and cultural trends that have had an influence on these artworks, artists, and movements. 2. Compare and contrast them by perceiving and reflecting on their differences and similarities. 3. Interpret statements made about global artistic

circulations by contextualizing and analyzing them and selecting artworks to illustrate their comments. 4. Apply knowledge acquired to analyze and write about artworks not studies in class. 5. Build knowledge and understanding of global art and develop analytical and written skills. Credits: 3.00

CMPL 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (LC 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities.

Learning Outcomes: 1. Trace how various cultures have shaped our contemporary models of higher education through written and oral assignments. 2. Describe how literary texts from various cultures provided the catalyst for major political and social events throughout history. 3. Identify the impact that literary endeavors have in the development of scientific, medical, corporate, environmental and political ideas. 4. Articulate clearly why a Liberal Arts education that focuses on languages and intercultural competency is both valuable and marketable in today's global context. Credits: 3.00

HIST 27800 - Money, Trade, And Power: The History Of Capitalism

Credit Hours: 3.00. This course examines the origins of capitalist institutions and their changes over time, including banks, joint-stock companies, and modern corporations -- all viewed with respect to their impact on industrialization, colonial expansion, business cycles, and the emergence of a global economy.

Learning Outcomes: 1. Explain the history of capitalism based on a combination of readings, course lectures, and course discussions. 2. Develop compelling historical arguments and demonstrate your understanding of the course material through examinations. 3. Write clear and concise analytical papers based on templates and feedback supplied by the professor. Credits: 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

LC 26700 - World Literature: From 1700 A D To The Present

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

LC 26600 - World Literature: From The Beginnings to 1700 A D

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

Learning Outcomes: 1. Demonstrate knowledge

of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

JPNS 48500 - Culinary Culture Of Japan

Credit Hours: 3.00. Advanced-level language and culture course about the food of Japan. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of Japan. Students will further develop their speaking, listening, reading and writing abilities in Japanese. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience. Conducted entirely in Japanese. Permission of department required.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Japanese about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance. 5. Examine the Japanese food heritage and impact in the United States. Credits: 3.00

KOR 38100 - Introduction To Korean Food Culture

Credit Hours: 3.00. This course is an advanced-level language and culture course that uses food as a lens for understanding the history, cultures, and society of Korea. It covers gastronomy, history, ideologies of modern Korean cuisine, and other aspects of daily life related to Korean traditions. Through this course, students will enhance their proficiency in speaking, listening, reading, and writing in Korean. They will explore a range of topics connected to the eating, making, and representation of food. The primary language of instruction will be Korean, with some supplementary reading material in English.

Learning Outcomes: 1. Interpret the culture, history, and ideologies of modern Korea through the lens of food. 2. Discuss diet, cooking, eating and food culture topics using a broad range of vocabulary and advanced grammatical structures. 3. Identify main cultural trends in food production and consumption. 4. Recognize main ingredient, food categories and their historical significance in Korean diets. Credits: 3.00

ITAL 38100 - Italian And Italian American Food Culture (UCC: HUM)

Credit Hours: 3.00. This course provides a comprehensive exploration of the rich and diverse food cultures of Italy and Italian American communities. Through a combination of historical, cultural, visual, and culinary perspectives, students will gain an in-depth understanding of the traditions, influences, and innovations that have shaped Italian and Italian-American cuisine.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify and articulate the historical and cultural significance of Italian and Italian American food traditions. 2. Summarize evidence, such as cookbooks, food memoirs, and other cultural artifacts, to understand the complexity of the human experience as expressed through food. 3. Interpret and critique culinary works, exploring the intersection of food, culture, and art. 4. Critically compare texts, recipes, and culinary practices within the cultural, intellectual, and historical contexts of Italy and the Italian American experience. 5. Reflect on the impact of socio-cultural and historical factors on the development of Italian and Italian American cuisine. Credits: 3.00

C. Option 1 or 2 (3 credits)

1. Additional Course from Section B (3 credits)

2. International Experience (3 credits)

SCLA 49000 - Directed Reading

Credit Hours: 1.00 to 3.00. Designed for a student to work with

an instructor on a topic of special interest.

Credits: 1.00 to 3.00

1. Additional Course from Section B (3 credits)

A. Required Courses (6 credits)

GSLA 10100 - Global Awareness

Credit Hours: 3.00. This course surveys a range of global issues to develop an understanding and appreciation of the major geographical and cultural areas of the world and the issues that both unite and divide such areas and their people. The course will examine key political, economic, social, historical and cultural patterns that define our modern world. It encourages students to raise 'big' questions about what processes and institutions helped constitute the modern moment, as well as about the dynamic interactions between our social world and the natural one. This is a gateway course for prospective Global Studies Majors and Minors.

Learning Outcomes: 1. Develop critical thinking. 2. Develop cultural competence. 3. Understand communication across cultures. 4. Develop ethical decision making. Credits: 3.00

GSLA 30100 - Theories Of Global Studies (UCC: HUM)

Credit Hours: 3.00. The course is designed to introduce students to the major schools of thought in Global and International Studies. It provides students with critical tools to explore the interconnectedness of our world from multiple perspectives. The course will expose students to a variety of international scholars who have understood Global Studies to be more than globalization. Instead, it introduces contested issues and contradictory positions concerning the meaning and significance of globalization.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Gain an understanding of key theoretical approaches to the question of globalization and its role in the discipline of Global Studies. 2. Learn how to evaluate competing and opposing analytical frameworks. 3. Apply a theoretical framework to a concrete problem or case. Credits: 3.00

Global Studies Minor

Requirements for the Minor (11-13 credits)

A. Diversity, Equity, and Social Justice in Education (3 credits)

EDCI 58500 - Multicultural Education

Credit Hours: 3.00. The course aims to develop understanding of multicultural education as an on-going reform process that addresses social justice issues through an examination of race, class, gender, ethnicity, language, sexual orientation, etc.

Learning Outcomes: 1. Develop awareness of multicultural issues in education and other fields. 2. Increase knowledge of multicultural education and applications of multicultural theories to education and other disciplines. 3. Develop skills in meeting the needs of diverse populations. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local

organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

B. Multidisciplinary Course (3 credits)

AGEC 25000 - Economic Geography Of World Food And Resources (UCC: BSS)

Credit Hours: 3.00. A study of the important issues and economic decisions about worldwide resource use for food and fiber production as influenced by geography, climate, history, social institutions, national self-interest, and the environment.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGR 20100 - Communicating Across Culture (UCC: BSS/IL)

Credit Hours: 3.00. This course will provide students with an opportunity to understand their place in a multicultural, multiethnic, multinational country, the United States. It is designed to provide an academic overview of the field of multicultural education as it evolved to this day. The course will offer an introductory overview of the many differences that exist within all human beings. Because the diversity among individuals is endless, we cannot study all differences, but will study a sampling such as race, ethnicity, gender identity, age, social class, disability, learning styles, and religion/spiritual orientation. Issues of poverty, language, and social justice may also be examined in relationship to the above major areas of emphasis.

University Core Curriculum (UCC): (UCC: BSS/IL) Credits: 3.00

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

EDCI 35002 - International Comparative Education

Credit Hours: 3.00. In this course, students will explore the education system in an international context and compare particular aspects of the system (e.g., equity, funding, language, accessibility) to their own experiences with, and knowledge of, education in the United States. Students will consider the range of schools and policies in both countries in terms of issues of social justice (e.g., redistribution, recognition, representation).

Learning Outcomes: 1. Experience, first-hand, the educational system of Tanzania and read accounts of this system from a range of perspectives which draw attention to its strengths and challenges. 2. Investigate issues of social justice (e.g., redistribution, recognition, representation) in education systems. Credits: 3.00

C. International/Globalization Emphasis (4-7 credits)

1. Study Abroad* (2-5 Weeks)

2. Additional Courses (4-7 credits)

EDCI 52600 - Language Study For Educators

Credit Hours: 3.00. (ENGL 52900) Covers foundational knowledge in language and linguistics for teachers and educational researchers. Topics include structure and functions of language, language acquisition and development, language diversity, classroom discourse, language and media, and literacy-language arts curriculum. A foundation for work in Literacy and Language Education.

Learning Outcomes: 1. Understand the concepts and theories of how second (and more) languages are acquired and processed through an examination of current research into second language acquisition. 2. Examine this research to develop a greater understanding of the issues and challenges faced by students as they learn English as a New Language, and how teachers can develop practice which address these needs. Credits: 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDCI 35001 - Tanzania Seminar

Credit Hours: 2.00. In this course, we will prepare for the Maymester in Tanzania study abroad program in a variety of ways, including investigating the history and culture of Tanzania, beginning to learn Kiswahili, conceptualizing service learning experiences, and collaborating on a plan for program logistics.

Learning Outcomes: 1. Critically explore common conceptions of Africa. 2. Investigate the history and culture of Tanzania. 3. Describe the educational system of Tanzania. 4. Read, write, and speak basic phrases and sentences in Kiswahili. 5. Conceptualize and engage in service learning experiences. Credits: 2.00

EDCI 35004 - History, Culture, And Language In Tanzania

Credit Hours: 3.00. This course is a component of the Maymester in Tanzania study abroad program. In this course, students will study the history, culture, and language of Tanzania through experiences in local schools and the community, supplemented by course readings, assignments, discussions, and service learning projects.

Learning Outcomes: 1. Explore the history of Tanzania, including its identification as the cradle of mankind, colonization, independence, and the impacts of socialism and capitalism. 2. Engage in cultural and linguistic immersion in a rural Tanzanian village and schools. 3. Experience, first-hand, the educational system of Tanzania and read accounts of this system from a range of perspectives which draw attention to its strengths and challenges. 4. Collaborate with Tanzanian residents on

developing and implementing service learning projects in the community. Credits: 3.00

EDCI 32650 - Introduction To Linguistics And Language Acquisition In Education

Credit Hours: 3.00. This course addresses foundational knowledge in language and linguistics for pre-service teachers and educational researchers. The purpose of this course is to survey linguistics, the study of the science of language. In this course, we will focus on phonetics, phonology, morphology, syntax, and semantics. These topics will be discussed in terms of theory, as well as in the context of ESL classroom instruction, materials development, and assessment.

Learning Outcomes: 1. Understand and describe core concepts and terminology of descriptive linguistics, including phonetics, phonology, morphology, syntax, semantics, and pragmatics. 2. Apply course concepts to analyze linguistic data and gain a fuller understanding of the systematic nature of language. 3. Apply descriptive linguistic concepts to instruction to support the four domains of speaking, listening, reading, and writing. 4. Research and describe the biological, social, and cultural dimensions of linguistics, including pragmatics, discourse, dialects, bilingualism, and language in education. 5. Discuss the role of home language and culture in ELL instruction. 6. Apply an understanding of the role of culture and family background in the student's experience of the classroom. Credits: 3.00

D. Global Studies Seminar (1 credit)

EDPS 45200 - Global Studies Seminar

Credit Hours: 1.00. (EDCI 45200) The course builds on students' international cross-cultural experiences, particularly Study Abroad. The course is required for those wishing to complete the Global Studies minor in the College of Education.

Learning Outcomes: 1. Discuss economic, social, and cultural diversity within a global context. 2. Describe the cultural, social and historical dynamics that influence individuals and groups. 3. Explain the perspective of the culture of another country through the study of world languages, arts, spiritual traditions, mythology/literature, and/or through study abroad. 4. Identify examples of how social, behavioral, or historical knowledge informs and can shape personal, civic, ethical, or global decisions and responsibilities. 5. Clearly communicate a central message with the supporting materials. Credits: 1.00

EDCI 45200 - Global Studies Seminar

Credit Hours: 1.00. (EDPS 45200) The course builds on students' international cross-cultural experiences, particularly Study Abroad. The course is required for those wishing to complete the Global Studies minor in the College of Education.

Learning Outcomes: 1. Discuss economic, social, and cultural diversity within a global context. 2. Describe the cultural, social and historical dynamics that influence individuals and groups. 3. Explain the perspective of the culture of another country through the study of world languages, arts, spiritual traditions, mythology/literature, and/or through study abroad. 4. Identify examples of how social, behavioral, or historical knowledge informs and can shape personal, civic, ethical, or global decisions and responsibilities. 5. Clearly communicate a central message with the supporting materials. Credits: 1.00

History of Science Technology and Medicine Minor

About the Minor

Minor Requirements (15 credits)

History of Science, Technology, and Medicine Courses - Choose 4: (12 credits)

HIST 38400 - History Of Aviation (UCC: HUM/STS)

Credit Hours: 3.00. A comparative history of human flight and air power (in Europe, the Americas, and Asia) from its origin in the early inventors and pilots, through its reflection in the popular media, to the global development of civil and military aviation.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 38700 - History Of The Space Age (UCC: HUM/STS)

Credit Hours: 3.00. The historical interaction between human values and space exploration in the contemporary age, focusing on issues of global interdependence. Topics include the international competition in rocketry, the Cold War in space, the moon missions, space disasters, and satellite technology.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 39400 - Environmental History Of The United States (UCC: HUM)

Credit Hours: 3.00. This is a mid-level survey designed to provide students of environmental science with historical background and students of history with the unique perspective of environmental history.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 49200 - Seminar In Historical Topics

Credit Hours: 3.00. Course description will vary according to specific topic proposed to study.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will develop the ability to distinguish between primary and secondary sources. 3. Students will analyze arguments and interpretations, and recognize interpretive conflicts. 4. Students will strengthen skills in oral communication. 5. Students will improve their information literacy and engage in creative and critical thinking. 6. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 36305 - The History Of Medicine And Public Health (UCC: HUM/STS)

Credit Hours: 3.00. The purpose of this course is to provide students with a historical understanding of the role public health and medicine has played in American history during the 19th and 20th centuries. How does the health status of Americans reflect and shape the U.S.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Understand how and why public health has evolved over the course of the past two centuries. 2. Identify and analyze how scientific beliefs and social anxieties contribute to policies and practices of medicine and health. 3. Develop critical thinking skill to assess the impact of public health reforms on everyday life. Credits: 3.00

HIST 47005 - Women And Health In America (UCC: HUM)

Credit Hours: 3.00. This course examines the historical relationship between women and health by exploring a number of critical themes that have affected women's health in the United States.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze the ways in which societal assumptions about gender, health and sickness, along with race and class, help to determine the course of treatment. 2. Analyze the role of primary sources in contributing to our understanding of women's health. Credits: 3.00

HIST 31405 - Science, Technology, Engineering And Mathematics (STEM) And Gender (UCC: HUM/STS)

Credit Hours: 3.00. Scientific and technological innovation has been a cornerstone of American identity. How science and

technology matters to gender, and gender matters to science and technology, will be explored through studying amateur and professional scientists and engineers, industrialization, education, sexual division of labor, and home and work spaces in twentieth-century America. Examining technological, scientific, and engineering innovation through the lens of gender reveals changing relationships between men and women in modern America.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to gender. 2. Understand and recognize how assumptions about gender may influence the practice of science and development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 48005 - Madness And The Asylum In The United States

Credit Hours: 3.00. This course explores how Americans have understood insanity and asylums. We analyze historical concepts of insanity, the evolution of asylums, how psychiatrists have debated therapeutics, and how ordinary people have experienced treatments and diagnoses.

Learning Outcomes: 1. Gain knowledge of some of the major debates in the history of insanity. 2. Be able to identify a research question, conduct primary source research, and form a thesis. 3. Use a variety of databases to assemble a range of primary sources. 4. Learn to interrogate and compare primary sources for viewpoint and implicit value system. 5. Gain knowledge of some of the major theoretical approaches and frameworks used for studying the history of insanity. 6. Be able to discuss ideas and research in formal writing and in seminar discussion. Credits: 3.00

HIST 35205 - Death, Disease And Medicine In Twentieth Century American History (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of disease, dying, and medicine in the United States in the 20th century.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Identify and explain the relationship between science and culture and interdisciplinarity. 2. Analyze texts and cultural artifacts about medicine. 3. Identify medical practice and how it is informed by context and culture. Credits: 3.00

HIST 30605 - Technology And War In U.S. History (UCC: HUM/STS)

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through the present day.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain understanding about the importance of technologies to the development of techniques of war in the context of U.S. history. 2. Contemplate the role of technology in shaping society and of society in shaping technology. 3. Consider ethical questions about the use and effects of technologies in war. 4. Sharpen critical analytical, reading, and writing skills. 5. Sharpen their ability to use primary and secondary source materials as evidence in persuasive written argument. 6. Improve ability to work as a team. 7. Practice public speaking skills. Credits: 3.00

HIST 33205 - The Nuclear Age (UCC: HUM/STS)

Credit Hours: 3.00. Once seen as a revolutionary and exceptional, nuclear technologies have become central to many aspects of life in the U.S. This course uses the history of nuclear technologies to trace how American society has grappled with technological change.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Write a persuasive essay evaluating nuclear energy as a source of power, using primary and secondary historical sources to support your claims. 2.

Create a compelling argument about how societies cope with technological change, using the history of nuclear technologies as a central example. 3. Summarize the importance of nuclear technologies in US history, drawing on primary and secondary historical sources introduced in the course. Credits: 3.00

HIST 30805 - History Of Life Sciences

Credit Hours: 3.00. This course will examine the development of life sciences from 1750 to the present, introducing students to critical problems related to biology and society through the study of primary and secondary sources. The "life sciences" include all the sciences that deal with life as an organic entity. A prominent theme in this historical treatment is the impact of social and political ideas on the life sciences. Topics will include theories of life, the origin of life, taxonomy and classification, theories of development, natural selection, genetics, eugenics, science and religion, the evolutionary synthesis, biodiversity, ecology and environmentalism, sociobiology, the discovery of DNA, cognition and the brain, and gender in science. Students will develop crucial skills in the interpretation of primary and secondary sources, research, analysis, and presentation.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical material. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 30905 - History Of Environmental Science

Credit Hours: 3.00. This course introduces students to various approaches to environmental science through time. It considers critical problems related to the environment and society. The "environmental sciences" include all the sciences that deal with the Earth's physical and organic environments.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical materials. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 31305 - Medical Devices And Innovation (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of material cultures of health care in the United States. The class will analyze how technological innovation has become central to medicine over the last two centuries and how we are coping with the consequences, both intended and unintended, of our reliance upon such medical devices. We will look at identities associated with medical devices, the ways in which disease is constructed, how technologies contribute to the naming of maladies, and implications for emergent bioengineering and biotechnologies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to medicine. 2. Understand and recognize how assumptions about health influence the practice of science and development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 49400 - Science And Society In American Civilization

Credit Hours: 3.00. This course examines the development of science in the United States from colonial times to the present. Emphasis in the earlier periods is placed on comparison and contrast of the American scene with that of Europe. Subsequent treatment deals with industrialization, and maturation of the American scientific community, and the increasing social effects of science. Among those considered are the forces making for urbanization, for greater interdependence among science, industry and government, and for repercussions in intellectual affairs.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and

society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 30701 - History Of Artificial Intelligence: Minds And Machines

Credit Hours: 3.00. This course examines the long history of efforts in automating human cognition. Historically, the attempts to automate human cognitive functions - from the mere reckoning of numbers to complex decision-making have been entangled with heated debates about what counts as good, proper, and desirable thinking; whose thinking machines should emulate; and whether the thinking of some humans is inferior to that of machines. In this course, we will examine how the invention of calculating machines - analogue and then digital - has developed in tandem with philosophical and scientific theories of human thinking and intelligence. In their turn, the latter developed as a response to changing social, political, and economic currents.

Learning Outcomes: 1. Critique the epistemological foundations and ethical implications of past and present approaches to the automation of human cognition. 2. Use primary sources to make arguments about the role of social, political, economic, and cultural currents that have historically provided the impulses for research and development in the automation of human cognition. 3. Assess historical scholarly arguments about social, economic, and political power asymmetries surrounding artificial intelligences. 4. Create websites to use text, imagery, and video content and effectively communicate how social factors have historically shaped the development of artificial intelligence. Credits: 3.00

HIST 36105 - History Of Science, Technology, And Environment In Pre-Modern East Asia

Credit Hours: 3.00. This course explores developments in scientific, technological, and ecological history specifically in Pre-modern East Asia. In this class, we will read basic theories and methods in the history of science and technology, as well as basic debates and questions that challenge scholars studying the history of science, technology, and the environment in a non-western pre-modern context. We will explore how society, culture, and politics affect knowledge production and people's engagement with nature, and how these interactions, in turn, shaped society, culture, and politics. All readings are in English. No prior knowledge of East Asia is necessary.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society in pre-modern East Asia. 2. Discuss examples of scientific and technological changes and the costs and benefits for individuals and specific societies. 3. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 4. Investigate the diversity of human experience in pre-modern East Asia, explain how social factors such as ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, have shaped the development or application of science and technology, including tools and strategies by which societies promote, constrain, or otherwise influence scientific and technical innovation. 5. Identify and explain the major themes of the history of science, technology, and environment, write about the role of science in society, and describe ethical implications of technological and scientific developments. Credits: 3.00

HIST 30705 - History Of Data: How Data Became Big

Credit Hours: 3.00. This course offers a long history of Big Data. The first module focuses on how states collected data from the 16th to 19th centuries. Here we will focus on mortality bills, census, statistics, and accounting tables. In the second model, we will pay special attention to data collection and privacy in the 20th century. In the third module, students will explore how previous developments in data collection were applied to the new developments in analog and digital computing. The final weeks of the course will focus on present-day artificial intelligence, big data, their technical limitations, and the ways they often amplify, exploit, and contribute to a wide array of social problems.

Learning Outcomes: 1. Understand a variety of historical contexts that have shaped how we use, collect, and analyze data in the 21st century. 2. Assess historical arguments about the place of data in the growth of state bureaucracies, colonialism, eugenics, national security, warfare, and scientific research made in scholarly secondary sources. 3. Use primary sources to make arguments about the historical contingency of the ways practitioners have been using data to solve state problems. 4. Develop critical thinking about data-empowered algorithms and envision a human-centered and ethical way of creating and implementing data technologies. Credits: 3.00

HIST 30902 - History Of Biotechnology

Credit Hours: 3.00. This class examines historical intersections between engineering and biology in the Western world. The course begins by considering several possible meanings of "biotechnology." It examines how and why different biotechnologies from the life sciences, biology, and medicine have arisen in specific historical contexts, changed over time, and affected society from the late 19th century to the present. We will study vaccines and beer-making in the 19th century, cell culture, birth control pills, and DNA sequencing in the 20th century, and 21st-century genome editing and synthetic biology, for example. Overall, this course argues that biotechnologies have always forced human beings to consider whether living and non-living entities are made up of the same fundamental "stuff," the implications of manipulating living things, and the nature of life itself.

Learning Outcomes: 1. Identify and describe examples of biotechnologies. 2. Describe the role of biotechnology in history and its relevance for society today. 3. Explain major themes in the history of biotechnology, such as how biotechnologies have changed through time and impacted society by way of their interactions with (for example) ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class. 4. Investigate the history and social impacts of a biotechnology of their choosing that has not been discussed in depth in this class. 5. Explain how and why this biotechnology arose in a specific historical context, changed over time, and impacted (or impacts) society (using historical methods). Credits: 3.00

HIST 28400 - The Computer Age From Babbage To The Blockchain

Credit Hours: 3.00. In this course we will explore the history of computing-from the pre-electronic days through the computer's ascent in the twentieth century to the various electronic computing and communications technologies that surround us today. This course will investigate why there was a desire to create computing machines in the first place, the economic and political arrangements that brought computers into existence, the debates over what computers could (and should) be used for, the development of the IT profession, and the gradual shift from computers being room-sized specialty machines to everyday objects that people carry around in their pockets.

Learning Outcomes: 1. Identify social, economic, political, and historic factors that have shaped the development and application of computer technology. 2. Describe the history of computing and its relevance for the world today. 3. Locate primary source materials, critically analyze those sources by considering their context and the reasons for their creation. 4. Examine work produced by, and arguments made by, historians. 5. Discuss the role that computers play in everyday life with an expansive view of the wide breadth of computerized systems that surround us. Credits: 3.00

HIST 30801 - American Eugenics

Credit Hours: 3.00. This course explores the pre-history and history of American eugenics, as well as its afterlives. It analyzes how Americans have used scientific ideas to grapple with questions of heredity and human worth from the Early Republic to the present. We will explore the social and political uses of phrenology, physiognomy, and eugenics, and consider how those scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering.

Learning Outcomes: 1. Read and discuss primary sources. 2. Interpret how scientific knowledge has been applied in human lives and society from the 18th century to the present. 3. Analyze major themes in the history of eugenics. 4. Investigate how and why specific ideas about human value and genetic worth arise in specific historical contexts. 5. Critique the extent to which scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering. Credits: 3.00

HIST 36405 - Patient Voices In The History Of Medicine

Credit Hours: 3.00. This course examines the history of medicine in the United States from the early twentieth century to the present by starting with patient voices, which provide a glimpse into the experience of illness. Using patient reflections as the primary lens through which to examine the history of medicine, topics covered include historical changes and historical decision making related to the diagnostic process, therapeutic interventions, access to care, and medical institutions. The course also examines how assumptions about gender, race, and class have shaped differential health outcomes such as mortality rates, time to diagnosis, and determination of treatment approach and efficacy.

Learning Outcomes: 1. Identify in written and oral communication key features of the U.S. medical system by examining how patient experiences have changed over time and in different contexts. 2. Analyze how assumptions about race, gender, and class can affect the experience of illness, access to care, and health outcomes. 3. Engage with primary sources such as journal entries, memoirs, newspaper articles, artwork, and audiovisual material to identify patient perspectives and place them in historical context, and to illustrate how social, cultural, political, and economic factors have shaped the practice of medicine. 4. Reflect on the ethical issues that have arisen in medicine using patient voices as a lens to examine the impact of technology on the illness experience. 5. Examine patient experiences to make an argument about the history of medical practice, such as the diagnostic process or therapeutic approaches, using historical methods. Credits: 3.00

History Course (3 credits)

Notes

Program Learning Outcomes

Horticulture Minor

Requirements for the Minor (16 credits)

Required Courses (7 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

Selective Courses (9 credits)

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 30600 - History Of Horticulture (UCC: STS)

Credit Hours: 3.00. The origins and development of agriculture, with specific emphasis on horticulture from prehistory to the present in relation to civilization and modern culture.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 37000 - Professional Floral Design

Credit Hours: 3.00. Principles and techniques of commercial-scale floral design for weddings, funerals, hospitals, personal, and parties. Design construction for fresh, dried, and silk materials. Survey of retail florist management. Permission of department required.

Credits: 3.00

HORT 40300 - Tropical Horticulture

Credit Hours: 3.00. An introduction to the agriculture of the tropics and subtropics, emphasizing horticultural crops. Offered in even-numbered years.

Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals

and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

HORT 45000 - In The English Landscape: Integrating History, Horticulture, And Landscape Architecture

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Offered in even-numbered years. Permission of instructor required.

Credits: 3.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required.

Credits: 1.00 to 3.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

HORT 59000 - Special Studies In Horticulture

Credit Hours: 1.00 to 3.00. Special studies in horticulture not covered in regular coursework. The field in which work is offered will be indicated in the student's record. Permission of instructor required.

Credits: 1.00 to 3.00

HORT 12100 - Medicine In The Garden (UCC: STS)

Credit Hours: 1.00. A survey of the uses and properties of horticultural plants for human health and well-being. Topics will focus on the close relationships between plants and human physiology, nutrition, medicines, mind-altering drugs, poisons, and beverages.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using data and reasoning to develop sound responses to

complex problems. 3. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 4. Demonstrate the ability to work effectively as part of a problem-solving team. 5. Demonstrate skills necessary for lifelong learning. Credits: 1.00

HORT 29100 - Selected Topics In Horticulture

Credit Hours: 1.00 to 3.00. This variable-credit, lower-level selected topics course will be used for lower-division undergraduate research projects, for development of new lower-division courses and for temporary courses for lower-division students. Permission of instructor required.

Credits: 1.00 to 3.00

HORT 52500 - The Plant Microbiome

Credit Hours: 3.00. Students will learn about the latest methods to collect and analyze root and shoot exudates, quantify the composition and activity of microbes associating with plants, and determine how these associations influence plant health and productivity. Critical reviews of the primary literature and development of a research proposal will help students acquire the skills needed to conduct research on this rapidly emerging topic.

Learning Outcomes: 1. Describe basic processes regulating plant-microbial interactions in the rhizosphere and phyllosphere, and the implications of these interactions on plant and environmental health. 2. Critically evaluate and discuss primary literature in the field. 3. Compare and contrast methods used to study processes mediating plant-microbial relationships. 4. Identify questions that remain unanswered in the field and develop a research proposal to address one of these questions. Credits: 3.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 42700 - Horticulture Capstone

Credit Hours: 1.00. Based on an approved work or internship experience, or case study, or mentored research experience, or production activity, students will collect information and develop a written analytical exploration of the commercial enterprise, internship institution, or research or production activity. The written analysis will be appropriate to the student's area of concentration. In addition, a summary oral presentation based on specific aspects of their experience will be made by each

student. Prerequisite: Completion of an approved work or internship experience or mentored research experience.

Learning Outcomes: 1. Describe the structure and operation of a horticultural enterprise, public horticultural institution or the methodology for hypothesis testing in research. 2. Give examples of strengths and weaknesses of a horticultural enterprise, public horticultural institution or the methodology used in the research project. 3. Apply principles learned in coursework to evaluation of the observed horticultural enterprise, public horticultural institution or the methodology used in the research project including the management, operational, or horticultural setting and strategies. 4. Formulate proposals for ways in which the observed horticultural enterprise, public horticultural institution or the research activity might improve. Credits: 1.00

HORT 27000 - Floral Design And Interior Plant Management

Credit Hours: 3.00. Elements and principles of floral design, as well as the identification, culture, and propagation of indoor plants. Topics in the art of floral design from both the florist's and the consumer's perspective, as well as information on growing houseplants. A variety of creative, hands-on lab projects include fresh flowers & foliage, silk, and dried materials.

Learning Outcomes: 1. Recognize and use the elements and principles of design as they apply to the art of arranging flowers. 2. Develop the skills necessary to create floral designs. 3. Correctly select and use flowers, containers, and color harmonies. 4. Properly condition cut flowers and greens for use in everyday flower arrangements. 5. Identify indoor foliage plants and flowers and problems of interior plants. 6. Better understand the factors involved in growing and maintaining plants. 7. Know the cultural requirements of 30 popular interior plants. 8. Properly manage interior plants and floral arrangements. 9. Properly evaluate floral designs used for decorating and gift giving. 10. Receive greater enjoyment from plants and flowers and increased awareness of their design qualities. Credits: 3.00

HORT 32100 - Hydroponics Systems

Credit Hours: 3.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in controlled environment agriculture (CEA). This course offers students foundational information and hands-on experience on hydroponic and soilless cultivation of horticultural crops. Production practices, growing systems, new technologies, and current challenges are discussed.

Learning Outcomes: 1. Describe essential components of single-pass and recirculating hydroponic systems. 2. Compare different substrates and hydroponic system designs. 3. Interpret water quality analysis results and recommend corrections. 4. Create nutrient solutions using salts or mixed fertilizers. 5. Evaluate the importance of water quality, dissolved oxygen, salinity, and pH management for hydroponics. 6. Select hydroponic systems for production of leafy greens, herbs, and vegetable crops. 7. Apply solution chemistry knowledge and plant biology concepts to manage hydroponic systems. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size,

substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Note

HTM International Studies Minor

Requirements for the Minor (21 credits)

I. Approved full-time Work or Study Abroad (Minimum 12 weeks)

II. Foreign Language (6 credits)

III. International Focus Coursework (15 credits)

A. Non-HTM courses (6 credits)

B. HTM courses (6 credits)

HTM 37200 - Global Tourism Geography (UCC: BSS)

Credit Hours: 3.00. Introduction and analysis of specific world travel destinations, including the exploration of geographic features, customs and tradition, population centers, visitor attractions, political, religious, language and other cultural differences as these relate to the hospitality and travel industry. The course is designed to teach students specific geographic knowledge and develop a deeper understanding and empathy for cultural values and traditions that exist outside their own culture.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify and explain the interactions of tourism with the culture, economy, and environment of global destinations. 2. Identify international travel patterns and explain their impact on tourism management in promoting cultural understanding and global peace. 3. Locate various countries, major cities, natural wonders, historic sites and other tourism attractions, both man-made and natural. 4. Describe how the physical environment in specific geographic regions affects the ability of humans to live there and influences inbound and outbound travel. 5. Explain how political, economic, and environmental factors affect travel both positively and negatively. 6. Explain international travel patterns and identify the major travel generating and travel receiving areas. 7. Compare and contrast different cultures throughout the world with your home culture. Identify and explain key differences and their influence on travel. 8. Identify and explain the key elements of interdependence required for the existence of modern day world travel. Credits: 3.00

HTM 39000 - Undergraduate Special Problems

Credit Hours: 0.00 to 6.00. Individual or group participation in supervised reading, laboratory experiences, field experiences, or research in special areas of the field. Permission of instructor required.

Credits: 0.00 to 6.00

HTM 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University.

Credits: 1.00 to 6.00

C. Additional International Focus coursework (3 credits)

1. Non-HTM Courses: Regional or Country Focus

CHNS 28000 - Topics In Chinese Civilization And Culture (UCC: HUM)

Credit Hours: 3.00. Selected topics on Chinese civilization and culture including history and geography, Confucianism, contemporary China, education, family, international cultural and economic cooperation. Course materials also cover most

current issues on and in Chinese-speaking communities. Lectures in English.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24000 - East Asia And Its Historic Tradition (UCC: HUM)

Credit Hours: 3.00. Survey of the great historic traditions of China, Japan, and Korea from earliest times to approximately 1600, with special attention to state formation, society, intellectual, philosophical, and religious developments, and the visual, musical, and literary arts.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24100 - East Asia In The Modern World (UCC: HUM)

Credit Hours: 3.00. The response of China, Japan, and Korea to the coming of the West in modern times, with special stress on the effect of Western ideas and machines. Approximately 1600 to the present.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 33900 - Traditional China

Credit Hours: 3.00. Chinese civilization from its origins to the end of the Ming Dynasty. Attention is divided equally between political and cultural history, giving emphasis to the development of traditional institutions in Chinese society as well as to art, literature, religion, and philosophy.

Credits: 3.00

PHIL 23000 - Religions Of The East (UCC: HUM)

Credit Hours: 3.00. (REL 23000) A study of the history, teachings, and present institutions of the religions of India, Southeast Asia, China, and Japan. This will include Hinduism, Jainism, Sikhism, Buddhism, Confucianism, Taoism, Shintoism, and Zoroastrianism.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Information literacy. 2. Human cultures. 3. Creative thinking. 4. Inter-culteral knowledge. Credits: 3.00

2. Non-HTM Courses: Global Issues

CSR 33200 - Cross-Cultural Marketing And International Retailing

Credit Hours: 3.00. Examination of marketing/retail practices used to target domestic and global consumer market segments. Development of successful retail and marketing strategies is stressed.

Credits: 3.00

COM 22400 - Communicating In The Global Workplace (UCC: BSS)

Credit Hours: 3.00. This introductory course explores communication issues that arise in the global workplace. The course develops an appreciation of the relationship among culture, communication, and ways of organizing and doing business.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Critically analyze communication issues arising in culturally diverse organizations in the global environment by utilizing conceptual and theoretical frameworks. 2. Develop intercultural competencies for better managing communication issues in the global workplace by developing practical strategies for contemporary organizations operating in multiple cultures. 3. Explain macro social trends that are impacting global organizations by illustrating current examples. Credits: 3.00

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 20600 - Introduction To Philosophy Of Religion (UCC: HUM)

Credit Hours: 3.00. The course encourages critical reflection on traditional and contemporary views about God and other religious ideas. Topics include arguments for God's existence,

the problem of evil, understanding the divine attributes, miracles, religious pluralism, and life after death. CTL:ISH 1052 Philosophy Of Religion

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate familiarity with one or more conceptions of God and with arguments for and against the coherence of such conceptions. 2. Demonstrate a familiarity with some of the arguments for and against God's existence and with some of the objections to those arguments. 3. Recognize the importance of and demonstrate familiarity with multiple religious ideas and beliefs. 4. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 5. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. Credits: 3.00

POL 13000 - Introduction To International Relations (UCC: BSS)

Credit Hours: 3.00. An analysis of the fundamentals of international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 14100 - Governments Of The World (UCC: BSS)

Credit Hours: 3.00. An introduction to the politics and government in selected foreign countries. The course presents the tools and background needed to understand contemporary events in the world beyond the United States. Readings and discussions pay special attention to democratization and development.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

Notes

Human Development and Family Science Minor

Requirements for the Minor (15 credits)

Required Courses (6 credits)

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics

at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

Additional Courses (9 credits)

Notes

Human Resource Management Minor

Requirements for the Minor (15 credits)

Required Courses (6 credits)

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized.

Learning Outcomes: 1. Develop an understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures, compensation, administration, and collective bargaining. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

Advanced Topic Courses - (9 credits)

MGMT 49000 - Problems In Industrial Management

Credit Hours: 1.00 to 4.00. Investigation in a specific management field. Arrange with instructor before enrolling.

Permission of instructor required.

Credits: 1.00 to 4.00

MGMT 44429 - Talent Management

Credit Hours: 3.00. This course focuses on the employer-employee relationship at work, and how managers work with employees to improve employee performance. Attention is given to the history of labor relations and performance management in work settings, with an emphasis, however, on contemporary approaches to managing the employer-employee relationship and the systems for managing employee performance.

Learning Outcomes: 1. Identify and understand the tools and techniques of contemporary employee relations at work. 2. Identify and understand the tools and techniques of contemporary performance management at work. 3. Ability to apply these techniques. Credits: 3.00

MGMT 39000 - Junior Level Problems In Management

Credit Hours: 0.00 to 4.00. The Accounting Internship provides work experience in businesses or other institutions. Permission of instructor required.

Credits: 0.00 to 4.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.

Learning Outcomes: 1. Improve ability to effectively negotiate. 2. Recognize and analyze negotiation situations. 3. Gain confidence negotiating. 4. Improve decision-making knowledge and skills. Credits: 3.00

MGMT 44430 - Staffing: Talent Acquisition

Credit Hours: 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. It will also prepare students to evaluate methods for job analysis and selection. Students will learn how to design and ask interview questions that are behaviorally anchored and focused on organization-person fit and person-job fit, both of which are important for successful adaptation and effective performance on the job. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees.

Learning Outcomes: 1. Describe workforce planning implementation issues and the importance of continuous refinement of the plan. 2. Define talent acquisition and differentiate between recruiting and selection processes. 3. Understand the various talent

acquisition organization models. 4. Use tangible and intangible data to build a business case for effective talent acquisition. 5. Articulate the steps in a common talent analysis and translate the analysis into selection criteria and methods. 6. Conduct a job-fit and organization-fit analysis and translate the analysis into selection criteria and methods. 7. Develop behavior-based and situation-based interview questions derived from job analysis and conduct a professional interview. 8. Design a process for final candidate evaluation. 9. Highlight various strategies to orient and onboard new acquired talent. 10. Articulate an employer's legal responsibilities in the talent acquisition process. Credits: 3.00

MGMT 44431 - Compensation: Total Rewards

Credit Hours: 3.00. This course examines the tangible and intangible aspects of compensation, through the lens of a total reward philosophy of an organization in order to attract, motivate, and retain their Human Capital. It also provides an overview of the considerations necessary to develop a compensation system that is internally and externally equitable and fiscally responsible, including the use of job evaluation and salary surveys.

Learning Outcomes: 1. Evaluate the difference Total Rewards programs can make in organizations. 2. Distinguish between total rewards and compensation and identify compensation and non-compensation elements of total rewards. 3. Recognize various reward systems, their relationship and connection to a total compensation and benefits philosophy, and how they impact the quality of work life and productivity organizations. 4. Assess the practical issues in compensation and employee benefits in light of a company's management philosophy and human resources strategies. 5. Define job evaluation and its use to develop internally equitable compensation systems. 6. Identify the implications of using salary surveys to ensure externally equitable and fiscally responsible compensation systems. 7. Explain the concepts of salary administration and application of compensation programs in the business environment. 8. Better understand effective salary and wage structures in organizations today. 9. Explain the relationship between performance evaluation methods and reward systems. 10. Discuss the legal aspects of compensation, benefits and performance appraisals. Credits: 3.00

MGMT 44433 - Leading And Working In Teams

Credit Hours: 3.00. This course will explore the forces that affect behavior in teams, and the factors that lead to team success. We will use a variety of readings, cases, activities, and class discussions to build concrete skills related to leading and working in teams. The course will explore the specific challenges associated with leading teams, some of which include: building and designing teams, managing information exchange within and across teams, structuring effective group decision processes, igniting creative thinking, enabling complex problem solving, managing team diversity and conflict, and managing systems of teams. Permission of instructor required.

Learning Outcomes: 1. Identify and define concepts related to team functioning and effectiveness. 2. Apply those concepts to understand and diagnose issues associated with team effectiveness. 3. Develop a course of action to improve team functioning. Credits: 3.00

MGMT 55500 - Leading Management Of Diversity And Inclusion In Organizations

Credit Hours: 2.00 or 3.00. This course is designed to help participants learn to effectively manage self, peers, teams, clients, and firms in diverse organizational settings and to lead organizational change to foster inclusion, equality, and productive workplaces. The class is designed to develop your skills in leading diversity and inclusion from a multi-level view in the workplace: employee, leader, team member, organizational, and institutional/societal levels. Its goal is to a) improve your ability to work in diverse teams, as well as b) develop your ability to design, and implement strategies to foster cultural and structural change to support the management of an increasingly diverse workforce toward enhanced organizational effectiveness to benefit business, employees, and society. People and leaders in organizations are constantly working with members of different backgrounds, social identities, and experiences, often

across distributed and/or digitally connected environments, fostering increased attention to diversity equity and inclusion in transforming employment settings. When understood, supported and leveraged effectively, these differences in social identities, difference and values can help attract and retain talent, strengthen societal and community economic equality, support organizational and team effectiveness; but when overlooked, or mismanaged, these differences can increase turnover, conflict, stress, talent under-utilization, and harm career and work-life wellbeing, health, and productivity. We will focus on advancing understanding of how intersecting organizational and institutional structures and cultures and their relation to strategies for creating diversity; an inclusive culture and positive climate for inclusion and talent management; and developing and retaining diverse talent to foster innovation and organizational effectiveness across multiple levels of intervention. We discuss how to conduct an organizational diagnosis of the current diversity climate and barriers and facilitators for creating a multicultural workplace and a flexible environment supportive of many identities, and how assumptions of "ideal workers" may vary across industry and cultural contexts. You as a leader will be better able to articulate your own DEI vision and develop understanding of strategies that move from description to evidence-based diagnosis to action strategies and implementation in order to move aspirations into organizational change realities. From an individual leadership perspective, we tackle the question: "Why does diversity, equity and inclusion matter in employing organizations and business, what is the state-of-the-art evidence-based knowledge, and what does it mean to me personally in my career and my leadership beliefs?" Specifically, we focus on the business and social science processes - including attitudes toward in-groups and out-groups, stereotyping, identity, privilege, and power, intersectionality, discrimination, bias, influence opportunity, bystander awareness, allyship, difficult conversations, and perspective taking - these topics relate to how members of different social groups perceive and interact with one another. Since managing social identity increasingly involves managing work-life boundaries and work and non-work public and private selves, we will also learn about authenticity choices and social and public/professional identity boundary management. Further, the opportunity to experience higher well-being and work-life balance is increasingly linked to job and life opportunities reflecting growing work-life inequality in society. From an organizational and group perspective, we address the questions: "What are best practices for successful management of diversity and inclusion? And why does it matter to me as a future leader personally and in business and in the communities and world in which I live."

Learning Outcomes: 1. Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations. 2. Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations operating both in local, domestic and global contexts. 3. Propose ways to make relationships across cultural and cross-cultural and gender differences in organizations more effective. 4. Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in domestic and global organizations. 5. Analyze a company's current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company. Credits: 2.00 or 3.00

MGMT 55400 - Leading Global Organizations And People Across Cultures

Credit Hours: 2.00 or 3.00. This course focuses on the opportunities and challenges of managing a global multicultural workforce and implementing global organizational people strategies. The overall goal of this class is to help you become a more effective professional and leader in a global world on and off the job by providing information, tools and multicultural opportunities to increase conceptual and practical understanding of how national cultures shape employment settings and its implications for your own behavior as a global business professional and leader who implements human capital and organizational strategies, policies, and practices in a cross-national context. This course will also increase knowledge of and ability to implement current global human capital, international HRM, and organizational strategies for MNES and domestically. To achieve these goals, student engagement in class sessions, and willingness to share perspectives and opinions, and application of course readings and materials, are critical to the success of this course. A range of participative learning methods are used to facilitate an active classroom environment, including learning log journaling, case analysis, experiential exercises, small group projects, break out discussions, company guest speakers, and self-assessments. The role of the instructor in this course is not always to provide "the" answer, but to create an environment where you can collectively explore, examine and experiment with students' own ideas and share ideas and perspectives on working and managing global firms.

Learning Outcomes: 1. Use cross-cultural leadership and organizational abilities to understand on how cultural differences shape

workplace interactions so you can better implement organizational and people strategies to achieve business goals in a global environment. 2. Identify and avoid cultural mishaps and identify how your own national cultural values and assumptions about managing people and organizations shape your effectiveness in managing people, diversity, and systems in a global or cross-cultural firm. 3. Understand the challenges of adapting HRM policies and organizational people strategies when adapting HR and employment systems as organizations "go global" and develop a global workforce. 4. Understand the pros and cons of different multicultural strategies (cultural minimization, accommodation, cultural integration) for successfully implementing human capital strategies and HR practices in multicultural contexts. 5. Develop the core competencies needed by business leaders to work in multicultural teams contexts, including cultural intelligence, the ability to work in cross-cultural teams, develop clear and concise non country biased written communication, the ability to give effective presentations virtually and face to face, and the ability to engage in strategic cross-cultural thinking to implement global HR. 6. Understand and be able to apply core concepts in global HR/OB from 1)Global HR planning and organizational design; 2) Merger and Acquisition with a focus on linkages to successful people and organizational strategies; 3) Global talent management; 4) Development, reward, and performance management of global leaders; 5) Managing Global Teams, diversity, and cross-cultural communication; and 6) Implementing global change and improving organizational effectiveness. Credits: 2.00 or 3.00

MGMT 44434 - Human Resources Analytics

Credit Hours: 3.00. This course introduces concepts, tools, and methods used in collecting, interpreting, and presenting HR data. Students will learn how to gain new insights, solve problems, and drive performance through HR analytics. A central focus of this course is the ethics of HR analytics. This course teaches students how to ask the right questions in order to intelligently use HR analytics and metrics for business decisions. It discusses the implications of internet AI, business AI, perception AI, and autonomous AI for HR. This course will cover applications including the intelligent use of analytics related to employee engagement, healthcare expenditure, learning and development, performance management, and safety.

Learning Outcomes: 1. Gain an understanding of the different analytical approaches used by HR Professionals to solve real business problems. 2. Examine actual business cases and apply problem solving and critical thinking skills through group case studies. 3. Learn how to make impact with data by using effective storytelling techniques. 4. Build on presentation skills and demonstrate the ability to work effectively in teams. Credits: 3.00

MGMT 42930 - Labor Relations

Credit Hours: 3.00. The course focuses on employee-employer relations. Attention is given to topics in legal aspects of union organizing and collective bargaining, labor unions history and structure in the United States, labor management negotiations, dispute resolution procedures, international labor relations, and labor-management cooperation.

Learning Outcomes: 1. Summarize what unions do and why workers join labor unions. 2. Explain how management can react when its workers decide to form a union. 3. Execute the process of collective bargaining and summarize information typically contained in a collective bargaining agreement. 4. Differentiate how disputes are resolved through mediation, arbitration, and other methods. 5. Compare how labor-management relations in the USA are versus similar relationships in other countries around the world. Credits: 3.00

Notes

Human Rights Studies Minor

Department of Philosophy

Requirements for the Minor (15 credits)

A. HISTORY of Human Rights (3 credits)

HIST 33805 - History Of Human Rights (UCC: HUM)

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities in the human rights history narrative, which have shaped today's world, its politics, ideas, and ambitions. 2. Explore how human rights connects us to other people, places and times. 3. Analyze fundamental problems in human rights in history in individual writing and in group work and be engaged in an environment of open inquiry to exchange ideas and interpretations of human rights concepts. 4. Be better prepared to negotiate the variable applications of human rights concepts in today's globalized world. Credits: 3.00

B. THEORY of Human Rights (3 credits)

PHIL 24000 - Social And Political Philosophy (UCC: HUM)

Credit Hours: 3.00. A study of some major social and political philosophers from Plato to contemporary authors. Issues such as justice, rights and freedom, community, and the "globalized" future will be considered.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 26000 - Philosophy And Law

Credit Hours: 3.00. A discussion of philosophical issues in the law: a critical examination of such basic concepts in law as property, civil liberty, punishment, right, contract, crime and responsibility; and a survey of some main philosophical theories about the nature and justification of legal systems. Readings will be drawn from both law and philosophy.

Credits: 3.00

C. STRUCTURE of Human Rights (3 credits)

POL 43300 - International Organization

Credit Hours: 3.00. A study of the structure and functions of the United Nations and associated agencies, with an emphasis on the role of this system in contemporary international relations.

Learning Outcomes: 1. Define and explain the theoretical significance of certain international relations concepts used by scholars and policy-makers to analyze world affairs. These include but are not limited to: IGO, NGO, sovereignty, transnationalism, networks, humanitarian missions, G-77, international security, United Nations, peacekeeping, international institutions, realism, anarchy, constructivism, multilateralism, human rights. 2. Understand the history, structure and purposes of the United Nations in some detail. 3. Identify ways in which international politics may be reflected in, and shaped by, the politics within particular international organizations like the UN, both by observing UN politics and through an experiential in-class simulation. 4. Identify and evaluate ways the international system may be changing, and why. 5. Read course materials and reflect on their meaning, both in writing and discussion. 6. Choose an international ""problem,"" analyze ways to solve it, and present your ideas and analysis. Credits: 3.00

POL 43801 - International Human Rights

Credit Hours: 3.00. This course exposes students to the politics of international human rights through reading, lectures, film, discussion, and student research. Topics include the concept of human rights, international law related to the protection of human rights, empirical research on political and economic

causes of human rights violations in individual countries, and research on prevention efforts and remedies for past violations. This political science course is also part of Purdue's Human Rights Minor program.

Learning Outcomes: 1. Comprehend the interrelated legal and philosophical concepts pertaining to human rights as understood in theory and practice. 2. Analyze particular historical and ongoing situations of human rights violations. 3. Evaluate causes of and solutions for international human rights violations. Credits: 3.00

D. APPLICATION of Human Rights - Choose Two (6 credits)

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 33600 - Human Variation

Credit Hours: 3.00. Biological differences between human individuals and groups, causes of variations, the role of genetics, concepts of race, and the interrelationship between the social and biological meanings of race will be considered.

Learning Outcomes: 1. Describe the scientific basis of human diversity from evolutionary and biocultural perspectives. 2. Evaluate statements in scientific literature about biological and cultural variation. 3. Explain how humans are continuing to change. 4. Analyze articles in the popular press that deal with human differences. Credits: 3.00

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

ANTH 38000 - Using Anthropology In The World

Credit Hours: 3.00. The use of anthropology in practical contexts. What anthropological practice is, how it originated, how it can be applied in non- academic and interdisciplinary contexts and careers. The main contemporary issues surrounding anthropological practice, including training, ethics, relevance, and rigor. For majors and non-majors.

Learning Outcomes: 1. Describe applied anthropology and how the field has evolved over time. 2. Analyze the major issues, controversies, and opportunities of applied anthropology. 3. Identify key methods and skills that applied anthropologists use in their careers. 4. Explain how anthropology can be applied in

non-academic and interdisciplinary settings. 5. Demonstrate how to prepare for a career in anthropological practice, and/or use anthropology in their future career. Credits: 3.00

HIST 30000 - Eve Of Destruction: Global Crises And World Organization In The 20th Century (UCC: HUM)

Credit Hours: 3.00. Using a variety of case studies, this course considers 20th-century turning points -- often violent and disastrous ones -- in an emerging global conversation about urgent world problems and their possible solutions.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 32900 - History Of Women In Modern Europe (UCC: HUM)

Credit Hours: 3.00. This course examines women's experiences and constructions of femininity in Europe from 1789 to the present, including women in revolutions, state intervention in the family, changing ideas of sexuality, women's movements, women in socialism and fascism, and women in war.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will understand the history of women in modern Europe from 1789 to the present by analyzing women's experiences and the social and cultural constructions of femininity as well as the different contexts of class, ethnicity, and nationality in the history of European women. 2. They will think historically and critically about women's participation in revolutions; state interventions in the family; working lives of women; ideals and practices of sexuality; the middle-class model of domesticity and women's responses to it; the role of women and femininity in imperialism; women in socialism, under fascism, and in the transition from communism to capitalism; women's experiences of two world wars; and the rise of feminist movements and contemporary feminisms in Europe. 3. Students will understand the difference between secondary and primary sources. They will read and interpret primary source materials, including fiction, autobiography, and other historical documents including those written by women. 4. Students will develop their critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 33700 - Europe Since 1945

Credit Hours: 3.00. This course traces the history of Europe, west and east, from 1945 to the present. Once viewed as a success story, culminating in the collapse of eastern European communism, developments after 1990 - such as the breakup of Yugoslavia, the European debt crisis, and the War in Ukraine - call this simplistic narrative into question. This course will consider Cold War division, decolonization, and political protest alongside democratization and economic recovery.

Learning Outcomes: 1. Explain broad themes in postwar European history, including the Cold War as geopolitical process and a historical framework, the role of decolonization in shaping European politics, the impact of social movements, and the distinctions and overlaps between different economic systems. 2. Read historical scholarship for arguments, evidence, and contributions to the field and assess their effectiveness in these areas. 3. Craft a persuasive argument supported by primary and secondary source evidence that makes an intervention into the historical literature on a chosen topic. 4. Interpret a diverse range of historical sources and assess their utility in understanding the past, paying attention to form, perspective, and limitations. 5. Present historical research clearly and accessibly to different audiences using a variety of media formats. Credits: 3.00

HIST 38300 - Recent American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Intensive study of constitutional questions and Supreme Court answers from the period of the Warren Court to present. Particularly emphasized are the areas of segregation, civil rights, and civil liberties and guarantees for personal rights.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 40800 - Dictatorship And Democracy: Europe 1919-1945

Credit Hours: 3.00. This course examines the fleeting triumph of democracy across Europe. Followed by the rise of fascism, communism, and Nazism. Emphasis will be placed on broad economic, social, and cultural transformations as well as individual choices to resist or conform.

Credits: 3.00

HIST 41300 - Modern European Imperialism: Repression And Resistance

Credit Hours: 3.00. This course examines the expansion, transformation and collapse of 19th and 20th-century European empires, focusing on colonial encounters and relationships. Students should come to the course familiar with major developments, events and themes in modern European and/or global history.

Learning Outcomes: 1. Contextualize and compare important events and moments in the history of European imperialism and decolonization. 2. Analyze and evaluate how historians interpret the past, and examine how this past continues to shape the present. 3. Analyze an array of historical sources and types of evidence, historical narratives, first-person accounts and commentaries, scholarly interpretations, visual imagery and fictional portrayals, as well as the setting in which these sources were produced. 4. Craft original arguments supported by historical and textual evidence in class discussions and weekly writing assignments. Credits: 3.00

HIST 46900 - Black Civil Rights Movement

Credit Hours: 3.00. This course will examine the origins, dynamics, and consequences of the modern black civil rights movement by exploring how struggles for racial equality and full citizenship worked to dismantle entrenched systems of segregation, repression, and discrimination within American society and culture.

Credits: 3.00

PHIL 11400 - Global Moral Issues (UCC: HUM)

Credit Hours: 3.00. A systematic and representative examination of significant contemporary moral problems with a focus on global issues such as international justice, poverty and foreign aid, nationalism and patriotism, just war, population and the environment, human rights, gender equality, and national self-determination.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Acquire a thorough understanding of a comprehensive selection of global moral issues, including the concepts and theories that are essential to understanding and discussing these issues. 2. Acquire skills in the analysis and evaluation, as well the construction, of the kind of arguments needed for justifying personal opinion on ethical issues. 3. Develop critical thinking skills. 4. Develop skills in analytical writing and in clear and precise oral communication. Credits: 3.00

PHIL 27000 - Biomedical Ethics (UCC: STS)

Credit Hours: 3.00. An examination of the moral problems raised by developments in medicine and the biomedical sciences. Topics include abortion, reproductive technologies, euthanasia and physician-assisted suicide, experiments involving human subjects, and health care delivery.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

POL 13000 - Introduction To International Relations (UCC: BSS)

Credit Hours: 3.00. An analysis of the fundamentals of

international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 14100 - Governments Of The World (UCC: BSS)

Credit Hours: 3.00. An introduction to the politics and government in selected foreign countries. The course presents the tools and background needed to understand contemporary events in the world beyond the United States. Readings and discussions pay special attention to democratization and development.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 15000 - Introduction To Political Thought

Credit Hours: 3.00. Introduction to basic concepts in political philosophy, such as conflict and community, justice and the good society, the origins of democracy, and the intersections of class, race, gender, and sexuality. Selected classical and contemporary political thinks covered.

Credits: 3.00

POL 22200 - Women, Politics, And Public Policy (UCC: BSS)

Credit Hours: 3.00. An introduction to women's participation in politics, with an emphasis on America. Structural and attitudinal conditions limiting women's political roles and contemporary efforts to change women's status in society through politics.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 32600 - Black Political Participation In America (UCC: BSS)

Credit Hours: 3.00. An examination of African American political participation in the United States. Analyzes political culture and socialization, with a focus on the interaction between African Americans and actors, institutions, processes, and policies of the American system of politics and governance.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 36000 - Women And The Law (UCC: BSS)

Credit Hours: 3.00. An introductory survey of women's legal status in America. Topics include constitutional law, marriage and divorce, reproductive rights, employment discrimination, and crimes of violence.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 32800 - Criminal Justice

Credit Hours: 3.00. Introduction to institutionalized responses of society to the problem of crime. Analysis of the administration of justice in each of the major components of the criminal justice system and laws regulating their operations. Some consideration given to comparative criminal justice. CTL:ISH 1030 Introduction To Criminal Justice

Learning Outcomes: 1. Demonstrate an understanding of the Criminal Justice System in the United States, including the relationships between federal, state and local units of government. 2. Demonstrate an understanding of the pathway which an individual follows from first arrest to incarceration. 3. Demonstrate an understanding of the differential criminalization and sanctions connected to domestic, street, and corporate forms of violence and crime. 4. Demonstrate an understanding of the influence of class, race/ethnicity and gender in criminal justice. 5. Demonstrate an understanding of the major policy debates regarding crime control and criminal justice. Credits: 3.00

SOC 41900 - Sociology Of Law

Credit Hours: 3.00. Provides an overview of American legal

thought and legal processes. Major topics include definitions of law; anthropological studies of law; origin and development of law; jurisprudence; police behavior; lawyers and courts; deterrent and labeling effects of legal sanctions.

Learning Outcomes: 1. Understand how official law and law-in-action can differ. 2. Identify key theories in sociology of law. 3. Apply socio-legal theoretical concepts to real-world examples. Credits: 3.00

HIST 59500 - The Holocaust And Genocide

Credit Hours: 3.00. (POL 59500) History and analysis of the Nazi attempt to destroy the European Jews, with comparisons to other instances of genocide.

Credits: 3.00

CDIS 23900 - Introduction To Disability Studies

Credit Hours: 3.00. Introduces students to the principles of and debates within disability studies. Topics explored include ideas of normalcy; the social model of disability; history of eugenics and its current manifestations; relations between disability and other identity categories; issues of social and physical access; cultural representations of disabled people.

Learning Outcomes: 1. Identify different models of understanding disability. 2. Understand the ways normalcy is socially constructed. 3. Distinguish between impairment and disability. 4. Offer informed opinions on current eugenic practices. 5. Compare and contrast disability to other identity categories such as race, gender, and sexuality. 6. Identify exclusionary practices that marginalize disabled people. Credits: 3.00

HIST 30605 - Technology And War In U.S. History (UCC: HUM/STS)

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through the present day.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain understanding about the importance of technologies to the development of techniques of war in the context of U.S. history. 2. Contemplate the role of technology in shaping society and of society in shaping technology. 3. Consider ethical questions about the use and effects of technologies in war. 4. Sharpen critical analytical, reading, and writing skills. 5. Sharpen their ability to use primary and secondary source materials as evidence in persuasive written argument. 6. Improve ability to work as a team. 7. Practice public speaking skills. Credits: 3.00

ANTH 21500 - Introduction To Forensic Anthropology

Credit Hours: 3.00. Introduction to forensic anthropology, the science that utilizes methods from skeletal biology and archaeology as tools in human identification in a medico-legal context. This course introduces students to methods used to recover and positively identify human remains, and to evaluate trauma and taphonomy in medico-legal situations. Topics include an overview of historical and current developments in the field. Students will develop a comprehensive understanding of the sequential order of applied work from the search for forensic scenes through the recovery of remains, and skeletal analysis in the laboratory.

Learning Outcomes: 1. Understand the legal context in which anthropologists work in both state and federal courts by the standards of the US medico-legal system. 2. Explain the statistical approaches to forensic anthropological problems by analysis of problem sets. 3. Gain general knowledge about the methods of the biological profile (age, sex, ancestry, stature and pathology) to improve competency and understand the errors associated with each method by review and evaluation of relevant literature. 4. Explain the biological basis of the components of the biological profile by advancing reasonable conclusions. 5. Critically examine the use of the terms race and ancestry in forensic contexts by group discussion. Credits: 3.00

HIST 38200 - American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Survey of the fundamental principles of American constitutionalism and dominant trends in judicial interpretation, from the creation of the Constitution to the period of the New Deal.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 40500 - The French Revolution And Napoleon

Credit Hours: 3.00. A study of revolutionary France from the fall of the ancient regime to the Congress of Vienna. Divided in emphasis between the period of the revolution and the era of Napoleon, the course stresses social, political, ideological, and institutional developments.

Credits: 3.00

HIST 40600 - Rebels And Romantics: Europe 1815-1870

Credit Hours: 3.00. Examines the dramatic social, cultural, and political developments in Europe following the defeat of Napoleon through various rebellious and romantic personalities, as well as figures who supported conservative or reformist solutions to the upheavals of industrialization, revolution, and nationalism.

Credits: 3.00

A. HISTORY of Human Rights (3 credits)

HIST 33805 - History Of Human Rights (UCC: HUM)

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities in the human rights history narrative, which have shaped today's world, its politics, ideas, and ambitions. 2. Explore how human rights connects us to other people, places and times. 3. Analyze fundamental problems in human rights in history in individual writing and in group work and be engaged in an environment of open inquiry to exchange ideas and interpretations of human rights concepts. 4. Be better prepared to negotiate the variable applications of human rights concepts in today's globalized world.
Credits: 3.00

Requirements for the Minor (15 credits)

A. HISTORY of Human Rights (3 credits)

HIST 33805 - History Of Human Rights (UCC: HUM)

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities in the human rights history narrative, which have shaped today's world, its politics, ideas, and ambitions. 2. Explore how human rights connects us to other people, places and times. 3. Analyze fundamental problems in human rights in history in individual writing and in group work and be engaged in an environment of open inquiry to exchange ideas and interpretations of human rights concepts. 4. Be better prepared to negotiate the variable applications of human rights concepts in today's globalized world.
Credits: 3.00

B. THEORY of Human Rights (3 credits)

PHIL 24000 - Social And Political Philosophy (UCC: HUM)

Credit Hours: 3.00. A study of some major social and political philosophers from Plato to contemporary authors. Issues such as justice, rights and freedom, community, and the "globalized" future will be considered.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

PHIL 26000 - Philosophy And Law

Credit Hours: 3.00. A discussion of philosophical issues in the law: a critical examination of such basic concepts in law as property, civil liberty, punishment, right, contract, crime and responsibility; and a survey of some main philosophical theories

about the nature and justification of legal systems. Readings will be drawn from both law and philosophy.

Credits: 3.00

C. STRUCTURE of Human Rights (3 credits)

POL 43300 - International Organization

Credit Hours: 3.00. A study of the structure and functions of the United Nations and associated agencies, with an emphasis on the role of this system in contemporary international relations.

Learning Outcomes: 1. Define and explain the theoretical significance of certain international relations concepts used by scholars and policy-makers to analyze world affairs. These include but are not limited to: IGO, NGO, sovereignty, transnationalism, networks, humanitarian missions, G-77, international security, United Nations, peacekeeping, international institutions, realism, anarchy, constructivism, multilateralism, human rights. 2. Understand the history, structure and purposes of the United Nations in some detail. 3. Identify ways in which international politics may be reflected in, and shaped by, the politics within particular international organizations like the UN, both by observing UN politics and through an experiential in-class simulation. 4. Identify and evaluate ways the international system may be changing, and why. 5. Read course materials and reflect on their meaning, both in writing and discussion. 6. Choose an international ""problem,"" analyze ways to solve it, and present your ideas and analysis. Credits: 3.00

POL 43801 - International Human Rights

Credit Hours: 3.00. This course exposes students to the politics of international human rights through reading, lectures, film, discussion, and student research. Topics include the concept of human rights, international law related to the protection of human rights, empirical research on political and economic causes of human rights violations in individual countries, and research on prevention efforts and remedies for past violations. This political science course is also part of Purdue's Human Rights Minor program.

Learning Outcomes: 1. Comprehend the interrelated legal and philosophical concepts pertaining to human rights as understood in theory and practice. 2. Analyze particular historical and ongoing situations of human rights violations. 3. Evaluate causes of and solutions for international human rights violations. Credits: 3.00

D. APPLICATION of Human Rights - Choose Two (6 credits)

ANTH 20300 - Biological Bases Of Human Social Behavior (UCC: BSS)

Credit Hours: 3.00. This course is an introduction to human social behavior from the perspective of biological anthropology, with special emphasis on human evolution and non-human primates. Topics include aggression, communication, learning, maturation, sexuality, and the evolution of social systems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Demonstrate understanding of core concepts and theories of human evolutionary biology and ecology. 2. Describe key components of human life course evolution and hunter-gatherer lifestyles. 3. Analyze the evolutionary mechanisms underlying behavioral variation across primates. 4. Assess cross-cultural variation in food acquisition, mating, parenting, and social systems. Credits: 3.00

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and

contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 33600 - Human Variation

Credit Hours: 3.00. Biological differences between human individuals and groups, causes of variations, the role of genetics, concepts of race, and the interrelationship between the social and biological meanings of race will be considered.

Learning Outcomes: 1. Describe the scientific basis of human diversity from evolutionary and biocultural perspectives. 2. Evaluate statements in scientific literature about biological and cultural variation. 3. Explain how humans are continuing to change. 4. Analyze articles in the popular press that deal with human differences. Credits: 3.00

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ANTH 38000 - Using Anthropology In The World

Credit Hours: 3.00. The use of anthropology in practical contexts. What anthropological practice is, how it originated, how it can be applied in non- academic and interdisciplinary contexts and careers. The main contemporary issues surrounding anthropological practice, including training, ethics, relevance, and rigor. For majors and non-majors.

Learning Outcomes: 1. Describe applied anthropology and how the field has evolved over time. 2. Analyze the major issues, controversies, and opportunities of applied anthropology. 3. Identify key methods and skills that applied anthropologists use in their careers. 4. Explain how anthropology can be applied in non-academic and interdisciplinary settings. 5. Demonstrate how to prepare for a career in anthropological practice, and/or use anthropology in their future career. Credits: 3.00

HIST 33700 - Europe Since 1945

Credit Hours: 3.00. This course traces the history of Europe, west and east, from 1945 to the present. Once viewed as a success story, culminating in the collapse of eastern European communism, developments after 1990 - such as the breakup of Yugoslavia, the European debt crisis, and the War in Ukraine - call this simplistic narrative into question. This course will consider Cold War division, decolonization, and political protest alongside democratization and economic recovery.

Learning Outcomes: 1. Explain broad themes in postwar European history, including the Cold War as geopolitical process and a historical framework, the role of decolonization in shaping European politics, the impact of social movements, and the distinctions and overlaps between different economic systems. 2. Read historical scholarship for arguments, evidence, and contributions to the field and assess their effectiveness in these areas. 3. Craft a persuasive argument supported by primary and secondary source evidence that makes an intervention into the historical literature on a chosen topic. 4. Interpret a diverse range of

historical sources and assess their utility in understanding the past, paying attention to form, perspective, and limitations. 5. Present historical research clearly and accessibly to different audiences using a variety of media formats. Credits: 3.00

HIST 38300 - Recent American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Intensive study of constitutional questions and Supreme Court answers from the period of the Warren Court to present. Particularly emphasized are the areas of segregation, civil rights, and civil liberties and guarantees for personal rights.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 40800 - Dictatorship And Democracy: Europe 1919-1945

Credit Hours: 3.00. This course examines the fleeting triumph of democracy across Europe. Followed by the rise of fascism, communism, and Nazism. Emphasis will be placed on broad economic, social, and cultural transformations as well as individual choices to resist or conform.

Credits: 3.00

HIST 46900 - Black Civil Rights Movement

Credit Hours: 3.00. This course will examine the origins, dynamics, and consequences of the modern black civil rights movement by exploring how struggles for racial equality and full citizenship worked to dismantle entrenched systems of segregation, repression, and discrimination within American society and culture.

Credits: 3.00

PHIL 11400 - Global Moral Issues (UCC: HUM)

Credit Hours: 3.00. A systematic and representative examination of significant contemporary moral problems with a focus on global issues such as international justice, poverty and foreign aid, nationalism and patriotism, just war, population and the environment, human rights, gender equality, and national self-determination.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Acquire a thorough understanding of a comprehensive selection of global moral issues, including the concepts and theories that are essential to understanding and discussing these issues. 2. Acquire skills in the analysis and evaluation, as well the construction, of the kind of arguments needed for justifying personal opinion on ethical issues. 3. Develop critical thinking skills. 4. Develop skills in analytical writing and in clear and precise oral communication. Credits: 3.00

PHIL 27000 - Biomedical Ethics (UCC: STS)

Credit Hours: 3.00. An examination of the moral problems raised by developments in medicine and the biomedical sciences. Topics include abortion, reproductive technologies, euthanasia and physician-assisted suicide, experiments involving human subjects, and health care delivery.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

POL 13000 - Introduction To International Relations (UCC: BSS)

Credit Hours: 3.00. An analysis of the fundamentals of international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 14100 - Governments Of The World (UCC: BSS)

Credit Hours: 3.00. An introduction to the politics and government in selected foreign countries. The course presents

the tools and background needed to understand contemporary events in the world beyond the United States. Readings and discussions pay special attention to democratization and development.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 15000 - Introduction To Political Thought

Credit Hours: 3.00. Introduction to basic concepts in political philosophy, such as conflict and community, justice and the good society, the origins of democracy, and the intersections of class, race, gender, and sexuality. Selected classical and contemporary political thinks covered.

Credits: 3.00

POL 22200 - Women, Politics, And Public Policy (UCC: BSS)

Credit Hours: 3.00. An introduction to women's participation in politics, with an emphasis on America. Structural and attitudinal conditions limiting women's political roles and contemporary efforts to change women's status in society through politics.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 32600 - Black Political Participation In America (UCC: BSS)

Credit Hours: 3.00. An examination of African American political participation in the United States. Analyzes political culture and socialization, with a focus on the interaction between African Americans and actors, institutions, processes, and policies of the American system of politics and governance.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 36000 - Women And The Law (UCC: BSS)

Credit Hours: 3.00. An introductory survey of women's legal status in America. Topics include constitutional law, marriage and divorce, reproductive rights, employment discrimination, and crimes of violence.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

SOC 32800 - Criminal Justice

Credit Hours: 3.00. Introduction to institutionalized responses of society to the problem of crime. Analysis of the administration of justice in each of the major components of the criminal justice system and laws regulating their operations. Some consideration given to comparative criminal justice. CTL:ISH 1030 Introduction To Criminal Justice

Learning Outcomes: 1. Demonstrate an understanding of the Criminal Justice System in the United States, including the relationships between federal, state and local units of government. 2. Demonstrate an understanding of the pathway which an individual follows from first arrest to incarceration. 3. Demonstrate an understanding of the differential criminalization and sanctions connected to domestic, street, and corporate forms of violence and crime. 4. Demonstrate an understanding of the influence of class, race/ethnicity and gender in criminal justice. 5. Demonstrate an understanding of the major policy debates regarding crime control and criminal justice. Credits: 3.00

SOC 33900 - Sociology Of Global Development

Credit Hours: 3.00. Analysis of the causes and consequences of global development. Topics include: globalization; colonialism and decolonization; food insecurity and dependency; industrialization, poverty and inequality; migration; debt and trade; women's empowerment; global health; rights and social change; and sustainable development. This course will introduce you to the study of global development and globalization. The primary questions we will address are: What is development? What is globalization and what is its relationship with development? How have the processes of global development produced inequalities among nations,

regions, races, genders, and classes? Is there a "developing" world and a "developed" world? If so, what are their differences and how do they relate with each other? How have some developing countries become more developed than others? What roles do corporations, the state, and civil society organizations play in the processes of global development? How is global development interrelated with the physical environment, inequalities of consumption, and the environmental crisis? How do people resist the inequalities and perceived injustices of global development through global social movements? How are we interconnected economically, politically, culturally, socially, and ecologically with people all over the world? What are the possible futures of development? To address these issues, our focus will be on the developing world, our scope will be global and long-term, our methodology will be historical-comparative, and our perspective will be social-scientific and critical.

Learning Outcomes: 1. Demonstrate knowledge of the causes and consequences of global development. 2. Outline the strengths and weaknesses of the basic theoretical perspectives on global development. 3. Identify the key historical events that have led to the project of global development. 4. Apply sociological analysis to different complex and power dynamics. 5. Describe how small- and large-scale projects might contribute to or hinder sustainable development. Credits: 3.00

SOC 41900 - Sociology Of Law

Credit Hours: 3.00. Provides an overview of American legal thought and legal processes. Major topics include definitions of law; anthropological studies of law; origin and development of law; jurisprudence; police behavior; lawyers and courts; deterrent and labeling effects of legal sanctions.

Learning Outcomes: 1. Understand how official law and law-in-action can differ. 2. Identify key theories in sociology of law. 3. Apply socio-legal theoretical concepts to real-world examples. Credits: 3.00

HIST 59500 - The Holocaust And Genocide

Credit Hours: 3.00. (POL 59500) History and analysis of the Nazi attempt to destroy the European Jews, with comparisons to other instances of genocide.

Credits: 3.00

CDIS 23900 - Introduction To Disability Studies

Credit Hours: 3.00. Introduces students to the principles of and debates within disability studies. Topics explored include ideas of normalcy; the social model of disability; history of eugenics and its current manifestations; relations between disability and other identity categories; issues of social and physical access; cultural representations of disabled people.

Learning Outcomes: 1. Identify different models of understanding disability. 2. Understand the ways normalcy is socially constructed. 3. Distinguish between impairment and disability. 4. Offer informed opinions on current eugenic practices. 5. Compare and contrast disability to other identity categories such as race, gender, and sexuality. 6. Identify exclusionary practices that marginalize disabled people. Credits: 3.00

PHIL 32200 - Philosophy Of Technology

Credit Hours: 3.00. A philosophical examination of the nature and history of technology, as well as its complex impact on humans and the world.

Learning Outcomes: 1. Critically evaluate the impact technology has upon our lives and the world. 2. Analyze and interpret a significant body of primary works in philosophy of technology. 3. Develop their ability to read, analyze, and write about complex texts. 4. Demonstrate their familiarity with the major questions and traditions in the philosophy of technology. 5. Reflect on the socially responsible creation and use of technology. 6. Critically scrutinize the nature, value, and challenges to technology as an intellectual and cultural institution. 7. Pose critical questions about the future directions of technology and explore whether any ethical vision guides the development of technology. Credits: 3.00

HIST 30605 - Technology And War In U.S. History (UCC: HUM/STS)

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through

the present day.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain understanding about the importance of technologies to the development of techniques of war in the context of U.S. history. 2. Contemplate the role of technology in shaping society and of society in shaping technology. 3. Consider ethical questions about the use and effects of technologies in war. 4. Sharpen critical analytical, reading, and writing skills. 5. Sharpen their ability to use primary and secondary source materials as evidence in persuasive written argument. 6. Improve ability to work as a team. 7. Practice public speaking skills. Credits: 3.00

PHIL 40300 - Moral Psychology And Climate Change

Credit Hours: 3.00. This course investigates the ethical challenges posed by climate change in conjunction with the deep cognitive and motivational factors that shape our individual and collective responses to it. Current research on human moral psychology is examined, drawing on work from a range of disciplines. Ethical theories concerning the unique moral challenges posed by a threat that spans national borders and human generations are considered. Strategies for addressing climate change that try to avoid our common cognitive foibles, and to leverage what we know about human moral capacities for collective action, are examined.

Learning Outcomes: 1. Identify the structure, thesis statement, and main lines of argumentation in written work of philosophers and psychologists, and also to analyze the arguments by breaking them down into their component parts, and formulating their own objections. 2. Discuss a wide variety of issues and sources surrounding moral psychology, from philosophers, psychologists, biologists, economists and anthropologists; they will develop this ability by summarizing and commenting on the assigned readings in weekly blog posts. 3. Compare the threat raised by climate change to other existential threats by reporting on the way different kinds of threats are processed cognitively. 4. Appraise the strengths and weaknesses of different strategies for addressing climate change, as assessed from the point of view of the state of the art understanding of human cognition and moral motivation; they will write a research paper that assesses the pros and cons of such strategies. 5. Identify common cognitive blind spots, predictable irrationalities, and motivational hurdles, and will be able to use this to appreciate the scope of the collective action problems associated with climate change; they will develop these skills by reading academic texts devoted to these issues. Credits: 3.00

ANTH 21500 - Introduction To Forensic Anthropology

Credit Hours: 3.00. Introduction to forensic anthropology, the science that utilizes methods from skeletal biology and archaeology as tools in human identification in a medico-legal context. This course introduces students to methods used to recover and positively identify human remains, and to evaluate trauma and taphonomy in medico-legal situations. Topics include an overview of historical and current developments in the field. Students will develop a comprehensive understanding of the sequential order of applied work from the search for forensic scenes through the recovery of remains, and skeletal analysis in the laboratory.

Learning Outcomes: 1. Understand the legal context in which anthropologists work in both state and federal courts by the standards of the US medico-legal system. 2. Explain the statistical approaches to forensic anthropological problems by analysis of problem sets. 3. Gain general knowledge about the methods of the biological profile (age, sex, ancestry, stature and pathology) to improve competency and understand the errors associated with each method by review and evaluation of relevant literature. 4. Explain the biological basis of the components of the biological profile by advancing reasonable conclusions. 5. Critically examine the use of the terms race and ancestry in forensic contexts by group discussion. Credits: 3.00

HIST 38200 - American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Survey of the fundamental principles of American constitutionalism and dominant trends in judicial interpretation, from the creation of the Constitution to the period of the New Deal.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

Notes

Program Learning Outcomes

Requirements for the Minor (15 credits)

A. HISTORY of Human Rights (3 credits)

HIST 33805 - History Of Human Rights (UCC: HUM)

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities in the human rights history narrative, which have shaped today's world, its politics, ideas, and ambitions. 2. Explore how human rights connects us to other people, places and times. 3. Analyze fundamental problems in human rights in history in individual writing and in group work and be engaged in an environment of open inquiry to exchange ideas and interpretations of human rights concepts. 4. Be better prepared to negotiate the variable applications of human rights concepts in today's globalized world.
Credits: 3.00

B. THEORY of Human Rights (3 credits)

PHIL 24000 - Social And Political Philosophy (UCC: HUM)

Credit Hours: 3.00. A study of some major social and political philosophers from Plato to contemporary authors. Issues such as justice, rights and freedom, community, and the "globalized" future will be considered.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

PHIL 26000 - Philosophy And Law

Credit Hours: 3.00. A discussion of philosophical issues in the law: a critical examination of such basic concepts in law as property, civil liberty, punishment, right, contract, crime and responsibility; and a survey of some main philosophical theories about the nature and justification of legal systems. Readings will be drawn from both law and philosophy.

Credits: 3.00

C. STRUCTURE of Human Rights (3 credits)

POL 43300 - International Organization

Credit Hours: 3.00. A study of the structure and functions of the United Nations and associated agencies, with an emphasis on the role of this system in contemporary international relations.

Learning Outcomes: 1. Define and explain the theoretical significance of certain international relations concepts used by scholars and policy-makers to analyze world affairs. These include but are not limited to: IGO, NGO, sovereignty, transnationalism, networks, humanitarian missions, G-77, international security, United Nations, peacekeeping, international institutions, realism, anarchy, constructivism, multilateralism, human rights. 2. Understand the history, structure and purposes of the United Nations in some detail. 3. Identify ways in which international politics may be reflected in, and shaped by, the politics within particular international organizations like the UN, both by observing UN politics and through an experiential in-class simulation. 4. Identify and evaluate ways the international system may be changing, and why. 5. Read course materials

and reflect on their meaning, both in writing and discussion. 6. Choose an international ""problem,"" analyze ways to solve it, and present your ideas and analysis. Credits: 3.00

POL 43801 - International Human Rights

Credit Hours: 3.00. This course exposes students to the politics of international human rights through reading, lectures, film, discussion, and student research. Topics include the concept of human rights, international law related to the protection of human rights, empirical research on political and economic causes of human rights violations in individual countries, and research on prevention efforts and remedies for past violations. This political science course is also part of Purdue's Human Rights Minor program.

Learning Outcomes: 1. Comprehend the interrelated legal and philosophical concepts pertaining to human rights as understood in theory and practice. 2. Analyze particular historical and ongoing situations of human rights violations. 3. Evaluate causes of and solutions for international human rights violations. Credits: 3.00

D. APPLICATION of Human Rights - Choose Two (6 credits)

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 33600 - Human Variation

Credit Hours: 3.00. Biological differences between human individuals and groups, causes of variations, the role of genetics, concepts of race, and the interrelationship between the social and biological meanings of race will be considered.

Learning Outcomes: 1. Describe the scientific basis of human diversity from evolutionary and biocultural perspectives. 2. Evaluate statements in scientific literature about biological and cultural variation. 3. Explain how humans are continuing to change. 4. Analyze articles in the popular press that deal with human differences. Credits: 3.00

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

ANTH 38000 - Using Anthropology In The World

Credit Hours: 3.00. The use of anthropology in practical contexts. What anthropological practice is, how it originated,

how it can be applied in non- academic and interdisciplinary contexts and careers. The main contemporary issues surrounding anthropological practice, including training, ethics, relevance, and rigor. For majors and non-majors.

Learning Outcomes: 1. Describe applied anthropology and how the field has evolved over time. 2. Analyze the major issues, controversies, and opportunities of applied anthropology. 3. Identify key methods and skills that applied anthropologists use in their careers. 4. Explain how anthropology can be applied in non-academic and interdisciplinary settings. 5. Demonstrate how to prepare for a career in anthropological practice, and/or use anthropology in their future career. Credits: 3.00

HIST 30000 - Eve Of Destruction: Global Crises And World Organization In The 20th Century (UCC: HUM)

Credit Hours: 3.00. Using a variety of case studies, this course considers 20th-century turning points -- often violent and disastrous ones -- in an emerging global conversation about urgent world problems and their possible solutions.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 32900 - History Of Women In Modern Europe (UCC: HUM)

Credit Hours: 3.00. This course examines women's experiences and constructions of femininity in Europe from 1789 to the present, including women in revolutions, state intervention in the family, changing ideas of sexuality, women's movements, women in socialism and fascism, and women in war.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will understand the history of women in modern Europe from 1789 to the present by analyzing women's experiences and the social and cultural constructions of femininity as well as the different contexts of class, ethnicity, and nationality in the history of European women. 2. They will think historically and critically about women's participation in revolutions; state interventions in the family; working lives of women; ideals and practices of sexuality; the middle-class model of domesticity and women's responses to it; the role of women and femininity in imperialism; women in socialism, under fascism, and in the transition from communism to capitalism; women's experiences of two world wars; and the rise of feminist movements and contemporary feminisms in Europe. 3. Students will understand the difference between secondary and primary sources. They will read and interpret primary source materials, including fiction, autobiography, and other historical documents including those written by women. 4. Students will develop their critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 33700 - Europe Since 1945

Credit Hours: 3.00. This course traces the history of Europe, west and east, from 1945 to the present. Once viewed as a success story, culminating in the collapse of eastern European communism, developments after 1990 - such as the breakup of Yugoslavia, the European debt crisis, and the War in Ukraine - call this simplistic narrative into question. This course will consider Cold War division, decolonization, and political protest alongside democratization and economic recovery.

Learning Outcomes: 1. Explain broad themes in postwar European history, including the Cold War as geopolitical process and a historical framework, the role of decolonization in shaping European politics, the impact of social movements, and the distinctions and overlaps between different economic systems. 2. Read historical scholarship for arguments, evidence, and contributions to the field and assess their effectiveness in these areas. 3. Craft a persuasive argument supported by primary and secondary source evidence that makes an intervention into the historical literature on a chosen topic. 4. Interpret a diverse range of historical sources and assess their utility in understanding the past, paying attention to form, perspective, and limitations. 5. Present historical research clearly and accessibly to different audiences using a variety of media

formats. Credits: 3.00

HIST 38300 - Recent American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Intensive study of constitutional questions and Supreme Court answers from the period of the Warren Court to present. Particularly emphasized are the areas of segregation, civil rights, and civil liberties and guarantees for personal rights.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 40800 - Dictatorship And Democracy: Europe 1919-1945

Credit Hours: 3.00. This course examines the fleeting triumph of democracy across Europe. Followed by the rise of fascism, communism, and Nazism. Emphasis will be placed on broad economic, social, and cultural transformations as well as individual choices to resist or conform.

Credits: 3.00

HIST 41300 - Modern European Imperialism: Repression And Resistance

Credit Hours: 3.00. This course examines the expansion, transformation and collapse of 19th and 20th-century European empires, focusing on colonial encounters and relationships. Students should come to the course familiar with major developments, events and themes in modern European and/or global history.

Learning Outcomes: 1. Contextualize and compare important events and moments in the history of European imperialism and decolonization. 2. Analyze and evaluate how historians interpret the past, and examine how this past continues to shape the present. 3. Analyze an array of historical sources and types of evidence, historical narratives, first-person accounts and commentaries, scholarly interpretations, visual imagery and fictional portrayals, as well as the setting in which these sources were produced. 4. Craft original arguments supported by historical and textual evidence in class discussions and weekly writing assignments. Credits: 3.00

HIST 46900 - Black Civil Rights Movement

Credit Hours: 3.00. This course will examine the origins, dynamics, and consequences of the modern black civil rights movement by exploring how struggles for racial equality and full citizenship worked to dismantle entrenched systems of segregation, repression, and discrimination within American society and culture.

Credits: 3.00

PHIL 11400 - Global Moral Issues (UCC: HUM)

Credit Hours: 3.00. A systematic and representative examination of significant contemporary moral problems with a focus on global issues such as international justice, poverty and foreign aid, nationalism and patriotism, just war, population and the environment, human rights, gender equality, and national self-determination.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Acquire a thorough understanding of a comprehensive selection of global moral issues, including the concepts and theories that are essential to understanding and discussing these issues. 2. Acquire skills in the analysis and evaluation, as well the construction, of the kind of arguments needed for justifying personal opinion on ethical issues. 3. Develop critical thinking skills. 4. Develop skills in analytical writing and in clear and precise oral communication. Credits: 3.00

PHIL 27000 - Biomedical Ethics (UCC: STS)

Credit Hours: 3.00. An examination of the moral problems raised by developments in medicine and the biomedical sciences. Topics include abortion, reproductive technologies, euthanasia and physician-assisted suicide, experiments involving human subjects, and health care delivery.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

POL 13000 - Introduction To International Relations (UCC: BSS)

Credit Hours: 3.00. An analysis of the fundamentals of international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 14100 - Governments Of The World (UCC: BSS)

Credit Hours: 3.00. An introduction to the politics and government in selected foreign countries. The course presents the tools and background needed to understand contemporary events in the world beyond the United States. Readings and discussions pay special attention to democratization and development.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 15000 - Introduction To Political Thought

Credit Hours: 3.00. Introduction to basic concepts in political philosophy, such as conflict and community, justice and the good society, the origins of democracy, and the intersections of class, race, gender, and sexuality. Selected classical and contemporary political thinks covered.

