Credit Hours: 3.00. Study of poetry of the past two or three decades, both American and foreign, and their interaction. Attention to influences, "schools," and little magazines, as well as to conventional sources. **Credits:** 3.00

ENGL 59500 - Contemporary American Fiction

Credit Hours: 3.00. Intensive study of contemporary and postmodern American fiction within various formal, theoretical, and cultural contexts, including multiculturalism, poststructuralism, and gender analysis, among others. **Credits:** 3.00

ENGL 59600 - Advanced Studies In Literature Or Language

Credit Hours: 3.00. Advanced study of a topic within the instructor's fields of specialization. Emphasis on scholarly analysis and research. **Credits:** 3.00

ENGL 59700 - Contemporary Black Feminist Literature

Credit Hours: 3.00. An intense examination of recent literary works by black women along with various critical theories constructed about black women's literature, beginning with the premise that black feminism is a "sign to be interrogated, a locus of contradictions." **Credits:** 3.00

ENGL 59900 - Academic Language And Content Area Learning

Credit Hours: 3.00. (EDCI 55900) Course focuses on theoretical and practical knowledge for teachers about how second languages are learned, and on the educational and philosophical basis for second language teaching and learning. The course links English language development to teaching and learning strategies and is designed for undergraduate and graduate students in education and practicing teachers. **Credits:** 3.00

ENGL 60100 - Teaching Literature At The College Level

Credit Hours: 3.00. Focuses on the practical and theoretical issues related to teaching literature at the college level. Topics include course design, literary canons and text selection, teaching and learning styles, close reading, writing about literature, assessment, and professional ethics. Prerequisite: ENGL 50100 or consent of department. Restricted to graduate students in the Department of English. **Credits:** 3.00

ENGL 60111 - Introduction To Scientific, Technical, Medical, And Healthcare Writing

Credit Hours: 3.00. Introduction to Scientific, Technical, Medical, and Healthcare Writing offers an overview of the genres, conventions, and strategies that these professional fields have in common. This course is the gateway course into the online Professional Certificate and Masters in Scientific, Technical, and Medical Communication. Permission of department required. **Credits:** 3.00

ENGL 60211 - Science Writing

Credit Hours: 3.00. This course teaches students how to use the various writing styles and rhetorical strategies that are common in popular science and the scientific workplace. More specifically, they learn how to analyze, prepare, and edit technical and professional documents needed to effectively communicate within scientific professions, with specialized focus on reporting science news, conducting interviews with scientists, and identifying and explaining current debates in science. Permission of department required. **Credits:** 3.00

ENGL 60311 - Medical And Healthcare Writing

Credit Hours: 3.00. This course helps students master various genres, writing styles, and rhetorical strategies common in medical and healthcare contexts. More specifically, you will learn how to analyze, prepare, and edit documents that are used to communicate within and about the healthcare industry (i.e., protocols, patient educational materials, and proposals). Permission of department required. **Credits:** 3.00

ENGL 60400 - Introduction To Inquiry In Second Language Studies

Credit Hours: 3.00. Survey of a variety of approaches to inquiry (incl. hermeneutic, conceptual, historical, qualitative, and quantitative) available for second language studies to provide participants copies for design of their own research and scholarship. **Credits:** 3.00

ENGL 60411 - Writing Proposals And Grants

Credit Hours: 3.00. Writing Proposals and Grants teaches students how to analyze requests for proposals, analyze problems, devise project plans, and write proposals for for-profit corporations and non-profit organizations. Permission of department required. **Credits:** 3.00

ENGL 60500 - Computers In Language And Rhetoric

Credit Hours: 3.00. Seminar that investigates how computers figure in contemporary theories of text and text making. Typical topics: critiques of technology, hypertext, cyberspace, computer-mediated communication, Internet, electronic writing, online research, pedagogy, and publishing. **Credits:** 3.00

ENGL 60511 - Editing And Publishing

Credit Hours: 3.00. The purpose of this course is to show you how to use professional editing techniques to produce high-quality and publishable documents. Students learn how to work as a professional editor at four "levels of edit," which include proofreading, copyediting, substantive editing, and development editing. Permission of department required. **Credits:** 3.00

ENGL 60600 - Seminar In Poetry Writing

Credit Hours: 3.00. An advanced course in the writing of poetry. Workshop criticism. Study of the work of established writers. Prerequisite: admission to the MA program in creative writing. **Credits:** 3.00

ENGL 60611 - Technical Communication

Credit Hours: 3.00. The purpose of this course is to show students how to write technical documentation and produce high-quality and reader-centered documents. They learn to write documents in several modalities, including print, electronic, audio, and video. Permission of department required. **Credits:** 3.00

ENGL 60700 - The Theory And Craft Of Creative Writing

Credit Hours: 3.00. A study of the craft of poetry, fiction, or drama with some consideration of underlying theories. Prerequisite: admission to the MA program in creative writing. **Credits:** 3.00

ENGL 60711 - Designing Documents, Interfaces, And Graphics

Credit Hours: 3.00. The purpose of this course is to introduce students to visual rhetoric principles that are commonly used to design documents and interfaces, as well as show them how to use multimedia tools for designing visual texts. Students also learn how to create effective visuals, such as graphs, charts, and tables. Permission of department required. **Credits:** 3.00

ENGL 60811 - Entrepreneurship Communication

Credit Hours: 3.00. The purpose of this class is to teach students how to use design thinking and information experience (IX) strategies to be innovative and generate new ideas for products and services. Students will learn how to write a business model and pitch that business model to investors or their supervisors. Permission of department required. **Credits:** 3.00

ENGL 60900 - Seminar In Fiction Writing

Credit Hours: 3.00. An advanced course in the writing of fiction. Workshop critiques. Prerequisite: Admission to the creative writing program. **Credits:** 3.00

ENGL 60911 - User Experience And Design Thinking

Credit Hours: 3.00. The purpose of this courses is to show students how to employ User Experience (UX) principles to design documents, interfaces, and products for scientific, technical, healthcare, and medical situations, making those interactions intuitive, easy, and even pleasurable. Design thinking broadens out the focus, using design as a systematic way of understanding a company's customers, defining their problems and needs, ideating to create new solutions with emerging technologies, and prototyping those solutions. Permission of department required. **Credits:** 3.00

ENGL 61100 - Old English Language

Credit Hours: 3.00. A study of the principal prose and poetry from the beginnings to about 1100. Emphasis on the language. **Credits:** 3.00

ENGL 61200 - Old English Literature

Credit Hours: 3.00. A survey of Old English literary works, including heroic poetry, religious epic, elegiac poetry, homilies, and secular prose, illustrative of the early development of English literature and culture. Prerequisite: ENGL 61100. **Credits:** 3.00

ENGL 61300 - Middle English Language

Credit Hours: 3.00. A study of selected readings from the literature of about 1100 to about 1500. Emphasis on the language. **Credits:** 3.00

ENGL 61400 - Middle English Literature

Credit Hours: 3.00. Study of representative works in the major literary traditions and genres of Middle English literature (exclusive of Chaucer): lyric, romance, satire, and allegory. Detailed examination of major works, such as Sir Gawain and the Green Knight, Piers Plowman, and Pearl. Prerequisite: ENGL 61300. **Credits:** 3.00

ENGL 61500 - A Reading Of Beowulf

Credit Hours: 3.00. An intensive reading of Beowulf in the original with a consideration of background sources and interpretive theories. Prerequisite: ENGL 61100. **Credits:** 3.00

ENGL 61800 - Quantitative Research In Second Language Studies

Credit Hours: 3.