Credits: 3.00

POL 22200 - Women, Politics, And Public Policy (UCC: BSS)

Credit Hours: 3.00. An introduction to women's participation in politics, with an emphasis on America. Structural and attitudinal conditions limiting women's political roles and contemporary efforts to change women's status in society through politics.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 32600 - Black Political Participation In America (UCC: BSS)

Credit Hours: 3.00. An examination of African American political participation in the United States. Analyzes political culture and socialization, with a focus on the interaction between African Americans and actors, institutions, processes, and policies of the American system of politics and governance.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 36000 - Women And The Law (UCC: BSS)

Credit Hours: 3.00. An introductory survey of women's legal status in America. Topics include constitutional law, marriage and divorce, reproductive rights, employment discrimination, and crimes of violence.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

SOC 32800 - Criminal Justice

Credit Hours: 3.00. Introduction to institutionalized responses of society to the problem of crime. Analysis of the administration of justice in each of the major components of the criminal justice system and laws regulating their operations. Some consideration given to comparative criminal justice. CTL:ISH 1030 Introduction To Criminal Justice

Learning Outcomes: 1. Demonstrate an understanding of the Criminal Justice System in the United States, including the relationships between federal, state and local units of government. 2. Demonstrate an understanding of the pathway which an individual follows from

first arrest to incarceration. 3. Demonstrate an understanding of the differential criminalization and sanctions connected to domestic, street, and corporate forms of violence and crime. 4. Demonstrate an understanding of the influence of class, race/ethnicity and gender in criminal justice. 5. Demonstrate an understanding of the major policy debates regarding crime control and criminal justice. Credits: 3.00

SOC 41900 - Sociology Of Law

Credit Hours: 3.00. Provides an overview of American legal thought and legal processes. Major topics include definitions of law; anthropological studies of law; origin and development of law; jurisprudence; police behavior; lawyers and courts; deterrent and labeling effects of legal sanctions.

Learning Outcomes: 1. Understand how official law and law-in-action can differ. 2. Identify key theories in sociology of law. 3. Apply socio-legal theoretical concepts to real-world examples. Credits: 3.00

HIST 59500 - The Holocaust And Genocide

Credit Hours: 3.00. (POL 59500) History and analysis of the Nazi attempt to destroy the European Jews, with comparisons to other instances of genocide.

Credits: 3.00

CDIS 23900 - Introduction To Disability Studies

Credit Hours: 3.00. Introduces students to the principles of and debates within disability studies. Topics explored include ideas of normalcy; the social model of disability; history of eugenics and its current manifestations; relations between disability and other identity categories; issues of social and physical access; cultural representations of disabled people.

Learning Outcomes: 1. Identify different models of understanding disability. 2. Understand the ways normalcy is socially constructed. 3. Distinguish between impairment and disability. 4. Offer informed opinions on current eugenic practices. 5. Compare and contrast disability to other identity categories such as race, gender, and sexuality. 6. Identify exclusionary practices that marginalize disabled people. Credits: 3.00

HIST 30605 - Technology And War In U.S. History (UCC: HUM/STS)

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through the present day.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain understanding about the importance of technologies to the development of techniques of war in the context of U.S. history. 2. Contemplate the role of technology in shaping society and of society in shaping technology. 3. Consider ethical questions about the use and effects of technologies in war. 4. Sharpen critical analytical, reading, and writing skills. 5. Sharpen their ability to use primary and secondary source materials as evidence in persuasive written argument. 6. Improve ability to work as a team. 7. Practice public speaking skills. Credits: 3.00

ANTH 21500 - Introduction To Forensic Anthropology

Credit Hours: 3.00. Introduction to forensic anthropology, the science that utilizes methods from skeletal biology and archaeology as tools in human identification in a medico-legal context. This course introduces students to methods used to recover and positively identify human remains, and to evaluate trauma and taphonomy in medico-legal situations. Topics include an overview of historical and current developments in the field. Students will develop a comprehensive understanding of the sequential order of applied work from the search for forensic scenes through the recovery of remains, and skeletal analysis in the laboratory.

Learning Outcomes: 1. Understand the legal context in which anthropologists work in both state and federal courts by the standards of the US medico-legal system. 2. Explain the statistical approaches to forensic anthropological problems by analysis of problem sets. 3. Gain general knowledge about the methods of the biological profile (age, sex, ancestry, stature and pathology) to improve competency and understand the errors

associated with each method by review and evaluation of relevant literature. 4. Explain the biological basis of the components of the biological profile by advancing reasonable conclusions. 5. Critically examine the use of the terms race and ancestry in forensic contexts by group discussion. Credits: 3.00

HIST 38200 - American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Survey of the fundamental principles of American constitutionalism and dominant trends in judicial interpretation, from the creation of the Constitution to the period of the New Deal.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 40500 - The French Revolution And Napoleon

Credit Hours: 3.00. A study of revolutionary France from the fall of the ancient regime to the Congress of Vienna. Divided in emphasis between the period of the revolution and the era of Napoleon, the course stresses social, political, ideological, and institutional developments.

Credits: 3.00

HIST 40600 - Rebels And Romantics: Europe 1815-1870

Credit Hours: 3.00. Examines the dramatic social, cultural, and political developments in Europe following the defeat of Napoleon through various rebellious and romantic personalities, as well as figures who supported conservative or reformist solutions to the upheavals of industrialization, revolution, and nationalism.

Credits: 3.00

A. HISTORY of Human Rights (3 credits)

HIST 33805 - History Of Human Rights (UCC: HUM)

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities in the human rights history narrative, which have shaped today's world, its politics, ideas, and ambitions. 2. Explore how human rights connects us to other people, places and times. 3. Analyze fundamental problems in human rights in history in individual writing and in group work and be engaged in an environment of open inquiry to exchange ideas and interpretations of human rights concepts. 4. Be better prepared to negotiate the variable applications of human rights concepts in today's globalized world.
Credits: 3.00

Information Studies Minor

About the Minor

Requirements for the Minor (15 credits)

Core Courses (6 credits)

Required Foundation Course (3 credits)

ILS 10000 - Introduction To Information Studies

Credit Hours: 3.00. This course will provide a foundation for navigating and engaging with the information-rich world. Students will define and assess information in order to address real-world situations; map their information landscape and effectively engage with information systems as well as human sources of information; develop a practice of critical and ethical information use; and conceptualize, apply, and examine the strategies for information and knowledge management, production, and dissemination. Students will examine the societal impact and implications of information and information privilege to explore the applications and consequences of information, in addition to examining data practices and methods. This will provide students with an opportunity to strengthen their research and information literacy skills, reflect in an informed and critical manner, and give them the tools to successfully make ethical, evidence-based decisions in the academic and professional context.

Learning Outcomes: 1. Identify different types of primary and secondary information formats and how they are created. 2. Analyze the societal, historical, and political significance of

information. 3. Identify and explain different types of information-seeking behaviors. 4. Demonstrate ethical attribution of sources in their own information production. 5. Critically evaluate information. 6. Synthesize information in order to make ethical and evidence-based decisions. 7. Identify interested parties, such as scholars, experts, archives, organizations, governments, and industries, who might produce or house information about a topic and then determine how to access that information. 8. Match information needs and search strategies to appropriate search tools. 9. Design and refine needs and search strategies. 10. Understand how information systems (i.e., collections of recorded information) are organized in order to access relevant information. 11. Understand how and why information is selected for long-term preservation and access. 12. Organize information in situationally relevant ways. 13. Explain different forms of information dissemination. 14. Explore different professional pathways and career options in relation to information. 15. Analyze and criticize forms of preservation. Credits: 3.00

Additional Foundation Courses - choose one of the following (3 credits)

ILS 30000 - Information, Culture, And Society

Credit Hours: 3.00. Information and information systems shape our beliefs, influence decision-making, define our collective knowledge, and are integral to being an informed, responsible, and engaged citizen in our modern world. This course will examine the intricate relationship between information and society to better understand how information ecosystems, constituted by various technologies and practices, shape and are shaped by individual identities, structures of power, and ethical considerations/human values. Using an interdisciplinary and team-based approach, students will gain essential skills to navigate their information-rich world.

Learning Outcomes: 1. Identify and apply frameworks to critically evaluate the impact of information and technology on cultural norms, values, and societal structures. 2. Explore the concept of information identity, including how individuals and communities construct their identities through information consumption and production, and critically analyze the impact of information identity on culture and society. 3. Explain the components of information ecosystems, including producers, consumers, intermediaries, and technologies, and how they interact within different cultural and societal contexts. 4. Analyze the power structures in information ecosystems, including the privileged access and control of certain individuals or groups, and explain how these power dynamics intersect with social constructs like race, gender, class, and ethnicity to shape cultural and societal dynamics. 5. Articulate ethical principles related to information ownership, privacy, censorship, transparency, and research in various contexts. Credits: 3.00

ILS 30100 - Data Foundations, Tools, And Applications

Credit Hours: 3.00. Data are everywhere. Data permeates every aspect of our lives, from journalistic reporting to workplace projects to artificial intelligence applications. This course covers the basics of the data research lifecycle, including locating and managing datasets, along with applying different methods and tools a to craft compelling stories about data. Students will learn the difference between data and information and how to transform raw data into information to be communicated to a wider audience. This course offers unique skills for students from any discipline who want to discover the world of data.

Learning Outcomes: 1. Understand the differences between data and information. 2. Navigate the basics of data management, ethics, and analysis. 3. Explore different datasets and their lifecycles. 4. Apply fundamental methods--and tools--of data location, analysis, cleaning, and visualization. 5. Create an original data story with and about data. Credits: 3.00

Selective Courses (9 credits)

Group 1 - choose any of the following (6 credits)

MGMT 17500 - Information Strategies For Management (UCC: IL)

Credit Hours: 1.00. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Organization and use of electronic and print tools will be explained through discussion, hands-on exercises, and homework assignments. Permission of instructor required.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Ability to access information and determine what different sources are needed for problem solving. 2. Develop a foundation in problem-solving to use discovered information effectively and efficiently. 3. Develop a knowledge base into the full array of information available (scholarly articles, market reports, quality websites, and other types of information). 4. Prioritize sources based on credibility and relevance. 5. Accurately cite the information you find. 6. Use retrieved information to accomplish a specific purpose and present information clearly and persuasively using a range of technology tools and media. Credits: 1.00

MGMT 11000 - Introduction To Management And Information Strategies

Credit Hours: 2.00. An introduction to and survey of the field of business. Exposure to the different functional areas of management will be stressed. Focus will be on the individual development of the student in regard not only to future professional employment but also to his or her educational planning. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Students apply their knowledge of business in a Case Competition. Required for freshman Krannert Leaders Academy students.

Learning Outcomes: 1. Learn how to manage themselves. 2. Identify various professional development options available to them. 3. Reflect upon what type of Krannert student they would like to be. 4. Learn strategies and tactics to help them transition to college life 5. Analyze and rank different main areas of business in accordance with individual interests. 6. Learn how to manage teams. 7. Reflect upon their behavior within a group. 8. Learn how to manage a small team to be efficient 9. Compete in a freshmen case competition to explore further how to practice teamwork in a case environment. 10. Use information and fundamentals of business to make decisions 11. Understand the fundamental vocabulary of business. 12. Become aware of various resources that are available to them through the library. 13. Break down problems into segments. 14. Use information to make decisions in groups. 15. Become acquainted with numerous people associated with Krannert's past, current, and future endeavors. Credits: 2.00

IDIS 20100 - Introduction To Digital Humanities

Credit Hours: 3.00. This is an interdisciplinary foundational course that combines theory and practice to teach students in and about digitally mediated culture. Accordingly, this course fosters a critical understanding of the digital and its implication for the development of a technologically driven society. Students will be introduced to digital inquiry and critical practice and explore the ways that the digital transforms knowledge acquisition and production across the humanities, social sciences and sciences. Students will engage in readings and activities that help them form substantive perspectives on the digital formulations and practice through digital technologies and tools. Students will also experiment with digital methods and tools by building a digital project. This course places an emphasis on engaged learning through online and in-class discussion, digital activities, and collaborative work.

Learning Outcomes: 1. Identify various concepts and methods in digital humanities. 2. Apply a variety of methods and tools to conduct digital humanities research. 3. Research the transformative potential of digital methods

through critical inquiry. 4. Create a process for developing and completing a digital project. Credits: 3.00

Group 2 - choose any of the following (3 credits)

AMST 30100 - Perspectives On America

Credit Hours: 3.00. Advanced interdisciplinary study of American culture, history, and society in their national and global contexts.

Credits: 3.00

CHM 51300 - Chemical Literature

Credit Hours: 1.00. Types of information in technical publications; exercises in finding, assembling, and using such data.

Credits: 1.00

BCHM 42100 - R For Molecular Biosciences

Credit Hours: 3.00. Students will acquire, assess, clean, visualize and analyze biological data sets with R. Students will be able to describe the link between complex biological phenomena and the data captured through human observation or scientific instrumentation. Students will learn how to organize data sets to optimize clarity and analytic possibilities while minimizing errors with examples drawn from the literature or biological databases. R will be taught starting with small-scale data such as drug sensitivity assays moving to genome-scale analyses such as gene expression and pathway analysis later in the course. These skills will be taught in the light of increasing data literacy and enabling reproducible research through clear documentation of data and communication of analyses. Relevant concepts from biology and statistics will be reviewed.

Learning Outcomes: 1. Understand how complex biological phenomena are captured as data. 2. Learn how to manage data science projects using tools such as R, Linux and remote computing. 3. Use R to acquire, assess, clean, organize, visualize and analyze biological data. 4. Use R to document and communicate analysis of biological data. Credits: 3.00

Program-Level Learning Outcomes

Innovation and Transformational

Change Minor

About the Minor

Requirements for the Minor (18 credits)

Required Courses (6 credits)

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

MSE 59700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. Permission of instructor required.

Credits: 0.00 to 18.00

ENGR 30500 - Fundamentals Of Innovation Theory And Practice

Credit Hours: 3.00. This course is designed to provide students with initial exposure to the fundamental patterns, mindsets, behaviors, attributes, tools, and methods employed in the innovative activity of individuals and organizations. Emphasis is placed on understanding and effectively utilizing techniques to systematically drive innovation that are drawn from the fields of business, design, problem-solving, engineering, and the social sciences. Lecture, in-class small group activities, and individual and team assignments are employed across an array of contemporary socio-technical challenges to provide students with the opportunity to apply conveyed theory and methods to rigorously structure problems, understand involved stakeholders, utilize innovation motifs and analogical reasoning to develop robust views of potential solutions spaces, tailor solution design to stakeholder context, consider the full suite of functional, social, and emotional dimensions that could influence solution prioritization, and document and systematically assess underlying solution assumptions to iterate toward a viable and sustainable forward-looking plan that could achieve target outcomes. This course counts toward, serves as a required entry course for, the College of Engineering Minor in Innovation and Transformational Change.

Learning Outcomes: 1. Develop working knowledge of established innovation forms and motifs. 2. Demonstrate ability to link innovation motifs to specific classes of problems. 3. Understand, and be able to pursue, the core aspects of an end-to-end innovation process. 4. Recognize the mental models, mindsets and behaviors of innovators. 5. Gain awareness of the approaches various forms of organizations take to systematically innovate. 6. Acquire leadership and communication skills through teamwork, oral presentations, and written deliverables. Credits: 3.00

ENGR 49001 - Breakthrough Thinking For Complex Challenges

Credit Hours: 3.00. This course helps students learn and effectively employ high-impact design principles and structured problem solving methods to address complex multi-stakeholder socio-technical challenges. Case discussions of historical and contemporary high impact solutions to complex challenges are used to introduce techniques to frame problems, structure ambiguity, intentionally design non-incremental solutions, and communicate, trial, and iterate solutions to drive adoption and multifaceted sustainability. Techniques are drawn from multiple schools of thought such as business, design, engineering, and the social sciences. Over the course of the term, multi-disciplinary student teams directly apply cumulative learning to address selected parts of a real-world complex societal challenge in close collaboration with a partner organization, in an experiential learning format. This course can be counted toward the College of Engineering Minor in Innovation and Transformational Change and the Burton D. Morgan Center for Entrepreneurship (BDMCE) Certificate in Entrepreneurship and Innovation. Permission of instructor required.

Learning Outcomes: 1. Employ rigorous issue analysis methods to develop mutually-exclusive collectively-exhaustive structured inventories of the issues involved in a major challenge. 2. Understand stakeholder motivation and interpret the funds, services, and influence exchanged in stakeholder ecosystems. 3. Understand the benefits and limitations of qualitative and quantitative methods to identify and interpret stakeholder needs. 4. Gain familiarity with habit conversion methodologies and the role they can play in design activities. 5. Recognize the importance of empathy in solution design and apply structured ideation methods to engender empathy in designers. 6. Understand patterns of innovation success and the contextual circumstances in which they apply. 7. Understand combinatorial business design methods to explore and prioritize alternative paths to achieve financial sustainability for an idea. 8. Discern the broader societal impacts of design activities. 9. Develop robust assessments of the assumptions underlying new ideas and means to test those assumptions rapidly and at low cost. 10. Recognize and define influence paths and communication methods to drive awareness, consideration, conversion, and retention of new solutions. Credits: 3.00

CE 59601 - Entrepreneurship And Business Strategy In Engineering

Credit Hours: 3.00. This course offers students the opportunity to learn and apply the core skills required to build and grow engineering- and technology-based businesses through lecture,

case discussions, and weekly activities tied to a semester-long team project. Course content includes market analysis techniques to link technology attributes to opportunity and vice versa, combinatorial business design and planning methods, strategic innovation theories, competitive analysis, methods of emergent strategy and risk mitigation, as well as examination of team building, firm influence and navigation, and organizational design principles. Emphasis throughout is placed on the implications of research and development uncertainty, long-lifecycle economics, and the management of subcontracts and multi-disciplinary teams often encountered when developing and delivering complex engineering outputs. Case studies are used to contrast the challenges faced when creating new businesses (entrepreneurial) with those encountered in attempts to grow an existing enterprise (intrapreneurial). Coursework and project activities also facilitate development of business acumen, and skill building in conceptual thinking, synthesis, and persuasive communication. This course is particularly relevant for engineering students intending to progress into managerial roles in technology or R&D driven organizations. This course can be counted toward the College of Engineering Minor in Innovation and Transformational Change and the Burton D. Morgan Center for Entrepreneurship (BDMCE) Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Articulate the similarities and differences between entrepreneurship and intrapreneurship. 2. Employ open-ended problem solving techniques to identify opportunities to grow or transform new or existing organizations and/or commercialize new technologies. 3. Utilize and interpret qualitative and quantitative issue and market analysis methods to understand and/or quantify the level of market interest in an idea. 4. Understand and apply theories of innovation to define competitive market entry strategies. 5. Employ combinatorial business design methods to explore and prioritize alternative paths to achieve financial sustainability for an idea. 6. Employ principles of risk mitigation and emergent strategy to define the assumptions underlying new ideas and explore paths to capture market value. 7. Perform and interpret financial evaluations of new ideas and businesses. 8. Interpret the tradeoffs of varying legal and management structures for a new enterprise. 9. Recognize influence paths in an organization and/or market ecosystem and tailor oral and written communications accordingly.

Credits: 3.00

CE 59801 - Breakthrough Thinking For Complex Challenges

Credit Hours: 3.00. This course helps students learn and effectively employ high-impact design principles and structured problem solving methods to address complex multi-stakeholder socio-technical challenges. Case discussions of historical and contemporary high impact solutions to complex challenges are used to introduce techniques to frame problems, structure ambiguity, intentionally design non-incremental solutions, and communicate, trial, and iterate solutions to drive adoption and multifaceted sustainability. Techniques are drawn from multiple schools of thought such as business, design, engineering, and the social sciences. Over the course of the term, multidisciplinary student teams directly apply cumulative learning to address a real-world complex societal challenge in close collaboration with a partner organization in an experiential learning format. The course can be counted toward the College of Engineering Minor in Innovation and Transformational Change and the Burton D. Morgan Center for Entrepreneurship (BDMCE) Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Employ rigorous issue analysis methods to develop mutually exclusive collectively-exhaustive structured inventories of the issues involved in a major challenge. 2. Understand stakeholder motivation and interpret the funds, services and influence exchanged in stakeholder ecosystems. 3. Understand the benefits and limitations of qualitative and quantitative methods to identify and interpret stakeholder needs. 4. Gain familiarity with habit conversation methodologies and role they can play in design activities. 5. Recognize the importance of empathy in solution design and apply structured ideation methods to engender empathy in designers. 6. Understand patterns of innovation success and the contextual circumstances in which they apply. 7. Employ combinatorial business design methods to explore and prioritize alternative paths to achieve financial sustainability for an idea. 8. Discern the broader societal impacts of design activities. 9. Develop robust assessments of the assumptions underlying new ideas and means

to test those assumptions rapidly and at low cost. 10. Recognize and define influence paths and communication methods to drive awareness, consideration, conversion and retention of new solutions. Credits: 3.00

Selective Courses (9 credits)

Design Holistic Solutions (3 credits)

CE 39800 - Introduction To Civil Engineering Systems Design

Credit Hours: 3.00. An introduction to engineering economy and systems analysis. A systematic approach to the engineering method of design and problem solving.

Credits: 3.00

EEE 25000 - Environmental, Ecological, And Engineering Systems

Credit Hours: 3.00. An overview of systems thinking and examples, and applications to environmental, ecological, and engineering systems. Students will develop an understanding of complex and global systems, along with the tools and analysis methods required to deal with them. Basic environmental and ecological science concepts are also included.

Learning Outcomes: 1. Understand the types of relationships and dynamics common in complex systems, including environmental systems, ecological systems, and engineering systems. 2. Able to apply fundamental systems tools and modeling approaches to a wide variety of engineering, environmental, and ecological problems. 3. Understand the foundational concepts and vocabulary of global environment and ecological systems. 4. Appreciate the complexity of contemporary issues related to society and EEE, including and understanding of the roles and responsibilities of stakeholders. Credits: 3.00

IE 49000 - Special Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Special topic courses and projects of contemporary importance or of special interest that are outside the scope of the standard undergraduate curriculum. Permission of instructor required.

Credits: 1.00 to 6.00

AAE 56000 - System-Of-Systems Modeling And Analysis

Credit Hours: 3.00. Introduction to features of system-of-systems problems; problem definition tools; role of complexity; network topology analysis and agent-based simulation models; architecture analysis; metrics for multi-stakeholder problems; semester team projects allow students to exercise and critique such methods for analyzing system-of-systems problems. Some background in probability and statistics (e.g. random variables, probability density and distributions, sampling methods) is expected.

Learning Outcomes: 1. Introduce to modeling and analysis techniques for system-of-systems (SoS) problems in engineering. 2. Center on students' ability for understanding, modeling, and analyzing SoS problems, which consist of multiple, heterogeneous, distributed systems embedded in networks at multiple levels that evolve over time. These problems are often large-scale and interdisciplinary, involving systems and behaviors found in diverse fields such as engineering, economics, social science, policy, etc. 3. Present developments in addressing system-of-systems problems, describes criteria, lexicon, and analysis methodology for their study, and, through semester-long team projects, allows students to explore the many unknowns that persist in this emerging field. 4. Know the major subjects covered: distinguishing traits of and behaviors of SoS problems, complexity and complex adaptive systems, agent-based modeling, modern network theory and analysis tools, modeling for decision-making, and exploratory modeling. Credits: 3.00

ME 55300 - Product And Process Design

Credit Hours: 3.00. Fundamental principles of product and process design to produce a marketable product, develop a preliminary business strategy, and construct an operational prototype. Overview of relevant principles related to product and process design. Market analysis, design parameters, manufacturing prototype plan, production process plan, and a business strategy developed in teams. Broad overview of the

entire product development process, including patents, commercialization of new technologies, and the highly interdisciplinary nature of product design through industry guest lectures. Impact of information technologies and the Internet on product design, prototyping, marketing, and customization. Product prototype is required. Design and product software information technology service-type concepts. Permission of instructor required.

Credits: 3.00

TECH 53300 - Design Theory And Technology

Credit Hours: 3.00. This course provides an overview of theories and approaches to the transdisciplinary concept of design, spanning multiple disciplines and types of design outputs with a focus on technology. Students will read the work of leading design scholars, and situate their personal approach to design practice and research based on historical and current trends in the literature. Student work will be focused on theoretical and practical outcomes, with two main learning goals: 1) building upon and critiquing theories, methods, and processes of design in their original research; and 2) generating an awareness and representation of their personal design philosophy.

Learning Outcomes: 1. Situate design as a unique epistemology and ontology. 2. Explain key aspects of design activity. 3. Identify scholars, seminal works, and theories relating to design. 4. Distinguish between every day and professional design, craft, and art. 5. Critique theoretical foundations of their own discipline using the language and constructs of design theory. 6. Identify and articulate vital components of their design activity. 7. Synthesize and prioritize their design commitments. 8. Communicate their philosophy of design in multiple discipline-appropriate ways. Credits: 3.00

TLI 52000 - Foundations Of Innovation Studies

Credit Hours: 3.00. Foundations Of Innovation Studies has been designed to provide a broad spectrum introduction to the field of innovation studies. Students will gain practical and theoretical knowledge of innovation at a variety of levels, including the individual, team, organizational, and ecosystem contexts. Students will examine innovation strategies and tensions within the innovation "Triple Helix" of industry, academia, and government through the use of case studies and individually selected research reports. Throughout the class, students will examine recent innovation efforts and present short innovation cases that align with the learning objectives of the class.

Learning Outcomes: 1. Identify innovations in multiple settings and define the key characteristics that enabled those innovations. 2. Relate multi-level innovation practices to institutional outcomes. 3. Define and contrast the conditions that foster innovative thinking and development. 4. Critically assess modern examples of innovation and suggest ways to improve outcomes. Credits: 3.00

IE 47200 - Imagine, Model, Make

Credit Hours: 3.00. This course develops a holistic view of an initial competency in engineering design by conceiving, designing, manufacturing, and optimizing a system component such as a complex structural part. Activities include hand sketching, CAD modeling, and operation of CNC machining equipment for rapid prototyping. Tolerance requirements will be verified and optimized prior to the fabrication of the part in the laboratory using rapid prototyping techniques. The focus is on the design process itself as well as the complementary roles of human creativity and computational methods and tools.

Learning Outcomes: 1. Create any object using 3D CAD design software (modeling, texturing, and animation). 2. Evaluate and optimize 3D designs for different manufacturing processes and materials. 3. Apply the principles of engineering tolerance to 3D CAD design. 4. Use rapid prototyping techniques (laser cutting, laser engraving, injection molding, and 3D printing) to manufacture 3D CAD designs. Credits: 3.00

ANTH 38400 - Designing For People: Anthropological Approaches

Credit Hours: 3.00. This course is about designing for people. You will use anthropological knowledge and skills to better understand human and technology interactions. With students from other fields, you will learn how to apply an anthropological perspective to human centered design and design with the needs of a specific user group in mind.

Learning Outcomes: 1. Identify opportunities for innovation that emerge from ethnographic studies and divergent thinking approaches to design. 2. Apply diverse team approaches to address open-ended and ill-defined design

problems. 3. Describe and apply ethical decision-making to real-world design settings. 4. Demonstrate documentation of the design process from ethnography through choosing a design idea to make, including fieldnotes, drawings and digital presentation techniques. Credits: 3.00

Motivate Change (3 credits)

CSR 33100 - Consumer Behavior

Credit Hours: 3.00. An interdisciplinary survey of consumer behavior theory focused on psychological, sociological, and cultural influences on consumer choice and use of products and services. Credit will not be given for both CSR 33100.

Credits: 3.00

CSR 34400 - Fundamentals Of Negotiations

Credit Hours: 3.00. This course is designed to be relevant to the broad spectrum of bargaining "problems" that are traditionally faced by the manager, sales personnel and financial advisors. The course explores the processes of bargaining and negotiation as social and managerial activities. Special emphasis will be given to the areas of interpersonal and interpersonal and intergroup conflict, in addition to the interpersonal influence techniques and the tactics and strategies involved with improved bargaining and negotiation. The major purpose of the course is for each student to gain insight into his or her own negotiating style and to become a more effective negotiator, as well as a more astute observer of social process. The course will involve extensive use of cases, role-plays, and related participative activities, enhanced by rigorous self-review and introspection.

Learning Outcomes: 1. Explore the major concepts and theories of the psychology of bargaining and negotiation. 2. Understand the dynamics of interpersonal and intergroup conflict and its resolution. 3. Help develop the sophistication to analyze bargaining and conflict relationships. 4. Learn about your own individual "bargaining" style. 5. Development appropriate negotiation strategies and tactics for specific situations. Credits: 3.00

PSY 27200 - Introduction To Industrial-Organizational Psychology

Credit Hours: 3.00. Survey of psychological principles and research methods relevant to organizations and industry. Topics covered include research methodology, individual differences, personnel selection, performance measurement, training, motivation, job satisfaction, emotions, work stress, and leadership.

Learning Outcomes: 1. Provide instruction and covers material to assist students in obtaining a broad perspective on the field of Psychological Sciences. Credits: 3.00

COM 21000 - Addressing Public Issues

Credit Hours: 3.00. Survey of argumentation and persuasion theories addressing contemporary public issues. Readings and discussions on cultural norms, audience reasoning, civic discourse, and constructing appeals addressing policies and practices. Preparation of appeals for public campaigns and social movements.

Learning Outcomes: 1. Describe argumentation and persuasion theories as applied to contemporary public issues. 2. Identify cultural norms, values, and beliefs of diverse communities contribute to civic discourse and audience reasoning. 3. Construct written and oral appeals addressing public issues, policies, and practices. Credits: 3.00

COM 30300 - Intercultural Communication

Credit Hours: 3.00. Study of the complex relationship between culture and communication in a variety of interpersonal, group, organizational, and computer-mediated settings. Application of theory and research to development of the knowledge, attitudes, and skills associated with intercultural communication competence.

Credits: 3.00

COM 31800 - Principles Of Persuasion

Credit Hours: 3.00. Persuasion and its effects, ranging from individual influences to societal impacts. Various perspectives and models of persuasion are examined, including classical and modern approaches. Both theoretical and pragmatic considerations are introduced.

Learning Outcomes: 1. List the major areas of study in the field of persuasion. 2. Analyze and critique persuasive techniques. 3. Apply theories of persuasion to explain everyday circumstances. Credits: 3.00

PHIL 22100 - Introduction To Philosophy Of Science (UCC: STS)

Credit Hours: 3.00. An introduction to the scope and methods of science and to theories of its historical development. Topics include scientific revolutions, theories of scientific method, the nature of scientific discovery, explanation, and the role of values in scientific change.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

TLI 31400 - Leading Innovation In Organizations

Credit Hours: 3.00. This course provides the foundation for understanding the manner in which companies capture innovation and use it to set themselves apart from competitors. Topics covered include the attributes of organizations that are successful in fostering a culture of innovation; the characteristics and roles of leaders and members in innovative organizations; managerial processes and organizational systems that facilitate the successful development, commercialization, and adoption of innovative technologies, products, and services; and methods used to measure innovation-related outcomes.

Learning Outcomes: 1. Describe the characteristics of successful innovations. 2. Explain how innovations develop from ideas to successful outcomes. 3. Analyze practices and strategies that lead to the successful development and adoption of innovations. 4. Communicate how innovation strategies help organizations succeed in competitive markets. 5. Identify managerial behaviors that foster a culture of innovation among employees. 6. Differentiate the attributes of successful leaders and employees in innovative organizations. 7. Analyze methods used to measure innovation-related outcomes. Credits: 3.00

ECON 47100 - Behavioral Economics

Credit Hours: 3.00. Students learn about human behavior in economic environments, with a strong emphasis on classroom laboratory exercises. Topics considered include behavior in a variety of markets - for example, markets with price controls, markets for financial assets and auction markets -- and behavior in social dilemmas that arise when people try to provide public goods voluntarily or when sellers try to conspire to fix prices. Students will also learn how people bargain with, trust each other, and show social preferences towards others. Decision-making and anomalies for risky and uncertain choices will also be covered.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to human behavior in various economic environments based on classroom laboratory exercises. 2. Understand the perspective provided by economic analysis in social exchanges that involve bargaining, trust, and uncertainty. 3. Identify insights experimental economics provides concerning individuals' behavior in markets. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and

practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

MGMT 42710 - Digital Marketing Strategy

Credit Hours: 3.00. Digital marketing is where marketing meets the internet, wireless devices, and other digital media. The course covers a variety of topics including online advertising, search engine optimization, participation in social media, online listening and monitoring, and web & social media analytics. Through a combination of lecture, case studies, hands-on exercises, and course projects, students develop capabilities in designing, implementing, and evaluating digital marketing strategies. Students can also gain hand-on learning experience in the course by participating in an online marketing project. In the online marketing project, each student team is given $50 to promote a chosen business or organization via online or social media platform (including search engine advertising and online display advertising).

Learning Outcomes: 1. Enable students to rethink marketing in the evolving digital age. 2. Develop capabilities in designing, implementing, and evaluating digital marketing strategies. 3. Understand major tools of digital marketing by gaining hands-on learning experience of search engine advertising tools by participating in a Google sponsored online marketing challenge competition. Credits: 3.00

COM 44400 - Introduction To Communication And Social Entrepreneurship

Credit Hours: 3.00. This class introduces students to the roles that communication and innovation play in social entrepreneurship. It explores activities of entrepreneurs, ethics and skill development at the individual and organizational levels, and communication functions in not-for-profit and social venture space.

Learning Outcomes: 1. Identify the major components of communication and social change. 2. Describe the social economy. 3. Articulate how both social entrepreneurship and social innovation benefit society. 4. Describe the difference between nonprofit organizations (NPs), social action efforts, NGOs and social enterprises, as well as traditional entrepreneurship, social entrepreneurship, social intrapreneurship and social innovation. 5. Explain how social enterprises function in different sectors and regions, of various sizes, with vastly different missions. 6. Articulate the challenges social entrepreneurs face as they startup, develop, and communicate with various publics. 7. Identify the best approaches and communication tools that can be deployed to assist in ""getting out the message"" about NP goals and objectives. Credits: 3.00

Develop Strategies for Financial Sustainability (3 credits)

POL 23500 - International Relations Among Rich And Poor Nations (UCC: BSS)

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 33900 - Sociology Of Global Development

Credit Hours: 3.00. Analysis of the causes and consequences of global development. Topics include: globalization; colonialism and decolonization; food insecurity and dependency; industrialization, poverty and inequality; migration; debt and trade; women's empowerment; global health; rights and social change; and sustainable development. This course will introduce you to the study of global development and globalization. The primary questions we will address are: What

is development? What is globalization and what is its relationship with development? How have the processes of global development produced inequalities among nations, regions, races, genders, and classes? Is there a "developing" world and a "developed" world? If so, what are their differences and how do they relate with each other? How have some developing countries become more developed than others? What roles do corporations, the state, and civil society organizations play in the processes of global development? How is global development interrelated with the physical environment, inequalities of consumption, and the environmental crisis? How do people resist the inequalities and perceived injustices of global development through global social movements? How are we interconnected economically, politically, culturally, socially, and ecologically with people all over the world? What are the possible futures of development? To address these issues, our focus will be on the developing world, our scope will be global and long-term, our methodology will be historical-comparative, and our perspective will be social-scientific and critical.

Learning Outcomes: 1. Demonstrate knowledge of the causes and consequences of global development. 2. Outline the strengths and weaknesses of the basic theoretical perspectives on global development. 3. Identify the key historical events that have led to the project of global development. 4. Apply sociological analysis to different complex and power dynamics. 5. Describe how small- and large-scale projects might contribute to or hinder sustainable development. Credits: 3.00

ENTR 31000 - Marketing And Management For New Ventures

Credit Hours: 3.00. This course builds on the foundational skills developed in ENTR 20000 (prerequisite course) to bring students through the process of launching a new venture. Students work in teams to develop and validate business models for potential startups. This occurs through experiential activities including gathering feedback from potential customers, creating forecasts, developing a go-to-market strategy, and pitching to investors. Students can choose ENTR 31000, ENTR 31500, or ENTR 32500 to serve as the second required core course for the Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Validate new business concepts and business models. 2. Conduct primary market research with prospective customers. 3. Apply the financial knowledge necessary for sales forecasting and cash flow management. 4. Evaluate methods to acquire and manage financial resources for a proposed venture. 5. Persuade investors and partners to support an entrepreneurial venture. 6. Identify and recruit talent for an entrepreneurial team. 7. Participate effectively as a team member or leader. Credits: 3.00

ENTR 20000 - Introduction To Entrepreneurship And Innovation

Credit Hours: 3.00. This course introduces students to the process of turning ideas, inventions, and innovations into new business ventures. It covers foundational entrepreneurial concepts and practices, as well as the leadership, teamwork, and communication skills required of individuals who choose to become entrepreneurs or to act entrepreneurially in established organizations. It serves as the first required core course for the Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Explain how innovation and entrepreneurship drive economic growth. 2. Use creativity and ideation techniques to identify market opportunities. 3. Evaluate the feasibility of new venture opportunities using secondary market research. 4. Interpret financial statements, profit and loss, and breakeven analysis. 5. Identify sources of funding for new ventures. 6. Understand how to prepare a proper legal and ethical foundation for a new venture. 7. Describe the role of intellectual property protection in the venture development process. 8. Define the roles of diverse individuals on an entrepreneurial team. 9. Prepare and deliver persuasive business presentations. Credits: 3.00

MGMT 48400 - Management Of Entrepreneurial Ventures

Credit Hours: 3.00. This course teaches skills required to become an entrepreneur, succeed in a start-up venture, work in venture capital, join a family business, or develop a franchise operation. Students will learn about how to identify and shape emerging market opportunities, innovate new business models, prepare and evaluate business plans, raise capital, build a skilled founding team, network for resources, and grow an initial market.

Learning Outcomes: 1. Identify and shape emerging market opportunities. 2. Innovate new business models. 3. Prepare and evaluate

business plans. 4. Raise capital. 5. Build a skilled founding team, network for resources, and grow an initial market. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

CE 59601 - Entrepreneurship And Business Strategy In Engineering

Credit Hours: 3.00. This course offers students the opportunity to learn and apply the core skills required to build and grow engineering- and technology-based businesses through lecture, case discussions, and weekly activities tied to a semester-long team project. Course content includes market analysis techniques to link technology attributes to opportunity and vice versa, combinatorial business design and planning methods, strategic innovation theories, competitive analysis, methods of emergent strategy and risk mitigation, as well as examination of team building, firm influence and navigation, and organizational design principles. Emphasis throughout is placed on the implications of research and development uncertainty, long-lifecycle economics, and the management of subcontracts and multi-disciplinary teams often encountered when developing and delivering complex engineering outputs. Case studies are used to contrast the challenges faced when creating new businesses (entrepreneurial) with those encountered in attempts to grow an existing enterprise (intrapreneurial). Coursework and project activities also facilitate development of business acumen, and skill building in conceptual thinking, synthesis, and persuasive communication. This course is particularly relevant for engineering students intending to progress into managerial roles in technology or R&D driven organizations. This course can be counted toward the College of Engineering Minor in Innovation and Transformational Change and the Burton D. Morgan Center for Entrepreneurship (BDMCE) Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Articulate the similarities and differences between entrepreneurship and intrapreneurship. 2. Employ open-ended problem solving techniques to identify opportunities to grow or transform new or existing organizations and/or commercialize new technologies. 3. Utilize and interpret qualitative and quantitative issue and market analysis methods to understand and/or quantify the level of market interest in an idea. 4. Understand and apply theories of innovation to define competitive market entry strategies. 5. Employ combinatorial business design methods to explore and prioritize alternative paths to achieve financial sustainability for an idea. 6. Employ principles of risk mitigation and emergent strategy to define the assumptions underlying new ideas and explore paths to capture market value. 7. Perform and interpret financial evaluations of new ideas and businesses. 8. Interpret the tradeoffs of varying legal and management structures for a new enterprise. 9. Recognize influence paths in an organization and/or market ecosystem and tailor oral and written communications accordingly. Credits: 3.00

Electives (3 credits)

Research Methods

AGEC 45100 - Applied Econometrics

Credit Hours: 3.00. Application of strategies to economic problems. Simple and multiple regression, dummy variables, logit analysis, time series, and forecasting.

Learning Outcomes: 1. Learn how to estimate and interpret linear regression models. 2. Learn how to test hypotheses based on regression coefficients. 3. Learn how to develop forecasts abased on regression models. Credits: 3.00

ANTH 38000 - Using Anthropology In The World

Credit Hours: 3.00. The use of anthropology in practical contexts. What anthropological practice is, how it originated, how it can be applied in non- academic and interdisciplinary contexts and careers. The main contemporary issues surrounding anthropological practice, including training, ethics, relevance, and rigor. For majors and non-majors.

Learning Outcomes: 1. Describe applied anthropology and how the field has evolved over time. 2. Analyze the major issues, controversies, and opportunities of applied anthropology. 3. Identify key methods and skills that applied anthropologists use in their careers. 4. Explain how anthropology can be applied in non-academic and interdisciplinary settings. 5. Demonstrate how to prepare for a career in anthropological practice, and/or use anthropology in their future career. Credits: 3.00

ANTH 38500 - Community Engagement In Anthropology

Credit Hours: 3.00. This course offers hands-on service learning experience with local community organizations involved with minority and immigrant populations. Part of the semester will include class meetings to explore issues and experiences of immigrant and ethnic groups in the U.S.

Learning Outcomes: 1. Explain the ethical, historical, and theoretical approaches and challenges of conducting community-engaged anthropological research. 2. Design community-engaged research projects involving ethical approaches to partnerships, methods, and data analysis. 3. Apply course concepts to real-life situations by conducting community-engaged research with a community partner. 4. Summarize final research findings to a community partner. Credits: 3.00

ANTH 41800 - Field Methods In Cultural Anthropology

Credit Hours: 1.00 to 9.00. Introduces basic field methods in Cultural Anthropology. Topics may include ethnographic or other interviewing techniques and methods of inquiry into any of the broad topics covered by Cultural Anthropology. Permission of department required.

Learning Outcomes: 1. Understanding the use of anthropological methods such as participant observation, ethnographic analysis and general interviewing techniques. Credits: 1.00 to 9.00

COM 32500 - Interviewing: Principles And Practice

Credit Hours: 3.00. Theory and practice of methods in selected interview settings: informational, employment, and persuasive. Emphasis on communication between two persons, questioning techniques, and the logical and psychological bases of interpersonal persuasion.

Credits: 3.00

SOC 38300 - Introduction To Research Methods In Sociology

Credit Hours: 3.00. Introduction to the methods of data collection and analysis and to the use of the scientific method of social research. Formulation of hypotheses and research designs for their testing. Elementary principles for the conduct of experiments, observation and interviewing, documentation, content analysis, and surveys. Relationship between social research and social theory.

Learning Outcomes: 1. Understand the conditions needed to establish social causation in social research. 2. Become familiar with major approaches to collecting data for social research. 3. Understand practices to achieve valid measurement and representative samples. Credits: 3.00

ANTH 59200 - Selected Topics In Anthropology

Credit Hours: 1.00 to 3.00. Topics vary.

Credits: 1.00 to 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

MGMT 42110 - Marketing Analytics

Credit Hours: 3.00. This course covers essential decision models and strategic metrics that form the cornerstone of marketing analytics. Using the insight gained in the course, students can predict the outcome of marketing plans to boost return on marketing investment (ROMI). The course emphasizes hands-on learning so students can immediately apply the econometric tools and techniques on a variety of marketing applications. A number of relevant topics are discussed, such as market sizing, forecasting and positioning, promotion budget allocation, and profit maximization. The final piece of this course is guiding the students on how best to craft data-driven presentations to key stakeholders through the use of an experiential learning project provided by an external client.

Learning Outcomes: 1. Enhance the student's knowledge on Advanced Modeling Techniques, such as how and when to apply Logistic Regression, Logit, Multinomial Logit, Ordinal Logit, and Tobit. 2. Showcase situations across a variety of marketing topics (pricing, sales, advertising, new product development, etc.) where analytical methods can bring greater insight to the marketing practitioner. 3. Apply the above information to a real-world consulting project and deliver not only managerial insights, but also a data-driven presentation. Credits: 3.00

Grand Challenges

General

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 34000 - International Economic Development

Credit Hours: 3.00. This course is designed to introduce students to issues and problems related to international economic development. Topics covered include a description of the current situation in developing countries and the history of growth and development. The course is grounded in the body of theory associated with economic development, but concentrates on the many practical problems such as poverty, population growth, urbanization, education and the environment. The three areas with the greatest attention are agricultural development, international trade, and policy analysis for developing countries.

Learning Outcomes: 1. Build an appreciation for the conditions and constraints of contemporary life in developing countries. 2. Have your own notions of what it means to live in poverty, the challenges of improving welfare, and the role of economics in development. 3. Demonstrate how economic principles, models, and analysis can help evaluate and refine approaches to improving human welfare in developing countries. 4. Develop the ability to analyze and write about real-world problems and solutions. The course, particularly the assignments, will allow you to acquire technical skills that will

contribute to your future professional work. Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

ME 49200 - Technology And Values

Credit Hours: 3.00. The impact of science and technology on personal and societal value systems. The special responsibility of engineers. Practical methods for using human values to guide future technological developments. Societal problems considered: warfare, energy, overpopulation, resource depletion, and environmental degradation. Interdisciplinary approaches stressed. Offered in alternate years.

Credits: 3.00

ANTH 20400 - Human Origins (UCC: SCI)

Credit Hours: 3.00. Surveys our evolutionary journey, from fossil primates to modern humans, through a review of evolutionary theory and genetics, the fossil evidence for current theories in human evolution with insight from modern non-human primates, and the influence of environmental stressors on modern human biological variation.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Define and explain the mechanisms of evolution and genetic inheritance. 2. Identify the characteristics of non-human primates and describe their behavior, ecology, and evolutionary relationships to humans. 3. Describe primate and human evolution as seen in the fossil record. 4. Explain how evolutionary processes have led to contemporary human variation and behavior. Credits: 3.00

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

ANTH 32700 - Environment And Culture

Credit Hours: 3.00. This course provides a general overview to the field of environmental anthropology, and surveys key methods, and theories that anthropologists use to interpret human-environment interactions. Topics include culture ecology, agroecology, ethnobiology, political ecology, and environmental justice.

Learning Outcomes: 1. Identify and explain the key theories in environmental anthropology. 2. Identify several cross-cultural examples of human-environment interactions. 3. Distinguish between anthropological approaches and other disciplines that study the environment. 4. Apply the theories and methods learned in this course to real world environmental issues. 5. Demonstrate professional skills in research, analysis, presentation and peer review. Credits: 3.00

HSOP 55600 - Healthcare Economics And Public Policy

Credit Hours: 3.00. Principles and theories of healthcare economics applied in analysis of the U.S. healthcare system. Perspectives are presented on the differential roles of economic analysis and policy analysis. Topics include medical care as an input to health, pharmaceutical service market, adequacy of health manpower supply, health associations and demand for legislation. Healthcare reform, the pharmaceutical industry, and social values that guide policy are explored.

Credits: 3.00

SOC 57200 - Comparative Healthcare Systems

Credit Hours: 3.00. Using cost, quality, and access to care as core concepts, this course explores healthcare in comparative context. Special topics are health and gender, the environment, epidemics, long-term care, technology, and rationing, among others.

Credits: 3.00

AMST 31000 - Invention, Innovation, And Design (UCC: HUM/STS)

Credit Hours: 3.00. This course focuses on the various ways that invention, innovation, and design shape the modern world. We will investigate the forms, uses, and meanings of a diverse set of objects, networks, and systems that influence the ways we live. We will explore these ideas through the concepts of consumption, waste, and "smart" to gain a deeper understanding of how material infrastructures influence human existence. This project-based course will use readings, discussions, and critical reflections to inform a series of hands-on projects to understand our roles as designers, creators, and users of science, technology, and material culture. Permission of instructor required.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Identify the major themes and issues prompted by the terms invention, innovation, and design. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest meaning through designed objects. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Develop the skills to analyze invention, innovation and design through the use of interdisciplinary source materials, research methodologies, and intellectual approaches. 5. Reach independent conclusions based on research-based analysis and communicate them effectively verbally, in writing, and through project-based assignments. Credits: 3.00

AMST 32500 - Sports, Technology, And Innovation (UCC: HUM/STS)

Credit Hours: 3.00. This course examines how science, technology, engineering, and data analysis reshape sports. Traditionally, sports have been understood as competitions between humans. However, recent technoscientific developments have altered this arrangement and have changed the ways sports are played. We have reached a place where heated competitions not only take place on the fields of play, but also within scientific and engineering laboratories. The fundamental question this project-based course will address is: how will new and emerging scientific knowledge and technological innovations transform sports? We will explore topics ranging from football, baseball, basketball, and soccer, to e-sports, fantasy sports, and sports analytics.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Identify the major themes and issues prompted by the terms sports, technology, and innovation. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest meaning through the play and consumption of

sports. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Develop the skills to analyze sporting invention, innovation, design, and culture through the use of interdisciplinary source materials, research methodologies, and intellectual approaches. 5. Reach independent conclusions based on research-based analysis and communicate them effectively verbally, in writing, and through project-based assignments. Credits: 3.00

ENGR 31000 - Engineering In Global Context (UCC: STS)

Credit Hours: 3.00. This course provides students with opportunities to study how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help students understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of: the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary challenges related to globalization, ethics, and sustainability. In summary, the course is designed to help students understand what it means to identify as, and/or work with, engineers. Recitation sections and/or independent projects (at the instructor's discretion) provide further opportunities for students to expand their knowledge and improve their skills in relation to course themes.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe and evaluate the specific kinds of knowledge and methods typically employed by engineers, including in comparison with other professional fields. 2. Understand the historical development of engineering education and the engineering profession in the United States. 3. Recognize how national differences are important in engineering work, including by comparing and contrasting different national cultures and styles of engineering. 4. Explain the significance of diversity in engineering education and professional practice, including by evaluating competing perspectives on diversity in different historical and sociocultural contexts. 5. Understand contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability, and interpret their significance in relation to engineering education and practice. 6. Demonstrate written communication capabilities at the level of emerging or higher (as defined by the Purdue Core Curriculum guidelines). Credits: 3.00

Education

EDPS 30102 - Social-Emotional Aspects Of Learning In Diverse Environments

Credit Hours: 3.00. The course examines the role of social emotional competence in learning and builds understandings of the inter-relationships between theory, empirical evidence, and instructional practice. It takes the perspective that experiences across different learning contexts are interrelated and may influence each other in reciprocal ways. The course views social-emotional dimensions of learning as: embedded in person-environment transactions; tied to specific instructional (formal and/or informal) contexts over time; co-evolving with cognition and language; critical to psychological, behavioral, and learning outcomes. The focus is on intersection of social-emotional competence, learning, and instruction. The course is intended to provide the foundations (theoretical and empirical) that can help those interested in formal and informal instructional environments make informed educational decisions by considering the social-emotional dimensions of learning.

Learning Outcomes: 1. Students will develop familiarity with major theoretical perspectives that inform social and emotional development in learning contexts. 2. Students will be able to define and distinguish core theoretical principles and connect them to empirical evidence and instructional practices in formal and informal learning contexts. 3. Students will be able to think critically about and evaluate the characteristics of different learning environments (and the instructional practices within these environments) and their relationship to learner development. 4. Students will develop familiarity with research methods

for studying and assessing social development in different contexts. 5. Students will be familiar with key dimensions of social-emotional competence. 6. Students will develop the ability to think critically about the dimensions of social-emotional competence and their links to learner development in different contexts. 7. Students will be familiar with the social processes that operate in key contexts. Credits: 3.00

EDST 51200 - Foundations Of Educational Policy

Credit Hours: 3.00. (EDFA 51200) An examination of the relationship between policy, values, and social change in education, including the roles of local, state, and federal government in educational policymaking and the effects of educational policies on societal issues such as equity, cultural diversity, and opportunity.

Learning Outcomes: 1. Understand the policy-making process at different levels of government. 2. Understand underlying values and theories of education behind different policy initiatives. 3. Understand the relationship between educational policy and social issues. Credits: 3.00

EDST 51400 - Economics Of Education

Credit Hours: 3.00. A general course in financing education, including current economic theories, sources of revenues, and trends in fiscal structure and operations in education.

Learning Outcomes: 1. Develop and understand the goals of public education, why states invest in education, and the legal basis for financing public education. 2. Develop and understand the sources of revenues for public education and the approaches used to raise and distribute funds for school district operations. 3. Develop and understand the concepts of equity and adequacy and how these ideas are reflected in current state education policy and educational leadership practices. 4. Develop and understand budgeting strategies and procedures used by educational leaders to influence student achievement outcomes and realize other school-based goals. Credits: 3.00

EDCI 56500 - Principles Of Adult Education

Credit Hours: 3.00. (ASEC 56500) Principles of adult education applied to helping adults learn, evaluating their performance, and determining their needs. Examines history, philosophy, and research of adult education. Explores techniques required in design and delivery of instruction for adults.

Learning Outcomes: 1. Examine principles and techniques for educating adults, including the history, philosophy, and research field. 2. Develop an individual philosophy of continuing and adult education for a wide variety of situations. 3. Apply principles, techniques, philosophy and research in development and design of adult education programs. Credits: 3.00

Environment

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in

forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

HIST 39400 - Environmental History Of The United States (UCC: HUM)

Credit Hours: 3.00. This is a mid-level survey designed to provide students of environmental science with historical background and students of history with the unique perspective of environmental history.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn

fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

POL 32300 - Comparative Environmental Policy

Credit Hours: 3.00. Comparative study of environmental policy development and processes in industrialized democracies, former and current communist states, and developing nations.

Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 42300 - International Environmental Policy

Credit Hours: 3.00. Environmental policy development in the international arena, with attention to international law, international organizations, and transboundary environmental problems.

Credits: 3.00

BIOL 48300 - Great Issues: Environmental And Conservation Biology

Credit Hours: 3.00. Concerned with the application of ecological principles to environmental issues, the course introduces fundamental ecology, emphasizing the interplay of theoretical models, natural history, and experimentation. New research developments are stressed, with the outlook for application to environmental management and restoration. Whole-biosphere issues, such as the loss of biological diversity, frame a focus at the population level to understand local and global extinction and community stability. In-depth case studies of endangered ecosystems (both temperate and tropical), with computer modeling, field trips, and discussions of policy formulation, demonstrate the range of tools and information necessary to accomplish coexistence of humans with the rest of nature.

Credits: 3.00

EAPS 32700 - Climate, Science And Society

Credit Hours: 3.00. This course will examine the broad problems of climate change by examining the relationship between science, politics, and society by using climate change as a lens through which to examine larger issues. Students will be encouraged to identify similar themes in their own experiences as emerging scientists, engineers and global leaders. Adequate preparation to write essays and perform basic arithmetic calculations needed. Prior knowledge of climate change science is not necessary.

Learning Outcomes: 1. Able to think logically and creatively. 2. Able to apply knowledge to practical situations. 3. Able to respond flexibly as situation changes. 4. Understand ethical issues, particularly in Science. 5. Appreciate diverse experiences, thoughts, backgrounds. 6. Understand and appreciate Science in the world environment. Credits: 3.00

AGEC 52500 - Environmental Policy Analysis

Credit Hours: 3.00. Designed to assist in understanding how environmental information and knowledge are produced, disseminated, and utilized in a variety of institutional contexts. Readings are selected to promote discussion and interaction concerning alternative mechanisms for protecting environmental resources. Prerequisite: introductory microeconomics course suggested.

Credits: 3.00

EAPS 36000 - Great Issues In Climate Change And Society

Credit Hours: 3.00. This course develops basic skills and knowledge critical to analyze issues of energy use, climate change, and sustainability that incorporate both societal and scientific perspectives. The goal of this course is not to arrive at particular consensus solutions to the problems associated with these issues but instead to foster an informed (through information literacy) debate that will ultimately be waged as solutions are sought. Working in teams the students work throughout the semester to complete a capstone teamwork project and a group presentation. Counts for Great Issues course in College of Science.

Learning Outcomes: 1. Understand/interpret the complex issues related to energy (production and use) policy and climate change. 2. Recognize the basic ethical, technological, political, and economic issues influencing the production of renewable and fossil energy. 3.

Identify, distinguish, and use credible/factual information sources to establish a defensible viewpoint on these issues. Credits: 3.00

FNR 30200 - Global Sustainability Issues

Credit Hours: 2.00. This course explores global sustainability issues in natural resources with emphasis on forestry, wood products manufacturing, conservation, water management, energy and their impact on the targeted geographic location (such as Central America, Eastern Europe) and the rest of the world. The purpose of this course is to present students, regardless of their disciplinary background, with an overview of the interdisciplinary aspects of sustainable natural resource management. This colloquium course will examine global sustainable natural resources and related issues (including population, poverty, pollution, climate change, deforestation, invasive species, urbanization, habitat loss, cultural traditions, water management, energy, education, technology, and international collaboration).

Learning Outcomes: 1. Appraise the impact of natural resources in developing and developed economies. 2. Understand the most important factors that threaten natural resources in developing and developed economies. 3. Understand how developments in natural resources in foreign countries relate to similar developments in Indiana and the United States. 4. Comprehend the complexity of global natural resource issues and the role of sustainable natural resource management in sustainable development. Credits: 2.00

HTM 37000 - Sustainable Tourism And Responsible Travel

Credit Hours: 3.00. This course will examine issues associated with sustainability in the hospitality and tourism industry. It will examine how principles of sustainable development and the triple bottom line (economic, social and environmental) are applied to hospitality and tourism. The course will address sustainability across a variety of tourism sectors including destination management, lodging, restaurants and meetings. The course will also examine consumer issues associated with sustainability.

Learning Outcomes: 1. Define sustainability and describe its applications in the tourism and hospitality system. 2. Explain the relationship between tourism and the UN Sustainable Development Goals/Grand Challenges. 3. Describe the components of sustainability programs in tourism and hospitality organizations. 4. Analyze sustainability programs in various tourism sectors to determine their effectiveness in achieving social and environmental goals. 5. Apply and evaluate environmental performance programs in the hospitality industry. 6. Explain the major consumer issues associated with sustainability in the tourism and hospitality industry. 7. Identify and explain principles of ethics as applied to the tourism industry. 8. Identify career opportunities associated with sustainability in tourism and hospitality. Credits: 3.00

Energy

ME 44000 - Automotive Prime Movers: Green Engines And Clean Fuel

Credit Hours: 3.00. Internal combustion engines (ICE), hybrid engines (HE), fuel-cell engines (FCE), and alternative/renewable fuels. ICEs topics- engines with advanced combustion systems such as clean diesels, direct-injection spark-ignition engines (DISI), and low-temperature combustion (LTC) compression-ignition. HE topics- different components of hybrid engines and the powertrain design. FCE topics- fundamentals of fuel cells and automotive applications. Clean fuel topics- biofuels, hydrogen, and natural gas, as well as, other cleaner fossil fuels for automotive applications. Well-to-wheel energy and cost analysis of prime mover designs/fuels.

Learning Outcomes: 1. Relate processes in automotive prime movers to engineering fundamentals. 2. Study low-carbon emitting, and LEV, ULEV, SULEV, PZEV, and ZEV prime mover designs. 3. Study prime mover designs that are alternative to conventional combustion engines. 4. Study cleaner alternatives to conventional fossil fuels. 5. Carry out analysis of prime mover designs and fuel alternatives to identify cost and energy tradeoffs. Credits: 3.00

EAPS 30100 - Oil!

Credit Hours: 3.00. Petroleum is a common thread that interweaves Geoscience with the Political-Economic history of the 20th century. Its dominance in current society has major

repercussions on our current and future society and environment. The unequal distribution of petroleum and natural gas, coupled with innovative geologists and engineers, has set the stage for the modern geo-political world. This course is a unique survey into the multitude of aspects of petroleum -- from its formation to "resource wars".

Learning Outcomes: 1. Enlighten and enable self-discovery of this major past, present and future issue in human civilization. 2. Understand the selected major oil-gas basins. 3. Learn Technical writing. 4. Examine case examples of past unethical corporate or private behaviors and how these were eventually resolved or remain a concern (e.g., monopoly building and later bread-up of Standard Oil; Ecuador pollution cases;; CIA involvement with Iranian government overthrow in 1950s to restore oil company monopoly; corruption in African and other ""oil-cursed"" nations; atmospheric pollution of cities; major oil spills; etc.). 5. Learn exactly how a hydrogen-fuel car would function, including engineering costs; or exactly how ozone is produced in car-dominated cities in the summer. This multidisciplinary course also includes aspect of social change, role of oil-gas in national politics, climate effects, and the petrochemical industry products. 6. Understand petroleum basins and the importance of hydrocarbons in history/society/climate is essential. This OIL! Course is unique in placing the geological aspects into the broader context of social, international and environmental concerns. Credits: 3.00

EAPS 37500 - Great Issues - Fossil Fuels, Energy And Society

Credit Hours: 3.00. Prosperity of the 20th century was based on abundant and cheap energy; during the 21st century we will be faced with difficult challenges. Our society will face higher energy prices, decline of petroleum based fuels supplies, increased environmental effects of fossil fuels usage, and the challenge of solving the technological problems of developing alternative fuels. This course will review the structure, economics, and geopolitical issues faced by fossil fuel industries and the mitigation strategies that will be needed to change to low fossil fuel use society based on low polluting renewable energy sources. Counts for Great Issues course in College of Science for Juniors and Seniors.

Credits: 3.00

Food

AGEC 25000 - Economic Geography Of World Food And Resources (UCC: BSS)

Credit Hours: 3.00. A study of the important issues and economic decisions about worldwide resource use for food and fiber production as influenced by geography, climate, history, social institutions, national self-interest, and the environment.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 41000 - Agricultural Policy

Credit Hours: 3.00. Economic analysis of U.S. food and agricultural policy; current and past farm legislation; international trade; agricultural policies in selected countries; domestic and foreign food assistance; structural change; agricultural research policy; macroeconomic linkages with the agricultural sector; and emerging environmental policy issues, land and water use.

Learning Outcomes: 1. Understand the role of government interventions in the farm and food system. 2. Apply economic principles to the analysis of government interventions. 3. Delineate between economic and values-based arguments in assessment of policies. 4. Understand the breadth, complexity and importance of 'Agricultural Policy'. Credits: 3.00

AGEC 52800 - Global Change And The Challenge Of Sustainably Feeding A Growing Planet

Credit Hours: 3.00. This course investigates the major drivers of global agricultural and environmental change associated with the global farm and food system. This includes demography, income growth, biofuels, climate change, environmental and ecosystem services, livestock consumption, food waste and land use change. Weekly modules include a guest lecture, student led discussion of readings and discussion of lab assignments undertaken using the SIMPLE model of global agriculture, environment and food security. The class culminates with a course project which is presented to the class and written up in a term paper.

Learning Outcomes: 1. Gain exposure to different disciplines and their approaches to analyzing global change. 2. Master the basic

economic concepts of demand and supply in the context of the global food economy. 3. Become proficient in undertaking economic analysis using the SIMPLE model. 4. Gain a knowledge of the role which economic analysis plays in analyzing long run sustainability of the global food system. Credits: 3.00

Health

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

BIOL 31200 - Great Issues Genomics And Society

Credit Hours: 3.00. The course will revolve around genomics, the science and technology involved in determining the sequence of the entire DNA complement in an organism. Almost everyone has heard of the human genome project, but fewer are aware of the spectacular technical progress in this field and the fact that many thousands of genomes have been sequenced. Until recently, most of these have been microorganisms, but technological and computational progress has made it progressively easier and cheaper to sequence the genomes of higher organisms. This field may have more of an impact on your future lives than almost any other field of the life sciences - mostly because it touches on all areas of study. The course will focus on the impact that genomes will have in selected areas. It will begin with a basic understanding of the science and technology that gave rise to our current capabilities in sequencing and the fact that technology continues to provide greater capacity and cheaper prices. You will soon see that every field in the College of Science is well represented in the science and technology. We will then go on to see how genomics influences many topics that affect our daily lives and can possibly provide answers to some critical questions (or at least pose better questions): What is the basis of personalized medicine? What does genomics tell us about the genealogy of mankind? What impact will genomics have on our future food supply and our ability to feed a population of 9 billion people? What is the human microbiome and what does that mean to me? Similarly, what is the gut microbiome, the mouth microbiome, etc? What impact will genomics have on the development of alternative energy sources, especially biofuels? In every area, we will discuss the scientific challenges, but also the ethical and societal implications. In most cases, there is no one right answer, but a series of choices that can be guided by ethical considerations.

Learning Outcomes: 1. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. Credits: 3.00

PUBH 51100 - Foundations Of Global Health

Credit Hours: 3.00. Global disparities in the health and well-being of diverse populations, across and within borders, has never been greater. Profound and rapid changes in demographics, from population growth to urbanization, along with unprecedented shifts in patterns of disease and risks, are coupled with game-changing advances in knowledge, technology, and innovation. This course will introduce students to current challenges and efforts at solutions in global health, with a focus on low- and middle-income countries. It will provide an interdisciplinary overview of topics that include measures of health and disease, communicable diseases such as HIV/AIDS and malaria, non-communicable diseases such as diabetes and cardiovascular disease, women's health, maternal and child health, food systems and nutrition, health systems, and health care delivery. In addition to lectures, the course will include interactive discussions of case studies and specific country examples, aimed at immersing students in the debates and challenges facing global health leaders and decision makers.

Learning Outcomes: 1. Identify major shifts and trends in health patterns, burden of disease, population dynamics, and globalization. 2. Understand the historical context of global health and current evolving agendas. 3. Analyze diverse global health challenges, incorporating ethical, environmental, political, historical, and societal perspectives, with a focus on low- and middle-income countries. 4. Evaluate global health research to assess how conclusions arise from evidence and analysis. 5. Formulate evidence-based arguments for/against diverse global health policies or interventions. Credits:

3.00

Notes:

Insect Biology Minor

Requirements for the Minor (15 credits)

Required Courses (3 credits)

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

Selective Courses (12 credits)

ENTM 10500 - Insects: Friend And Foe (UCC: SCI/STS)

Credit Hours: 3.00. A one-semester course for nonscience students who want to know more about insects - the most numerous organisms on earth. An introduction to insects and their relationship with humankind, including interesting aspects of insect biology; insects in music, decoration, history; use of insects in teaching at the elementary school level; their use in art, photography, and drawing; insects as human food.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 3.00

ENTM 21000 - Introduction To Insect Behavior (UCC: SCI)

Credit Hours: 3.00. Description and introductory analysis of innate and learned insect behavior, including basic orientations and movements, behavioral periodicity, communication, chemical and structural defenses, host selection and feeding, reproduction, and insect societies. General biology and introductory entomology are desirable, but not essential.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

ENTM 31100 - Insect Ecology

Credit Hours: 3.00. Insect ecology investigates the fundamental concepts of ecology as they relate to insects, including insect interactions, other insects and their environment. Topics include population and community ecology, plant-insect interactions, insect biodiversity and biogeography, and theoretical and applied ecology. Examples from current entomological and ecological studies are used. Completion of college biology or an introductory course in entomology is recommended.

Learning Outcomes: 1. Comprehend ecological principles at different scales of biological organization, from the individual to the population to the community to the ecosystem. 2. Understand the mechanisms that mediate interactions of insects with their biotic and abiotic environments. 3. Appreciate the importance of insects as stabilizing and destabilizing components of food webs. 4. Recognize the value and application of insect ecology n solving real-world problems. 5. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. Credits: 3.00

ENTM 33500 - Introduction To Insect Identification

Credit Hours: 4.00. This class is designed for learning more about the collection and identification of adult insects. Emphasis will be placed on collection and sampling techniques, the preparation of specimens for future study, and identification.

Learning Outcomes: 1. Use keys and other published resources to identify unknown insects to the correct family and by-sight identification. 2. Collect a diversity of insects and related arthropods and to prepare specimens to professional standards. 3. State the scientific names, critical taxonomic characters, natural history and biology, unique or interesting behaviors, ecological role, taxonomic relationships and impacts on human activities of selected families. Credits: 4.00

ENTM 52500 - Medical And Veterinary Entomology

Credit Hours: 3.00. Introduction to the biology and control of arthropods of medical and veterinary importance, and coverage of the natural history and abatement of selected arthropod-related diseases, including arboviral encephalitis, filariasis, leishmaniasis, Lyme disease, malaria, plague, spotted fever, trypanosomiasis, and myasis. Offered in odd-numbered years.

Credits: 3.00

ENTM 25300 - Insect Physiology And Biochemistry

Credit Hours: 4.00. Introductory course in insect cell biology, biochemistry, and physiology including structures and functions of insect internal and external tissues and organs. A year of college biology or equivalent knowledge is expected.

Learning Outcomes: 1. Understand (i) the structure and functions of insect cells, the major internal organ systems of insects, the insect integument, and homeostatic mechanisms; (ii) insect development and reproduction, and their endocrine control; and (iii) the neural mechanisms that underlie the interactions of insects with their environment and coordinated behavior. 2. Understand the physical and chemical principles underpinning animal physiology. 3. Understand the dependence of function on structure in physiology and biochemistry. 4. Acquire familiarity with commonly used experimental procedures for research in insect physiology and biochemistry. Credits: 4.00

ENTM 31200 - Plant-Insect Chemical Ecology

Credit Hours: 3.00. An overview of the structure and function of natural and synthetic chemical products in insect ecology. One year of college biology. One year of college chemistry strongly recommended.

Learning Outcomes: 1. Appreciate the history and scope of chemical ecology as a discipline. 2. Understand the role of chemistry in the biology/ecology of plants and animals. 3. Appreciate how chemical products influence processes at various levels of biological integration - from genes to ecosystems. 4. Evaluate and critique primary literature on chemical ecology. 5. Recognize the application of insect chemical ecology in solving grand challenges in entomology. Credits: 3.00

ENTM 35300 - Insecticides And Environment

Credit Hours: 3.00. Insecticides, their interactions with biological organisms and the environment, regulatory policies, environmental and human health outcomes, and current controversies. A year of college biology and college chemistry or equivalent knowledge is expected.

Learning Outcomes: 1. Communicate to the public about insecticide issues including risk, best practices for management and use. 2. Apply principles of toxicology including dose response, target sites, differential toxicity, and resistance. 3. Evaluate environmental hazards, their management and mitigation. 4. Interpret and implement insecticide label instructions. 5. Explain how Risk Assessment and Management is implemented in the U.S. to protect human health and safety balance economic and environmental risks. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and

ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 32820 - Medico-Legal Entomology

Credit Hours: 3.00. This course explores the main topics covered under medico-legal entomology (MLE). Specifically, the course will focus on the role that insects play in abuse, neglect, and death investigations. Students will experience rearing and identifying the major forensically important insect groups associated with medico-legal investigations. Finally, students will gain an appreciation of the scope of MLE through the analysis of two mock cases.

Learning Outcomes: 1. Establish an understanding of how insects are in used in legal investigations. 2. Define and defend the types of insect evidence presented in abuse & neglect cases. 3. Define and defend the types of insect evidence presented in death investigations. 4. Explain how insects are used to answer various questions in legal investigations. 5. Collect, rear and identify forensically important specimens. 6. Identify forensically important specimens down to family, genus or species level. 7. Demonstrate and explain proper collection techniques from decomposing remains. 8. Demonstrate and explain proper rearing techniques for forensically important insects. 9. Experience medico-legal entomology. 10. Compare and explain the life cycle of forensically important flies. 11. Analyze two medico-legal scenes. 12. Compose forensic entomology case reports. Credits: 3.00

Intellectual Property Law for Engineers Minor

A minor in Intellectual Property Law is available to students in the College of Engineering.

Requirements for the Minor (19 credits)

Required Courses (13 credits)

IDE 49500 - Special Topics In Interdisciplinary Engineering

Credit Hours: 1.00 to 4.00. Primarily designed for interdisciplinary engineering subject areas for which there is no specific course offered, but for which there is sufficient student interest to justify teaching a specialized course on a trial basis. May be repeated for credit as long as the topic being taught is not repeated.

Credits: 1.00 to 4.00

ME 49200 - Technology And Values

Credit Hours: 3.00. The impact of science and technology on personal and societal value systems. The special responsibility of engineers. Practical methods for using human values to guide future technological developments. Societal problems considered: warfare, energy, overpopulation, resource depletion, and environmental degradation. Interdisciplinary approaches stressed. Offered in alternate years.

Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and

industries. Credits: 3.00

POL 42800 - The Politics Of Regulation

Credit Hours: 3.00. Politics and policies of federal and state regulatory agencies. Explanations of regulatory agency behavior, arguments for and against government regulation, and alternatives to government regulation.

Credits: 3.00

ENTR 20000 - Introduction To Entrepreneurship And Innovation

Credit Hours: 3.00. This course introduces students to the process of turning ideas, inventions, and innovations into new business ventures. It covers foundational entrepreneurial concepts and practices, as well as the leadership, teamwork, and communication skills required of individuals who choose to become entrepreneurs or to act entrepreneurially in established organizations. It serves as the first required core course for the Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Explain how innovation and entrepreneurship drive economic growth. 2. Use creativity and ideation techniques to identify market opportunities. 3. Evaluate the feasibility of new venture opportunities using secondary market research. 4. Interpret financial statements, profit and loss, and breakeven analysis. 5. Identify sources of funding for new ventures. 6. Understand how to prepare a proper legal and ethical foundation for a new venture. 7. Describe the role of intellectual property protection in the venture development process. 8. Define the roles of diverse individuals on an entrepreneurial team. 9. Prepare and deliver persuasive business presentations. Credits: 3.00

ME 55400 - Intellectual Property For Engineers

Credit Hours: 1.00. Survey of the law of patents, trade secrets, trademarks, and copyrights, with special emphasis on the process of defining inventions broadly and diversely. Obtaining, registering, licensing, and litigation of intellectual property.

Credits: 1.00

PHIL 20700 - Ethics For Technology, Engineering, And Design (UCC: STS)

Credit Hours: 3.00. This course is designed to increase your understanding of professional and ethical responsibilities in national, international, and cross-cultural environments, helping you to anticipate, understand, and navigate issues that will likely arise in your working life as an engineer or designer. The focus of the course is on developing the ability to apply a general ethical framework to new and unique situations, including those arising from the global cultural context of modern engineering. The course covers how this ethical framework should be constituted, and provides practice in applying this a framework to specific, concrete cases. Together, these components work toward your development as a better engineer and a more responsible global citizen. The readings, case studies, and exercises are geared towards the development of a well-researched original case study that you will present to the class, which is informed by your past experiences and future aspirations related to engineering.
University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Develop an understanding of professional and ethical responsibilities in technology, engineering, and design (TED). 2. Understand and assess ethical problems in TED contexts. 3. Analyze and assess the impact of engineering solutions in global, economic, environmental, and societal contexts. 4. Understand the effects of technological engineering and design solutions in different cultural environments. 5. Apply abstract ethical frameworks to concrete situations. 6. Develop critical thinking skills. 7. Develop and deploy analytical skills in ethical contexts. 8. Develop skills in analytical writing and in clear and precise oral communication. Credits: 3.00

Elective Courses (6 credits)

Law (3 credits)

POL 10100 - American Government And Politics (UCC: BSS)

Credit Hours: 3.00. A study of the nature of democratic government, the U.S. Constitution, federalism, civil rights, political dynamics, the presidency, Congress, and the judiciary. CTL:ISH 1002 American Government

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify the basic theories and concepts used in the study of American politics. 2. Explain the institutions, processes, and values that underpin American political behavior and events. 3. Apply the knowledge gained to function and perform as an educated citizen. Credits: 3.00

POL 46100 - Constitutional Law I

Credit Hours: 3.00. A survey of selected areas of constitutional law, considering the political and social influences as well as the doctrinal forces that have produced these policies and interpretations.

Credits: 3.00

POL 46200 - Constitutional Law II

Credit Hours: 3.00. An examination of the development of individual rights and civil liberties through constitutional law and interpretation of the Bill of Rights and Civil War Amendments. Both doctrinal and political pressures will be discussed to illustrate the evolution of these rights.

Credits: 3.00

Technical (3 credits)

CEM 48500 - Legal Aspects Of Construction Engineering

Credit Hours: 3.00. This course will cover legal principles and landmark cases relevant to civil and construction engineering. Specific subjects covered include contracts, torts, agency, professional liability, labor laws, insurance, expert testimony, arbitration, patents and copyrights, sureties and ethics.

Learning Outcomes: 1. Read, comprehend and interpret construction contract plans and specifications for lock and dam facilities and other inland navigation structures. Through detailed study of project plans and specs as well as construction photos, students will be taken through the process of building these facilities from planning through construction. 2. Understand how a lock and dam facility functions. 3. Identify various components of lock and dam structures. 4. Understand various types of marine equipment necessary to construct a navigation facility in the dry or wet. Credits: 3.00

ECE 38200 - Feedback System Analysis And Design

Credit Hours: 3.00. In this course, classical concepts of feedback system analysis and associated compensation techniques are presented. In particular, the root locus, Bode diagram, and Nyquist criterion are used as determinants of stability.

Credits: 3.00

ECE 48300 - Digital Control Systems Analysis And Design

Credit Hours: 3.00. The course introduces feedback computer controlled systems, the components of digital control systems, and system models on the z-domain (z-transfer functions) and on the time domain (state variable representations.) The objectives for system design and evaluation of system performance are considered. Various discrete-time controllers are designed including PID-controllers, state and output feedback controllers, and reconstruction of states using observers. The systems with the designated controllers are tested by simulations.

Learning Outcomes: 1. Understand digital feedback control systems. 2. Know constructing discrete-time mathematical model system. 3, Know the analyzing system behavior using discrete-time model and evaluating the system performance. 4. Know to use controller design techniques to make the system behavior satisfy specified design objectives. 5. Evaluate and test the system performance using digital simulations. Credits: 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-

aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

ME 36300 - Principles And Practices Of Manufacturing Processes

Credit Hours: 3.00. Manufacturing processes for engineering materials, both metallic and non-metallic. Fundamentals of manufacturing processes with a "hands-on" laboratory sequence. Analysis and design of processes for various engineering materials and their link to engineering design. Hands-on experiences through laboratory experiments and demonstrations. Not open to students with credit in IE 37000.

Credits: 3.00

ME 44400 - Computer-Aided Design And Prototyping

Credit Hours: 3.00. Introduction to advanced computer-aided design (CAD) for product design, modeling, and prototyping. Individual use and team-based environment to design and prototype a functional and marketable product. Projects include use of the advanced design tools to produce a working prototype that is manufacturable. Application to design, manufacturing, and analysis.

Credits: 3.00

ME 47500 - Automatic Control Systems

Credit Hours: 3.00. Controller design in frequency domain with introduction to digital systems and control.

Credits: 3.00

ME 55300 - Product And Process Design

Credit Hours: 3.00. Fundamental principles of product and process design to produce a marketable product, develop a preliminary business strategy, and construct an operational prototype. Overview of relevant principles related to product and process design. Market analysis, design parameters, manufacturing prototype plan, production process plan, and a business strategy developed in teams. Broad overview of the entire product development process, including patents, commercialization of new technologies, and the highly interdisciplinary nature of product design through industry guest lectures. Impact of information technologies and the Internet on product design, prototyping, marketing, and customization. Product prototype is required. Design and product software information technology service-type concepts. Permission of instructor required.

Credits: 3.00

ME 55700 - Design For Manufacturability

Credit Hours: 3.00. Introduction to manufacturing concerns, such as efficient design, producibility, and quality, which must be considered early in the engineering design process. Topics include the product development cycle, manufacturing process selection, tolerancing, quality function deployment (QFD), design for assembly (DFA), quality control techniques, Taguchi's robust design methodology, life cycle engineering, and reliability. Laboratory projects in the area of tolerancing, assembly, and manufacturability are included along with a project from industry in which the students can disassemble, analyze, and redesign a product while obtaining feedback from industry concerning manufacturability.

Credits: 3.00

ME 57000 - Machine Design

Credit Hours: 3.00. Analysis of stresses and deflections due to complicated loading. Investigation of specific design problems through application of theory of elasticity, failure criteria, energy approach, and numerical methods. Individual design project.

Learning Outcomes: 1. Understand complicated 3-D state of stress for both determinate and indeterminate problems. 2. Learn advance theory of elasticity. 3. Gain fundamental knowledge of bodies in contact. 4. Solution methods for torsion of prismatic section and bending of asymmetric cross section. 5. Apply energy method to solve problems for linear and nonlinear materials. Credits: 3.00

ME 57100 - Reliability Based Design

Credit Hours: 3.00. Basic concepts of probability and random variables. Time-dependent reliability models. Strength-based reliability and interference theory. Weakest-link and fail-safe systems. Extremal distributions. Monte Carlo methods. Maintainability and availability. Fault tree analysis. Quality control and reliability. Offered in alternate years.

Learning Outcomes: 1. Enable students to understand the importance of reliability during the design of engineered products. 2. Learn common probability distributions and fit probability distributions to experimentally obtained failure data. 3. Learn to describe and manipulate expectation and variance of continuous functions. 4. Understand principles

of probabilistic design of engineered products. 5. Carryout reliability simulations of complex systems using Monte Carlo and first order reliability methods. 6. Understand important failure concerns in mechanical and electronic systems. Credits: 3.00

ME 57200 - Analysis And Design Of Robotic Manipulators

Credit Hours: 3.00. Introduction to the analysis and design of robotic manipulators. Topics include: kinematic configurations, forward and inverse position solution, velocity and acceleration, path planning, workspace analysis, force and torque solutions, rigid body dynamics, motors and actuators, robot design, sensors and controls, computer simulation, and graphical animation.

Learning Outcomes: 1. Analysis of manipulator motion and forces. 2. Manipulator design including actuator, drive, and sensor issues. 3. Computer simulation to predict motion and forces. Credits: 3.00

ME 57500 - Theory And Design Of Control Systems

Credit Hours: 3.00. Covers the analysis and design of control systems from both a classical and modern viewpoint, with emphasis on design of controllers. Classical control design is reviewed, including both root locus and Bode domain design methodologies. The state space representation is introduced, along with notions of stability, controllability, and observability. State feedback controllers for pole placement and state observers are discussed with emphasis in their frequency domain implications.

Credits: 3.00

ME 57600 - Computer Control Of Manufacturing Processes

Credit Hours: 3.00. Fundamental elements for manufacturing process control are presented with advanced control theories, modeling and analysis of actuators, controller architecture, interfacing and programming. Emphasis is on computer integrated manufacturing with computer numerical control of machine tools, automation via programmable logic controllers, motion control, process control examples, and manufacturing process monitoring. Hands-on experience is attained through laboratory experiments with state-of-the-art equipment.

Credits: 3.00

ME 58600 - Microprocessors In Electromechanical Systems

Credit Hours: 3.00. Architecture of microcomputers; operating systems, logic functions, logic circuit design; I/O structure and interfacing; assembly language, manual assembly; software and hardware interrupts; data acquisition, serial and parallel communications; the role of high-level languages. Laboratory experiments on applications to electrical, mechanical, and thermofluid systems.

Credits: 3.00

ME 58800 - Mechatronics - Integrated Design Of Electro-Mechanical Systems

Credit Hours: 3.00. Electronic and interfacing techniques for design and control of electro-mechanical systems. Basic digital and analog design with applications to electro-mechanical interfacing via hands-on laboratory experience. Commonly used actuators and sensors and corresponding interfacing techniques. Realistic and integrated product development experience provided through a comprehensive final project where working prototypes are built to defined specifications.

Credits: 3.00

ME 35400 - Machine Design

Credit Hours: 3.00. Design, analysis, and selection of machine components for fluctuating loading. Application of design fundamentals to mechanical components and integration of components to form systems. Open-ended design projects reinforce the design process.

Learning Outcomes: 1. Apply Statics, Dynamics, and Strength of Materials to the realization of machine components. 2. Understand fatigue failure mechanisms 3. Apply fatigue failure theories to create reliable mechanical components. 4. Select standard machine components and materials. 5. Enhance problem-solving and communication skills through design projects. Credits: 3.00

Notes

International Studies in Agriculture Minor

About the Program

Requirements for the Minor (15-27 credits)

Requirements - Complete Five (5) Learning Outcomes:

Learning Outcome 1 - Projects

Option 1: Research Project

Option 2: Capstone Project

Option 3: International Agriculture Project

Learning Outcome 2 - World Language

Option 1 - World Language Aptitude

Option 1a - World Language Advanced Coursework (12 credits)

Option 1b - Study Abroad Course taught in Foreign Language

Option 1c - World Language Proficiency Exam

Option 2 - Intercultural Development Inventory (IDI)

Learning Outcome 3 - International Engagement

Option 1 - Study Abroad Experience

Option 2 - Campus Engagement with International Group

Learning Outcome 4 - International Agriculture Courses (15 credits)

Learning Outcome 5 - Reflective Paper/Video

Course Examples:

Examples of College of Agriculture International-related Courses

AGEC 25000 - Economic Geography Of World Food And Resources (UCC: BSS)

Credit Hours: 3.00. A study of the important issues and economic decisions about worldwide resource use for food and fiber production as influenced by geography, climate, history, social institutions, national self-interest, and the environment.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 34000 - International Economic Development

Credit Hours: 3.00. This course is designed to introduce students to issues and problems related to international economic development. Topics covered include a description of the current situation in developing countries and the history of growth and development. The course is grounded in the body of theory associated with economic development, but concentrates on the many practical problems such as poverty, population growth, urbanization, education and the environment. The three areas with the greatest attention are agricultural development, international trade, and policy analysis for developing countries.

Learning Outcomes: 1. Build an appreciation for the conditions and constraints of contemporary life in developing countries. 2. Have your own notions of what it means to live in poverty, the challenges of improving welfare, and the role of economics in development. 3. Demonstrate how economic principles, models, and analysis can help evaluate and refine approaches to improving human welfare in developing countries. 4. Develop the ability to analyze and write about real-world problems and solutions. The course, particularly the assignments, will allow you to acquire technical skills that will contribute to your future professional work.

Credits: 3.00

AGEC 40000 - Agricultural Economics Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with

cooperating foreign universities.

Credits: 0.00 to 8.00

AGEC 45000 - International Agricultural Trade

Credit Hours: 3.00. Study of U.S. agricultural trade with emphasis on international trade theory, exchange rates and their determination, relationships between domestic agricultural policies and trade policies, and analysis of institutional arrangements for world trade in agricultural products.

Learning Outcomes: 1. Explain the rationale for international trade in a variety of economic models. 2. Assess the models in terms of their assumptions and implications. 3. Discuss supplementary research that qualifies and extends the basic models. 4. Discuss the implications of international trade policies, institutions and agreements for international trade, especially trade in food and agricultural products. Credits: 3.00

AGEC 49800 - Special Problems

Credit Hours: 1.00 to 3.00. Open primarily to qualified seniors who want to study special problems in agricultural economics not covered in regular work. Permission of instructor required.

Credits: 1.00 to 3.00

ASM 40000 - Agricultural Systems Management Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

AGR 40000 - Agriculture Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

AGR 49300 - Special Topics In International Agriculture

Credit Hours: 0.00 to 3.00. A course that provides students interested in international agriculture opportunity for in-depth study and analysis of major issues associated with the relationship of U.S. agriculture to world agriculture and agricultural development abroad. Current and significant topics will be selected. Permission of instructor required.

Credits: 0.00 to 3.00

AGR 49500 - International Professional Experience In Agriculture, Food, Or Natural Resources

Credit Hours: 0.00. Supervised international professional experiences in agricultural, food, or natural resource disciplines. The professional experience period must be preplanned and conducted under the supervision of a College of Agriculture faculty member. Students must submit a summary report. Consent of the College of Agriculture international professional experience program coordinator required. Permission of instructor required.

Credits: 0.00

AGRY 28500 - World Crop Adaptation And Distribution (UCC: STS)

Credit Hours: 3.00. Examination of how environmental factors, including climate and soils, impact the global distribution of major food crops. Identification of the types of naturally occurring plant communities and comparison of these communities with those of environmentally and economically sound field cropping systems. Exploration of how man's intervention has maintained or modified the productivity of food crops in agricultural communities and how his intervention has affected the environment.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

AGRY 35000 - Global Awareness

Credit Hours: 1.00 to 3.00. A seminar-type course about world geography, cultures, and agriculture. Speakers are selected from the many Purdue graduate students and visiting scholars from around the world. Extra credit may be earned through independent study of a global issue.

Credits: 1.00 to 3.00

AGRY 39900 - Individual Study

Credit Hours: 1.00 to 3.00. Supervised individual study or research over topics not covered in other courses. Arrange with agronomy faculty before registering. Permission of instructor required.

Credits: 1.00 to 3.00

ANSC 29500 - Special Topics In Animal Sciences

Credit Hours: 0.00 to 3.00. Lecture presentation of specialized material not available in formal courses of the department. The specific topic that is offered will be indicated on the student's record. May be repeated for credit with variable title. Permission of instructor required.

Credits: 0.00 to 3.00

ANSC 40000 - Animal Sciences Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

BCHM 40000 - Biochemistry Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

BTNY 39000 - Selected Topics In Plant Science

Credit Hours: 1.00 to 3.00. This course deals with special topics in botany not covered in regular undergraduate coursework. Credit depends upon work done. May be repeated once for credit. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 3.00

BTNY 40000 - Botany And Plant Pathology Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

ENTM 40000 - Entomology Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

FS 40000 - Food Science Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

FS 47000 - Wine Appreciation

Credit Hours: 3.00. A study of wine production and marketing principles with an emphasis upon consumption responsibility. Historical perspectives form the foundations for wine classification systems and traditional serving procedures. Cardinal scale sensory evaluations are conducted in relationship to various food pairings. Must be 21 years of age or older to register for this course. Permission of department required.

Learning Outcomes: 1. Understand the nature of wine - its production, history, uses and related responsibilities. 2. Develop the ability to recognize different classes, types, and origins of wines. 3. Learn proper etiquette and tasting techniques. 4. Gain direct experience, both individually and as part of a team, in adopting these manners and methods. Credits: 3.00

FNR 23000 - The World's Forests And Society (UCC: STS)

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Comprehend the complexity of the forests worldwide and understand their variety, distribution, ecological functioning, and role in developing societies and communities. 2. Provide a global perspective of forests' social and economic values, their multiple uses, and the variety of products derived from them. 3. Understand the most critical factors threatening forests and related natural resources in developing and developed countries. 4. Understand the strong connection between forests and related natural resource fields (ecology, wildlife, forest products, sustainability, etc.). Credits: 3.00

FNR 40000 - Forestry And Natural Resources Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 0.00 to 8.00

FNR 46000 - International Natural Resources Summer Program

Credit Hours: 3.00. A four-week, intensive program examining the management and conservation of natural resources in Europe and the United States. Jointly taught with faculty and students from the Swedish University of Agricultural Sciences. The program topic and venue change each year, but emphasis is placed on student interaction and internationalization as well

as on cross-cultural communication skills within a natural resources framework. Offered in even-numbered years at Purdue University and in odd-numbered years at the Swedish University of Agricultural Sciences in Sweden.

Learning Outcomes: 1. Explain cultural differences in managing natural resources sustainably. 2. Evaluate natural resource use alternatives and policies. 3. Evaluate the sustainability of various landscapes and uses of natural resources. Credits: 3.00

HORT 40000 - Horticulture Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

HORT 40300 - Tropical Horticulture

Credit Hours: 3.00. An introduction to the agriculture of the tropics and subtropics, emphasizing horticultural crops. Offered in even-numbered years.

Credits: 3.00

HORT 45000 - In The English Landscape: Integrating History, Horticulture, And Landscape Architecture

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Offered in even-numbered years. Permission of instructor required.

Credits: 3.00

LA 16600 - History And Theory Of Landscape Architecture

Credit Hours: 3.00. A study of the historic evolution of landscape architecture to the status of a recognized profession. The course covers the social, economic, political, climatic, and other factors that have influenced the development of design styles and theories.

Credits: 3.00

LA 40000 - Landscape Architecture Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

LA 45000 - In The English Landscape:Integrating History, Horticulture, and Landscape Architecture

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Offered in even-numbered years. Permission of instructor required.

Credits: 3.00

NRES 40000 - Natural Resources And Environmental Science Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

AGEC 52600 - International Food And Agribusiness Marketing Strategy

Credit Hours: 3.00. Students will develop their analytical, decision-making, and communication skills related to marketing management of food systems in the world economy. They will analyze a foreign market's potential and market entry strategies; compare consumer differences and similarities across markets; define issues related to marketing mix standardization or adaptation; and evaluate effects of economic, social, and legal environments on marketing strategy.

Credits: 3.00

AGEC 59600 - Seminars In Current Issues In Agricultural Economics

Credit Hours: 1.00 to 3.00. Study of selected current developments in agricultural economics. Topics will be announced in advance. Permission of instructor required.

Credits: 1.00 to 3.00

AGRY 59800 - Special Problems

Credit Hours: 1.00 to 6.00. Research on agronomic problems conducted in laboratory, field, or library; report required; arrange with an agronomy staff member before registering. Permission of instructor required.

Credits: 1.00 to 6.00

FNR 30200 - Global Sustainability Issues

Credit Hours: 2.00. This course explores global sustainability issues in natural resources with emphasis on forestry, wood products manufacturing, conservation, water management, energy and their impact on the targeted geographic location (such as Central America, Eastern Europe) and the rest of the world. The purpose of this course is to present students,

regardless of their disciplinary background, with an overview of the interdisciplinary aspects of sustainable natural resource management. This colloquium course will examine global sustainable natural resources and related issues (including population, poverty, pollution, climate change, deforestation, invasive species, urbanization, habitat loss, cultural traditions, water management, energy, education, technology, and international collaboration).

Learning Outcomes: 1. Appraise the impact of natural resources in developing and developed economies. 2. Understand the most important factors that threaten natural resources in developing and developed economies. 3. Understand how developments in natural resources in foreign countries relate to similar developments in Indiana and the United States. 4. Comprehend the complexity of global natural resource issues and the role of sustainable natural resource management in sustainable development. Credits: 2.00

ASEC 43100 - Planning For International Engagement Methods

Credit Hours: 1.00. A team-based laboratory course for students who seek experience working with international partners to plan and conduct quality service-learning projects. Using established partner relationships, students will work with international partners to address hands-on, real-world, identified challenges to learn the principles of extension methodology and sustainable community development by integrating their discipline knowledge and technical skills from previous courses. Students will also learn the intercultural communication, market analysis, project design and planning, entrepreneurial business planning for micro-credit loans and business ventures, and cultural factors affecting community food security while they work in bi-national teams to determine how best to apply their classroom knowledge and experience to respond to partners' needs and local resource constraints.

Learning Outcomes: 1. Apply classroom knowledge and science technologies through extension methodologies to assist partners in addressing their economic and social challenges. 2. Demonstrate intercultural knowledge and effectiveness to successfully communicate, understand, and interact among people with differing assumptions that exist because of ethnic and cultural differences. 3. Demonstrate critical thinking and emotional intelligence in evaluation of what is read and heard by using data and reasoning to identify and assess opportunities and develop sound responses to complex problems in a rural international village setting. 4. Demonstrate the ability to communicate persuasively and while considering audience and purpose in a different cultural setting. 5. Assess the partners' needs, plan, present, and assess educational programs in Haiti. 6. Demonstrate the ability to work constructively as part of a bi-national problem-solving team. Credits: 1.00

ASEC 43120 - Evaluating International Engagement Methods

Credit Hours: 1.00. Designed for students who have just returned from the Engagement Methods for Int'l Food Security course or have previous experience working with our partners. In order to 1) fully comprehend the impact of the experience and 2) foster true long-term relationships with and service to our partners, it is required to work on our projects when we return. Matt McGregor, Former Exec. Dir. of Timmy Global Health, told us that "it's not really about the trip". It is essential that we accomplish: 1) Closure of trip experiences with partners and contacts - thank you's and complete follow-up; 2) Reflection of Purdue student experiences and personal goals/follow-up actions; 3) Promotion of food insecurity realities and opportunities for support; and 4) Planning, recommendations, and promotion of future service learning courses.

Learning Outcomes: 1. Apply classroom knowledge and science technologies through extension methodologies to assist partners in addressing their challenges. 2. Demonstrate intercultural knowledge and effectiveness to successfully communicate, understand, and interact among people with differing assumptions that exist because of ethnic and cultural differences. 3. Demonstrate critical thinking and evaluation of what is read and heard by using data and reasoning to identify and assess opportunities and develop sound responses to complex problems in a rural international village setting. 4. Demonstrate the ability to communicate persuasively and while considering audience and purpose in a different

cultural setting. 5. Assess partners' needs, plan, present, and assess educational programs in Haiti. 6. Demonstrate ability to work constructively as part of a bi-national problem-solving team. Credits: 1.00

BTNY 28500 - Plants And Civilization (UCC: STS)

Credit Hours: 3.00. This course, intended primarily for non-majors, covers the history of agriculture, with focus on the centers of origin of our major food, fiber, and medicinal plants, and their historical, cultural, and economic relevance. The course also surveys the biology of crop plants, with respect to taxonomy, anatomy, cell structure, physiology, development, and genetics. Discussions also center on the roles plant biotechnology may play in sustainable agriculture and in helping to alleviate problems caused by overpopulation and ecological stress.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Professional preparation, scientific principles, critical thinking, cultural understanding, social science principles and lifelong learning. Credits: 3.00

ASEC 55100 - International Engagement And Development Strategies

Credit Hours: 3.00. Sem. S and SS, cr. 3; an overview of cross-disciplinary, cultural, theoretical frameworks, communication tools, and assessment methods applied to international agricultural development and engagement. Lectures, panel discussions, and case studies on appropriate methods of development and engagement, international project planning, intercultural effectiveness, principles of sustainable agricultural, food, community development, and program/project monitoring and evaluation will be the basis of assignments and team work. This eight-week course will provide the theoretical and social frameworks and principles needed to successfully work in multi-agency partnerships on international development projects.

Learning Outcomes: 1. Select the most culturally-appropriate application of disciplinary knowledge and technologies for agriculture, food, natural resources and related sciences in development programs. 2. Deconstruct self biases and intercultural effectiveness and their critical and creative thinking skills for different contexts in appropriate applications of scientific research as creative interventions and evaluation. 3. Differentiate high and low oral and written communication skills, tolerance of cultural ambiguity, and adaptability. 4. Judge the efficacy of applying appropriate theoretical frameworks for engaging stakeholders in projects to create sustainable impact. 5. Determine the relevance of the result of applying principals and applications of ethical decision making and professional development. 6. Reflect on one's progress and abilities to work in multi-disciplinary teams to carryout developing country assessments and conceptualize a viable project proposal under a tight deadline. Credits: 3.00

ANSC 33100 - The Role Of Horses In Human History, Culture, And Society (UCC: HUM)

Credit Hours: 3.00. A multi-disciplinary course that introduces students to the history of the human-horse relationship in a global context. Because the history of horse and human interaction is so broad and so important to the development of civilization, the course will include a broad view of horses in the context of agriculture, transportation, sport, culture and art.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Interpret and explain the integral role horses have played in human civilization. 2. Compare the roles of horses in Asia, Europe and the Americas through history. 3. Analyze the impact of horses on the political, social and cultural environments in different parts of the world. 4. Develop a logical argument as to why horses still have a role in international society in the contemporary historical period. Credits: 3.00

Examples of courses from outside of the College of Agriculture

POL 13000 - Introduction To International Relations (UCC: BSS)

Credit Hours: 3.00. An analysis of the fundamentals of international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

ECON 37000 - International Trade

Credit Hours: 3.00. Develops an understanding of the economics of globalization, including the movement of goods, people, capital, and ideas across countries. Using the tools of intermediate economic theory, we discuss the benefits and costs of globalization, the implications of globalization for wages, earnings, and national welfare, and their intersection with government policies.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade, including the movement of goods, people, capital, and ideas across countries. 2. Understand the perspective provided by economic analysis regarding globalization of economies, including the implications for wages, earnings and national welfare. 3. Identify insights economics analysis provides concerning the benefits and costs of globalization and the implications for government policies. Credits: 3.00

Notes

Islamic Studies Minor

Requirements for the Minor (15 credits)

A. Required Course - Choose One (3 credits)

ARAB 28100 - Introduction To Islamic Civilization And Culture

Credit Hours: 3.00. This course is a survey of broad currents in the cultures, thought and civilization of the Muslim world. It emphasizes religious, intellectual and cultural trends, social and political structures and contemporary issues of Muslim societies within the current global cultural world. Taught in English.

Learning Outcomes: 1. Gained understanding of the basic teachings of Islam, sources of Islamic civilization and culture, its historical development and major aspects of Islamic thought and art through today. 2. Make connections and understand the interplay among religion, politics, culture and other forms of artistic expression. 3. Provide students with tools to undertake further research about the cultures of Islam and examine the impact Islam makes in lives of communities and contemporary problems facing Muslims in a globalized cultural world. Credits: 3.00

PHIL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (REL 23100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Information literacy. 2. Human cultures. 3. Creative thinking. 4. Integrative learning. Credits: 3.00

REL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (PHIL 33100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

B. Category I and Category II (12 credits)

Category I: Islamic Culture, Gender and Diversity (at least 3 credits)

ARAB 10200 - Standard Arabic Level II (UCC: HUM)

Credit Hours: 3.00. Further study of Modern Standard Arabic. Continued presentation of the basic structures of Arabic grammar and expansion of vocabulary. Reading and writing will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify language comprehension by reading, reporting on, and or writing about long segments of Arabic text and speech. 2. Use simple grammatical and syntactic structures in daily communication. 3. Compose simple sentences and short paragraphs. 4. Demonstrate language

comprehension by discussing familiar topics with peers. Credits: 3.00

ARAB 23000 - Arabic Literature In Translation

Credit Hours: 3.00. Survey of Arabic literature, from the classical to the postmodern period. Emphasis on connections between literary works and contemporary life. Conducted in English; no knowledge of Arabic required.

Credits: 3.00

ARAB 23900 - Arab Women Writers (UCC: HUM)

Credit Hours: 3.00. Survey of Arab women writers from North Africa, the Middle East, and Arab communities in the Western world. Emphasis on issues of sexuality, marriage, work, travel and immigration. Conducted in English; no knowledge of Arabic required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ARAB 28000 - Arabic Culture (UCC: HUM)

Credit Hours: 3.00. A historical and literary survey of defining characteristics of Arabic culture from pre-Islamic times to the modern period.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ARAB 28100 - Introduction To Islamic Civilization And Culture

Credit Hours: 3.00. This course is a survey of broad currents in the cultures, thought and civilization of the Muslim world. It emphasizes religious, intellectual and cultural trends, social and political structures and contemporary issues of Muslim societies within the current global cultural world. Taught in English.

Learning Outcomes: 1. Gained understanding of the basic teachings of Islam, sources of Islamic civilization and culture, its historical development and major aspects of Islamic thought and art through today. 2. Make connections and understand the interplay among religion, politics, culture and other forms of artistic expression. 3. Provide students with tools to undertake further research about the cultures of Islam and examine the impact Islam makes in lives of communities and contemporary problems facing Muslims in a globalized cultural world. Credits: 3.00

ARAB 33400 - North African Literature And Culture

Credit Hours: 3.00. A view of the culture and society of the Maghreb (Morocco, Algeria, Tunisia, and Libya). Emphasis on issues of race, politics, religion, and gender through literature and other forms of artistic expression, including film and music. Conducted in English; no knowledge of Arabic required.

Learning Outcomes: 1. Increase ability to think critically about other cultures and societies and appreciate cultural differences. 2. Investigate key cultural, social and political issues that have shaped cultures and societies in North Africa. 3. Develop understanding of contemporary questions such as nationalism, politics, religion and ethnicity in the region as represented through materials (literary and/or visual) from/about North Africa. 4. Develop and improve analytical skills (both oral and written) and enhance their abilities to comprehend, interpret, and analyze texts. 5. Expand familiarity and knowledge about core societal and cultural issues of this region and connect to contemporary events in the various countries and communities in North Africa. Credits: 3.00

Category II: Islam and the World: History, Politics, and Philosophy (at least 3 credits)

ANTH 31200 - The Archaeology Of Ancient Egypt And The Near East

Credit Hours: 3.00. Selected topics on the archaeology of ancient Near Eastern cultures in Mesopotamia, the circum-Mediterranean area, Egypt, and the Nile Valley, emphasizing an anthropological interpretation of the political, social, religious, and economic systems that contributed to their development.

Learning Outcomes: 1. Summarize the rise and development of civilization in the Near East and North Africa from 10,000 years ago to 331 BC. 2. Distinguish the emergence and strategies of governance between these neighboring regions. 3. Recognize the historical and cultural context that gave rise to the Great Pyramids, cuneiform writing, and other significant achievements in the region. 4. Interpret the Near East and North

Africa within Western historical narratives and popular imaginings. Credits: 3.00

HIST 24600 - Modern Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course explores the political, social, and cultural factors that have contributed to the formation of the modern Middle East. Course includes short stories and a selection of documentary films from the region.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 25000 - United States Relations With The Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course examines US relations with the Middle East and North Africa since World War II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gained a deeper understanding of the patterns and processes shaping US relations with the Middle East and North Africa. 2. Thought historically and critically about approaches to the study of US relations with the Middle East and North Africa. 3. Used primary source evidence to analyze fundamental issues in US relations with the Middle East and North Africa. 4. Sharpened critical reading, thinking, writing, and discussion skills in order to defend an independent argument. Credits: 3.00

REL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (PHIL 33100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 50500 - Islamic And Jewish Philosophy And The Classical Tradition

Credit Hours: 3.00. A study of representative texts and issues in medieval Islamic and Jewish philosophy. Possible topics include the commensurability of philosophy and (revealed) law, the creation or eternity of the world, the nature of prophecy, the human good, the nature of God, and divine language.

Credits: 3.00

ARAB 58700 - Modern Arab Thought

Credit Hours: 3.00. Prominent and critical issues in modern Arab thought. Identity, historical meaning, the Arab-Islamic cultural legacy, and tradition vs. modernity are engaged through Arab encounters with the West. Conducted in English; no knowledge of Arabic required.

Learning Outcomes: 1. Become familiar with the main lines of modern Arab thought. 2. Identify critical issues in modern Arab thought, in relation to questions of identity, cultural heritage, and religious faith; situate those issues within their historical, social, and political contexts. 3. Appreciate the nuanced relationship between the Arab world and the West in terms of an often painful dialogue between tradition and modernity. Credits: 3.00

Notes

Italian Minor

Requirements for the Minor (15 credits)

A. Italian Language/Literature Courses (12 credits)

ITAL 30100 - Italian Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Italian speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Italy from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Italian.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will develop oral communication skills in Italian at advanced level through classroom discussions, presentations, and interpersonal communication. 2. Students will expand and refine their competence to comprehend, analyze, and interpret texts in Italian through integrated reading and discussion of different genres of authentic texts in Italian through

integrated reading and discussion of different genres of authentic texts. 3. Students will expand and refine their written proficiency in Italian by producing a variety of genre-specific texts in Italian. 4. Students will expand their knowledge of Italian culture and their cross-cultural proficiency through the use of aural, visual, and written texts in Italian. Credits: 3.00

ITAL 30200 - Italian Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Italian, on the basis of materials dealing with the ideas and events that have shaped present-day Italy. Conducted primarily in Italian.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ITAL 34100 - Italian Literature I: From The Middle Ages To The Enlightenment

Credit Hours: 3.00. This is the first course of a two-semester sequence presenting an overview of Italian literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Readings, discussion, and papers in Italian.

Credits: 3.00

ITAL 34200 - Italian Literature II: From Romanticism To The Present

Credit Hours: 3.00. This is the second course of a two-semester sequence presenting an overview of Italian literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Readings, discussion, and papers in Italian.

Credits: 3.00

B. Additional Italian Course 20000 or higher (3 credits)

ITAL 23100 - Dante's Divine Comedy

Credit Hours: 3.00. Reading and discussion of Dante's Divine Comedy. The major critical approaches to Dante's masterpiece will be reviewed. All readings, papers, and examinations will be in English.

Credits: 3.00

ITAL 28000 - Italian Culture And Civilization (UCC: HUM)

Credit Hours: 3.00. Course focuses on salient aspects of Italian culture and civilization from the Middle Ages to the present. In English.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of Italian culture and its legacy in the world. 2. Identify crucial developments of Italian society and culture of the time studied. 3. Situate the arts, literature, and music of Italy in their historical context. 4. Become aware of the political and national struggles that Italy faced throughout the centuries. 5. Be introduced to key figures from different fields of studies whose work, inventions, and discoveries changed and are still changing our world perspectives. Credits: 3.00

ITAL 28100 - The Italian Renaissance And Its Scientific And Cultural Impact On Western Civilization (UCC: HUM)

Credit Hours: 3.00. This course introduces students to the most important cultural and scientific writings of the Italian Renaissance, and shows the pivotal influence of the Renaissance on the development of Western civilization as a whole. Classes and readings entirely in English; no knowledge of Italian needed.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Become acquainted with the canonical works of the Italian Renaissance that have had a major influence on modern Western thought and will develop a broad understanding of the Renaissance. 2. Become familiar with different literary genres such as poetry, comedy, novellas, treatises and dialogues, and will develop the tools necessary to approach them critically within the cultural and political context that produced them. 3. Improve their critical and writing skills. Credits: 3.00

ITAL 33000 - The Italian Cinema (UCC: HUM)

Credit Hours: 3.00. The development and evolution of Italian cinema after World War II. The class will center on the viewing and discussion of films and will survey a broad spectrum of directors and styles. Knowledge of Italian not required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ITAL 33300 - The Spirit Of Italian Comedy (UCC: HUM)

Credit Hours: 3.00. This course explores various types of Italian comedy, focusing on theater and cinema. Particular emphasis will be given to Renaissance theater, commedia dell'arte, Goldoni, Pirnadello, Dario Fo, and to the new generation of Italian comedians. In English.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ITAL 33500 - Italian-American Cinema

Credit Hours: 3.00. This course offers an overview of the major filmmakers associated with the representation of Italian Americans in the United States film world. Students will view and discuss major filmmakers and their films, and will write critical essays on film topics. Conducted in English.

Credits: 3.00

ITAL 39300 - Special Topics In Italian Literature Or Cinema

Credit Hours: 3.00. This course will focus on particular aspects of Italian literature, cinema or culture. No knowledge of Italian required.

Credits: 3.00

ITAL 39400 - Special Topics In Italian Literature

Credit Hours: 3.00. This course studies a particular aspect in Italian literature (e.g., a theme, device, character type, motif, place) by reading a varied selection of works of different genres, styles, and/or periods. Readings, discussion, and papers in Italian.

Credits: 3.00

ITAL 49300 - Advanced Topics In Italian Literature Or Cinema

Credit Hours: 3.00. This course will analyze in depth particular aspects of Italian literature, cinema or culture. No knowledge of Italian necessary.

Credits: 3.00

ITAL 38100 - Italian And Italian American Food Culture (UCC: HUM)

Credit Hours: 3.00. This course provides a comprehensive exploration of the rich and diverse food cultures of Italy and Italian American communities. Through a combination of historical, cultural, visual, and culinary perspectives, students will gain an in-depth understanding of the traditions, influences, and innovations that have shaped Italian and Italian-American cuisine.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify and articulate the historical and cultural significance of Italian and Italian American food traditions. 2. Summarize evidence, such as cookbooks, food memoirs, and other cultural artifacts, to understand the complexity of the human experience as expressed through food. 3. Interpret and critique culinary works, exploring the intersection of food, culture, and art. 4. Critically compare texts, recipes, and culinary practices within the cultural, intellectual, and historical contexts of Italy and the Italian American experience. 5. Reflect on the impact of socio-cultural and historical factors on the development of Italian and Italian American cuisine. Credits: 3.00

ITAL 28500 - Intercultural Migration To Italy In Film, Literature, And Art (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the complexities of recent migrations to Italy through the perspectives of film, literature, and art. The course covers a wide range of topics, from a historical and geographical overview of migrations to Italy, to the hotly debated issues of immigration policies, Italian citizenship law, human rights and social justice, and the process of reimagining the Italian identity in more diverse and inclusive terms. Course taught in English. No Italian knowledge required.

Explain and employ different genres of reading, including argument through evidence and close reading. 4. Demonstrate written and visual literacies by analyzing diverse media. 5. Demonstrate knowledge of and proficiency in different types of writing, including argument through evidence and written persuasion. 6. Demonstrate content knowledge of specific Biblical books and their genres. Credits: 3.00

ENGL 46200 - The Bible As Literature: The Old Testament

Credit Hours: 3.00. A study of the Old Testament - Pentateuch, Prophets, and other books such as Psalms, Proverbs, Job, and Ecclesiastes - with emphasis on its unique literary characteristics.

Credits: 3.00

ENGL 46300 - The Bible As Literature: The New Testament

Credit Hours: 3.00. A study of the New Testament, with emphasis on its unique literary characteristics.

Credits: 3.00

ENGL 59000 - Directed Reading

Credit Hours: 1.00 to 3.00. Directs the reading of students with special interests. Guides students in profitable reading in subjects of their own choice. Individual conferences; no class meetings. Permission of instructor required.

Credits: 1.00 to 3.00

2. Languages and Cultures

HEBR 10100 - Modern Hebrew Level I (UCC: HUM)

Credit Hours: 3.00. Introduction to Modern Hebrew: the writing and sound systems, and systematic presentation of basic structures. All language skills - reading, writing, speaking, and comprehension - are emphasized. No previous knowledge of Hebrew required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 10200 - Modern Hebrew II (UCC: HUM)

Credit Hours: 3.00. Continuation and extension of the first semester. The course aims to develop fluency in reading, comprehension, and spoken language. Knowledge of grammar and vocabulary is expanded.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 12100 - Biblical Hebrew Level I (UCC: HUM)

Credit Hours: 3.00. The first semester of biblical Hebrew will present the basic elements of the language, including alphabet, vocabulary, and grammar. No previous knowledge of Hebrew required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 12200 - Biblical Hebrew Level II (UCC: HUM)

Credit Hours: 3.00. The second semester of biblical Hebrew will continue the study of reading, vocabulary and grammar, based on selections from the Hebrew Bible.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 20100 - Modern Hebrew Level III (UCC: HUM)

Credit Hours: 3.00. Extensive practice in reading, speaking, and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading both in the modern language.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 20200 - Modern Hebrew Level IV (UCC: HUM)

Credit Hours: 3.00. Extensive practice in reading, speaking, and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading in the modern language.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 22100 - Biblical Hebrew Level III (UCC: HUM)

Credit Hours: 3.00. The third semester of biblical Hebrew focuses on reading and translation of extended passages form the Pentateuch and the use of textual criticism.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 22200 - Biblical Hebrew Level IV (UCC: HUM)

Credit Hours: 3.00. The fourth semester of biblical Hebrew exposes the student to both narrative and poetic sections of the Bible.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 38500 - The Holocaust In Modern Hebrew Literature

Credit Hours: 3.00. This course critically examines the Holocaust and the ways in which it has influenced modern Hebrew literature, the role it plays, and how it is represented in modern Hebrew literature. Conducted in English; no knowledge of Hebrew is necessary.

Credits: 3.00

JWST 59000 - Directed Readings In Jewish Studies

Credit Hours: 3.00. A reading course in aspects of Judaica directed by the instructor in whose particular field of specialization the content of the reading falls. Permission of Instructor required.

Learning Outcomes: 1. Deepen the knowledge of select topics in Judaica. Credits: 3.00

LC 59300 - Special Topics In Literature

Credit Hours: 1.00 to 4.00. Special topics in Literature. Permission of instructor required.

Credits: 1.00 to 4.00

HEBR 38000 - Israel And The Modern World: Cinema, Literature, History And Politics (UCC: HUM)

Understand Israeli political-social problems and its influence on world affairs. 4. Development of modern Israeli cinema and literature in reference to their historical and political groundings. 5. Mastery of major historical events, major films, major literary figures, and major social/political problems.
Credits: 3.00

3. History

HIST 10300 - Introduction To The Medieval World (UCC: HUM)

Credit Hours: 3.00. Barbarians, kings, queens, peasants, witches, saints, teachers, students, heretics, Moslems, Jews, Christians, love, death, monks, farm life, city life, ordinary men, women, and children as Europe develops from A.D. 500 to 1500.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 40800 - Dictatorship And Democracy: Europe 1919-1945

Credit Hours: 3.00. This course examines the fleeting triumph of democracy across Europe. Followed by the rise of fascism, communism, and Nazism. Emphasis will be placed on broad economic, social, and cultural transformations as well as individual choices to resist or conform.

Credits: 3.00

HIST 49500 - Research Seminar In Historical Topics

Credit Hours: 3.00. This course is designed to train history majors in the fundamentals of historical research and writing. Course descriptions vary according to specific topics proposed for study by instructors.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will learn historical skills such as primary source research and analysis and how to form historical arguments. 3. Students will advance their information literacy and creative and critical thinking, acquire analytical skills sufficient to distinguish between primary and secondary sources. 4. Students will learn to analyze argument and interpretations and recognize interpretive conflicts. 5. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 59000 - Directed Reading In History

Credit Hours: 1.00 to 3.00. A reading course directed by the instructor in whose field of specialization the content of the reading falls. Approval of each reading project must be secured from the department. Permission of instructor required.

Credits: 1.00 to 3.00

HIST 59500 - The Holocaust And Genocide

Credit Hours: 3.00. (POL 59500) History and analysis of the Nazi attempt to destroy the European Jews, with comparisons to other instances of genocide.

Credits: 3.00

4. Philosophy

PHIL 20600 - Introduction To Philosophy Of Religion (UCC: HUM)

Credit Hours: 3.00. The course encourages critical reflection on traditional and contemporary views about God and other religious ideas. Topics include arguments for God's existence, the problem of evil, understanding the divine attributes, miracles, religious pluralism, and life after death. CTL:ISH 1052 Philosophy Of Religion

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate familiarity with one or more conceptions of God and with arguments for and against the coherence of such conceptions. 2. Demonstrate a familiarity with some of the arguments for and against God's existence and with some of the objections to those arguments. 3. Recognize the importance of and demonstrate familiarity with multiple religious ideas and beliefs. 4. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 5. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. Credits: 3.00

PHIL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (REL 23100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Information literacy. 2. Human cultures. 3. Creative thinking. 4. Integrative learning. Credits: 3.00

PHIL 50500 - Islamic And Jewish Philosophy And The Classical Tradition

Credit Hours: 3.00. A study of representative texts and issues in medieval Islamic and Jewish philosophy. Possible topics include the commensurability of philosophy and (revealed) law, the creation or eternity of the world, the nature of prophecy, the human good, the nature of God, and divine language.

Credits: 3.00

5. Political Science

POL 59000 - Directed Reading In Political Science

Credit Hours: 1.00 to 3.00. A reading course directed by the instructor in whose field of specialization the content of the reading falls. Approval of each reading project must be secured from the department. Permission of instructor required.

Credits: 1.00 to 3.00

6. Religious Studies

REL 20200 - Interpretation Of The Old Testament

Credit Hours: 3.00. An investigation of the religious content of documents Christians call the "Old Testament" in light of the historical, social, and intellectual contexts out of which they arose. The student will be introduced to problems and methods in their interpretation.

Credits: 3.00

REL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (PHIL 33100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

REL 31700 - Ancient Judaism And Early Christianity

Credit Hours: 3.00. This course is a study of the emergence of Judaism and the rise of Christianity out of roots in the history of ancient Israel. This will include noticing the effects of Greek culture, evidence of anti-Semitism and admiration of the Jews, conversion in a setting of religious pluralism, and the development of Jewish and Christian self-definition in this climate.

Credits: 3.00

REL 31800 - The Bible And Its Early Interpreters

Credit Hours: 3.00. This course will start with observation of the development of early themes in later parts of the Hebrew Bible and proceed to the on-going influence of these themes in Jewish literature outside the Hebrew canon (apocrypha, pseudepigrapha, targums, midrash, Josephus, Philo, and other Hellenistic Jewish authors), as well as in pagan literature of this era and in early Christian literature, particularly the New Testament.

Credits: 3.00

7. Sociology

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.

Learning Outcomes: 1. Identify the role of race and ethnic identity in social and professional environments. 2. Identify, define and explain the Americanization process consistent with ethnic group's integration, assimilation, and/or acculturation into American status. 3. Become familiar with principle terms, concepts, and theories of the field of race and race relations.
Credits: 3.00

SOC 36700 - Religion In America

Credit Hours: 3.00. Examines the social dimensions of religion in American life; religion in American culture; social profiles of America's religious groups, trends in individual religious commitment; and religion's impact on American life.

Learning Outcomes: 1. Describe the sizes and influences of major (and some minor) religious groups in America and how these sizes and influences have changed over the past 50 years. 2. Explain and evaluate the influence of religious groups and ideas on at least one other important aspect of social life. 3. Explain ways in which trends in American society over the past 50 years (e.g., changing gender roles, political shifts, etc.) are bringing about changes

in American religion. Credits: 3.00

SOC 51400 - Racial And Cultural Minorities

Credit Hours: 3.00. America's minority groups; immigration; interracial and intercultural conflicts; assimilation.

Credits: 3.00

SOC 59000 - Individual Research Problems

Credit Hours: 1.00 to 3.00. Individual research or reading in an area of sociology under a Sociology department staff member. Does not include thesis work. Permission of instructor required.

Credits: 1.00 to 3.00

Notes

Korean Studies Minor

About the Minor

Requirements for the Minor (15 credits)

A. Korean Language Courses (6 credits)

KOR 30100 - Korean Level V

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas-speaking, listening, reading, and writing-in Korean at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. Emphasis will be on the appropriate use of Korean in a variety of situations including schools, companies, and formal/informal meetings. This course also enables students to understand Korean culture and history and to develop cross-cultural insights by comparing Korean society with US society. Korean history, image of Korea, and current social trends in Korea will be discussed for a solid understanding of Korean culture in which Korean language is embedded.

Learning Outcomes: 1. Obtain knowledge about linguistic structures and language-related cultures through linguistic and cultural analysis and synthesis of various types of data. 2. Apply their linguistic and cultural knowledge to comprehend (reading and listening) and produce (writing and speaking) language. 3. Assess paragraph-length texts and oral discourse to comprehend provided texts and dialogue in the classroom. 4. Explain orally in Korean topics that are based on personal experiences in order to successfully interact with native speakers on a prepared topic. 5. Analyze, learn, and produce forms of polite speech, forms to describe past experience, and forms to express supposition. 6. Compose written language in Korean to meet practical writing needs that address the present, past, and some hypothetical situations. 7. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional grams.

Credits: 3.00

KOR 30200 - Korean Level VI

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas-speaking, listening, reading, and writing-in Korean at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. Emphasis will be on the appropriate use of Korean in a variety of situations including schools, companies, and formal/informal meetings. This course also enables students to understand Korean culture and history and to develop cross-cultural insights by comparing Korean society with US society. Korean history, image of Korea, and current social trends in Korea will be discussed for a solid understanding of Korean culture in which Korean language is embedded.

Learning Outcomes: 1. Obtain knowledge about linguistic structures and language-related cultures through linguistic and cultural analysis and synthesis of various types of data. 2. Apply their linguistic and cultural knowledge to comprehend (reading and listening) and produce (writing and speaking) language. 3. Assess paragraph-length texts and oral discourse to comprehend provided texts and dialogue in the classroom. 4. Explain orally in Korean topics that are based on personal experiences in order to successfully interact

with native speakers on a prepared topic. 4. Analyze, learn, and produce forms of polite speech, forms to describe past experience, and forms to express supposition. 5. Compose written language in Korean to meet practical writing needs that address the present, past, and some hypothetical situations. 6. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional grams. Credits: 3.00

B. Literature and Culture (3 credits)

KOR 28200 - Korean Culture And Society

Credit Hours: 3.00. This course explores Korean culture from antiquity to the present. Students will investigate the dynamic political and social forces that have shaped Korean history, comparing and contrasting them with those of other Asian countries. Various hands-on activities include an introduction to Korean cuisine, traditional musical instruments and costumes, and other cultural artifacts and practices.

Learning Outcomes: 1. Build a solid understanding of contemporary Korean culture and social issues. 2. Construct structured arguments about Korea, utilizing academic discourse, through several assignments. 3. Identify facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 4. Establish an analytical framework for K-pop culture and their fan culture. Credits: 3.00

KOR 24100 - Introduction To Korean Literature

Credit Hours: 3.00. This course will introduce students to major trends, genres, perspectives, and ideas in Korean literature, including poetry, essays, and short stories, from the early 20th century up to the present day. Covering significant historical milestones such as the Japanese Colonial Period, Liberation Day, and the post-liberation era, the literary works discussed in this course offer diverse perspectives on these time periods. By exploring prominent themes, forms, and literacy techniques, students will gain insight into modern Korean literary traditions within the evolving context of Korean culture and society. The language of instruction will be in English.

Learning Outcomes: 1. Analyze major literary themes and evaluate narrative strategies of the works of literature. 2. Interpret the use of symbolism, characteristic stylistic features, and nuances of the language's literary aspects. 3. Develop an understanding of the dynamic interplay between literary texts and their cultural and historical contexts. 4. Formulate analytical skills and learn how to research, structure, and edit essays in the humanities. Emphasis will be placed on developing organizational and editing skills, as are widely applicable across fields of study. 5. Identify literary Korean in various forms, aiming to familiarize them with the nuances of the language's literary aspects. Credits: 3.00

C. Selectives - Choose Two: (6 credits)

KOR 38000 - Special Topics In Korean Culture

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on traditional, historical, social, and political themes of Korea.

Learning Outcomes: 1. Learning outcomes vary due to nature of course. Credits: 3.00

KOR 48000 - Special Topics In Korean Studies

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on topics related to contemporary Korean culture, arts, literature, etc. Or an internship totaling approximately 100-120 hours per semester or summer in Korea may also be credited through this course.

Learning Outcomes: 1. Learning outcomes vary due to nature of course. Credits: 3.00

KOR 40100 - Korean Level VII

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas (speaking, listening, reading, and writing) at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. By dealing with various topics on authentic materials including news, articles on websites, and short stories, this course enables students to enhance linguistics knowledge and skills and also helps them to

understand Korean culture, history, and current issues in Korea. It is expected that students will be able to discuss various topics and express opinions fluently in both spoken and written language.

Learning Outcomes: 1. Assess discourse-length texts to comprehend provided texts and dialogue in the classroom. 2. Explain the main ideas and most supporting details in connected discourse of paragraphs on a variety of general interest topics in written and spoken Korean. 3. Analyze, learn, and produce forms in informal and formal settings, provide lengthy and coherent narrations, present opinions on a number of issues, and provide structured arguments to support them. 4. Compose written language in Korean to demonstrate the ability to write about various topics with good control of frequently used structures and vocabulary, by using paraphrasing and elaboration to provide clarity. 5. Describe facts and evidence related to Korean history, culture, and society through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional games. Credits: 3.00

KOR 33000 - Introduction To Korean Cinema

Credit Hours: 3.00. This course examines Korean society and culture through cinematic representations. Through film, the course provides a broad understanding of the major social and political changes in Korean society, as well as a brief history of Korean cinema and the transformations in the structure of the Korean film industry. Students will learn to identify major directors such as Park Chan-wook, Lee Chang-dong, and Bong Joon-ho, films, and genres. All films will be screened with English subtitles.

Learning Outcomes: 1. Appreciate how film can be understood and used as a cultural and social form that can explain Korean society and culture. 2. Build an understanding of various cinematographic techniques. 3. Learn how to interpret a broad-based understanding of contemporary Korean culture and social issues. 4. Identify elements of genre in Korean cinema through facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 5. Develop and communicate their ideas orally and in writing. Credits: 3.00

KOR 28200 - Korean Culture And Society

Credit Hours: 3.00. This course explores Korean culture from antiquity to the present. Students will investigate the dynamic political and social forces that have shaped Korean history, comparing and contrasting them with those of other Asian countries. Various hands-on activities include an introduction to Korean cuisine, traditional musical instruments and costumes, and other cultural artifacts and practices.

Learning Outcomes: 1. Build a solid understanding of contemporary Korean culture and social issues. 2. Construct structured arguments about Korea, utilizing academic discourse, through several assignments. 3. Identify facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 4. Establish an analytical framework for K-pop culture and their fan culture. Credits: 3.00

KOR 24100 - Introduction To Korean Literature

Credit Hours: 3.00. This course will introduce students to major trends, genres, perspectives, and ideas in Korean literature, including poetry, essays, and short stories, from the early 20th century up to the present day. Covering significant historical milestones such as the Japanese Colonial Period, Liberation Day, and the post-liberation era, the literary works discussed in this course offer diverse perspectives on these time periods. By exploring prominent themes, forms, and literacy techniques, students will gain insight into modern Korean literary traditions within the evolving context of Korean culture and society. The language of instruction will be in English.

Learning Outcomes: 1. Analyze major literary themes and evaluate narrative strategies of the works of literature. 2. Interpret the use of symbolism, characteristic stylistic features, and nuances of the language's literary aspects. 3. Develop an understanding of the dynamic interplay between literary texts and their cultural and historical contexts. 4. Formulate analytical skills and learn how to research, structure, and edit essays in the humanities. Emphasis will be

placed on developing organizational and editing skills, as are widely applicable across fields of study. 5. Identify literary Korean in various forms, aiming to familiarize them with the nuances of the language's literary aspects. Credits: 3.00

KOR 38100 - Introduction To Korean Food Culture

Credit Hours: 3.00. This course is an advanced-level language and culture course that uses food as a lens for understanding the history, cultures, and society of Korea. It covers gastronomy, history, ideologies of modern Korean cuisine, and other aspects of daily life related to Korean traditions. Through this course, students will enhance their proficiency in speaking, listening, reading, and writing in Korean. They will explore a range of topics connected to the eating, making, and representation of food. The primary language of instruction will be Korean, with some supplementary reading material in English.

Learning Outcomes: 1. Interpret the culture, history, and ideologies of modern Korea through the lens of food. 2. Discuss diet, cooking, eating and food culture topics using a broad range of vocabulary and advanced grammatical structures. 3. Identify main cultural trends in food production and consumption. 4. Recognize main ingredient, food categories and their historical significance in Korean diets. Credits: 3.00

Landscape and Turf Minor

Requirements for the Minor (13 Credits)

Required Courses (10 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed.

Credits: 3.00

HORT 21100 - Fundamentals Of Turfgrass Culture Laboratory

Credit Hours: 1.00. (AGRY 21100) Companion lab to AGRY 21000. Laboratory exercises will focus on turfgrass and seed anatomy, morphology, identification as well as the hands-on basic principles of turfgrass culture. Designed for the student who intends to pursue a career in turfgrass management and plans to enroll in AGRY 51000. Enrollment preference will be given to Turfgrass Science Majors.

Credits: 1.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural

understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

Selective Course (3 credits)

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

Notes

Landscape Management Minor

Requirements for the Minor (12-13 credits)

Required Courses (9-10 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the

installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

Selective Course (3 credits)

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic

herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

Notes

Latin American and Latino Studies Minor

School of Interdisciplinary Studies

Requirements for the Minor (15 credits)

A. Required Course (3 Credits)

LALS 25000 - Introduction To Latin American And Latino Studies

Credit Hours: 3.00. Interdisciplinary and integrative presentation and examination of the historical, political, economic, and cultural processes of Latin America, from independence to the present followed by an analysis of scholarly works that include theoretical models, methodological strategies, and analytical approaches to learning about US Latinos. Special emphasis is placed on the immigrant experience and its role in the incorporation of Latinos into the US society.

Credits: 3.00

B. Literary and Cultural Studies (3-6 Credits)

AD 34400 - Latin American Art Since 1900

Credit Hours: 3.00. This course offers a critical yet comprehensive overview of modern and contemporary art from Latin America. It focuses on major artists, whose works and contributions are considered in both their specific socio-cultural context and in a larger art historical perspective.

Learning Outcomes: 1. Identify individuals who have made a major contribution to a style or period. 2. Compare artworks by identifying their differences and similarities. 3. Define terms and concepts in relation to a particular style, artist or artwork. 4. Discuss historical events, social forces and cultural trends that have had an influence on a particular style, artist or artwork. 5. Build the knowledge and understanding of Latin America art. 6. Develop the analytical and writing skills through textual studies of primary and secondary sources, as well as writing exercises. Credits: 3.00

LALS 26000 - U S Latino Culture

Credit Hours: 3.00. This course uses an interdisciplinary approach to study Latino culture in the United States through art, film, literature, music and theater.

Credits: 3.00

PTGS 33000 - Brazilian, Portuguese, And African Cinema

Credit Hours: 3.00. Screening and analysis of selected films from Portuguese-speaking countries: Brazil, Portugal, Angola, Mozambique, Cape Verde, Guinea-Bissau, S. Tome and Principe, with discussion of their cultural contexts (colonial/post-colonial societies; cross-Atlantic relationships; racial diversity; minority/majority issues). Knowledge of Portuguese not required.

Credits: 3.00

SPAN 23500 - Spanish American Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected masterpieces of Spanish American literature. The course context will change from semester to semester. Knowledge of Spanish not required.

Credits: 3.00

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.

Learning Outcomes: 1. Gain understanding of literature produced in the Spanish speaking world. 2. Develop the ability to talk effectively about and interact with literature in Spanish. 3. Write specific types of texts for analyzing Spanish literature. Credits: 3.00

SPAN 33000 - Spanish And Latin American Cinema (UCC: HUM)

Credit Hours: 3.00. Screening and analysis of selected Spanish and Latin American films with readings and discussions relative to their historical, social, political, aesthetic, literary, and linguistic contexts. No knowledge of Spanish required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 33500 - The Literature Of The Spanish-Speaking Peoples In The United States

Credit Hours: 3.00. Study of selected poetry, fiction, theatre, and essays written in the United States by Spanish-speaking writers; includes readings in the literature written in Spanish and English as well as bilingual poetry and prose. Conducted in Spanish and English.

Credits: 3.00

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

PTGS 55100 - Brazilian Poetry

Credit Hours: 3.00. A survey of the major currents and most important writers of Brazilian poetry. Readings include Gregorio de Matos, Goncalves Dias, Castro Alves, Mario de Andrade, Manuel Bandeira, and Cecilia Meireles. Permission of instructor required.

Credits: 3.00

PTGS 55500 - Brazilian Drama

Credit Hours: 3.00. A survey of the primary movements and most important works of Brazilian theatre. Readings include plays by Nelson Rodrigues, Dias Gomes, Ariano Suassuna, and Jorge Andrade. Permission of instructor required.

Credits: 3.00

PTGS 55700 - Brazilian Fiction

Credit Hours: 3.00. A survey of the development and major texts of Brazilian fiction. Readings include novels or short stories by Jose de Alencar, Machado de Assis, Graciliano Ramos, and Clarice Lispector, among others. Permission of instructor required.

Credits: 3.00

SPAN 54900 - Hispanic Women Writers

Credit Hours: 3.00. A survey of the literature of Hispanic women writers from Latin America, the Caribbean, and Spain in light of their traditions and of feminist literary theory and criticism. Permission of instructor required.

Learning Outcomes: 1. Discuss female characters from an informed perspective, whether applying feminist theories or not . 2. Compare and contrast literary innovations of male and female writers in literary movement since Modernity Credits: 3.00

SPAN 55000 - Spanish American Literature Of The Colonial Period

Credit Hours: 3.00. A survey of Spanish American literature of the colonial period. Reading and discussion of a number of representative works as well as excerpts from several others.

Credits: 3.00

SPAN 55100 - Spanish American Literature Of The 19th Century

Credit Hours: 3.00. A survey of Spanish American literature of the 19th century. Reading and discussion of a number of representative works as well as excerpts from several others.

Credits: 3.00

SPAN 55200 - Spanish American Literature From 1900 To 1970

Credit Hours: 3.00. A survey of Spanish American literature from 1900 to 1970. Readings and discussion of a number of representative works, as well as excerpts from several others.

Learning Outcomes: 1. Student will gain practical experiences in the language. Credits: 3.00

SPAN 55300 - Spanish American Literature From 1970 - Present

Credit Hours: 3.00. A survey of Spanish American literature from 1970 to the present. Readings and discussion of a number of representative works, as well as excerpts from several others.

Learning Outcomes: 1. Student will gain practical experiences in the language. Credits: 3.00

SPAN 55400 - Hispanic Caribbean Literature

Credit Hours: 3.00. This course focuses on various topics pertaining to Hispanic Caribbean literature. The particular works included will change each time the course is offered. All coursework and discussion is in Spanish.

Credits: 3.00

SPAN 55500 - Latino/a Literature

Credit Hours: 3.00. This class offers an overview of U.S. Latino/a literature, written in Spanish and English and produced in the United States. It will introduce students to the many and diverse experiences of different Latino/a groups through their literary production. Permission of instructor required.

Learning Outcomes: 1. Gain a sense of the diversity of the Latino/a experience in the U.S. as well as the longevity and richness of the Latino/a literary tradition in the U.S. 2. Become familiar with some of the major themes and trends in Latino/a literature. 3. Consider the ways in which identities like - class, race, and gender - intersect with one another and are constructed in relation to one another. 4. Learn how to close-read a literary or cultural object, such as a novel, a film, or a poem. 5. Work on improving their writing and research skills through the development of an original research project dealing with Latino/a literature. Credits: 3.00

SPAN 55600 - Mexican Literature

Credit Hours: 3.00. A survey of Mexican literature. Reading and discussion of a number of representative works as well as excerpts from several others. Permission of instructor required.

Learning Outcomes: 1. Discuss the impact the history of Mexico has on literary production. 2. Examine the nature of the development of Mexican literary movements. 3. Analyze Mexican literature with consideration of its individual literary innovations. Credits: 3.00

SPAN 55700 - Argentine Literature

Credit Hours: 3.00. A survey of Argentine literature. Reading and discussion of a number of representative works as well as excerpts from several others and from standard anthologies.

Credits: 3.00

LALS 40100 - Special Topics In Latin American/Latino Studies

Credit Hours: 3.00. Investigation of a special topic in Latin American or US Latina/o studies. The topic will vary from semester to semester.

Credits: 3.00

LALS 40200 - Directed Reading In Latin American/Latino Studies

Credit Hours: 1.00 to 6.00. Directs the reading of students with special interests in Latin American or U.S. Latina/o studies. Guides students in profitable reading in subjects of their own choice. Individual conferences; no class meetings. Permission of instructor required.

Credits: 1.00 to 6.00

LALS 30100 - Latin American Literary And Cultural Studies

Credit Hours: 3.00. Focuses on Latin American literatures and cultural products, such as film, music, and/or art. As a variable-topics course, individual sections may variously focus on South and/or Central America, Mexico, the Caribbean, U.S. Latina/o

populations, or any combination of the above. Individual sections may also examine major cultural and historical movements, and/or canonical and emerging authors and artists. May be repeated for credit.

Credits: 3.00

C. History, Philosophy and Social Sciences (3-6 Credits)

HIST 27100 - Introduction To Colonial Latin American History (1492-1810) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the principle historical themes of Latin America during the colonial period (roughly, from 1492 to 1810). No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate a grasp of the historical forces that in many ways laid the foundation for present-day Latin America. 2. Express understanding of how these major political, social, economic, and cultural issues unfolded in different ways in Latin America, with respect to region, time, and culture. Credits: 3.00

HIST 27200 - Introduction To Modern Latin American History (1810 To The Present) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the study of the major economic, political, social, and cultural processes that shaped modern Latin American nations since independence. No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a broad understanding of the modern history of Latin America. 2. Become familiar with the major economic, political, social, and cultural processes that shaped the nations of the continent. Credits: 3.00

LALS 35500 - Political Economy Of Latin America

Credit Hours: 3.00. Examines the salient issues of the 21st century in the political economy of Latin America. The first part introduces students to the historical evolution of the region's economy and its socio-economic and political determinants. Then it focuses on topical inquiry, analyzing key policy areas, frameworks and choices at the core of the current political economy of the region's countries: fiscal and industrial policies, monetary and financial policies and policies on trade, migration and inequality, energy and the environment.

Credits: 3.00

POL 23100 - Introduction To United States Foreign Policy (UCC: BSS)

Credit Hours: 3.00. Designed to introduce students to the major themes and issues in contemporary U.S. foreign policy. Lectures, discussion, and readings will examine such areas as U.S. relationships with the major powers, the Third World, and international organizations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 34700 - Introduction To Latin American Politics

Credit Hours: 3.00. Major aspects of Latin American politics and development. Questions such as the impact of the military on political development, the dynamics of Latin American industrialization, and Latin America's changing international role will be explored.

Credits: 3.00

HIST 57600 - Problems In Latin American History

Credit Hours: 3.00. A detailed examination of specific topics in Latin American history. Topics offered vary between colonial and national periods.

Credits: 3.00

HIST 57700 - Contemporary Latin America

Credit Hours: 3.00. A topical and regional approach to recent political, social, and economic movements in Latin America.

Credits: 3.00

LALS 40100 - Special Topics In Latin American/Latino Studies

Credit Hours: 3.00. Investigation of a special topic in Latin American or US Latina/o studies. The topic will vary from semester to semester.

Credits: 3.00

LALS 40200 - Directed Reading In Latin American/Latino Studies

Credit Hours: 1.00 to 6.00. Directs the reading of students with special interests in Latin American or U.S. Latina/o studies. Guides students in profitable reading in subjects of their own choice. Individual conferences; no class meetings. Permission of instructor required.

Credits: 1.00 to 6.00

LALS 34700 - Latin American Politics

Credit Hours: 3.00. Focuses on major aspects of Latin American and/or U.S. Latina/o politics and development. As a variable-topics course, individual sections may variously focus on U.S. foreign policy toward countries in Latin America, the U.S.'s historical role in the politics of the Western hemisphere, the impact of the military on political development, the dynamics of Latin American industrialization, Latin America's changing international role, Latinas/os's political participation in the United States, or any combination of the above. Individual sections may also Latin American political thought from the colonial period through the present day.

Credits: 3.00

D. Languages and Linguistics (3-6 Credits)

PTGS 20100 - Portuguese Level III (UCC: HUM)

Credit Hours: 3.00. An intermediate Portuguese course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Discussing personal relations and academic studies. 2. Giving and receiving directions to a destination and/or in order to complete a task. 3. Preparing short oral presentations on topics related to Portuguese and Brazilian cultures. 4. Writing short essays on specified topics. Credits: 3.00

PTGS 20200 - Portuguese Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of PTGS 20100 .

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 20100 - Spanish Level III (UCC: HUM)

Credit Hours: 3.00. An intermediate Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1912 Spanish Level III

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate mastery of grammatical structure and syntax, formation of plural nouns, noun-adjective agreement, verb conjugation, through the application of the communicative pedagogy (teaching in context) in the use of the basic learning skills (reading, writing, speaking and listening) by: 2. Discussing personal relations and academic studies. 3. Giving and receiving directions to a destination and/or in order to complete a task. 4. Writing short essays (maximum 250 words) on specified topics. Credits: 3.00

SPAN 20200 - Spanish Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 20100. CTL:IWL 1913 Spanish Level IV

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate control of most structures, considerable breadth of vocabulary, and appropriate communicative competence. 2. Develop the linguistic and analytic skills needed for advanced study in Spanish. 3. Be able to communicate in an academic setting, critically assess ideas and texts, and be able to present them in writing to an academic audience. 4. Show the knowledge of the rich cultural, geographical, and linguistic variety of the Spanish-speaking world. Credits: 3.00

LALS 40100 - Special Topics In Latin American/Latino Studies

Credit Hours: 3.00. Investigation of a special topic in Latin American or US Latina/o studies. The topic will vary from semester to semester.

Credits: 3.00

LALS 40200 - Directed Reading In Latin American/Latino Studies

Credit Hours: 1.00 to 6.00. Directs the reading of students with special interests in Latin American or U.S. Latina/o studies. Guides students in profitable reading in subjects of their own choice. Individual conferences; no class meetings. Permission of instructor required.

Credits: 1.00 to 6.00

LALS 30300 - Latin American Languages And Linguistics

Credit Hours: 3.00. Focuses on the languages and linguistic

practices of Latin American and/or U.S. Latina/o populations, also including the Caribbean. As a variable-topics course, individual sections may variously focus on the nature and structure of specific languages, as well as the study of their dialects, semantics, and histories; the history, structure, uses, and educational concerns of Latin American indigenous, Caribbean Creole and/or U.S. Latina/o speech communities; or any combination of the above. May be repeated for credit.

Credits: 3.00

Notes

Law and Society Minor

Requirements for the Minor (15 credits)

A. Required Foundation Course (3 credits)

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

B. Required Law and Process Courses (9 credits)

SOC 32400 - Criminology

Credit Hours: 3.00. (CRJU 32400) Nature and cause of crime; methods of dealing with adult and juvenile offenders, consideration of present programs for the social treatment of crime in the light of needed changes.

Learning Outcomes: 1. Develop a sociological perspective on crime. 2. Comprehend the foundational terms, theories, and concepts of criminology. 3. Think critically about current issues related to crime. Credits: 3.00

SOC 32800 - Criminal Justice

Credit Hours: 3.00. Introduction to institutionalized responses of society to the problem of crime. Analysis of the administration of justice in each of the major components of the criminal justice system and laws regulating their operations. Some consideration given to comparative criminal justice. CTL:ISH 1030 Introduction To Criminal Justice

Learning Outcomes: 1. Demonstrate an understanding of the Criminal Justice System in the United States, including the relationships between federal, state and local units of government. 2. Demonstrate an understanding of the pathway which an individual follows from first arrest to incarceration. 3. Demonstrate an understanding of the differential criminalization and sanctions connected to domestic, street, and corporate forms of violence and crime. 4. Demonstrate an understanding of the influence of class, race/ethnicity and gender in criminal justice. 5. Demonstrate an understanding of the major policy debates regarding crime control and criminal justice. Credits: 3.00

SOC 41900 - Sociology Of Law

Credit Hours: 3.00. Provides an overview of American legal thought and legal processes. Major topics include definitions of law; anthropological studies of law; origin and development of law; jurisprudence; police behavior; lawyers and courts; deterrent and labeling effects of legal sanctions.

Learning Outcomes: 1. Understand how official law and law-in-action can differ. 2. Identify key theories in sociology of law. 3. Apply socio-legal theoretical concepts to real-world examples. Credits: 3.00

C. Selective Course (3 credits)

SOC 22000 - Social Problems (UCC: BSS)

Credit Hours: 3.00. Contemporary problems at the community, society, and international levels, focusing on patterns of social

organization and social change in American society, with concentration on such topics as technological militarism and war, poverty, racism, political protest, and cybernation. CTL:ISH 1061 Social Problems

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Describe the cultural, social, and historical dynamics that influence how we construct social problems. 2. Identify the strengths and weaknesses of contending explanations or interpretations of major social problems. 3. Critique proposed solutions to major social problems. Credits: 3.00

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.

Learning Outcomes: 1. Identify the role of race and ethnic identity in social and professional environments. 2. Identify, define and explain the Americanization process consistent with ethnic group's integration, assimilation, and/or acculturation into American status. 3. Become familiar with principle terms, concepts, and theories of the field of race and race relations. Credits: 3.00

SOC 32600 - Social Conflict And Criminal Justice (UCC: BSS)

Credit Hours: 3.00. This course examines the dynamics of social conflict, with a special focus on legal institutions and criminological processes. Students will learn to think more analytically about the causes of social conflict, its dynamics, and strategies for resolution.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Become familiar with classic theories of social conflict and social order. 2. Understand why society needs dissent. 3. Understand strategies for conflict resolution. Credits: 3.00

SOC 32700 - Crime, Deviance And Mass Media

Credit Hours: 3.00. Various forms of mass media are used to explore the sociology of crime and deviance. Topics may include white collar crime, juvenile delinquency, street crime, sexuality and sexual orientation, hate crimes, deviance and community. Assignments include quizzes and short papers.

Learning Outcomes: 1. Able to identify concepts associated with specific theoretical perspectives and be able to describe these concepts. 2. Able to use these concepts to the media forms presented in the class. 3. Use the concepts to craft explanations for characters' actions in the fictional films. 4. Able to conduct analyses of the news that conform to accepted methodological standards of quantitative and qualitative research. Credits: 3.00

SOC 33400 - Urban Sociology

Credit Hours: 3.00. Development of the city and its functions; types of social behavior in cities; influences of city life on personality; city planning.

Credits: 3.00

SOC 34000 - General Social Psychology

Credit Hours: 3.00. Social influences on the individual and processes of social interaction. Individual attitudes and behavior as related to socialization, social norms, social roles, communication and propaganda, and other social influences. Among the interaction processes considered are interpersonal attraction, influence, leadership, cooperation, and conflict. Not open to students with credit in PSY 24000.

Learning Outcomes: 1. Develop an understanding of how politics has been approached and analyzed by sociologists over time, and an appreciation for the important thinkers and historical events that have shaped these approaches. 2. Identify specific areas of political polarization and political consensus in contemporary American politics, including

where we find evidence of partisan asymmetry. 3. Demonstrate ability to develop and communicate sociological insights as they relate to political history and contemporary political dynamics, both in class and in written assignments. Credits: 3.00

SOC 35200 - Drugs, Culture, And Society (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of the social and cultural underpinnings of drug use across societies. Students engage with various topics, including addiction, global markets, drug epidemics, public policy, and cross-cultural differences in drug use.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion.

Learning Outcomes: 1. Apply sociological approaches and concepts to the study of hate and violence. 2. Identify some of the causes of hate and violence, as well as the forces that perpetuate hate and violence. 3. Identify and critically evaluate institutional responses to hate and violence. 4. Empirically examine an organized effort to work against hate and violence. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

SOC 38300 - Introduction To Research Methods In Sociology

Credit Hours: 3.00. Introduction to the methods of data collection and analysis and to the use of the scientific method of social research. Formulation of hypotheses and research designs for their testing. Elementary principles for the conduct of experiments, observation and interviewing, documentation, content analysis, and surveys. Relationship between social research and social theory.

Learning Outcomes: 1. Understand the conditions needed to establish social causation in social research. 2. Become familiar with major approaches to collecting data for social research. 3. Understand practices to achieve valid measurement and representative samples. Credits: 3.00

SOC 39100 - Selected Topics In Sociology

Credit Hours: 1.00 to 3.00. Various topics in sociology that may change from semester to semester are presented by Sociology faculty members.

Credits: 1.00 to 3.00

SOC 40200 - Sociological Theory

Credit Hours: 3.00. An advanced critical treatment of the theories, concepts, and methods of sociology. A basic course required of undergraduate majors in sociology.

Credits: 3.00

SOC 41100 - Social Inequality

Credit Hours: 3.00. Examination of systems of class and caste, with special attention to the United States; status, occupation, income, and other elements in stratification.

Learning Outcomes: 1. Challenge misconceptions about the nature and origins of social inequalities. 2. Critically apply social inequality research to their own social environments. 3. Construct arguments about social inequalities' causes and consequences. Credits: 3.00

SOC 42100 - Juvenile Delinquency

Credit Hours: 3.00. A study of social and psychological factors influencing individual delinquent behavior patterns. Emphasis on preventive and rehabilitative programs and the role of community agencies such as social service agencies, juvenile

courts, and youth authorities. Visits to selected organizations and institutions.

Learning Outcomes: 1. Understand the causes and consequences of juvenile crime on individuals, families, and society. 2. Understand the prevalence and types of juvenile delinquency in the United States. 3. Learn the basic theories of juvenile crime. 4. Assess the theories onset of, recidivism, and desistance from crime. 5. Assess effects of social factors in delinquency, such as parents, siblings, family structure, and peers. 6. Know the history of and reasons for the juvenile justice system. 7. Critically evaluate the juvenile justice system and social response to juvenile crime. 8. Identify and evaluate multiple local organizations and institutions that intervene or act in juvenile delinquency prevention, rehabilitation, or response. Credits: 3.00

SOC 42600 - Social Deviance And Control

Credit Hours: 3.00. Sociological and social psychological study of social control and social deviance. Emphasis on theoretical frameworks and empirical research. Consideration also given to specific areas such as substance abuse, suicide, violence, and deviant collective behavior.

Learning Outcomes: 1. Develop a sociological perspective on deviance and social control. 2. Comprehend the foundational theories, concepts, and terms involved in the study of deviance and social control. 3. Think critically about current issues related to deviance and social control. Credits: 3.00

SOC 42900 - Sociology Of Protest (UCC: BSS)

Credit Hours: 3.00. This course focuses on the sociological study of protest. Topics include protest emergence, individual reasons for participation in protest, and outcomes. Course readings cover protest in the United States as well as other cultural contexts.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

SOC 45000 - Gender Roles In Modern Society

Credit Hours: 3.00. A critical examination of the complementary roles of men and women, with particular attention to problems of role adjustment in the contemporary United States. The neofeminist movement and countermovements. Role conflicts and adjustments in such areas as family, education, employment, and the political arena.

Credits: 3.00

SOC 33500 - Political Sociology (UCC: STS)

Credit Hours: 3.00. Analysis of the social and social psychological sources of routine political participation such as voting and interest group activity, and nonroutine political action such as protest movements and revolution; the organization of power at the community, national, and international level; and political ideology.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Have a basic understanding of sociological theories of the state 2. Acquire an understanding of recent social and political science explanations of political processes and events 3. Apply sociological principles to make sense of current world events and to contribute to social debates 4. Comprehend different opportunities to influence political decisions by average citizens. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize

what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

SOC 38100 - Data And Society

Credit Hours: 3.00. We are currently witnessing amazing technological innovations brought about by the production, accumulation, and analysis of unimaginable amounts of data. These technologies are disrupting industries, creating new classes of wealthy and poor, and providing novel opportunities for social control and resistance. This course will look at how the increasing centrality of data is changing our world. Among the questions we will answer: What's so big about Big Data? How intelligent is artificial intelligence? Why does everyone want my data? Will there still be jobs when I graduate?

Learning Outcomes: 1. Outline the development of machine learning technologies from expert systems to neural nets. 2. Explain why data has become a precious resource, and the positive and negative effects this change has engendered. 3. Critically appraise potential dangers of artificial intelligence and automation as well as their potential benefits. Credits: 3.00

A. Required Foundation Course (3 credits)

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

CTL:ISH 1061 Social Problems

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Describe the cultural, social, and historical dynamics that influence how we construct social problems. 2. Identify the strengths and weaknesses of contending explanations or interpretations of major social problems. 3. Critique proposed solutions to major social problems. Credits: 3.00

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.

Learning Outcomes: 1. Identify the role of race and ethnic identity in social and professional environments. 2. Identify, define and explain the Americanization process consistent with ethnic group's integration, assimilation, and/or acculturation into American status. 3. Become familiar with principle terms, concepts, and theories of the field of race and race relations. Credits: 3.00

SOC 32600 - Social Conflict And Criminal Justice (UCC: BSS)

Credit Hours: 3.00. This course examines the dynamics of social conflict, with a special focus on legal institutions and criminological processes. Students will learn to think more analytically about the causes of social conflict, its dynamics, and strategies for resolution.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Become familiar with classic theories of social conflict and social order. 2. Understand why society needs dissent. 3. Understand strategies for conflict resolution. Credits: 3.00

SOC 32700 - Crime, Deviance And Mass Media

Credit Hours: 3.00. Various forms of mass media are used to explore the sociology of crime and deviance. Topics may include white collar crime, juvenile delinquency, street crime, sexuality and sexual orientation, hate crimes, deviance and community. Assignments include quizzes and short papers.

Learning Outcomes: 1. Able to identify concepts associated with specific theoretical perspectives and be able to describe these concepts. 2. Able to use these concepts to the media forms presented in the class. 3. Use the concepts to craft explanations for characters' actions in the fictional films. 4. Able to conduct analyses of the news that conform to accepted methodological standards of quantitative and qualitative research. Credits: 3.00

SOC 33400 - Urban Sociology

Credit Hours: 3.00. Development of the city and its functions; types of social behavior in cities; influences of city life on personality; city planning.

Credits: 3.00

SOC 34000 - General Social Psychology

Credit Hours: 3.00. Social influences on the individual and processes of social interaction. Individual attitudes and behavior as related to socialization, social norms, social roles, communication and propaganda, and other social influences. Among the interaction processes considered are interpersonal attraction, influence, leadership, cooperation, and conflict. Not open to students with credit in PSY 24000.

Learning Outcomes: 1. Develop an understanding of how politics has been approached and analyzed by sociologists over time, and an appreciation for the important thinkers and historical events that have shaped these approaches. 2. Identify specific areas of political polarization and political consensus in contemporary American politics, including where we find evidence of partisan asymmetry. 3. Demonstrate ability to develop and communicate sociological insights as they relate to political history and contemporary political dynamics, both in class and in written assignments. Credits: 3.00

SOC 35200 - Drugs, Culture, And Society (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of the social and cultural underpinnings of drug use across societies. Students engage with various topics, including addiction, global markets, drug epidemics, public policy, and cross-cultural differences in drug use.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion.

Learning Outcomes: 1. Apply sociological approaches and concepts to the study of hate and violence. 2. Identify some of the causes of hate and violence, as well as the forces that perpetuate hate and violence. 3. Identify and critically evaluate institutional responses to hate and violence. 4. Empirically examine an organized effort to work against hate and violence. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

SOC 38300 - Introduction To Research Methods In Sociology

Credit Hours: 3.00. Introduction to the methods of data collection and analysis and to the use of the scientific method of social research. Formulation of hypotheses and research designs for their testing. Elementary principles for the conduct of experiments, observation and interviewing, documentation, content analysis, and surveys. Relationship between social research and social theory.

Learning Outcomes: 1. Understand the conditions needed to establish social causation in social research. 2. Become familiar with major approaches to collecting data for social

research. 3. Understand practices to achieve valid measurement and representative samples. Credits: 3.00

SOC 39100 - Selected Topics In Sociology

Credit Hours: 1.00 to 3.00. Various topics in sociology that may change from semester to semester are presented by Sociology faculty members.

Credits: 1.00 to 3.00

SOC 40200 - Sociological Theory

Credit Hours: 3.00. An advanced critical treatment of the theories, concepts, and methods of sociology. A basic course required of undergraduate majors in sociology.

Credits: 3.00

SOC 41100 - Social Inequality

Credit Hours: 3.00. Examination of systems of class and caste, with special attention to the United States; status, occupation, income, and other elements in stratification.

Learning Outcomes: 1. Challenge misconceptions about the nature and origins of social inequalities. 2. Critically apply social inequality research to their own social environments. 3. Construct arguments about social inequalities' causes and consequences. Credits: 3.00

SOC 42100 - Juvenile Delinquency

Credit Hours: 3.00. A study of social and psychological factors influencing individual delinquent behavior patterns. Emphasis on preventive and rehabilitative programs and the role of community agencies such as social service agencies, juvenile courts, and youth authorities. Visits to selected organizations and institutions.

Learning Outcomes: 1. Understand the causes and consequences of juvenile crime on individuals, families, and society. 2. Understand the prevalence and types of juvenile delinquency in the United States. 3. Learn the basic theories of juvenile crime. 4. Assess the theories onset of, recidivism, and desistance from crime. 5. Assess effects of social factors in delinquency, such as parents, siblings, family structure, and peers. 6. Know the history of and reasons for the juvenile justice system. 7. Critically evaluate the juvenile justice system and social response to juvenile crime. 8. Identify and evaluate multiple local organizations and institutions that intervene or act in juvenile delinquency prevention, rehabilitation, or response. Credits: 3.00

SOC 42600 - Social Deviance And Control

Credit Hours: 3.00. Sociological and social psychological study of social control and social deviance. Emphasis on theoretical frameworks and empirical research. Consideration also given to specific areas such as substance abuse, suicide, violence, and deviant collective behavior.

Learning Outcomes: 1. Develop a sociological perspective on deviance and social control. 2. Comprehend the foundational theories, concepts, and terms involved in the study of deviance and social control. 3. Think critically about current issues related to deviance and social control. Credits: 3.00

SOC 42900 - Sociology Of Protest (UCC: BSS)

Credit Hours: 3.00. This course focuses on the sociological study of protest. Topics include protest emergence, individual reasons for participation in protest, and outcomes. Course readings cover protest in the United States as well as other cultural contexts.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 45000 - Gender Roles In Modern Society

Credit Hours: 3.00. A critical examination of the complementary roles of men and women, with particular attention to problems of role adjustment in the contemporary United States. The neofeminist movement and countermovements. Role conflicts and adjustments in such areas as family, education, employment, and the political arena.

Credits: 3.00

SOC 33500 - Political Sociology (UCC: STS)

Credit Hours: 3.00. Analysis of the social and social psychological sources of routine political participation such as voting and interest group activity, and nonroutine political action such as protest movements and revolution; the organization of power at the community, national, and international level; and

political ideology.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Have a basic understanding of sociological theories of the state 2. Acquire an understanding of recent social and political science explanations of political processes and events 3. Apply sociological principles to make sense of current world events and to contribute to social debates 4. Comprehend different opportunities to influence political decisions by average citizens. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

SOC 38100 - Data And Society

Credit Hours: 3.00. We are currently witnessing amazing technological innovations brought about by the production, accumulation, and analysis of unimaginable amounts of data. These technologies are disrupting industries, creating new classes of wealthy and poor, and providing novel opportunities for social control and resistance. This course will look at how the increasing centrality of data is changing our world. Among the questions we will answer: What's so big about Big Data? How intelligent is artificial intelligence? Why does everyone want my data? Will there still be jobs when I graduate?

Learning Outcomes: 1. Outline the development of machine learning technologies from expert systems to neural nets. 2. Explain why data has become a precious resource, and the positive and negative effects this change has engendered. 3. Critically appraise potential dangers of artificial intelligence and automation as well as their potential benefits. Credits: 3.00

A. Required Foundation Course (3 credits)

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

Learning Sciences in Educational Studies Minor

Requirements for the Minor (15 credits)

Required Courses (5-6 credits)

EDPS 10101 - Learning In Context-An Introduction To The Learning Sciences

Credit Hours: 3.00. This introductory course is designed to acquaint first year Learning Science students with the core concepts, principles, and research findings of the learning sciences as they apply to a wide range of formal and informal educational contexts. The course provides students with opportunities to interact with and learn about the scholarship of

College of Education faculty who conduct research within the framework of the learning sciences. Students will learn about faculty projects that exemplify key features of the Learning Sciences such as attention to the complexity of learning environments, the study of social and cultural as well as individual dimensions of learning, and the cross-disciplinary nature of the field.

Learning Outcomes: 1. Identify the features of education as a design discipline. 2. Identify core principles, questions, and challenges, that define educational research and practice from a Learning Sciences perspective. 3. Identify the varied sources of cross-disciplinary knowledge that contribute to the design and study of effective learning environments. Credits: 3.00

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

Selectives (9-10 credits)

EDPS 30101 - Motivation To Learn

Credit Hours: 3.00. This course introduces students to current social-cognitive and sociocultural theories of motivation for learning and academic achievement, and research framed by those theories. Both individual-level and contextual factors associated with motivation will be considered. The course will also address applications of theory in educational settings, including motivational interventions.

Learning Outcomes: 1. Be familiar with predominant social-cognitive theories of motivation and their related constructs. 2. Understand how social-cognitive and socio-cultural approaches to studying motivation differ conceptually, methodologically, and empirically. 3. Be familiar with a range of methodologies that are used to measure student motivation, and strengths and weaknesses of each. 4. Understand and think critically about research design issues in motivation research, including descriptive correlational, quasi-experimental, and design research. 5. Understand the implications of motivation for student learning and achievement, and how this association is affected by affective, behavioral, and cognitive engagement. 6. Be familiar with proximal and distal contextual factors that are associated with motivation, and reasons for those associations. 7. Be familiar with ways that teaching and learning practices can facilitate or impede optimal student motivation. Credits: 3.00

EDPS 49000 - Individual Research And Teaching Experience

Credit Hours: 1.00 to 8.00. Primarily for teacher candidates requiring special, individualized experience in research or teaching. Permission of instructor required.

Credits: 1.00 to 8.00

EDPS 49100 - Topics And Issues In Education

Credit Hours: 1.00 to 3.00. Provides student with opportunity to strengthen preparation through study of selected educational topics and issues based upon individual needs and interests. One topic is considered in each enrollment.

Credits: 1.00 to 3.00

EDPS 53300 - Introduction To Educational Research I: Methodology

Credit Hours: 3.00. This course presents a sequence of journal

articles and exercises that help introduce the foundational concepts of the course, including: research design, reliability and validity, various methodologies commonly used in educational research, and basic quantitative and qualitative data analyses. In addition, contrasting research conclusions are shown in the articles to help students learn why careful analysis of articles and their theoretical framing is critical to evaluating their conclusions.

Learning Outcomes: 1. Find research literature. 2. Read and critique educational research. 3. Deepen knowledge of at least one research area in education. 4. Design, conduct, analyze, and write a research project. Credits: 3.00

EDPS 53400 - Introduction To Educational Research II: Measurement Consideration

Credit Hours: 3.00. This course is designed to provide an overview of introductory quantitative data analysis methods in education. The course in specially designed to enhance students' quantitative reasoning and skills through discussions of issues in educational data and authentic data analysis experiences of a variety of education data. The topics to be covered in this course include data collection and description, sampling distributions, methods of quantitative data analysis often used in education research. Permission of instructor required.

Learning Outcomes: 1. Describe key concepts and principles of educational measurement. 2. Conduct comprehensive analyses of the characteristics of different assessments (including their advantages and limitations). Credits: 3.00

EDPS 54000 - Gifted, Creative And Talented Children

Credit Hours: 3.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership).

Learning Outcomes: 1. Understand who gifted, creative, and talented children are and how their talent development needs can be met in the school setting. 2. Recognize the diversity that exists within the gifted, creative, and talented population. 3. Understand the history, philosophical traditions, and paradigms of practice in gifted education. 4. Develop awareness of specific strategies for supporting gifted, creative, and talented students within the school context. 5. Develop awareness of key professional resources in the field of gifted education and talent development. 6. Develop a personal identity as a practitioner of gifted education. Credits: 3.00

EDPS 54500 - Social And Affective Development Of Gifted Students

Credit Hours: 3.00. This course focuses on the social and emotional development of gifted and talented students. An overview of the characteristics and needs of gifted subpopulations, diversity issues, and family/parenting concerns along with an introduction to current educational approaches and counseling interventions are provided. The course is designed to complement EDPS 54000.

Learning Outcomes: 1. Analyze, synthesize, and evaluate current research literature on the social and affective development of gifted students. 2. Discuss characteristics and needs of subpopulations of gifted and talented learners and the implications for academic instruction and/or counseling interventions. 3. Increase knowledge of issues related to the social and affective development of gifted students through class discussion, interaction with gifted students, and completion of CORE assignments. Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area

performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for

implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

EDPS 34501 - Social And Affective Development Of Gifted Students

Credit Hours: 3.00. This course focuses on the social and emotional development of gifted and talented students and provides you with knowledge and skills needed to effectively support healthy psychosocial development through your work with gifted students. As well as providing an overview of the

characteristics and needs of gifted students, we will also discuss special populations of gifted learners, diversity issues, family and peer relationships, and current educational approaches and counseling interventions, including considerations for career development for gifted students. Permission of instructor required.

Learning Outcomes: 1. Recognize the social and affective characteristics and needs of high-ability students; describe and apply research-based practices to support their affective developments across home, school, and community. [NAGC-CEC Standards: 1.1, 1.2, 2.1] 2. Practice designing products that incorporate meaningful and engaging social and affective components that promote social-emotional well-being, including coping skills, proactive, adaptive behaviors, performance skills, and social skills. [NAGC-CEC Standards: 2.1-2.3, 3.1, 3.4, 4.5, 5.1] 3. Discuss characteristics and needs of subpopulations of high-ability learners and the implications for academic instruction, ethical leadership development, and/or counseling interventions. [NAGC-CEC Standards: 2.1-2.3, 4.1-4.5, 6.1, 6.3] 4. Increase knowledge and experience through regular participation in class discussion boards, interaction with gifted students and their parents, and completion of an in-depth, original affective case study of a high-ability students K-12. [NAGC-CEC Standards: 3.1, 4.3, 4.5, 7.1-7.2] Credits: 3.00

Notes

LGBTQ Studies Minor

Requirements for the Minor (12 credits)

A. LGBTQ Foundational Course (3 credits)

ANTH 28200 - Introduction To LGBTQ Studies

Credit Hours: 3.00. (WGSS 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding if the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

WGSS 28200 - Introduction To LGBTQ Studies (UCC: BSS)

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding of the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

B. LGBTQ 40000-level Course (3 credits)

ANTH 48200 - Sexual Diversity In Global Perspectives

Credit Hours: 3.00. This course focuses on anthropological and interdisciplinary research in the study of sexuality with particular attention to lesbian, gay, bisexual and transgender identities. It explores historical, theoretical and ethnographic work on sexualities and genders in the US and globally.

Learning Outcomes: 1. Develop an in-depth

understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally. 4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

HIST 48800 - History Of Sexual Regulation In The United States

Credit Hours: 3.00. This course will illuminate broad themes in the historical regulation of sexual violence, consensual sex, and homosexuality. Student will understand and analyze how cultural, social, religious, and moral ideologies have influenced conceptions of deviant and normative sexuality in the United States.

Learning Outcomes: 1. Students will be able to articulate verbally and in writing what they have learned about the nineteenth and twentieth century history of sexual regulation. 2. Students will be able to identify and analyze the cultural and religious values which informed sexual regulation. 3. Students will develop a deeper understanding of how regulations and reform worked by conducting primary source research and synthesizing it into written arguments. Credits: 3.00

WGSS 48200 - Interdisciplinary Studies In Sexuality

Credit Hours: 3.00. This course offers an interdisciplinary introduction to recent work in lesbian and gay studies in various fields, including literature, history, film, cultural theory, medicine, law, and studies of sexuality.

Learning Outcomes: 1. Develop an in-depth understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally. 4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

C. LGBTQ Studies Electives (6 credits)

1. Category 1 - Choose One (3 credits)

PSY 24400 - Introduction To Human Sexuality

Credit Hours: 3.00. This course will provide a broad survey of research on human sexuality from a psychosocial perspective. Topics covered include research methods, gender identity, sexual orientation, reproductive anatomy, typical and atypical sexual behavior, and sexual difficulties and their treatments. CTL:ISH 1022 Human Sexuality

Credits: 3.00

ANTH 48200 - Sexual Diversity In Global Perspectives

Credit Hours: 3.00. This course focuses on anthropological and interdisciplinary research in the study of sexuality with particular attention to lesbian, gay, bisexual and transgender identities. It explores historical, theoretical and ethnographic work on sexualities and genders in the US and globally.

Learning Outcomes: 1. Develop an in-depth understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally. 4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

CLCS 23700 - Gender And Sexuality In Greek And Roman Antiquity (UCC: HUM)

Credit Hours: 3.00. How identities based on gender, sexual behavior and sexual desire, and socio-economic status are established in ancient Greece and Rome. Exploration of why these ancient views of gender and sexuality remain of continuing importance in the 21st century. All readings in English.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Learn core information about ancient Greek and/or Roman cultures. 2. Learn to analyze gender identities and conventions surrounding sexuality in various

communities with different socio-political structures. 3. Develop methods for historically sensitive investigation of materials (literary and/or visual) from ancient cultures. 4. Systematically improve analytical skills as writers, readers, and speakers. Credits: 3.00

HIST 48800 - History Of Sexual Regulation In The United States

Credit Hours: 3.00. This course will illuminate broad themes in the historical regulation of sexual violence, consensual sex, and homosexuality. Student will understand and analyze how cultural, social, religious, and moral ideologies have influenced conceptions of deviant and normative sexuality in the United States.

Learning Outcomes: 1. Students will be able to articulate verbally and in writing what they have learned about the nineteenth and twentieth century history of sexual regulation. 2. Students will be able to identify and analyze the cultural and religious values which informed sexual regulation. 3. Students will develop a deeper understanding of how regulations and reform worked by conducting primary source research and synthesizing it into written arguments. Credits: 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion.

Learning Outcomes: 1. Apply sociological approaches and concepts to the study of hate and violence. 2. Identify some of the causes of hate and violence, as well as the forces that perpetuate hate and violence. 3. Identify and critically evaluate institutional responses to hate and violence. 4. Empirically examine an organized effort to work against hate and violence. Credits: 3.00

WGSS 49200 - Practicum In Women's, Gender, and Sexuality Studies

Credit Hours: 2.00 to 4.00. This course is designed to integrate knowledge derived from women's studies scholarship with practical experience. Students will define their own projects in consultation with women's studies faculty. Periodic conferences and written reports required. Permission of instructor required.

Credits: 2.00 to 4.00

WGSS 48200 - Interdisciplinary Studies In Sexuality

Credit Hours: 3.00. This course offers an interdisciplinary introduction to recent work in lesbian and gay studies in various fields, including literature, history, film, cultural theory, medicine, law, and studies of sexuality.

Learning Outcomes: 1. Develop an in-depth understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally. 4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

WGSS 48000 - Feminist Theory

Credit Hours: 3.00. Intensive study of a variety of contemporary and international feminist theories from an interdisciplinary perspective. Provides an overview of major trends, critical approaches, and diverse viewpoints in the field of feminist theory.

Credits: 3.00

WGSS 38200 - Love, Sex And Sexuality

Credit Hours: 3.00. Explores intimate relationships and marriage practices in Western and non-Western societies from a historical and comparative perspective. Examines the changes in love and marriage in Greco-Roman societies, medieval and modern Europe, China, India and the Muslim world, among others.

Credits: 3.00

WGSS 38000 - Comparative Studies In Gender And Culture (UCC: BSS)

Credit Hours: 3.00. This course expands students' understanding of gender issues by exploring the multicultural

diversity of women's lives. It examines how race, class, sexuality, and culture interact and shape society and ecology in the United States and in a global context.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the diversity of feminist thought within the U.S. and globally. 2. Summarize the following concepts: 1) sex and gender; 2) social construction and essentialism; 3) oppression; 4) privilege; 6) resistance and social activism. 3. Analyze how gender operates as system of social stratification and differentiation in major arenas of social life such as home and family, work, politics, education, and sexuality across various cultural contexts. 4. Define some of the multi and trans-cultural interactions among gender, race, class, sexuality, and national belonging and some of the ways in which ""woman/women"" and ""man/men"" is a constructed category that is historically and culturally shaped. 5. Demonstrate an understanding of activist awareness and commitment to women's and LGBTQ+ issues from a multi/trans-cultural and global perspective. 6. Make explicit connections between matters discussed in this class and the events and interactions of your daily life. Credits: 3.00

2. Category 2 - Choose One (3 credits)

ENGL 36000 - Gender And Literature (UCC: HUM)

Credit Hours: 3.00. An introduction to feminist approaches to the study of literature, including poetry, drama, fiction, and/or autobiography. Examines how gender intersects with race, ethnicity, sexual orientation, and class in shaping authorship, reading, and representation.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37500 - Women In America Since 1870 (UCC: HUM)

Credit Hours: 3.00. A survey of the history of women in the United States from 1870 to the present.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

LC 23900 - Women Writers In Translation (UCC: HUM)

Credit Hours: 3.00. An examination of international female writers' literary creativity in the context of women's studies and feminist theory, as articulated in their specific cultural and geographical milieu. Course content will vary in terms of cultural focus. In English.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop skills in writing, reading, critical thinking, and oral expression. 2. Gain knowledge of female literary traditions in different geographical milieu and time periods. 3. Increase awareness of the ways in which women writers reflect upon and resist stereotypes of women in literature, and how this process may differ across cultures. 4. Understand fundamental concepts in women's gender and sexuality studies. Credits: 3.00

POL 22200 - Women, Politics, And Public Policy (UCC: BSS)

Credit Hours: 3.00. An introduction to women's participation in politics, with an emphasis on America. Structural and attitudinal conditions limiting women's political roles and contemporary efforts to change women's status in society through politics.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 42600 - Social Deviance And Control

Credit Hours: 3.00. Sociological and social psychological study of social control and social deviance. Emphasis on theoretical frameworks and empirical research. Consideration also given to specific areas such as substance abuse, suicide, violence, and deviant collective behavior.

Learning Outcomes: 1. Develop a sociological perspective on deviance and social control. 2. Comprehend the foundational theories, concepts, and terms involved in the study of deviance and social control. 3. Think critically about current issues related to deviance and social control. Credits: 3.00

SOC 45000 - Gender Roles In Modern Society

Credit Hours: 3.00. A critical examination of the complementary roles of men and women, with particular attention to problems of

role adjustment in the contemporary United States. The neofeminist movement and countermovements. Role conflicts and adjustments in such areas as family, education, employment, and the political arena.

Credits: 3.00

WGSS 48300 - Feminisms In Global Perspective

Credit Hours: 3.00. Explores feminist struggles through the writings of First and Third World feminist scholars. Focuses on feminist projects within and against colonial, nationalist, religious and global contexts. Includes Third World feminist critiques of Western feminisms.

Credits: 3.00

POL 52400 - Public Policy And The Family

Credit Hours: 3.00. An intensive examination of the interrelationships between public policy making and the structure and quality of life of families. The primary focus is the United States, but consideration is given to family policies in other capitalist nations.

Credits: 3.00

Linguistics Minor

Requirements for the Minor (15 credits)

A. Introduction to Linguistics - Choose One (3 credits)

SLHS 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. (ENGL 22700) Credit will not also be awarded for both SLHS 22700 and LC 26100. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

ENGL 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge. CTL:IEL 1260 Introduction To Linguistics

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

LING 20100 - Introduction To Linguistics (UCC: BSS)

Credit Hours: 3.00. Basic concepts of linguistics and methods of analysis of language; overview of linguistics and the role of language in society. Introduction to phonology, morphology, syntax, and semantics, and to problem-solving techniques, with material drawn from a variety of languages.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

LC 26100 - Introduction To The Linguistic Study Of Foreign Languages (UCC: BSS)

Credit Hours: 3.00. Overview of linguistics and the role of language in society; fundamental concepts of linguistic analysis. The course focuses on linguistic phenomena found in French, German, Russian, and Spanish, with material, examples, and assignments drawn primarily from those languages whenever appropriate.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

B. General Linguistics (6 credits)

1. Category #1

ENGL 32900 - English Language III: Sound And Form

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on phonology and morphology. Implications of recent theory to the teaching of English.

Credits: 3.00

LING 31100 - Fundamentals Of Phonology And Morphology

Credit Hours: 3.00. Basic concepts and tools of phonological and morphological analysis viewed through the material of American English. Current theoretical approaches to phonology and morphology, including word-formation processes and applications.

Credits: 3.00

2. Category #2

SLHS 30600 - Introduction To Phonetics

Credit Hours: 3.00. Credit will not be given for both SLHS 30600 and LING 31500. An introduction to articulatory phonetics, speech sounds in languages of the world, and principles and symbols of the International Phonetic Alphabet. Extensive practice in phonetic transcription.

Credits: 3.00

LC 37100 - Phonetics Of Foreign Languages

Credit Hours: 3.00. Introduction to articulatory phonetics for students of foreign languages. Mechanisms of production of speech sounds. Production and discrimination of sounds of other languages; contrast with English sounds; practice in pronunciation and phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be awarded for more than one of SLHS 30600 , LING 31500 , and LC 37100.

Credits: 3.00

LING 31500 - Elements Of Phonetics

Credit Hours: 3.00. Introduction to articulatory phonetics. Mechanisms of production of speech sounds. Sounds of languages of the world, ear training for discriminating speech sounds, and practice in broad and narrow phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be given for both LING 31500 and SLHS 30600.

Credits: 3.00

3. Category #3

ENGL 32800 - English Language II: Structure And Meaning

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on syntax and semantics, including parts of speech, sentence structure, and meaning. Implications of recent theory for the teaching of English. Credit will not be given for both ENGL 32800 and LING 32100 .

Credits: 3.00

LING 32100 - Foundations Of Syntax And Semantics

Credit Hours: 3.00. Introduction to syntactic and semantic analysis based on American English and its dialects. Underlying structure and its relation to meaning. Analysis of parts of speech, constituent phrases, sentence structure, representations, ambiguity, and applications of current theory. Credit will not be given for both LING 32100 and ENGL 32800 .

Credits: 3.00

C. Additional Courses in Linguistics - Choose Two (6 credits)

PSY 40300 - Psycholinguistics

Credit Hours: 3.00. (PSY 40300) This course aims to introduce students to the current, research-based understanding of how different aspects of language (such as word perception, language acquisition, or speech production) are represented in the mind. In addition, it will introduce some of the research methods employed by language scientists for gaining insight into such a representation. This course also aims to help students learn how to critically evaluate research data used to support various theories about psychological and neural foundations of language knowledge.

Learning Outcomes: 1. Understand main theories and empirical findings about psychological and neural foundations of language knowledge. 2. Explain how experimental work is used to inform models of language processing. 3. Critically evaluate research data used to support such models. 4. Write evaluation of empirical work in a clear and concise manner. Credits: 3.00

PSY 42600 - Language Development

Credit Hours: 3.00. (SLHS 30900) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed.

Credits: 3.00

SLHS 30200 - Hearing Science

Credit Hours: 3.00. An introduction to the scientific foundations of auditory sensation and perception. The course covers those aspects of acoustics most pertinent to understanding auditory processing of simple and complex sounds (e.g. speech and music), the anatomy and physiology of the peripheral and central auditory systems, and a range of auditory perceptual phenomena and their physiological correlates.

Learning Outcomes: 1. Define the physical parameters of sound waves and explain how

waves propagate through a medium. 2. Characterize the effects of systems on signals in both the time and frequency domains. 3. Describe the transmissions of sound through the anatomical structures in the peripheral auditory system. 4. Describe the neural coding of simple and complex sounds. 5. Describe the fundamental aspects of auditory sensation and perception. 6. Describe the basic physiological correlates of auditory sensation and perception. Credits: 3.00

SLHS 30900 - Language Development (UCC: STS)

Credit Hours: 3.00. (PSY 42600) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Numerous examples illustrating the nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

SLHS 40100 - Language And The Brain

Credit Hours: 3.00. (PSY 40100) This course is an overview of the neutral systems that underlie the core components of language, including speech perception and production, reading and writing, morphology, syntax, semantics, and discourse. During the past few decades, there has been an unprecedented increase in studies on these topics, due in large part to the widespread use of highly sensitive brain mapping techniques that enable researchers to identify relationships between particular brain areas and particular language functions. The findings that have been emerged from this recent explosion of research are exciting and important for several reasons. They provide fresh insights into the nature of the uniquely human capacity for language, and they have significant implications for understanding and treating language disorders that result from brain injury.

Learning Outcomes: 1. Understand the main methods for investigating the neural substrates of language. 2. Understand the classic and progressive aphasia syndromes. 3. Basic neural underpinnings of the core aspects of language. 4. Critically evaluate research on language. 5. Critically evaluate research on language and the brain. Credits: 3.00

SLHS 40300 - Psycholinguistics

Credit Hours: 3.00. (SLHS 40300) This course aims to introduce students to the current, research-based understanding of how different aspects of language (such as word perception, language acquisition, or speech production) are represented in the mind. In addition, it will introduce some of the research methods employed by language scientists for gaining insight into such a representation. This course also aims to help students learn how to critically evaluate research data used to support various theories about psychological and neural foundations of language knowledge.

Learning Outcomes: 1. Understand main theories and empirical findings about psychological and neural foundations of language knowledge. 2. Explain how experimental work is used to inform models of language processing. 3. Critically evaluate research data used to support such models. 4. Write evaluation of empirical work in a clear and concise manner. Credits: 3.00

ANTH 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American speech communities and the culture at large.

Credits: 3.00

ANTH 39200 - Selected Topics In Anthropology

Credit Hours: 1.00 to 3.00. Various topics in anthropology that may change from semester to semester are presented by anthropology faculty members.

Credits: 1.00 to 3.00

ENGL 32700 - English Language I: History And Development

Credit Hours: 3.00. Introduction to the history of the English language, its sounds, inflections, words, and sentence structures. Cultural and historical events affecting this history, and the interplay between language and literature.

Credits: 3.00

ENGL 39600 - Studies In Literature And Language

Credit Hours: 1.00 to 3.00. A course in the study of a special topic directed by an instructor in whose particular field of specialization the content of the course falls.

Learning Outcomes: 1. Students will think

critically about course content. 2. Students will read and write reflectively and critically about course content. 3. Students will engage in course discussions, either online or face-to-face, which encourage critical thought and personal engagement. Credits: 1.00 to 3.00

FR 39600 - Special Topics In French Language Science

Credit Hours: 3.00. Examines a particular aspect entailed in the study of French language, e.g., language acquisition and teaching, language in society, regional dialects of France, French around the world, French creoles. Conducted in French.

Credits: 3.00

JPNS 36100 - Elementary Survey Of Japanese Linguistics

Credit Hours: 3.00. This course surveys all areas of Japanese Linguistics, including phonetics, phonology, morphology, syntax, semantics, and pragmatics, focusing on systematizing fragmentary knowledge students are assumed to have acquired through Japanese language courses.

Credits: 3.00

JPNS 36300 - Relationship Of Japanese Language And Society

Credit Hours: 3.00. This course examines the Japanese language with reference to the way the language is being used in the Japanese society. Particular areas include keigo (honorific language), aizuchi (backchannel), silence, gender issues, in-group vs. out-group.

Credits: 3.00

LC 49000 - Special Topics In Foreign Languages And Literatures

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

LING 49800 - Special Topics In Linguistics II

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required.

Credits: 3.00

LING 49000 - Directed Reading In Linguistics

Credit Hours: 1.00 to 4.00. Independent study and reading on a topic in linguistics directed by a faculty member. Permission of instructor required.

Credits: 1.00 to 4.00

LING 39800 - Special Topics In Linguistics I

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required.

Credits: 3.00

LING 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American English in African American speech communities and the United States culture at large.

Credits: 3.00

PHIL 46500 - Philosophy Of Language

Credit Hours: 3.00. An examination of some of the central issues in the philosophy of language, such as meaning, reference, truth, propositions, and speech acts.

Credits: 3.00

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning

process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

COM 50700 - Introduction To Semiotics

Credit Hours: 3.00. (ANTH 51900, AUSL 58900, ENGL 57000, LC 57000) The study of languages, literatures, and other systems of human communication. Includes a wide range of phenomena, which can be brought together by means of a general theory of signs. The course deals with three fundamental areas: 1) verbal communication, 2) nonverbal communication (iconic systems, gestures, body language, etc.), and 3) communication through art forms.

Learning Outcomes: 1. Describe and apply semiotic theories. 2. Apply semiotic theory and practice to everyday life. 3. Apply semiotic theory to different socio-cultural contexts. 4. Describe the semiotic theory behind the social construction of reality. 5. Analyze sign systems within their socio-cultural milieus. Credits: 3.00

COM 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, AUSL 56500, ENGL 56500, LC 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism.

Credits: 3.00

ANTH 51900 - Introduction To Semiotics

Credit Hours: 3.00. (COM 50700 , ENGL 57000 , LC 57000) The study of languages, literatures, and other systems of human communication. Includes a wide range of phenomena which can be brought together by means of a general theory of signs. The course deals with three fundamental areas: 1) verbal communication, 2) nonverbal communication (iconic systems, gestures, body language, etc.), and 3) communication through art forms.

Credits: 3.00

ANTH 56500 - Sociolinguistics

Credit Hours: 3.00. (SLHS 56500, COM 56500 , ENGL 56500 , LC 56500 , LING 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism.

Credits: 3.00

ANTH 59200 - Selected Topics In Anthropology

Credit Hours: 1.00 to 3.00. Topics vary.

Credits: 1.00 to 3.00

ENGL 51100 - Semantics

Credit Hours: 3.00. An introduction to and survey of current semantic theories and methods with an emphasis on English. Basic concepts of linguistic semantics and its relation to the other semantics. Compositional (transformational), model-theoretical (truth-conditional), pragmatic, and contextual semantics.

Credits: 3.00

ENGL 51200 - English Syntax And Syntactic Theory

Credit Hours: 3.00. Introduction to English syntactic structure, syntactic argumentation, and syntactic theory. Emphasis on one current theory as the primary theoretical framework, with other theories considered.

Credits: 3.00

ENGL 51300 - English Phonology

Credit Hours: 3.00. Introduction to current phonological theory, with applications to descriptions of American and British English. Articulatory description of English phonological structure and contrastive analysis of phonetic variation across dialects. Evolution of the stress system of English and its utilization by poets writing metrical verse.

Credits: 3.00

ENGL 51600 - Teaching English As A Second Language: Theoretical Foundations

Credit Hours: 3.00. Survey of theories of learning and teaching English as a second/foreign/international language. Focus is on current theories and their implications for practice.

Learning Outcomes: 1. Demonstrate an understanding of current theories of second-

language learning and teaching and their implications. Credits: 3.00

ENGL 51800 - Teaching English As A Second Language: Principles And Practices

Credit Hours: 3.00. Studies of issues and principles in ESL/EFL program development. Emphasis is on practical application of theory in a variety of English learning and teaching contexts in the U.S. and abroad.

Credits: 3.00

ENGL 56300 - Historical Linguistics

Credit Hours: 3.00. (ANTH 56300, LC 56300) A survey of mechanisms and motivations of linguistic change. Topics include: phonological, morphological, semantic and syntactic change, comparative and internal reconstruction, linguistic variation, language contact, and linguistic typology.

Credits: 3.00

ENGL 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, COM 56500, LC 56500, LING 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism.

Credits: 3.00

ENGL 57000 - Introduction To Semiotics

Credit Hours: 3.00. The study of languages, literatures, and other systems of human communication. Includes a wide range of phenomena which can be brought together by means of a general theory of signs. The course deals with three fundamental areas: 1) verbal communication, 2) nonverbal communication (iconic systems, gestures, body language, etc.), and 3) communication through art forms.

Credits: 3.00

ENGL 59600 - Advanced Studies In Literature Or Language

Credit Hours: 3.00. Advanced study of a topic within the instructor's fields of specialization. Emphasis on scholarly analysis and research.

Learning Outcomes: 1. Think critically about course content. 2. Read and write reflectively and critically about the course content. 3. Engage in course discussions, either online or face to face, which will encourage critical thought and personal engagement. Credits: 3.00

SLHS 50200 - Fundamentals Of Speech Production And Perception

Credit Hours: 3.00. The physical, biological, and behavioral correlates of normal speech production and perception. Includes an exposure to the measures and methods of speech science.

Learning Outcomes: 1. The student will be able to describe how the muscles and nerves (cranial and spinal) of the respiratory, laryngeal, and supralaryngeal systems are involved in normal speech production. 2. The student will be able to describe how the acoustic speech signal is formed by the speech production system and understand the resulting acoustic signal for consonants and vowels. 3. The student will understand the underlying principles of speech perception. 4. The student will demonstrate acceptable writing skills. 5. The student will demonstrate how research principles can be integrated into evidence-based practice. Credits: 3.00

SLHS 59000 - Directed Study Of Special Problems

Credit Hours: 1.00 to 6.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 6.00

FR 56100 - The Structure Of French I: Phonetics And Phonology

Credit Hours: 3.00. This course presents the sound system of French by examining descriptive and theoretical issues in the patterning of segments on various levels (phonetics, phonemics, morphology, etc.). Students will study current phonological and phonetic issues in recent literature. Credit will not be given for both FR 35100 and 56100.

Credits: 3.00

FR 56200 - The Structure Of French II: Syntax And Morphosyntax

Credit Hours: 3.00. This course presents descriptive and theoretical issues concerning the grammatical structure of French, dealing both with word-level phenomena (inflectional and derivational morphology, etc.) and with phrase-, sentence-, and discourse-level phenomena (syntactic structure, sentence constituents, word order, etc.). Credit will not be given for both FR 36200 and 56200.

Credits: 3.00

FR 56300 - History Of The French Language

Credit Hours: 3.00. A survey of the historical development of the French language from Vulgar Latin to the present and of the French language of today as a reflection of past cultural and socio-political conditions. Knowledge of a Romance language or of Latin is recommended but not required.

Credits: 3.00

FR 56400 - Introduction To Old French

Credit Hours: 3.00. Introduction to the study of Old French. Phonetic, syntactic, and stylistic questions will be addressed through the analysis of original texts.

Credits: 3.00

FR 59600 - Special Topics In French Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

GER 56100 - The Structure Of German I: Phonology And Derivational Morphology

Credit Hours: 3.00. Linguistic analysis of German, focusing on phonetics, phonology, and word structure. The course will treat various problems of pronunciation, structural sound patterns, and word derivation. One weekly class is devoted to theoretical issues affecting German phonology and morphology. Credit will not be given for both GER 36100 and 56100.

Credits: 3.00

GER 56200 - The Structure Of German II: Inflectional Morphology And Syntax

Credit Hours: 3.00. Linguistic analysis of German, focusing on inflectional morphology, syntax, and semantics. The course will present the grammatical structure of German, dealing with word-level phenomena (inflectional morphology), and phrase- and sentence-level phenomena (constituents, word order, syntactic structure, etc.). Credit will not be given for both GER 36200 and 56200.

Credits: 3.00

GER 56300 - History Of The German Language

Credit Hours: 3.00. A survey of the development of the German language, with emphasis on the factors and events that brought about the ultimate unification of the major German dialects into the standard form of the present. The German language of today as a reflection of past cultural and sociopolitical conditions.

Credits: 3.00

GER 59600 - Special Topics In German Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

JPNS 59600 - Special Topics In Japanese Linguistics.

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

LC 56300 - Historical Linguistics

Credit Hours: 3.00. (ANTH 56300, ENGL 56300) A survey of mechanisms and motivations of linguistic change. Topics include phonological, morphological, semantic and syntactic change, comparative and internal reconstruction, linguistic variation, language contact, and linguistic typology.

Credits: 3.00

LC 57000 - Introduction To Semiotics

Credit Hours: 3.00. (ANTH 51900, SLHS 58900, COM 50700, ENGL 57000) The study of languages, literatures, and other systems of human communication. Includes a wide range of phenomena that can be brought together by means of a general theory of signs. The course deals with three fundamental areas: 1) verbal communication, 2) nonverbal communication (iconic systems, gestures, body language, etc.), and 3) communication through art forms.

Credits: 3.00

LC 57500 - Theories Of Foreign Language Acquisition

Credit Hours: 3.00. An advanced course designed to provide an overview of major theoretical issues in foreign language acquisition research. Provides a broad historical introduction to theories of acquisition that underlie these different perspectives. This course also provides an understanding of skills assessment and selection of instructional materials. Permission of instructor required.

Credits: 3.00

LC 59000 - Directed Reading In Foreign Languages

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

LC 59600 - Special Topics In Linguistics

Credit Hours: 1.00 to 4.00. Special topics in Linguistics. Permission of instructor required.

Credits: 1.00 to 4.00

LING 59800 - Special Topics In Linguistics

Credit Hours: 1.00 to 4.00. Investigation of an advanced topic in linguistics. Topic varies from semester to semester. Permission of instructor required.

Credits: 1.00 to 4.00

LING 59400 - Special Topics In Historical Linguistics

Credit Hours: 3.00. Investigation of an advanced topic in historical linguistics. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 59300 - Special Topics In Semantics

Credit Hours: 3.00. Investigation of an advanced topic in semantics. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 59100 - Special Topics In Phonology

Credit Hours: 3.00. Investigation of an advanced topic in phonology. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 59000 - Directed Reading In Linguistics

Credit Hours: 1.00 to 4.00. Independent study and reading on a topic in linguistics directed by a faculty member. Permission of instructor required.

Credits: 1.00 to 4.00

LING 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, COM 56500, ENGL 56500, LC 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism.

Learning Outcomes: 1. Able to discuss the relationship between language and society and identify the roles of language in its social and cultural context. 2. Able to critique current theories in sociolinguistics using data sets provided in course texts. 3. Able to identify the major models for sociolinguistic analysis and suggest reformulations and refinements necessary for various societies and cultures. 4. Able to recognize the sociolinguist's responsibility in the ethical treatment of human subjects and collected data. Credits: 3.00

LING 54100 - Historical Linguistics And Language Change

Credit Hours: 3.00. A general examination of the ways in which languages and their subsystems change over time and of the forces that produce change. The comparative method; internal reconstruction; geographical variation; and social variation. Overview of world language families and genetic relationships. Offered in conjunction with ENGL 56300 or LC 56300 .

Credits: 3.00

LING 53200 - Semantics II: Formal And Grammatical Semantics

Credit Hours: 3.00. A formal, logic-based study of semantic relations. Semantics of individuals and objects, attributes, determiners, definite descriptions, quantifiers, events, time, and space.

Credits: 3.00

LING 53100 - Semantics I: Lexical And Sentential Semantics

Credit Hours: 3.00. Foundations of semantic analysis and survey of current linguistic semantic theories and methods. Semantics at the lexical and sentential levels. Combinatorial, truth-conditional, pragmatic, contextual, and computational semantics. Offered in conjunction with ENGL 51100 .

Credits: 3.00

LING 52200 - Syntax II: Issues In Syntax

Credit Hours: 3.00. Deeper examination of a wider range of syntactic phenomena and evaluation of competing theoretical analyses proposed to account for them. Constructing theoretical analyses and evaluating their explanatory adequacy for Universal Grammar. Topics include LF phenomena, functional projections, and structural representations.

Credits: 3.00

LING 52100 - Syntax I: Syntactic Analysis

Credit Hours: 3.00. Foundations of syntactic analysis and syntactic theory within the framework of generative grammar. Focuses on the central concepts of syntactic theory and on the principles and methods of syntactic analysis and argumentation using a core of topics relevant for syntactic theory. Offered in conjunction with ENGL 51200 .

Credits: 3.00

LING 51200 - Phonology II: Theoretical Approaches

Credit Hours: 3.00. Examination, comparison, and evaluation of contemporary phonological theories, with focus on the contribution of each theory to our understanding of representations and operations in phonological analysis. Primary emphasis is on autosegmental phonology, metrical phonology, lexical phonology, and optimality theory.

Credits: 3.00

LING 51100 - Phonology I: Descriptive Analysis

Credit Hours: 3.00. Foundations of phonological analysis. Development of concepts and methods for the analysis of phonological data and the phonological structures of natural languages within the framework of generative phonology. Focuses on problem solving and linguistic argumentation. Offered in conjunction with ENGL 51300 .

Credits: 3.00

RUSS 56100 - The Structure Of Russian I: Phonology And Syntax

Credit Hours: 3.00. This course treats the sound system and sentence structure of Russian, dealing with the structural pattern on various levels (phonetic, phonemic, syntactic) from various points of view. One weekly class is devoted to theoretical issues affecting Russian phonology and syntax.

Credits: 3.00

RUSS 56200 - The Structure Of Russian II: Morphology

Credit Hours: 3.00. This course will present a systematic study of Russian morphology in the light of current linguistic research, dealing both with the various categories of inflected words (nouns, pronouns, adjectives, verbs) and with word formation.

Credits: 3.00

RUSS 59600 - Special Topics In Russian Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

SPAN 56100 - The Structure Of Spanish I: Phonetics, Phonology, And Dialectology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a theoretical and contrastive Spanish/English perspective.

Learning Outcomes: 1. Understand, recall, and discuss the main concepts in the fields of phonetics and phonology. 2. Apply and adapt the fundamental concepts of phonetics and phonology to multiple varieties of Spanish. 3. Examine and critically assess current research in the field. 4. Design and conduct original research in the field of Spanish phonetics and phonology. Credits: 3.00

SPAN 56200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Have knowledge and understanding of basic notions of Spanish syntax including syntagmatic structure, X-bar theory, thematic roles, argument structure, constituents and hierarchical representation, and syntactic operations (e.g., wh-movement). 2. Be able to observe, describe, and formulate abstract theoretical concepts in relation to the syntactic structure of Spanish. 3. Be able to relate theoretical analysis to experimental syntax, specifically in relation to the acquisition of Spanish syntax and semantics among second language learners and heritage speakers. Credits: 3.00

SPAN 56300 - History Of The Spanish Language

Credit Hours: 3.00. Development of Spanish since the Ancient Latin period, taking into account influences of other cultures and languages; Spanish in relation to Latin and other Romance languages; basic principles of language change; language change underlying differences between American and Peninsular Spanish.

Learning Outcomes: 1. Have a perspective of the evolution of Spanish and being able to identify the basic features of Spanish through its history, as well as understanding the influence of external influences in the evolution of the language. 2. Understand the configuration of

the different varieties of Spanish in the different areas (peninsular Spanish and Spanish in America). 3. Read publications on general aspects of History of Spanish Language with critical sense and understanding basic problems of diachronic studies and basic principles of language change. 4. Able to read, understand and linguistically analyze texts from all the stages of Spanish. Credits: 3.00

SPAN 59600 - Special Topics In Spanish Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

ENGL 21500 - Inventing Languages

Credit Hours: 3.00. "Invented languages" include linguistic systems created for fictional worlds, such as Dothraki (Game of Thrones), Na'vi (Avatar), Elvish (Lord of the Rings) and Klingon (Star Trek), as well as languages invented for international communication by real speakers, such as Esperanto. In this course, you will study these systems, learn the major properties of natural human languages, and construct your own rudimentary languages.

Learning Outcomes: 1. Understand the characteristics and goals of various invented languages from linguistic, cultural, and historical perspectives. 2. Show mastery of basic concepts of language structure and language typology. 3. Elucidate mastery of basic concepts of sociolinguistics, historical linguistics, and linguistic anthropology. 4. Explain how natural languages has influenced the development of invented languages. 5. Construct a rudimentary language system and create a back story, dictionary, grammar, and sample text. Credits: 3.00

LING 50100 - Language Acquisition

Credit Hours: 3.00. This course offers an introduction to main linguistic, psycholinguistic and sociocultural approaches to language acquisition theory and research. Through extensive reading, students will develop a deep understanding of central issues affecting language acquisition in typically developing children, including age effects, and input and output conditions in the acquisition of syntax, semantics, phonology, lexicon and morphology. Emphasis will be made on experimental approaches and research methods in the acquisition of syntax in L1 and child bilingual development.

Learning Outcomes: 1. Learn how languages are acquired and developmental stages of main linguistic components. 2. Know major concepts and issues relative to child language development. 3. Know major concepts and issues relative to bilingual first language acquisition. 4. Know main sociocultural constructs related to language development. 5. Become familiar with main issues relative to methodological issues in language acquisition. 6. Know main linguistics and psycholinguistic factors related to language acquisition including age, cognitive development, and linguistics input. Credits: 3.00

LING 56300 - Language Acquisition

Credit Hours: 3.00. This course offers an introduction to main linguistic, psycholinguistic and sociocultural approaches to language acquisition theory and research. Through extensive reading, students will develop a deep understanding of central issues affecting language acquisition in typically developing children, including age effects, and input and output conditions in the acquisition of syntax, semantics, phonology, lexicon and morphology. Emphasis will be made on experimental approaches and research methods in the acquisition of syntax in L1 and child bilingual develpment.

Learning Outcomes: 1. Understand how languages are acquired and developmental stages of main linguistic components. 2. Understand major concepts and issues relative to child language development. 3. Understand major concepts and issues relative to bilingual first-language acquisition. 4. Understand knowledge of main sociocultural constructs related to language development. 5. Understand main issues relative to methodological issues in language acquisition. 6. Understand main linguistics and psycholinguistic factors related to language acquisition including age, cognitive development, and linguistics input. Credits: 3.00

LC 57700 - Acoustic Analysis Of Speech

Credit Hours: 3.00. This course is an introduction to those aspects of acoustics most pertinent to understanding speech production and perception. It covers sound waves and their properties, digital signal processing, hearing and loudness, sound recording, and details of the acoustics of specific speech sounds such as vowels, plosives, fricatives, and nasals. The course includes a prominent practicum component aimed at learning to use software tools, specifically Praat, for analyzing acoustic properties of speech sounds.

Learning Outcomes: 1. Define the physical parameters of sound waves; explain how sound waves are created and how they propagate through a medium. 2. Explain the concepts of resonance and filtering as applied to speech production. 3. Explain digital signal processing as applied to the analysis of speech. 4. Use their understanding of acoustics to explain aspects of hearing and perception of speech, including the perception of loudness; explain and apply standard methods of measuring loudness. 5. Use the tools of acoustic analysis to measure acoustic properties of speech sounds, such as duration, loudness, fundamental frequency, and other spectral properties; communicate the results effectively orally and in writing. Credits: 3.00

LC 57300 - Methods Of Experimental Research In Linguistics

Credit Hours: 3.00. The course is an overview of experimental methods used in linguistic research. The goal of the course is to introduce basic concepts, terminology, and procedures associated with experimental research in general, and to survey the types of experiments typically conducted in several major subfields of linguistics, including the associated experiment designs and approaches to data analysis. The course will focus mainly on designing and conducting the experiment, rather than on data analysis, although the data analysis techniques appropriate to the types of data will be briefly discussed whenever possible. The course will also cover additional topics such as ethics of experimental research (preparing an IRB protocol), doing background research, getting funding, choosing the right conference for presenting the results, writing a conference abstract, creating and delivering a conference presentation/poster, and writing up the results for publication.

Learning Outcomes: 1. Define experimental research and explain its differences from other types of research. 2. Explain best practices in developing research questions, hypotheses, and designing experiments. 3. Distinguish different types of data and measurement levels and select the appropriate type of data analysis for a given type of data. 4. Design and implement experimental studies independently to test hypotheses in linguistics, including determining the necessary equipment, software, facilities, and subject pool, preparing IRB protocols, and obtaining funding. 5. Summarize and present experimental results effectively both orally and in writing and in appropriate presenting and publishing outlets. Credits: 3.00

Notes

Management Minor

Requirements for the Minor (18 credits)

Required Courses (9 credits)

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal

use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

Electives (9 credits)

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are

conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized.

Learning Outcomes: 1. Develop an

understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures, compensation, administration, and collective bargaining. Credits: 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to

managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn about the marketing-decision making process. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

MGMT 35300 - Intermediate Accounting For Non-Accounting Majors

Credit Hours: 3.00. The course is designed to meet the needs of students of predominantly finance students, as a firm grasp of key accounting concepts is critical to success in most finance professions. Throughout the course we will study measurement and reporting issues related to selected important financial statement items. The goal of this course is to educate students on major accounting topics that are likely to influence key financial decisions such as different inventory methods, different depreciation methods, lease recognition, pension accounting, among other topics.

Learning Outcomes: 1. Identify, analyze, and interpret intermediate financial accounting concepts that are relevant to market participants (i.e., shareholders, debtholders, regulators, among others). 2. Demonstrate a thorough understanding of complex financial accounting concepts that are vital to understanding firms' financial statements. 3. Outline how firms use accounting to communicate business results to stakeholders and other interested parties. Credits: 3.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.

5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

Notes

Manufacturing Minor

A minor in Manufacturing is available to students in the College of Engineering and Polytechnic Institute.

Requirements for the Minor (18 credits)

Core Courses (9 credits)

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

ME 36300 - Principles And Practices Of Manufacturing Processes

Credit Hours: 3.00. Manufacturing processes for engineering materials, both metallic and non-metallic. Fundamentals of manufacturing processes with a "hands-on" laboratory sequence. Analysis and design of processes for various engineering materials and their link to engineering design. Hands-on experiences through laboratory experiments and demonstrations. Not open to students with credit in IE 37000.

Credits: 3.00

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

Elective Courses (9 credits)

Manufacturing Processes, Systems and Planning

IE 47000 - Manufacturing Processes II

Credit Hours: 3.00. The interrelations of materials, processes, and design with various aspects of manufacturing.

Credits: 3.00

ABE 50100 - Welding Engineering

Credit Hours: 3.00. Design of weldments and modeling of heat transfer and residual stresses of the welding processes. Finite element theory of nonlinear properties for the many processes including laser, submerged arc, manual, Gas Tungsten Arc Welding (GTAW), plasma, and electron beam. Metallurgy topics include continuous cooling transformation curves in optimizing engineered joint strength, including cutting and welding. Offered in alternate years.

Learning Outcomes: 1. Analyze and effectively discuss positive and negative sides of major

welding processes and make a sound choice of the most appropriate welding process for the given requirements. 2. Analyze and critique currently accepted theories of heat transfer and rapid solidification applied to welding processes. 3. Predict development of microstructure in the weld and residual stresses in the welded structure. Analyze the evolution of microstructure and segregation in the three main zones of welded joints. 4. Design the geometry of welded joints and determine proper welding parameters. 5. Recognize and analyze major welding defects, know inspection methods used to detect them, the major causes for their occurrence, and measures for their prevention or correction. Credits: 3.00

ME 55700 - Design For Manufacturability

Credit Hours: 3.00. Introduction to manufacturing concerns, such as efficient design, producibility, and quality, which must be considered early in the engineering design process. Topics include the product development cycle, manufacturing process selection, tolerancing, quality function deployment (QFD), design for assembly (DFA), quality control techniques, Taguchi's robust design methodology, life cycle engineering, and reliability. Laboratory projects in the area of tolerancing, assembly, and manufacturability are included along with a project from industry in which the students can disassemble, analyze, and redesign a product while obtaining feedback from industry concerning manufacturability.

Credits: 3.00

Automated Manufacturing and Integration

MFET 37400 - Manufacturing Integration I

Credit Hours: 3.00. The fundamentals of data communications and local area networks are taught in order to show students how to integrate modern manufacturing systems. Emphasis is on the various levels of communications between shop floor computers, PLCs, robots, and automatic identification equipment. Database technology is used as an integration tool. This course prepares students for the MFET capstone course.

Learning Outcomes: 1. Achieve communications between various types of controls and devices. 2. Interface various peripheral manufacturing devices using networking and serial communications. Credits: 3.00

MFET 34800 - Introduction To Robot Kinematics

Credit Hours: 3.00. This course introduces the fundamentals of robotics with an emphasis on solutions to the kinematics problems of serial robotic manipulators. It covers robot modeling and simulation, forward kinematics, inverse kinematics, analysis of robot motion and static forces, and trajectory planning.

Learning Outcomes: 1. Create the kinematics model of a robotic manipulator. 2. Solve forward and inverse kinematics problems of a robotic manipulator. 3. Analyze the motion and static forces of a robotic manipulator. 4. Plan trajectories of a robotic manipulator. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

IE 57400 - Industrial Robotics And Flexible Assembly

Credit Hours: 3.00. Lab by arrangement. Design, analysis, and operation of robotic systems. System components and their control. Languages for robot control. Application design and analysis. Part feeders and tooling for robot workstations and automated assembly. Methods for planning robotic and assembly applications.

Credits: 3.00

ME 57600 - Computer Control Of Manufacturing Processes

Credit Hours: 3.00. Fundamental elements for manufacturing process control are presented with advanced control theories, modeling and analysis of actuators, controller architecture, interfacing and programming. Emphasis is on computer integrated manufacturing with computer numerical control of machine tools, automation via programmable logic controllers, motion control, process control examples, and manufacturing process monitoring. Hands-on experience is attained through laboratory experiments with state-of-the-art equipment.

Credits: 3.00

Advanced Manufacturing

MET 49000 - Special Topics In MET

Credit Hours: 1.00 to 3.00. Group instruction in new or specialty areas of mechanical engineering technology is provided by MET faculty, subject to MET curriculum subcommittee approval. Hours, subject matter, and credit to be arranged by faculty.

Learning Outcomes: 1. Varies due to the nature of the course. Credits: 1.00 to 3.00

ME 50700 - Laser Processing

Credit Hours: 3.00. Introduces background knowledge in laser science and laser technology and fundamentals involved in laser processing and manufacturing. The following topics are discussed: laser fundamentals, industrial laser systems and processes, and the laser-induced thermal, thermo-mechanical, and thermo-acoustic effects. The course also discusses emerging areas of laser applications, such as microscale laser processing, ultrafast laser processing, and the related energy transport analyses. Laboratory and video demonstration sessions are used to enhance the overall understanding of the course materials. Offered in alternate years.

Credits: 3.00

Computer-Aided Design in Manufacturing

ME 44400 - Computer-Aided Design And Prototyping

Credit Hours: 3.00. Introduction to advanced computer-aided design (CAD) for product design, modeling, and prototyping. Individual use and team-based environment to design and prototype a functional and marketable product. Projects include use of the advanced design tools to produce a working prototype that is manufacturable. Application to design, manufacturing, and analysis.

Credits: 3.00

IE 47200 - Imagine, Model, Make

Credit Hours: 3.00. This course develops a holistic view of an initial competency in engineering design by conceiving, designing, manufacturing, and optimizing a system component such as a complex structural part. Activities include hand sketching, CAD modeling, and operation of CNC machining equipment for rapid prototyping. Tolerance requirements will be verified and optimized prior to the fabrication of the part in the laboratory using rapid prototyping techniques. The focus is on the design process itself as well as the complementary roles of human creativity and computational methods and tools.

Learning Outcomes: 1. Create any object using 3D CAD design software (modeling, texturing, and animation). 2. Evaluate and optimize 3D designs for different manufacturing processes and materials. 3. Apply the principles of engineering tolerance to 3D CAD design. 4. Use rapid prototyping techniques (laser cutting, laser engraving, injection molding, and 3D printing) to manufacture 3D CAD designs. Credits: 3.00

Quality Control

MET 45100 - Manufacturing Quality Control

Credit Hours: 3.00. (MFET 45100) Quality control practices used in manufacturing industries; management, statistical control charts, reliability, sampling plans, economics, computer methods, and test equipment are presented and applied. Credit will not be granted for both MET 45100 and MFET 45100.

Learning Outcomes: 1. Apply the theory, principles, and applications of various quality management philosophes. 2. Measure and collect data in a variety of manners using technical standards related to sampling plans and quality process documentation. 3. Work in teams to conduct measurement system analysis and statistical process control (SPC). 4. Develop a solid understanding of how to utilize common quality management tools. 5. Conduct quality control experiments commonly used in industry for different manufacturing processes. Credits: 3.00

IE 53000 - Quality Control

Credit Hours: 3.00. Principles and practices of statistical quality control in industry. Control charts for measurements and for attributes. Acceptance sampling by attributes and by measurements. Standard sampling plans. Sequential analysis. Sampling inspection of continuous production.

Credits: 3.00

Notes

Materials Science and Engineering Minor

Requirements for the Minor (15 credits)

Core Requirements (3 credits)

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

NUCL 32000 - Introduction To Materials For Nuclear Applications

Credit Hours: 3.00. Nuclear environments and materials selection for nuclear applications, bonding, crystal structure and symmetry, defects and irradiation, chemical thermodynamics, phase equilibria, phase transformations, and corrosion in nuclear systems and design.

Credits: 3.00

Selective - Choose Two (6 credits)

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific

literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

MSE 27000 - Atomistic Materials Science

Credit Hours: 3.00. Introductory course with an atomistic view point on material properties. Three primary class sections: bonding crystallography and statistical mechanics. Bonding topics include introduction to quantum mechanics, emphasis on understanding of metallic, ionic and covalent bonding. Crystallography topics include crystal descriptions and symmetry principles. Statistical mechanics development with application to electronic and thermodynamic properties.

Credits: 3.00

MSE 33000 - Processing And Properties Of Materials

Credit Hours: 3.00. An introduction to the relationships between the processing of materials and their properties. Heat treating, forming, casting, consolidation, and other more material-specific manufacturing processes. Elucidation of the role of phenomena such as heat flow, mass diffusion, nucleation, interfacial tension, elastic and plastic deformation, precipitation, grain growth.

Credits: 3.00

MSE 37000 - Electrical, Optical, And Magnetic Properties Of Materials

Credit Hours: 3.00. An introductory course to provide basic background on the behavior of materials; electronic band structure, electronic and ionic conduction, electronic processes in semiconductors, dielectric, optical, and magnetic properties, and superconductivity; emphasis is on the relation between the properties and the structural aspects of materials.

Credits: 3.00

Additional Selective - Choose Two (6 credits)

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

MSE 38200 - Mechanical Response Of Materials

Credit Hours: 3.00. This course encompasses deformation-based microscopic mechanisms, including dislocation motion, diffusion, and viscoplasticity. Macroscopic mechanical response of metals, ceramics, polymers, and composites will be related to elasticity and plasticity concepts for single crystal, polycrystalline, and amorphous materials. Practical design considerations for deformation will be included as well as an introduction to fracture mechanisms.

Learning Outcomes: 1. Conversant with conventional nomenclature, units and notation of mechanical behavior. Examples: Stress,

strain, yield strength, fracture strength; yield criteria, flow rules, creep, fracture. 2. Estimate relative ranges and values for important properties of common engineering materials. Examples: Young's modulus at room temperature for steels versus most polymers; yield strength ranges for ductile metals. 3. Recognize mechanisms for important mechanical behaviors. Examples: Plastic deformation by dislocation glide; plastic deformation by molecular rearrangement; dilatant deformation processes; strengthening mechanisms in crystalline solids. 4. Predict mechanical responses based on given information. Examples: Will yielding occur given a stress state and properties? Will fracture occur given a stress state and properties? How will the material change shape for the applied deformation? Which slip system(s) will be operative? 5. Explain the fundamental basis for important deformation mechanisms or processes. Examples: Dislocation glide, cross-slip, dislocation climb, precipitation strengthening; molecular orientation; Nabarro-Herring creep; plane strain fracture. 6. Apply the mechanisms of deformation to component design or alloy design. Credits: 3.00

MSE 44500 - Materials Engineering Systems Analysis And Design

Credit Hours: 3.00. Integration of materials engineering core coursework with statistical, economic and environmental considerations for analysis and design of systems. Analysis of primary materials processing operations using mathematical and statistical models for predicting interactive effects and process optimization. Specification of materials and processes for mechanical designs, incorporating properties assessment and tradeoffs, cost analysis, and performance optimization with multiple constraints.

Learning Outcomes: 1. Translate performance attributes in a given design to the corresponding nominal material properties. 2. Derive and apply material indices to materials selection for single- and multi-objective designs using the CES materials database and software tools. 3. Specify manufacturing processes for a given component design (material, shape, production rate) using basic cost modeling. 4. Apply a computational model for simulating a materials production and/or processing operation. 5. Quantify material properties, processing and performance variability using statistical methods. Examples: error analysis, probability distributions, sampling theory, statistic intervals and statistical process control charts. 6. Perform basic calculations for engineering cost analysis and use those results to make choices among trade-offs in product design or process operation. 7. Locate and evaluate design information for specific materials and processes. Examples: testing standards, processing specifications, commercial data and patents. 8. Apply quantitative trade-off strategies in selection of materials for designs with conflicting objectives. 9. Apply computational models for materials production and/or processing operations to predict interactive effects of inputs on material quality, production rates, cost minimization, and environmental impact. 10. Optimize material and process selection simultaneously, based on refined functional relationships between processing, properties and costs. Credits: 3.00

MSE 49900 - Research In Materials Engineering

Credit Hours: 0.00 to 18.00. Available upon prior approval of, and arrangement with, a faculty research advisor. Permission of instructor required.

Credits: 0.00 to 18.00

MSE 42000 - Structure And Properties Of Organic Materials

Credit Hours: 3.00. This course presents information on the chemical and physical structure and basic material properties of organic materials, including synthetic plastics and specialty polymers and surfactants as well as select natural materials (e.g., proteins, carbohydrates, lipids). Fundamental concepts from organic chemistry will be presented along with descriptions of how the chemical and physical structures of organic

molecules directly impact the properties of bulk materials over multiple length scales, from the molecular-level to the macroscale. This course will prepare students to be successful in higher-level polymer and soft material elective courses in materials engineering.

Learning Outcomes: 1. Describe atomic-scale bonding and identify common hydrocarbon units in organic molecules and describe common organic reactions involving those units. 2. Select the appropriate characterization techniques for chemical structures, physical structures, and bulk material properties and interpret basic data from selected techniques. 3. Explain how macromolecules are synthesized and outline the most common synthesis reactions. 4. Distinguish between chemical and physical structures or organic materials and classify different structures into appropriate material length scales. 5. Explain important structure-property relationships over multiple length scales. Credits: 3.00

The pre- and co-requisites for MSE courses relevant to the minor are:

Notes

Mathematical Economics Minor

About the Program

Requirements for the Minor (16 credits)

Required Courses (13 credits)

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical

models. Credits: 3.00

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

Additional Course - Choose One (3 credits)

ECON 45100 - Game Theory

Credit Hours: 3.00. In the course, economic, political, and social interactions are represented as games, in which strategies and resulting outcomes can be analyzed. The analysis of these interactions is then used to demonstrate how one can make optimal decisions under uncertainty. This course uses Calculus.

Learning Outcomes: 1. Model strategic interactions as a game. 2. Describe behavior in games using strategies. 3. Calculate the Nash equilibrium of a game. 4. Predict behavior in different games. 5. Explain the role of uncertainty in strategic interactions. Credits: 3.00

ECON 37300 - Computational Economics

Credit Hours: 3.00. The main goal of this course is to introduce economics students to the computation, programming, and data analysis in Python. In the first part of the course, we will cover basic programming techniques and the use of popular Python packages for data analysis. In the second part of the course, we will consider more advanced programming techniques including numerical methods, dynamic programming, and simulation-based methods. Throughout the course we will consider a number applications related to microeconomics, macroeconomics, and econometrics covered in the Economics program curriculum.

Learning Outcomes: 1. Have a working knowledge of programming techniques in Python. 2. Use scientific computing packages to analyze economic data. 3. Possess an understanding of numerical methods used to solve economic models. 4. Use visualization tools to communicate computational results. Credits: 3.00

ECON 46300 - Advanced Data Analysis And Machine Learning

Credit Hours: 3.00. This is an advanced applied econometrics course that introduces students to a variety of techniques and methods for the empirical study of economic data. This course focuses on the practical aspects of economic data analysis, including data organization (such as merging and appending datasets) and the implementation of econometric models. This

course will cover multivaraite linear regression, non-linear least squares, models for binary and categorical outcomes, model selection using machine learning, and panel data models. As part of the course, students will learn to conduct empirical analysis of economic data using Stata, a statistical software package.

Learning Outcomes: 1. Explore and organize economic data. 2. Apply a variety of econometric techniques including: multivariate linear regression, non-linear least squares, models for binary outcomes (including logit and probit models), and models for panel data (including linear random effects and fixed effects models). 3. Understand the fundamentals of machine learning and use machine learning for model selection. 4. Interpret and critique the results from econometric estimations. Credits: 3.00

Notes

Mathematics Minor

The Mathematics Minor provides a strong background in mathematics for students majoring in some other discipline.

Requirements for the Minor (12-13 credits)

Area 1 - Choose One (3 credits)

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of vector space, subspace, linear combination of vectors, linear dependence and linear independence, bases and dimension. 2. Perform rigorous proofs using the definitions of linear transformation and the null space and range of a linear transformation. 3. Exhibit a clear understanding of the relationship between composition of linear transformation and matrix multiplication. 4.

Understand elementary matrices and their use in describing the solution set of a system of linear equations. 5. Understand that the determinant function on n x n matrices with entries in a field F is a function that may be defined recursively, and may be uniquely defined as an alternating multilinear form which takes the identity matrix to 1. 6. Perform rigorous proofs involving eigenvalues and eigenvectors. 7. Understand and be able to apply conditions for a linear operator on a finite-dimensional vector space to be diagonalizable. 8. Preform calculations with Gram-Schmidt, least squares and related topics. 9. Students should be able to do rigorous proofs involving inner product spaces and related topics. Credits: 3.00

Area 2 - Choose One (3 credits)

Algebra

MA 45000 - Algebra Honors

Credit Hours: 3.00. This course, which is essentially the first half of MA 55300, is recommended for students wanting a more substantial background in algebra than is afforded by MA 45300, in particular students intending to do graduate work in science or engineering. Topics include the elements of number theory and group theory; unique factorization in polynomial rings and in principal ideal domains.

Credits: 3.00

MA 45300 - Elements Of Algebra I

Credit Hours: 3.00. Fundamental properties of integers, polynomials, groups, rings, and fields, with emphasis on problem solving and applications. Not open to students with credit in MA 45000.

Learning Outcomes: 1. Demonstrate knowledge of: divisibility properties of integers and polynomials, structure theory of groups and examples of groups, structure theory of rings and examples of rings, basic theory of fields. 2. Demonstrate knowledge of the proofs of facts covered in the course. Credits: 3.00

Analysis

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

Area 3 - Choose Two (6-7 credits)

Algebra

MA 45000 - Algebra Honors

Credit Hours: 3.00. This course, which is essentially the first half of MA 55300, is recommended for students wanting a more substantial background in algebra than is afforded by MA 45300, in particular students intending to do graduate work in science or engineering. Topics include the elements of number theory and group theory; unique factorization in polynomial rings and in principal ideal domains.

Credits: 3.00

MA 45300 - Elements Of Algebra I

Credit Hours: 3.00. Fundamental properties of integers, polynomials, groups, rings, and fields, with emphasis on problem solving and applications. Not open to students with credit in MA 45000.

Learning Outcomes: 1. Demonstrate knowledge of: divisibility properties of integers and polynomials, structure theory of groups and examples of groups, structure theory of rings and examples of rings, basic theory of fields. 2. Demonstrate knowledge of the proofs of facts covered in the course. Credits: 3.00

Analysis

MA 30100 - An Introduction To Proof Through Real Analysis

Credit Hours: 3.00. An introduction to abstract reasoning in the context of real analysis. Topics may include axioms for the real numbers, mathematical induction, formal definition of limits, density, decimal representations, convergence of sequences and series, continuity, differentiability, the extreme value, mean value and intermediate value theorems, and cardinality. The emphasis, however, is more on the concept of proof than on any one given topic.

Credits: 3.00

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 36200 - Topics In Vector Calculus

Credit Hours: 3.00. Multivariate calculus; partial differentiation; implicit function theorems and transformations; line and surface integrals; vector fields; theorems of Gauss, Green, and Stokes. Credit granted for only one of MA 36200 and MA 51000 .

Credits: 3.00

MA 42500 - Elements Of Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions; differentiation of complex functions; power series, uniform convergence; integration, contour integrals; elementary conformal mapping.

Learning Outcomes: 1. Apply complex number theory and understand algebraic and geometric representations. 2. Solve complex equations and analyze limits, continuity, and differentiability. 3. Use Cauchy-Riemann equations to identify analytic functions. 4. Evaluate integrals using Cauchy's integral theorem and formula. 5. Apply the residue theorem for evaluating integrals in engineering and science problems. 6. Use Taylor and Laurent series to expand complex functions. 7. Solve boundary value problems in fluid dynamics, electrostatics, and potential theory. 8. Apply complex analysis techniques to engineering and science applications. Credits: 3.00

MA 42800 - Introduction To Fourier Analysis

Credit Hours: 3.00. Topics include: Fourier series, convolutions, kernels, summation methods, Fourier transforms, and applications to the wave, heat, and Laplace equations.

Learning Outcomes: 1. Know applications of Fourier series to problems in physics and other areas. 2. Know convergence theorems and proofs for Fourier series. 3. Know the relationship between convolutions and Fourier series. 4. Know applications of Fourier transforms to problems in physics and other areas. Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform

convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

MA 44200 - Honors Real Analysis II

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces--continued from MA 44000. Topics include mappings of Euclidean spaces and their derivatives, multivariable chain rule, inverse function theorem and implicit function theorem, sets with content and integration in n dimensions, the integrability theorem, Jacobian and change of variables theorem, related topics.

Learning Outcomes: 1. Determine points at which derivatives exist and compute linear approximations for mappings of Euclidean spaces. 2. Perform rigorous applications of the multivariable chain rule, inverse function theorem and implicit function theorem in Euclidean spaces. 3. Apply the integrability theorem on the existence of Riemann integrals of functions in bounded sets in Euclidean spaces. 4. Perform rigorous applications of the change of variables theorem for integrals of functions on smooth transformations of domains in a Euclidean spaces. Credits: 3.00

Computer Science

ECE 26400 - Advanced C Programming

Credit Hours: 3.00. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures. A basic knowledge of the UNIX operating system and an introductory C programming course; C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions.

Learning Outcomes: 1. Ability to read and write C programs that use files. 2. Ability to read and write C programs that use structures. 3. Ability to read and write C programs that use dynamic data structures. Credits: 3.00

CS 24000 - Programming In C

Credit Hours: 3.00. The UNIX environment, C development cycle, data representation, operators, program structure, recursion, macros, C preprocessor, pointers and addresses, dynamic memory allocation, structures, unions, typedef, bit-fields, pointer/structure applications, UNIX file abstraction, file access, low-level I/O, concurrency.

Learning Outcomes: 1. Understand programming principles and techniques for problem solving in the C programming language. Credits: 3.00

CS 25100 - Data Structures And Algorithms

Credit Hours: 3.00. Running time analysis of algorithms and their implementations, one-dimensional data structures, trees, heaps, additional sorting algorithms, binary search trees, hash tables, graphs, directed graphs, weighted graph algorithms, additional topics.

Learning Outcomes: 1. Understand fundamental data structures, fundamental algorithms, and their implementation. Credits: 3.00

ECE 36800 - Data Structures

Credit Hours: 3.00. Provides insight into the use of data structures. Topics include stacks, queues and lists, trees, graphs, sorting, searching, and hashing.

Learning Outcomes: 1. Understand various basic data structures, including stacks, queues, and trees. 2. Able to analyze time complexity and space complexity of algorithms. 3. Able to apply appropriate sorting and searching

algorithms for a given application. 4. Able to apply graph theoretic techniques, data structures and algorithms for problem solving. 5. Able to design and implement appropriate data structures and algorithms for engineering applications. Credits: 3.00

MA 34900 - Signals And Systems For Mathematicians

Credit Hours: 3.00. This course introduces the mathematical framework for the description, analysis and processing of signals such as music, speech and images. Main topics covered include signal representations in different bases; continuous-time signal sampling; and signal processing by linear and time-invariant systems.

Learning Outcomes: 1. Describe and analyze continuous-time and discrete-time signals in different bases. 2. Understand the relation between a continuous-time signal and a sampling of that signal, including methods to reconstruct a continuous-time signal from its samples and applicability conditions. 3. Describe and analyze the properties of continuous-time and discrete time systems in different bases. 4. Construct linear and time-invariant systems to process continuous-time and discrete-time signals. Credits: 3.00

MA 37400 - Mathematical Foundations For Machine Learning

Credit Hours: 3.00. This course combines data, computation, and inferential thinking to solve challenging problems. In this class, we explore key areas of machine learning including question formulation, statistical inference, predictive modeling, and decision making. Through a strong emphasis on data-centric computing, and quantitative critical thinking, this class covers key principles and techniques of machine learning. These include algorithms for machine learning methods including regression, classification, and clustering; and statistical concepts of measurement error and prediction.

Learning Outcomes: 1. Identify a machine learning related data-science problem, formulate questions, visualize the data, and identify features, and conduct statistical inference, and derive prediction algorithms. 2. Know how to use a computer programming tool (e.g. Python or Matlab) to draw samples from important distributions. 3. Understand linear machine learning models for regression problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for regression problems. 4. Understand linear machine learning models for classification problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for classification problems. 5. Know how to build kernel methods; in particular, Gaussian process methods, and how to use a computer programming tool (e.g. Python or Matlab) to implement kermel methods. 6. Understand the concept of mixture models and the Expectational-Maximization algorithm and how to use a computer programming tool (e.g. Python or Matlab) to implement mixture models and the Expectational-Maximization algorithm. 7. Understand the sampling methods and perform computations for Markov Chain Monte Carlo. Credits: 3.00

CS 25300 - Data Structures And Algorithms For DS/AI

Credit Hours: 3.00. This course gives a broad introduction to the most important data structures and algorithms in computer science. The emphasis is on data structures and their use in algorithms relevant for data science and AI and their applications. The course focuses on developing and comparing efficient implementations, assessing suitability of data structures for massive data sets, and understanding effective use, modifications, and extensions. This course will not fulfill CS 25100 requirement for any Computer Science major or minor.

Learning Outcomes: 1. Apply an asymptotic analysis to given code and explain its significance. 2. Analyze asymptotic performance of data structures and algorithms with respect to time and space. 3. Describe different implementations of a data structure and explain when what implementation is most efficient. 4. Demonstrate how to add functionality to a data structure to efficiently

handle new operations and queries. 5. Assess how the choice of data structures and algorithm design methods impacts the performance of programs. 6. Make effective and appropriate use of data structures such as stacks, queues, linked lists, hash tables, Bloom filters, priority queues, dictionaries, search trees, tries, and graphs. Credits: 3.00

Differential Equations

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

MA 30300 - Differential Equations And Partial Differential Equations For Engineering And The Sciences

Credit Hours: 3.00. This is a methods course for juniors in any branch of engineering and science, designed to follow MA 26200 or MA 26600. Materials to be covered are: linear systems of ordinary differential equations, nonlinear systems, Fourier series, separation of variables for partial differential equations, and Sturm-Liouville theory.

Learning Outcomes: 1. Learn the theory of systems of first order linear differential equations and methods for solving them. 2. Learn qualitative theory of systems of nonlinear differential equations. 3. Learn the Laplace transform method for solving differential equations. 4. Learn about Fourier series and Sturm-Liouville theory and how to use them to solve separable partial differential equations. Credits: 3.00

MA 36600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 4.00. An introduction to ordinary differential equations with emphasis on problem solving and applications. The one-hour computer lab will give students an opportunity for hands-on experience with both the theory and applications of the subject.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the statement of the theorem of existence and uniqueness of solutions of first order differential equations and standard methods of solving linear, and some special non-linear, differential equations of first order. 2. Interpret solutions qualitatively. 3. Learn how to construct mathematical models. 4. Learn the standard methods of solving linear homogenous differential equations of constant coefficients of arbitrary order. 5. Learn methods to solve nonhomogeneous differential equations of constant coefficients of arbitrary order. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how they apply to systems of linear differential equations. 9. Learn how to analyze systems of nonlinear differential equations (optional). 10. Learn Laplace transforms and their applications to differential equations (optional). Credits: 4.00

Discrete Mathematics, Foundation

CS 38100 - Introduction To The Analysis Of Algorithms

Credit Hours: 3.00. Techniques for analyzing the time and space requirements of algorithms. Application of these techniques to sorting, searching, pattern-matching, graph

problems, and other selected problems. Brief introduction to the intractable (NP-hard) problems.

Learning Outcomes: 1. Use big O-notation to give asymptotic time and space bounds of algorithms. 2. Explain the use of big-Omega, big-Theta, and little-o notations. 3. Use recurrence relations to determine the time complexity of recursive algorithms. 4. Solve recurrence relations commonly arising in algorithm design. 5. Give examples that illustrate time-space trade-offs of algorithms.

Credits: 3.00

CS 48300 - Introduction To The Theory Of Computation

Credit Hours: 3.00. Turing machines and the Church-Turing thesis; decidability; halting problem; reducibility; undecidable problems; decidability of logical theories; Kolmogorov complexity; time classes; P, NP, NP-complete; space classes; Savitch's theorem, PSPACE-completeness, NL-completeness; hierarchy theorems; approximation theorems; probabilistic algorithms; applications of complexity to parallel computation and cryptography.

Credits: 3.00

MA 37500 - Introduction To Discrete Mathematics

Credit Hours: 3.00. Induction, permutations, combinations, finite probability, relations, graphs, trees, graph algorithms, recurrence relations, generating functions. Problem solving in all these areas. Credit granted for only one of MA 27600 and 37500.

Credits: 3.00

MA 38500 - Introduction To Logic

Credit Hours: 3.00. Propositional calculus and predicate calculus with applications to mathematical proofs, valid arguments, switching theory, and formal languages.

Credits: 3.00

Linear Algebra

MA 42100 - Linear Programming And Optimization Techniques

Credit Hours: 3.00. Solution of linear programming problems by the simplex method, duality theory, transportation problems, assignment problems, network analysis, dynamic programming.

Credits: 3.00

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of vector space, subspace, linear combination of vectors, linear dependence and linear independence, bases and dimension. 2. Perform rigorous proofs using the definitions of linear transformation and the null space and range of a linear transformation. 3. Exhibit a clear understanding of the relationship between composition of linear transformation and matrix multiplication. 4. Understand elementary matrices and their use in describing the solution set of a system of linear equations. 5. Understand that the determinant function on n x n matrices with entries in a field F is a function that may be defined recursively, and may be uniquely defined as an alternating multilinear form which takes the identity matrix to 1. 6. Perform rigorous proofs involving eigenvalues and eigenvectors. 7. Understand and be able to apply conditions for a linear operator on a finite-dimensional vector space to be diagonalizable. 8. Preform calculations with Gram-Schmidt, least squares and related topics. 9. Students should be able to do rigorous proofs involving inner product spaces and related topics.

Credits: 3.00

Numerical Analysis

CS 31400 - Numerical Methods

Credit Hours: 3.00. Iterative methods for solving nonlinear equations; direct and iterative methods for solving linear systems; approximations of functions, derivatives, and integrals; error analysis.

Credits: 3.00

CS 51400 - Numerical Analysis

Credit Hours: 3.00. (MA 51400) AIternative methods for solving nonlinear equations; linear difference equations, applications to solution of polynomial equations; differentiation and integration formulas; numerical solution of ordinary differential equations; roundoff error bounds.

Credits: 3.00

CS 51500 - Numerical Linear Algebra

Credit Hours: 3.00. Direct and iterative solvers of dense and sparse linear systems of equations, numerical schemes for handling symmetric algebraic eigenvalue problems, and the singular-value decomposition and its applications in linear least squares problems.

Learning Outcomes: 1. Become knowledgeable about major kernels and algorithms underlying matrix computations for dense and sparse matrices including linear systems of equation, symmetric eigenvalue problems, and the singular-value decomposition. 2. Be able to implement basic versions of these kernels and algorithms. 3. Learn about the difference between direct and iterative methods for linear systems. 4. Gain expertise in the design of iterative methods and preconditioning techniques for large-scale sparse linear systems. 5. Be able to implement eigenvalue and singular-value problem solvers. Credits: 3.00

CS 52000 - Computational Methods In Optimization

Credit Hours: 3.00. A treatment of numerical algorithms and software for optimization problems with a secondary emphasis on linear and nonlinear systems of equations: unconstrained and constrained optimization; line search methods; trust region methods; Quasi-Newton methods; linear programming; calculating derivatives; quadratic programming; global optimization, including simulated annealing.

Credits: 3.00

Statistics, Probability

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem.

Credits: 3.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus.

Credits: 3.00

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing.

Learning Outcomes: 1. Understand and able to use inference for standard parametric families of distributions; properties of estimators; Bayes and maximum likelihood estimation; sufficient statistics; properties of test of hypotheses; distribution theory for common statistics based on normal distributions. Credits: 3.00

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)

Learning Outcomes: 1. Identify which discrete and continuous distributions are applicable in a given setting. 2. Use conditional probabilities, Bayes theorem, and conditional distributions. 3. Utilize joint distributions in the context of several random variables. 4. Apply the law of large numbers and the central limit theorem in asymptotic settings. 5. Derive moments and moment generating functions for discrete and continuous random variables. Credits: 3.00

STAT 51900 - Introduction To Probability

Credit Hours: 3.00. (MA 51900) Algebra of sets, sample spaces, combinatorial problems, independence, random variables, distribution functions, moment generating functions, special continuous and discrete distributions, distribution of a function of a random variable, limit theorems.

Credits: 3.00

MA 43200 - Elementary Stochastic Processes

Credit Hours: 3.00. An introduction to some classes of stochastic processes that arise in probabilistic models of time-dependent random processes. The main stochastic processes studied will be discrete time Markov chains and Poisson processes. Other possible topics covered may include continuous time Markov chains, renewal processes, queueing networks, and martingales.

Learning Outcomes: 1. Identify a verbal description of a stochastic process, identify the process as a Markov process and compute the transition matrix for the Markov process. 2. Compute the stationary distribution of a Markov process and use this to draw conclusions on the long-term asymptotic behavior of the stochastic process using appropriate limit theorems for Markov processes. 3. Understand what conditions are necessary to be able to apply the main limit theorems for Markov chains; also, students should be able to give examples of Markov chains where these limit theorems do not hold because the assumptions of the theorems are violated. 4. Calculate hitting probabilities or expected hitting times of a Markov chain by solving a system of linear equations. 5. Know how to use mathematics software (e.g. Matlab) to perform computations for Markov chains on large state spaces. 6. Understand the thinning and superposition properties of Poisson processes and how to use these properties in computations. Credits: 3.00

Notes

Microelectronics and Semiconductors Minor

About the Minor

Requirements for the Minor (18 credits)

Required Courses - Choose One: (10 credits)

Option 1: Microelectronics Track (10 credits)

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

ECE 33700 - ASIC Design Laboratory

Credit Hours: 2.00. Introduction to standard cell design of Application Specific Integrated Circuits (ASICs) using modern hardware description languages (HDLs). Emphasis on how to write HDL code that will map readily to hardware. Laboratory experiments using commercial grade computer-aided design (CAD) tools for HDL based design, logic simulation, automatic placement and routing, timing analysis and verification.

Learning Outcomes: 1. Design combinational

and sequential logic in a variety of styles and awareness of resource usage. 2. Use, modify, create scripts to control logic synthesis. 3. Create a test bench and use it to verify a design that incorporates multiple sequential blocks. 4. Place, route, and verify timing of an ASIC design. 5. Determine the RTL architecture implied by HDL code of moderate complexity. 6. Explain the difference between various ASIC and digital system design approaches - standard cell, full custom, and programmable device. Credits: 2.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

Option 2: Semiconductors Track (10 credits)

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses

mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

Electives (8 credits)

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 33700 - ASIC Design Laboratory

Credit Hours: 2.00. Introduction to standard cell design of Application Specific Integrated Circuits (ASICs) using modern hardware description languages (HDLs). Emphasis on how to write HDL code that will map readily to hardware. Laboratory experiments using commercial grade computer-aided design (CAD) tools for HDL based design, logic simulation, automatic placement and routing, timing analysis and verification.

Learning Outcomes: 1. Design combinational and sequential logic in a variety of styles and awareness of resource usage. 2. Use, modify, create scripts to control logic synthesis. 3. Create a test bench and use it to verify a design that incorporates multiple sequential blocks. 4. Place, route, and verify timing of an ASIC design. 5. Determine the RTL architecture implied by HDL code of moderate complexity. 6. Explain the difference between various ASIC

and digital system design approaches - standard cell, full custom, and programmable device. Credits: 2.00

ECE 43700 - Computer Design And Prototyping

Credit Hours: 4.00. An introduction to computer organization and design, including instruction set selection, arithmetic logic unit design, datapath design, control strategies, pipelining, memory hierarchy, and I/O interface design.

Credits: 4.00

ECE 45500 - Integrated Circuit Engineering

Credit Hours: 3.00. Analysis, design, and fabrication of silicon bipolar and MOSFET monolithic integrated circuits. Consideration of amplifier circuit design and fabrication techniques with circuit simulation using Spice-2. Integrated operational amplifiers with difference amplifiers, current sources, active loads, and voltage references. Design of IC analog circuit building blocks.

Credits: 3.00

ECE 45600 - Digital Integrated Circuit Analysis And Design

Credit Hours: 3.00. As applied t digital integrated circuits, the MDs transistor is studied in depth-from its fabrication to its electrical characteristics. Combinational, sequential, and dynamic logic circuits are considered. While the focus of the course is on CMOS technology, bipolar, nMOS, and BiCMOS circuits are introduced as well. SPICE is used as both an analysis and design tool. Semiconductor memory circuits are also discussed.

Credits: 3.00

ECE 55700 - Integrated Circuit Fabrication Laboratory

Credit Hours: 3.00. Laboratory exercises in the fabrication and testing of silicon integrated circuits. Both bipolar and MOS integrated circuit test chips are fabricated and tested. Laboratory technique, the technology of integrated circuit fabrication, and electrical characterization are emphasized. Permission of department required.

Credits: 3.00

ECE 55900 - MOS VLSI Design

Credit Hours: 3.00. An introduction to most aspects of large-scale MOS integrated circuit design including: device fabrication and modeling; inverter characteristics; designing CMOS combinational and sequential circuits; designing arithmetic building blocks and memory structures; interconnect and timing issues; testing and verification; and system design considerations. Term projects involve the complete design of a functional logic block or system using CAD tools.

Credits: 3.00

ECE 59500 - Selected Topics In Electrical Engineering

Credit Hours: 1.00 to 3.00. Formal classroom or individualized instruction on topics of current interest. Permission of instructor required.

Credits: 1.00 to 3.00

ECE 36200 - Microprocessor Systems And Interfacing

Credit Hours: 4.00. An introduction to basic computer organization, microprocessor instruction sets, assembly language programming, and microcontroller peripherals.

Learning Outcomes: 1. Show ability to program a microcontroller to perform various tasks. 2. Show an ability to interface a microcontroller to various devices. 3. Show an ability to effectively utilize microcontroller peripheral. 4. Show an ability to design and implement a microcontroller-based embedded system.

Credits: 4.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in

circuit analysis and design. Credits: 3.00

Military Science and Leadership Minor

Requirements for the Minor (15 credits)

Required Courses (12 credits)

MSL 40200 - Company Grade Leadership

Credit Hours: 3.00 to 4.00. This course explores the roles and responsibilities of company-grade Army officers with respect to unified land operations. Emphasizes the knowledge, skills and abilities required of junior officers in preparation for commissioning.

Learning Outcomes: 1. Describe company grade officer roles and responsibilities pertaining to unified land operations. 2. Demonstrate officership as it pertains to a U.S. Army Second Lieutenant. Credits: 3.00 to 4.00

MSL 40100 - The Army Officer

Credit Hours: 3.00 to 4.00. An examination of Army officer development to include planning, resourcing, and assessing training at the small-unit level. Topics include counseling subordinates, evaluating performance, values and ethics, career planning, legal responsibilities, and programs that support Army officers in these endeavors.

Learning Outcomes: 1. Describe Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. 2. Explain how to plan, prepare, execute, and continuously assess training at the company level. Credits: 3.00 to 4.00

MSL 30200 - Applied Leadership In Small Unit Operations

Credit Hours: 3.00 to 4.00. An examination of the fundamentals of direct-level leadership and small-unit tactics at the platoon level in preparation for Cadet Summer Training Advance Camp. Emphasizes the planning, coordinating, navigating, motivating, and leading a platoon to execute a mission.

Learning Outcomes: 1. Describe the fundamentals of direct-level leadership and small unit tactics at the platoon level. 2. Explain how the Army operates through the warfighting functions. 3. Plan, coordinate, and lead a platoon to execute a mission. Credits: 3.00 to 4.00

MSL 30100 - Training Management And The Warfighting Function

Credit Hours: 3.00 to 4.00. Examines how the Army operates through warfighting functions. Emphasizes planning, preparing, and executing training for small-unit tactics.

Learning Outcomes: 1. Describe the fundamentals of training management. 2. Explain how the Army operates through the warfighting functions. 3. Plan, prepare, and execute training for a squad conducting small-unit tactics. Credits: 3.00 to 4.00

Military History/Policy Selective (3 credits)

HIST 30000 - Eve Of Destruction: Global Crises And World Organization In The 20th Century (UCC: HUM)

Credit Hours: 3.00. Using a variety of case studies, this course considers 20th-century turning points -- often violent and disastrous ones -- in an emerging global conversation about urgent world problems and their possible solutions.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 35100 - The Second World War (UCC: HUM)

Credit Hours: 3.00. A study of the diplomacy, economic mobilization, and military operations of World War II, 1939-1945.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 35500 - History Of American Military Affairs (UCC: HUM)

Credit Hours: 3.00. Surveys American military policy from the colonial militia to the atomic age. Covers major wars and limited wars. The course also investigates the peacetime military functions, i.e., the Navy's role in diplomacy and the Army's involvement in Indian affairs.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 43900 - Communist China

Credit Hours: 3.00. The evolution of the Communist movement (1921-1949) and the development of the Communist government (since 1949) in China. Attention is given to political, economic, social, and cultural changes.

Credits: 3.00

PHIL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (REL 23100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Information literacy. 2. Human cultures. 3. Creative thinking. 4. Integrative learning. Credits: 3.00

POL 23100 - Introduction To United States Foreign Policy (UCC: BSS)

Credit Hours: 3.00. Designed to introduce students to the major themes and issues in contemporary U.S. foreign policy. Lectures, discussion, and readings will examine such areas as U.S. relationships with the major powers, the Third World, and international organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 23700 - Modern Weapons And International Relations (UCC: STS)

Credit Hours: 3.00. This course introduces the student to the roles that modern weapons systems play in contemporary international relations.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

POL 43900 - United States Foreign Policy Making

Credit Hours: 3.00. An analysis of the decision-making process in United States foreign policy.

Credits: 3.00

Notes

Music History and Theory Minor

Requirements for the Minor (15 credits)

A. Required Theory Courses (6 credits)

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

B. Required History Course (3 credits)

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

C. Music Selectives (6 credits)

MUS 37500 - Selected Topics In Music

Credit Hours: 3.00. A study of a specific genre in music (symphony, opera, chamber music, etc.) or the works of a single composer.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 3.00

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 49000 - Guided Reading In Music

Credit Hours: 1.00 to 6.00. For students with specialized needs and interests in the field. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 1.00 to 6.00

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological pos-sibilities of media and music, willing to explore its many dimensions.

Learning Outcomes: 1. Survey trends in media throughout the 20th and 21st century to gain awareness of technologies as they relate to music. 2. Analyze recording and performance standards of mediated music. (music that is not performed acoustically and live) 3. Build confidence discussing media and technological advances in musical performance and recording. Credits: 3.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

MUS 38300 - Digital Audio Recording And Production I

Credit Hours: 3.00. This course is an introduction to digital audio recording and production practices. Topics covered will include design and structure of sound studios, musical sequencing and recording, microphones, fundamentals of sound reinforcement, and sound editing. Students will be required to develop music recording projects.

Learning Outcomes: 1. Explain the fundamentals of musical acoustics. 2. Define digital audio and MIDI (Musical Instrument Digital Interface) terminology. 3. Explain and demonstrate the principles of music recording (studio and live mixes). 4. Explain and demonstrate the fundamentals of sound reinforcement (live sound performances). 5. Explain and demonstrate microphone selection and placement. 6. Design a recording studio. 7. Explain and demonstrate musical sequencing and digital audio editing. 8. Explain and demonstrate how to combine digital sequenced data with natural acoustic sounds. 9. Create professional mixes: adding reverb, compression, special effects, etc. Credits: 3.00

MUS 38400 - Digital Record And Production II

Credit Hours: 3.00. This course is a continuation of MUS

38300, Digital Audio Recording and Production I. Topics covered will include advanced musical sequencing, multitrack audio recording, audio signal processing, mixing, mastering and advanced audio and digital production. Students will be required to develop music recording and production projects.

Learning Outcomes: 1. Explain and demonstrate multitrack recording, mixing, analog and digital effects processing, sampling, use of specialized filters and audio tools such as vocoders and other electronic instruments to shape and edit sound. 2. Explain and demonstrate advanced musical sequencing and digital audio editing. 3. Explain and demonstrate issues and techniques used when combining digital sound with acoustic instruments and voices. 4. Create professional mixes that use reverb, compression, and special effects, etc. 5. Explain and demonstrate techniques used in combining sound and music to video and film productions. Credits: 3.00

MUS 17100 - Jazz Improvisation I

Credit Hours: 2.00. This course is an introduction to the development of beginning jazz improvisational and theoretical skills for all instrumentalists and vocalists. Fundamentals theoretical and musicianship skills are addressed through practical application, guided listening, dictation, transcription, harmonic and rhythmic analysis, and performance of standard jazz repertoire.

Learning Outcomes: 1. Explain the fundamentals of jazz theory and musicianship. 2. Write or transcribe a jazz solo from a recording. 3. Explain and notate jazz harmonies and voicings using established forms of analysis. 4. Describe various jazz styles in performance. 5. Perform selected jazz repertoire. 6. Perform an improvised jazz solo. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

A. Required Theory Courses (6 credits)

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)

Explain and demonstrate multitrack recording, mixing, analog and digital effects processing, sampling, use of specialized filters and audio tools such as vocoders and other electronic instruments to shape and edit sound. 2. Explain and demonstrate advanced musical sequencing and digital audio editing. 3. Explain and demonstrate issues and techniques used when combining digital sound with acoustic instruments and voices. 4. Create professional mixes that use reverb, compression, and special effects, etc. 5. Explain and demonstrate techniques used in combining sound and music to video and film productions. Credits: 3.00

MUS 17100 - Jazz Improvisation I

Credit Hours: 2.00. This course is an introduction to the development of beginning jazz improvisational and theoretical skills for all instrumentalists and vocalists. Fundamentals theoretical and musicianship skills are addressed through practical application, guided listening, dictation, transcription, harmonic and rhythmic analysis, and performance of standard jazz repertoire.

Learning Outcomes: 1. Explain the fundamentals of jazz theory and musicianship. 2. Write or transcribe a jazz solo from a recording. 3. Explain and notate jazz harmonies and voicings using established forms of analysis. 4. Describe various jazz styles in performance. 5. Perform selected jazz

repertoire. 6. Perform an improvised jazz solo.
Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility.
Credits: 2.00

A. Required Theory Courses (6 credits)

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters.
Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies.
Credits: 3.00

Native American and Indigenous Studies Minor

About the Minor

Requirements for the Minor (15 credits)

A. Foundational Course - Choose One (3 credits)

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

HIST 37700 - History And Culture Of Native America (UCC: HUM)

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

B. Electives - Choose Four (12 credits)

ANTH 31300 - Archaeology Of North America

Credit Hours: 3.00. Archaeological overview of North America emphasizing Indigenous cultures prior to the arrival of Europeans, but including Contact and Post-Contact communities of the Historic Period. Topics will include the peopling of the Americas, culture and environment, social complexity, and Cultural Resource Management.

Learning Outcomes: 1. Describe the general historical outline for North America's past. 2. Summarize the diversity of peoples and cultures that existed in North America. 3. Explain how North American archaeologists gather information and interpret the past. 4. Recognize how contemporary archaeologists engage with other stakeholders in North America's past. Credits: 3.00

ANTH 37700 - Anthropology Of Hunter-Gatherer Societies

Credit Hours: 3.00. Selective global survey of societies whose mode of subsistence is/was based on the collection of wild food resources. Topics to be covered include: the development and current state of theory, ecology, social organization, land use, demography, subsistence rights, and worldview.

Learning Outcomes: 1. Explain the forager lifestyle and the range of variation that researchers continue to discover. 2. Summarize the role that hunter-gatherer studies have played in the development of anthropological and biological inquiry and theory. 3. Recognize why the hunter-gatherer lifestyle has persisted as a human adaptation for as long as it has and how knowledge derived from its study can help scientists understand humanity. 4. Describe major issues faced by foragers and their descendants today. Credits: 3.00

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ANTH 41800 - Field Methods In Cultural Anthropology

Credit Hours: 1.00 to 9.00. Introduces basic field methods in Cultural Anthropology. Topics may include ethnographic or other interviewing techniques and methods of inquiry into any of the broad topics covered by Cultural Anthropology. Permission of department required.

Learning Outcomes: 1. Understanding the use of anthropological methods such as participant observation, ethnographic analysis and general interviewing techniques. Credits: 1.00 to 9.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

HIST 37700 - History And Culture Of Native America (UCC: HUM)

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 39500 - Junior Research Seminar

Credit Hours: 3.00. Variable title seminar for history majors in their junior year intended to teach historical skills, including research in primary sources, analytical skills, and forming historical arguments. It is a writing-intensive course and counts as one of the major requirements.

Learning Outcomes: 1. History majors will learn historical skills such as primary source research and analysis and how to form historical arguments. 2. Acquire analytical skills sufficient to distinguish between primary and secondary sources, to analyze arguments and interpretations, and to recognize interpretive conflicts. 3. Engage in integrative learning. 4. Develop the ability to recognize, analyze and incorporate primary source material into scholarly investigations and analyses. 5. Improve their information literacy and enhance their creative thinking. 6. Strengthen skills in

critical thinking and oral communication. 7. Improve their writing skills. Credits: 3.00

HIST 47700 - Native American Women's History

Credit Hours: 3.00. This course studies the history of indigenous women in North America from pre-contact to the present era, examining their roles through the experience of colonization and decolonization underscoring issues of sovereignty, identity, activism, kinship, public images, and stereotypes.

Credits: 3.00

HIST 49500 - Research Seminar In Historical Topics

Credit Hours: 3.00. This course is designed to train history majors in the fundamentals of historical research and writing. Course descriptions vary according to specific topics proposed for study by instructors.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will learn historical skills such as primary source research and analysis and how to form historical arguments. 3. Students will advance their information literacy and creative and critical thinking, acquire analytical skills sufficient to distinguish between primary and secondary sources. 4. Students will learn to analyze argument and interpretations and recognize interpretive conflicts. 5. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

LING 59800 - Special Topics In Linguistics

Credit Hours: 1.00 to 4.00. Investigation of an advanced topic in linguistics. Topic varies from semester to semester. Permission of instructor required.

Credits: 1.00 to 4.00

LING 57600 - Latin American Indigenous Languages And Cultures

Credit Hours: 3.00. This course will help students to learn the importance of understanding the diversity of Latin American indigenous languages and cultures as well as the intercultural understandings gained when these indigenous languages are valued within the global context. Moreover, this course will provide a general cultural and linguistic framework to understand the sociolinguistic status of the language within the context where it exists. In this course, students will deepen their knowledge of Latin American indigenous cultures and their historics, as a means to achieving a greater understanding of both a shared humanity and the variety of human experiences.

Learning Outcomes: 1. Acquire in-depth knowledge in a chosen, specific indigenous people while demonstrating panoramic understanding of Latin American indigenous groups. 2. Explain the brief history of US interaction with a particular Latin American country of this course topic. 3. Show basic oral and auditory competency in the language; will demonstrate how to express and understand basic statements, greetings, requests for directions, for food, and general courtesy interactions in the particular language. 4. Identify the particular complex interactions of the indigenous language within the context of the dominant colonial language. 5. Identify the linguistic position of the language within the context of indigenous languages of the Americas. 6. Identify basic cultural characteristics associated with the language speaking community. Credits: 3.00

LING 56000 - Service Learning In Languages And Linguistics

Credit Hours: 1.00 to 4.00. This course aims to introduce the student to critical reflective thinking and experiential learning that address local and global needs and foster civic responsibility. This service learning course is a multifaceted method of teaching and learning that enriches a students' academic life and real life learning by engaging her/him in meaningful hands-on service to the community while gaining valuable knowledge and skills that integrate with course objectives.

Learning Outcomes: 1. Participated in socially responsible activities that would have a positive impact not only on her/his local and global community. 2. Acquired skills that are transferable to her/his future work environments. 3. Reflected on how to maximize her/his personal and academic development to help her/him achieve her/his goals in life. 4. Gained knowledge and insights that will prepare

her/him for active civic engagement. Credits: 1.00 to 4.00

Notes

Natural Resources and Environmental Science Minor

Requirements for the Minor (15 credits)

Required Course (3 credits)

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation

biology, and environmental geology. Credits: 3.00

Selective Course (3 credits)

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

Emphasis Areas Selectives (9 credits)

Climate and Energy Emphasis

NRES 23000 - Survey Of Meteorology (UCC: SCI)

Credit Hours: 3.00. (EAPS 22100) An introductory course for both science and non-science students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate, ozone depletion, and other contemporary issues.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

EAPS 22100 - Survey Of Atmospheric Science (UCC: SCI)

Credit Hours: 3.00. (NRES 23000) An introductory course for both science and nonscience students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate ozone depletion, and other contemporary issues.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of meteorological phenomena using fundamental principles of physics and chemistry. 2. Learn a unified approach that relates the behavior of air parcels acting under forces to the observed weather and climate. 3. Represent weather parameters quantitatively on maps and charts. 4. Identify the principal threat to the stratospheric ozone shield and the gases responsible for the

greenhouse effect. 5. Understand the Coriolis effect and how it determines wind direction and circulation in cyclones and anticyclones in the Northern and Southern Hemispheres. 6. Identify conditions that lead to the formation of hazardous weather. Credits: 3.00

EAPS 22500 - Science Of The Atmosphere (UCC: SCI)

Credit Hours: 3.00. This course provides a quantitative introduction to how to use the laws of physics to understand the behavior of the Earth's atmosphere. Emphasizes key processes that govern the climate system and the weather phenomena that arise within it. Topics covered may include the Earth's energy balance, heat transfer, the greenhouse effect, atmospheric convection, precipitation, the general circulation, the Coriolis effect, atmospheric chemistry, weather systems, weather forecasting, and climate change.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Solve simple quantitative problems by manipulating equations, plugging in numbers, and checking units. 2. Visualize how our atmosphere varies in space and time by interpreting graphs and maps of atmospheric data as a function of latitude, longitude, and/or height/pressure. 3. Use key physical laws to explain (mathematically and in words)...Physical properties (composition, density, temperature, pressure, specific humidity, relative humidity) of our atmosphere; How energy transfer between the Sun, Earth, and outer space affect the properties of our atmosphere; How horizontal variability in air properties gives rise to circulations, such as the jet stream. Credits: 3.00

Environmental Policy and Analysis Emphasis

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 52500 - Environmental Policy Analysis

Credit Hours: 3.00. Designed to assist in understanding how environmental information and knowledge are produced, disseminated, and utilized in a variety of institutional contexts. Readings are selected to promote discussion and interaction concerning alternative mechanisms for protecting environmental resources. Prerequisite: introductory microeconomics course suggested.

Credits: 3.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

Environmental Quality and Restoration Emphasis

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

AGRY 56000 - Soil Physics

Credit Hours: 3.00. Fundamentals of soil physics; transport of chemicals, heat, and gases; field spatial variability; principles and methods of physical analysis of soils; the influence of soil physical processes on environmental quality and agricultural production. Students having an understanding of introductory soil science will be suitably prepared.

Credits: 3.00

NRES 38010 - Hazardous Waste Handling

Credit Hours: 3.00. This course trains individuals to stop the release or potential releases of hazardous substances. They have a more aggressive role than first responders at the operations level by approaching the point of the release to plug, patch, or otherwise stop it or manage offensive operations. This course satisfies the OSHA standards for completion of the 40-hour Hazardous Waste Operator/Emergency Response Technician certification, 29CFR1910.120. Topics covered include implementing an employer's emergency response plan; classification and identification of unknown materials using field survey instruments; functioning within the Incident Command System; specialized chemical protective equipment; hazard and risk assessment techniques; advanced product control operations; decontamination procedures; proper termination procedures; and basic chemical and toxicological terminology.

Learning Outcomes: 1. Analyze a response scene to stop the release or potential releases of hazardous substances. 2. Connect knowledge and awareness to meet OSHA requirements. (29 CFR 1910.120) for working on projects that involve the handling of hazardous materials. 3. Receive their 40-hour HAZWOPER Certification after successfully completing all requirements. Credits: 3.00

Sustainability Science Emphasis

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about

sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and biomes. 3. Understand the ecological processes of vegetation succession. 4. Understand the role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.

Learning Outcomes: 1. Design engineering and manufacturing systems with reduced environmental and ecological impact using industrial ecology principles. 2. Describe principles of life cycle analysis (LCA), including its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. Identify common relationships and dynamics in complex systems, including environmental systems, socio-economic systems, and engineered systems. 4. Conduct a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 5. Quantify the physical

inputs and outputs of specific engineering processes that comprise a product life cycle. 6. Demonstrate awareness of the roles and responsibilities of stakeholders in complex contemporary environmental issues. 7. Identify implicit and explicit impacts on various stakeholder groups from policies and decisions on environmental issues and engineering solutions. 8. Develop an equitable engineering design proposal. Credits: 3.00

Watershed Management Emphasis

AGRY 33700 - Environmental Hydrology

Credit Hours: 3.00. This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Credits: 3.00

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

NRES 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (AGRY 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Credits: 3.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

NRES 33700 - Environmental Hydrology

Credit Hours: 3.00. (AGRY 33700) This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Learning Outcomes: 1. Become familiar with hydrological processes, interactions and their representations over scales from point to ""continental"" and times from seconds to years. The major emphasis is on surface and near surface phenomenon. 2. Gain qualitative and quantitative understanding of land surface water budgets and how they respond to environmental

change. 3. Develop problem solving abilities on topics related to surface water hydrology. Credits: 3.00

NRES 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Discuss the complexity of involving stakeholders in decisions about landscape management. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

HORT 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Demonstrate knowledge of a variety of participatory and facilitation techniques. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

Note

Naval Science Minor

Requirements for the Minor (15 credits)

Required Courses (12 credits)

NS 41300 - Naval Leadership And Ethics

Credit Hours: 3.00. This course completes the final preparations of ensigns and second lieutenants for service in the Navy and Marine Corps. The course integrates an intellectual exploration of Western moral traditions and ethical philosophy with a variety of topics, such as military leadership, core values, professional ethics, the UCMJ and Navy regulations, and discussions relating to the roles of enlisted members, junior and senior officers, command relationships, and the conduct of warfare. The course provides midshipmen with a foundation of moral traditions, combined with a discussion of actual current and historical events in the Navy and Marine Corps, to prepare them for the roles and responsibilities of leadership in the Naval Service of the 21st century. Permission of instructor required.

Learning Outcomes: 1. Explain the role of commissioned officers as members of the U.S. Armed Forces and the obligations and responsibilities assumed by taking the oath of office, including the constitutional requirement for civilian control. 2. Explain the naval officer's roles and responsibilities as a member of the profession of arms. 3. Explain the significance of special trust and confidence vested in commissioned officers. 4. Explain the Uniform Code of Military Justice (UCMJ), the practice of military law, and the applications of regulations as they may involve a junior officer in the performance of duties. 5. Explain the purpose, scope, and constitutional basis of Navy regulations and the UCMJ, relating them to personal conduct in the military service. 6. Explain the professional, moral, and ethical responsibilities of the naval officer. 7. Explain the relationship of integrity, moral courage, and ethical behavior to authority, responsibility, and accountability. 8. Demonstrate, by personal example, the professional attributes and behaviors of a naval officer. 9. Describe how leadership by example influences an officer's ability to effectively lead

in an organization. Credits: 3.00

NS 21400 - Naval Leadership And Management

Credit Hours: 3.00. Introduces the student to many of the fundamental concepts of leading Sailors and Marines, which shall be expanded upon during the continuum of leadership development throughout NROTC. It develops the elements of leadership vital to the effectiveness of Navy/Marine Corps officers by reviewing the theories and parameters of leadership and management within and outside of the Naval Service and progressing through values development, interpersonal skills, management skills, and application theory. Practical applications are explored through the use of experiential exercises, readings, case studies, and laboratory discussions.

Learning Outcomes: 1. Explain the differences between management and leadership. 2. Describe sources of leader power and related influence tactics. 3. Describe the interaction between the leader, the followers, and the situation. 4. Describe the building blocks of leadership skills and how they impact a leader's effectiveness. 5. Perform a leadership personality analysis and interpret its results. 6. Describe rational and emotional approaches to organizational changes. 7. Apply leadership concepts to a written analysis of a real-world leader. Credits: 3.00

NS 21300 - Sea Power And Maritime Affairs

Credit Hours: 3.00. This course is a study of the U.S. Navy and sea power's influence on history and the political process. Students will explore the major events, attitudes, personalities, and circumstances that have imbued the U.S. Navy with its proud history and rich tradition. It deals with issues of national imperatives in peacetime, as well as war, varying maritime philosophies that were interpreted into naval strategies/doctrines, budgetary concerns that shaped force realities, and the pursuit of American diplomatic objectives. It concludes with a discussion of the Navy's strategic and structural changes at the end of the Cold War and its new focus, mission, and strategy in the post-September 11, 2001 world.

Learning Outcomes: 1. Describe the impact and significance of geography and Sea Lines of Communication on maritime strategy and naval operations. 2. State the mission and basic organization of the Navy and Marine Corps. 3. Describe the current organization of the Department of the Navy. 4. Describe significant events in U.S. naval history. 5. Describe the evolution of the Navy and Marine Corps including the origins. 6. Describe the importance of power projection by seaborne forces and cite historical examples. 7. Describe the significant historical developments of naval weapons systems, platforms, tactics, techniques, and procedures. Credits: 3.00

NS 11000 - Introduction To Naval Science

Credit Hours: 3.00. This course is a general introduction to the USN and USMC that emphasizes organizational structure, warfare components and assigned roles/missions of USN/USMC. It covers all aspects of naval service from its relative position within the DoD to the specific warfare community/career paths and includes basic elements of leadership and USN and USMC core values. The course provides students with initial exposure to many elements of naval culture and provides the conceptual framework/working vocabulary for students to use on summer cruise.

Learning Outcomes: 1. Demonstrate proficiency in USN and USMC customs, such as the hand salute, uniform preparation, and flag etiquette. 2. Describe the departmental organizations of the USN and USMC. 3. Define the various watch-standing roles of shipboard personnel. 4. Describe the general career path of the various unrestricted line communities in the Navy and Marine Corps. 5. Describe all rank insignia of the armed forces. 6. Explain institutional values and ethics of the Department of the Navy. Credits: 3.00

Naval Science Selectives (3 credits)

NS 44000 - Fundamentals Of Maneuver Warfare

Credit Hours: 3.00. The purpose of this course is to introduce the student to the foundational concepts and history of the USMC as the premier maneuver warfighting organization. It is a theoretical class that utilizes both historical examples from previous military operations as well as current doctrine, developing an individual who is both a critical thinker and scholar in the profession of arms. The goal is to educate the student to read military history analytically.

Learning Outcomes: 1. Describe the role of the United States Marine Corps as a premier amphibious warfare fighting institution. 2. Describe specific successful amphibious-based maneuver warfare operations throughout Marine Corps history. 3. Describe how amphibious warfare ties into general warfare, serving as a subset of total warfare. 4. Perform an analysis of historical influences upon current tactical, operational and strategic implications of maneuver warfare practices used in current and future operations. 5. Recite a basic understanding of Marine Corps doctrine that facilitates successful sea-based operations, requiring ship-to-shore movements. Credits: 3.00

NS 35000 - Naval Ship Systems-Engineering

Credit Hours: 3.00. In this course, students learn detailed ship design, hydrodynamic forces, stability, propulsion, electrical theory and distribution, hydraulic theory and ship control, and damage control. The course includes basic concepts of theory/design of steam, gas turbine, diesel, and nuclear propulsion.

Learning Outcomes: 1. Explain the first and second laws of thermodynamics and how they apply to naval ship systems. 2. Understand the difference between thermal and mechanical energy and how to transfer between the two to produce propulsion. 3. Explain how energy is stored onboard US naval vessels and the ways that stored energy is converted into propulsion. 4. Describe each step of a thermodynamic cycle and be able to apply them to various heat engines. 5. Draw the steam cycle on a temperature/entropy graph and describe each process. 6. Describe the role of various auxiliary equipment in a propulsion plant. 7. Describe the basic damage control process and the initial ship-wide response to fire and flooding. Credits: 3.00

NS 33000 - Evolution Of Warfare

Credit Hours: 3.00. The purpose of Evolution of Warfare is to imbue students with an understanding of the origins of modern warfighting theory through an analysis of historical philosophies, domains, tactics and technology. Through a study of military history, students explore the timeless fundamentals of armed conflict as well as the central role of innovation. They will apply these fundamental warfighting concepts to historic amphibious and expeditionary operations through guided analysis and decision games.

Learning Outcomes: 1. State the major cultural, technological, organizational, and doctrinal transformations in warfare. 2. State the operational history of amphibious and expeditionary warfare. 3. Recite the warrior ethos. 4. Describe the relationship between the tactical, operational, and strategic level of warfare. 5. Describe the origins of current USMC and Joint doctrine, especially MCDP 1 and MCDP 1-0. 6. Apply symmetric and asymmetric principles across all warfighting domains. 7. Apply knowledge from historical conflicts to modern and future challenges. 8. Demonstrate fundamental writing and speaking skills required of a marine officer. 9. Demonstrate a tactical mindset and effective decision-making. Credits: 3.00

NS 31100 - Naval Operations And Seamanship

Credit Hours: 3.00. This course is a continued study of relative motion, formation tactics, and ship employment. It includes introductions to naval operations and operations analysis, ship behavior and characteristics in maneuvering, applied aspects of ship handling, afloat communications, naval command and control, naval warfare areas, and joint warfare.

Learning Outcomes: 1. Explain the theory of relative motion as it applies to vessels at sea. 2. Describe the fundamentals of the U.S. Navy's systems of communications used on sea-going vessels. 3. Demonstrate proper use of the Rules of the Road preventing collisions at sea. 4. Discuss the many issues relating to ship handling and Naval Officers' responsibility. 5. Demonstrate relative motion and the capability to solve problems associated with relative motion using maneuvering boards. 6. Perform

the proper use of Standard Commands during Conning Officer Virtual Environment (COVE) lab. 7. Explain the doctrines of Naval Warfare, Command and Control, and Joint Operations. Credits: 3.00

NS 31000 - Naval Navigation

Credit Hours: 3.00. This course is an in-depth study of the theory, principles, procedures, and application of plotting, piloting, and electronic navigation, as well as an introduction to maneuvering boards. Students learn piloting techniques, the use of charts, the use of visual and electronic aids, and the theory of operation of both magnetic and gyrocompasses. Students develop practical skills in plotting and electronic navigation. Other topics include tides, currents, effects of wind/weather, voyage planning, and an application and introduction to the international/inland rules of navigation.

Learning Outcomes: 1. Explain the theory and practice of navigation at sea. 2. Describe the environmental weather factors affecting naval operations. 3. Describe the sources of environmental products/predictions, forecasts available to naval units underway. 4. Demonstrate relative motion and the capability to solve problems associated with relative motion using maneuvering boards. 5. Demonstrate proper use of the Rules of the Road preventing collisions at sea. Credits: 3.00

NS 21200 - Naval Ships Systems II (Weapons)

Credit Hours: 3.00. This course outlines the theory and employment of weapons systems. Students explore the processes of detection, evaluation, threat analysis, weapon selection, delivery, guidance, and explosives. Fire control systems and major weapons types are discussed, including capabilities and limitations. The physical aspects of radar and underwater sound are described. Facets of command, control, communications, computers, and intelligence are explored as a means of weapons system integration. The tactical and strategic significance of command and control warfare and information warfare is discussed.

Learning Outcomes: 1. Explain the choice of weapon, given the defined threat's capabilities. 2. Define the capabilities and limitations of Naval Ship weaponry. 3. Identify, visually, a ship's array of antennae and communication components. 4. Describe the importance of command and control warfare. 5. Analyze the moral and ethical responsibilities of leaders and their use of firepower. Credits: 3.00

Note

Nuclear Engineering Minor

About the Minor

Requirements for the Minor (12 credits)

Required Courses (6 credits)

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

NUCL 30000 - Nuclear Structure And Radiation Interactions

Credit Hours: 3.00. Review of atomic properties and introduction to nuclear models. Discussion of radioactive decay and the interaction of nuclear radiation and reaction products with matter. Energetics and cross-sections of nuclear reactions with applications to problems typical of nuclear engineering.

Credits: 3.00

Additional Requirements (6 credits)

NUCL 20500 - Nuclear Engineering Undergraduate Laboratory I

Credit Hours: 2.00. A laboratory course designed for the study of the properties of radiation, radioactive material, and radiation detectors. The hazards of radiation and safe handling techniques are emphasized.

Credits: 2.00

NUCL 49700 - Selected Topics In Nuclear Engineering

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required.

Learning Outcomes: 1. Learning objectives will vary with coursework. Credits: 1.00 to 3.00

NUCL 59700 - Selected Topics In Nuclear Engineering I

Credit Hours: 1.00 to 3.00. Development of individual research and study projects. Permission of instructor required.

Learning Outcomes: 1. Vary with coursework. Credits: 1.00 to 3.00

Notes

Nutrition Minor

About the Minor

Requirements for the Minor (15 credits)

A. Required Courses (9 credits)

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

B. Additional Courses (6 credits)

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 39000 - Independent Undergraduate Research

Credit Hours: 1.00 to 3.00. Individual research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 49000 - Independent Undergraduate Research

Credit Hours: 1.00 to 4.00. Independent research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 4.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

Notes

Occupational and Environmental Health and Safety Minor

Required Courses (15 credits)

Fundamental Required Courses (3 credits)

HSCI 34500 - Introduction To Occupational And Environmental Health Sciences

Credit Hours: 3.00. Principles of occupational health (industrial hygiene) and environmental health as related to anticipation, recognition, evaluation, and control of hazards in the workplace and the surrounding community. Emphasis is on hazards of chemicals and their role in occupationally and environmentally related diseases. Historical basis and current legislation are discussed. In addition, the principles of epidemiology, toxicology, exposure standards, and respiratory protection are addressed.

Learning Outcomes: 1. Discuss the historical background of the fields of occupational and environmental health and events leading to the establishment of current related regulations. 2. Understand the major principles and terminology of toxicology, epidemiology, and environmental exposure assessment as they are applied to environmental and occupational health. 3. Understand the units of airborne contaminant concentration, and be able to perform basic calculations and conversions involving these concentrations. 4. Identify classes of environmental contaminants, their major health effects, and typical environments where they are of concern. 5. Understand the operations of OSHA, NIOSH, EPA, ACGIH, their important interactions with industry, and their principle types of regulations and/or guidelines. 6. Understand the use of different types of respiratory protective equipment. Credits: 3.00

Selective Courses - Choose 12 credits

HSCI 34600 - Industrial Hygiene Engineering Control

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material.

Learning Outcomes: 1. Describe/understand different approaches for controlling exposures in the occupational environment, and give hypothetical and real situations in terms of the best control methods. 2. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans, and balance/test such systems, culminating in the ability to design a complete ventilation system. 3. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 4. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to prevent it in the workplace. 5. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 6. Synthesize and apply knowledge of the IH paradigm (AREC) in analyzing practical industrial hygiene/occupational health problems. Credits: 4.00

HSCI 34800 - Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. Sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data.

Learning Outcomes: 1. Explain the rationale of the sampling strategy. 2. Perform basic sampling procedures for certain gases, vapors, particulates, noise, and heat, including proper selection, set-up, and operation of equipment. 3. Summarize the basic principles of the sampling procedures and explain why they function as they do. 4. Describe the limitations of sampling and analysis in real-world situations and how to deal with them. 5. Collect, analyze, interpret, and summarize laboratory data into a well-written report. 6. Describe the advantages as well as the difficulties of working together on

a team. Credits: 3.00

IET 33100 - Advanced Industrial Safety And Health Management

Credit Hours: 3.00. An introduction to OSHA and standards development for occupational health in general industry. Special emphasis is on fire protection and egress, flammable and combustible liquids, electrical, personal protective equipment, machine guarding, industrial hygiene/blood-borne pathogens, ergonomics, and ISO 9000/14000 integration.

Learning Outcomes: 1. Explain the purpose of the Occupational Safety and Health Administration (OSHA). 2. Describe the fundamental requirements of each of the General Industry Regulations in 29 CFR 1910. 3. Apply the General Industry Regulations in real-life scenarios within the workplace. 4. Explain how to prepare for the OHSA workplace inspection. 5. Create an adequate training plan for workplace employees. 6. Identify readily available resources for creating a workplace free from recognized hazards. Credits: 3.00

HSCI 54600 - Advanced Industrial Hygiene Control Technology

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Engineering controls are placed in effort to reduce or remove the hazard at the source by isolating the worker from the hazard. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material.

Learning Outcomes: 1. Use scientific and engineering principles to anticipate and recognize potential health hazards in the workplace. 2. Interpret the scientific literature and health data and apply these to the anticipating, recognition, evaluation and control of occupational hazards in the workplace. 3. Describe/understand different approaches for controlling exposures in the occupational environment and give hypothetical and real situations in terms of the best control methods and relative pros & cons. 4. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 5. Understand potential sources of indoor air quality problems, physical symptoms which may be experienced by individuals exposed to various contaminants, and methods of improving the indoor environment. 6. Identify biological contaminants and methods of controlling exposure. 7. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to assess exposure and prevent hearing loss in the workplace. 8. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 9. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans, and balance/test such systems, culminating in the ability to design a small ventilation system. Credits: 4.00

HSCI 54700 - Fundamentals Of Epidemiology

Credit Hours: 3.00. This course is an introduction to epidemiology, which is the study of the patterns, causes, and impact of disease in populations. Epidemiology is increasingly important for public health and clinical medicine research and policy. This course will discuss the basic principles and methods of epidemiology, including measurements of disease occurrence and association, study designs, and determination of causality. Contemporary examples will be used to illustrate the application of these concepts, with an emphasis on environmental causes of disease.

Learning Outcomes: 1. Describe major models of disease causation and prevention. 2. Calculate the extent of disease in populations. 3. Identify and utilize appropriate epidemiologic study designs. 4. Estimate the association between exposure and disease. 5. Differentiate between association and causation. 6. Explain and employ the use of epidemiologic tools in public health and clinical practice. 7. Review and critique basic epidemiology studies. Credits: 3.00

HSCI 58000 - Occupational Biomechanics And Ergonomics

Credit Hours: 2.00. Occupational safety is a cross-disciplinary area concerned with protecting the safety, health and welfare of people engaged in work. Occupational ergonomics is a branch of science that focuses on optimizing the relationships between workers and their work environment. This course focuses on the principles and applications of safety and ergonomics as it applies to workers. The first part of the course will consist of lectures on the fundamentals of safety standards and liability and the development of work-related musculoskeletal disorders, ergonomic risk factors including work practices, tools and workstation design. The last part will consist of identification and use of safety and ergonomic controls to reduce and prevent work-related fatalities, injuries, and musculoskeletal disorders.

Learning Outcomes: 1. Describe ergonomic risk factors in the workplace. 2. Analyze work stations and identify ergonomic risk factors. 3. Develop solutions to minimize identified ergonomic risk factors. 4. Describe cumulative trauma disorders which may occur due to exposure to poor ergonomic conditions. 5. Explain how people perceive & understand information, and use this knowledge to improve work flow. Credits: 2.00

HSCI 22500 - Healthcare Leadership And Safety

Credit Hours: 3.00. This course will present topics related to effective leadership and management strategies within an organization. The course will focus on implementation of these strategies from a health and safety perspective. Specific leadership and management topics to be discussed include communication strategies, motivation, conflict management, negotiation, ethics, and professional development. In addition, important safety topics, such as fire & life safety, workplace violence, terrorism, hazard communication, and slip & fall hazards will also be addressed.

Learning Outcomes: 1. Discuss principles of and various levels of leadership. 2. Explain ethical issues in health & safety and justify a response to those issues. 3. Explain principles of motivation and effective application to health and safety leadership. 4. Relate conflict management approaches to workplace issues. 5. Develop a fire and life safety plan for the workplace. 6. Recognize situations in which violence may occur in the workplace and identify strategies to prevent incidents from occurring. Credits: 3.00

HSCI 35300 - Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization - protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and frontline employees. As such, the successful health and safety manager needs skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the frontline employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the frontline employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the frontline employees and upper management together in their vision of a safe and healthy workplace.

Learning Outcomes: 1. Discuss strategies for creating a positive safety culture in an organization. 2. Conduct an accident investigation and root cause analysis. 3. Identify leading and lagging safety performance indicators. 4. Explain methods of conducting safety training in an organization. 5. Plan an effective safety management system for an organization. 6. Demonstrate group and team building strategies as it relates to health and safety. Credits: 3.00

HSCI 55300 - Advanced Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization, protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and front line

employees. As such, the successful health and safety manager needs to skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the front line employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the front line employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the front line employees and upper management together in their vision of a safe and health workplace.

Learning Outcomes: 1. Discuss strategies for creating a positive safety culture in an organization. 2. Conduct an accident investigation and root cause analysis. 3. Identify leading and lagging safety performance indicators. 4. Explain methods of conducting safety training in an organization. 5. Plan an effective safety management system for an organization. Credits: 3.00

HSCI 44400 - Exposure Assessment In OEHS

Credit Hours: 3.00. Exposure assessment is an essential component of Environmental Health Science and industrial hygiene. This course provides students basic scientific knowledge of exposure assessment, with emphasis on practical aspects of exposure science, including study design, data and measurement collection, data analysis, and results interpretation and presentation. Course topics include major exposure media and pathways (air, water, food, soil, etc.) and important exposure routes (inhalation, ingestion, dermal absorption); exposure measurement and assessment; strengths and weaknesses of various exposure assessment techniques, how to link exposure assessment with environmental health, and human subject research in exposure studies. The course includes case studies and group projects. Students are expected to develop entry-level skills for designing exposure studies applicable to human exposure monitoring, epidemiologic investigations and health risk assessment.

Learning Outcomes: 1. Describe basic components of exposure assessment studies. 2. Design a study to conduct basic assessments of exposure to chemical hazards at workplace or in a community setting. 3. Obtain and analyze existing data, collect and analyze measurement data, prepare technical reports, and present results. 4. Discuss ethical and professional responsibilities in exposure studies. 5. Function effectively on a team that identify, evaluate and solve problems related to exposures in occupational and environmental settings. Credits: 3.00

HSCI 54400 - Advanced Topics In Exposure Assessment

Credit Hours: 2.00. The course will prepare students to use techniques of exposure assessment as it relates to environmental and occupational epidemiological studies as well as regulatory compliance at workplace and in community settings, risk science, and susceptibility factors. It will include exposure assessment study design, the strengths and weaknesses of various exposure assessment techniques, and how to link exposure assessment with occupational and environmental health. Core concepts to be covered include exposure variability and its implications for reconstructing historical exposures, the choice of exposure metric, surrogate measures and measurement errors, exposure modeling, and biomarkers of exposure. The course emphasizes critical and analytical discussions of seminal exposure assessment literature. Students are required to critically evaluate exposure assessment strategies in selected epidemiological studies from the peer-reviewed literature. Students participate in the class through presentations, class discussions, and a semester project.

Learning Outcomes: 1. Explain the nature of exposure problems in reconstructing historical exposures in occupational and non-occupational settings. 2. Recognize the implications of sparse and missing data and the choice of the exposure-response relationship. 3. Design a testable hypothesis and execute research activity to investigate exposure to environmental contaminants at workplace or in a community, and interpret data obtained from such studies. 4. Be aware of the modeling tools for quantifying exposures. 5. Evaluate critically exposure assessment strategies in occupational and environmental epidemiological studies and risk assessments. Credits: 2.00

HSCI 54800 - Advanced Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. This course covers sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data.

Learning Outcomes: 1. Use scientific and engineering principles to anticipate and recognize potential health hazards in the workplace. 2. Interpret the scientific literature and health data and apply these to the anticipating, recognition, evaluation and control of occupational hazards in the workplace. 3. Describe/understand different approaches for controlling exposures in the occupational environment and give hypothetical and real situations in terms of the best control methods and relative pros and cons. 4. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 5. Understand the potential sources of indoor air quality problems, physical symptoms which may be experiences by individuals exposed to various contaminants, and methods of improving the indoor environment. 6. Identify biological contaminants and methods of controlling exposure. 7. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to assess exposure and prevent hearing loss in the workplace. 8. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 9. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans and balance/test such systems, culminating in the ability to design a small ventilation system. Credits: 3.00

HSCI 58001 - Occupational Biomechanics And Ergonomics Laboratory

Credit Hours: 1.00. This course will be the laboratory component for HSCI 58000. Occupational Biomechanics and Ergonomics. Laboratory exercises will accompany and illustrate each topic discussed during the lecture course. An ergonomic project will allow the students to evaluate an individual performing a job and provide ergonomic recommendations to improve the work situation. The course will also emphasize report writing, teamwork, and communication skills.

Learning Outcomes: 1. Evaluate scientific literature to identify the strengths & weaknesses of study designs, interpretation of results, and implications for the future. 2. Display techniques for performing ergonomic measurements. 3. Evaluate ergonomic hazards of the workplace and make recommendations to correct the identified hazards. 4. Write professional quality reports summarizing laboratory procedures, clearly display experiment results, and interpret those results in the context of the principles learned in the HSCI 58000 lectures. Credits: 1.00

HSCI 44700 - Global Workplace Health

Credit Hours: 2.00. This course will examine health and safety issues, particularly those which occur in the work setting, in various countries around the world. A particular focus will be toward developing countries in which the regulatory environment and resources to control hazards are less than those of more developed countries. Students will participate through an established professional organization. They will virtually work on specific projects in various countries, with the goal of improving the health and safety environment.

Learning Outcomes: 1. Identify exposures to harmful environmental agents which may adversely affect human health. 2. Apply their knowledge and skills of occupational health to recommend methods to reduce exposure to harmful environmental agents. 3. Be able to function as part of team to address issues involving human health. 4. Be able to describe the differences in exposure to hazardous agents for different parts of the world. 5. Obtain a knowledge of current events and identify how

the events relate to disparities in human health across different cultures and countries. 6. Obtain an understanding of professional ethics in relation to differing health and safety policies. Credits: 2.00

Notes

Organizational Leadership Minor

Requirements for the Minor (12 credits)

Required Courses (6 credits)

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

TLI 15200 - Business Principles For Organizational Leadership

Credit Hours: 3.00. This course will introduce the topic of applied organization leadership in the context of working organizations. Topics include basic functions, structures, and operations of organizations, and an introduction to reading and understanding balance sheets, cash flow statements, and profit-loss statements.

Learning Outcomes: 1. Identify the business information that organizational leaders are expected to know to comprehensively manage the function and operation of profit and not-profit organizations. 2. Describe the major functions of business, including: operations, finance, marketing, and information technology. 3. Interpret balance sheets, cash flow statements, and profit-loss statements. 4. Explore how organizations use technology to become competitive entities in global business environments. Credits: 3.00

Electives (6 credits)

OLS 48400 - Leadership Strategies For Quality And Productivity

Credit Hours: 3.00. A study of how organizational leaders create an environment conducive to high levels of employee self-motivation, quality, and productivity (TQM). Actual case situations are used to illustrate the application of course content.

Learning Outcomes: 1. Describe characteristics of adaptable organizations. 2. Assess existing organizational strategic alignments. 3. Design organizational systems for sustainable competitive advantage. 4. Implement organizational systems for sustainable competitive advantage. Credits: 3.00

OLS 47700 - Conflict Management

Credit Hours: 3.00. A study of the methods for dealing with innerpersonal, interpersonal, and political disputes by means generally outside the traditional court system. Students will investigate the theoretical and practical aspects of conflict assessment, negotiation, problem solving, mediation, and arbitration.

Learning Outcomes: 1. Interpret and summarize major conflict management concepts. 2. Apply course conflict management concepts to new situations and real-world applications. 3. Assess conflict situations and apply appropriate methods to mitigate conflict. 4. Demonstrate ability to handle difficult people and situations. Credits: 3.00

OLS 45400 - Gender And Diversity In Management

Credit Hours: 3.00. Today's workforce is composed of employees with a variety of individual differences, including race, gender, LGBTQ+, culture, national origin, mental and physical disabilities and age. This course will use the knowledge of diversity, equity, inclusion and ethical responsibilities to develop effective leadership.

Learning Outcomes: 1. Define managing diversity, valuing diversity and affirmative action. 2. Compare American cultural values with non-American cultural values. 3. Describe the major diversity issues, including inclusion, equity and ethical responsibilities, encountered in the workplace. 4. Explain how federal anti-discrimination laws affect the management of diversity and ethical responsibilities. 5. Describe how leaders can effectively manage diversity, inclusion, equity and ethical responsibilities. 6. List the major components of a diversity/inclusion program. Credits: 3.00

OLS 38600 - Leadership For Organizational Change

Credit Hours: 3.00. Introduction to and overview of fundamental concepts of leading organizational change. Topics include setting the stage for organizational change, implementing organizational change, sustaining organizational change, and the role of the change manager. Concepts and frameworks taught in this course are applicable to change at multiple scales from small enterprises and large corporations to communities and ecosystems.

Learning Outcomes: 1. Identify organizational culture and transformation readiness. 2. Apply various change management frameworks to leading organizational change. 3. Understand the role organizational culture plays in change and transformation. 4. Identify the effect of technological change on organizations, communities, and society. 5. Develop and apply a change management framework. Credits: 3.00

OLS 37800 - Labor And Management Relations

Credit Hours: 3.00. An introduction to, and overview of, the fundamental concepts of labor relations, collective bargaining, and dispute resolution procedures. An international comparative analysis is used to assess some of the legal, economic, and political structures of labor relations.

Credits: 3.00

OLS 37500 - Training Methods

Credit Hours: 3.00. Principles, practices, and methods of employee training. Introduction to systematic training program design, development, and evaluation. Emphasis is on the supervisor as a trainer.

Learning Outcomes: 1. Define the role training and development plays in sustaining a competitive advantage across the full array of modern organizations. 2. Explain how training is a systemic process and how it relates to the overall leadership, supervision, and human resource management system of an organization. 3. Describe the purpose and scope of a training needs assessment and plan, including its key components in designing training systems in leadership, supervision, and human resource management system of an organization. 4. Compare and contrast various training delivery methods, citing advantages and disadvantages of each. 5. Describe the essential principles of adult learning and intervention evaluation in developing and designing a training program in leadership, supervision, and human resource management system of an organization. Credits: 3.00

OLS 34600 - Critical Thinking And Ethics

Credit Hours: 3.00. A course in complex problem solving and creative thinking with an emphasis on the ethical impacts of these solutions.

Learning Outcomes: 1. Define various approaches to the study of ethics in leadership. 2. Recognize and apply laws and regulations that affect ethical behavior in business and industry. 3. Work through processes to better identify what are real problems and perceived problems. 4. Use various techniques to ensure the real problem is identified and generate solutions. 5. Relate methods and concepts learned to new situations in order to solve

problems. 6. Identify necessary steps to evaluate and implement solutions. 7. Develop individual problem solving and analytical skills. 8. Identify ethical, legal, and global challenges facing organizational leaders. Credits: 3.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection.

Learning Outcomes: 1. Demonstrate ability to function effectively in teams. 2. Document and manage a project using accepted project management principles. 3. Identify strategies for managing organizational stakeholders. 4. Demonstrate effective oral and written communication skills. Credits: 3.00

OLS 48900 - Digital Transformation

Credit Hours: 3.00. This course covers the role of digital transformation and what it means for companies. This course includes practicums in digital transformation, including business transformation strategies, and AI driven insight.

Learning Outcomes: 1. Describe the foundations of Industry 4.0. 2. Explain the history of digital transformation. 3. Evaluate business collaboration in the modern workplace. 4. Synthesize performance management goals and objectives. Credits: 3.00

Notes

Pet Food Processing Minor

Requirements for the Minor (21 credits)

Required Courses (21 credits)

ANSC 10600 - Biology Companion Animal

Credit Hours: 3.00. Introduction to the various aspects of companion animal biology. Topics include anatomy, physiology, health, immunity, nutrition, growth, digestion, metabolism, behavior, genetics, reproduction and lactation.

Credits: 3.00

ANSC 32400 - Applied Animal Nutrition

Credit Hours: 3.00. Application of the principles of animal nutrition to the formulation and feeding of supplements and complete rations for animals; ration ingredients and substitution values; computer applications; legal aspects of feed formulation; and industry practices. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Understand and apply basic nutritional principles in the use of available ingredients to provide optimum nutrition for growth, development and reproduction. 2. Become familiar and competent with a least cost computer program on feed formulation as used by the commercial feed industry. 3. Enhance student understanding and appreciation of animal research with hands-on experience in conducting and summarizing nutrition research. Credits: 3.00

ANSC 44600 - Companion Animal Management

Credit Hours: 3.00. This course details understanding of the economic scope of the pet industry as well as the role of pets in American society. The students will acquire the information to be responsible pet owners by experiencing their knowledge of housing practices, nutritional care, health care, behavior and breeding of companion animals.

Credits: 3.00

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS)

Credits: 3.00

FS 34100 - Food Processing I

Credit Hours: 2.00. Applications of the fundamentals of food engineering, microbiology, and chemistry to methods of food processing and preservation; emphasis will be on processing concepts, preparation for food processing, food formulation, and thermal processing.

Learning Outcomes: 1. Explain the sources of variability of raw food materials and their impact on food processing operations. 2. List and describe the major methods covered in class to control deterioration and spoilage in foods. 3. Identify the conditions under which important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Identify conditions including sanitation practices under which microorganisms are commonly inactivated, killed, or made harmless in foods. 5. Demonstrate use mass and energy balances for a food process. 6. Explain the transport processes and unit operations involved in processing a particular food. 7. Identify the principles and current practices of processing techniques and the effects of processing parameters in product quality. 8. Predict changes in food quality during storage or processing. 9. Understand the requirements for water utilization and waste management in food and food processing. Credits: 2.00

FS 34200 - Food Processing I Laboratory

Credit Hours: 1.00. This laboratory course applies food engineering principles and thermal processing methods for production of safe and high-quality foods. The course will include applications of mathematics and physics principles in food processing operations, engineering problem-solving exercises and laboratory demonstrations. Engineering concepts such as heat transfer, fluid flow, mass and energy balances applied to various food systems will be a major portion of this laboratory.

Learning Outcomes: 1. Apply mathematical principles to food processing application. 2. Demonstrate an understanding of energy, heat transfer and fluid flow principles. 3. Apply engineering principles to thermal processing of foods. 4. Identify conditions under which microorganisms are commonly inactivated, killed, or made harmless in foods including pasteurization, sterilization, and aseptic processing. 5. Demonstrate use mass and energy balances for a food process. Credits: 1.00

FS 36200 - Food Microbiology

Credit Hours: 3.00. Microbiology of foods, with emphasis on the conditions for growth of microorganisms and degradation of food components, preservation methods, use of Hazard Analysis and Critical Control Point (HACCP) concepts, and microorganisms associated with foodborne illness, and modern detection methods.

Learning Outcomes: 1. Students should be able to identify the major components of food that affect microbial growth, to identify degradation in foods when microorganisms grow. 2. Students will be able to explain how preservations methods affect microbes in food, to explain major foodborne pathogens and under what conditions they thrive, to use microbiological information and molecular techniques to solve practical problems of the food industry. Credits: 3.00

FS 44200 - Food Processing II

Credit Hours: 2.00. Study of food processing and preservation methods based on the integrated knowledge of microbiology, chemistry, and food engineering; emphasis will be on temperature reduction, water activity, concentration, dehydration, irradiation, and extrusion.

Learning Outcomes: 1. Have sufficient knowledge of food chemistry to control reactions in foods. 2. Understand the major chemical reactions that limit shelf-life of foods. 3. Identify the conditions under which the important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Understand the principles involving food preservation via fermentation processes. 5. Be able to identify the conditions, including

sanitation practices under which the important pathogens and spoilage microorganisms are commonly inactivated, killed, or made harmless in foods. 6. Explain the spoilage and deterioration mechanisms in foods and methods to control deterioration and spoilage. 7. Understand the principles that make a food product safe for consumption. 8. Be able to use mass and energy balances for a given food process. 9. Explain the unit operation required to produce a given food product. 10.Understand the principles and current practices of processing techniques and the effects of processing parameters on product quality. 11.Be able to apply and incorporate the principles of food science in practical, real-world situations. 12.Define a problem, identify causes and possible solutions, and make thoughtful recommendations. 13.Work effectively on a team project. Credits: 2.00

FS 44700 - Food Processing II Laboratory

Credit Hours: 1.00. This lab is designed to build upon fundamental concepts associated with the preservation and processing of various food products. Concepts to be covered include water activity, dehydration (drum, spray and freeze drying), frying, high pressure, microwave and ohmic heating. The focus of this lab will be hands-on production of various food products and the demonstration of fundamental food processing unit operations and calculations related to each preservation method.

Learning Outcomes: 1. Perform experiments using appropriate food processing unit operations to create various food products. 2. Write a lab report that includes analysis and interpretation of the results. 3. Work on a project team to duplicate a commercial food product and present the finding of the project in an oral and written report. Credits: 1.00

Notes

Philosophy Minor

Requirements for the Minor (15 credits)

A. Philosophy Course - Choose One (3 credits)

PHIL 30100 - History Of Ancient Philosophy (UCC: HUM)

Credit Hours: 3.00. A survey of Greek philosophy from its beginning in the Milesian school through the Presocratics to Plato and Aristotle.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

PHIL 30200 - History Of Medieval Philosophy (UCC: HUM)

Credit Hours: 3.00. A survey of the main trends and figures of medieval philosophy, with an emphasis on metaphysics, epistemology, and ethics. Readings (in English translation) may include Augustine, Boethius, Avicenna, Anselm, Abelard, Maimonides, Aquinas, Scotus, Ockham and Suarez.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

PHIL 30300 - History Of Modern Philosophy (UCC: HUM)

Credit Hours: 3.00. Concentrates on the major philosophical writers from the Renaissance to the beginning of the nineteenth century: Descartes, Hobbes, Spinoza, Locke, Leibniz, Berkeley, Hume, Kant. Some in other areas, e.g., Galileo, Newton, Calvin, are also considered.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

B. Philosophy course 30000-level or above (3 credits)

C. Additional Philosophy courses - Choose Three (9 credits)

Notes

Physics Minor

Requirements for the Minor (18-20 credits)

Required Courses (12-14 credits)

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

PHYS 34000 - Quantum Science Laboratory

Credit Hours: 2.00. Physics experiments will be conducted that emphasize how quantum behavior differs from classical physics, including particle interference, entanglement, photon-electron scattering, and electron charge-to-mass ratio. Special emphasis is given to keeping a professional lab notebook, error analysis and data plotting, and interpretation of experimental results. Lecture hour will cover underlying physics and exploration of lab results.

Learning Outcomes: 1. Acquire the ability to understand design of a physics experiment, to develop experimental techniques and tools, to analyze and interpret data, and to draw and present physical conclusions. 2. Conduct physics experiments where the quantum aspects are distinctly different from classical predictions. Credits: 2.00

MA 27101 - Honors Multivariate Calculus (UCC: QR)

Credit Hours: 5.00. This course is the Honors version of MA 26100, Multivariate Calculus; it will also include a review of infinite series. The course is intended for first-year students who have credit for Calculus I and II. There will be a significant emphasis on conceptual explanation, but not on formal proof. Permission of department is required.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know techniques of

vector algebra and be able to apply these to the geometry of space; in particular they will be able to find equations for lines and planes in space. 2. Find equations for standard surfaces in space. 3. Use vector methods to analyze motion in space, and calculate arc length and curvature. 4. Acquire a conceptual and computational knowledge of infinite series; in particular they will be able to test for convergence, and to do calculations with power series. 5. Understand the meaning of partial derivatives in various situations, and will be able to calculate with them. 6. Know the multivariable chain rule and its meaning, and will be able to apply it to calculate derivatives in various situations. 7. Know the meaning of directional derivatives and how to calculate them. 8. Find tangent planes. 9. Find and classify extreme values and saddle points and use the method of Lagrange multipliers. 10. Know the meaning of multiple integrals and how to calculate them. 11. Know the meaning of line integrals and surface integrals and how to calculate them. 12. Know Green's theorem, Stokes' theorem, and the divergence theorem and their applications. Credits: 5.00

PHYS 34202 - Introduction To Quantum Science

Credit Hours: 3.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrödinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrödinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 3.00

Physics and Astronomy courses 30000-level or above (6 credits)

Notes

Plant Biology Minor

Requirements for the Minor (15 credits)

Required Courses (4-8 credits)

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates

knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

Selective Courses (7-11 credits)

BTNY 20700 - The Microbial World

Credit Hours: 3.00. This course delivers a broad synthesis of microbiology, discussing all taxa of the microbial world. The course also discusses a wide range of subjects related to microbiology, including medical microbiology, but it has a strong emphasis on the botanical and environmental sciences. One particular characteristic that separates it from other microbiology courses is the reduced emphasis upon bacteriology, with discussions of the protists and viruses and, especially of the fungi, occurring in greater detail than the other general microbiology courses available.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak

with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase your communication skills by creating and presenting a poster. Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

BTNY 42000 - Plant Cellular And Developmental Biology

Credit Hours: 3.00. This course will focus on the fundamentals of plant cellular and developmental biology. Topics to be covered include: the structure and function of plant organelles and membranes; the cell cycle; DNA, RNA and protein synthesis; the secretory pathway, and the cellular basis of development and whole plant morphogenesis.

Learning Outcomes: 1. Understand the organization of plant genomes and cells. 2. Know how plant organs, tissues and cells are organized. 3. Know how a plant cell secretes proteins. 4. Know the mechanism of protein degradation and why it is a key aspect of developmental pathways. 5. Know the function of each plant hormone, understand where and how it is made, and most importantly, how that hormone exerts its influence. 6. Feel confident entering a graduate-level course in plant molecular, cellular or developmental biology. Credits: 3.00

BTNY 49800 - Research In Plant Science

Credit Hours: 1.00 to 3.00. Supervised individual laboratory or field research. Permission of department required.

Learning Outcomes: 1. Define and explain the scientific method as it applies to plant science research. 2. Identify and practice research ethics and responsible conduct in research. 3. Reflect on their own research, identifying lessons learned, strengths, and ways to improve. Credits: 1.00 to 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

BTNY 55000 - Biology Of Fungi

Credit Hours: 3.00. Lectures cover general features of fungi, unique characteristics of major fungal groups, fungal interactions with other organisms, and principles of fungal genetics. Lab exercises include examination of representative species from major groups of fungi and classical and molecular manipulations of fungi.

Learning Outcomes: 1. Demonstrate the understanding of fungal structures and development. 2. Identify different fungal groups. 3. Understand unique features of fungal genetics. 4. Demonstrate the ability to culture and observe different fungi. Credits: 3.00

BTNY 28500 - Plants And Civilization (UCC: STS)

Credit Hours: 3.00. This course, intended primarily for non-majors, covers the history of agriculture, with focus on the centers of origin of our major food, fiber, and medicinal plants, and their historical, cultural, and economic relevance. The course also surveys the biology of crop plants, with respect to taxonomy, anatomy, cell structure, physiology, development, and genetics. Discussions also center on the roles plant biotechnology may play in sustainable agriculture and in helping to alleviate problems caused by overpopulation and ecological stress.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Professional preparation, scientific principles, critical thinking, cultural understanding, social science principles and lifelong learning. Credits: 3.00

Notes

Plant Pathology Minor

Requirements for the Minor (15 credits)

Required Courses (9 credits)

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology,

including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

BTNY 52500 - Intermediate Plant Pathology

Credit Hours: 3.00. Examines the biological and pathological characteristics of major causal agents; concepts of epidemiology and disease assessment; physiology, genetics, and molecular biology of host-pathogen interactions; disease management practices; and methods of disease diagnosis.

Learning Outcomes: 1. Understand concepts of disease and disease assessment; physiology, genetics, and molecular biology of host-pathogen interactions. 2. Understand the current state of knowledge in plant pathology from applied to molecular plant pathogen interactions. 3. Understand importance of plant disease in food security. 4. Understand plant pathogens and how they cause diseases; the biological and pathological characteristics of major pathogens; Understand pathogenesis of bacterial, fungal, nematode and viral diseases. 5. Understand plant disease resistance pathways, genetic resistance mechanisms starting form gene for gene interactions. 6. Understand resistance to necrotrophic plant pathogens. 7. Understand biotechnological approaches to plant diseases resistance. 8. Identify and describe an economically important plant disease. Credits: 3.00

BTNY 53500 - Plant Disease Epidemiology

Credit Hours: 3.00. Plant disease epidemics occur due to the suitable combination of various elements of the agroecosystem. Many plant pathogens and diseases have increased their geographic distribution and intensity in the U.S. and the world. A lack of epidemiological understanding can exacerbate problems and significantly challenge the management of diseases at the field level. This course is an introduction to the epidemiological basis of disease management strategies. The course includes concepts in botanical epidemiology, disease assessment and measurement, disease modeling, epidemics comparison, and a revision of the traditional plant disease control principles. *Plant Disease Epidemiology* is an upper-level course for students interested in plant pathology, agronomy, data-driven Ag, national or international agriculture, or closely related areas. Although some pathosystems are used as model systems, *Plant Disease Epidemiology* is not a "how-to" course on controlling specific plant diseases.

Learning Outcomes: 1. Standardize terminology used in epidemiology for disease management purposes. 2. Analyze the accuracy and precision of data. 3. Use models to describe plant disease epidemics. 4. Explain how epidemiology is used to evaluate disease management options. Credits: 3.00

Selective Courses (6 credits)

BTNY 20700 - The Microbial World

Credit Hours: 3.00. This course delivers a broad synthesis of microbiology, discussing all taxa of the microbial world. The course also discusses a wide range of subjects related to microbiology, including medical microbiology, but it has a strong emphasis on the botanical and environmental sciences. One particular characteristic that separates it from other microbiology courses is the reduced emphasis upon bacteriology, with discussions of the protists and viruses and, especially of the fungi, occurring in greater detail than the other general microbiology courses available.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates

knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 3.00

BTNY 49800 - Research In Plant Science

Credit Hours: 1.00 to 3.00. Supervised individual laboratory or field research. Permission of department required.

Learning Outcomes: 1. Define and explain the scientific method as it applies to plant science research. 2. Identify and practice research ethics and responsible conduct in research. 3. Reflect on their own research, identifying lessons learned, strengths, and ways to improve. Credits: 1.00 to 3.00

BTNY 55000 - Biology Of Fungi

Credit Hours: 3.00. Lectures cover general features of fungi, unique characteristics of major fungal groups, fungal interactions with other organisms, and principles of fungal genetics. Lab exercises include examination of representative species from major groups of fungi and classical and molecular manipulations of fungi.

Learning Outcomes: 1. Demonstrate the understanding of fungal structures and development. 2. Identify different fungal groups. 3. Understand unique features of fungal genetics. 4. Demonstrate the ability to culture and observe different fungi. Credits: 3.00

Program Learning Outcomes

Portuguese Minor

Requirements for the Minor (15 credits)

A. Required Courses (12 credits)

PTGS 20100 - Portuguese Level III (UCC: HUM)

Credit Hours: 3.00. An intermediate Portuguese course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Discussing personal relations and academic studies. 2. Giving and receiving directions to a destination and/or in order to complete a task. 3. Preparing short oral presentations on topics related to Portuguese and Brazilian cultures. 4. Writing short essays on specified topics. Credits: 3.00

PTGS 20200 - Portuguese Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of PTGS 20100 .

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

PTGS 30100 - Portuguese Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Portuguese speaking, listening, reading and writing abilities, using materials dealing primarily with everyday life and civilization in the

Portuguese-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Portuguese.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

PTGS 30200 - Portuguese Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Portuguese on the basis of materials dealing primarily with the ideas and events that have shaped present-day Portuguese-speaking countries. Conducted primarily in Portuguese.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

B. Portuguese Electives (3 credits)

PTGS 33000 - Brazilian, Portuguese, And African Cinema

Credit Hours: 3.00. Screening and analysis of selected films from Portuguese-speaking countries: Brazil, Portugal, Angola, Mozambique, Cape Verde, Guinea-Bissau, S. Tome and Principe, with discussion of their cultural contexts (colonial/post-colonial societies; cross-Atlantic relationships; racial diversity; minority/majority issues). Knowledge of Portuguese not required.

Credits: 3.00

PTGS 39800 - Topics In Portuguese

Credit Hours: 3.00. Advanced studies of particular aspects of Portuguese (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussion, and papers in Portuguese.

Credits: 3.00

PTGS 49800 - Advanced Topics In Portuguese

Credit Hours: 3.00. Advanced studies of particular aspects of Portuguese (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussion, and papers in Portuguese.

Credits: 3.00

PTGS 55100 - Brazilian Poetry

Credit Hours: 3.00. A survey of the major currents and most important writers of Brazilian poetry. Readings include Gregorio de Matos, Goncalves Dias, Castro Alves, Mario de Andrade, Manuel Bandeira, and Cecilia Meireles. Permission of instructor required.

Credits: 3.00

PTGS 55500 - Brazilian Drama

Credit Hours: 3.00. A survey of the primary movements and most important works of Brazilian theatre. Readings include plays by Nelson Rodrigues, Dias Gomes, Ariano Suassuna, and Jorge Andrade. Permission of instructor required.

Credits: 3.00

PTGS 55700 - Brazilian Fiction

Credit Hours: 3.00. A survey of the development and major texts of Brazilian fiction. Readings include novels or short stories by Jose de Alencar, Machado de Assis, Graciliano Ramos, and Clarice Lispector, among others. Permission of instructor required.

Credits: 3.00

Notes

Product Lifecycle Management Minor

About the Minor

Requirements for the Minor (15-16 credits)

Prerequisite Courses for Non-Engineering Students

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role

of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

Prerequisite Courses for Engineering Students

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

ENGR 13100 - Transforming Ideas To Innovation I (UCC: IL)

Credit Hours: 2.00. A partnership between Schools and Programs within the College of Engineering, introduces students to the engineering professions using multidisciplinary, societally relevant content. Developing engineering approaches to systems, generating and exploring creative ideas, and use of quantitative methods to support design decisions. Explicit model-development activities (engineering eliciting activities, EEAs) engage students in innovative thinking across the engineering disciplines at Purdue. Experiencing the process of design and analysis in engineering including how to work effectively in teams. Developing skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools (e.g., Excel and MATLAB).

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Describe the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Use a problem formulation and solving process to translate written problem statements into a mathematical model that allows for a logical comparison of approaches and tradeoffs in an engineering design. 3. Communicate technical information orally and visually and develop basic knowledge and introductory skills for cross-cultural communication. 4. Explain how an engineering problem solving process in related to a design process. 5. Apply a design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 6. Implement simple algorithmic solutions to engineering problems and in design using the most appropriate engineering tool. 7. Demonstrate appropriate knowledge and behaviors for effective and ethical membership on a technical team (i.e., teaming skills). 8. Exhibit a work ethic appropriate for the engineering profession. Credits: 2.00

Required Courses

MFET 20301 - Model-Based Definition

Credit Hours: 3.00. This course provides experience in the development of model-based product definition through the use of contemporary modeling tools and the application of ASME dimensional standards. This course also covers product data exchange and interoperability standards from the perspective of

neutral and proprietary data formats and models. Long-term archival concepts are also covered.

Learning Outcomes: 1. Explain the significance of 2D and 3D CAD model standards relative to industrial practice. 2. Describe the elements and process of 3D model-based definition. 3. Incorporate model-based definition techniques into the CAD model database and technical documentation when creating geometry. 4. Implement modeling techniques that support long-term archival of product data. 5. Develop standard parts libraries which incorporate industrial standard parts specifications. 6. Select appropriate file format(s) for the communication of CAD data through different toolsets and data exchange media. 7. Develop basic literacy in interpreting technical documentation. Credits: 3.00

MFET 21301 - Simulation And Visualization Applications

Credit Hours: 3.00. This course provides an investigation of predictive and documentary capabilities of engineering simulation and visualization tools. The course is based on concepts derived from theoretical computer graphics and related industrial standards, as well as the use of the geometric model-based product definition.

Learning Outcomes: 1. Describe the processes of simulation and visualization methods and tools. 2. Select and use appropriate simulation and visualization tools for specific PLM tasks. 3. Describe the role of product data models to enhance the processes of engineering design optimization and verification. 4. Develop skills of communication and project management through written assignments, individual, and group projects. 5. Define and apply the fundamentals of technical simulation and visualization with CAx tools in a PLM environment. Credits: 3.00

MFET 30301 - Digital Manufacturing

Credit Hours: 3.00. This course investigates digital manufacturing methods, tools, and processes. Topics include additive and subtractive production techniques, CNC tools, geometric dimensioning and tolerance, model-based definition, measurement instruments and metrology, and scanning techniques for geometry validation.

Learning Outcomes: 1. Describe the differences between additive and subtractive manufacturing. 2. Create a simple CNC program to drive a desktop mill, lathe, and cutter. 3. Understand the basic steps to moving CAD data through a CAM system to drive a machine. 4. Use measurement techniques and model-based data to inspect a manufactured part. 5. Use 3D scanning technology to validate a manufactured part. Credits: 3.00

MFET 31301 - The Business Of Managing Digital Product Data

Credit Hours: 3.00. This course provides experience in the business-related aspects of PLM tools and methods. Topics include identifying specifications and roles for system users within an organization, creating database models for digital product information, workflows, virtual machine installation and configuration of PLM systems, budgeting, and benchmarking.

Learning Outcomes: 1. Identify specifications and requirements for users of PLM systems. 2. Identify user roles and create them with appropriate permissions in a PLM system. 3. Install and configure a PLM system to be used by student teams. 4. Develop the product data model consistent with user requirements. 5. Conduct basic benchmarking and budgeting activities for a PLM deployment. Credits: 3.00

Notes

Professional Writing Minor

Requirements for the Minor (15 credits)

A. Research, Introduction, Digital Publishing - Choose One (3 credits)

ENGL 20300 - Introduction To Research For Professional Writers

Credit Hours: 3.00. Introduction to research sources and

methods useful for professional writers, including electronic resources. Focus on collecting print and online information, interviewing, surveying, and conducting observations; and on evaluating, summarizing, analyzing, and reporting research.

Credits: 3.00

ENGL 30600 - Introduction To Professional Writing

Credit Hours: 3.00. Development of skill in analyzing rhetorical situations in the workplace. Practice in planning, writing, evaluating, and revising a variety of documents typical of those used in the arts and industry.

Learning Outcomes: 1. Understand the basic rhetorical theories that underlie professional and technical writing. 2. Explore issues and challenges in professional writing in a variety of professional and technical contexts. 3. Produce critical writing on rhetorical issues in the field. 4. Solve workplace or organizational problems using writing. Credits: 3.00

ENGL 30900 - Digital Design And Production

Credit Hours: 3.00. The development of the ability to write and design documents using electronic publishing technologies. Students will receive instruction in writing, graphics, and publishing software and will write, design, produce, and critique a number of publications.

Learning Outcomes: 1. Understand the foundational principles of document design and gain practical experience with contemporary design tools. 2. Build portfolio pieces that employ a design thinking approach, both in content and execution 3. Apply theories of document design to a variety of different genres directed to different audiences and rhetorical purposes. Credits: 3.00

ENGL 28000 - Games, Narrative, Culture

Credit Hours: 3.00. This is an introduction to the field of game studies, and to games as narrative and cultural media. We will look at the stories games tell; the way their narrative elements or plot devices intersect with the culture around the games and gaming itself; and how all these things come together to affect game design, meaning, and play.

Learning Outcomes: 1. Demonstrate knowledge of key concepts in both game studies and narrative theory in order to critique a game's systems and narrative elements. 2. Articulate how a game's narrative and the industry's workplace practices are situated in specific historical and cultural contexts. 3. Demonstrate critical thinking skills suited to cultural and historical complexities. 4. Articulate concise, coherent arguments about the effects of writing, narrative, and workplace practices and policies on the video game industry and a game's audience. Credits: 3.00

B. General Education Professional Writing - Choose One (3 credits)

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse

audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ENGL 42201 - Writing For The Health And Human Sciences

Credit Hours: 3.00. This course applies rhetorical principles to the writing of health, hospitality, nutrition and other related fields. It will prepare students to write in diverse modalities for technical, professional and lay audiences.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Employ theories and approaches of medical and science writing to adapt to the rapidly changing industries of healthcare and public health. 4. Compose effective healthcare and public health documents with an awareness of the accessibility and usability needs of patients, providers and caregivers. 5. Communicate complex healthcare and public health information while writing both individually and in teams. Credits: 3.00

ENGL 42400 - Writing For High Technology Industries

Credit Hours: 3.00. Applies principles of effective professional writing to the planning, production, and evaluation of computer user manuals and other writing tasks.

Learning Outcomes: 1. Communicate technical knowledge through writing. 2. Think and write about writing in high technology workplaces. 3. Write concisely, precisely, and with economy of language. 4. Become familiar with the best practices and procedures for documenting advanced technologies. 5. Become familiar with adapting technical language and requirements for a non-specialist audience. 6. Become familiar with composing and delivering policies or new procedures to colleagues or co-workers. 7. Become familiar with practical strategies for improving your resume, conduct, and online presence. Credits: 3.00

C. Advanced Professional Writing Classes - Choose Two (6 credits)

ENGL 40600 - Review Writing

Credit Hours: 3.00. Intensive practice in the writing of book, film, and theatre criticism, as well as reviews of musical programs and art exhibits. Readings in critics to serve as possible models. Audience analysis of newspapers and periodicals that would be potential markets.

Credits: 3.00

ENGL 47000 - Advanced Topics In Rhetorical Studies

Credit Hours: 3.00. Study of rhetorical theories and practices past and present. Includes readings in primary texts in the history and theory of rhetoric. May be repeated for credit with a different topic.

Learning Outcomes: 1. Demonstrate advanced

understanding of rhetorical concepts, theories, and practices. 2. Analyze and assess rhetorical situations from which arguments are generated; evaluate arguments and their public, institutional, or organizational success; produce arguments in a variety of genres and forms. 3. Demonstrate understanding of how and why rhetoric accomplishes its work from a variety of perspectives across the humanities and sciences. Credits: 3.00

ENGL 48800 - Internship In Professional Writing

Credit Hours: 3.00 to 6.00. This course provides on-the-job experience in various kinds of professional writing, combined with a seminar in applied rhetoric. Students work in selected internship settings, participate in seminar discussions of their work, and read selections appropriate to their internship. Permission of instructor required.

Credits: 3.00 to 6.00

ENGL 49000 - Worksite Internship Practicum

Credit Hours: 1.00 to 3.00. Course facilitates the transition between an English undergraduate degree and the workplace or professional life. The course has two components: a professor-guided component and a practicum component in a chosen area. Permission of instructor required.

Credits: 1.00 to 3.00

ENGL 51500 - Advanced Professional Writing

Credit Hours: 3.00. Production of documents and coordination of publishing projects for clients and users; application of advanced principles of document design, rhetoric, collaboration, and project management; and team writing in a computer-networked environment.

Credits: 3.00

ENGL 43300 - Writing Proposals And Grants

Credit Hours: 3.00. Writing Proposals and Grants is a professional writing workshop that teaches students to write workplace proposals and grants in for-profit and not-for-profit companies and organizations. Students will also learn how to write business plans, a specialized form of proposal.

Learning Outcomes: 1. Analyze rhetorical situations to determine needs of readers and contexts. 2. Generate new ideas for businesses, products, and services. 3. Organize proposals and grants using various proposal genres. 4. Write in a plain and persuasive style that is appropriate to readers. 5. Design documents in ways that make information accessible. 6. Edit and revise proposals and grants. 7. Work with authors, customers, and funding agencies to sharpen the message of a proposal or grant. Credits: 3.00

ENGL 43400 - Science And Medical Writing

Credit Hours: 3.00. Science and Medical Writing is a professional writing workshop that teaches students how to write in medical and scientific fields. Students will learn the genres and conventions that are used by medical writers and science writers, as well as editors in these fields.

Learning Outcomes: 1. Analyze rhetorical situations to determine needs of readers and contexts. 2. Identify the appropriate genre for a writing project. 3. Edit and proofread scientific and medical documents. 4. Design documents that pertain specifically to medical and scientific texts. 5. Create and effectively use tables, charts, and graphics common in the sciences and medicine. 6. Develop skills for working with authors and publishers in scientific and medical fields. Credits: 3.00

ENGL 33000 - Games And Diversity

Credit Hours: 3.00. This course looks critically at diversity in games, game development, and in the larger mainstream games community. Students will analyze and play games that related to women, minorities, members of the LGBTQ community, and/or those who lack access because of disability.

Learning Outcomes: 1. Analyze a game's narrative based on a specific frame of diversity (i.e. gender, ethnicity, sexuality, and/or disability). 2. Explain how video games relate to contemporary cultural issues. 3. Use evidence-based arguments to defend a position related to video games and diversity. Credits: 3.00

ENGL 33200 - Games And User Experience (UX)

Credit Hours: 3.00. This course connects gamers and their

experiences with games by developing ways to harvest gaming experiences for the improvement of games. We aim to prepare you to better understand gaming experiences, use those understandings to improve games in development, and be able to think and write critically about those experiences.

Learning Outcomes: 1. Identify and address the variables affecting usability investigation. 2. Articulate and employ methods for collecting and processing usability/user experience information about games. 3. Practice evidence-based arguments on game development and improvements. Credits: 3.00

ENGL 43201 - Editing And Publishing

Credit Hours: 3.00. Editing and Publishing is a professional writing workshop that teaches students how to proofread, copyedit, substantive edit, and global edit documents. Students will learn how to navigate the publishing industry and work with authors on print, electronic, online, and multimedia documents.

Learning Outcomes: 1. Understand how the publishing industry operates, especially from an editor's perspective. 2. Apply the four levels of edit (global editing, substantive editing, copyediting, and proofreading) in an editorial project. 3. Work collaboratively with authors to produce clearly written and persuasive documents. 4. Edit document design and graphics in a document. 5. Interact with publishers to bring a text from manuscript form into a published manuscript. Credits: 3.00

D. Additional Professional Writing Course (3 credits)

Notes

Psychology Minor

Requirements for the Minor (15 credits)

A. Required Course (3 credits)

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

B. Selective (3 credits)

PSY 20000 - Introduction To Cognitive Psychology

Credit Hours: 3.00. A survey of psychology as the science of mental life, covering theories and research in perception, reading, attention, consciousness, imagery, memory and its improvement, problem solving, creativity, decision-making, and artificial intelligence.

Learning Outcomes: 1. Describe basic aspects of visual perception and visual imagery. 2. Explain the role of attention in cognition. 3. Describe basic representations and processes of memory. 4. Understand high-level cognitive functions such as reasoning, problem solving, and language. 5. Understand how cognitive neuroscience can inform cognitive psychology. Credits: 3.00

PSY 22200 - Introduction To Behavioral Neuroscience

Credit Hours: 3.00. An introduction to how the nervous system controls behavior. Topics include evolution and comparative psychobiology, the neuroscience of sensation and perception, the neuroscience of motivation, neuropsychology, and cognitive neuroscience.

Learning Outcomes: 1. Describe the basic structure and function of the brain including neuroanatomy and neural communication. 2. Explain how the central nervous system processes internal and external stimuli. 3. Explain how experience influences current and future behavior. 4. Discern normal from abnormal brain function and describe its influence on behavior. Credits: 3.00

C. Selective (3 credits)

PSY 23500 - Child Psychology

Credit Hours: 3.00. Not open to students with credit in PSY 36000. General principles of children's behavior and development, from conception to adolescence, including sensory and motor development, and basic psychological processes such as learning, motivation, and socialization.

Credits: 3.00

PSY 24000 - Introduction To Social Psychology

Credit Hours: 3.00. Not open to students with credit in SOC 34000 . A broad survey in current knowledge about human social behavior. Topics covered include aggression, attraction and love, social influence, attitudes and attitude change, nonverbal communication, leadership, prejudice and discrimination, and application of social psychology to law, medicine, and other fields. CTL:ISH 1024 Social Psychology

Credits: 3.00

PSY 27200 - Introduction To Industrial-Organizational Psychology

Credit Hours: 3.00. Survey of psychological principles and research methods relevant to organizations and industry. Topics covered include research methodology, individual differences, personnel selection, performance measurement, training, motivation, job satisfaction, emotions, work stress, and leadership.

Learning Outcomes: 1. Provide instruction and covers material to assist students in obtaining a broad perspective on the field of Psychological Sciences. Credits: 3.00

PSY 35000 - Abnormal Psychology

Credit Hours: 3.00. Various forms of mental disorders from the standpoint of their origin, treatment, prevention, social significance, and relation to problems of normal human adjustment. CTL:ISH 1023 Abnormal Psychology

Learning Outcomes: 1. Demonstrate an understanding of the historical, ethical, and cultural contexts of psychopathology. 2. Compare and contrast major historical and contemporary theoretical perspectives on psychopathology. 3. Demonstrate an understanding of the scientific bases of the etiology, assessment, classification, diagnosis, and treatment of psychopathology. Credits: 3.00

D. Additional Psychology Courses (6 credits)

Notes

Quantum Science Minor

About the Minor

Requirements for the Quantum Science Minor (19 credits)

Required Courses (11 credits)

CHM 37400 - Physical Chemistry II

Credit Hours: 3.00. Physical chemistry of molecules. Wave properties of matter; quantum mechanics of translation, rotation, and vibration; atomic structure; molecular orbitals; quantum states; statistical mechanics; chemical kinetics; collision theory; transition state theory.

Learning Outcomes: 1. Give examples that demonstrate the fundamental principles in quantum mechanics. 2. Apply simple quantum mechanical models such as particle-in-a-box to atomic and molecular structures to predict wave functions and calculate energy levels. 3. Interpret simple optical spectroscopy of atoms and molecules based on quantum mechanical principles. Credits: 3.00

PHYS 34000 - Quantum Science Laboratory

Credit Hours: 2.00. Physics experiments will be conducted that emphasize how quantum behavior differs from classical physics, including particle interference, entanglement, photon-electron scattering, and electron charge-to-mass ratio. Special emphasis is given to keeping a professional lab notebook, error analysis and data plotting, and interpretation of experimental results. Lecture hour will cover underlying physics and exploration of lab results.

Learning Outcomes: 1. Acquire the ability to understand design of a physics experiment, to develop experimental techniques and tools, to analyze and interpret data, and to draw and present physical conclusions. 2. Conduct physics experiments where the quantum aspects are distinctly different from classical predictions. Credits: 2.00

PHYS 34400 - Introduction To Quantum Science

Credit Hours: 4.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrodinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrodinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 4.00

PHYS 36000 - Quantum Mechanics

Credit Hours: 3.00. Contemporary approach to quantum science that combines traditional quantum mechanics with aspects of quantum information science. Primary topics include quantum states, operators, measurement, spin, angular momentum, entanglement, qubits, and the Schrodinger Equation. Special attention is given to the Einstein-Podolsky-Rosen paradox, quantum cryptography, and an introduction to quantum computing.

Learning Outcomes: 1. Utilize the fundamental assumptions of quantum mechanics to distinguish between classical and quantum physics. 2. Solve the Schrodinger equation when applied to standard examples of constant potentials, including harmonic oscillators and the hydrogen atom. 3. Apply quantum measurement concepts and entanglement to describe the fundamental physics behind quantum cryptography and quantum computing. Credits: 3.00

PHYS 34202 - Introduction To Quantum Science

Credit Hours: 3.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrödinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrödinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has

enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 3.00

QSCI 34202 - Introduction To Quantum Science

Credit Hours: 3.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrodinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrodinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 3.00

QSCI 34400 - Introduction To Quantum Science

Credit Hours: 4.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrodinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrodinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 4.00

QSCI 36000 - Quantum Mechanics

Credit Hours: 3.00. Contemporary approach to quantum science that combines traditional quantum mechanics with aspects of quantum information science. Primary topics include quantum states, operators, measurement, spin, angular momentum,

entanglement, qubits, and the Schrodinger Equation. Special attention is given to the Einstein-Podolsky-Rosen paradox, quantum cryptography, and an introduction to quantum computing.

Learning Outcomes: 1. Utilize the fundamental assumptions of quantum mechanics to distinguish between classical and quantum physics. 2. Solve the Schrodinger equation when applied to standard examples of constant potentials, including harmonic oscillators and the hydrogen atom. 3. Apply quantum measurement concepts and entanglement to describe the fundamental physics behind quantum cryptography and quantum computing. Credits: 3.00

QSCI 34000 - Quantum Science Laboratory

Credit Hours: 2.00. Physics experiments will be conducted that emphasize how quantum behavior differs from classical physics, including particle interference, entanglement, photon-electron scattering, and electron charge-to-mass ratio. Special emphasis is given to keeping a professional lab notebook, error analysis and data plotting, and interpretation of experimental results. Lecture hour will cover underlying physics and exploration of lab results.

Learning Outcomes: 1. Acquire the ability to understand design of a physics experiment, to develop experimental techniques and tools, to analyze and interpret data, and to draw and present physical conclusions. 2. Conduct physics experiments where the quantum aspects are distinctly different from classical predictions. Credits: 2.00

PHYS 34900 - Introduction To Quantum Computing

Credit Hours: 3.00. This is a first course in quantum information and quantum computing, for students who have already had an introduction to quantum science. Linear algebra and some probability theory will be presented and used throughout this course. The basic postulates of quantum mechanics will motivate the applications to qubits, cryptography, quantum computation, algorithms, error correction, and other current topics.

Learning Outcomes: 1. Explain the difference between classical and quantum computation. 2. Understand the essential role of quantum entanglement. 3. Appreciate the role of eigenstates in quantum cryptography. 4. Explain the historical significance of Shor's algorithm in establishing the field of quantum computing. 5. Demonstrate the ability to write a quantum computing program. Credits: 3.00

QSCI 34900 - Introduction To Quantum Computing

Credit Hours: 3.00. This is a first course in quantum information and quantum computing, for students who have already had an introduction to quantum science. Linear algebra and some probability theory will be presented and used throughout this course. The basic postulates of quantum mechanics will motivate the applications to qubits, cryptography, quantum computation, algorithms, error correction, and other current topics.

Learning Outcomes: 1. Explain the difference between classical and quantum computation. 2. Understand the essential role of quantum entanglement. 3. Appreciate the role of eigenstates in quantum cryptography. 4. Explain the historical significance of Shor's algorithm in establishing the field of quantum computing. 5. Demonstrate the ability to write a quantum computing program. Credits: 3.00

Additional Courses (8 credits)

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient,

how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

Notes

Radiological Health Sciences Minor

Requirements for the Minor (15-16 credits)

Fundamental Required Courses (5 credits)

HSCI 31200 - Radiation Science Fundamentals

Credit Hours: 3.00. This course introduces principles and concepts related to nuclear energetics, radioactive decay, the interactions of ionizing radiation with matter, and the human health effects of exposure to ionizing radiation. Fundamental concepts related to atomic and sub-atomic physical processes as well as relevant aspects of modern physics are briefly reviewed. Students gain practical experience and enhance their understanding of radiation protection by participating in a radiological emergency response exercise (RERE).

Learning Outcomes: 1. Have a sense of scale for the atomic and sub-atomic world with regard to size and energies involved. 2. Recognize the major types of radioactive decay, calculate the rates of particle emission, and apply the theory of radioactive decay to decay chains, medical imaging applications and radio dating. 3. Describe and apply the mechanisms of interactions of radiation with matter. 4. Explain and apply mechanisms of radiation detection and quantification. 5. Know and quantify the biological effects of exposure to radiation using dosimetry principles. 6. Be proficient at manipulating the physical quantities and systems of units used in the radiological sciences and at applying critical thinking and problem-solving skills. Credits: 3.00

HSCI 31300 - Principles Of Radiation Detection And Measurement

Credit Hours: 2.00. Course presents an introduction to the principles of radiation detection and measurement, including statistical models, counting statistics, error analysis, detection limits, ionization chambers, proportional counters, GM counters, scintillation counters, gamma-ray spectroscopy, solid-state detectors, TLDs, track-etch and bubble detectors.

Learning Outcomes: 1. Understand the fundamentals of 3 types of ionization radiation. 2. Understand radiation safety. 3. Understand how to choose the radiation detection devices that fit for a specific purpose. 4. Understand what their capabilities and limitations are. 5.

Understand how to interpret and use the output from radiation detectors. 6. Understand medical applications of radiation or radioactive materials. 7. Understand basic principles to detect the radioactive materials injected into human or animal subjects. 8. Understand different nuclear imaging procedures. 9. Understand fundamentals of molecular imaging. 10. Understand the receptor-based radiotracers for imaging and radiotherapy. Credits: 2.00

Advanced Required Courses (8 credits)

HSCI 51400 - Radiation Instrumentation Laboratory

Credit Hours: 2.00. Laboratory techniques required for the application of radiation and radionuclides.

Credits: 2.00

HSCI 52600 - Principles Of Health Physics And Dosimetry

Credit Hours: 3.00. Principles of health physics, radiation dosimetry, and radiation shielding. Topics covered include natural and man-made radiation environments, operational radiation quantities and units, radiation protection philosophy, risk and dose limits, dose-response models, mortality estimates and risk calculations.

Credits: 3.00

HSCI 54000 - Radiation Biology

Credit Hours: 3.00. Effects of ionizing radiation on living systems at the molecular, cellular and tissue levels. Biological basis for radiation therapy treatment planning and radiation protection.

Learning Outcomes: 1. Understand the interaction of radiation with cells. 2. Understand the biological, chemical, and physical factors that modulate the interaction of radiation with cells. 3. Understand the mechanisms of cell killing by radiation. 4. Understand the repair of radiation damage. 5. Understand the genetic effects of radiation. 6. Understand the carcinogenic effects of radiation. 7. Understand the effects of radiation on different tissues. 8. Understand the effects of acute whole body irradiation. 9. Understand the use of radiation in cancer therapy. 10. Understand the effects of radiation on development. 11. Understand the biology of radiation carcinogenesis. 12. Understand the risk of cancer in populations exposed to low doses of radiation. Credits: 3.00

Selective: (2-3 credits)

HSCI 53400 - Applied Health Physics

Credit Hours: 3.00. Lecture and case studies related to the application of radiation dosimetry and shielding principles to the practice of health physics, including environmental and in-plant monitoring, emergency response, decommissioning and decontamination, operational criteria for meeting ALARA exposure limits, and the transport, disposal and treatment of radioactive waste. Epidemiological studies related to radiological accidents and nuclear power are also examined.

Credits: 3.00

HSCI 57000 - Introduction To Medical Diagnostic Imaging

Credit Hours: 3.00. This course teaches the fundamentals of medical imaging, including the basic physics and engineering associated with each imaging modality (CT, MRI, PET, and ultrasound), as well as mathematics and computational tools associated with image reconstruction and image processing. The course is intended for students in health sciences, biomedical engineering, physics, and life sciences.

Credits: 3.00

HSCI 57200 - Radiation Oncology Physics

Credit Hours: 3.00. An introductory course to the physical principles, equipment, processes, imaging guidance, and clinical techniques involved in the treatment of cancer patients with external radiation beams and radioactive sources. Various external radiation beam types and their energy deposition characteristics are described. Treatment planning dose calculation algorithms and point dose calculations are discussed. The use of international dosimetry protocols for radiation beam calibration are covered in detail.

Learning Outcomes: 1. Perform dose calculations used in radiation therapy and to derive output factor (MU) to obtain these point dose calculations. 2. Describe the fundamentals of computer-based treatment planning in 1, 2, and 3 dimensions. 3.

Understand and apply techniques used to plan treatment when using photons, electron, and proton beams. 4. Describe the rationale and fundamentals of common methods and special techniques used in radiation therapy, including static accelerators, IMRT, Tomotherapy, Gamma knife, CyberKnife, Brachytherapy, TBI, SBRT, and similar. Credits: 3.00

HSCI 57400 - Medical Health Physics

Credit Hours: 2.00. This course introduces the legislation and international and national recommendations relevant to the practice of radiation protection in medicine. Principles for the design of radiation use monitoring programs and shielding for radiation facilities is covered. Radiation risk avoidance and management for staff, patients and their families, and members of the public are discussed.

Learning Outcomes: 1. Introduce the student to the application of health physics in medicine and the role of the health physicist and medical physicist in this environment. Real-life experiences will be provided by lecturers to connect the professional and technical aspects of medical health physics to the clinical environment. 2. Identify issues and problems that would not normally be taught in the pure academic setting. Credits: 2.00

Notes

Real Estate Finance Minor

About the Minor

Requirements for the Minor (18 credits)

Required Real Estate Courses (9 credits)

MGMT 37000 - Real Estate Fundamentals

Credit Hours: 3.00. This course introduces the basic concepts, principles, and analytic methods applied in the field of real estate. The course covers topics including legal, financial, economic and marketing concepts related to real estate. The goal of the course is to expose students to the field of real estate and prepare them for more advanced real estate courses.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Describe titles to the conveyance of real estate. 3. Review land economic principles as they relate to real estate values. 4. Identify all quantitative issues required to complete effective real estate transactions. 5. Discuss the aspects of city planning and zoning on real estate values. 6. Understand basic methods for real estate valuation. 7. Understand basic issues in real estate development. Credits: 3.00

MGMT 43901 - Real Estate Investment & Development

Credit Hours: 3.00. The course will cover two main topics: real estate development and real state investment. For real estate development, we will discuss the process of the real estate development process, including the basics of the idea conception, feasibility, planning, financing, market analysis, contract negotiation, risk management, marketing, and asset management. For real estate investment, we will discuss the process and techniques of analyzing real property investment, and the effects of market conditions, government policies, and other factors on real estate investment.

Learning Outcomes: 1. Understand the nature of real estate markets and how value is determined. 2. Understand the process of developing real estate properties. 3. Understand the basic methods for evaluating financial and other risks associated with a real estate development project. 4. Understand and utilize the underlying theory in the analysis of income-producing real estate as an investment medium. 5. Use the net present value and internal rate of return and traditional measures of investment analysis of a real estate investment. 6. Understand the basic principles in structuring real estate investments. Credits: 3.00

MGMT 43905 - Real Estate Industry Project

Credit Hours: 3.00. This course gives students opportunities of working on real-world projects provided by commercial

corporations or organizations. Through the experiential learning experience, students have the opportunities to develop knowledge and skills in managing real estate projects. Depending on the available projects, students will work on topics related to real estate investment and development, facility design and renovation, asset management and other issues. The focus is on developing students' ability in applying what they've learned to solve real-world challenges and receiving coaching and feedback from industry experts.

Learning Outcomes: 1. Learn how to organize your investment or development project by analyzing key characteristics and external constraints that affect schedule, budget, and outcomes. 2. Plan and manage financial and physical resources by a well-planned schedule with appropriate tasks. 3. Monitor project progress and make necessary adjustments to the project schedule manpower and costs. 4. Develop team leadership and communication skills. Credits: 3.00

Additional Course Requirements (9 credits)

Additional Required Courses (3-6 credits)

MGMT 43902 - Real Estate Capital Markets

Credit Hours: 3.00. In this course, students explore the world of real estate finance and capital markets from the perspectives of investors, lenders, fund managers, and other capital allocators. Diving into essential topics like deal structuring, waterfall analysis, debt management, real estate private equity, taxation and regulation, public incentives, mortgage-backed securities (MBS), and Real Estate Investment Trusts (REITs). Through hands-on experience, they will learn to model before-tax and after-tax cash flows, price various securities and deal structures, and develop strategies for managing risk and distress at both project and fund levels. With a strong focus on case study analysis, this course will equip students with practical insights and skills to succeed in real estate finance.

Learning Outcomes: 1. Demonstrate a deep understanding of the history and composition of both debt and equity components of real estate capital markets. 2. Understand the main drivers of real estate capital flows and capital pricing. 3. Describe the structure of residential and commercial mortgage-backed securities. 4. Perform a comprehensive valuation of a REIT. 5. Structure the capitalization for a given project type. Credits: 3.00

MGMT 37500 - Real Estate Law

Credit Hours: 3.00. The course provides an overview of real estate law and its influence on various aspects of the real estate industry. The course examines the legal issues surrounding the nature of real property, types of ownership and possession, real estate contracts, escrow and title and insurance, zoning, financing, landlord and tenant, land use regulations, environments law and regulations, and agency ethics.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Understand how the right to use land is conveyed. 3. Understand the limitations and requirements of land ownership. 4. Understand how the state controls and influences the use of property. 5. Describe the various ways of acquiring the title of real property. 6. Interpret the regulations on real estate contracts. 7. Evaluate various types of real estate ownership and financing techniques. 8. Understand the limitations which can be imposed on real property based on environmental concerns. Credits: 3.00

Real Estate Selective Courses (3-6 credits)

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and

critically evaluate ideas, arguments, and points of view. Credits: 3.00

ECON 45600 - Urban Economics

Credit Hours: 3.00. Examines the market forces that lead to the development, growth, and size of cities. In addition, this course covers the theory of location and land use, principles of local public finance, policy problems in the areas of urban housing, transportation, crime, and pollution.

Credits: 3.00

ECON 38000 - Money And Banking

Credit Hours: 3.00. The course analyzes the economics of money, monetary systems, investments, and financial intermediaries in modern industrial economies. Topics considered include the origin of money and the banking industry, financial asset markets, the role of central banks, and the effects of various monetary policies. The theory will be presented side by side with current economic and financial news, and the students will learn how to track financial and economic data via The Wall Street Journal.

Learning Outcomes: 1. Understand economic analysis, through developing the economic intuition necessary to organize concepts and facts, and draw conclusions through use of inductive and deductive logic. 2. Evaluate current developments and financial news, using economic analysis to think critically about how to interpret current events. 3. Use economic analysis to predict likely changes in the economy and financial system. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 41601 - Corporate Mergers And Acquisitions

Credit Hours: 3.00. The financial analysis of corporate acquisitions, mergers, and reorganizations including asset acquisitions, joint ventures, spin-offs, sell-offs, equity carve-outs, bankruptcy proceedings and reorganizations, and

corporate governance. The course uses a combination of lectures, readings, and case analysis.

Learning Outcomes: 1. Understand the processes of valuation, negotiation, and financial outcomes of transactions involving mergers and acquisitions. Credits: 3.00

MGMT 41300 - Corporate Finance

Credit Hours: 3.00. The course provides the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending, or investment banking setting. Topics include corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition, and mergers/acquisition.

Learning Outcomes: 1. Know the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending or investment banking system through study of topics including corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition and mergers/acquisition. Credits: 3.00

MGMT 41200 - Financial Institutions And Markets

Credit Hours: 3.00. Introduction to financial markets and management of financial institutions. Emphasis on determinants of interest rates, and measurement and management of financial risk. Concentration on management of depository firms such as banks and savings and loans.

Learning Outcomes: 1. Students will be introduced to financial markets and management of financial institutions through learning about determinants of interest rates, and measurement and management of financial risk, with particular attention on management of depository firms such as banks and savings and loans. Credits: 3.00

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.

Learning Outcomes: 1. Improve ability to effectively negotiate. 2. Recognize and analyze negotiation situations. 3. Gain confidence negotiating. 4. Improve decision-making knowledge and skills. Credits: 3.00

MGMT 46600 - Project Management

Credit Hours: 3.00. This course seeks to introduce different phases of managing projects from conception to termination with particular emphasis on quantitative tools for planning, scheduling, resource allocation, monitoring, and control. In addition, topics such as risk management, quality management and procurement management will be covered. Students will also gain a working knowledge of MSProject software.

Learning Outcomes: 1. Provide in-depth exposure to the use of project management tools and philosophies. 2. Demonstrate a realistic experience using these tools to plan and control a project. 3. Know basic steps in project planning: work breakdown, scheduling, resource allocation, information systems, and control. Credits: 3.00

MGMT 47900 - Data Visualization

Credit Hours: 2.00 or 3.00. This course is an introduction to the techniques and algorithms for creating effective data visualization. Visualizations are graphical depictions of data that can improve comprehension, communication, and decision making. This course emphasizes application in business settings where visual representation methods that are covered in this course will improve our understanding of complex data and models. We focus in particular on pattern identification, difference and trends in data sets across categories, space, and time. In addition to participating in in-class discussions, students will have sufficient hands-on experience with the tools and techniques covered in this course. Students will be expected to complete several short programming and data analysis assignments. Students will also have an opportunity to work as groups on a final project. Permission of department required.

Learning Outcomes: 1. Understand the key techniques and theory used in visualization, including data models and graphical perception. 2. Apply perception and cognition principles in visualization. 3. Become familiar with a large number of data visualization tools. 4. Transform large database for visual displays using various representation techniques. 5. Critique various visualization representation and interaction techniques. 6. Read and discuss research papers from the visualization literatures. Credits: 2.00 or 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.
5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

MGMT 43907 - Advanced Topics In Real Estate

Credit Hours: 3.00. This course covers selected and timely topics in real estate that are not covered in other regular courses. The topics are determined by the instructor offering the course. The instructor may also include advanced analytical techniques for real estate investment decisions, real estate valuation, and other analyses. Cases and research reports may be used in this course.

Learning Outcomes: 1. Recognize and understand issues and their impacts on the real estate industry. 2. Assess the impacts of certain issues on a company. 3. Understand and apply advanced analytical methods in real estate decisions. 4. Develop a life-long learning ability for future issues in real estate. Credits: 3.00

Notes

Real Estate Minor

About the Minor

Requirements for the Minor (18 credits)

Required Business & Economics Courses (9 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGEC 42400 - Financial Management Of Agricultural Business

Credit Hours: 3.00. A study of the major types of financial decisions made by agriculturally related firms, including investment in inventory, receivables and cash, property, plant, and equipment; sources and types of short-term, intermediate, and long-term capital; legal patterns of the business organization, emphasis on implementation involving agribusiness case problems.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

Required Real Estate Courses (9 credits)

MGMT 37000 - Real Estate Fundamentals

Credit Hours: 3.00. This course introduces the basic concepts, principles, and analytic methods applied in the field of real estate. The course covers topics including legal, financial, economic and marketing concepts related to real estate. The goal of the course is to expose students to the field of real estate and prepare them for more advanced real estate courses.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Describe titles to the conveyance of real estate. 3. Review land economic principles as they relate to real estate values. 4. Identify all quantitative issues required to complete effective real estate transactions. 5. Discuss the aspects of city planning and zoning on real estate values. 6.

Understand basic methods for real estate valuation. 7. Understand basic issues in real estate development. Credits: 3.00

MGMT 43901 - Real Estate Investment & Development

Credit Hours: 3.00. The course will cover two main topics: real estate development and real state investment. For real estate development, we will discuss the process of the real estate development process, including the basics of the idea conception, feasibility, planning, financing, market analysis, contract negotiation, risk management, marketing, and asset management. For real estate investment, we will discuss the process and techniques of analyzing real property investment, and the effects of market conditions, government policies, and other factors on real estate investment.

Learning Outcomes: 1. Understand the nature of real estate markets and how value is determined. 2. Understand the process of developing real estate properties. 3. Understand the basic methods for evaluating financial and other risks associated with a real estate development project. 4. Understand and utilize the underlying theory in the analysis of income-producing real estate as an investment medium. 5. Use the net present value and internal rate of return and traditional measures of investment analysis of a real estate investment. 6. Understand the basic principles in structuring real estate investments. Credits: 3.00

MGMT 37500 - Real Estate Law

Credit Hours: 3.00. The course provides an overview of real estate law and its influence on various aspects of the real estate industry. The course examines the legal issues surrounding the nature of real property, types of ownership and possession, real estate contracts, escrow and title and insurance, zoning, financing, landlord and tenant, land use regulations, environments law and regulations, and agency ethics.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Understand how the right to use land is conveyed. 3. Understand the limitations and requirements of land ownership. 4. Understand how the state controls and influences the use of property. 5. Describe the various ways of acquiring the title of real property. 6. Interpret the regulations on real estate contracts. 7. Evaluate various types of real estate ownership and financing techniques. 8. Understand the limitations which can be imposed on real property based on environmental concerns. Credits: 3.00

Notes

Religious Studies Minor

Requirements for the Minor (15 credits)

A. Required Courses (9 credits)

PHIL 23000 - Religions Of The East (UCC: HUM)

Credit Hours: 3.00. (REL 23000) A study of the history, teachings, and present institutions of the religions of India, Southeast Asia, China, and Japan. This will include Hinduism, Jainism, Sikhism, Buddhism, Confucianism, Taoism, Shintoism, and Zoroastrianism.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Information literacy. 2. Human cultures. 3. Creative thinking. 4. Inter-culteral knowledge. Credits: 3.00

PHIL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (REL 23100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Information literacy. 2. Human cultures. 3. Creative thinking. 4. Integrative learning. Credits: 3.00

REL 20000 - Introduction To The Study Of Religion (UCC: HUM)

Credit Hours: 3.00. This course will introduce students to the academic study of religion through an exploration of various methodologies available for a critical, reflective investigation of the study of religion.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

REL 23000 - Religions Of The East (UCC: HUM)

Credit Hours: 3.00. (PHIL 33000) A study of the history, teaching, and present institutions of the religions of India, Southeast Asia, China, and Japan. This will include Hinduism, Jainism, Sikhism, Buddhism, Confucianism, Taoism, Shintoism, and Zoroastrianism.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

REL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (PHIL 33100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

B. Elective - Choose One (3 credits)

Category I: Religious Traditions and Diversity

ENGL 26400 - The Bible As Literature (UCC: HUM)

Credit Hours: 3.00. A literary study of selections from the Old and New Testaments as examples of Hebrew and early Christian literature.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Explain the methods, objects of study, and applications of literary studies and the liberal arts, especially related to the Bible. 2. Employ critical approaches from basic building blocks to more advanced ones suited to cultural complexities. 3. Explain and employ different genres of reading, including argument through evidence and close reading. 4. Demonstrate written and visual literacies by analyzing diverse media. 5. Demonstrate knowledge of and proficiency in different types of writing, including argument through evidence and written persuasion. 6. Demonstrate content knowledge of specific Biblical books and their genres. Credits: 3.00

ENGL 46200 - The Bible As Literature: The Old Testament

Credit Hours: 3.00. A study of the Old Testament - Pentateuch, Prophets, and other books such as Psalms, Proverbs, Job, and Ecclesiastes - with emphasis on its unique literary characteristics.

Credits: 3.00

ENGL 46300 - The Bible As Literature: The New Testament

Credit Hours: 3.00. A study of the New Testament, with emphasis on its unique literary characteristics.

Credits: 3.00

JWST 33000 - Introduction To Jewish Studies (UCC: HUM)

Credit Hours: 3.00. An interdisciplinary course touching on the full range of Jewish experience from antiquity to the present. Several members of the Jewish Studies faculty and guest lecturers participate, representing such fields as anthropology, history, language, literature, philosophy, politics, religion, and sociology.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

REL 20100 - Interpretation Of The New Testament

Credit Hours: 3.00. An investigation of the religious content of the Christian Scriptures in light of the historical, social, and intellectual contexts out of which they emerged. Other canons and extra-canonical interpretations of the New Testament will also be investigated.

Credits: 3.00

REL 20200 - Interpretation Of The Old Testament

Credit Hours: 3.00. An investigation of the religious content of documents Christians call the "Old Testament" in light of the historical, social, and intellectual contexts out of which they arose. The student will be introduced to problems and methods in their interpretation.

Credits: 3.00

REL 20300 - Theology Of Paul

Credit Hours: 3.00. A critical examination of the Pauline and Deutero-Pauline epistles, the book of Acts, and other first century texts associated with Paul of Tarsus. Students will be introduced to problems and methods in the interpretation of ancient texts.

Credits: 3.00

REL 31700 - Ancient Judaism And Early Christianity

Credit Hours: 3.00. This course is a study of the emergence of Judaism and the rise of Christianity out of roots in the history of

ancient Israel. This will include noticing the effects of Greek culture, evidence of anti-Semitism and admiration of the Jews, conversion in a setting of religious pluralism, and the development of Jewish and Christian self-definition in this climate.

Credits: 3.00

REL 31800 - The Bible And Its Early Interpreters

Credit Hours: 3.00. This course will start with observation of the development of early themes in later parts of the Hebrew Bible and proceed to the on-going influence of these themes in Jewish literature outside the Hebrew canon (apocrypha, pseudepigrapha, targums, midrash, Josephus, Philo, and other Hellenistic Jewish authors), as well as in pagan literature of this era and in early Christian literature, particularly the New Testament.

Credits: 3.00

REL 49100 - Special Topics In Religious Studies

Credit Hours: 3.00. Investigation of a special topic in Religious Studies. The topic will vary from semester to semester.

Learning Outcomes: 1. Vary due to nature of course. Credits: 3.00

REL 24000 - Engaging Religious Diversity (UCC: HUM)

Credit Hours: 3.00. The course offers students case-based explorations of local and global religious diversity in various cultural contexts. Religious diversity in secular spaces and the significance of religion for shaping community identities will be examined from multiple disciplinary perspectives. Students will analyze religious representations and influences in the public sphere by studying examples from different genres and media. Additionally, this course offers students opportunities to improve their religious literacy and gain real-world experience through experiential learning projects.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Identify religious values and practices from multiple traditions. 2. Explain the importance of engaging religious diversity in various contexts. 3. Analyze interactions between religion and civic participation. 4. Evaluate the role of religion in shaping identities. 5. Assess public representations of religion. Credits: 3.00

Category II: Religion, Society and the Public Square

ANTH 37300 - Anthropology Of Religion

Credit Hours: 3.00. Anthropological theories of the origin, development, and functions of religion, ritual, and myth. Data drawn from western and non-western societies, with special emphasis on the relationship of religion to social structure, cultural patterns, and social change.

Learning Outcomes: 1. Explain anthropological approaches to the study of religious belief systems. 2. Investigate religious and cultural differences using anthropological skills. 3. Describe a diversity of faiths and worldviews. 4. Summarize the key ways that humans of the past and present have sought to make sense of the mysteries of life and the sacred. Credits: 3.00

HIST 24600 - Modern Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course explores the political, social, and cultural factors that have contributed to the formation of the modern Middle East. Course includes short stories and a selection of documentary films from the region.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 31700 - A History Of The Christian Church And The Expansion Of Christianity I

Credit Hours: 3.00. A history of the emergence of Christianity, the development of the Christian church, and the impact of Christian thought and institutions upon western Europe prior to the Reformation.

Credits: 3.00

SOC 36700 - Religion In America

Credit Hours: 3.00. Examines the social dimensions of religion in American life; religion in American culture; social profiles of America's religious groups, trends in individual religious commitment; and religion's impact on American life.

Learning Outcomes: 1. Describe the sizes and influences of major (and some minor) religious groups in America and how these sizes and influences have changed over the past 50 years. 2. Explain and evaluate the influence of religious groups and ideas on at least one other important aspect of social life. 3. Explain ways

in which trends in American society over the past 50 years (e.g., changing gender roles, political shifts, etc.) are bringing about changes in American religion. Credits: 3.00

HIST 59500 - The Holocaust And Genocide

Credit Hours: 3.00. (POL 59500) History and analysis of the Nazi attempt to destroy the European Jews, with comparisons to other instances of genocide.

Credits: 3.00

HIST 31905 - Christianity In The Global Age

Credit Hours: 3.00. This course examines the social, cultural, economic, legal, and religious dynamics of global Christianity in its emerging centers of Latin America, Asia, and Africa during the 20th and 21st centuries.

Learning Outcomes: 1. Understand key issues in the global Christianity in 20th and 21st centuries. 2. Distinguish between secondary and primary sources, and be able to critically read both types of sources. 3. Synthesize information and arguments from both types of sources. 4. Engage in independent historical analysis with the use of primary and secondary sources. 5. Write analytical essays in fluid English prose with thesis statements, clear organization, and appeals to concrete evidence. 6. Research a contemporary topic using a variety of international sources and write a report analyzing the issue in the context of longer historical developments. Credits: 3.00

HIST 40300 - Europe In The Reformation

Credit Hours: 3.00. A study of decay and renewal in European society, 1300 to 1650. Concentrates on the Protestant and Catholic Reformation and religious wars, but also covers the Northern Renaissance, the New Monarchies, and the discovery and exploration of the New World.

Credits: 3.00

REL 49100 - Special Topics In Religious Studies

Credit Hours: 3.00. Investigation of a special topic in Religious Studies. The topic will vary from semester to semester.

Learning Outcomes: 1. Vary due to nature of course. Credits: 3.00

C. Elective - Choose One (3 credits)

Category III: Religion, Culture, and Intellectual History

PHIL 20600 - Introduction To Philosophy Of Religion (UCC: HUM)

Credit Hours: 3.00. The course encourages critical reflection on traditional and contemporary views about God and other religious ideas. Topics include arguments for God's existence, the problem of evil, understanding the divine attributes, miracles, religious pluralism, and life after death. CTL:ISH 1052 Philosophy Of Religion

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate familiarity with one or more conceptions of God and with arguments for and against the coherence of such conceptions. 2. Demonstrate a familiarity with some of the arguments for and against God's existence and with some of the objections to those arguments. 3. Recognize the importance of and demonstrate familiarity with multiple religious ideas and beliefs. 4. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 5. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. Credits: 3.00

PHIL 30200 - History Of Medieval Philosophy (UCC: HUM)

Credit Hours: 3.00. A survey of the main trends and figures of medieval philosophy, with an emphasis on metaphysics, epistemology, and ethics. Readings (in English translation) may include Augustine, Boethius, Avicenna, Anselm, Abelard, Maimonides, Aquinas, Scotus, Ockham and Suarez.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

PHIL 40200 - Studies In Medieval Christian Thought

Credit Hours: 3.00. A survey of medieval (and patristic) philosophical theology. Issues include the nature and existence of God, religious language, and doctrines such as the Trinity, Incarnation, and Atonement. Readings (in English translation) will include, among others, Augustine, Boethius, Anselm, and Aquinas.

Credits: 3.00

PHIL 40600 - Intermediate Philosophy Of Religion

Credit Hours: 3.00. An intensive study of some important problems such as the existence of God, the problem of evil, immortality, or the nature of religion. Or the religious philosophy of some significant thinkers such as Buber, Berdyaev, Tillich, Barth, Maritain, or Chardin may form the content of the course. Subject matter may vary.

Credits: 3.00

REL 20400 - Introduction To Christian Theology

Credit Hours: 3.00. This course is an introductory survey of the goals and aims of theology in the Christian tradition. Focus is on the content of Christian theology, its methodological presuppositions and principles of development.

Credits: 3.00

REL 25000 - A History Of The Christian Afterlife

Credit Hours: 3.00. An exploration of the ways Christians have envisioned the afterlife, including New Testament descriptions. Apocryphal notions, Patristic conceptions, mystical and 19th century descriptions of heaven as sexual union, and 20th century understandings of the afterlife as a "process of education".

Credits: 3.00

REL 35100 - Christian Mysticism

Credit Hours: 3.00. A critical, historical examination of the development of Christian mystical thought, beginning with its earliest intimations in the Hebrew Scriptures, the thought of Plato and Aristotle and continuing through Patristic, Medieval, Renaissance, Reformation, Counter-Reformation and Modern periods to the present.

Credits: 3.00

REL 45000 - Christian Ethics

Credit Hours: 3.00. The course explores the historical development of Christian moral theology, from pre-Christian times to the present. It includes a study of Biblical moral conceptions, patristic, medieval, Enlightenment, modern, and contemporary understandings of Christian ethics.

Credits: 3.00

REL 45100 - Christology

Credit Hours: 3.00. The course examines the historical development of Christological doctrine in the Christian faith from the age of the New Testament to the late 20th/early 21st century, paying special attention to the New Testament and conciliar formulations.

Credits: 3.00

REL 45200 - Systematic Theology

Credit Hours: 3.00. An introduction to the nature, tasks, and methods of what Christians have called "systematic theology", historically conceived through an exploration of the writings of figures such as Augustine, Aquinas, Melancthon, John Calvin, Barth, and Paul Tillich.

Credits: 3.00

PHIL 50500 - Islamic And Jewish Philosophy And The Classical Tradition

Credit Hours: 3.00. A study of representative texts and issues in medieval Islamic and Jewish philosophy. Possible topics include the commensurability of philosophy and (revealed) law, the creation or eternity of the world, the nature of prophecy, the human good, the nature of God, and divine language.

Credits: 3.00

PHIL 50600 - Advanced Philosophy Of Religion

Credit Hours: 3.00. A detailed critical investigation of some central problems in a philosophical approach to religion. Readings will be selected from leading representatives of traditional theism and various contemporary schools. The thought of the representative thinkers will be analyzed, discussed, and critically evaluated. The problems discussed will be selected from the existence of God, the problem of evil, freedom and determinism, the problem of immortality, and the nature of religious language. Variable content.

Credits: 3.00

PHIL 52000 - Existentialism

Credit Hours: 3.00. A detailed exploration and examination of the existentialist movement in modern thought, including its historical roots, its philosophical formulations, and its influence and expression in and relation to art, literature, psychology, social criticism, and religion. Readings will be from at least some of the major existentialists: Kierkegaard, Nietzsche, Jaspers, Heidegger, and Sartre. In addition, texts from existentialist thinkers in other areas will be used.

Credits: 3.00

REL 49100 - Special Topics In Religious Studies

Credit Hours: 3.00. Investigation of a special topic in Religious Studies. The topic will vary from semester to semester.

Learning Outcomes: 1. Vary due to nature of course. Credits: 3.00

Notes

Russian Minor

Requirements for the Minor (15 credits)

A. Russian Language (9 credits)

RUSS 30100 - Russian Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Russian speaking, listening, reading, and writing abilities, using material dealing primarily with everyday life and civilization in the Soviet Union from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Russian.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

RUSS 30200 - Russian Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Russian, on the basis of materials dealing with the ideas and events that have shaped present-day Russia and the Soviet Union. Conducted primarily in Russian.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

RUSS 40100 - Russian Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Russian speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in Russia and the Soviet Union. Conducted primarily in Russian.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

B. Russian Literature (3 credits)

RUSS 34100 - Russian Literature In The Nineteenth Century

Credit Hours: 3.00. Selected Russian poetry, prose, and drama from the Kievan period to 1900 in historical and cultural context. Students will write critical essays on literary topics. Conducted largely in Russian.

Learning Outcomes: 1. Understand the role of literature in 19th century Russian culture and society. 2. Situate the works they read in their historical and political content. 3. Improve understanding of the way literary works function through various artistic devices. 4. Improve ability to perform close readings of literary texts. 5. Increase ability to write analytical papers supporting a thesis. 6. Increase ability to conduct and present independent research. 7. Confront the philosophical and ethical questions raised by these works. Credits: 3.00

RUSS 34200 - Revolution, Repression, Renewal: Soviet Literature And Beyond

Credit Hours: 3.00. Selected Russian poetry, prose, and drama of the 20th century in historical and cultural context. Students will read and discuss major authors and texts and will write critical essays on literary topics. Conducted largely in Russian.

Learning Outcomes: 1. Understand the role and position of literature in the Soviet Union. 2. Situate the works they read in their historical and political context. 3. Understand the relationship between writers, the Soviet state, and the means of disseminating texts. 4. Improve understanding of the way literary works function through various artistic devices. 5. Improve ability to perform close readings of literary texts. 6. Increase ability to write analytical papers supporting a thesis. 7. Increase ability to conduct and present independent research. 8. Confront the philosophical and ethical questions raised by these works. Credits: 3.00

C. Russian Electives (3 credits)

RUSS 34100 - Russian Literature In The Nineteenth Century

Credit Hours: 3.00. Selected Russian poetry, prose, and drama from the Kievan period to 1900 in historical and cultural context. Students will write critical essays on literary topics. Conducted largely in Russian.

Learning Outcomes: 1. Understand the role of literature in 19th century Russian culture and society. 2. Situate the works they read in their historical and political content. 3. Improve understanding of the way literary works function through various artistic devices. 4. Improve ability to perform close readings of literary texts. 5. Increase ability to write analytical papers supporting a thesis. 6. Increase ability to conduct and present independent research. 7. Confront the philosophical and ethical questions raised by these works. Credits: 3.00

RUSS 34200 - Revolution, Repression, Renewal: Soviet Literature And Beyond

Credit Hours: 3.00. Selected Russian poetry, prose, and drama of the 20th century in historical and cultural context. Students will read and discuss major authors and texts and will write critical essays on literary topics. Conducted largely in Russian.

Learning Outcomes: 1. Understand the role and position of literature in the Soviet Union. 2. Situate the works they read in their historical and political context. 3. Understand the relationship between writers, the Soviet state, and the means of disseminating texts. 4. Improve understanding of the way literary works function through various artistic devices. 5. Improve ability to perform close readings of literary texts. 6. Increase ability to write analytical papers supporting a thesis. 7. Increase ability to conduct and present independent research. 8. Confront the philosophical and ethical questions raised by these works. Credits: 3.00

RUSS 40200 - Russian Level VIII (UCC: HUM)

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in Russian. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted primarily in Russian.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Improve proficiency in the four language skills: speaking, listening, writing, and reading. 2. Achieve a proficiency of Intermediate High to Advanced Low (ACTFL scale), Level 3 (State Department Scale). 3. Gain greater familiarity with various elements of Russian society and both high and popular culture. Credits: 3.00

RUSS 42400 - Business Russian

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Credits: 3.00

RUSS 56100 - The Structure Of Russian I: Phonology And Syntax

Credit Hours: 3.00. This course treats the sound system and sentence structure of Russian, dealing with the structural pattern on various levels (phonetic, phonemic, syntactic) from various points of view. One weekly class is devoted to theoretical issues affecting Russian phonology and syntax.

Credits: 3.00

RUSS 56200 - The Structure Of Russian II: Morphology

Credit Hours: 3.00. This course will present a systematic study of Russian morphology in the light of current linguistic research, dealing both with the various categories of inflected words (nouns, pronouns, adjectives, verbs) and with word formation.

Credits: 3.00

RUSS 59600 - Special Topics In Russian Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

RUSS 38000 - Russian Culture And Civilization I

Credit Hours: 3.00. This course traces the intellectual and cultural development of Russia, starting with the founding of the Kievan state and continuing to the last days of the Russian Empire. No knowledge of Russian is required.

Learning Outcomes: 1. Understand the forces

and circumstances (geographical, historical, political) that shaped the Russian state and gave rise to its distinctive forms of culture. 2. Understand the distinction between rossiskoe (Russian as pertains to the polity) and russkoe (ethnically and linguistically Russian), and improve understanding of Russia as a multi-ethnic state. 3. Discover the contributions of non-ethnic Russians to Russian culture. 4. Develop an appreciation for the artistic value of examples of Russian literature, music, and the pictorial arts. 5. Increase ability to read critically and write persuasively. Credits: 3.00

RUSS 38100 - Russian Culture And Civilization II

Credit Hours: 3.00. This course traces the intellectual and cultural development of Russia from the revolutionary period to the present. No knowledge of Russian is required.

Learning Outcomes: 1. Increase understanding of the interactions between revolutionary politics and revolutionary art, and explore the role of art in a political society while encountering various strategies authors, composers, etc. used to navigate between creative impulses and political requirements. 2. Move beyond the simplistic dichotomy of propaganda vs. dissidence and explore the complex gradations between the extremes of official anti-Soviet culture. 3. Increase knowledge of the relationship between cultural production, distribution, and consumption and the forms that culture takes. 4. Develop an appreciation for the artistic value of examples of Russian literature, music, and the pictorial arts. Credits: 3.00

RUSS 49700 - Topics In Russian Literature

Credit Hours: 3.00 to 6.00. This course provides in-depth study of a particular author or facet of the Russian literary tradition. Possible topics include Dostoevsky and His Age; The Art and Thought of Leo Tolstoy; Russian Romanticism: Pushki, Gogol, Lermontov; The Russian Stage: Theater in Russia and the Soviet Union.

Learning Outcomes: 1. Increase familiarity with various writers, movements, and other aspects of the Russian literary tradition. 2. Improve understanding of the ways in which Russian writers confronted moral and artistic problems in their works. 3. Able to contextualize Russian literary works in the historical and cultural context in which they appeared. 4. Increase ability to read critically and write persuasively. 5. Become acquainted with the resources available for further pursuit of topics in Russian cultural history. Credits: 3.00 to 6.00

RUSS 49800 - Topics In Russian Culture

Credit Hours: 3.00 to 6.00. This course provides a sustained examination of some aspect of Russian culture or a topic relevant to Russian cultural studies. Topics may include Russia Confronts the East; The Caucasus: An Introduction; Popular Culture in Russia.

Learning Outcomes: 1. Attain an in-depth understanding of a particular movement, feature, or aspect of Russian culture. 2. Improve knowledge of Russian history and society as it pertains to cultural development. 3. Increase ability to read critically and write persuasively. 4. Become acquainted with the resources available for further pursuit of topics in Russian cultural history. Credits: 3.00 to 6.00

Notes

Smart Manufacturing Enterprise Minor

About the Minor

Requirements for the Minor (15 credits)

Required Courses (15 credits)

CNIT 15501 - Introduction To Software Development Concepts

Credit Hours: 3.00. This course introduces fundamental software development concepts common to most programming languages. Topics include problem solving and algorithm development, debugging, programming standards, variables, data types, operators, decisions, repetitive structures, modularity, arrays, user interface construction, software testing and debugging. A broad range of examples will be used throughout the course to show how each programming concept applies to real life problems.

Learning Outcomes: 1. Define key application development terms. 2. Explain the importance of programming to different domain areas. 3. Identify advantages and disadvantages of using an IDE to write program code. 4. Use debugging tools to find program errors. 5. Use data types, variables, constants, arithmetic operators, relational operators, logical operators, decisions, loop, functions, and arrays when writing computer programs. Credits: 3.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

MFET 35000 - Smart Manufacturing Systems Modeling & Simulation

Credit Hours: 3.00. This course addresses application of industrial internet of things (IIoT) for modeling and simulation of smart manufacturing assets, processes, and operations. Emphasis is on synchronizing modeling/simulation with real-time data to develop innovative services, create efficiencies, and enable productivity improvement in smart factories.

Learning Outcomes: 1. Describe the convergence of the physical and digital worlds, technology, and standards of IIoT-aided modeling and simulation. 2. Implement process data modeling and application to various types of plant data (drives, pumps, production lines) using real-time, historical, and event-based data. 3. Develop digital/virtual-cloud representation models to be mirrored onto physical manufacturing systems. 4. Create digital twin (DT) models using data from IIoT devices for monitoring and automating control of smart connected assets. 5. Construct DT-oriented simulation model for IoT-aided manufacturing system for applications in productivity, reliability, efficiency, and predictive maintenance operations. 6. Develop application of augmented reality and manufacturing model proxies in diagnostic and troubleshooting operations. Credits: 3.00

MFET 23000 - Industrial Internet Of Things, Networks, And Systems I

Credit Hours: 3.00. This course provides an introduction to Industrial Internet of Things (IIoT) devices, networks, and standards in the context of converged information technology (IT) and operations technology (OT) industrial automation systems. Course topics include an examination of IT and OT networks, hardware, architecture, protocols, standards, and security practices in the context of industrial applications.

Learning Outcomes: 1. Explain the concept of Industrial Internet of Things (IIoT) and the enabling technologies. 2. Describe IT and OT development and detail differences in priorities and capabilities. 3. Design, implement, and analyze an integrated industrial network. 4. Configure host-level and network-level technical security controls in IT and OT systems. 5. Apply industry standards and reference architectures to ensure best practices in the selection,

deployment, and operation of IIoT devices. Credits: 3.00

MFET 25000 - Smart Manufacturing Cloud Computing Applications

Credit Hours: 3.00. This course introduces concepts and principles of cloud computing and the virtualization of computing resources and services for smart manufacturing applications. The fundamental topics of cloud computing will be addressed, including virtually processing, storing, modeling and analyzing of data in the cloud environment. Fundamental concepts about cloud tools, applications, and services from a production and manufacturing perspective will be presented.

Learning Outcomes: 1. State the challenges and advantages of cloud computing in smart manufacturing. 2. Explain the concepts and principles of cloud computing such as a scalability, elasticity, agility, fault tolerance, disaster recovery and networking. 3. Recognize the models, tools, and service types offered by the different cloud platforms for smart manufacturing applications. 4. Select strategies for managing and optimizing cloud computing resources for different manufacturing applications. 5. Apply techniques in clouding computing to model and manage manufacturing data. 6. Build manufacturing apps using cloud based platform tools and services. Credits: 3.00

Notes

Sociology Minor

Requirements for the Minor (15 credits)

A. Required Foundation Course (3 credits)

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

B. Sociology Electives (12 credits)

A. Required Foundation Course (3 credits)

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

Soil Science Minor

Requirements for the Minor (18 credits)

Required Courses (6 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6.

Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

Selective Courses (12 credits)

AGRY 33500 - Weather And Climate

Credit Hours: 3.00. An introductory course in meteorology and climatology with applications to daily life. The study of the fundamental physical principles behind weather and climate and how they apply to the homeowner and the world citizen. Emphasis is on how to interpret weather conditions and forecasts, what controls the wide range of climates in the world, and what the future may hold.

Credits: 3.00

AGRY 33700 - Environmental Hydrology

Credit Hours: 3.00. This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

AGRY 34900 - Soil Ecology

Credit Hours: 3.00. An introductory course that will cover the basic concepts of soil ecology. Biological diversity and the interactions between and within biotic and abiotic components of the soil ecosystem, nutrient cycling, and genetic engineering are introduced.

Credits: 3.00

AGRY 35500 - Soil Morphology And Geography

Credit Hours: 2.00. This course features field experience in advanced techniques in soil morphology including the study of the relationship of soils to landscaped, common parent materials of Midwest and classification of soils in the Soil Taxonomy. Course material emphasizes the development of detailed descriptions of soil properties and how these properties directly impact the interpretations and recommendations for land use options. Use and management of soils based on landscape position and morphology will be covered including on-site waste disposal, homes with basements as well as road and street construction. Collegiate soil judging is a portion of the subject matter discussed. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society

at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 2.00

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 54000 - Soil Chemistry

Credit Hours: 3.00. Emphasis on processes controlling the gaseous, solution, and solid phases in soils including precipitation, acid-base, oxidation-reduction, complexation, absorption, and ion exchange.

Credits: 3.00

AGRY 54400 - Environmental Organic Chemistry

Credit Hours: 3.00. The fundamental properties and processes responsible for the fate of organic chemicals in the environment, with emphasis on soil and water chemistry. Areas to be addressed will include both conceptual and theoretical aspects of processes relevant to environmental fate of contaminants; measurement, estimation, correlation, and application of the parameters most commonly used to assess various chemodynamic properties in soil-water systems.

Learning Outcomes: 1. Demonstrate an understanding of the fundamental properties and processes controlling the environmental fate of organic contaminants in surface and subsurface environments. 2. Understand how variations in chemical structure change chemical behavior including solubility, volatility, acid-base speciation and reactivity. 3. Quantify chemical distribution between soil-water, soil-air, water-air and liquid-liquid compartments. 4. Understand and quantify how environmental and anthropogenic factors change chemical behavior and distribution in the environment. 5. Apply partition coefficients and mass balance approaches to predict chemical distribution between various environmental compartments. 6. Demonstrate an understanding of how abiotic and biotransformation processes affect chemical fate in the environment. 7. Demonstrate an understanding how chemical, soil and subsurface properties impact choice of remediation strategies. Credits: 3.00

AGRY 54500 - Remote Sensing Of Land Resources

Credit Hours: 3.00. Application of remote sensing and spatial databases for observing and managing land resources within the Earth System; analysis and interpretation of remotely sensed data in combination with field observations and other data sources; conceptualization and design of a global earth resources information system.

Learning Outcomes: 1. Evaluate, analyze, and apply the fundamentals of remote sensing related to sensor technologies, Multispectral/hyperspectral imaging, active and passive radar, LIDAR, GPS, preprocessing of remote sensing image data, Radiometric and geometric correction, data enhancement for visual interpretation, extraction of information from data, spatial and spectral feature extraction for analysis, Unsupervised and

supervised classification, terrain modeling and sources of remote sensing data/information. Credits: 3.00

AGRY 56000 - Soil Physics

Credit Hours: 3.00. Fundamentals of soil physics; transport of chemicals, heat, and gases; field spatial variability; principles and methods of physical analysis of soils; the influence of soil physical processes on environmental quality and agricultural production. Students having an understanding of introductory soil science will be suitably prepared.

Credits: 3.00

AGRY 56500 - Soils And Landscapes

Credit Hours: 3.00. Soils as natural components of landscapes, geomorphology and soil characteristics; processes of soil formation; principal soils of Indiana, their adaptations, limitations, productivity and use; global soil distributions; application of GPS and mobile GIS in the field. This course requires two all-day field trips. Students will pay individual meal expenses when necessary.

Credits: 3.00

AGRY 58000 - Soil And Rhizosphere Microbiology

Credit Hours: 3.00. Soils are complex ecosystems that host a diverse array of organisms, which interact with and respond to their environment. This course explores the ecology, evolution, and functions of soil microbes, with a particular focus on their interactions with plants. Through this course, students will gain an understanding of the metabolic processes and life-history strategies of archaea, bacteria, fungi, and viruses in soil, root, and rhizosphere compartments. Students will also survey the microbiomes of diverse soil ecosystems, such as forests, agroecosystems, and grasslands, and learn principles of soil microbiology and biogeochemistry. In addition, students will acquire practical knowledge about the methods used for characterizing microbes in soil and plant systems.

Learning Outcomes: 1. Demonstrate understanding of the ecology and physiology of major groups of bacteria, archaea, fungi, and viruses found in soils, the rhizosphere, and roots. 2. Compare and contrast soil and rhizosphere microbiomes, and their differences between the managed versus natural ecosystems. 3. Use verbal and basic mathematical descriptions to explain theories related to microbial growth, survival, and symbioses. 4. Predict the occurrence of microbial processes and soil conditions that govern the cycling of carbon, nitrogen, phosphorus, sulfur, and metals in soils and relate this knowledge to ecosystem functions. 5. Envision potential applications for soil and root-borne microbes in natural resource management, such as agriculture, forestry, and soil conservation. 6. Apply knowledge of plant-microbe interactions to develop hypotheses, design experiments, and select appropriate study methods. 7. Recognize and select appropriate resources and tools to effectively analyze microbiome data. Credits: 3.00

AGRY 58500 - Soils And Land Use

Credit Hours: 3.00. Soils as a resource in development planning; soil properties affecting land use; use of soil survey, aerial photos, topographic maps, and other resource data in land-use allocation; nonengineering aspects of site selection for various land uses, water conservation, waste disposal, and erosion control.

Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

Notes

Spanish for the Professions Minor

Requirements for the Minor (15 credits)

A. Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

B. Spanish for the Professions Required Course (3 credits)

SPAN 32100 - Introduction To Spanish For The Professions

Credit Hours: 3.00. Continued work at the advanced-intermediate level with a focus on vocabulary and grammar for contexts in a wide variety of professional settings. Conducted primarily in Spanish.

Learning Outcomes: 1. Build upon and improve intermediate Spanish language skills. 2. Develop necessary vocabulary for communication in the target language within broader professional contexts. 3. Create real-world scenarios that facilitate, promote, and practice professional communication in the target language. 4. Incorporate trade-specific situations that are relevant and applicable to each student and his/her respective field of study, while covering the broader implications of these contexts. 5. Promote personal and meaningful application of material through personalized activities and projects that students could use as part of their job search. 6. Examine and present current news events through articles, websites, and videos. Credits: 3.00

C. Spanish for the Professions Elective (3-6 credits)

SPAN 32200 - Spanish For The Health Professions

Credit Hours: 3.00. Intermediate level course directed towards the use of Spanish in the health care professions. It covers specialized vocabulary from the medical fields, as well as grammar and syntax with the goal of developing speaking, listening, reading and writing abilities. Students will have the opportunity to apply their skills in practical contexts and discuss cultural considerations.

Learning Outcomes: 1. Prepare students to communicate effectively in the health professional field. 2. Study of specialized vocabulary of the health sciences. 3. Apply their skills in a practical classroom setting. 4. Gain cultural, legal, and ethical awareness about the use of Spanish in their interaction with Spanish speaking patients. Credits: 3.00

SPAN 41500 - Spanish Translation And Interpreting

Credit Hours: 3.00. Introduction to the Translation and Interpretation Studies field for Spanish speakers. High level of competence in Spanish required. Overview of translation theory, methodology, and practice both in class and in real settings. Includes a service learning component. Conducted in English and Spanish.

Learning Outcomes: 1. Have an overview of the translation studies field in its relation to Linguistics, Literature, Media, Sciences, and Second Language Acquisition. 2. Understand the different methodologies used for translation and interpretation. 3. Learn the ethics, standards and rules of the profession. 4. Practice different types of translation (technical, scientific, literary, legal medical, etc.) and interpretation (simultaneous, consecutive, over the phone, conference, etc.). 5. Understand the basic principles of cross-cultural communication. Credits: 3.00

SPAN 42400 - Business Spanish

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Credits: 3.00

SPAN 32500 - Spanish For Engineering And Technology

Credit Hours: 3.00. This is an intermediate-level course directed towards the use of Spanish in Engineering and Technology professions. It covers specialized vocabulary from the different technical areas, as well as grammar and syntax, with the goal of developing speaking, listening, reading, and writing abilities. Students will have the opportunity to apply their skills in practical contexts, including job interviews, internships, formal presentations and communication in the workplace.

Learning Outcomes: 1. Recognize and apply a broad range of engineering and technical-related vocabulary. 2. Read, understand, and

discuss specific engineering and technical topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific engineering problems in Spanish. Credits: 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

SPAN 32300 - Global Sustainable Engineering

Credit Hours: 1.00 to 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life. Taught in Spanish.

Learning Outcomes: 1. Discuss various approaches to engineering problems in class meetings or online discussion boards. 2. Analyze global engineering problems from engineering and humanistic perspectives evidenced in written case study responses and assessments. 3. Apply concepts of systems thinking and design thinking and express them in individual and group activities. 4. Explain the application of humanistic fields of study to engineering problems. Credits: 1.00 to 3.00

D. Additional Course (0-3 credits)

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and

movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

SPAN 39800 - Special Topics In Spanish

Credit Hours: 1.00 to 3.00. Studies of particular aspects of Spanish (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussions, and papers in Spanish.

Learning Outcomes: 1. Recognize and apply a broad range of hospitality and tourism-related vocabulary. 2. Read, understand, and discuss specific hospitality and tourism topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific problems in hospitality and tourism in Spanish. Credits: 1.00 to 3.00

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48100 - Spanish Culture

Credit Hours: 3.00. The development of the cultural life of the Spanish people as reflected in the geography, history, music, art, and architecture of Spain. Lectures in Spanish.

Learning Outcomes: 1. Catalogue and describe in Spanish the major historical epochs of Spain. 2. Correctly identify major works of painting and music, and locate them temporally, geographically, and by cultural movement or period. 3. Debate accurately Spain's current regional conflicts through knowledgeable

assessment of the historical evolution of the language, literature, commerce, and agriculture. Credits: 3.00

SPAN 48200 - Latin American Civilization

Credit Hours: 3.00. Outline of Latin American history; the cultural heritage from Spain and from the pre-Spanish civilizations; the intellectual, social, and cultural progress of the Latin American countries. Lectures in Spanish.

Learning Outcomes: 1. Identify and locate the major groups of Latin America's indigenous peoples on the map and assess their historical trajectory through primary and secondary texts, group discussion and debate, and written reports. 2. Survey in Spanish from a historical perspective the rise and development of Colonial Latin American institutions through critical readings, written and oral presentations. 3. Summarize in Spanish the key forces leading up to and following the 19th-century wars of Independence by assessing regional military and political strategies and by generating written and oral reports. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries, including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

SPAN 38000 - Spanish Language And Culture Abroad

Credit Hours: 1.00 to 6.00. This course must be taken concurrently with participation in an experiential learning opportunity abroad (e.g., study abroad, internship) that requires a period abroad in a Spanish-speaking location. The course will guide students to improve their Spanish language abilities and gain cultural knowledge about their experiential learning location. This course, coupled with the immersion experience, will enhance student learning through Spanish language activities and also cultural research projects. Permission of instructor is required.

Learning Outcomes: 1. Identify important moments of daily learning and reflect on them in written form in Spanish. 2. Explain experiences in the Spanish-speaking location through conversations in Spanish with a peer. 3. Compare experiences and problems encountered through conversations in Spanish with a peer; formulate possible solutions to problems if encountered in the future. 4. Research cultural surroundings and present findings in various modes of communication (e.g., presentational, written). 5. Assess learning during the immersion period in a summative way, reflecting on language and cultural learning through the creation of a final presentation project. Credits: 1.00 to 6.00

SPAN 36600 - Spanish In The United States

Credit Hours: 3.00. The course explores the linguistic profile of established and emerging Spanish-speaking communities in the United States. Topics addressed are the current demographic profiles of Spanish speakers, the historical presence of Spanish, language identity, the meaning of linguistic landscapes, American Spanish and its speakers in the media and social institutions, as well as the varieties of Spanish in the U.S. The course is conducted in Spanish.

Learning Outcomes: 1. Describe Spanish-speaking populations in the U.S. considering their diverse histories. 2. Use course-related concepts and terms accurately in class discussions and written texts. 3. Examine the experience of Spanish-speakers in the U.S. through course activities. 4. Investigate the

sociopolitical position of language through course readings and data analysis. 5. Identify a topic of research and conduct research to contribute to our knowledge of Spanish or Spanish speakers in the U.S. Credits: 3.00

A. Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

Notes

Requirements for the Minor (15 credits)

A. Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

B. Spanish for the Professions Required Course (3 credits)

SPAN 32100 - Introduction To Spanish For The Professions

Credit Hours: 3.00. Continued work at the advanced-intermediate level with a focus on vocabulary and grammar for contexts in a wide variety of professional settings. Conducted primarily in Spanish.

Learning Outcomes: 1. Build upon and improve intermediate Spanish language skills. 2.

Develop necessary vocabulary for communication in the target language within broader professional contexts. 3. Create real-world scenarios that facilitate, promote, and practice professional communication in the target language. 4. Incorporate trade-specific situations that are relevant and applicable to each student and his/her respective field of study, while covering the broader implications of these contexts. 5. Promote personal and meaningful application of material through personalized activities and projects that students could use as part of their job search. 6. Examine and present current news events through articles, websites, and videos. Credits: 3.00

C. Spanish for the Professions Elective (3-6 credits)

SPAN 32200 - Spanish For The Health Professions

Credit Hours: 3.00. Intermediate level course directed towards the use of Spanish in the health care professions. It covers specialized vocabulary from the medical fields, as well as grammar and syntax with the goal of developing speaking, listening, reading and writing abilities. Students will have the opportunity to apply their skills in practical contexts and discuss cultural considerations.

Learning Outcomes: 1. Prepare students to communicate effectively in the health professional field. 2. Study of specialized vocabulary of the health sciences. 3. Apply their skills in a practical classroom setting. 4. Gain cultural, legal, and ethical awareness about the use of Spanish in their interaction with Spanish speaking patients. Credits: 3.00

SPAN 41500 - Spanish Translation And Interpreting

Credit Hours: 3.00. Introduction to the Translation and Interpretation Studies field for Spanish speakers. High level of competence in Spanish required. Overview of translation theory, methodology, and practice both in class and in real settings. Includes a service learning component. Conducted in English and Spanish.

Learning Outcomes: 1. Have an overview of the translation studies field in its relation to Linguistics, Literature, Media, Sciences, and Second Language Acquisition. 2. Understand the different methodologies used for translation and interpretation. 3. Learn the ethics, standards and rules of the profession. 4. Practice different types of translation (technical, scientific, literary, legal medical, etc.) and interpretation (simultaneous, consecutive, over the phone, conference, etc.). 5. Understand the basic principles of cross-cultural communication. Credits: 3.00

SPAN 42400 - Business Spanish

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Credits: 3.00

SPAN 32500 - Spanish For Engineering And Technology

Credit Hours: 3.00. This is an intermediate-level course directed towards the use of Spanish in Engineering and Technology professions. It covers specialized vocabulary from the different technical areas, as well as grammar and syntax, with the goal of developing speaking, listening, reading, and writing abilities. Students will have the opportunity to apply their skills in practical contexts, including job interviews, internships, formal presentations and communication in the workplace.

Learning Outcomes: 1. Recognize and apply a broad range of engineering and technical-related vocabulary. 2. Read, understand, and discuss specific engineering and technical topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific engineering problems in Spanish. Credits: 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the

Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

SPAN 32300 - Global Sustainable Engineering

Credit Hours: 1.00 to 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life. Taught in Spanish.

Learning Outcomes: 1. Discuss various approaches to engineering problems in class meetings or online discussion boards. 2. Analyze global engineering problems from engineering and humanistic perspectives evidenced in written case study responses and assessments. 3. Apply concepts of systems thinking and design thinking and express them in individual and group activities. 4. Explain the application of humanistic fields of study to engineering problems. Credits: 1.00 to 3.00

D. Additional Course (0-3 credits)

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

SPAN 39800 - Special Topics In Spanish

Credit Hours: 1.00 to 3.00. Studies of particular aspects of Spanish (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussions, and papers in Spanish.

Learning Outcomes: 1. Recognize and apply a

broad range of hospitality and tourism-related vocabulary. 2. Read, understand, and discuss specific hospitality and tourism topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific problems in hospitality and tourism in Spanish. Credits: 1.00 to 3.00

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48100 - Spanish Culture

Credit Hours: 3.00. The development of the cultural life of the Spanish people as reflected in the geography, history, music, art, and architecture of Spain. Lectures in Spanish.

Learning Outcomes: 1. Catalogue and describe in Spanish the major historical epochs of Spain. 2. Correctly identify major works of painting and music, and locate them temporally, geographically, and by cultural movement or period. 3. Debate accurately Spain's current regional conflicts through knowledgeable assessment of the historical evolution of the language, literature, commerce, and agriculture. Credits: 3.00

SPAN 48200 - Latin American Civilization

Credit Hours: 3.00. Outline of Latin American history; the cultural heritage from Spain and from the pre-Spanish civilizations; the intellectual, social, and cultural progress of the Latin American countries. Lectures in Spanish.

Learning Outcomes: 1. Identify and locate the major groups of Latin America's indigenous peoples on the map and assess their historical trajectory through primary and secondary texts, group discussion and debate, and written reports. 2. Survey in Spanish from a historical perspective the rise and development of Colonial Latin American institutions through critical readings, written and oral presentations. 3. Summarize in Spanish the key forces leading up to and following the 19th-century wars of Independence by assessing regional military and political strategies and by generating written and oral reports. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries, including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

SPAN 38000 - Spanish Language And Culture Abroad

Credit Hours: 1.00 to 6.00. This course must be taken concurrently with participation in an experiential learning opportunity abroad (e.g., study abroad, internship) that requires a period abroad in a Spanish-speaking location. The course will guide students to improve their Spanish language abilities and gain cultural knowledge about their experiential learning location. This course, coupled with the immersion experience, will enhance student learning through Spanish language activities and also cultural research projects. Permission of instructor is required.

Learning Outcomes: 1. Identify important moments of daily learning and reflect on them in written form in Spanish. 2. Explain experiences in the Spanish-speaking location through conversations in Spanish with a peer. 3. Compare experiences and problems encountered through conversations in Spanish with a peer; formulate possible solutions to problems if encountered in the future. 4. Research cultural surroundings and present findings in various modes of communication (e.g., presentational, written). 5. Assess learning during the immersion period in a summative way, reflecting on language and cultural learning through the creation of a final presentation project. Credits: 1.00 to 6.00

SPAN 36600 - Spanish In The United States

Credit Hours: 3.00. The course explores the linguistic profile of established and emerging Spanish-speaking communities in the United States. Topics addressed are the current demographic profiles of Spanish speakers, the historical presence of Spanish, language identity, the meaning of linguistic landscapes, American Spanish and its speakers in the media and social institutions, as well as the varieties of Spanish in the U.S. The course is conducted in Spanish.

Learning Outcomes: 1. Describe Spanish-speaking populations in the U.S. considering their diverse histories. 2. Use course-related concepts and terms accurately in class discussions and written texts. 3. Examine the experience of Spanish-speakers in the U.S. through course activities. 4. Investigate the sociopolitical position of language through course readings and data analysis. 5. Identify a topic of research and conduct research to contribute to our knowledge of Spanish or Spanish speakers in the U.S. Credits: 3.00

A. Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

Spanish Minor

Requirements for the Minor (15 credits)

A. Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

B. Spanish Literature Course (3 credits)

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.

Learning Outcomes: 1. Gain understanding of literature produced in the Spanish speaking world. 2. Develop the ability to talk effectively about and interact with literature in Spanish. 3. Write specific types of texts for analyzing Spanish literature. Credits: 3.00

C. Spanish Electives (6 credits)

SPAN 32200 - Spanish For The Health Professions

Credit Hours: 3.00. Intermediate level course directed towards the use of Spanish in the health care professions. It covers

specialized vocabulary from the medical fields, as well as grammar and syntax with the goal of developing speaking, listening, reading and writing abilities. Students will have the opportunity to apply their skills in practical contexts and discuss cultural considerations.

Learning Outcomes: 1. Prepare students to communicate effectively in the health professional field. 2. Study of specialized vocabulary of the health sciences. 3. Apply their skills in a practical classroom setting. 4. Gain cultural, legal, and ethical awareness about the use of Spanish in their interaction with Spanish speaking patients. Credits: 3.00

SPAN 33500 - The Literature Of The Spanish-Speaking Peoples In The United States

Credit Hours: 3.00. Study of selected poetry, fiction, theatre, and essays written in the United States by Spanish-speaking writers; includes readings in the literature written in Spanish and English as well as bilingual poetry and prose. Conducted in Spanish and English.

Credits: 3.00

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Credits: 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish.

Learning Outcomes: 1. Develop intermediate- to advanced-level oral communication skills in Spanish through classroom discussions, presentations, and group work. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of authentic texts in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of analytical essays and writing assignments in Spanish. Credits: 3.00

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement.

Credits: 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.).

Learning Outcomes: 1. Develop specific knowledge of the linguistic analysis of Spanish morphosyntax, through lectures, quizzes, take-home assignments and midterm exams, students. 2. Apply this knowledge of Spanish morphosyntax to linguistic theorizing in general but most importantly to their own learning process of the Spanish language through integrated readings and discussions, exams, and projects. 3. Examine linguistic phenomena related to Spanish morphosyntax and morphology by using explicit knowledge of word-level phenomena (e.g., derivational and inflectional morphology, the lexicon) as well as phrase and sentence-level phenomena (e.g., interrogative formation, subject-verb inversion, relative clauses, clitic expression and movement, passivation), through lectures, quizzes, take-home assignments and midterm exams. Credits: 3.00

SPAN 39800 - Special Topics In Spanish

Credit Hours: 1.00 to 3.00. Studies of particular aspects of Spanish (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussions, and papers in Spanish.

Learning Outcomes: 1. Recognize and apply a

broad range of hospitality and tourism-related vocabulary. 2. Read, understand, and discuss specific hospitality and tourism topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific problems in hospitality and tourism in Spanish. Credits: 1.00 to 3.00

SPAN 40100 - Spanish VII: Advanced Spanish In Context: Celebrations And Traditions (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Respond critically in Spanish to a movie from a Spanish speaking country, paraphrase its plot, and discuss the major themes by writing an essay on a specific topic. 2. Appraise, assess and compare different sources, by researching a culture topic in Latin America and making a 10-15 minute presentation in Spanish to the class. Credits: 3.00

SPAN 40200 - Spanish VIII: Advanced Spanish In Context: Contemporary Issues (UCC: HUM)

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and demonstrate an advanced level of listening, speaking, reading and writing skills through the study of content-based materials. 2. Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 41500 - Spanish Translation And Interpreting

Credit Hours: 3.00. Introduction to the Translation and Interpretation Studies field for Spanish speakers. High level of competence in Spanish required. Overview of translation theory, methodology, and practice both in class and in real settings. Includes a service learning component. Conducted in English and Spanish.

Learning Outcomes: 1. Have an overview of the translation studies field in its relation to Linguistics, Literature, Media, Sciences, and Second Language Acquisition. 2. Understand the different methodologies used for translation and interpretation. 3. Learn the ethics, standards and rules of the profession. 4. Practice different types of translation (technical, scientific, literary, legal medical, etc.) and interpretation (simultaneous, consecutive, over the phone, conference, etc.). 5. Understand the basic principles of cross-cultural communication. Credits: 3.00

SPAN 42400 - Business Spanish

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Credits: 3.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken

there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48100 - Spanish Culture

Credit Hours: 3.00. The development of the cultural life of the Spanish people as reflected in the geography, history, music, art, and architecture of Spain. Lectures in Spanish.

Learning Outcomes: 1. Catalogue and describe in Spanish the major historical epochs of Spain. 2. Correctly identify major works of painting and music, and locate them temporally, geographically, and by cultural movement or period. 3. Debate accurately Spain's current regional conflicts through knowledgeable assessment of the historical evolution of the language, literature, commerce, and agriculture. Credits: 3.00

SPAN 48200 - Latin American Civilization

Credit Hours: 3.00. Outline of Latin American history; the cultural heritage from Spain and from the pre-Spanish civilizations; the intellectual, social, and cultural progress of the Latin American countries. Lectures in Spanish.

Learning Outcomes: 1. Identify and locate the major groups of Latin America's indigenous peoples on the map and assess their historical trajectory through primary and secondary texts, group discussion and debate, and written reports. 2. Survey in Spanish from a historical perspective the rise and development of Colonial Latin American institutions through critical readings, written and oral presentations. 3. Summarize in Spanish the key forces leading up to and following the 19th-century wars of Independence by assessing regional military and political strategies and by generating written and oral reports. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries, including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

SPAN 49800 - Advanced Topics In Spanish

Credit Hours: 1.00 to 3.00. Advanced studies of particular aspects of Spanish (e.g. culture, civilization, literature, linguistics, film, etc) by examining a varied selection of works. Readings, discussion, and papers in Spanish.

Credits: 1.00 to 3.00

SPAN 32100 - Introduction To Spanish For The Professions

Credit Hours: 3.00. Continued work at the advanced-intermediate level with a focus on vocabulary and grammar for contexts in a wide variety of professional settings. Conducted primarily in Spanish.

Learning Outcomes: 1. Build upon and improve intermediate Spanish language skills. 2. Develop necessary vocabulary for communication in the target language within broader professional contexts. 3. Create real-world scenarios that facilitate, promote, and practice professional communication in the target language. 4. Incorporate trade-specific situations that are relevant and applicable to each student and his/her respective field of study, while covering the broader implications of these contexts. 5. Promote personal and

meaningful application of material through personalized activities and projects that students could use as part of their job search. 6. Examine and present current news events through articles, websites, and videos. Credits: 3.00

SPAN 32500 - Spanish For Engineering And Technology

Credit Hours: 3.00. This is an intermediate-level course directed towards the use of Spanish in Engineering and Technology professions. It covers specialized vocabulary from the different technical areas, as well as grammar and syntax, with the goal of developing speaking, listening, reading, and writing abilities. Students will have the opportunity to apply their skills in practical contexts, including job interviews, internships, formal presentations and communication in the workplace.

Learning Outcomes: 1. Recognize and apply a broad range of engineering and technical-related vocabulary. 2. Read, understand, and discuss specific engineering and technical topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific engineering problems in Spanish. Credits: 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

SPAN 38000 - Spanish Language And Culture Abroad

Credit Hours: 1.00 to 6.00. This course must be taken concurrently with participation in an experiential learning opportunity abroad (e.g., study abroad, internship) that requires a period abroad in a Spanish-speaking location. The course will guide students to improve their Spanish language abilities and gain cultural knowledge about their experiential learning location. This course, coupled with the immersion experience, will enhance student learning through Spanish language activities and also cultural research projects. Permission of instructor is required.

Learning Outcomes: 1. Identify important moments of daily learning and reflect on them in written form in Spanish. 2. Explain experiences in the Spanish-speaking location through conversations in Spanish with a peer. 3. Compare experiences and problems encountered through conversations in Spanish with a peer; formulate possible solutions to problems if encountered in the future. 4. Research cultural surroundings and present findings in various modes of communication (e.g., presentational, written). 5. Assess learning during the immersion period in a summative way, reflecting on language and cultural learning through the creation of a final presentation project. Credits: 1.00 to 6.00

SPAN 32300 - Global Sustainable Engineering

Credit Hours: 1.00 to 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life. Taught in Spanish.

Learning Outcomes: 1. Discuss various approaches to engineering problems in class

meetings or online discussion boards. 2. Analyze global engineering problems from engineering and humanistic perspectives evidenced in written case study responses and assessments. 3. Apply concepts of systems thinking and design thinking and express them in individual and group activities. 4. Explain the application of humanistic fields of study to engineering problems. Credits: 1.00 to 3.00

SPAN 36600 - Spanish In The United States

Credit Hours: 3.00. The course explores the linguistic profile of established and emerging Spanish-speaking communities in the United States. Topics addressed are the current demographic profiles of Spanish speakers, the historical presence of Spanish, language identity, the meaning of linguistic landscapes, American Spanish and its speakers in the media and social institutions, as well as the varieties of Spanish in the U.S. The course is conducted in Spanish.

Learning Outcomes: 1. Describe Spanish-speaking populations in the U.S. considering their diverse histories. 2. Use course-related concepts and terms accurately in class discussions and written texts. 3. Examine the experience of Spanish-speakers in the U.S. through course activities. 4. Investigate the sociopolitical position of language through course readings and data analysis. 5. Identify a topic of research and conduct research to contribute to our knowledge of Spanish or Spanish speakers in the U.S. Credits: 3.00

A. Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

Acquire a broad panoramic view of the different cultures and traditions in the Hispanic world, including Hispanics in the U.S. (The specific area of studies will be Central America and Caribbean South America.) 3. Identify and compare cultural traits through the study of history, art, food, pop culture, literature, music, current events and other aspects. 4. Demonstrate the ability to interpret and critique the culture through different types of written and oral materials, and reflect on how these topics relate to their own values and experiences. Credits: 3.00

SPAN 41500 - Spanish Translation And Interpreting

Credit Hours: 3.00. Introduction to the Translation and Interpretation Studies field for Spanish speakers. High level of competence in Spanish required. Overview of translation theory, methodology, and practice both in class and in real settings. Includes a service learning component. Conducted in English and Spanish.

Learning Outcomes: 1. Have an overview of the translation studies field in its relation to Linguistics, Literature, Media, Sciences, and Second Language Acquisition. 2. Understand the different methodologies used for translation and interpretation. 3. Learn the ethics, standards and rules of the profession. 4. Practice different types of translation (technical, scientific, literary, legal medical, etc.) and interpretation (simultaneous, consecutive, over the phone, conference, etc.). 5. Understand the basic principles of cross-cultural communication. Credits: 3.00

SPAN 42400 - Business Spanish

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Credits: 3.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish.

Learning Outcomes: 1. Locate and name the autonomous communities of Spain on the map. 2. Distinguish the different languages spoken there from written samples and audio recordings. 3. Explain in Spanish key differences and similarities between the regions through succinct summaries of historical, geographical, gastronomical, and political influences. Credits: 3.00

SPAN 48100 - Spanish Culture

Credit Hours: 3.00. The development of the cultural life of the Spanish people as reflected in the geography, history, music, art, and architecture of Spain. Lectures in Spanish.

Learning Outcomes: 1. Catalogue and describe in Spanish the major historical epochs of Spain. 2. Correctly identify major works of painting and music, and locate them temporally, geographically, and by cultural movement or period. 3. Debate accurately Spain's current regional conflicts through knowledgeable assessment of the historical evolution of the language, literature, commerce, and agriculture. Credits: 3.00

SPAN 48200 - Latin American Civilization

Credit Hours: 3.00. Outline of Latin American history; the cultural heritage from Spain and from the pre-Spanish civilizations; the intellectual, social, and cultural progress of the Latin American countries. Lectures in Spanish.

Learning Outcomes: 1. Identify and locate the major groups of Latin America's indigenous peoples on the map and assess their historical trajectory through primary and secondary texts, group discussion and debate, and written reports. 2. Survey in Spanish from a historical perspective the rise and development of Colonial Latin American institutions through critical readings, written and oral presentations. 3. Summarize in Spanish the key forces leading up to and following the 19th-century wars of Independence by assessing regional military and political strategies and by generating written and oral reports. Credits: 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish.

Learning Outcomes: 1. Identify and describe in Spanish contemporary aesthetic expressions in art, music, literature, film and architecture generated by Latin America's and U.S. Latino's diverse cultures through written exams and oral

presentations. 2. Demonstrate a deeper cross-cultural understanding of key similarities and differences between Latin American countries, including U.S. Latino cultures, through critical assessment of contemporary social, political, and cultural movements. 3. Integrate multiple disciplines, perspectives, and methods of analysis of Latin American and U.S. Latino cultures through presentational language abilities in Spanish. Credits: 3.00

SPAN 49800 - Advanced Topics In Spanish

Credit Hours: 1.00 to 3.00. Advanced studies of particular aspects of Spanish (e.g. culture, civilization, literature, linguistics, film, etc) by examining a varied selection of works. Readings, discussion, and papers in Spanish.

Credits: 1.00 to 3.00

SPAN 32100 - Introduction To Spanish For The Professions

Credit Hours: 3.00. Continued work at the advanced-intermediate level with a focus on vocabulary and grammar for contexts in a wide variety of professional settings. Conducted primarily in Spanish.

Learning Outcomes: 1. Build upon and improve intermediate Spanish language skills. 2. Develop necessary vocabulary for communication in the target language within broader professional contexts. 3. Create real-world scenarios that facilitate, promote, and practice professional communication in the target language. 4. Incorporate trade-specific situations that are relevant and applicable to each student and his/her respective field of study, while covering the broader implications of these contexts. 5. Promote personal and meaningful application of material through personalized activities and projects that students could use as part of their job search. 6. Examine and present current news events through articles, websites, and videos. Credits: 3.00

SPAN 32500 - Spanish For Engineering And Technology

Credit Hours: 3.00. This is an intermediate-level course directed towards the use of Spanish in Engineering and Technology professions. It covers specialized vocabulary from the different technical areas, as well as grammar and syntax, with the goal of developing speaking, listening, reading, and writing abilities. Students will have the opportunity to apply their skills in practical contexts, including job interviews, internships, formal presentations and communication in the workplace.

Learning Outcomes: 1. Recognize and apply a broad range of engineering and technical-related vocabulary. 2. Read, understand, and discuss specific engineering and technical topics in Spanish. 3. Write texts in different styles using appropriate structures and vocabulary. 4. Hold a conversation about specific engineering problems in Spanish. Credits: 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Spanish about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance in the Latin American and Spanish diets. Credits: 3.00

SPAN 38000 - Spanish Language And Culture Abroad

Credit Hours: 1.00 to 6.00. This course must be taken concurrently with participation in an experiential learning opportunity abroad (e.g., study abroad, internship) that requires a period abroad in a Spanish-speaking location. The course will guide students to improve their Spanish language abilities and gain cultural knowledge about their experiential learning location. This course, coupled with the immersion experience, will enhance student learning through Spanish language activities and also cultural research projects. Permission of

instructor is required.

Learning Outcomes: 1. Identify important moments of daily learning and reflect on them in written form in Spanish. 2. Explain experiences in the Spanish-speaking location through conversations in Spanish with a peer. 3. Compare experiences and problems encountered through conversations in Spanish with a peer; formulate possible solutions to problems if encountered in the future. 4. Research cultural surroundings and present findings in various modes of communication (e.g., presentational, written). 5. Assess learning during the immersion period in a summative way, reflecting on language and cultural learning through the creation of a final presentation project. Credits: 1.00 to 6.00

SPAN 32300 - Global Sustainable Engineering

Credit Hours: 1.00 to 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life. Taught in Spanish.

Learning Outcomes: 1. Discuss various approaches to engineering problems in class meetings or online discussion boards. 2. Analyze global engineering problems from engineering and humanistic perspectives evidenced in written case study responses and assessments. 3. Apply concepts of systems thinking and design thinking and express them in individual and group activities. 4. Explain the application of humanistic fields of study to engineering problems. Credits: 1.00 to 3.00

SPAN 36600 - Spanish In The United States

Credit Hours: 3.00. The course explores the linguistic profile of established and emerging Spanish-speaking communities in the United States. Topics addressed are the current demographic profiles of Spanish speakers, the historical presence of Spanish, language identity, the meaning of linguistic landscapes, American Spanish and its speakers in the media and social institutions, as well as the varieties of Spanish in the U.S. The course is conducted in Spanish.

Learning Outcomes: 1. Describe Spanish-speaking populations in the U.S. considering their diverse histories. 2. Use course-related concepts and terms accurately in class discussions and written texts. 3. Examine the experience of Spanish-speakers in the U.S. through course activities. 4. Investigate the sociopolitical position of language through course readings and data analysis. 5. Identify a topic of research and conduct research to contribute to our knowledge of Spanish or Spanish speakers in the U.S. Credits: 3.00

A. Spanish Language (6 credits)

SPAN 30100 - Spanish Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop oral communication skills in Spanish at advanced level through classroom discussions, presentations, projects, and interpersonal communication. 2. Expand and refine their competence to comprehend, analyze, and interpret texts in Spanish through integrated reading and discussion of different genres of authentic texts and video clips in Spanish. 3. Expand and refine their written proficiency in Spanish by producing a variety of genre-specific

texts in Spanish. 4. Expand their knowledge of Hispanic culture and their cross-cultural proficiency of the Spanish-speaking world through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30200 - Spanish Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Develop and expand intermediate-advanced proficiency in Spanish oral communication skills through discovery in various media, presentations, group work, and interpersonal communication. 2. Expand and refine their written proficiency in Spanish by producing a variety of essays, project, and other written assignments. 3. Expand and enhance their knowledge of the diverse Spanish-speaking world and their cross-cultural proficiency through the use of aural, visual, and written texts in Spanish. Credits: 3.00

SPAN 30500 - Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of SPAN 30500 . It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain more advanced writing and composition skills in Spanish. 2. Gain more advanced knowledge of Spanish grammar. 3. Gain more enhanced ability to understand, critically evaluate and summarize written texts. 4. Gain more enhanced sociolinguistic competence of their heritage language. 5. Be much better prepared for upper-level courses in Spanish linguistics and literatures. Credits: 3.00

Statistics Minor

Requirements for the Minor (15 credits)

Area 1 - Choose One (3 credits)

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with

emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits:

3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

Area 2 - Choose One (3 credits)

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem.

Credits: 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 31100 - Introductory Probability

Credit Hours: 3.00. An introduction to basic probability with some theoretical background as well as applications to the physical sciences and engineering. Formulation of probability problems, general probability rules, conditional probability and Bayes Theorem, and discrete and continuous random variables and their properties. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Determine appropriate methods for determining probabilities and conditional probabilities. 2. Use of distribution functions involving mass functions and cumulative distribution functions. 3. Use of specific distribution functions for both discrete and continuous random variables including means and variances. 4. Use of distribution functions involving more than one variable. Credits: 3.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and

moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus.

Credits: 3.00

Area 3 (3 credits)

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

Area 4 - Choose Two (6 credits)

IE 33600 - Operations Research - Stochastic Models

Credit Hours: 3.00. Introduction to probabilistic models in operations research. Emphasis on Markov chains, Poisson processes, and their application to queuing systems.

Credits: 3.00

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing.

Learning Outcomes: 1. Understand and able to use inference for standard parametric families of distributions; properties of estimators; Bayes and maximum likelihood estimation; sufficient statistics; properties of test of hypotheses; distribution theory for common statistics based on normal distributions. Credits: 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.

Learning Outcomes: 1. Acquire fluency in the language and techniques of modem quality control and its applications. 2. Conceptually understand the utility of statistics for quality control. 3. Apply control charts and experimental design techniques to solve real-life quality control problems. 4. Utilize appropriate Statistical software for statistical computation, visualization, control chart construction, and design of experiments. 5. Discuss what is learned in lecture and assignments through oral and written presentations. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

IE 53000 - Quality Control

Credit Hours: 3.00. Principles and practices of statistical quality control in industry. Control charts for measurements and for attributes. Acceptance sampling by attributes and by measurements. Standard sampling plans. Sequential analysis. Sampling inspection of continuous production.

Credits: 3.00

Due to Minor Requirements and Pre-requisites, Below are the Suggested Pathways for Specific Majors

Krannert School of Management Majors

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 31100 - Introductory Probability

Credit Hours: 3.00. An introduction to basic probability with some theoretical background as well as applications to the physical sciences and engineering. Formulation of probability problems, general probability rules, conditional probability and Bayes Theorem, and discrete and continuous random variables and their properties. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Determine appropriate methods for determining probabilities and conditional probabilities. 2. Use of distribution functions involving mass functions and cumulative distribution functions. 3. Use of specific distribution functions for both discrete and continuous random variables including means and variances. 4. Use of distribution functions involving more than one variable. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.

Learning Outcomes: 1. Acquire fluency in the language and techniques of modem quality control and its applications. 2. Conceptually understand the utility of statistics for quality control. 3. Apply control charts and experimental design techniques to solve real-life quality control problems. 4. Utilize appropriate Statistical software for statistical computation, visualization, control chart construction, and design of experiments. 5. Discuss what is learned in lecture and assignments through oral and written presentations. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

Industrial Engineering Majors

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.

Learning Outcomes: 1. Acquire fluency in the language and techniques of modem quality control and its applications. 2. Conceptually understand the utility of statistics for quality control. 3. Apply control charts and experimental design techniques to solve real-life quality control problems. 4. Utilize appropriate Statistical software for statistical computation, visualization, control chart construction, and design of experiments. 5. Discuss what is learned in lecture and assignments through oral and written presentations. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective

conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

IE 53000 - Quality Control

Credit Hours: 3.00. Principles and practices of statistical quality control in industry. Control charts for measurements and for attributes. Acceptance sampling by attributes and by measurements. Standard sampling plans. Sequential analysis. Sampling inspection of continuous production.

Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

Pharmacy, Nursing, Biology, Agriculture Majors (Majors that utilize STAT 50300)

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 31100 - Introductory Probability

Credit Hours: 3.00. An introduction to basic probability with some theoretical background as well as applications to the physical sciences and engineering. Formulation of probability problems, general probability rules, conditional probability and Bayes Theorem, and discrete and continuous random variables and their properties. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Determine appropriate methods for determining probabilities and conditional probabilities. 2. Use of distribution functions involving mass functions and cumulative distribution functions. 3. Use of specific distribution functions for both discrete and continuous random variables including means and variances. 4. Use of distribution functions involving more than one variable. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to

identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.

Learning Outcomes: 1. Acquire fluency in the language and techniques of modem quality control and its applications. 2. Conceptually understand the utility of statistics for quality control. 3. Apply control charts and experimental design techniques to solve real-life quality control problems. 4. Utilize appropriate Statistical software for statistical computation, visualization, control chart construction, and design of experiments. 5. Discuss what is learned in lecture and assignments through oral and written presentations. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

Majors that require MA 26100 (Calculus III)

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics:

variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus.

Credits: 3.00

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing.

Learning Outcomes: 1. Understand and able to use inference for standard parametric families of distributions; properties of estimators; Bayes and maximum likelihood estimation; sufficient statistics; properties of test of hypotheses; distribution theory for common statistics based on normal distributions. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

Majors that do not require MA 26100 (Calculus III)

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing.

Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.

Learning Outcomes: 1. Acquire fluency in the language and techniques of modem quality control and its applications. 2. Conceptually

understand the utility of statistics for quality control. 3. Apply control charts and experimental design techniques to solve real-life quality control problems. 4. Utilize appropriate Statistical software for statistical computation, visualization, control chart construction, and design of experiments. 5. Discuss what is learned in lecture and assignments through oral and written presentations. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

Notes

Supply Chain Engineering Technology Minor

About the Minor

Requirements for the Minor (15 credits)

Required Courses (15 credits)

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 34200 - Warehouse And Inventory Management

Credit Hours: 3.00. A course designed to develop understanding of types of warehouses, methods of organizing the warehouse environment, and determining efficient inventory control procedures. Technology applications related to the management of warehouse and inventory stock-keeping units (SKU) are investigated. Storage of inventory, placement of inventory, picking, packing, shipping, and other internal logistics management topics will be explored.

Learning Outcomes: 1. Identify activities associated with inventory and warehouse management. 2. Explain the relationship of inventory and warehouse management to supply chain management with other various functional areas, including corporate strategy. 3. Design various warehouse activities under given circumstances. 4. Describe material/distribution requirements planning (MRP/DRP) systems. Credits: 3.00

IET 34300 - Technical And Service Selling

Credit Hours: 3.00. A study of sales models and techniques for technical and service sales in business-to-business environments, including development of channel relationships, long-term sales agreements, customer relationship management efforts, total cost of ownership tools and complex sales presentations. Covers critical sales skills such as e-economy sales and marketing, lead management, building credibility, consultative selling, ethical negotiations, and sustainable product management.

Learning Outcomes: 1. Explain the roles of technical and service sales in business to business channels. 2. Describe the relationship between personal selling and marketing. 3. Describe critical influencing factors on organizational buyer behavior. 4. Describe various types of buying situations and typical sales agreements. 5. Demonstrate a personal selling communication model. 6. Describe customer relationship management. Credits: 3.00

Note

Sustainable Engineering Minor

Requirements for the Minor (18 credits)

Required Courses (12 credits)

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative

thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

FNR 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (AGEC 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities

and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

EEE 53000 - Life Cycle Assessment: Principles And Applications

Credit Hours: 3.00. This course covers the basic concept of life cycle thinking, framework and computational structure of process and economic input-output based life cycle assessment (LCA), state-of-the-art LCA software tools, industrial case studies, and recent advances in LCA methodology. Students are required to complete a group project that could potentially facilitate the adaptation of LCA tools in engineering research, education, or practice.

Learning Outcomes: 1. Conduct an LCA study using state-of-the-art software tools and databases according to ISO I4040 standards. 2. Identify the limitations and weakness of an existing LCA study. 3. Develop customized inventory dataset using information available in literature and current inventory databases. 4. Develop a simplified yet functional LCA software tool tailored for an enterprise or organization. 5. Combine LCA results with economic and social impact analysis to support decision making. Credits: 3.00

Public Policy (3 credits)

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

POL 32300 - Comparative Environmental Policy

Credit Hours: 3.00. Comparative study of environmental policy development and processes in industrialized democracies, former and current communist states, and developing nations.

Credits: 3.00

POL 42300 - International Environmental Policy

Credit Hours: 3.00. Environmental policy development in the international arena, with attention to international law, international organizations, and transboundary environmental problems.

Credits: 3.00

POL 42500 - Environmental Law And Politics

Credit Hours: 3.00. This course provides an introduction to statutory and case law relating to environmental policy. Regulatory schemes in environmental policy and the legal framework for environmental regulation are presented. Market alternatives to various regulatory mechanisms will also be treated.

Credits: 3.00

POL 52300 - Environmental Politics And Public Policy

Credit Hours: 3.00. The political problems of natural resource use and environmental quality. Theoretical foundations for environmental policy and its evaluation, the political context of environmental policy, principles of administering environmental policies, and the significance of international law and institutions for environmental policies.

Credits: 3.00

Technical Courses - Choose One (3 credits)

Agriculture/Environmental Sustainability

EEE 30000 - Environmental And Ecological Systems Modeling

Credit Hours: 3.00. Introduction to computational methods for describing physical, chemical, and microbiological processes that occur in natural and engineered aqueous systems, including rivers and lakes, and within water and wastewater treatment systems. Emphases on understanding and conceptualizing important processes, data analysis, algorithm development, and competency in the use of programming tools.

Learning Outcomes: 1. Apply simple models to natural and engineered systems. 2. Identify processes critical to proper formulation of ecological and environmental models. 3. Formulate models to analyze specific issues concerning natural waters and wastewaters. 4. Encode model algorithms into common software packages. 5. List limitations and assumptions of classic and self-formulated models. Credits: 3.00

EAPS 37500 - Great Issues - Fossil Fuels, Energy And Society

Credit Hours: 3.00. Prosperity of the 20th century was based on abundant and cheap energy; during the 21st century we will be faced with difficult challenges. Our society will face higher energy prices, decline of petroleum based fuels supplies, increased environmental effects of fossil fuels usage, and the challenge of solving the technological problems of developing alternative fuels. This course will review the structure, economics, and geopolitical issues faced by fossil fuel industries and the mitigation strategies that will be needed to change to low fossil fuel use society based on low polluting renewable energy sources. Counts for Great Issues course in College of Science for Juniors and Seniors.

Credits: 3.00

AGEC 52500 - Environmental Policy Analysis

Credit Hours: 3.00. Designed to assist in understanding how environmental information and knowledge are produced, disseminated, and utilized in a variety of institutional contexts. Readings are selected to promote discussion and interaction concerning alternative mechanisms for protecting environmental resources. Prerequisite: introductory microeconomics course suggested.

Credits: 3.00

CE 55700 - Air Quality Management

Credit Hours: 3.00. Discussion of fugitive, mobile, and point sources of air pollution with attendant effects on materials, plants, and humans. Development and status of state and federal regulations with emphasis on the development and use of mathematical dispersion models including meteorological fundamentals and atmospheric transport. Discussion of concepts for ambient air quality control strategies including urban planning and transportation considerations.

Credits: 3.00

AGEC 52800 - Global Change And The Challenge Of Sustainably Feeding A Growing Planet

Credit Hours: 3.00. This course investigates the major drivers of global agricultural and environmental change associated with the global farm and food system. This includes demography, income growth, biofuels, climate change, environmental and ecosystem services, livestock consumption, food waste and land use change. Weekly modules include a guest lecture, student led discussion of readings and discussion of lab assignments undertaken using the SIMPLE model of global agriculture, environment and food security. The class culminates with a course project which is presented to the class and written up in a term paper.

Learning Outcomes: 1. Gain exposure to different disciplines and their approaches to analyzing global change. 2. Master the basic economic concepts of demand and supply in the context of the global food economy. 3. Become proficient in undertaking economic analysis using the SIMPLE model. 4. Gain a knowledge of the role which economic analysis plays in analyzing long run sustainability of the global food system. Credits: 3.00

EEE 38000 - Environmental Chemodynamics

Credit Hours: 3.00. Introduction to chemical thermodynamics and general equilibrium processes in environmental and ecological engineering systems. Introduction to the first and second laws of thermodynamics; properties of pure substances; ideal and real gases; thermodynamic cycles and processes; heat transfer and combustion; and chemical equilibrium in aquatic solutions, including equilibria between phases and reaction equilibria. Emphasis is on understanding and conceptualizing important processes, and competency in thermodynamic calculations.

Learning Outcomes: 1. Apply the First and Second Laws of thermodynamics to closed and open systems. 2. Understand, identify, and quantify the environmental impacts of closed and open systems, based on mass and energy transfer. 3. Analyze full-scale systems, and compare actual and theoretical operation. 4. Understand the structure and reactivity of environmentally relevant organic compounds. 5. Calculate concentrations of different components in equilibrium and non-equilibrium environmental systems. Credits: 3.00

Energy Conversion and Storage

NUCL 47000 - Fuel Cell Engineering

Credit Hours: 3.00. The principles of electromechanical energy conversion for a single fuel cell, fuel cell stack, process engineering in the fuel and oxidizer supply systems. Principles, components, operation and performance for alkaline, phosphoric acid, solid polymer, molten carbonate and solid oxide fuel cells. Provides broad insight into science, technology, system design, and safety concerns in design and operation of fuel cells.

Credits: 3.00

NUCL 56300 - Direct Energy Conversion

Credit Hours: 3.00. Review of energy sources and study of the basic processes of direct energy conversion and their applications to energy utilization, based on both conventional and nuclear energy conversion schemes. Conventional schemes include thermoelectric, photovoltaic, thermionic, magnetohydrodynamic generators, fuel cell systems, etc.; and nuclear energy conversion schemes correspond to nuclear radiation and fusion energy conversion. Permission of instructor required.

Credits: 3.00

Energy Utilization and Equipment

ME 44000 - Automotive Prime Movers: Green Engines And Clean Fuel

Credit Hours: 3.00. Internal combustion engines (ICE), hybrid engines (HE), fuel-cell engines (FCE), and alternative/renewable fuels. ICEs topics- engines with advanced combustion systems such as clean diesels, direct-injection spark-ignition engines (DISI), and low-temperature combustion (LTC) compression-ignition. HE topics- different components of hybrid engines and the powertrain design. FCE topics- fundamentals of fuel cells and automotive applications. Clean fuel topics- biofuels, hydrogen, and natural gas, as well as, other cleaner fossil fuels for automotive applications. Well-to-wheel energy and cost analysis of prime mover designs/fuels.

Learning Outcomes: 1. Relate processes in automotive prime movers to engineering fundamentals. 2. Study low-carbon emitting, and LEV, ULEV, SULEV, PZEV, and ZEV prime mover designs. 3. Study prime mover designs that are alternative to conventional combustion engines. 4. Study cleaner alternatives to conventional fossil fuels. 5. Carry out analysis of prime mover designs and fuel alternatives to identify cost and energy tradeoffs. Credits: 3.00

Sustainable Design and Construction

AD 39700 - Sustainability In The Built Environment

Credit Hours: 3.00. The study of philosophical concepts, principles, and theories of sustainability as they pertain to building methods, materials, systems, and occupants. To provide a foundation for evaluation of materials, processes, and applications of design components for environmentally responsible. Field trips will be required.

Learning Outcomes: 1. Define sustainability and assess the ways that sustainable design strategies, processes, and products may be integrated effectively into the built environment. 2. Identify complex social, ecological, and economic dimensions that affect the well-being of humans, neighborhoods, communities, and

ecological systems. 3. Apply critical thinking skills to explain how green building methods affect the way built environments are designed, constructed, and operated. 4. Utilize appropriate methodological tools to analyze sustainable problems and provide environmentally responsible solutions for a green-building scenario. 5. Articulate a comprehensive, progressive world view that integrates diverse approaches to sustainability. 6. Utilize USGBC materials and other educational sources to explain the LEED rating system, LEED professional credentials, and Green Building principles and techniques preparatory to obtaining the LEED Green Associate credential. Credits: 3.00

CM 51000 - Topics In Environmentally Sustainable Construction, Design And Development

Credit Hours: 3.00. This course explores environmental sustainability in all its forms, starting with the historical and theoretical basis and continuing through an understanding of sustainable building construction, design, development, and renewable energy strategies/management tools and how these can be applied in practice.

Learning Outcomes: 1. Recognize human population trends and their effects on associated resource demands. 2. Identify and evaluate energy use trends, including status quo, business-as-usual (BAU) and alternative production and delivery approaches. 3. Interpret and analyze regional and global climate trends and implications, including policy alternatives. 4. Illustrate economic and social drivers, including triple bottom line business practices. 5. Discuss trends and management alternatives in land and ocean ecosystems. 6. Examine food and water security issues including production, management, and distribution alternatives. 7. Distinguish behavior psychology including examination of constraints and opportunities for sustainable practices. 8. Compare market and other incentives designed to stimulate best practices for building design and community planning. 9. Demonstrate knowledge of the conceptual history and controversies involving sustainability. 10. Apply current sustainability principles. 11. Debate common sustainability issues from multiple perspectives. 12. Recognize uncertainty envelopes and constraints on predictive knowledge. 13. Apply best practices in sustainability to their specific field of interest. 14. Employ interdisciplinary approaches to sustainability outside of their own field. 15. Recognize the challenges and opportunities of applying science and technology to governance. 16. Formulate messaging skills needed to deliver scientific information to popular audiences. 17. Practice abstract theoretical evaluation of sustainability challenges and solutions. 18. Employ critical reading and writing skills within scientific, policy and popular media. 19. Prepare action research projects to transform sector-specific practices for sustainability. 20. Construct a broad range of delivery and assessment strategies to support change for sustainability. Credits: 3.00

CE 59700 - Civil Engineering Projects

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. Permission of instructor required.

Credits: 0.00 to 18.00

ME 55300 - Product And Process Design

Credit Hours: 3.00. Fundamental principles of product and process design to produce a marketable product, develop a preliminary business strategy, and construct an operational prototype. Overview of relevant principles related to product and process design. Market analysis, design parameters, manufacturing prototype plan, production process plan, and a business strategy developed in teams. Broad overview of the entire product development process, including patents, commercialization of new technologies, and the highly interdisciplinary nature of product design through industry guest lectures. Impact of information technologies and the Internet on product design, prototyping, marketing, and customization. Product prototype is required. Design and product software information technology service-type concepts. Permission of

instructor required.

Credits: 3.00

Sustainable Energy Options

ABE 58000 - Advanced Processes In Biological Engineering

Credit Hours: 3.00. Physical and chemical structure of biomass. Reaction kinetics of hydrolysis of hemicellulose and cellulose to fermentable sugars. Fundamentals of ethanol production by fermentation. Separation of fermentation products into pure components.

Learning Outcomes: 1. Analyze bioprocesses using engineering design principles, bioreactor simulations, application of basic separations methods, and applying engineering economic analysis. 2. Develop process models for batch and continuous fermentation, cell culture, and enzymatic bioreactors. 3. Analyze the impact of fundamental advances in bio-sciences on bioprocess engineering and the environment, and the potential of these advances to solve societal problems. 4. Understand the impact of biosafety and regulatory considerations on process design. Credits: 3.00

CHE 55800 - Rate-Controlled Separation Processes

Credit Hours: 3.00. Rate-controlled separation processes based on solute movement (adsorption, chromatography and ion exchange), membranes (reverse osmosis, ultrafiltration, and gas permeation), and crystallization.

Credits: 3.00

CHE 59700 - Special Topics In Chemical Engineering

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. Permission of instructor required.

Credits: 0.00 to 18.00

ME 51400 - Fundamentals Of Wind Energy

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet, turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component machine and off-design performance. Inspection trip to industrial plan required.

Learning Outcomes: 1. Introduce students to the technology and economics of converting wind energy to electricity. 2. Inform students to the environmental concerns of wind energy. 3. Understand principles of wind turbine aerodynamics. 4. Develop the ability to design optimum blading. 5. Develop the ability to evaluate a potential site in terms of wind energy. 6. Understand wind turbine structural dynamics issues. Credits: 3.00

ME 49601 - Experimental Courses

Credit Hours: 1.00 to 6.00. Experimental classes offered at the junior or senior level on a temporary basis to test the viability of offering the course on a permanent basis.

Credits: 1.00 to 6.00

ECE 50616 - Physics And Manufacturing Of Solar Cells

Credit Hours: 3.00. This course introduces the electronic, optical and material properties and the manufacturing of photovoltaic devices. Topics include electronic charge separation, transportation and recombination; optical concentration, trapping and confinement; material preparations in photovoltaic systems; bulk crystal, thin-film and organic photovoltaic device configurations; energy storage; as well as emerging concepts in photovoltaics. Discussions also involve the process and equipment for the manufacturing of various photovoltaic modules, with special emphasis on driving down the cost of photovoltaic systems.

Learning Outcomes: 1. Understand different market segments for photovoltaics and their key requirements. 2. Understanding of p-n junctions, drift and diffusion of charges, LUMO and HOMO. 3. Extract efficiency from i-v characteristics of photovoltaic cells. Credits: 3.00

ME 52900 - Sustainable Energy Options And Analysis

Credit Hours: 3.00. This course develops an understanding of the current energy situation and impacts of energy choices on economics and sustainability metrics. A range of different technologies and approaches are presented for meeting future energy needs. Students learn how to assess the potential for alternative energy technologies in terms of economic and sustainability metrics and gain experience in assessing different energy technologies for specific case studies.

Learning Outcomes: 1. Gain an understanding of the current energy situation and impacts of energy choices on economics and sustainability metrics. 2. Gain an understanding of alternative technologies for meeting future energy needs. 3. Learn how to assess the potential for alternative energy technologies in terms of economic and sustainability metrics. 4. Gain experience in assessing different energy technologies. Credits: 3.00

Notes

Sustainable Food and Farming Systems Minor

About the Minor

Requirements for the Minor (18 credits)

Required Courses (9 Credits)

AGRY 10500 - Crop Production

Credit Hours: 3.00. Fundamental principles of crop production and distribution. Emphasis is placed on applying technological advances in agronomy to active crop-production situations, including basic soils, agricultural meteorology, and crop physiology and breeding.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working

on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

Systems Modules (3 credits)

SFS 31100 - Aquaponics

Credit Hours: 1.00. (FNR 31300) (HORT 31100) There has been significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia, and our impending food crisis has kindled an interest in developing aquaponic systems in western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. High input costs can, however, be a limitation. The waste disposal problem of the fish can become the nutrient supply to the plants.

Learning Outcomes: 1. Understand the nature of interactions among organisms, in particular those involving plants: mutualism, commensalism, parasitism, herbivory. 2. Understand the relationships among host, environment and pathogen for development of plant disease. 3. Know principal pathogens of Midwestern crops. 4. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 5. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 6. Understand the importance of energy in society and in agricultural production systems. 7. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 8. Have a broad awareness of the role of agriculture in global society. 9. Understand the advantages and disadvantages of different approaches to food production. 10. Understand the principles of food marketing and sales. 11. Understand the principles of post harvest food storage and pest management. Credits: 1.00

SFS 31200 - Urban Agriculture

Credit Hours: 1.00. Urban agriculture has the potential to address a range of social, economic and environmental issues including food insecurity, energy conservation, and human health and well-being. During this 5-week course, students will learn about the forces driving urban agriculture as well as the political and biophysical factors constraining it by reading articles, reviewing case studies, and visiting urban farms, vertical farm factories, food pantries, and local food advocacy groups. At the end of this course, students will apply the knowledge they've gained by developing a plan to increase urban agriculture in the greater Lafayette metropolitan area.

Learning Outcomes: 1. Understand the complexity of our global food system and learn how urban agriculture can address social, economic and ecological issues in cities around the world. 2. Develop critical thinking and communication skills through in-class discussions and writing assignments that integrate agroecology, urban planning, and civic engagement as they relate to urban agriculture. 3. Apply relevant theories and examples by developing a plan to facilitate the growth of urban agriculture. Credits: 1.00

SFS 31300 - Farm To Fork

Credit Hours: 1.00. This course will investigate the culinary opportunities of local and seasonal foods and the horticultural demands of producing and marketing them. Dr. Hallett will represent the "farm", giving students a brief overview of the production of local and seasonal foods in Indiana. The "farm" will harvest produce at the student farm and deliver it to the "fork" -- Chef Ambarish Lulay - who will work his culinary magic in the teaching kitchens in the HTM department. The focus, from both "sides" of the course will be the importance of niche marketing for farmers and chefs. This course is going to be tasty and fun!

Learning Outcomes: 1. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 2. Have a broad awareness of the role of agriculture in global society. 3. Understand the advantages and disadvantages of different approaches to

food production. 4. Understand the principles of food marketing and sales. 5. Understand the principles of postharvest food storage and pest management. 6. Be able to handle multiple tasks and deadline pressures. 7. Be able to work effectively with individuals from diverse cultures. 8. Have strong professional ethics and integrity. 9. Understand the importance of developing leadership skills. 10. Be able to work effectively in teams. Credits: 1.00

SFS 31400 - Comparative Livestock Production Systems

Credit Hours: 1.00. This course will compare and contrast the various livestock and poultry systems in the United States. The course will begin with in depth analysis of the history and structure of prevalent or conventional livestock and poultry production systems followed by a similar analysis of the various alternative production systems currently in use in the US, including organic, grass-fed, and pasture-raised among others. A heavy focus will be placed on critically evaluating the pros and cons of each system, regulations of both conventional and process-verified systems and potential differences in products resulting from different management and processing systems.

Learning Outcomes: 1. Understand the structure of conventional livestock and poultry production systems in the US. 2. Understand the alternative livestock and poultry production systems prevalent in the US. 3. Know how each system is regulated including the various process verified systems. 4. Know how different management and processing systems do or do not impact final product qualities. 5. Be able to critically evaluate and compare the benefits and challenges inherent in different production systems. Credits: 1.00

SFS 31500 - Principles Of Permaculture

Credit Hours: 1.00. The goal of this class is to encourage students to think of farming systems, including their energy and resource flows, economics and social characteristics, in the ways that ecologists think of ecological systems. How does energy flow through farming systems, and how do resources recycle (or not)? What are the weaknesses of farming systems that could be mitigated by mimicking natural systems? Issues of efficiency, sustainability and resilience will be investigated in the context of permaculture, a theory of food production and landscape design that has an emphasis on perennial crops, low input production, and ecological diversity. The centerpiece of the course will be to further develop the Purdue Student Farm using permaculture principles.

Learning Outcomes: 1. Analyze energy and natural resource issues of modern society in the context of ecological systems thinking. Credits: 1.00

Selectives (6 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGEC 25000 - Economic Geography Of World Food And Resources (UCC: BSS)

Credit Hours: 3.00. A study of the important issues and economic decisions about worldwide resource use for food and fiber production as influenced by geography, climate, history, social institutions, national self-interest, and the environment.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 31000 - Farm Organization

Credit Hours: 3.00. Economic factors controlling success in farming; types of farming; business records and analysis; adjustment in organization to meet changing economic conditions; organization and management of successful farms.

Credits: 3.00

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of

accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

ASM 10400 - Introduction To Agricultural Systems

Credit Hours: 3.00. Basic principles of selection and operation of agricultural production equipment, including farm tractors and machines and crop-processing equipment. Planning considerations for crop storage and animal production systems and devices for water conservation and erosion control.

Credits: 3.00

ASM 20100 - Construction And Maintenance

Credit Hours: 3.00. Fundamental principles in the selection and use of tools for the construction and maintenance of agricultural and related facilities, equipment, and machines. Areas covered include small engines, concrete and masonry, wood, plumbing, electricity, and metal.

Credits: 3.00

AGRY 37500 - Crop Production Systems

Credit Hours: 3.00. Factors affecting management decisions in crop production systems. Development of small grain and row cropping systems. Interaction of factors affecting efficient production systems, including seed selection, tillage, planting management, pest management, and harvesting and storage considerations.

Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team.

Credits: 4.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

ENTM 31100 - Insect Ecology

Credit Hours: 3.00. Insect ecology investigates the fundamental concepts of ecology as they relate to insects, including insect

interactions, other insects and their environment. Topics include population and community ecology, plant-insect interactions, insect biodiversity and biogeography, and theoretical and applied ecology. Examples from current entomological and ecological studies are used. Completion of college biology or an introductory course in entomology is recommended.

Learning Outcomes: 1. Comprehend ecological principles at different scales of biological organization, from the individual to the population to the community to the ecosystem. 2. Understand the mechanisms that mediate interactions of insects with their biotic and abiotic environments. 3. Appreciate the importance of insects as stabilizing and destabilizing components of food webs. 4. Recognize the value and application of insect ecology n solving real-world problems. 5. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. Credits: 3.00

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

SFS 30100 - Agroecology

Credit Hours: 3.00. This course introduces students to the application of ecological concepts to food production systems and farm management. We will consider species interactions, nutrient and water cycles, regenerative practices, alternative approaches to agriculture, and ecosystem services provided to and by agro-ecosystems.

Learning Outcomes: 1. Understand key connections between ecology and agriculture. 2. Apply the agro-ecosystem concept to farming systems. 3. Discuss the relative strengths and weaknesses of conventional and alternative forms of agriculture. 4. Understand the effect of farm management practices on primary productivity, nutrient cycling, and species interaction. 5. Evaluate ecosystem services provided to and by agro-ecosystems. 6. Consider the role of social factors on farming systems. 7. Discuss the potential for ecologically based agriculture to address farming issues at local, regional, and global levels. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial

advisors when entering the workforce. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

SFS 41100 - Structural Racism In US Agriculture

Credit Hours: 1.00. A discussion-based exploration of the history and legacies of structural racism in American agriculture. We will analyze the barriers to success faced by non-white farmers in the US, the structures that have oppressed minority groups in agriculture, and ways in which these forces might be reversed or resisted.

Learning Outcomes: 1. Deepen an understanding of racism, bias, and white privilege. 2. Develop an understanding of the governmental, institutional, and social structures that have led to racial and ethnic inequities in American agriculture. 3. Understand the relationship of all peoples with American agriculture, whether indigenous or arriving as enslaved person or immigrant, and the legacies of those relationships. 4. Analyze the ways in which immigration and foreign policy impact the US food system. 5. Learn to communicate issues of structural racism in American agriculture effectively. 6. Construct ideas that might promote a more equitable food system. Credits: 1.00

SFS 41200 - Colonialism, Globalization, And Food Justice

Credit Hours: 1.00. This course will uncover the foundations of inequities in access to healthy, nutritious food from the first era of colonization to the modern era of globalization. The course will make students aware of the racial and ethnic inequities in farming and food systems and consider mechanisms of decolonization: resistance against the status quo and the development of new food systems.

Learning Outcomes: 1. Understand the emergence of modern food systems through the eras of colonization and globalization. 2. Analyze the factors that contribute to inequities in access to healthy, nutritious food. 3. Investigate global and local food justice movements. 4. Evaluate the legacies of colonialism in today's food deserts. 5. Investigate local food movements, such as urban agriculture, represent attempts at decolonization. 6. Investigate the activism of indigenous groups around the world seeking decolonization and food justice. 7. Consider policies to reduce inequities in food systems. Credits: 1.00

SFS 41300 - The Cultures And Agricultures Of The United States

Credit Hours: 1.00. The United States is a vast country encompassing many climates, geographies, and human

histories. This course will investigate the diversity of the United States by examining a dozen locations with respect to people-and-place. How have people shaped these places, and how have these places shaped the people who have lived in them?

Learning Outcomes: 1. Understand the different types of land use, especially agriculture, in different regions of the United States, and consider their sustainability. 2. Investigate the cultures and agricultures of American Indian tribes prior to first contact with Europeans. 3. Analyze the displacement and relocation of American Indian tribes in specific regions. 4. Analyze the nature and legacies of slavery, and the means by which African Americans have been excluded from land ownership since reconstruction. 5. Consider the contributions of Asian Americans to the cultures and agricultures of the United States. 6. Investigate changes to the natural, built, and cultural landscapes of the United States through time. 7. Consider how the sustainability of cultures, economies, environmental health, and agriculture can (or cannot) be sustained in different regions of the United States. Credits: 1.00

HORT 32100 - Hydroponics Systems

Credit Hours: 3.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in controlled environment agriculture (CEA). This course offers students foundational information and hands-on experience on hydroponic and soilless cultivation of horticultural crops. Production practices, growing systems, new technologies, and current challenges are discussed.

Learning Outcomes: 1. Describe essential components of single-pass and recirculating hydroponic systems. 2. Compare different substrates and hydroponic system designs. 3. Interpret water quality analysis results and recommend corrections. 4. Create nutrient solutions using salts or mixed fertilizers. 5. Evaluate the importance of water quality, dissolved oxygen, salinity, and pH management for hydroponics. 6. Select hydroponic systems for production of leafy greens, herbs, and vegetable crops. 7. Apply solution chemistry knowledge and plant biology concepts to manage hydroponic systems. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Theatre Design and Production Minor

Requirements for the Minor (15 credits)

A. Required Theatre Courses (5 credits)

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more

comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 20100 - Theatre Appreciation (UCC: HUM)

Credit Hours: 3.00. Understanding and appreciation of the theatre's role in the modern world, dramatic structure and analysis, the actor, director, designer, and critic; attendance at current stage productions; class discussion of production elements. CTL:IFA 1302 Theatre Appreciation

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

B. Theatre Selective - Choose One (2 credits)

THTR 16000 - Introduction To Scene Design And Technology

Credit Hours: 2.00. This course is designed to introduce the students to the process and tools of scene design and technology.

Credits: 2.00

THTR 16100 - Introduction To Costume Design And Technology

Credit Hours: 2.00. Introduction to analytical, artistic, and practical skills required when creating costumes for theatre. Beginning training in elements and principles of design, rendering and presentation skills. Elementary instruction in costume construction, including hand and machine sewing, costume crafts, and basic patterning.

Credits: 2.00

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design.

Credits: 2.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 16400 - Introduction To Theatre Organization And Management

Credit Hours: 2.00. A theoretical study of performing arts management and backstage operations from audition through performance. Techniques of scheduling, production management, stage management, technical direction, house management, safety issues, and emergency procedures.

Credits: 2.00

C. Theatre Design and Production Selectives (8 credits)

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

A. Required Theatre Courses (5 credits)

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more

comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 20100 - Theatre Appreciation (UCC: HUM)

Credit Hours: 3.00. Understanding and appreciation of the theatre's role in the modern world, dramatic structure and analysis, the actor, director, designer, and critic; attendance at current stage productions; class discussion of production elements. CTL:IFA 1302 Theatre Appreciation

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

B. Theatre Selective - Choose One (2 credits)

THTR 16000 - Introduction To Scene Design And Technology

Credit Hours: 2.00. This course is designed to introduce the students to the process and tools of scene design and technology.

Credits: 2.00

THTR 16100 - Introduction To Costume Design And Technology

Credit Hours: 2.00. Introduction to analytical, artistic, and practical skills required when creating costumes for theatre. Beginning training in elements and principles of design, rendering and presentation skills. Elementary instruction in costume construction, including hand and machine sewing, costume crafts, and basic patterning.

Credits: 2.00

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design.

Credits: 2.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate

resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 16400 - Introduction To Theatre Organization And Management

Credit Hours: 2.00. A theoretical study of performing arts management and backstage operations from audition through performance. Techniques of scheduling, production management, stage management, technical direction, house management, safety issues, and emergency procedures.

Credits: 2.00

Credits: 2.00

C. Additional Theatre Selectives (5 credits)

THTR 23300 - Acting II

Credit Hours: 3.00. Continued development of the basic acting tools of objectives, actions, justification, and personalization; continued vocal and physical work; introduction of script and character analysis; and the introduction of audition techniques. The course will use material from contemporary dramatic literature in the rehearsal process. Prerequisite: THTR 133. Instructor permission required for non-majors.

Learning Outcomes: 1. Practice and incorporate relaxation, physical, vocal, and sense memory exercises into a daily warm-up. 2. See, connect, and respond to a partner within improvised scenarios. 3. Read plays with insight and imagine the experience of the characters in the given circumstance of a play. 4. Analyze and break scenes down into beats, with each beat having a clear action and objective. 5. Analyze, rehearse and publicly perform an open scene, and a contemporary monologue and scene. Credits: 3.00

THTR 25600 - Stage Make-Up

Credit Hours: 2.00. Study of facial anatomy, the aging process, the principles of light and shadow, and character analysis. Theory and practice in the basic techniques of applying stage makeup.

Credits: 2.00

THTR 33300 - Acting III

Credit Hours: 3.00. Application of foundational acting techniques to specific disciplines. May be repeated for credit. Instructor permission required for non-majors.

Learning Outcomes: 1. Identify, define, describe and demonstrate the basic principles of the craft of acting. 2. Identify, define, describe and demonstrate the basic terminology of stage technique. 3. Identify, define and describe the basic principles of script & character analysis. 4. Read, investigate, interpret and articulate your analysis of specific plays from the canon of 20th and 21st Century realistic dramatic literature. 5.

Develop critical thinking as it applies to your own work, your peers' work and in production work. Credits: 3.00

THTR 33600 - Rehearsal And Performance II

Credit Hours: 1.00 or 2.00. The study and practice of rehearsal techniques and stage performance. Students will be assigned to acting and stage management duties in experimental and major stage productions. Permission of instructor required.

Credits: 1.00 or 2.00

THTR 35400 - Painting For The Stage

Credit Hours: 3.00. The principles and practice of painting for the stage. Study of tools, media, and techniques used in traditional scenic painting, costume painting, and the creation of dimensionality on various surfaces. Offered alternate years.

Credits: 3.00

THTR 36000 - Scenic Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into an environment for dramatic action. Emphasis on the interrelationship among all aspects of production and how the scenic element becomes a building block toward total picturization. Offered alternate years.

Credits: 3.00

THTR 36100 - Costume Design

Credit Hours: 3.00. Theory and principles of design specifically applied to stage costume design. Emphasis on the interrelationship of all aspects of production and how the costume becomes a building block toward total picturization. Offered in alternate years.

Credits: 3.00

THTR 36300 - Sound Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into auditory response and environment. Emphasis on the interrelationship among all aspects of production and how sound becomes a building block toward total picturization. Majors have priority. Offered alternate years.

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 38000 - Histories Of Theatre

Credit Hours: 3.00. Variable topics in theatre and performance history. Emphasis on the study of the works, aesthetics, and innovations of a theatrical form/genre alongside social, cultural, economic, and political contexts.

Credits: 3.00

THTR 38100 - Theatre And Performance Historiography

Credit Hours: 3.00. Historiographic analysis of theatre, drama, and performance of the 20th and 21st centuries. Emphasis on the relationship between modern and contemporary performance to world history from social, political, and cultural perspectives. Course includes both written and practical components. Prerequisites: THTR 201, THTR 271.

Learning Outcomes: 1. Interpret plays, performances, and performance theory from the 20th and 21st century. 2. Analyze theatre and performance histories through a combination of historical research, critical questioning, and practical application. 3. Demonstrate how political, economic, and cultural structures impact theatre and performance histories of the 20th and 21st Century. 4. Demonstrate skills in research, collaboration, and oral presentation.
Credits: 3.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.).
Credits: 3.00

THTR 36200 - Light Design

Credit Hours: 3.00. A project course in utilizing the principles of design as they can convey an environment and its qualities to further dramatic action. Emphasis on the interrelationship

among all aspects of production and how light becomes a building block toward total picturization. Offered in alternate years.

Credits: 3.00

THTR 44000 - Directing: Page To Stage

Credit Hours: 3.00. This course focuses on theoretical and practical understanding of the essential principles and fundamentals of directing for the stage. Students will learn a proven directorial methodology and engage in essential research and written and practical presentations throughout. Permission of instructor required.

Learning Outcomes: 1. Identify, classify, and critique elements of drama and the requirements of production with depth and imagination. 2. Analyze plays for production. 3. Articulate aspects of student's own personal aesthetic orally, visually, and in writing. 4. Integrate skills in play analysis, intuitive contemplation, research, composition techniques, and various rehearsal strategies to stage dramatic texts. 5. Evaluate creative decisions and processes. Credits: 3.00

DANC 37900 - The Art Of Protest: An Examination Of The Role Of Arts, Artists, Activism, & Social Transformation

Credit Hours: 3.00. Throughout history, art has been used to advocate for political movements and provoke social action and transformation. This course examines the role of the arts and the artist and their relationship to activism throughout history and beyond. We will investigate how art has been used as a tool to transform cultural perspectives, alter policies, and promote social change. We will explore a range of artists whose methodologies, materials and approach challenge the cultural norms. From printmakers to musicians, to choreographers, to performance artists, students will engage and evaluate the act of art-making as a tactic of resistance and the responses to those acts. We will investigate readings that argue for and against the need for artists to make work that politically challenge their society. Once a foundation of knowledge has been laid, we will turn to the creative process through an investigation of materials and practices - performance, mixed media, and photography. Students will research, watch, discuss, create, and perform their own projects that promote social transformation.

Learning Outcomes: 1. Demonstrate effective oral and written communication in formal assignments, critical analysis, and class presentations. 2. Demonstrate through creative projects how art, culture, and activism have a direct and interactive relationship. 3. Investigate and critically engage with artists whose work transform cultural perspectives, alter policies, provide socio-political commentary, and promote social change. 4. Analyze seminal art and historical and philosophical texts that articulate the role and importance of political art. Credits: 3.00

THTR 48400 - Performance, Media, And Technology

Credit Hours: 3.00. This course explores the intersection of performance, media, and technology from the early 20th century through present day, examining how technological innovations have transformed performance practices and audience experiences.

Learning Outcomes: 1. Describe the historical development of media and technology in 20th and 21st-century performance. 2. Apply theories of liveness, remediation, intermediality, and mediatization toward analysis of contemporary performance practices. 3. Assess the impacts of new media on concepts such as narrative, space, text, and embodiment. 4. Generate strategies for conceptualizing projects that integrate media into performance. Credits: 3.00

Themed Entertainment Design Minor

About the Minor

Requirements for the Minor (15 credits)

Required Courses (15 credits)

CGT 40700 - Current And Future Trends In Themed Attraction Design

Credit Hours: 3.00. Students will learn about current trends in immersive attractions. Current technologies will be explored that can be used to enhance the narrative in a themed immersive space. Students will explore technologies, narrative techniques and integration of engineering.

Credits: 3.00

CGT 20400 - Introduction To Themed Attraction Design

Credit Hours: 3.00. An introduction to immersive attraction; including the consideration of operations, graphics, engineering, technology and design. Students will apply their knowledge in narration and graphic principles to concept projects in immersive spaces.

Credits: 3.00

CGT 32800 - Business Of Themed Entertainment

Credit Hours: 3.00. This course provides an insider's look at the skills needed to succeed in themed entertainment industry as well as provide an overview of the experience economy. Students will get an insider understanding of the project process, working with outside vendors, team communication, common constraints and budgeting.

Credits: 3.00

CGT 31700 - Planning And Communicating Themed Attraction Design

Credit Hours: 3.00. Building on students knowledge of narrative creation and design, students will learn about the fundamentals of operations, graphics, engineering, technology and design to create theme-based immersive attractions. This course will focus on design concepts, technical design, management and creation of immersive experiences.

Credits: 3.00

CGT 36700 - Previsualization In Themed Entertainment

Credit Hours: 3.00. This course provides an overview of themed entertainment development from concept to previsualization and communication. Students will have the opportunity to take initial concepts for themed experiences and visualize them to communicate to multiple external audiences.

Credits: 3.00

Learning Outcomes

Turf Management Minor

Requirements for the Minor (13 credits)

Required Courses (10 Credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 51000 - Turfgrass Science

Credit Hours: 3.00. An advanced course in turfgrass management which focuses on the management requirements of intensively cultured turfgrass areas, with a specific emphasis on golf course and athletic fields. Interrelationships among soil, plant and atmospheric environments, management practices and turfgrass quality will be stressed.

Credits: 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed.

Credits: 3.00

HORT 21100 - Fundamentals Of Turfgrass Culture Laboratory

Credit Hours: 1.00. (AGRY 21100) Companion lab to AGRY 21000. Laboratory exercises will focus on turfgrass and seed anatomy, morphology, identification as well as the hands-on basic principles of turfgrass culture. Designed for the student who intends to pursue a career in turfgrass management and plans to enroll in AGRY 51000. Enrollment preference will be given to Turfgrass Science Majors.

Credits: 1.00

Selective Course - Choose One (3 Credits)

AGRY 36500 - Soil Fertility

Credit Hours: 3.00. Principles of soil chemistry and physics influencing plant nutrition; emphasis on diagnosis and solution of problems on soil reaction and nutrient status; fertilizer chemistry and use; reaction of pesticides and growth regulators with soils.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

AGRY 51200 - Integrated Turfgrass Systems

Credit Hours: 3.00. Integration of agronomic principles for professionally managing golf courses, athletic complexes, lawn care companies, and sod production facilities in an efficient and environmentally friendly manner. Emphasizes independent thinking and team cooperation for understanding the social, ethical, and economical aspects underlying the daily agronomic management decisions, including construction, establishment, cultural practices, fertilization, and pest management. Course meets for weeks 1-10.

Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are

expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

Notes

Unmanned Aerial Systems Minor

Requirements for the Minor (15 credits)

Required Courses (15 credits)

AT 20900 - Autonomous Aircraft Technology And Maintenance I

Credit Hours: 3.00. This course introduces fundamental concepts of autonomous aircraft technology and maintenance. Topics include history, airframe and powerplant selection, regulations governing uncrewed systems, airspace descriptions, safety, autonomous system programming and calibration, data package options, weather, system maintenance and repair, manual flight training, and aerodynamics and flight controls for autonomous aircraft.

Learning Outcomes: 1. Reflect on the history of UAS and project the future growth of UAS. 2. Analyze data sources to determine flight feasibility and mitigate hazards. 3. Collaborate effectively as a crew member both in the lab and in the field. 4. Design and print flight ready 3D model. 5. Assess airspace and flight feasibility by submission of FAA waiver application. 6. Demonstrate effective design choices. Credits: 3.00

AT 21900 - Autonomous Aircraft Technology And Maintenance II

Credit Hours: 3.00. This course will further develop skills and understanding of autonomous aircraft technology and maintenance. Emphasis will be on design, selection, construction, flight test, evaluation, and repair, of stabilized uncrewed aircraft. Students will work hands-on with open-source flight controllers to perform autonomous missions. Additionally, students will design and deploy scenario-specific sensors using student-constructed rotorcraft. Students will be expected to demonstrate their sensor payload through lab and field demonstration and professional documentation.

Learning Outcomes: 1. Apply flight principles to building a UAS capable of performing a specific operation. 2. Analyze and compare flight characteristics of UAS under different environmental and physical conditions. 3. Predict and compare flight characteristics of UAS using different components and configurations. 4. Integrate custom sensor payload into UAS design. 5. Safely and efficiently coordinate automated flights with team members. 6. Develop an enterprise-ready online user manual for UAS and sensor payload. Credits: 3.00

AT 30901 - Introduction To UAS Sensor Technology

Credit Hours: 3.00. This course introduces students to multiple forms of UAS sensors and core fundamentals of Remote Sensing and Geospatial Technology. Students will be introduced to basic data capture and processing techniques and to effectively apply different forms of UAS sensors to real-world applications.

Learning Outcomes: 1. Identify and define core geospatial and remote sensing technology

concepts. 2. Effectively associate and relate UAS sensor technology with related portions of the electromagnetic spectrum. 3. Identify and explain geographic coordinate systems and projections. 4. Process and Create UAS data products within a Geographic Information System. Credits: 3.00

AT 10901 - Introduction To Uncrewed Aircraft System Operations

Credit Hours: 3.00. This course will provide students the aeronautical knowledge required to operate a small UAS in the National Airspace. Students are introduced to various aspects of uncrewed aviation operations, which includes UAS system types and components, regulations and operational approvals, and indoctrination to the civil and commercial applications of UAS. Through the use of UAS simulation technology, students will develop basic small UAS flight skills and successfully complete various UAS operational scenarios. Upon successful completion of the course students will be prepared to obtain a Federal Aviation Administration (FAA) Remote Pilot Certificate with a Small UAS Rating. Permission of department is required.

Learning Outcomes: 1. Obtain an FAA Remote Pilot Certificate with a Small UAS Rating. 2. Understand small UAS terminology and technology. 3. Comply with regulatory framework and understand various UAS approval processes. 4. Understand basic small UAS operating procedures. 5. Appreciate and gain perspective on how to safely operate UAS in the national airspace system. 6. Using simulation technology, demonstrate basic small UAS flight maneuvers and execute basic flight operations. Credits: 3.00

AT 11901 - Uncrewed Aerial Systems: Safety And Risk Management

Credit Hours: 3.00. This course discusses the fundamental concepts of Safety and Risk Management and their application to UAS operations. The course will provide insight into strategies for developing and implementing a formal safety management system (SMS) that effectively supports an organization's UAS operations. In addition, students will gain an understanding of ethical decision-making and its relationship to safety. Laboratory exercises provide students practical application of this knowledge to various UAS operational scenarios, which includes utilizing SMS principles in assessing risks and developing appropriate mitigations. Must possess a valid FAA Part 107 Remote Pilot Certificate.

Learning Outcomes: 1. Understand and demonstrate the application of safety and risk management principles to UAS operations. 2. Exemplify the UAS regulatory environment, which includes related regulatory approval and waiver processes. 3. Understand and apply technical data sources to evaluate UAS airworthiness and system health, to include ground and flight testing, troubleshooting, maintenance and repair. 4. Demonstrate the ability to plan and safely complete basic UAS missions that are regulatory compliant. 5. Understand and demonstrate ethical decision-making. Credits: 3.00

Urban Forestry Minor

Requirements for the Minor (16 credits)

A. Required Courses (10 credits)

FNR 44400 - Arboricultural Practices

Credit Hours: 4.00. Course covers a broad spectrum of arboriculture principles and techniques, including pruning, transplanting, fertilization, climbing, rigging, removal, cabling, bracing, lightning protection, hazard tree evaluation, tree appraisal, and street tree inventory.

Learning Outcomes: 1. Recognize and explain the various arboricultural practices that enhance the sustainability of trees in the built environment. 2. Apply essential plant health care practices and arboricultural practices used in the cultivation and management of trees and other woody plants in the built environment including planting, pruning and pest management. Credits: 4.00

FNR 44500 - Urban Forest Issues

Credit Hours: 3.00. This course presents an array of topics germane to the management of trees in the urban environment. This includes the benefits of trees and general tree care, tree

appraisal, tree ordinances, tree inventory and management plans, and tree preservation and construction.

Learning Outcomes: 1. Understand sustainable urban & community forestry and why it is important. 2. Recognize the numerous benefits of urban/community forests to society, and the ecosystem services provided. 3. Identify common issues, challenges and pressures which threaten the urban forest. 4. Recognize the unique features of urban forest systems and how to apply the principles of urban forest management to real-world cases. 5. Acquire an understanding of sustainability as it pertains to urban forests and urban forestry programs in metropolitan regions, cities, towns, communities and neighborhoods. Credits: 3.00

FNR 58600 - Urban Ecology

Credit Hours: 3.00. Urbanization is on the rise, transforming natural ecosystems into coupled human-natural ecosystems that encompass complex, novel functional and structural characteristics shaped by people and the inherent environment. Through local field trips and readings of the primary scientific literature, we examine the unique characteristics of coupled human-natural ecosystems. The course is designed to be broadly accessible to students from a variety of backgrounds, interests, and majors who are interested in environmental science and engineering and emphasizes the importance of incorporating an ecological perspective in environmental engineering and natural resource management. This course covers fundamental principles of ecology as applied in urban and other coupled human-natural systems with emphasis on the impacts of modern industrial society on ecosystem structure and function. Organizing themes addressed in this class include macroscale processes, systems thinking, and topics related to urban systems.

Learning Outcomes: 1. Describe and diagram flows of matter and energy in coupled human and natural systems. 2. Discuss how drivers in each cycle change across an urban-rural gradient. 3. Describe the changes to natural ecosystems imposed by urbanization and other forms of global change (climate change, altered biogeochemical cycling, invasive species, mass extinction, etc.). 4. Compare and contrast urban and rural ecosystem structure and function, including diversity and distribution of organisms, landcover types, and ecosystem services. 5. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 6. Describe the key components of the following ecological concepts and apply them to an analysis of urban vs rural ecosystems: a. resistance and resilience b. dynamic equilibrium c. alternate stable states d. disturbance and succession Credits: 3.00

B. Selective Courses (6 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional

salesperson. Credits: 3.00

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses.

Learning Outcomes: 1. Learn the identifying

macro characteristics of commercially important woody biomaterials (color, odor, cellular arrangement, grain patterns, character marks, etc.) through laboratory exercises and field trips. 2. Learn the cellular structure and arrangement of woody biomaterials. 3. Know the manufacturing characteristics and uses of woody biomaterials. 4. Identify upon sight the major commercial hardwood and softwood species produced in North America. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique

of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance.

Learning Outcomes: 1. Able to understand the theory, applications (how theory is applied) can be used to study landscape and larger scale problems related to natural resources. 2. Know what a landscape is. 3. Know the methods to quantify landscape pattern. 4. Understand important terms in landscape ecology and biogeography. 5. Understand the causes (natural and human) of landscape pattern. 6. Understand the threats to biodiversity locally and globally. 7. Able to explain the theory of island biogeography. 8. Define sustainability and know how to calculate an ecological footprint. Credits: 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.

Learning Outcomes: 1. Know methods to quantify landscape pattern. 2. Use GIS to conduct simple and moderately complex analyses using common public domain databases. 3. Know where to get important geospatial data from the internet. 4. Work with US government data and understand the various levels of aggregation of spatial data. Credits: 1.00

FNR 33800 - Introduction To Silviculture

Credit Hours: 3.00. This course introduces the common silvicultural systems used in North American forests for forestry and wildlife habitat management objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures present theoretical concepts in order to allow students to understand forest management practices, while the recitation portion of this course reviews these concepts in light of wildlife habitat management, biodiversity, and other non-timber resources. The recitation is writing-intensive requiring several reflection papers on assigned readings and a semester-ending term paper on a subject of the student's choosing. Credit cannot be earned for both FNR 33800 and FNR 43900. Permission of department required.

Learning Outcomes: 1. Be familiar with technical silvicultural terminology. 2. Describe the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices affect soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Locate, summarize and evaluate primary and selected secondary literature sources in regards to silvicultural effects on non-timber resources. Credits: 3.00

Notes

Weed Science Minor

Requirements for the Minor (15 credits)

A. Required Courses (6 credits)

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

BTNY 50400 - Advanced Weed Science

Credit Hours: 3.00. Emphasizes the mode and mechanism of herbicide action and herbicide interaction with plants, and the biology and ecology of weedy plants. Offered in odd-numbered years.

Learning Outcomes: 1. Understand the physical, biological, biochemical, and physiological parameters that influence herbicide efficacy from the start to the end of the herbicide mode of action process in plants. 2. Demonstrate the unique differences in the practical use and plant activity of the major herbicide mode of action groups used in the United States. 3. Explain the development of herbicide-resistant crops, the evolution of herbicide-resistant weeds, and apply this knowledge to describe how these factors influence modern weed management practices. 4. Provide a technical analysis comparing the mode of action for herbicides, insecticides, and fungicides and the factors involved with management of pest resistance for these different pesticide groups. Credits: 3.00

BTNY 50500 - Advanced Biology Of Weeds

Credit Hours: 3.00. Principles of weed biology and ecology, with focus on reproduction and ecophysiology, population dynamics, community ecology, and ecosystem level phenomena. Instruction will emphasize the development and refinement of critical thinking skills.

Learning Outcomes: 1. Develop as a scholar by creating a scholarly review paper on a topic or issue related to weed biology. 2. Be able to understand and analyze peer-reviewed scientific literature so that you can engage in informed discussions about weed science. 3. Gain knowledge about key topics in weed biology, including seed and seed bank ecology, effects of biotic and abiotic factors on weed growth, and key theories related to plant invasions. Credits: 3.00

B. Selectives (9 credits)

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase your communication skills by creating and presenting a poster. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

BTNY 35000 - Biotechnology In Agriculture

Credit Hours: 3.00. A study of the methods used to produce genetically modified organisms, primarily using gene transfer technology, and the application of these organisms in agriculture. The uses of microbes, plants, and animals in agricultural biotechnology are examined. Social, economic, and ethical issues related to biotechnology are discussed.

Learning Outcomes: 1. Understand the broad scientific principles that underlie biotechnology. 2. Understand how principles underlying biotechnology are applied in agriculture. 3. Describe how transgenic plants are produced. 4. Explain how transgenic organisms and other biotechnology tools are applied in agriculture. 5. Evaluate the impact of these technologies in agriculture. 6. Analyze the controversies that surround the use of these technologies. Credits: 3.00

BTNY 49800 - Research In Plant Science

Credit Hours: 1.00 to 3.00. Supervised individual laboratory or field research. Permission of department required.

Learning Outcomes: 1. Define and explain the scientific method as it applies to plant science research. 2. Identify and practice research ethics and responsible conduct in research. 3. Reflect on their own research, identifying lessons learned, strengths, and ways to improve. Credits: 1.00 to 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

Notes

Wildlife Science Minor

Requirements for the Minor (17 credits)

Required Courses (11 credits)

FNR 24000 - Wildlife In America (UCC: STS)

Credit Hours: 3.00. History of the occurrence, exploitation, and management of North America's wildlife resources. Life histories, habitat relationships, and human impacts on selected species. Current conservation practices and future prospects.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Identify and describe the diversity of North American wildlife and their habitats in order to improve their ecological study and aid in their management and conservation. 2. Describe and explain fundamental concepts and theories in the field of ecology in order to inform different wildlife conservation and management strategies. 3.

Compare and contrast the various anthropogenic threats to wildlife in order to synthesize and evaluate their impacts on wildlife. 4. Explain and apply approaches and tools used in wildlife conservation and management in order to address anthropogenic threats to wildlife. 5. Evaluate primary literature in order to analyze the merits and weaknesses of current research in the fields of ecology, conservation, and management as they relate to major wildlife groups. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

Selective Courses (6 credits)

FNR 30500 - Conservation Genetics

Credit Hours: 3.00. Fundamentals and principles of genetics, including Mendelian inheritance, genetic mapping & linkage, DNA fingerprinting, phylogeography, and speciation. Topics cover the theoretical and empirical evidence illustrating how mutation, migration, drift, and natural selection influence the evolution of genes in natural populations. Designed for ecologists and natural resource professionals.

Learning Outcomes: 1. Develop conceptual understanding of modern genetics and the use of molecular markers in studies of wildlife/fisheries/forest management, ecology, and evolutionary biology. 2. Explore how genetic information is used in sportfish stockings, wildlife reintroductions, and selective harvest of native trees. 3. Recognize and predict the genetic ramifications of these artificial activities. 4. Compare these effects to the consequences of natural disturbances. (e.g., glaciations). Credits: 3.00

FNR 46000 - International Natural Resources Summer Program

Credit Hours: 3.00. A four-week, intensive program examining the management and conservation of natural resources in Europe and the United States. Jointly taught with faculty and students from the Swedish University of Agricultural Sciences. The program topic and venue change each year, but emphasis is placed on student interaction and internationalization as well as on cross-cultural communication skills within a natural resources framework. Offered in even-numbered years at Purdue University and in odd-numbered years at the Swedish University of Agricultural Sciences in Sweden.

Learning Outcomes: 1. Explain cultural differences in managing natural resources sustainably. 2. Evaluate natural resource use alternatives and policies. 3. Evaluate the sustainability of various landscapes and uses of natural resources. Credits: 3.00

ANTH 23500 - The Great Apes

Credit Hours: 3.00. Students will learn the behavior and conservation of our closest relatives and how early ape studies changed our understanding of what it meant to be human. Topics include gender in science, ethics of research and cross-cultural understandings.

Learning Outcomes: 1. Identify the geographic distribution as well as the anatomical and behavioral traits that characterize great ape species. 2. Explain the major achievements of and challenges to great ape research in the wild and captivity. 3. Demonstrate an understanding of why and how anthropologists use great apes to model human evolution. 4. Describe the ethical issues of conducting research on our closest living relatives and conserving them in the wild. Credits: 3.00

ANTH 33500 - Primate Behavior

Credit Hours: 3.00. This course is an introduction to the primate order and primate studies. The emphasis is on field studies. Ecological influences on social organization and behavior, learning, play, and communication will be considered as adaptations within an evolutionary framework.

Learning Outcomes: 1. Understand the diversity of anatomical and behavioral traits in primates, and how that diversity is taxonomically organized. 2. Describe the science of primatology, critically evaluate scientific research on primates, and contextualize primatology within Anthropology and closely related fields. 3. Communicate an understanding of the relationships among primates and their ecosystems as well as the ecological, evolutionary, and social forces that shape their lives. 4. Appreciate the complexities of the work of preserving and managing primate populations. Credits: 3.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing

biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses

and predictions, develop an experimental design. Credits: 2.00

BIOL 48300 - Great Issues: Environmental And Conservation Biology

Credit Hours: 3.00. Concerned with the application of ecological principles to environmental issues, the course introduces fundamental ecology, emphasizing the interplay of theoretical models, natural history, and experimentation. New research developments are stressed, with the outlook for application to environmental management and restoration. Whole-biosphere issues, such as the loss of biological diversity, frame a focus at the population level to understand local and global extinction and community stability. In-depth case studies of endangered ecosystems (both temperate and tropical), with computer modeling, field trips, and discussions of policy formulation, demonstrate the range of tools and information necessary to accomplish coexistence of humans with the rest of nature.

Credits: 3.00

BIOL 58000 - Evolution

Credit Hours: 3.00. A study of evolution as a basic concept of the biological sciences; an examination of current methods of experimentation within the area, as well as evidences for the possible mechanisms of evolutionary change.

Credits: 3.00

FNR 52700 - Ecotoxicology

Credit Hours: 2.00. This course covers theoretical and applied approaches to the science of ecotoxicology, including application of the tools and procedures used to understand toxicant fate and effects in free-ranging animals and ecosystems. Students are expected to be knowledgeable in chemistry, biology, and animal physiology.

Learning Outcomes: 1. Review of basic ecotoxicological principles. 2. Know the various types, sources and environmental fate and effects of contaminants. 3. Know the modes of toxicant uptake, transformation, storage and depuration. 4. Know the dose/concentration-response, exposure routes. 5. Know the factors that influence toxicity. 6. Know the contaminant distribution, bioaccumulation, and biomagnifications. 7. Know the biomarkers of exposure and effects: Molecular to ecosystem-levels. 8. Know the basic principles in aquatic toxicity testing. 9. Know the common toxicity assays using invertebrates, fish, amphibians, birds, and mammals (in vitro, in vivo, mesocosms, and in situ bioassays). 10. Know the field case studies: Complex effluents (sewage and paper mills); Persistent Bioaccumulative Toxicants (PCBs, PAHs, dioxins); Endocrine disrupting chemicals; Heavy metals; Nutrients and pathogens. 11.Statistical analyses of toxicity data. 12.Introduction to ecological risk assessment. Credits: 2.00

FNR 53600 - Ecology Of Disturbance

Credit Hours: 2.00. Advanced lecture- and discussion-based class examining how disturbance shapes the composition and structure of communities and landscapes across major terrestrial biomes. Students will examine and discuss the relationships between disturbance intensity, frequency, and spatial extent and how these characteristics affect ecological processes and ecologically-based management of forest and grassland ecosystems. The class will also examine the synergistic effects of multiple disturbances and the restoration of endemic disturbance regimes in contemporary ecosystems. Course is reading intensive; students will read and discuss on average 3-8 journal articles per week.

Learning Outcomes: 1. Describe how disturbance shapes community composition and structure for several major terrestrial biomes. 2. Understand how disturbance regulates biological diversity across terrestrial and aquatic ecosystems. 3. Understand the relationship between disturbance intensity, frequency, and spatial extent and how those factors affect management of forest and grassland ecosystems. 4. Describe the synergistic nature of disturbance and identify how disturbance factors interact across a landscape. 5. Describe how contemporary and restored disturbance regimes may facilitate or suppress the spread of invasive species. 6. Understand how management activities can mimic endemic disturbance regimes to promote biodiversity and sustainability. Credits: 2.00

FNR 53601 - Ecology Of Disturbance Practicum

Credit Hours: 1.00. This course is the practicum for FNR 53600 , hence enrollment is contingent upon enrollment in FNR 53600 . Course consists of a one or two-week long field trip to a remote site; prior trips have been taken to the Great Smokey National Park over spring break. Course requires an additional travel fee, depending on location visited.

Learning Outcomes: 1. How disturbance shapes community composition and the distribution of species across landscapes. 2. How alterations to endemic disturbance regimes affect the composition, structure, and function of ecosystems. 3. How interactions between natural disturbance and invasion of exotic species influence forest community development. 4. Management that uses natural disturbance to restore and maintain biotic communities and ecosystems. Credits: 1.00

FNR 54300 - Conservation Biology I

Credit Hours: 3.00. Introduction to conservation biology, including population dynamics and genetic structure of rare organisms. Recovery planning, restoration ecology, environmental policy making, and sustainable developments are considered, as is ethics in conservation of biological diversity. Offered in odd-numbered years. Permission of instructor required.

Learning Outcomes: 1. Read and interpret the scientific literature on conservation of natural resources with an awareness of the current status of what is known about biodiversity, endangered species and ecosystems, biological invasions, and the effects of climate change on natural communities. 2. Explain how conservation research is carried out, and appreciate common pitfalls in designing research for goals of conservation interest. 3. Consider and evaluate the balance between conservation goals and other priorities in land management, societal and economic goals, and socio-political systems. Credits: 3.00

FNR 56700 - Advanced Mammalogy

Credit Hours: 3.00. The class explores approaches to mammalian research and wildlife management through readings, discussions, field, and laboratory exercises. Topics such as mammalian behavior, ecology, phylogeny, taxonomy, and conservation are emphasized. The intention of this class is to help students who have a sincere interest in mammalian research and management to progress beyond identification in their understanding of mammals.

Learning Outcomes: 1. Understand the diversity of topics currently being examined using wild mammal populations and communities. 2. Integrate the results of published research into the design and exploration of research topics in which the students are interested. 3. Exhibit improved abilities in critical thinking, writing, and oral communication in discussing mammalian research and management topics. Credits: 3.00

FNR 52800 - Wildlife And Environmental Forensics

Credit Hours: 2.00. Theoretical and applied approaches to the science of wildlife and environmental forensics. General introduction on environmental forensics followed by discussion of different types of investigations. Includes application of tools and procedures used to solve crimes, including morphological, chemical and biological analysis of evidence. All material will be discussed in relation to criminal investigation. (Offered in even-numbered years)

Learning Outcomes: 1. Explain the history and scope of environmental forensics. 2. Explain the critical steps needed during a crime scene investigation. 3. Apply field and laboratory techniques used for crime scene investigations. Credits: 2.00

FNR 57100 - Advanced Ornithology

Credit Hours: 3.00. Study of current avian research topics and techniques. Class discussion of recent scientific literature; field and laboratory exercises to illustrate approaches to ornithological research. One weekend field trip is offered. (Offered in even-numbered years.)

Learning Outcomes: 1. Read the scientific literature on birds with a greater awareness of the current status of what is known about birds. 2. Describe how avian research is done and appreciate common pitfalls in designing research on birds. 3. Understand the conservation and management implications of current avian knowledge. Credits: 3.00

FNR 52900 - Disease Ecology

Credit Hours: 3.00. Study of the ecological and evolutionary complexity inherent to host-pathogen interactions. Includes case studies from a diverse array of systems, including plants, animals, aquatic and terrestrial systems. Emphasis is on the interactions between multiple hosts and pathogens within complex, dynamic environments. Introduction to parasite and pathogen diversity, host-pathogen coevolution, community ecology and the importance of pathogens in conservation and management.

Learning Outcomes: 1. Evaluate the roles played by the diversity of parasites and pathogens found in complex natural systems. 2. Apply the foundational principles of disease ecology - the importance of hosts, pathogens, and the environment - to understanding disease dynamics in natural systems. 3. Evaluate the strengths and weaknesses of different modeling approaches in disease ecology. 4. Understand how disease models are used in management and conservation. 5. Apply both ecological and evolutionary theory to examine the impact of infectious disease on host populations, communities, and ecosystems. 6. Demonstrate an understanding of patterns in pathogen diversity and abundance across landscape to regional scales. 7. Articulate understanding of disease ecology through written and oral communication. 8. Demonstrate an understanding of the scientific literature and an ability to critically evaluate this research for an interdisciplinary topic. Credits: 3.00

FNR 43200 - Human-Wildlife Conflicts

Credit Hours: 3.00. Exploration of conflicts between human interests and wildlife and the regulations policies and legislation used to minimize conflicts. Negative interactions may be real or perceived, economic or aesthetic, social or political, and may pose risks to human health and safety. Emphasis on the causes of conflict and resolutions that seek to balance protection or conservation of wildlife with protection of other public resources and individual property owners. Prior knowledge of college-level general biology and ecology is expected.

Learning Outcomes: 1. Identify common causes of human-wildlife conflicts. 2. Evaluate the impacts of the conflict damage/threat. 3. Prescribe options for resolving the conflict. 4. Measure effectiveness of applied mitigation strategies. Credits: 3.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance.

Learning Outcomes: 1. Able to understand the theory, applications (how theory is applied) can be used to study landscape and larger scale problems related to natural resources. 2. Know what a landscape is. 3. Know the methods to quantify landscape pattern. 4. Understand important terms in landscape ecology and biogeography. 5. Understand the causes (natural and human) of landscape pattern. 6. Understand the threats to biodiversity locally and globally. 7. Able to explain the theory of island biogeography. 8. Define sustainability and know how to calculate an ecological footprint. Credits: 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.

Learning Outcomes: 1. Know methods to quantify landscape pattern. 2. Use GIS to conduct simple and moderately complex analyses using common public domain databases. 3. Know where to get important geospatial data from the internet. 4. Work with US government data and understand the various levels of aggregation of spatial data. Credits: 1.00

BIOL 58601 - Ecology

Credit Hours: 3.00. This is an advanced ecology course that examines the ecological process and dynamics of populations, communities, and ecosystems. Topics include the physical, physiological, behavioral, and population genetic factors that influence how organisms interact with one another and their environment, the nature of population growth, and attributes of community structure. Course material integrates case studies from field and laboratory experiments, simulations, and theoretical models to understand life histories, species interactions, and community and ecosystem processes.

Learning Outcomes: 1. Apply ecological principles to interpret patterns of abundance and distribution of organisms in natural systems. 2. Use conceptual and mathematical models to predict the dynamics of populations and communities. 3. Critically evaluate the experimental design and data interpretation of ecological studies in the published literature. 4. Communicate scientific ideas and results through discussions and written assignments. Credits: 3.00

FNR 33350 - Applied Fire Ecology

Credit Hours: 3.00. Fire, either as a natural disturbance or anthropogenically mediated disturbance, has been a feature of almost every major terrestrial ecosystem in North America. In this era of climate change, land management agencies are increasingly using fire both to manage terrestrial ecosystems and to actively contain wildfire. This class will provide basic understanding to both fire behavior and its ecological impacts on terrestrial ecosystems, focusing on systems common to the Central Hardwood Region. Students will get experience conducting prescribed fire and take Firefighter Type II (FFT2) online training modules, in partial fulfillment of requirements of an Incident Qualification Card (i.e., "red card"). Students will learn how to develop a burn plan for a given property, including assessment of risks, prediction of fire behavior (i.e., BEHAVE model), and estimation of burn effects.

Learning Outcomes: 1. Explain the role of fire in the development of North American ecosystems. 2. Describe fire as a physical and ecological process. 3. Demonstrate the ability to utilize prescribed fire safely. 4. Develop a burn plan to complete a prescribed fire safely and effectively. 5. Evaluate the role of fire as a contemporary management tool. Credits: 3.00

BIOL 58602 - Laboratory In Ecology

Credit Hours: 1.00. This course is intended to complement many of the concepts discussed in BIOL 58601 Ecology Lecture. By studying selected topics in depth, both experimentally and through primary literature, you should gain a greater understanding of ecological principles and the process of science as it is applied to a variety of ecological topics. Permission of department required.

Learning Outcomes: 1. Read and discuss papers from the primary literature. 2. Develop hypotheses and conduct hypotheses testing through discussion of literature and predictions for experiments conducted in class. 3. Write and present on a scientific paper based on experiments conducted in class and lab-related topics. 4. Discuss parametric and non-parametric statistical tests and discuss the proper application of statistical tools. 5. Use multiple field techniques for sampling terrestrial plants, aquatic insects, and avian behavior. Credits: 1.00

Notes

Women's, Gender, & Sexuality Studies Minor

Requirements for the Minor (12 credits)

A. Introductory Course (3 credits)

WGSS 28000 - Women's, Gender, And Sexuality Studies: An Introduction (UCC: BSS/HUM)

Credit Hours: 3.00. An introductory survey of the concepts and research data in the new scholarship on women. Topics covered include biology, sexuality, socialization, family and work, creativity, and politics.

University Core Curriculum (UCC): (UCC: BSS/HUM) Credits: 3.00

B. Women's Studies (3 credits)

ANTH 28200 - Introduction To LGBTQ Studies

Credit Hours: 3.00. (WGSS 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding if the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

WGSS 49900 - Independent Study In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of the instructor in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 49200 - Practicum In Women's, Gender, and Sexuality Studies

Credit Hours: 2.00 to 4.00. This course is designed to integrate knowledge derived from women's studies scholarship with practical experience. Students will define their own projects in consultation with women's studies faculty. Periodic conferences and written reports required. Permission of instructor required.

Credits: 2.00 to 4.00

WGSS 48300 - Feminisms In Global Perspective

Credit Hours: 3.00. Explores feminist struggles through the writings of First and Third World feminist scholars. Focuses on feminist projects within and against colonial, nationalist, religious and global contexts. Includes Third World feminist critiques of Western feminisms.

Credits: 3.00

WGSS 48200 - Interdisciplinary Studies In Sexuality

Credit Hours: 3.00. This course offers an interdisciplinary introduction to recent work in lesbian and gay studies in various fields, including literature, history, film, cultural theory, medicine, law, and studies of sexuality.

Learning Outcomes: 1. Develop an in-depth understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally.

4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

WGSS 48000 - Feminist Theory

Credit Hours: 3.00. Intensive study of a variety of contemporary and international feminist theories from an interdisciplinary perspective. Provides an overview of major trends, critical approaches, and diverse viewpoints in the field of feminist theory.

Credits: 3.00

WGSS 38300 - Women, Work, And Labor

Credit Hours: 3.00. Examines race, class and gender issues as they affect working women in America. Covering women's work from domestic labor to informal economies to factories, topics include women's participation in trade unions, wage inequalities, family leave policies and sexual harassment.

Learning Outcomes: 1. Have acquired a broad comprehension of the work, including economic activity often not recognized as "work", that women typically have performed or is typically associated with women, world-wide and since the onset of industrialization. 2. Be capable of evaluating current global economic and cultural systems that impact what kinds of labor contemporary women perform, the conditions under which they work, and the nature of the gendered systems of labor that prevail in the U.S. and elsewhere. 3. Gain appreciation for the significance of women's unpaid or underpaid care-work, relational work, affective labor, and the "reproductive" labor underpinning global capitalism and industrialism. 4. Place their own personal lives and contexts within an analytical framework informed by feminist, Marxist, and intersectional perspectives on work and labor. Credits: 3.00

WGSS 38200 - Love, Sex And Sexuality

Credit Hours: 3.00. Explores intimate relationships and marriage practices in Western and non-Western societies from a historical and comparative perspective. Examines the changes in love and marriage in Greco-Roman societies, medieval and modern Europe, China, India and the Muslim world, among others.

Credits: 3.00

WGSS 38100 - Women Of Color In The United States

Credit Hours: 3.00. Explores the diversity of racial and ethnic groups in the United States with a particular emphasis on the histories, experiences, and cultural contributions of women of color. Provides a broad introduction to the intersections of gender, race and ethnicity.

Credits: 3.00

WGSS 28200 - Introduction To LGBTQ Studies (UCC: BSS)

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding of the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

WGSS 28100 - Variable Topics In Women's, Gender, And Sexuality Studies

Credit Hours: 1.00 to 4.00. This course examines in-depth particular topics from the introductory course in Women's Studies. It addresses gender issues for both men and women. Possible topics include gender and popular culture, women's bodies, body image, and health, masculinities, queering gender and gender transgression.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and

social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 59900 - Selected Topics In Women's Gender And Sexuality Studies

Credit Hours: 3.00. A study of selected topics taught by an instructor in whose particular field of specialization the content of the course falls. Permission of instructor required.

Learning Outcomes: 1. Understand the influence of men's views and control of women's participation in sport across age, race/ethnicity and sexual orientation. 2. Understand feminist perspectives on sport. 3. Clarify the meaning of one's own sport experience. 4. Appreciate the contributions of pioneering women in creating opportunities for women today. 5. Identify obligations to those in future generations regarding access to future sport participation. 6. Understand and appreciate the differences in experiences and perceptions of others through group work and class discussions. 7. Lean how gender ideologies impact women and men's access to sport. 8. Interrogate masculinity and femininity in order to understanding how gender is constructed in and through sport. 9. Enhance students critical thinking and analytical skills Credits: 3.00

WGSS 39000 - Variable Topics In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Variable topics under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.

Learning Outcomes: 1. Appreciate the ideological work that entertainment and mass cultural texts such as popular films perform. 2. Analyze popular visual texts including film and video for the meanings and power relations they invoke. 3. Apply feminist and queer theorizing of

gender, gender identity, and sexuality to visual texts. 4. Assess the intersectional impact that popular film and cinema have had on women and sexual minorities. 5. Understand the ways that American popular film, particularly those produced in Hollywood for mass distribution, has shared American culture and global relationships since the inception of cinema in the late 19th century. Credits: 3.00

C. Selectives - Choose Two (6 credits)

PUBH 22500 - Contemporary Women's Health

Credit Hours: 3.00. Examines behavioral, psychological, and sociocultural aspects of women's experience in healthcare systems. Includes the influence of factors such as age, social class, and ethnicity on women's roles as recipients and providers of health care.

Credits: 3.00

PSY 23900 - The Psychology Of Women

Credit Hours: 3.00. The purpose of the course is to provide an overview of the psychology of women. Topics include stereotyping, women and achievement, aggression and power, the psychological concept of androgyny, and attitudes toward feminism.

Credits: 3.00

AAS 37000 - Black Women Rising

Credit Hours: 3.00. This course examines the rise of black women and their impact on economic, social, and cultural issues.

Credits: 3.00

AAS 35900 - Black Women Writers

Credit Hours: 3.00. (ENGL 35900) This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

ANTH 23000 - Gender Across Cultures (UCC: BSS)

Credit Hours: 3.00. Explores gender and sexuality from a cross-cultural perspective. Draws on case studies to explore the complexities of women's and men's lives. Examines gender hierarchies, gender in a globalized world, and the cultural construction of sexuality and gender.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain how culture influences the social constructions of sex, gender, and sexuality. 2. Recognize the diversity of genders and sexualities globally and over time. 3. Demonstrate understanding of how gender intersects with other social processes and institutions. 4. Identify the role of power structures, violence, and inequity in constructing and maintaining gender conventions. Credits: 3.00

AD 30701 - History Of Contemporary Photography

Credit Hours: 3.00. This course examines evolution of major themes in contemporary photography (Digital era to Present) from a variety of aesthetic, social, and cultural perspectives, fostering an awareness of pertinent theoretical issues.

Learning Outcomes: 1. Learning the history of contemporary art photography from the digital revolution to present. 2. Learning photography's multiple roles including technique and utilitarian function, sociopolitical context, and aesthetics, especially photography in the digital age. 3. Ability to recognize the characteristics of significant photographic works from 1980-present. 4. Understanding of how photographic pictures may reflect ideas and values of a given culture period. Credits: 3.00

CLCS 23700 - Gender And Sexuality In Greek And Roman Antiquity (UCC: HUM)

Credit Hours: 3.00. How identities based on gender, sexual behavior and sexual desire, and socio-economic status are established in ancient Greece and Rome. Exploration of why these ancient views of gender and sexuality remain of continuing importance in the 21st century. All readings in English.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Learn core information about ancient Greek and/or Roman cultures. 2. Learn to analyze gender identities and conventions surrounding sexuality in various

communities with different socio-political structures. 3. Develop methods for historically sensitive investigation of materials (literary and/or visual) from ancient cultures. 4. Systematically improve analytical skills as writers, readers, and speakers. Credits: 3.00

COM 38100 - Gender And Feminist Studies In Communication

Credit Hours: 3.00. This course examines the ways in which communication constructs and maintains our conceptions of gender. It explores different approaches to the study of gender and feminist issues in public, organizational, and mass communication.

Credits: 3.00

ENGL 36000 - Gender And Literature (UCC: HUM)

Credit Hours: 3.00. An introduction to feminist approaches to the study of literature, including poetry, drama, fiction, and/or autobiography. Examines how gender intersects with race, ethnicity, sexual orientation, and class in shaping authorship, reading, and representation.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ENGL 46000 - Studies In Women's Literature

Credit Hours: 3.00. A study of literary works by women according to a specific theme, historical period, genre, or culture, e.g., Nineteenth-Century Women Novelists, Madness in Women's Writing, Caribbean Women Writers. May be repeated only with different topic.

Credits: 3.00

HIST 32900 - History Of Women In Modern Europe (UCC: HUM)

Credit Hours: 3.00. This course examines women's experiences and constructions of femininity in Europe from 1789 to the present, including women in revolutions, state intervention in the family, changing ideas of sexuality, women's movements, women in socialism and fascism, and women in war.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Students will understand the history of women in modern Europe from 1789 to the present by analyzing women's experiences and the social and cultural constructions of femininity as well as the different contexts of class, ethnicity, and nationality in the history of European women. 2. They will think historically and critically about women's participation in revolutions; state interventions in the family; working lives of women; ideals and practices of sexuality; the middle-class model of domesticity and women's responses to it; the role of women and femininity in imperialism; women in socialism, under fascism, and in the transition from communism to capitalism; women's experiences of two world wars; and the rise of feminist movements and contemporary feminisms in Europe. 3. Students will understand the difference between secondary and primary sources. They will read and interpret primary source materials, including fiction, autobiography, and other historical documents including those written by women. 4. Students will develop their critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 37500 - Women In America Since 1870 (UCC: HUM)

Credit Hours: 3.00. A survey of the history of women in the United States from 1870 to the present.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 47700 - Native American Women's History

Credit Hours: 3.00. This course studies the history of indigenous women in North America from pre-contact to the present era, examining their roles through the experience of colonization and decolonization underscoring issues of sovereignty, identity, activism, kinship, public images, and stereotypes.

Credits: 3.00

HIST 48800 - History Of Sexual Regulation In The United States

Credit Hours: 3.00. This course will illuminate broad themes in the historical regulation of sexual violence, consensual sex, and homosexuality. Student will understand and analyze how cultural, social, religious, and moral ideologies have influenced conceptions of deviant and normative sexuality in the United States.

Learning Outcomes: 1. Students will be able to

articulate verbally and in writing what they have learned about the nineteenth and twentieth century history of sexual regulation. 2. Students will be able to identify and analyze the cultural and religious values which informed sexual regulation. 3. Students will develop a deeper understanding of how regulations and reform worked by conducting primary source research and synthesizing it into written arguments. Credits: 3.00

LC 23900 - Women Writers In Translation (UCC: HUM)

Credit Hours: 3.00. An examination of international female writers' literary creativity in the context of women's studies and feminist theory, as articulated in their specific cultural and geographical milieu. Course content will vary in terms of cultural focus. In English.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Develop skills in writing, reading, critical thinking, and oral expression. 2. Gain knowledge of female literary traditions in different geographical milieu and time periods. 3. Increase awareness of the ways in which women writers reflect upon and resist stereotypes of women in literature, and how this process may differ across cultures. 4. Understand fundamental concepts in women's gender and sexuality studies. Credits: 3.00

PHIL 22500 - Philosophy And Gender (UCC: HUM)

Credit Hours: 3.00. An examination of the beliefs, assumptions, and values found in traditional and contemporary philosophical analyses of women. A range of feminist approaches to knowledge, values, and social issues will be introduced.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Improved knowledge of human cultures, creative thinking, critical thinking, integrative learning. Credits: 3.00

POL 22200 - Women, Politics, And Public Policy (UCC: BSS)

Credit Hours: 3.00. An introduction to women's participation in politics, with an emphasis on America. Structural and attitudinal conditions limiting women's political roles and contemporary efforts to change women's status in society through politics.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

POL 36000 - Women And The Law (UCC: BSS)

Credit Hours: 3.00. An introductory survey of women's legal status in America. Topics include constitutional law, marriage and divorce, reproductive rights, employment discrimination, and crimes of violence.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

SOC 35000 - Sociology Of Family

Credit Hours: 3.00. Designed to provide an understanding of contemporary courtship, marriage, and family interaction as cultural, social, and social-psychological phenomena. Consideration of the major sources of marital strain and conflict within a heterogeneous, rapidly changing society.

Learning Outcomes: 1. Articulate the contours of health disparities in the contemporary US. 2. Hold an informed discussion about current debates surrounding the organization of the health care system. 3. Understand the experiences of people suffering from chronic illness. Credits: 3.00

SOC 45000 - Gender Roles In Modern Society

Credit Hours: 3.00. A critical examination of the complementary roles of men and women, with particular attention to problems of role adjustment in the contemporary United States. The neofeminist movement and countermovements. Role conflicts and adjustments in such areas as family, education, employment, and the political arena.

Credits: 3.00

WGSS 38300 - Women, Work, And Labor

Credit Hours: 3.00. Examines race, class and gender issues as they affect working women in America. Covering women's work from domestic labor to informal economies to factories, topics include women's participation in trade unions, wage inequalities, family leave policies and sexual harassment.

Learning Outcomes: 1. Have acquired a broad comprehension of the work, including economic activity often not recognized as "work", that women typically have performed or is typically associated with women, world-wide and since the onset of industrialization. 2. Be capable of

evaluating current global economic and cultural systems that impact what kinds of labor contemporary women perform, the conditions under which they work, and the nature of the gendered systems of labor that prevail in the U.S. and elsewhere. 3. Gain appreciation for the significance of women's unpaid or underpaid care-work, relational work, affective labor, and the "reproductive" labor underpinning global capitalism and industrialism. 4. Place their own personal lives and contexts within an analytical framework informed by feminist, Marxist, and intersectional perspectives on work and labor. Credits: 3.00

WGSS 38200 - Love, Sex And Sexuality

Credit Hours: 3.00. Explores intimate relationships and marriage practices in Western and non-Western societies from a historical and comparative perspective. Examines the changes in love and marriage in Greco-Roman societies, medieval and modern Europe, China, India and the Muslim world, among others.

Credits: 3.00

WGSS 38000 - Comparative Studies In Gender And Culture (UCC: BSS)

Credit Hours: 3.00. This course expands students' understanding of gender issues by exploring the multicultural diversity of women's lives. It examines how race, class, sexuality, and culture interact and shape society and ecology in the United States and in a global context.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the diversity of feminist thought within the U.S. and globally. 2. Summarize the following concepts: 1) sex and gender; 2) social construction and essentialism; 3) oppression; 4) privilege; 6) resistance and social activism. 3. Analyze how gender operates as system of social stratification and differentiation in major arenas of social life such as home and family, work, politics, education, and sexuality across various cultural contexts. 4. Define some of the multi and trans-cultural interactions among gender, race, class, sexuality, and national belonging and some of the ways in which ""woman/women"" and ""man/men"" is a constructed category that is historically and culturally shaped. 5. Demonstrate an understanding of activist awareness and commitment to women's and LGBTQ+ issues from a multi/trans-cultural and global perspective. 6. Make explicit connections between matters discussed in this class and the events and interactions of your daily life. Credits: 3.00

WGSS 28200 - Introduction To LGBTQ Studies (UCC: BSS)

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding of the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

ENGL 59700 - Contemporary Black Feminist Literature

Credit Hours: 3.00. An intense examination of recent literary works by black women along with various critical theories constructed about black women's literature, beginning with the premise that black feminism is a "sign to be interrogated, a locus of contradictions."

Credits: 3.00

POL 52400 - Public Policy And The Family

Credit Hours: 3.00. An intensive examination of the interrelationships between public policy making and the structure and quality of life of families. The primary focus is the United States, but consideration is given to family policies in other capitalist nations.

Credits: 3.00

SPAN 54900 - Hispanic Women Writers

Credit Hours: 3.00. A survey of the literature of Hispanic women writers from Latin America, the Caribbean, and Spain in light of their traditions and of feminist literary theory and criticism. Permission of instructor required.

Learning Outcomes: 1. Discuss female characters from an informed perspective, whether applying feminist theories or not . 2. Compare and contrast literary innovations of male and female writers in literary movement since Modernity Credits: 3.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.

Learning Outcomes: 1. Appreciate the ideological work that entertainment and mass cultural texts such as popular films perform. 2. Analyze popular visual texts including film and video for the meanings and power relations they invoke. 3. Apply feminist and queer theorizing of gender, gender identity, and sexuality to visual texts. 4. Assess the intersectional impact that popular film and cinema have had on women and sexual minorities. 5. Understand the ways that American popular film, particularly those produced in Hollywood for mass distribution, has shared American culture and global relationships since the inception of cinema in the late 19th century. Credits: 3.00

Notes

Wood Products Manufacturing Technology Minor

Requirements for the Minor (15 credits)

Required Courses (9 credits)

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses.

Learning Outcomes: 1. Learn the identifying macro characteristics of commercially important woody biomaterials (color, odor, cellular arrangement, grain patterns, character marks, etc.) through laboratory exercises and field trips.

2. Learn the cellular structure and arrangement of woody biomaterials. 3. Know the manufacturing characteristics and uses of woody biomaterials. 4. Identify upon sight the major commercial hardwood and softwood species produced in North America. Credits: 3.00

FNR 48410 - Sustainable Wood Products, Furniture Design And Manufacturing

Credit Hours: 3.00. This project-based course explains principles of product development, furniture construction, strength design, performance testing, and product sustainability (life cycle analysis and end-of-life options). The course familiarizes students with methods such as Computer-Aided Design (CAD), Computer-Aided Manufacturing (CAM), Computer Numerical Control (CNC) router operation, rapid prototyping, and basics of secondary wood products manufacturing, to build an actual product.

Learning Outcomes: 1. Understand Computer Aided Design (CAD). 2. Understand Computer Aided Manufacturing (CAM). 3. Understand CNC router operation. 4. Understand rapid prototyping. 5. Understand the basics of secondary wood products manufacturing. 6. Understand the principles of sustainable product development. Credits: 3.00

Selective Courses (6 credits)

FNR 41910 - Furniture Product Development And Strength Design

Credit Hours: 3.00. Qualitative and quantitative principles of furniture construction, product development methodology and strength design principles, furniture performance testing, product sustainability and end of life options (LCA, computer-based applications and solutions). Course features laboratory evaluating, furniture joints and furniture structures.

Learning Outcomes: 1. Identify and specify appropriate furniture constructions. 2. Determine whether furniture has adequate strength, stiffness, and durability. 3. Determine whether furniture will meet existing performance standards. 4. Determine product sustainability. Credits: 3.00

AD 49000 - Special Problems In Art And Design

Credit Hours: 1.00 to 6.00. Individual problems in art and design. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 6.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed.

Learning Outcomes: 1. Explain key concepts of operations planning and management. 2. Explain the importance of enterprise resource planning (ERP) in technology systems management and supply chain operations. 3. Apply quantitative methods to solve operations management problems. 4. Define a problem, develop solution alternatives, and communicate findings to appropriate audiences. Credits: 3.00

IET 43540 - Facilities Planning And Material Handling

Credit Hours: 3.00. This course takes a systematic approach to design of facilities and material handling systems for effective and lean production of goods and services. An array of qualitative and quantitative tools and techniques are introduced and utilized, emphasizing lean principles, waste reduction, and overall efficiency of operations. Flow analysis and optimization tools, including computer simulation, are introduced. Strong emphasis is placed on a comprehensive semester-long team project as an integral component of this course.

Learning Outcomes: 1. Calculate various elements of time study and Takt time. 2. Apply various flow analysis tools. 3. Apply the principles of line balancing. 4. Calculate the efficiency of an assembly line. 5. Calculate facility space requirements. 6. Develop a systematic approach to layout and resource planning, incorporating basic material handling systems. Credits: 3.00

AD 53500 - Furniture Design

Credit Hours: 3.00. Examination of furniture design trends and designers. Explore materials and manufacturing processes. Design and build a full-size seating unit. Shop skills required. Permission of instructor required.

Credits: 3.00

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

Post-Baccalaureate Certificate

Advanced Methodologies in the Behavioral, Social, and Health Sciences, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (12 credits)

Quantitative Courses

COM 62511 - Survey Design, Analysis, And Reporting For Strategic Communication

Credit Hours: 3.00. This course provides students with an overview of quantitative research in public relations with a particular emphasis on survey design analysis. The course will cover the design and delivery of questionnaires, the use and interpretation of descriptive and inferential statistical methods, and reporting of quantitative results. The course will consider practical applications of these methods in professional strategic communication contexts. Prerequisite: COM 60411 Permission of department required.

Learning Outcomes: 1. Identify the types of questions that survey research is best suited to answer. 2. Develop effective survey instruments for measuring a wide range of attitudes, behaviors, and beliefs related to strategic communication. 3. Recognize the pros and cons of different sampling and survey distribution methodologies as they apply to different research protocols. 4. Demonstrate an understanding of common statistical approaches for analyzing survey data. 5. Apply survey methodologies to answer practical questions in the context of strategic communication. Credits: 3.00

COM 68200 - Seminar: Special Topics In Quantitative Research

Credit Hours: 3.00. Intensive study, varying from semester to semester, of different aspects and applications of quantitative research in communication. Prerequisite: COM 58200

Credits: 3.00

HDFS 62700 - Multilevel Modeling In Developmental And Family Research

Credit Hours: 3.00. This course gives students a basic grounding in the class of statistical techniques known as multilevel modeling (MLM), also known as hierarchical linear modeling (HLM), mixed models, or random coefficient models. Primary discussions will be on applications of these models to the study of marriages, relationships, families, aging, and child and adult development, but also will touch on biomedical, educational, and economic examples. The focus is on three types of multilevel models: growth-curve models, organizational models, and daily experience models. Students will also learn how to use SAS Proc Mixed for conducting MLM analyses. Students are assumed to have taken at least two graduate statistics courses and have a solid understanding of regression analysis. Prerequisites: STAT 50100 and STAT 50200 or HDFS 61300 and PSY 63100 .

Learning Outcomes: 1. Acquire a basic-to-intermediate understanding of the logic of multi-level modeling, grasp the underpinning statistics of MLM, and develop a sense as to when (and when not) to use the model. 2. Apply MLM to relevant questions in their area of research interest. 3. Critically read and evaluate empirical journal articles that use MLM. 4. Acquire basic programming skills for conducting MLM. 5. Select the appropriate methods of data analysis, given multivariate data and study objectives. 6. Employ statistical software to carry out statistical analyses, 7. Interpret and explain the results of statistical analyses, and 8. Write concise and effective summaries of results using APA style. Credits: 3.00

HDFS 62800 - Structural Equation Modeling

Credit Hours: 3.00. This course provides an introduction to classic structural equation models with latent variables (SEM).

The primary steps of implementing SEMs will be covered to include: model specification, model identification, parameter estimation, and model evaluation (model fit). Background training in statistical regression is required. Permission of instructor required.

Learning Outcomes: 1. Develop a basic understanding of structural equation models including proper application, interpretation, and evaluation of the models. 2. Develop an understanding of the underlying statistics including parameter identification and estimation as well as model fit measures. 3. Learn the benefits of SEMs including when it is advantageous to use this modeling approach. 4. Learn the limitations of the model and the most common mistakes in using SEMs. 5. Be able to apply the method to a topic relevant to your own research. 6. Be able to analyze SEM models using a SEM software package. Credits: 3.00

PSY 60600 - Special Topics In Quantitative Psychology

Credit Hours: 3.00. A seminar covering such topics as linear models, statistical decision-making, and multidimensional scaling. Permission of instructor required.

Credits: 3.00

PSY 60700 - Scaling And Measurement

Credit Hours: 3.00. An introduction to the theory of measurement and a survey of modern scaling methods (unidimensional and multidimensional, metric and nonmetric) within the framework of the modern theory of measurement. Some prior exposure to elementary matrix and set algebra is recommended.

Credits: 3.00

PSY 60800 - Measurement Theory And The Interpretation Of Data

Credit Hours: 3.00. The theory of measurement and the development of reliability and the Spearman-Brown equations, true scores and variables, and correction for attenuation. Variance or covariance of combinations of variables. Item analysis and test construction strategies. Reliability and validity of measurements and the influence of measurement error and measurement threats to research design. Prerequisite: PSY 60000 .

Credits: 3.00

PSY 61000 - Multivariate Analysis In The Behavioral Sciences

Credit Hours: 3.00. This is an advanced doctoral-level statistics course that examines the application of multivariate methods to the analyses of organizational data. Topics include: matrix algebra, the general linear model, multivariate analysis of variance, canonical correlation, discriminant function analysis, and factor/component analysis. Prerequisite: Grade of B or higher in (PSY 60000 and PSY 60100) or (STAT 51200 and STAT 51400) or (HDFS 68500 and PSY 63100).

Learning Outcomes: 1. Develop a broad theoretical understanding of multivariate analyses, applied skills necessary to incorporate multivariate analytic techniques into their research activities, and mathematical foundations of these topics that will allow the student to pursue advanced training and research in these areas. Credits: 3.00

SOC 60900 - Seminar In Sociology

Credit Hours: 3.00. Topics vary.

Credits: 3.00

SOC 68100 - Selected Problems Of Social Research

Credit Hours: 3.00. Working with already available data, each student will conduct one or more research projects, including conceptualization, operational procedures, analysis of the data, and report writing. The data to be used may be from surveys, small group studies, organizational studies, or written documents. Prerequisite: SOC 60000 or SOC 68000 . Permission of instructor required.

Credits: 3.00

PSY 67400 - Structural Equation Modeling

Credit Hours: 3.00. This is an advanced course in structural equation modeling (SEM), intended to provide doctoral students with an introductory treatment of the theory and methods of SEM. SEM is a statistical methodology that encompasses a wide variety of models, including path models, exploratory and confirmatory factor models, structural regression models, and latent growth models, among others. Prerequisites: PSY 61000 is highly recommended but not required. Permission of department required.

Learning Outcomes: 1. Obtain a basic-to-intermediate understating of the logic of SEM and grasp the underpinning statistics of SEM. 2. Critically read and evaluate empirical journal

articles that use SEM. 3. Develop the ability to apply SEM (and the correct model) to relevant questions in their area of research interest. 4. Acquire Programming skills for conducting SEM. Credits: 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

NUR 69200 - Applied Statistics In Healthcare Research

Credit Hours: 3.00. This course advances knowledge and skills in statistical approaches for analyzing complex healthcare data. It focuses on statistical analysis in contexts such as evidence-based practice, quality improvement, evaluation, and behavioral and population health. Topics include probability and descriptive statistics, nonparametric statistics, risk and odds ratios, sensitivity and specificity, logistic and multinomial regression, multiple linear regression, general linear models, survival and time-to-event analysis, and mixed effect modeling. The course will provide hands-on experience in statistical analysis of healthcare data. Prerequisites: Introductory course in statistics or biostatistics at the advanced undergraduate or graduate level.

Credits: 3.00

PSY 62601 - Bayesian Statistics For Psychological Sciences

Credit Hours: 3.00. The course will explain why you might want to use Bayesian methods instead of frequentist methods (such as t-tests, ANOVA, or regression). We discuss the basic properties and methods of Bayesian analysis and have many activities to show how Bayesian analyses are used. Prerequisites: PSY 60000 and PSY 60100. Permission of department required.

Learning Outcomes: 1. Understand some challenges with traditional statistical analyses, especially optional stopping. 2. Able to run various Bayesian analyses. 3. Able to extract information from Bayesian-calculated posteriors. 4. Able to set appropriate priors for their analyses. Credits: 3.00

PSY 60901 - Multilevel Modeling

Credit Hours: 3.00. This course familiarizes students with (1) generalized linear mixed (multilevel) models that are often used in the social sciences, and (2) best practices in the models' applications and interpretations. These models are extensions of classic linear regression models, and they go by many names: multilevel modes, hierarchical models, mixed models, etc. Throughout the course, models and methods will be introduced conceptually and will be illustrated using real and simulated data. Prerequisites: graduate coursework in regression and ANOVA, or by permission. Permission of department required.

Learning Outcomes: 1. Knowledge of linear and generalized multilevel models. 2. Able to competently apply and interpret such models in the analysis of their own research data. Credits: 3.00

ANTH 52300 - GIS For Humanities And Social Science Research

Credit Hours: 3.00. This course will introduce students the skills of spatial thinking, basic functions of Geography Information Systems (GIS), and spatial research methods that are most relevant to humanities and social science. The course will start with an introduction to basic GIS concepts and technology, then move onto GIS applications during the research process, including spatial research design, data acquisition, management, visualization, and spatial analytical techniques. Practical work will be introduced and completed using ESRI ArcGIS Pro software.

Learning Outcomes: 1. Understand the basics of mapping and geospatial information using ArcGIS Pro. 2. Apply spatial research methods into your own research. 3. Produce professional maps to visualize spatial data. 4. Document and manage spatial data using a standardized way. 5. Understand several spatial analysis methods that are relevant to your research area. 6. Create a web- or mobile-based GIS application using ArcGIS Online. Credits: 3.00

ILS 63000 - Digital Humanities Foundations

Credit Hours: 3.00. This course introduces graduate students to the core theoretical and practical components of Digital Humanities. Students engage key theoretical texts in weekly seminars and practice central methodologies in weekly work sessions.

Learning Outcomes: 1. Learn the basic vocabulary and concepts in digital humanities. 2. Gain familiarity with digital humanities projects, critical work, resources in the field, and hands-on experience of building a scholarly digital research project. 3. Gain experience working collaboratively with others on a joint project. 4. Perform critical, formal analyses of DH projects, digital media, and digital tools. 5. Write focused, analytical essays in clear, grammatical prose. 6. Employ logic, creativity, and interpretive skills to produce original, persuasive arguments. 7. Gain familiarity with digital tools and media used in in the field of digital humanities to create new knowledge of humanities subjects. Credits: 3.00

CE 50801 - Geographic Information Systems

Credit Hours: 3.00. This course covers a range of fundamentals in geographic information science and technology. Students will learn the use of current popular geographic information system (GIS) tools to handle various geographic data. Through working on real world geospatial problems, students shall gain extensive and hands-on experience in geographic data manipulation, visualization, and analysis. Course assignments are focused on both GIS theoretical basics and practical skills for students to achieve expected proficiency. The course will work with geospatial data in geography, topography, environmental science, hydrology, transportation, and geosocial science. It is targeted to students with interest in civil and environmental engineering, agriculture, geography, earth science, natural resources, smart cities or other related subjects.

Learning Outcomes: 1. Demonstrate a comprehensive and in-depth understanding of GIS fundamentals. 2. Effectively collect and handle various geographic data. 3. Exhibit a proficient command of popular GIS software tools. 4. Conduct GIS mapping, database design, analysis and visualization tasks independently. Credits: 3.00

ILS 65000 - Introduction To Computational Text Analysis

Credit Hours: 3.00. This course provides an introduction to the methods, debates, and tools of computational text analysis, specifically crafted for the humanities and social science graduate students.

Learning Outcomes: 1. Recognize and assess the possibilities for computational text analysis for research. 2. Find and implement code for text analysis projects. 3. Experiment with both existing and original code. 4. Appraise and critique the limits of computational text analysis for research. 5. Design original projects using course lessons. Credits: 3.00

Qualitative Courses

COM 58500 - Qualitative Methods In Communication Research

Credit Hours: 3.00. An introduction to qualitative research methods in communication studies. Provides students with an overview of several techniques for, and issues in, gathering, analyzing, writing-up, and using qualitative data. Department permission required.

Learning Outcomes: 1. Examine the philosophical assumptions, theoretical traditions and epistemology of qualitative methods in the field of communication. 2. Understand various approaches to qualitative inquiry, particularly entailing narrative research, phenomenological research, grounded theory research, ethnographic research, and case study research. 3. Critique written qualitative research in communication journals and identify ways to improve them. 4. Develop skills and techniques to design a qualitative research project, which includes the process of getting IRB approval, collecting and analyzing qualitative data, and writing up qualitative findings. Credits: 3.00

COM 62411 - Focus Groups And Interviewing For Strategic Communication

Credit Hours: 3.00. This course provides students with an overview of qualitative research in public relations with a particular emphasis on focus group and interview

methodologies. The course will consider practical applications of these protocols in strategic communication contexts. Prerequisite: COM 60411 Permission of department required.

Learning Outcomes: 1. Identify the types of questions that qualitative research seeks to answer. 2. Determine the relative value of focus groups or interview data as a mechanism for answering research questions and protocols. 3. Develop interview and focus group protocols for collecting qualitative data in strategic communication contexts. 4. Utilize strategies for interpreting qualitative data and reporting it systematically. 5. Conduct effective interviews and focus groups for a strategic communication project. Credits: 3.00

ANTH 60500 - Seminar In Ethnographic Analysis

Credit Hours: 3.00. Focuses on ethnographic research design, methodology, and ethics, discussing the appropriate selection of any method. Students gain experience with the varieties of ethnographic practice across anthropology and sibling sciences, the generation and analysis of data, and the writing up of ethnographic and of other qualitative research.

Learning Outcomes: 1. Meet the Graduate School learning objectives of knowledge, communication, critical thinking, and ethical research through the goals listed here. 2. Learn about qualitative research design, ethics and methods. 3. Understand when and how to appropriately select qualitative and quantitative methods and identify how and when to use them. 4. Gain an understanding on how anthropologists across the subfields and other scholars use and apply qualitative methods. 5. Gain experience in generating and analyzing qualitative data, including being exposed to common qualitative software packages (such as NVivo). 6. Achieve qualitative literacy for understanding and working in a mixed methods environment. Credits: 3.00

SOC 60900 - Seminar In Sociology

Credit Hours: 3.00. Topics vary.

Credits: 3.00

SOC 68100 - Selected Problems Of Social Research

Credit Hours: 3.00. Working with already available data, each student will conduct one or more research projects, including conceptualization, operational procedures, analysis of the data, and report writing. The data to be used may be from surveys, small group studies, organizational studies, or written documents. Prerequisite: SOC 60000 or SOC 68000 . Permission of instructor required.

Credits: 3.00

SOC 68600 - Qualitative Methods

Credit Hours: 3.00. Surveys qualitative research methods. Considers methods of data collection and data analysis, including computer-assisted techniques. Critical examination of perspectives, assumptions, and issues, including protection of human subjects. Students conduct research projects and write papers using techniques encountered in class. Prerequisite: SOC 58000 .

Credits: 3.00

TECH 69700 - Qualitative Research Methods In Technology Studies

Credit Hours: 3.00. In-depth examination of qualitative methods and frameworks used in technology research. Students learn by application a variety of methods from the qualitative research toolbox such as interviewing, focus groups, observation, and experience analysis. TECH 69700 prepares students to plan, pilot, and assess an original qualitative research study and to integrate qualitative research findings in the technology design and evaluation process. Permission of instructor required.

Learning Outcomes: 1. Explain the epistemological assumptions underlying qualitative research methods. 2. Identify and evaluate various types of qualitative research techniques. 3. Plan a research study using qualitative research methods. 4. Conduct a research study using qualitative research methods. 5. Write up a qualitative research scholarly paper. 6. Assess and analyze the validity of qualitative research. Credits: 3.00

POL 60800 - Qualitative Methods In Political Science

Credit Hours: 3.00. This course is an introduction to the use of qualitative methods in political science. In addition to a detailed consideration of several leading qualitative approaches to political research, the course will also consider the distinctive issues of research design for qualitative research as well as the

relationship of qualitative and quantitative methods. Prerequisite: POL 50100 Political Science Methodology or equivalent or consent of instructor.

Learning Outcomes: 1. Know and understand the different perspectives and epistemologies related to qualitative research. 2. Know and understand the primary components of qualitative research design. 3. Recognize and apply the common tools for the collection and analysis of qualitative data. 4. Understand the distinctive ethical issues that can arise in qualitative research. 5. Create and compose a research proposal with a substantial qualitative methods component. Credits: 3.00

ANTH 64000 - Foundations And Frameworks: Applying Anthropology

Credit Hours: 3.00. This course focuses on using anthropology to address social issues. The course examines topics including: the history of anthropologists working in applied settings, the relationship between theory and practice, professional ethics, job opportunities, and skills needed as anthropological practitioners. Students should have some background in anthropology if coming from another discipline e.g. prior coursework or relevant experience as determined by instructor.

Learning Outcomes: 1. Identify key questions and concerns in applied anthropology. 2. Speak about the relationship of anthropological theory and practice and how that relationship has been discussed in the discipline. 3. Know about a series of anthropological practice areas and their progression over time. 4. Analyze your own development as an anthropologist by doing career related research and self-reflexive writing in the course. Credits: 3.00

ANTH 64200 - Public Engagement: Using Anthropological Knowledge

Credit Hours: 3.00. This course is about using and communicating anthropological knowledge. We will discuss what it means to work as an anthropologist and public intellectual. Effectively working with stakeholders, presenting information, offering solutions for addressing problems and implementing change are addressed. Students should have some background in anthropology if coming from another discipline e.g. prior coursework or relevant experience as determined by instructor.

Learning Outcomes: 1. Know how to convey your anthropological ideas and findings for multiple purposes and audiences. 2. Be familiar with how some well-known anthropologists have had broad influence inside and outside our discipline. 3. Prepare your anthropological data and information for disseminating to different audiences and outlets. 4. Develop your anthropological critical thinking, writing and presentation skills to become a more effective anthropological communicator. 5. Consider the most successful ways for being an engaged anthropologist in your own areas of interests. Credits: 3.00

ANTH 64100 - Discovery And Design: Making Projects Work

Credit Hours: 3.00. This course is about using anthropology to make projects work. Students will learn anthropological approaches and methods to discover salient aspects of a design problem and use this understanding to devise responses. Anthropological discovery, design and delivery processes are demonstrated. Students should have some background in anthropology if coming from another discipline e.g. prior coursework or relevant experience as determined by instructor.

Learning Outcomes: 1. Be able to use Rapid Assessment Procedures (RAP), the Delphi Technique, Domain Analysis and Cross-Cultural Survey Design. 2. Understand how community projects are put together from goals and objectives, strategies implementation plans and monitoring and evaluation and be able to use that knowledge in effectively designing projects. 3. Write a funding proposal that clearly explains the purpose, impact, and essential features of the project in order to secure funding or other essential support. 4. Apply the skills of anthropological discovery and design in your own practice area of interest. Credits: 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data

visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

Quantitative Courses

COM 62511 - Survey Design, Analysis, And Reporting For Strategic Communication

Credit Hours: 3.00. This course provides students with an overview of quantitative research in public relations with a particular emphasis on survey design analysis. The course will cover the design and delivery of questionnaires, the use and interpretation of descriptive and inferential statistical methods, and reporting of quantitative results. The course will consider practical applications of these methods in professional strategic communication contexts. Prerequisite: COM 60411 Permission of department required.

Learning Outcomes: 1. Identify the types of questions that survey research is best suited to answer. 2. Develop effective survey instruments for measuring a wide range of attitudes, behaviors, and beliefs related to strategic communication. 3. Recognize the pros and cons of different sampling and survey distribution methodologies as they apply to different research protocols. 4. Demonstrate an understanding of common statistical approaches for analyzing survey data. 5. Apply survey methodologies to answer practical questions in the context of strategic communication. Credits: 3.00

COM 68200 - Seminar: Special Topics In Quantitative Research

Credit Hours: 3.00. Intensive study, varying from semester to semester, of different aspects and applications of quantitative research in communication. Prerequisite: COM 58200

Credits: 3.00

HDFS 62700 - Multilevel Modeling In Developmental And Family Research

Credit Hours: 3.00. This course gives students a basic grounding in the class of statistical techniques known as multilevel modeling (MLM), also known as hierarchical linear modeling (HLM), mixed models, or random coefficient models. Primary discussions will be on applications of these models to the study of marriages, relationships, families, aging, and child and adult development, but also will touch on biomedical, educational, and economic examples. The focus is on three types of multilevel models: growth-curve models, organizational models, and daily experience models. Students will also learn how to use SAS Proc Mixed for conducting MLM analyses. Students are assumed to have taken at least two graduate statistics courses and have a solid understanding of regression analysis. Prerequisites: STAT 50100 and STAT 50200 or HDFS 61300 and PSY 63100 .

Learning Outcomes: 1. Acquire a basic-to-intermediate understanding of the logic of multi-level modeling, grasp the underpinning statistics of MLM, and develop a sense as to when (and when not) to use the model. 2. Apply MLM to relevant questions in their area of research interest. 3. Critically read and evaluate empirical journal articles that use MLM. 4. Acquire basic programming skills for conducting MLM. 5. Select the appropriate methods of data analysis, given multivariate data and study objectives. 6. Employ statistical software to carry out statistical analyses, 7. Interpret and explain the results of statistical analyses, and 8. Write concise and effective summaries of results using APA style. Credits: 3.00

HDFS 62800 - Structural Equation Modeling

Credit Hours: 3.00. This course provides an introduction to classic structural equation models with latent variables (SEM). The primary steps of implementing SEMs will be covered to include: model specification, model identification, parameter estimation, and model evaluation (model fit). Background training in statistical regression is required. Permission of instructor required.

Learning Outcomes: 1. Develop a basic understanding of structural equation models including proper application, interpretation, and evaluation of the models. 2. Develop an

understanding of the underlying statistics including parameter identification and estimation as well as model fit measures. 3. Learn the benefits of SEMs including when it is advantageous to use this modeling approach. 4. Learn the limitations of the model and the most common mistakes in using SEMs. 5. Be able to apply the method to a topic relevant to your own research. 6. Be able to analyze SEM models using a SEM software package. Credits: 3.00

PSY 60600 - Special Topics In Quantitative Psychology

Credit Hours: 3.00. A seminar covering such topics as linear models, statistical decision-making, and multidimensional scaling. Permission of instructor required.

Credits: 3.00

PSY 60700 - Scaling And Measurement

Credit Hours: 3.00. An introduction to the theory of measurement and a survey of modern scaling methods (unidimensional and multidimensional, metric and nonmetric) within the framework of the modern theory of measurement. Some prior exposure to elementary matrix and set algebra is recommended.

Credits: 3.00

PSY 60800 - Measurement Theory And The Interpretation Of Data

Credit Hours: 3.00. The theory of measurement and the development of reliability and the Spearman-Brown equations, true scores and variables, and correction for attenuation. Variance or covariance of combinations of variables. Item analysis and test construction strategies. Reliability and validity of measurements and the influence of measurement error and measurement threats to research design. Prerequisite: PSY 60000 .

Credits: 3.00

PSY 61000 - Multivariate Analysis In The Behavioral Sciences

Credit Hours: 3.00. This is an advanced doctoral-level statistics course that examines the application of multivariate methods to the analyses of organizational data. Topics include: matrix algebra, the general linear model, multivariate analysis of variance, canonical correlation, discriminant function analysis, and factor/component analysis. Prerequisite: Grade of B or higher in (PSY 60000 and PSY 60100) or (STAT 51200 and STAT 51400) or (HDFS 68500 and PSY 63100).

Learning Outcomes: 1. Develop a broad theoretical understanding of multivariate analyses, applied skills necessary to incorporate multivariate analytic techniques into their research activities, and mathematical foundations of these topics that will allow the student to pursue advanced training and research in these areas. Credits: 3.00

SOC 60900 - Seminar In Sociology

Credit Hours: 3.00. Topics vary.

Credits: 3.00

SOC 68100 - Selected Problems Of Social Research

Credit Hours: 3.00. Working with already available data, each student will conduct one or more research projects, including conceptualization, operational procedures, analysis of the data, and report writing. The data to be used may be from surveys, small group studies, organizational studies, or written documents. Prerequisite: SOC 60000 or SOC 68000 . Permission of instructor required.

Credits: 3.00

PSY 67400 - Structural Equation Modeling

Credit Hours: 3.00. This is an advanced course in structural equation modeling (SEM), intended to provide doctoral students with an introductory treatment of the theory and methods of SEM. SEM is a statistical methodology that encompasses a wide variety of models, including path models, exploratory and confirmatory factor models, structural regression models, and latent growth models, among others. Prerequisites: PSY 61000 is highly recommended but not required. Permission of department required.

Learning Outcomes: 1. Obtain a basic-to-intermediate understating of the logic of SEM and grasp the underpinning statistics of SEM. 2. Critically read and evaluate empirical journal articles that use SEM. 3. Develop the ability to apply SEM (and the correct model) to relevant questions in their area of research interest. 4. Acquire Programming skills for conducting SEM. Credits: 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data

management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

NUR 69200 - Applied Statistics In Healthcare Research

Credit Hours: 3.00. This course advances knowledge and skills in statistical approaches for analyzing complex healthcare data. It focuses on statistical analysis in contexts such as evidence-based practice, quality improvement, evaluation, and behavioral and population health. Topics include probability and descriptive statistics, nonparametric statistics, risk and odds ratios, sensitivity and specificity, logistic and multinomial regression, multiple linear regression, general linear models, survival and time-to-event analysis, and mixed effect modeling. The course will provide hands-on experience in statistical analysis of healthcare data. Prerequisites: Introductory course in statistics or biostatistics at the advanced undergraduate or graduate level.

Credits: 3.00

PSY 62601 - Bayesian Statistics For Psychological Sciences

Credit Hours: 3.00. The course will explain why you might want to use Bayesian methods instead of frequentist methods (such as t-tests, ANOVA, or regression). We discuss the basic properties and methods of Bayesian analysis and have many activities to show how Bayesian analyses are used. Prerequisites: PSY 60000 and PSY 60100. Permission of department required.

Learning Outcomes: 1. Understand some challenges with traditional statistical analyses, especially optional stopping. 2. Able to run various Bayesian analyses. 3. Able to extract information from Bayesian-calculated posteriors. 4. Able to set appropriate priors for their analyses. Credits: 3.00

PSY 60901 - Multilevel Modeling

Credit Hours: 3.00. This course familiarizes students with (1) generalized linear mixed (multilevel) models that are often used in the social sciences, and (2) best practices in the models' applications and interpretations. These models are extensions of classic linear regression models, and they go by many names: multilevel modes, hierarchical models, mixed models, etc. Throughout the course, models and methods will be introduced conceptually and will be illustrated using real and simulated data. Prerequisites: graduate coursework in regression and ANOVA, or by permission. Permission of department required.

Learning Outcomes: 1. Knowledge of linear and generalized multilevel models. 2. Able to competently apply and interpret such models in the analysis of their own research data. Credits: 3.00

ANTH 52300 - GIS For Humanities And Social Science Research

Credit Hours: 3.00. This course will introduce students the skills of spatial thinking, basic functions of Geography Information Systems (GIS), and spatial research methods that are most relevant to humanities and social science. The course will start with an introduction to basic GIS concepts and technology, then move onto GIS applications during the research process, including spatial research design, data acquisition, management, visualization, and spatial analytical techniques. Practical work will be introduced and completed using ESRI ArcGIS Pro software.

Learning Outcomes: 1. Understand the basics of mapping and geospatial information using ArcGIS Pro. 2. Apply spatial research methods into your own research. 3. Produce professional maps to visualize spatial data. 4. Document and manage spatial data using a standardized way. 5. Understand several spatial analysis methods that are relevant to your research area. 6. Create a web- or mobile-based GIS application using ArcGIS Online. Credits: 3.00

ILS 63000 - Digital Humanities Foundations

Credit Hours: 3.00. This course introduces graduate students to the core theoretical and practical components of Digital Humanities. Students engage key theoretical texts in weekly seminars and practice central methodologies in weekly work sessions.

Learning Outcomes: 1. Learn the basic vocabulary and concepts in digital humanities. 2. Gain familiarity with digital humanities projects, critical work, resources in the field, and hands-on experience of building a scholarly

digital research project. 3. Gain experience working collaboratively with others on a joint project. 4. Perform critical, formal analyses of DH projects, digital media, and digital tools. 5. Write focused, analytical essays in clear, grammatical prose. 6. Employ logic, creativity, and interpretive skills to produce original, persuasive arguments. 7. Gain familiarity with digital tools and media used in in the field of digital humanities to create new knowledge of humanities subjects. Credits: 3.00

CE 50801 - Geographic Information Systems

Credit Hours: 3.00. This course covers a range of fundamentals in geographic information science and technology. Students will learn the use of current popular geographic information system (GIS) tools to handle various geographic data. Through working on real world geospatial problems, students shall gain extensive and hands-on experience in geographic data manipulation, visualization, and analysis. Course assignments are focused on both GIS theoretical basics and practical skills for students to achieve expected proficiency. The course will work with geospatial data in geography, topography, environmental science, hydrology, transportation, and geosocial science. It is targeted to students with interest in civil and environmental engineering, agriculture, geography, earth science, natural resources, smart cities or other related subjects.

Learning Outcomes: 1. Demonstrate a comprehensive and in-depth understanding of GIS fundamentals. 2. Effectively collect and handle various geographic data. 3. Exhibit a proficient command of popular GIS software tools. 4. Conduct GIS mapping, database design, analysis and visualization tasks independently. Credits: 3.00

ILS 65000 - Introduction To Computational Text Analysis

Credit Hours: 3.00. This course provides an introduction to the methods, debates, and tools of computational text analysis, specifically crafted for the humanities and social science graduate students.

Learning Outcomes: 1. Recognize and assess the possibilities for computational text analysis for research. 2. Find and implement code for text analysis projects. 3. Experiment with both existing and original code. 4. Appraise and critique the limits of computational text analysis for research. 5. Design original projects using course lessons. Credits: 3.00

Required Courses (12 credits)

Quantitative Courses

COM 62511 - Survey Design, Analysis, And Reporting For Strategic Communication

Credit Hours: 3.00. This course provides students with an overview of quantitative research in public relations with a particular emphasis on survey design analysis. The course will cover the design and delivery of questionnaires, the use and interpretation of descriptive and inferential statistical methods, and reporting of quantitative results. The course will consider practical applications of these methods in professional strategic communication contexts. Prerequisite: COM 60411 Permission of department required.

Learning Outcomes: 1. Identify the types of questions that survey research is best suited to answer. 2. Develop effective survey instruments for measuring a wide range of attitudes, behaviors, and beliefs related to strategic communication. 3. Recognize the pros and cons of different sampling and survey distribution methodologies as they apply to different research protocols. 4. Demonstrate an understanding of common statistical approaches for analyzing survey data. 5. Apply survey methodologies to answer practical

questions in the context of strategic communication. Credits: 3.00

COM 68200 - Seminar: Special Topics In Quantitative Research

Credit Hours: 3.00. Intensive study, varying from semester to semester, of different aspects and applications of quantitative research in communication. Prerequisite: COM 58200

Credits: 3.00

HDFS 62700 - Multilevel Modeling In Developmental And Family Research

Credit Hours: 3.00. This course gives students a basic grounding in the class of statistical techniques known as multilevel modeling (MLM), also known as hierarchical linear modeling (HLM), mixed models, or random coefficient models. Primary discussions will be on applications of these models to the study of marriages, relationships, families, aging, and child and adult development, but also will touch on biomedical, educational, and economic examples. The focus is on three types of multilevel models: growth-curve models, organizational models, and daily experience models. Students will also learn how to use SAS Proc Mixed for conducting MLM analyses. Students are assumed to have taken at least two graduate statistics courses and have a solid understanding of regression analysis. Prerequisites: STAT 50100 and STAT 50200 or HDFS 61300 and PSY 63100 .

Learning Outcomes: 1. Acquire a basic-to-intermediate understanding of the logic of multi-level modeling, grasp the underpinning statistics of MLM, and develop a sense as to when (and when not) to use the model. 2. Apply MLM to relevant questions in their area of research interest. 3. Critically read and evaluate empirical journal articles that use MLM. 4. Acquire basic programming skills for conducting MLM. 5. Select the appropriate methods of data analysis, given multivariate data and study objectives. 6. Employ statistical software to carry out statistical analyses, 7. Interpret and explain the results of statistical analyses, and 8. Write concise and effective summaries of results using APA style. Credits: 3.00

HDFS 62800 - Structural Equation Modeling

Credit Hours: 3.00. This course provides an introduction to classic structural equation models with latent variables (SEM). The primary steps of implementing SEMs will be covered to include: model specification, model identification, parameter estimation, and model evaluation (model fit). Background training in statistical regression is required. Permission of instructor required.

Learning Outcomes: 1. Develop a basic understanding of structural equation models including proper application, interpretation, and evaluation of the models. 2. Develop an understanding of the underlying statistics including parameter identification and estimation as well as model fit measures. 3. Learn the benefits of SEMs including when it is advantageous to use this modeling approach. 4. Learn the limitations of the model and the most common mistakes in using SEMs. 5. Be able to apply the method to a topic relevant to your own research. 6. Be able to analyze SEM models using a SEM software package. Credits: 3.00

PSY 60600 - Special Topics In Quantitative Psychology

Credit Hours: 3.00. A seminar covering such topics as linear models, statistical decision-making, and multidimensional scaling. Permission of instructor required.

Credits: 3.00

PSY 60700 - Scaling And Measurement

Credit Hours: 3.00. An introduction to the theory of measurement and a survey of modern scaling methods (unidimensional and multidimensional, metric and nonmetric) within the framework of the modern theory of measurement. Some prior exposure to elementary matrix and set algebra is recommended.

Credits: 3.00

PSY 60800 - Measurement Theory And The Interpretation Of Data

Credit Hours: 3.00. The theory of measurement and the development of reliability and the Spearman-Brown equations, true scores and variables, and correction for attenuation. Variance or covariance of combinations of variables. Item analysis and test construction strategies. Reliability and validity of measurements and the influence of measurement error and measurement threats to research design. Prerequisite: PSY 60000 .

Credits: 3.00

PSY 61000 - Multivariate Analysis In The Behavioral Sciences

Credit Hours: 3.00. This is an advanced doctoral-level statistics course that examines the application of multivariate methods to the analyses of organizational data. Topics include: matrix algebra, the general linear model, multivariate analysis of variance, canonical correlation, discriminant function analysis, and factor/component analysis. Prerequisite: Grade of B or higher in (PSY 60000 and PSY 60100) or (STAT 51200 and STAT 51400) or (HDFS 68500 and PSY 63100).

Learning Outcomes: 1. Develop a broad theoretical understanding of multivariate analyses, applied skills necessary to incorporate multivariate analytic techniques into their research activities, and mathematical foundations of these topics that will allow the student to pursue advanced training and research in these areas. Credits: 3.00

SOC 60900 - Seminar In Sociology

Credit Hours: 3.00. Topics vary.

Credits: 3.00

SOC 68100 - Selected Problems Of Social Research

Credit Hours: 3.00. Working with already available data, each student will conduct one or more research projects, including conceptualization, operational procedures, analysis of the data, and report writing. The data to be used may be from surveys, small group studies, organizational studies, or written documents. Prerequisite: SOC 60000 or SOC 68000 . Permission of instructor required.

Credits: 3.00

PSY 67400 - Structural Equation Modeling

Credit Hours: 3.00. This is an advanced course in structural equation modeling (SEM), intended to provide doctoral students with an introductory treatment of the theory and methods of SEM. SEM is a statistical methodology that encompasses a wide variety of models, including path models, exploratory and confirmatory factor models, structural regression models, and latent growth models, among others. Prerequisites: PSY 61000 is highly recommended but not required. Permission of department required.

Learning Outcomes: 1. Obtain a basic-to-intermediate understating of the logic of SEM and grasp the underpinning statistics of SEM. 2. Critically read and evaluate empirical journal articles that use SEM. 3. Develop the ability to apply SEM (and the correct model) to relevant questions in their area of research interest. 4. Acquire Programming skills for conducting SEM. Credits: 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

NUR 69200 - Applied Statistics In Healthcare Research

Credit Hours: 3.00. This course advances knowledge and skills in statistical approaches for analyzing complex healthcare data. It focuses on statistical analysis in contexts such as evidence-based practice, quality improvement, evaluation, and behavioral and population health. Topics include probability and descriptive statistics, nonparametric statistics, risk and odds ratios, sensitivity and specificity, logistic and multinomial regression, multiple linear regression, general linear models, survival and time-to-event analysis, and mixed effect modeling. The course will provide hands-on experience in statistical analysis of healthcare data. Prerequisites: Introductory course in statistics or biostatistics at the advanced undergraduate or graduate level.

Credits: 3.00

PSY 62601 - Bayesian Statistics For Psychological Sciences

Credit Hours: 3.00. The course will explain why you might want to use Bayesian methods instead of frequentist methods (such as t-tests, ANOVA, or regression). We discuss the basic properties and methods of Bayesian analysis and have many activities to show how Bayesian analyses are used. Prerequisites: PSY 60000 and PSY 60100. Permission of department required.

Learning Outcomes: 1. Understand some challenges with traditional statistical analyses, especially optional stopping. 2. Able to run

various Bayesian analyses. 3. Able to extract information from Bayesian-calculated posteriors. 4. Able to set appropriate priors for their analyses. Credits: 3.00

PSY 60901 - Multilevel Modeling

Credit Hours: 3.00. This course familiarizes students with (1) generalized linear mixed (multilevel) models that are often used in the social sciences, and (2) best practices in the models' applications and interpretations. These models are extensions of classic linear regression models, and they go by many names: multilevel modes, hierarchical models, mixed models, etc. Throughout the course, models and methods will be introduced conceptually and will be illustrated using real and simulated data. Prerequisites: graduate coursework in regression and ANOVA, or by permission. Permission of department required.

Learning Outcomes: 1. Knowledge of linear and generalized multilevel models. 2. Able to competently apply and interpret such models in the analysis of their own research data. Credits: 3.00

ANTH 52300 - GIS For Humanities And Social Science Research

Credit Hours: 3.00. This course will introduce students the skills of spatial thinking, basic functions of Geography Information Systems (GIS), and spatial research methods that are most relevant to humanities and social science. The course will start with an introduction to basic GIS concepts and technology, then move onto GIS applications during the research process, including spatial research design, data acquisition, management, visualization, and spatial analytical techniques. Practical work will be introduced and completed using ESRI ArcGIS Pro software.

Learning Outcomes: 1. Understand the basics of mapping and geospatial information using ArcGIS Pro. 2. Apply spatial research methods into your own research. 3. Produce professional maps to visualize spatial data. 4. Document and manage spatial data using a standardized way. 5. Understand several spatial analysis methods that are relevant to your research area. 6. Create a web- or mobile-based GIS application using ArcGIS Online. Credits: 3.00

ILS 63000 - Digital Humanities Foundations

Credit Hours: 3.00. This course introduces graduate students to the core theoretical and practical components of Digital Humanities. Students engage key theoretical texts in weekly seminars and practice central methodologies in weekly work sessions.

Learning Outcomes: 1. Learn the basic vocabulary and concepts in digital humanities. 2. Gain familiarity with digital humanities projects, critical work, resources in the field, and hands-on experience of building a scholarly digital research project. 3. Gain experience working collaboratively with others on a joint project. 4. Perform critical, formal analyses of DH projects, digital media, and digital tools. 5. Write focused, analytical essays in clear, grammatical prose. 6. Employ logic, creativity, and interpretive skills to produce original, persuasive arguments. 7. Gain familiarity with digital tools and media used in in the field of digital humanities to create new knowledge of humanities subjects. Credits: 3.00

CE 50801 - Geographic Information Systems

Credit Hours: 3.00. This course covers a range of fundamentals in geographic information science and technology. Students will learn the use of current popular geographic information system (GIS) tools to handle various geographic data. Through working on real world geospatial problems, students shall gain extensive and hands-on experience in geographic data manipulation, visualization, and analysis. Course assignments are focused on both GIS theoretical basics and practical skills for students to achieve expected proficiency. The course will work with geospatial data in geography, topography, environmental science, hydrology, transportation, and geosocial science. It is targeted to students with interest in civil and environmental engineering, agriculture, geography, earth science, natural resources, smart cities or other related subjects.

Learning Outcomes: 1. Demonstrate a comprehensive and in-depth understanding of GIS fundamentals. 2. Effectively collect and handle various geographic data. 3. Exhibit a proficient command of popular GIS software tools. 4. Conduct GIS mapping, database design, analysis and visualization tasks independently. Credits: 3.00

ILS 65000 - Introduction To Computational Text Analysis

Credit Hours: 3.00. This course provides an introduction to the methods, debates, and tools of computational text analysis, specifically crafted for the humanities and social science graduate students.

Learning Outcomes: 1. Recognize and assess the possibilities for computational text analysis for research. 2. Find and implement code for text analysis projects. 3. Experiment with both existing and original code. 4. Appraise and critique the limits of computational text analysis for research. 5. Design original projects using course lessons. Credits: 3.00

Qualitative Courses

COM 58500 - Qualitative Methods In Communication Research

Credit Hours: 3.00. An introduction to qualitative research methods in communication studies. Provides students with an overview of several techniques for, and issues in, gathering, analyzing, writing-up, and using qualitative data. Department permission required.

Learning Outcomes: 1. Examine the philosophical assumptions, theoretical traditions and epistemology of qualitative methods in the field of communication. 2. Understand various approaches to qualitative inquiry, particularly entailing narrative research, phenomenological research, grounded theory research, ethnographic research, and case study research. 3. Critique written qualitative research in communication journals and identify ways to improve them. 4. Develop skills and techniques to design a qualitative research project, which includes the process of getting IRB approval, collecting and analyzing qualitative data, and writing up qualitative findings. Credits: 3.00

COM 62411 - Focus Groups And Interviewing For Strategic Communication

Credit Hours: 3.00. This course provides students with an overview of qualitative research in public relations with a particular emphasis on focus group and interview methodologies. The course will consider practical applications of these protocols in strategic communication contexts. Prerequisite: COM 60411 Permission of department required.

Learning Outcomes: 1. Identify the types of questions that qualitative research seeks to answer. 2. Determine the relative value of focus groups or interview data as a mechanism for answering research questions and protocols. 3. Develop interview and focus group protocols for collecting qualitative data in strategic communication contexts. 4. Utilize strategies for interpreting qualitative data and reporting it systematically. 5. Conduct effective interviews and focus groups for a strategic communication project. Credits: 3.00

ANTH 60500 - Seminar In Ethnographic Analysis

Credit Hours: 3.00. Focuses on ethnographic research design, methodology, and ethics, discussing the appropriate selection of any method. Students gain experience with the varieties of ethnographic practice across anthropology and sibling sciences, the generation and analysis of data, and the writing up of ethnographic and of other qualitative research.

Learning Outcomes: 1. Meet the Graduate School learning objectives of knowledge, communication, critical thinking, and ethical research through the goals listed here. 2. Learn about qualitative research design, ethics and methods. 3. Understand when and how to appropriately select qualitative and quantitative methods and identify how and when to use them. 4. Gain an understanding on how anthropologists across the subfields and other scholars use and apply qualitative methods. 5. Gain experience in generating and analyzing qualitative data, including being exposed to common qualitative software packages (such as NVivo). 6. Achieve qualitative literacy for understanding and working in a mixed methods environment. Credits: 3.00

SOC 60900 - Seminar In Sociology

Credit Hours: 3.00. Topics vary.

Credits: 3.00

SOC 68100 - Selected Problems Of Social Research

Credit Hours: 3.00. Working with already available data, each student will conduct one or more research projects, including conceptualization, operational procedures, analysis of the data, and report writing. The data to be used may be from surveys, small group studies, organizational studies, or written documents. Prerequisite: SOC 60000 or SOC 68000 . Permission of instructor required.

Credits: 3.00

SOC 68600 - Qualitative Methods

Credit Hours: 3.00. Surveys qualitative research methods. Considers methods of data collection and data analysis, including computer-assisted techniques. Critical examination of perspectives, assumptions, and issues, including protection of human subjects. Students conduct research projects and write papers using techniques encountered in class. Prerequisite: SOC 58000 .

Credits: 3.00

TECH 69700 - Qualitative Research Methods In Technology Studies

Credit Hours: 3.00. In-depth examination of qualitative methods and frameworks used in technology research. Students learn by application a variety of methods from the qualitative research toolbox such as interviewing, focus groups, observation, and experience analysis. TECH 69700 prepares students to plan, pilot, and assess an original qualitative research study and to integrate qualitative research findings in the technology design and evaluation process. Permission of instructor required.

Learning Outcomes: 1. Explain the epistemological assumptions underlying qualitative research methods. 2. Identify and evaluate various types of qualitative research techniques. 3. Plan a research study using qualitative research methods. 4. Conduct a research study using qualitative research methods. 5. Write up a qualitative research scholarly paper. 6. Assess and analyze the validity of qualitative research. Credits: 3.00

POL 60800 - Qualitative Methods In Political Science

Credit Hours: 3.00. This course is an introduction to the use of qualitative methods in political science. In addition to a detailed consideration of several leading qualitative approaches to political research, the course will also consider the distinctive issues of research design for qualitative research as well as the relationship of qualitative and quantitative methods. Prerequisite: POL 50100 Political Science Methodology or equivalent or consent of instructor.

Learning Outcomes: 1. Know and understand the different perspectives and epistemologies related to qualitative research. 2. Know and understand the primary components of qualitative research design. 3. Recognize and apply the common tools for the collection and analysis of qualitative data. 4. Understand the distinctive ethical issues that can arise in qualitative research. 5. Create and compose a research proposal with a substantial qualitative methods component. Credits: 3.00

ANTH 64000 - Foundations And Frameworks: Applying Anthropology

Credit Hours: 3.00. This course focuses on using anthropology to address social issues. The course examines topics including: the history of anthropologists working in applied settings, the relationship between theory and practice, professional ethics, job opportunities, and skills needed as anthropological practitioners. Students should have some background in anthropology if coming from another discipline e.g. prior coursework or relevant experience as determined by instructor.

Learning Outcomes: 1. Identify key questions and concerns in applied anthropology. 2. Speak about the relationship of anthropological theory and practice and how that relationship has been discussed in the discipline. 3. Know about a series of anthropological practice areas and their progression over time. 4. Analyze your own development as an anthropologist by doing career related research and self-reflexive writing in the course. Credits: 3.00

ANTH 64200 - Public Engagement: Using Anthropological Knowledge

Credit Hours: 3.00. This course is about using and communicating anthropological knowledge. We will discuss what it means to work as an anthropologist and public intellectual. Effectively working with stakeholders, presenting information, offering solutions for addressing problems and implementing change are addressed. Students should have some background in anthropology if coming from another discipline e.g. prior coursework or relevant experience as determined by instructor.

Learning Outcomes: 1. Know how to convey your anthropological ideas and findings for multiple purposes and audiences. 2. Be familiar with how some well-known anthropologists have had broad influence inside and outside our discipline. 3. Prepare your anthropological data and information for disseminating to different audiences and outlets. 4. Develop your anthropological critical thinking, writing and presentation skills to become a more effective anthropological communicator. 5. Consider the most successful ways for being an engaged anthropologist in your own areas of interests. Credits: 3.00

ANTH 64100 - Discovery And Design: Making Projects Work

Credit Hours: 3.00. This course is about using anthropology to make projects work. Students will learn anthropological approaches and methods to discover salient aspects of a design problem and use this understanding to devise responses. Anthropological discovery, design and delivery processes are demonstrated. Students should have some background in anthropology if coming from another discipline e.g. prior coursework or relevant experience as determined by instructor.

Learning Outcomes: 1. Be able to use Rapid Assessment Procedures (RAP), the Delphi Technique, Domain Analysis and Cross-Cultural Survey Design. 2. Understand how community projects are put together from goals and objectives, strategies implementation plans and monitoring and evaluation and be able to use that knowledge in effectively designing projects. 3. Write a funding proposal that clearly explains the purpose, impact, and essential features of the project in order to secure funding or other essential support. 4. Apply the skills of anthropological discovery and design in your own practice area of interest. Credits: 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

Quantitative Courses

COM 62511 - Survey Design, Analysis, And Reporting For Strategic Communication

Credit Hours: 3.00. This course provides students with an overview of quantitative research in public relations with a particular emphasis on survey design analysis. The course will cover the design and delivery of questionnaires, the use and interpretation of descriptive and inferential statistical methods, and reporting of quantitative results. The course will consider practical applications of these methods in professional strategic communication contexts. Prerequisite: COM 60411 Permission of department required.

Learning Outcomes: 1. Identify the types of questions that survey research is best suited to answer. 2. Develop effective survey instruments for measuring a wide range of attitudes, behaviors, and beliefs related to strategic communication. 3. Recognize the pros and cons of different sampling and survey distribution methodologies as they apply to different research protocols. 4. Demonstrate an understanding of common statistical approaches for analyzing survey data. 5. Apply survey methodologies to answer practical questions in the context of strategic communication. Credits: 3.00

COM 68200 - Seminar: Special Topics In Quantitative Research

Credit Hours: 3.00. Intensive study, varying from semester to semester, of different aspects and applications of quantitative research in communication. Prerequisite: COM 58200

Credits: 3.00

HDFS 62700 - Multilevel Modeling In Developmental And Family Research

Credit Hours: 3.00. This course gives students a basic grounding in the class of statistical techniques known as multilevel modeling (MLM), also known as hierarchical linear modeling (HLM), mixed models, or random coefficient models. Primary discussions will be on applications of these models to the study of marriages, relationships, families, aging, and child and adult development, but also will touch on biomedical, educational, and economic examples. The focus is on three types of multilevel models: growth-curve models, organizational models, and daily experience models. Students will also learn how to use SAS Proc Mixed for conducting MLM analyses. Students are assumed to have taken at least two graduate statistics courses and have a solid understanding of regression analysis. Prerequisites: STAT 50100 and STAT 50200 or HDFS 61300 and PSY 63100 .

Learning Outcomes: 1. Acquire a basic-to-intermediate understanding of the logic of multi-level modeling, grasp the underpinning statistics of MLM, and develop a sense as to when (and when not) to use the model. 2. Apply MLM to relevant questions in their area of research interest. 3. Critically read and evaluate empirical journal articles that use MLM. 4. Acquire basic programming skills for conducting MLM. 5. Select the appropriate methods of data analysis, given multivariate data and study objectives. 6. Employ statistical software to carry out statistical analyses, 7. Interpret and explain the results of statistical analyses, and 8. Write concise and effective summaries of results using APA style. Credits: 3.00

HDFS 62800 - Structural Equation Modeling

Credit Hours: 3.00. This course provides an introduction to classic structural equation models with latent variables (SEM). The primary steps of implementing SEMs will be covered to include: model specification, model identification, parameter estimation, and model evaluation (model fit). Background training in statistical regression is required. Permission of instructor required.

Learning Outcomes: 1. Develop a basic understanding of structural equation models including proper application, interpretation, and evaluation of the models. 2. Develop an understanding of the underlying statistics including parameter identification and estimation as well as model fit measures. 3. Learn the benefits of SEMs including when it is advantageous to use this modeling approach. 4. Learn the limitations of the model and the most common mistakes in using SEMs. 5. Be able to apply the method to a topic relevant to your own research. 6. Be able to analyze SEM models using a SEM software package. Credits: 3.00

PSY 60600 - Special Topics In Quantitative Psychology

Credit Hours: 3.00. A seminar covering such topics as linear models, statistical decision-making, and multidimensional scaling. Permission of instructor required.

Credits: 3.00

PSY 60700 - Scaling And Measurement

Credit Hours: 3.00. An introduction to the theory of measurement and a survey of modern scaling methods (unidimensional and multidimensional, metric and nonmetric) within the framework of the modern theory of measurement. Some prior exposure to elementary matrix and set algebra is recommended.

Credits: 3.00

PSY 60800 - Measurement Theory And The Interpretation Of Data

Credit Hours: 3.00. The theory of measurement and the development of reliability and the Spearman-Brown equations, true scores and variables, and correction for attenuation. Variance or covariance of combinations of variables. Item analysis and test construction strategies. Reliability and validity of measurements and the influence of measurement error and measurement threats to research design. Prerequisite: PSY 60000 .

Credits: 3.00

PSY 61000 - Multivariate Analysis In The Behavioral Sciences

Credit Hours: 3.00. This is an advanced doctoral-level statistics course that examines the application of multivariate methods to the analyses of organizational data. Topics include: matrix algebra, the general linear model, multivariate analysis of variance, canonical correlation, discriminant function analysis, and factor/component analysis. Prerequisite: Grade of B or higher in (PSY 60000 and PSY 60100) or (STAT 51200 and STAT 51400) or (HDFS 68500 and PSY 63100).

Learning Outcomes: 1. Develop a broad

theoretical understanding of multivariate analyses, applied skills necessary to incorporate multivariate analytic techniques into their research activities, and mathematical foundations of these topics that will allow the student to pursue advanced training and research in these areas. Credits: 3.00

SOC 60900 - Seminar In Sociology

Credit Hours: 3.00. Topics vary.

Credits: 3.00

SOC 68100 - Selected Problems Of Social Research

Credit Hours: 3.00. Working with already available data, each student will conduct one or more research projects, including conceptualization, operational procedures, analysis of the data, and report writing. The data to be used may be from surveys, small group studies, organizational studies, or written documents. Prerequisite: SOC 60000 or SOC 68000 . Permission of instructor required.

Credits: 3.00

PSY 67400 - Structural Equation Modeling

Credit Hours: 3.00. This is an advanced course in structural equation modeling (SEM), intended to provide doctoral students with an introductory treatment of the theory and methods of SEM. SEM is a statistical methodology that encompasses a wide variety of models, including path models, exploratory and confirmatory factor models, structural regression models, and latent growth models, among others. Prerequisites: PSY 61000 is highly recommended but not required. Permission of department required.

Learning Outcomes: 1. Obtain a basic-to-intermediate understating of the logic of SEM and grasp the underpinning statistics of SEM. 2. Critically read and evaluate empirical journal articles that use SEM. 3. Develop the ability to apply SEM (and the correct model) to relevant questions in their area of research interest. 4. Acquire Programming skills for conducting SEM. Credits: 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

NUR 69200 - Applied Statistics In Healthcare Research

Credit Hours: 3.00. This course advances knowledge and skills in statistical approaches for analyzing complex healthcare data. It focuses on statistical analysis in contexts such as evidence-based practice, quality improvement, evaluation, and behavioral and population health. Topics include probability and descriptive statistics, nonparametric statistics, risk and odds ratios, sensitivity and specificity, logistic and multinomial regression, multiple linear regression, general linear models, survival and time-to-event analysis, and mixed effect modeling. The course will provide hands-on experience in statistical analysis of healthcare data. Prerequisites: Introductory course in statistics or biostatistics at the advanced undergraduate or graduate level.

Credits: 3.00

PSY 62601 - Bayesian Statistics For Psychological Sciences

Credit Hours: 3.00. The course will explain why you might want to use Bayesian methods instead of frequentist methods (such as t-tests, ANOVA, or regression). We discuss the basic properties and methods of Bayesian analysis and have many activities to show how Bayesian analyses are used. Prerequisites: PSY 60000 and PSY 60100. Permission of department required.

Learning Outcomes: 1. Understand some challenges with traditional statistical analyses, especially optional stopping. 2. Able to run various Bayesian analyses. 3. Able to extract information from Bayesian-calculated posteriors. 4. Able to set appropriate priors for their analyses. Credits: 3.00

PSY 60901 - Multilevel Modeling

Credit Hours: 3.00. This course familiarizes students with (1) generalized linear mixed (multilevel) models that are often used in the social sciences, and (2) best practices in the models' applications and interpretations. These models are extensions

of classic linear regression models, and they go by many names: multilevel modes, hierarchical models, mixed models, etc. Throughout the course, models and methods will be introduced conceptually and will be illustrated using real and simulated data. Prerequisites: graduate coursework in regression and ANOVA, or by permission. Permission of department required.

Learning Outcomes: 1. Knowledge of linear and generalized multilevel models. 2. Able to competently apply and interpret such models in the analysis of their own research data. Credits: 3.00

ANTH 52300 - GIS For Humanities And Social Science Research

Credit Hours: 3.00. This course will introduce students the skills of spatial thinking, basic functions of Geography Information Systems (GIS), and spatial research methods that are most relevant to humanities and social science. The course will start with an introduction to basic GIS concepts and technology, then move onto GIS applications during the research process, including spatial research design, data acquisition, management, visualization, and spatial analytical techniques. Practical work will be introduced and completed using ESRI ArcGIS Pro software.

Learning Outcomes: 1. Understand the basics of mapping and geospatial information using ArcGIS Pro. 2. Apply spatial research methods into your own research. 3. Produce professional maps to visualize spatial data. 4. Document and manage spatial data using a standardized way. 5. Understand several spatial analysis methods that are relevant to your research area. 6. Create a web- or mobile-based GIS application using ArcGIS Online. Credits: 3.00

ILS 63000 - Digital Humanities Foundations

Credit Hours: 3.00. This course introduces graduate students to the core theoretical and practical components of Digital Humanities. Students engage key theoretical texts in weekly seminars and practice central methodologies in weekly work sessions.

Learning Outcomes: 1. Learn the basic vocabulary and concepts in digital humanities. 2. Gain familiarity with digital humanities projects, critical work, resources in the field, and hands-on experience of building a scholarly digital research project. 3. Gain experience working collaboratively with others on a joint project. 4. Perform critical, formal analyses of DH projects, digital media, and digital tools. 5. Write focused, analytical essays in clear, grammatical prose. 6. Employ logic, creativity, and interpretive skills to produce original, persuasive arguments. 7. Gain familiarity with digital tools and media used in in the field of digital humanities to create new knowledge of humanities subjects. Credits: 3.00

CE 50801 - Geographic Information Systems

Credit Hours: 3.00. This course covers a range of fundamentals in geographic information science and technology. Students will learn the use of current popular geographic information system (GIS) tools to handle various geographic data. Through working on real world geospatial problems, students shall gain extensive and hands-on experience in geographic data manipulation, visualization, and analysis. Course assignments are focused on both GIS theoretical basics and practical skills for students to achieve expected proficiency. The course will work with geospatial data in geography, topography, environmental science, hydrology, transportation, and geosocial science. It is targeted to students with interest in civil and environmental engineering, agriculture, geography, earth science, natural resources, smart cities or other related subjects.

Learning Outcomes: 1. Demonstrate a comprehensive and in-depth understanding of GIS fundamentals. 2. Effectively collect and handle various geographic data. 3. Exhibit a proficient command of popular GIS software tools. 4. Conduct GIS mapping, database design, analysis and visualization tasks independently. Credits: 3.00

ILS 65000 - Introduction To Computational Text Analysis

Credit Hours: 3.00. This course provides an introduction to the methods, debates, and tools of computational text analysis, specifically crafted for the humanities and social science graduate students.

Learning Outcomes: 1. Recognize and assess the possibilities for computational text analysis for research. 2. Find and implement code for text analysis projects. 3. Experiment with both existing and original code. 4. Appraise and

critique the limits of computational text analysis for research. 5. Design original projects using course lessons. Credits: 3.00

Additional Information

About the Program

African American Studies, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (6 credits)

AAS 57500 - Theories Of African American Studies

Credit Hours: 3.00. This course addresses the development of an African American intellectual tradition. The course will span disciplines and swathes of time in order to understand how scholars not only created new ideas but developed theories that shaped and changed academic inquiry.

Learning Outcomes: 1. Critically analyze & synthesize Theoretical Paradigms of the African American experience. 2. Present material clearly and facilitate discussion. 3. Enhance interpretive skills. 4. Conduct ethical research. Credits: 3.00

AAS 57400 - Research Methods In African American Studies

Credit Hours: 3.00. This course covers techniques used by researchers and to interpret scholarly investigation on race, class and gender from an African American perspective.

Learning Outcomes: 1. Critically analyze & synthesize theoretical paradigms of the African American Experience. 2. Apply research methods associated with African American Studies . 3. Enhance interpretive skills. 4. Conduct ethical research. 5. Enhance critical thinking. Credits: 3.00

Selectives (6 credits)

ENGL 59700 - Contemporary Black Feminist Literature

Credit Hours: 3.00. An intense examination of recent literary works by black women along with various critical theories constructed about black women's literature, beginning with the premise that black feminism is a "sign to be interrogated, a locus of contradictions."

Credits: 3.00

HIST 65100 - Reading Seminar In American History

Credit Hours: 1.00 to 3.00. Bibliography and historiography of selected fields or topics in American history; may vary in subject matter from semester to semester. Prerequisite: Master's student standing.

Credits: 1.00 to 3.00

POL 52000 - Special Topics In Public Policy

Credit Hours: 3.00. This is a course focused on a specific current public policy topic, chosen for its contemporary political relevance, which varies from semester to semester. In general, each topic will be examined in terms of its historical roots, past policy initiatives, present policy proposals, and its enduring political and social challenges.

Credits: 3.00

POL 61100 - Research Seminar In American Government And Politics

Credit Hours: 3.00. Topics vary. Permission of department required.

Credits: 3.00

SOC 61100 - Social Inequality: Class, Race, And Gender

Credit Hours: 3.00. Survey of major approaches (functional, status attainment, labor market, class, culture) to the sociological study of inequality, including qualitative and quantitative, historical and comparative studies. Students will be asked to complete a project analyzing inequality, which might provide the basis for a publishable paper. Prerequisite: Master's student standing and Sociology majors only.

Credits: 3.00

AAS 59000 - Directed Readings In African American Studies

Credit Hours: 1.00 to 4.00. This directed readings course allows students to work with African American Studies faculty on work that cannot be achieved through one of the regular course offerings. This is a variable topics course that can be satisfied through individual course work with an instructor. A student wishing to earn such credit is required to obtain permission of the instructor in order to enroll for the course. This does not include work for thesis or dissertation projects. Permission of instructor required.

Learning Outcomes: 1. Analyze and synthesize theoretical paradigms involving the African American experience. 2. Enhance interpretive and critical thinking skills. 3. Develop and understand the methodological approaches employed in gathering data, and in presenting material clearly to facilitate discussion. Credits: 1.00 to 4.00

Required Courses (6 credits)

Required Courses (3 credits)

ASEC 52000 - Foundations Of Agricultural Education, Extension, And Communication

Credit Hours: 3.00. Critical analysis of the historical and philosophical assumptions, current strategic intents and relevant policies underpinning the discipline of agricultural education - inclusive of Extension education and agricultural communication - and project the impact existing economic, social and political issues may have in this field in the next 15 to 25 years. Instructor permission required.

Learning Outcomes: 1. Explain how social and economic conditions in the 19th century helped shape AEEC. 2. Identify and discuss how key events, leaders, driving forces, and policies (i.e., legislation) that shaped AEEC. 3. Compare and contrast similarities and differences among school-based agricultural education, non-formal (Extension) education, and agricultural communication regarding their purpose, development as a field, structure and stakeholders. 4. Discuss the philosophies of pragmatism, behaviorism, and constructivism, and how these philosophical assumptions influenced the policies and practices of AEEC. 5. Identify leaders and what role they played in helping shape AEEC. 6. Discuss how principles of community-based education support the

development of human, cultural and social capital in AEEC. 7. Examine current trends regarding existing organizational structures, enrollment, funding, and collaborative partners of AEEC, and project how current social and economic conditions in the 21st century may impact AEEC. 8. Discuss contemporary leadership and program models for the next 25 years, and analyze visions in AEEC are positioned to address grand challenges visions in AEEC. Credits: 3.00

Selectives (6 credits)

ASEC 55100 - International Engagement And Development Strategies

Credit Hours: 3.00. Sem. S and SS, cr. 3; an overview of cross-disciplinary, cultural, theoretical frameworks, communication tools, and assessment methods applied to international agricultural development and engagement. Lectures, panel discussions, and case studies on appropriate methods of development and engagement, international project planning, intercultural effectiveness, principles of sustainable agricultural, food, community development, and program/project monitoring and evaluation will be the basis of assignments and team work. This eight-week course will provide the theoretical and social frameworks and principles needed to successfully work in multi-agency partnerships on international development projects.

Learning Outcomes: 1. Select the most culturally-appropriate application of disciplinary knowledge and technologies for agriculture, food, natural resources and related sciences in development programs. 2. Deconstruct self biases and intercultural effectiveness and their critical and creative thinking skills for different contexts in appropriate applications of scientific research as creative interventions and evaluation. 3. Differentiate high and low oral and written communication skills, tolerance of cultural ambiguity, and adaptability. 4. Judge the efficacy of applying appropriate theoretical frameworks for engaging stakeholders in projects to create sustainable impact. 5. Determine the relevance of the result of applying principals and applications of ethical decision making and professional development. 6. Reflect on one's progress and abilities to work in multi-disciplinary teams to carryout developing country assessments and conceptualize a viable project proposal under a tight deadline. Credits: 3.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

ASEC 54600 - Communication And Issues Engagement For Agricultural Professionals

Credit Hours: 3.00. In this eight-week online course, students will be exposed to science communication and issues engagement principles. The course is designed primarily for those with little or no formal communication training. Topics

include evidence-based best practices for communicating science; news media and social media influences on controversial science; how to monitor controversial issues; and major theoretical perspectives and strategies for engaging the public on food and agricultural science.

Learning Outcomes: 1. Integrate best communication practices from the literature for engaging audiences about agriculture and science. 2. Analyze audiences and design appropriate messaging based on audience characteristics and needs. 3. Develop and adapt communication strategies for science-based controversial issues. 4. Formulate evidence-based strategies to anticipate controversial issues in agriculture and science. Credits: 3.00

ASEC 53100 - Global Learning For Agriculture, Food And Natural Resources

Credit Hours: 3.00. This is a graduate-level course in which students research, design, and evaluate communication and education methods and theoretical frameworks to apply appropriate cultural, community engagement, targeted outcomes of a population defined by the student. The central experience is an international/intercultural professional development experience immersed in rural and urban communities and cultures. Students will learn and develop global perspectives and effective engagement strategies to address agronomic, cultural, and community engagement realities affecting agriculture, life sciences and natural resources.

Learning Outcomes: 1. Have the skills to distinguish between educational designs needed for different goals and outcomes of global/intercultural learning programs. 2. Understand and apply one's own culture to interact among people with differing cultures, beliefs and values while designing engagement programs. 3. Design an educational intervention/module which is culturally appropriate and meets the needs of the community/learners. 4. Construct meaning from instructional messages, including oral, written and graphic communication applying the intersectionality of Social Identity, Intercultural Sensitivity, and Critical Race theories to engagement situations. 5. Evaluate one's self-awareness and recognition of others such that they can emotionally adapt their thinking and being in global/intercultural engagement efforts. 6. Identify best practices for educational global immersion experience related to food, fiber, and natural resources. Credits: 3.00

Required Courses (3 credits)

ASEC 52000 - Foundations Of Agricultural Education, Extension, And Communication

Credit Hours: 3.00. Critical analysis of the historical and philosophical assumptions, current strategic intents and relevant policies underpinning the discipline of agricultural education - inclusive of Extension education and agricultural communication - and project the impact existing economic, social and political issues may have in this field in the next 15 to 25 years. Instructor permission required.

Learning Outcomes: 1. Explain how social and economic conditions in the 19th century helped shape AEEC. 2. Identify and discuss how key events, leaders, driving forces, and policies (i.e., legislation) that shaped AEEC. 3. Compare and contrast similarities and differences among school-based agricultural education, non-formal (Extension) education, and agricultural communication regarding their purpose, development as a field, structure and stakeholders. 4. Discuss the philosophies of pragmatism, behaviorism, and constructivism, and how these philosophical assumptions influenced the policies and practices of AEEC. 5. Identify leaders and what role they played in helping shape AEEC. 6. Discuss how principles of community-based education support the development of human, cultural and social capital in AEEC. 7. Examine current trends regarding existing organizational structures, enrollment, funding, and collaborative partners of AEEC, and project how current social and economic conditions in the 21st century may impact AEEC. 8. Discuss contemporary

leadership and program models for the next 25 years, and analyze visions in AEEC are positioned to address grand challenges visions in AEEC. Credits: 3.00

About the Program

Program Learning Outcomes

About the Program

Applied Heat Transfer, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (6 credits)

ME 50500 - Intermediate Heat Transfer

Credit Hours: 3.00. Heat and mass transfer by diffusion in one-dimensional, two-dimensional, transient, periodic, and phase change systems. Convective heat transfer for external and internal flows. Similarity and integral solution methods. Heat, mass, and momentum analogies. Turbulence. Buoyancy-driven flows. Convection with phase change. Radiation exchange between surfaces and radiation transfer in absorbing-emitting media. Multimode heat transfer problems.

Learning Outcomes: 1. Analyze and solve variable cross-section fin problems. 2. Apply separation of variables to steady-state and transient heat conduction problems in Cartesian and cylindrical coordinate systems. 3. Apply separation of variables to steady-state conduction with heat generation. 4. Analyze and solve boundary layer problems. 5. Solve internal and external flow, forced convection problems. 6. Solve external flow natural convection problems. 7. Identify different regimes of boiling and condensation. 8. Recognize, model, and solve radiation heat transfer problems. Credits: 3.00

ME 51100 - Heat Transfer In Electronic Systems

Credit Hours: 3.00. This course covers both traditional and more innovative methods for heat extraction in electronic systems and the effectiveness and applicability of these methods over a wide range of scales. Special emphasis is given to industry-related applications with experts often attending and presenting material as part of class instruction.

Learning Outcomes: 1. Introduce concepts in thermal management of electronics to senior undergraduate and graduate students and practicing engineers. 2. Provide an appreciation for the applications of first principles to electronics cooling and packaging problems in industry. 3. Provide students with sound tools to approach existing packaging and cooling applications, while also raising awareness of novel techniques at the cutting edge. Credits: 3.00

ME 60800 - Numerical Methods In Heat, Mass, And Momentum Transfer

Credit Hours: 3.00. Governing conservation equations and their classification according to numerical properties. Discretization by Taylor series, weighted residual, and control volume methods. Solution of systems of algebraic equations. Discretization and solution of the convection-diffusion equation. Methods of solving the equations governing fluid flow. Mathematical modeling of turbulence, combustion, and radiation. Prerequisite: ME 50500 , ME 58100 .

Credits: 3.00

Selectives (6 credits)

MA 52700 - Advanced Mathematics For Engineers And Physicists I

Credit Hours: 3.00. MA 52700 is not a prerequisite for MA 52800; these courses can be taken independently. Topics in MA 52700 include linear algebra, systems of ordinary differential equations, Laplace transforms, Fourier series and transforms, and partial differential equations. MA 51100 is recommended.

Learning Outcomes: 1. Know the theory of systems of linear equations. 2. Know the theory of eigenvalues and eigenvectors and apply it to solve systems of ordinary differential equations and to analyze qualitative features. 3. Know theoretical properties of Laplace transforms and how to use them. 4. Know the basic theory of Fourier series and transforms, and how to apply these to solve partial differential equations.
Credits: 3.00

MA 52800 - Advanced Mathematics For Engineers And Physicists II

Credit Hours: 3.00. MA 52700 is not a prerequisite for MA 52800; these courses can be taken independently. Topics in MA 52800 include divergence theorem, Stokes theorem, complex variables, contour integration, calculus of residues and applications, conformal mapping, and potential theory. MA 51000 is recommended.

Learning Outcomes: 1. Improve knowledge of vector calculus and multivariable integral calculus. 2. Know basic theory of functions of a complex variable, including complex integration. 3. Improve knowledge of Taylor series, and extend this to Laurent series. 4. Know applications of complex analysis, including conformal mapping and potential theory.
Credits: 3.00

ME 51000 - Gas Dynamics

Credit Hours: 3.00. Flow of compressible fluids. One-dimensional flows including basic concepts, isentropic flow, normal and oblique shock waves, Rayleigh line, Fanno line, and simple waves. Multidimensional flows including general concepts, small perturbation theory for linearized flows and method of characteristics for nonlinear flows. Prerequisite: first course in fluid or aerodynamics.

Credits: 3.00

ME 56300 - Mechanical Vibrations

Credit Hours: 3.00. Review of systems with one degree for freedom. LaGrange's equations of motion for multiple degree of freedom systems. Introduction to matrix methods. Transfer functions for harmonic response, impulse response, and step response. Convolution integrals for response to arbitrary inputs. Principle frequencies and modes. Applications to critical speeds, measuring instruments, isolation, torsional systems. Introduction to nonlinear problems.

Credits: 3.00

ME 58100 - Numerical Methods In Mechanical Engineering

Credit Hours: 3.00. The solution of problems arising in mechanical engineering using numerical methods. Topics include nonlinear algebraic equations, sets of linear algebraic equations, eigenvalue problems, interpolation, curve fitting, ordinary differential equations, and partial differential equations. Applications include fluid mechanics, gas dynamics, heat and mass transfer, thermodynamics, vibrations, automatic control systems, kinematics, and design.

Learning Outcomes: 1. Identify the classical numerical methods available for engineering problem-solving. 2. Utilize numerical methods as an engineering tool and improve programming skills. 3. Develop a fundamental understanding of the methods. 4. Explain the importance of errors associated with scientific computing. Credits: 3.00

ME 61400 - Computational Fluid Dynamics

Credit Hours: 3.00. Application of finite difference methods, finite element methods, and the method of characteristics for the numerical solution of fluid dynamics problems. Incompressible viscous flows: vorticity transport equation, stream function equation, and boundary conditions. Compressible flows: treatment of shocks, implicit and explicit artificial viscosity techniques, and boundary conditions. Computational grids. Prerequisite: ME 50900 or ME 58100 .

Credits: 3.00

Required Courses (6 credits)

ME 50500 - Intermediate Heat Transfer

Credit Hours: 3.00. Heat and mass transfer by diffusion in one-

dimensional, two-dimensional, transient, periodic, and phase change systems. Convective heat transfer for external and internal flows. Similarity and integral solution methods. Heat, mass, and momentum analogies. Turbulence. Buoyancy-driven flows. Convection with phase change. Radiation exchange between surfaces and radiation transfer in absorbing-emitting media. Multimode heat transfer problems.

Learning Outcomes: 1. Analyze and solve variable cross-section fin problems. 2. Apply separation of variables to steady-state and transient heat conduction problems in Cartesian and cylindrical coordinate systems. 3. Apply separation of variables to steady-state conduction with heat generation. 4. Analyze and solve boundary layer problems. 5. Solve internal and external flow, forced convection problems. 6. Solve external flow natural convection problems. 7. Identify different regimes of boiling and condensation. 8. Recognize, model, and solve radiation heat transfer problems. Credits: 3.00

Required Courses (9 credits)

EDPS 50700 - Counseling Multicultural And Diverse Populations

Credit Hours: 3.00. Counseling strategies for multicultural and diverse populations encountered by helping professionals. Among the populations considered are ethnic and cultural minorities, older persons, the gifted, and the disabled.

Learning Outcomes: 1. Examine how social and cultural factors influence the counseling relationship and are reflected in counseling theory and practice. 2. Develop strategies for working with diverse individuals, couples, families, groups, and communities. 3. Develop an awareness of multicultural and pluralistic trends, including characteristics and concerns of specific socially and culturally diverse groups. 4. Examine ethical and legal issues related to counseling diverse populations. Credits: 3.00

EDPS 60000 - Counseling Theories And Techniques

Credit Hours: 3.00. Examination of major counseling theories and counseling techniques, professional and ethical issues. Permission of instructor required.

Learning Outcomes: 1. Utilize theoretical approaches to individual personality, behavior, decision, and life difficulties in clinical settings with clients. 2. Develop and write case conceptualization through active application. 3. Ascertain how counseling theory informs counseling techniques. 4. Theoretically conceptualize client presentations based on the context of diversity-related strengths and limitations of counseling theory (i.e. age, ethnicity, disabilities, language, national origin, race, religion, sexual orientation, and SES). Credits: 3.00

EDPS 60100 - Counseling Theories And Techniques Laboratory

Credit Hours: 3.00. Use of counseling techniques in a supervised laboratory; application of theories and techniques within varying employment settings. Concurrent Prerequisite: EDPS 60000 .

Learning Outcomes: 1. Identify counselor behaviors and characteristics that influence the helping process, including age, gender, ethnic differences, verbal and nonverbal behaviors, and personal characteristics, orientations, and skills. 2. Demonstrate essential interviewing and counseling skills, establishing appropriate counseling goals, designing intervention strategies, evaluating client outcomes, and successfully terminating the counselor-client relationship. Credits: 3.00

Selectives (3 credits)

EDPS 50000 - Group Counseling Theories And Techniques

Credit Hours: 3.00. Theoretical and experiential overview of fundamental elements of group work and group counseling processes. Broad topics include purposes and types of groups, therapeutic factors and stages of leadership skills, and multicultural, ethical, and legal aspects of group counseling.

Learning Outcomes: 1. Differentiate among various types and purposes groups and specializations in group work. 2. Identify the essential group dynamics involved in understanding group interactions. 3. Develop an understanding of the principles and challenges associated with planning a group intervention. 4. Develop an understanding of the principles and challenges associated with implementing a group intervention such as recruitment, therapeutic factors, and developmental stages of group. 5. Compare and contrast different perspectives on group leadership. 6. Examine and discuss the ethical considerations unique to group work. 7. Acquire knowledge regarding diversity-competent group practice. 8. Evaluate empirical findings associated with group work. 9. Consider various approaches to evaluating group processes (e.g., program evaluation) and the outcome of group work. Credits: 3.00

EDPS 50500 - Foundations Of Career Development And Assessment

Credit Hours: 3.00. Treats career development theories which emphasize aspects of the self in decision making, occupational classification systems, and educational and vocational information with applications to individual and group counseling.

Learning Outcomes: 1. Develop a comprehensive understanding of core and emerging theories and areas of research in career development. 2. Demonstrate the ability to conceptualize career counseling cases from various theoretical and multicultural perspectives. 3. Demonstrate the ability to integrate theory and research and utilize this information in such a way that it informs applications of career counseling and assessment. 4. Demonstrate understanding of the role cultural, individual difference (e.g., biological, personality), and developmental factors play in shaping career development processes. Credits: 3.00

EDPS 62500 - Human Growth And Development

Credit Hours: 3.00. An overview of lifespan development. Study of major development theories of childhood, adolescence, and adulthood. Prerequisite: EDPS 60000 .

Learning Outcomes: 1. Demonstrate knowledge of the nature and needs of individuals at all developmental levels across the life span, including theories of individual and family development and transition. 2. Demonstrate knowledge of major theories of learning and personality development. 3. Demonstrate knowledge of cognitive and emotional aspects of growth, including learning, intellectual, and moral development. Credits: 3.00

Required Courses (9 credits)

EDPS 50700 - Counseling Multicultural And Diverse Populations

Credit Hours: 3.00. Counseling strategies for multicultural and diverse populations encountered by helping professionals. Among the populations considered are ethnic and cultural minorities, older persons, the gifted, and the disabled.

Learning Outcomes: 1. Examine how social and cultural factors influence the counseling relationship and are reflected in counseling theory and practice. 2. Develop strategies for working with diverse individuals, couples, families, groups, and communities. 3. Develop an awareness of multicultural and pluralistic trends, including characteristics and concerns of specific socially and culturally diverse groups. 4. Examine ethical and legal issues related to counseling diverse populations. Credits: 3.00

EDPS 60000 - Counseling Theories And Techniques

Credit Hours: 3.00. Examination of major counseling theories and counseling techniques, professional and ethical issues. Permission of instructor required.

Learning Outcomes: 1. Utilize theoretical approaches to individual personality, behavior, decision, and life difficulties in clinical settings with clients. 2. Develop and write case conceptualization through active application. 3. Ascertain how counseling theory informs counseling techniques. 4. Theoretically conceptualize client presentations based on the context of diversity-related strengths and limitations of counseling theory (i.e. age, ethnicity, disabilities, language, national origin, race, religion, sexual orientation, and SES). Credits: 3.00

EDPS 60100 - Counseling Theories And Techniques Laboratory

Credit Hours: 3.00. Use of counseling techniques in a supervised laboratory; application of theories and techniques within varying employment settings. Concurrent Prerequisite: EDPS 60000 .

Learning Outcomes: 1. Identify counselor behaviors and characteristics that influence the helping process, including age, gender, ethnic differences, verbal and nonverbal behaviors, and personal characteristics, orientations, and skills. 2. Demonstrate essential interviewing and counseling skills, establishing appropriate counseling goals, designing intervention strategies, evaluating client outcomes, and successfully terminating the counselor-client relationship. Credits: 3.00

Additional Information

About the Program

Applied Statistics, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (6 credits)

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)

Learning Outcomes: 1. Identify which discrete and continuous distributions are applicable in a given setting. 2. Use conditional probabilities, Bayes theorem, and conditional distributions. 3. Utilize joint distributions in the context of several random variables. 4. Apply the law of large numbers and the central limit theorem in asymptotic settings. 5. Derive moments and moment generating functions for discrete and continuous random variables. Credits: 3.00

STAT 51700 - Statistical Inference

Credit Hours: 3.00. A basic course in statistical theory covering standard statistical methods and their application. Estimation including unbiased, maximum likelihood and moment estimation; testing hypotheses for standard distributions and contingency tables; confidence intervals and regions; introduction to nonparametric tests and linear regression.

Learning Outcomes: 1. Understand the basic asymptotic theory including consistency and convergence in distribution. 2. Know how to perform some elementary statistical inference such as estimation, confidence interval and hypothesis testing. 3. Be familiar with the maximum likelihood method to make statistical inference. 4. Know how to judge the quality of different estimators. 5. Know how to perform optimal tests of hypotheses. Credits: 3.00

STAT 51900 - Introduction To Probability

Credit Hours: 3.00. (MA 51900) Algebra of sets, sample spaces, combinatorial problems, independence, random variables, distribution functions, moment generating functions, special continuous and discrete distributions, distribution of a function of a random variable, limit theorems.

Credits: 3.00

STAT 52800 - Introduction To Mathematical Statistics

Credit Hours: 3.00. The course introduces the fundamental frameworks of statistical theory, from which statistical methods can be derived. This includes the framework of data and statistical models, decision theory (risk functions, Bayes and minimax criteria), sufficient statistics, exponential distribution families, estimation methods, unbiased estimators and information inequality (Cramer-Rao), the Neyman-Pearson framework of hypothesis testing, monotone likelihood ratio families and likelihood ratio tests, and an introduction of asymptotic approximations. Students will need background in advanced calculus, linear algebra, probability, and some mathematical analysis.

Learning Outcomes: 1. Understand the framework of statistical models and be able to define a statistical model for a data analysis problem. 2. Use the decision theory to compare different data analysis methods. 3. Derive theoretical properties of some statistical methods. 4. Be able to justify some commonly used statistical methods through theory. Credits: 3.00

Selectives (6 credits)

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper

statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

STAT 52000 - Time Series And Applications

Credit Hours: 3.00. An introductory course in stationary time series with applications. Topics include stationarity, autocovariance function, ARIMA (Autoregressive Integrated Moving Average) models, and basic spectral analysis (periodograms and their estimation, tapering, linear filtering). Extensive use of R is incorporated for building time series models and estimating the time series spectrum.

Learning Outcomes: 1. Recognize basic properties of stationary time series and various aspects and representations of ARMA and ARIMA models. 2. Understand and apply standard time domain techniques for the identification, estimation, and forecasting of ARIMA models. 3. Identify elementary concepts and techniques for spectral analysis. 4. Use R facilities to analyze real life time series data. Credits: 3.00

STAT 52200 - Sampling And Survey Techniques

Credit Hours: 3.00. This course covers basic sampling design and analysis techniques. Sampling designs include: simple random, stratified, clustered, multi-staged, and systematic samples. Methods of estimation appropriate to design features and efficiency and costs related to sample design are covered.

Learning Outcomes: 1. Develop a basic understanding of probability and inferential theory underlying sampling statistics. 2. Understand and apply complex sample design features to sampling plans. 3. Apply proper statistical analyses to data collected using complex sample designs. 4. Interpret statistical estimates and tests. 5. Analyze data from complex samples using SAS, R, STATA or other software. Credits: 3.00

STAT 52400 - Applied Multivariate Analysis

Credit Hours: 3.00. Extension of univariate tests in normal populations to the multivariate case, equality of covariance matrices, multivariate analysis of variance, discriminant analysis and misclassification errors, canonical correlation, principal components, factor analysis. Strong emphasis will be placed on use of existing computer programs.

Learning Outcomes: 1. Describe the underlying mathematical formulation associated with multivariate techniques such as principal components, factor analysis, discrimination and classification, and clustering. 2. Derive properties associated with the multivariate normal probability distribution. 3. Analyze data using multivariate techniques such as principal components, factor analysis, discrimination and classification, and clustering. 4. Use appropriate software, such as R, to describe, visualize, and analyze multivariate data. 5. Communicate the results of the work to a variety of audiences, including a non-statistician. Credits: 3.00

STAT 52500 - Intermediate Statistical Methodology

Credit Hours: 3.00. Statistical methods for analyzing data based on general/generalized linear models, including linear regression, analysis of variance (ANOVA), analysis of covariance (ANCOVA), random and mixed effects models, and logistic/loglinear regression models. Application of these methods to real-world problems using SAS statistical software.

Credits: 3.00

STAT 52600 - Advanced Statistical Methodology

Credit Hours: 3.00. As a sequel to STAT 52500, this course introduces statistical modeling tools for situations where standard least-squares techniques may not apply. This includes an extensive coverage of generalized linear models (GLM) for non-Gaussian responses, mixed effects models to describe correlated data, nonparametric regression, and lastly, parametric and nonparametric survival models for the analysis of (possibly censored) time-to-event data. Among issues to be discussed are the estimation of the models, the testing of hypotheses, and the checking of model adequacy. Data examples will be used throughout the course to illustrate the methodologies and the related software tools in R.

Learning Outcomes: 1. Understand the concepts and methods in generalized linear models, survival analysis, linear mixed models and GEE methods. 2. Apply these methods properly to real data using R, drawing valid conclusions, and presenting the results concisely. Credits: 3.00

STAT 54500 - Introduction To Computational Statistics

Credit Hours: 3.00. This introductory course covers the fundamentals of computing for statistics and data analysis. It starts with a brief overview of programming using a general purpose compiled language (C) and a statistics-oriented interpreted language (R). The course proceeds to cover data structures and algorithms that are directly relevant to statistics and data analysis and concludes with a computing-oriented introduction to selected statistical methods. A significant part of the course involves programming and hands-on experimentation demonstrating the covered techniques, ration, and Markov chain Monte Carlo methods.

Learning Outcomes: 1. Given a straightforward data manipulation problem, decide on what elementary data structures to use, write down an algorithm for a solution as a pseudocode, and analyze its computational complexity. 2. Implement an algorithm using C and/or R code, understand, modify, and if needed perform basic debugging of the existing code. 3. Understand and implement the computational techniques of numerical optimization, matrix manipulation, sampling, logistic regression, and EM algorithm. Credits: 3.00

Required Courses (6 credits)

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)

Learning Outcomes: 1. Identify which discrete and continuous distributions are applicable in a given setting. 2. Use conditional probabilities, Bayes theorem, and conditional distributions. 3. Utilize joint distributions in the context of several random variables. 4. Apply the law of large numbers and the central limit theorem in asymptotic settings. 5. Derive moments and moment generating functions for discrete and continuous random variables. Credits: 3.00

STAT 51700 - Statistical Inference

Credit Hours: 3.00. A basic course in statistical theory covering standard statistical methods and their application. Estimation including unbiased, maximum likelihood and moment estimation; testing hypotheses for standard distributions and contingency tables; confidence intervals and regions; introduction to nonparametric tests and linear regression.

Learning Outcomes: 1. Understand the basic asymptotic theory including consistency and convergence in distribution. 2. Know how to perform some elementary statistical inference such as estimation, confidence interval and hypothesis testing. 3. Be familiar with the maximum likelihood method to make statistical inference. 4. Know how to judge the quality of different estimators. 5. Know how to perform optimal tests of hypotheses. Credits: 3.00

STAT 51900 - Introduction To Probability

Credit Hours: 3.00. (MA 51900) Algebra of sets, sample spaces, combinatorial problems, independence, random variables, distribution functions, moment generating functions, special continuous and discrete distributions, distribution of a function of a random variable, limit theorems.

Credits: 3.00

STAT 52800 - Introduction To Mathematical Statistics

Credit Hours: 3.00. The course introduces the fundamental frameworks of statistical theory, from which statistical methods can be derived. This includes the framework of data and statistical models, decision theory (risk functions, Bayes and minimax criteria), sufficient statistics, exponential distribution families, estimation methods, unbiased estimators and information inequality (Cramer-Rao), the Neyman-Pearson framework of hypothesis testing, monotone likelihood ratio families and likelihood ratio tests, and an introduction of asymptotic approximations. Students will need background in advanced calculus, linear algebra, probability, and some mathematical analysis.

Learning Outcomes: 1. Understand the framework of statistical models and be able to define a statistical model for a data analysis problem. 2. Use the decision theory to compare different data analysis methods. 3. Derive

theoretical properties of some statistical methods. 4. Be able to justify some commonly used statistical methods through theory. Credits: 3.00

Additional Information

About the Program

Aviation Financial Management, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (12 credits)

AT 54600 - Aviation Financial Instruments And Operations

Credit Hours: 3.00. The course concentrates on increasing the understanding of financial expertise in analyzing trading and hedging programs for application in reducing aviation operational risk exposure. The studies include research into the development and use of operational indexes and their possible relation to hedging with commodity and security instruments. Emphasis will be placed on the understanding of current operational measurements and correlations to trading and hedging financial instruments in providing improved risk management in operational environments.

Learning Outcomes: 1. Propose and defend an analysis using operational data, trading, and hedging programs to reduce financial and operational risk in a specific business area in airline operations. 2. Collect, assess, organize, and present the relationships between operational data, financial data, and commodity volatility. 3. Develop and present the impact of complexity on airline business operations. Credits: 3.00

AT 54700 - Airline Revenue Management

Credit Hours: 3.00. This course aims to provide students with experience in airline revenue management applications. Primarily focusing on the commercial operation of airlines, this course covers various contemporary topics such as the segmentation, inventory control, forecasting, budgeting and pricing. This course will use simulations to enhance the overall learning-teaching experience.

Learning Outcomes: 1. Summarize the development of revenue management in the airline industry, and explain the importance of revenue management to business operation of airlines. 2. Interpret concepts such as segmentation, forecasting, budgeting, pricing, revenue management, and yield in the domain of the airlines industry and the broader hospitality sector. 3. Evaluate pricing schemes used by airlines on different markets (for instance, long-haul & short-haul, domestic & international, competitive & dominant, peak season & low season) in real world. 4. Implement inventory control in a simulated environment to respond to the dynamic and complex market conditions. 5. Develop appropriate strategies to optimize revenue for a specific airline (either full-service carrier or low-cost carrier) in a certain market (simulated environment). Credits: 3.00

AT 54800 - Aircraft Asset Management

Credit Hours: 3.00. This course provides the student with a detailed exploration of aircraft asset management programs in both airlines and business aviation organizations. Students analyze and study the critical components of an asset management program, the financial methods in aircraft asset management, acquisition proposals, and development plans of aircraft acquisitions in this course. An airline industry-relevant project is used to improve student reasoning and application of industry standard aircraft asset management analysis procedures to include forecasting techniques, present value calculations, and benefit-cost analyses. This course serves as the foundational knowledge required for AT 54900.

Learning Outcomes: 1. Review critically, synthesize, document and summarize relevant research literature in the field of aircraft asset management, expressing themselves clearly and concisely in writing and oral presentation. 2.

Recognize the critical components of an aircraft asset management program, thoroughly develop a business case for aircraft acquisition, and manage an in-service fleet of aircraft. 3. Develop a simulated asset management team and work effectively and collaboratively as part of the team. 4. Produce a high-quality airline industry aircraft asset management project, conduct financial analyses of aircraft assets, document findings in a paper, and communicate the key principles regarding their project in a professional presentation. Credits: 3.00

AT 54900 - Aircraft Leasing

Credit Hours: 3.00. This course provides students with training and experience managing aircraft leases using financial and risk management methodologies specific to the airline and business aviation industries. Students conduct financial evaluations of leasing versus ownership programs of airlines, as well as analyze debt, equity and capital markets for aircraft financing. The course includes an examination of taxation issues related to aircraft leasing, maintenance reserves, and auditing of aircraft financial performance. The prerequisite for this course is AT 54800.

Learning Outcomes: 1. Review critically, synthesize, document and present relevant research literature in the field of aircraft leasing and financing, expressing themselves clearly and concisely in writing and oral presentation. 2. Explain the necessary components of an aircraft lease, audit in-service aircraft financial performance, thoroughly analyze aircraft maintenance reserves, and summarize taxation issues with aircraft assets. 3. Develop a simulated aircraft leasing management team and work effectively and collaboratively as part of the team. 4. Generate a high-quality aircraft asset leasing project, conduct financial evaluations of leasing and owning options, document findings in a paper and communicate the key principles regarding their project in a professional presentation. Credits: 3.00

Program Learning Outcomes

GPA Requirements

About the Program

Aviation Safety Management, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (12 credits)

AT 53200 - Contemporary Issues In Transportation Security

Credit Hours: 3.00. This course provides extensive multi-modal transportation security experience. Students will receive detailed information on air, maritime, rail, mass transit, trucking and oil pipeline security programs, as well as applicable threat mitigation processes. Completion of an undergraduate course in either aviation law or aviation security is recommended. This course may be applicable to undergraduates with appropriate experience and background in aviation or other transportation systems. There are no citizenship or security clearance requirements for this course.

Learning Outcomes: 1. Describe the threats and countermeasures for transportation systems. 2. Describe the legislative and regulatory agencies responsible for security management. 3. Describe the techniques, policies and practices to counter security gaps. 4. Collect and analyze security data and information. 5. Process and disseminate information related to security mitigation programs. 6. Evaluate a security management program for a transportation system. Credits: 3.00

AT 57200 - Human Error And Safety

Credit Hours: 3.00. Explores the definition and nature of human error, error chains, and causal factors in error generation. Error taxonomies are reviewed in order to provide a classification scheme for grouping errors and assessing error criticality. Methods for assessing risk and predicting error generation potentials are learned, as well as strategies for controlling or eliminating errors. Case studies are utilized throughout the course to illustrate course concepts. Permission of instructor required.

Learning Outcomes: 1. Classify and evaluate types of human error using established taxonomies and assess their criticality in complex systems. 2. Analyze the antecedents and causal factors of human error, including those related to equipment, operators, organizational practices, regulatory frameworks, and cultural influences. 3. Apply error investigation methods, including data collection and analysis, to identify patterns and inform risk reduction strategies. 4. Examine case studies critically to propose evidence-based strategies for mitigating error incidents and improving safety outcomes. 5. Develop and present a scholarly research project on a contemporary human factors issue, demonstrating effective written and oral communication skills for professional contexts. Credits: 3.00

AT 57300 - Managing The Risk Of Organizational Accidents

Credit Hours: 3.00. Examines strategies various industries use to assess the risk of organizational accidents and to develop safety management programs to prevent, capture, and recover from conditions that lead to disastrous outcomes. Strategies such as High Reliability Organizations, Operational Risk Management, Behavioral Based Safety, Tripod Delta, and Safety Cultures are explored as successful methods for improving organizational safety in high-risk environments and endeavors. Permission of instructor required.

Learning Outcomes: 1. Explain Reason's model of Organizational Accidents (OA) and its application in understanding accident causation and prevention. 2. Analyze everyday operational events through the lens of the OA model to identify latent risks and contributory factors. 3. Evaluate best practices from safety frameworks such as High Reliability Organizations, Operational Risk Management, and Safety Cultures to mitigate the risk of organizational accidents. 4. Develop a detailed, evidence-based analysis of selected aviation accidents or incidents, incorporating the principles of the OA model. 5. Propose strategies to enhance organizational safety by integrating behavioral-based safety and proactive risk management techniques into safety management systems. Credits: 3.00

AT 67500 - Aviation Safety Program Development

Credit Hours: 3.00. This course is designed to provide graduate students with essential information and practical activities necessary to develop and manage effective and comprehensive safety programs for a wide variety of aviation operations. Students will conduct safety research, analyze data, and make presentations based on developed safety systems. Instructor permission required.

Learning Outcomes: 1. Describe the regulatory

and risk environment in which airline safety offices exist. 2. Describe safety theories and models. 3. Describe human factors and accident causation. 4. Collect and analyze safety related data. 5. Process and disseminate information related to accident prevention and risk minimization. 6. Manage an airline safety office and implement procedures. 7. Design a safety management program for an air career or FBO. Credits: 3.00

About the Program

Aviation Sustainability, Post-Baccalaureate Certificate Biochemistry and Molecular Biology, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (8 credits)

BCHM 60100 - Critical Thinking And Communication In Biochemistry I

Credit Hours: 2.00. The objective of this course is to assist students in acquiring the skills needed to read critically, evaluate, and assimilate the primary scientific literature. This objective will be accomplished by instructor-guided discussions of the hypotheses, experimental data, conclusions, and scientific merit of assigned manuscript(s) taken from the fields of biochemistry and molecular biology. Topics for discussion initially will focus on the structure, organization, review process, and ethical issues related to scientific manuscripts. As the semester progresses, discussions will focus on the hypotheses being tested, quality of the data, and validity of the conclusions. Permission of instructor required.

Learning Outcomes: 1. Understand essential graduate skills for independent research. 2. Enhance oral and written communication skills. 3. Master reading and interpreting scientific literature in biochemistry. 4. Develop critical thinking and creativity in scientific research. Credits: 2.00

BCHM 60501 - Macromolecules

Credit Hours: 3.00. This course will provide students with an understanding of the basic principles that underlie the secondary and tertiary structure of proteins and nucleic acids which contribute to their function. It will inform students of current efforts to engineer macromolecules with novel functions. Students will become familiar with methods used to determine the three-dimensional structures of macromolecules, and they will learn to critically evaluate the accuracy of structural models. Special topics in the current literature, including membrane proteins, drug design and ribozymes, will be covered. The class will typically include students from a variety of departments, graduate programs, and scientific backgrounds. The course will be taught primarily from various textbook and from the primary literature. A biochemistry course designated for majors is a prerequisite of the course. Lack of the prerequisite will require approval of the instructor. Permission of Department required.

Learning Outcomes: 1. Acquire knowledge about the chemical structures and properties of the building blocks of biological

macromolecules, including amino acids and nucleic acids. 2. Develop the skills required to visualize and analyze the higher order structures of proteins and nucleic acids. 3. Acquire information literacy by learning to use online resources to explore evolutionary relationships among macromolecules, and to prepare three dimensional models of proteins and nucleic acids. Credits: 3.00

BCHM 61000 - Regulation Of Eukaryotic Gene Expression

Credit Hours: 3.00. This course will provide students with a basic understanding of gene expression mechanisms with a s specific focus on newly emerging topics. This course will be taught from current primary literature, using a textbook as a background resource. Topics will include transcription, messenger RNA decay, microRNAs and connections between gene expression steps. Students will learn how to read and interpret scientific literature through class presentations, discussions and take home assignments. Additionally, students will gain experience in developing and testing hypotheses within the class topic areas and writing a research proposal. Prerequisites: BCHM 56100 and 56200, or BCHM 60501. Lack of these prerequisites will require approval by the instructor.

Learning Outcomes: 1. Basic knowledge of the molecular mechanisms in gene expression and regulation. 2. Appreciation for post-transcriptional gene regulatory events. 3. Enhancement of oral and written communication skills. 4. Mastery of reading and interpreting scientific literature in gene expression fields. 5. Development of critical thinking and creativity in scientific research. Credits: 3.00

Lack of these prerequisites will require approval by the instructor.

Learning Outcomes: 1. Basic knowledge of the molecular mechanisms in gene expression and regulation. 2. Appreciation for post-transcriptional gene regulatory events. 3. Enhancement of oral and written communication skills. 4. Mastery of reading and interpreting scientific literature in gene expression fields. 5. Development of critical thinking and creativity in scientific research. Credits: 3.00

Additional Information

About the Program

Biotechnology Quality and Regulation Compliance, Post-Baccalaureate Certificate

About the Program

Program Requirements

Required Courses (9 credits)

ABE 51100 - Drug Development

Credit Hours: 3.00. A review of drug discovery and drug development, with emphasis on the regulatory aspects of these activities. Animal preclinical research and human clinical research are discussed in detail. In addition, the process for the assembly of an IND and NDA is discussed along with the Phases (I,II,III) of human clinical trials. The CMC (chemistry manufacturing and control) aspects of drug development are presented along with ICH documents and manufacturing process analytical technologies. The course concludes with a brief review of international regulatory issues and patents.

Learning Outcomes: 1. Comprehend strategies used for biotechnology innovation: regulatory and quality documents and materials in the areas of drug development and discovery. 2. Ability to meld theory and practice. 3. Examine issues rationally, logically, and coherently; and acquire, evaluate, and synthesize information and knowledge relevant to an identified problem; and make sound decisions in both familiar and unfamiliar contexts. 4. Read, write, speak, listen, and use data, media and computers to send and respond effectively to communication for varied audiences and purposes. 5. Demonstrate sensitivity to and facility with personal values and ethical principles in professional and social contexts. Credits: 3.00

ABE 51200 - Good Regulatory Practices

Credit Hours: 3.00. Includes a review of the FDA and ICH regulations on good manufacturing, good laboratory, good clinical practices. The meaning of these regulations, the globalization of practices and the roles and responsibilities of various professionals implementing these regulations will be addressed. Special emphasis will be detailed coverage of the process for the assembly and submission of an IND or NDA, and the function of the regulatory affairs department in a pharmaceutical company.

Learning Outcomes: 1. Identify cGMP regulations, and relationship to maintaining control of the chemical and ultimately the drug product with a focus on Phase 3, product introduction, and post marketing. 2. Examine about the regulatory history of the FDA and the GxP framework. 3. Identify NDA and BLA applications, product control including specifications, quality outcomes, critical quality attributes, and ICH framework. 4. Evaluate the

regulations governing the manufacture of drug products, including the methods used to prove this, validation of those methods, validation of the manufacture, quality by design, comparability protocols, and continuous improvement. 5. Identify and evaluate compliance to GMP and warning letters. 6. Evaluate Good Distribution Practices (GDP) and the integration of supply chain controls into the Quality Management System. 7. Learn GCP, clinical regulations, and relationship to ensuring the drug or device is safe and efficacious. 8. Evaluate and describe basic clinical trial design and how to write the investigator's brochure that informs patients (through the informed consent document that they sign) of clinical information. 9. Examine the rigid control that governs the clinical protocols and processes such as compliance oversight procedures, the role of clinical auditors and the process of auditing a clinical trial to ensure that it is done right. 10. Identify about the impact of technology and patient involvement in clinical trials through online resources, such as clinicaltrials.gov, YouTube instruction videos including videos describing GCP for devices. 11. Summarize the impact of recent adverse clinical trial events with innovative applications such as in biologics (Tegerno) and gene therapy (Gelsinger). Students will also identify and describe the role of approved Risk Evaluation and Mitigation Strategies (REMS), pharmacovigilance programs and adverse drug event reporting. 12. Identify and evaluate GLP and regulations that ensure a drug product is safe. 13. Examine GLP protocols, toxicology testing, including animal and human safety, and indicators for safety (irregular heartbeats in animals, etc.). 14. Evaluate the ethical considerations of testing, including impact of falsifying safety testing. 15. Analyze how GLP regulations are implemented during development and testing of devices. 16. Discover how technology and innovation impact the regulatory process. 17. Review data integrity and compliance with cGMP. 18. Evaluate the role of computer systems and computer systems validation. 19. Assess the emerging area of predictive toxicology and the potential for testing without animals. 20. Evaluate and explain innovation in safety and adaptive clinical trials. 21. Examine innovation in CMC including quality by design and predicting the quality of manufacturing on the large scale with small scale experiments, including analytics modeling. 22. Discover how the global environment impacts the regulatory process. 23. Evaluate special considerations of implementing a generic system in the developing and third world country . 24. Analyze global regulatory authorities and WHO PQ process. 25. Examine special considerations of the regulatory process as applied to devices, diagnostics and generics. 26. Identify the importance of design to a device, attributes that lead to the specifications and raw materials for diagnostics and the importance of product equivalence for generics and special considerations for biologics. Credits: 3.00

ABE 51300 - Quality Management, Audits, Inspections

Credit Hours: 3.00. This course provides advanced topics in quality management and business improvement methods that apply to the pharmaceutical industry. Emphasis will be placed on specific issues of industry, audits, and inspections, as well as the successful selection and presentation of business and quality improvement projects to produce compliance and competitive advantage.

Learning Outcomes: 1. Understand quality management definitions, concepts, and guidelines. 2. Define quality and how to establish a quality management system. 3. Define quality plan, describe its purpose for the organization as a whole and identify various functional areas and people that have

responsibility for contributing to its development. 4. Understand the audit process and quality control, including the various approaches to audits, inspections and reviews. 5. Understand basic skills required to manage audits, inspections and reviews. 6. Learn how to set up effective self audit systems. 7. Understand the impact of changing technologies, such as electronic systems, on supporting a quality management system. 8. Understand how quality management functions support global business decisions for asset acquisitions and growth of a company. 9. Understand the key elements of supply chain management, assessing risk, and managing outcomes from supplier and vendor audits. 10. Understand regulatory compliance aspects and implementation of ICH and global quality principles in supply chain management, including good distribution practices. 11. Define a continuous quality improvement or business improvement project within an organization. 12. Select and define continuous quality improvement tools and techniques in order to achieve operational excellence. 13. Develop in-depth knowledge of how to implement and obtain operational excellence and present the findings in a coherent and informative manner. Credits: 3.00

ABE 51500 - Molecular Basis Of Manufacturing

Credit Hours: 3.00. This advanced course addresses important Chemistry Manufacturing and Control (CMC) issues related to manufacturing and quality by design. The course provides important information on strategies for quality by design, manufacturing strategies for early development, the best approaches to analyzing data, and strategies for reporting the information to the FDA. This course will also focus on product design and processing. Using product and process design helps achieve quality by design (QbD), strong development reports, excellent regulatory submissions and allows continuous improvement. The course includes laboratory exercises, laboratory tours, and/or workshops outlining how to interpret the data. Learning Outcomes: 1. Identify GMP manufacturing procedures operations including blending, granulation, drying, compression, coating, etc.; Specifications in manufacturing; Statistical principles important in manufacturing. 2. Characterize GMP manufacturing procedures. 3. Evaluate how drug products (solids, liquids, injectables) are characterized especially related to: Dissolution; Weight variation; Content uniformity; Instrumental methods including X-ray diffraction; Approaches to determining critical quality attributes; Factors that influence the quality of the final product; DOE approaches to product optimization. 4. Construct QOS and Critical quality attributes diagram. 5. Outline how technology and innovation impact the manufacturing process: Strategies for continuous manufacturing; Process analytical technology methods; Innovations in manufacturing methods; How the global manufacturing environment impacts pharmaceutical manufacturing. Credits: 3.00

Learn GCP, clinical regulations, and relationship to ensuring the drug or device is safe and efficacious. 8. Evaluate and describe basic clinical trial design and how to write the investigator's brochure that informs patients (through the informed consent document that they sign) of clinical information. 9. Examine the rigid control that governs the clinical protocols and processes such as compliance oversight procedures, the role of clinical auditors and the process of auditing a clinical trial to ensure that it is done right. 10. Identify about the impact of technology and patient involvement in clinical trials through online resources, such as clinicaltrials.gov, YouTube instruction videos including videos describing GCP for devices. 11. Summarize the impact of recent adverse clinical trial events with innovative applications such as in biologics (Tegerno) and gene therapy (Gelsinger). Students will also identify and describe the role of approved Risk Evaluation and Mitigation Strategies (REMS), pharmacovigilance programs and adverse drug event reporting. 12. Identify and evaluate GLP and regulations that ensure a drug product is safe. 13. Examine GLP protocols, toxicology testing, including animal and human safety, and indicators for safety (irregular heartbeats in animals, etc.). 14. Evaluate the ethical considerations of testing, including impact of falsifying safety testing. 15. Analyze how GLP regulations are implemented during development and testing of devices. 16. Discover how technology and innovation impact the regulatory process. 17. Review data integrity and compliance with cGMP. 18. Evaluate the role of computer systems and computer systems validation. 19. Assess the emerging area of predictive toxicology and the potential for testing without animals. 20. Evaluate and explain innovation in safety and adaptive clinical trials. 21. Examine innovation in CMC including quality by design and predicting the quality of manufacturing on the

large scale with small scale experiments, including analytics modeling. 22. Discover how the global environment impacts the regulatory process. 23. Evaluate special considerations of implementing a generic system in the developing and third world country . 24. Analyze global regulatory authorities and WHO PQ process. 25. Examine special considerations of the regulatory process as applied to devices, diagnostics and generics. 26. Identify the importance of design to a device, attributes that lead to the specifications and raw materials for diagnostics and the importance of product equivalence for generics and special considerations for biologics. Credits: 3.00

ABE 51300 - Quality Management, Audits, Inspections

Credit Hours: 3.00. This course provides advanced topics in quality management and business improvement methods that apply to the pharmaceutical industry. Emphasis will be placed on specific issues of industry, audits, and inspections, as well as the successful selection and presentation of business and quality improvement projects to produce compliance and competitive advantage.

Learning Outcomes: 1. Understand quality management definitions, concepts, and guidelines. 2. Define quality and how to establish a quality management system. 3. Define quality plan, describe its purpose for the organization as a whole and identify various functional areas and people that have responsibility for contributing to its development. 4. Understand the audit process and quality control, including the various approaches to audits, inspections and reviews. 5. Understand basic skills required to manage audits, inspections and reviews. 6. Learn how to set up effective self audit systems. 7. Understand the impact of changing technologies, such as electronic systems, on supporting a quality management system. 8. Understand how quality management functions support global business decisions for asset acquisitions and growth of a company. 9. Understand the key elements of supply chain management, assessing risk, and managing outcomes from supplier and vendor audits. 10. Understand regulatory compliance aspects and implementation of ICH and global quality principles in supply chain management, including good distribution practices. 11. Define a continuous quality improvement or business improvement project within an organization. 12. Select and define continuous quality improvement tools and techniques in order to achieve operational excellence. 13. Develop in-depth knowledge of how to implement and obtain operational excellence and present the findings in a coherent and informative manner. Credits: 3.00

ABE 51500 - Molecular Basis Of Manufacturing

Credit Hours: 3.00. This advanced course addresses important Chemistry Manufacturing and Control (CMC) issues related to manufacturing and quality by design. The course provides important information on strategies for quality by design, manufacturing strategies for early development, the best approaches to analyzing data, and strategies for reporting the information to the FDA. This course will also focus on product design and processing. Using product and process design helps achieve quality by design (QbD), strong development reports, excellent regulatory submissions and allows continuous improvement. The course includes laboratory exercises, laboratory tours, and/or workshops outlining how to interpret the data.

Learning Outcomes: 1. Identify GMP manufacturing procedures operations including blending, granulation, drying, compression, coating, etc.; Specifications in manufacturing; Statistical principles important in manufacturing. 2. Characterize GMP manufacturing procedures. 3. Evaluate how drug products (solids, liquids, injectables) are characterized especially related to: Dissolution; Weight variation; Content uniformity; Instrumental methods including X-ray diffraction; Approaches to determining critical quality attributes; Factors

that influence the quality of the final product; DOE approaches to product optimization. 4. Construct QOS and Critical quality attributes diagram. 5. Outline how technology and innovation impact the manufacturing process: Strategies for continuous manufacturing; Process analytical technology methods; Innovations in manufacturing methods; How the global manufacturing environment impacts pharmaceutical manufacturing. Credits: 3.00

COM 60111 - Seminar In Strategic Communication

Credit Hours: 3.00. This graduate course will survey the theories and processes of strategic communication and its practice by business, government, politicians, and non-profits - in domestic and international arenas. The course will emphasize the application of theory to provide an in-depth understanding of planning, executing, and evaluating strategic communication plans. Prerequisite: Graduate student in communication. Permission of department required.
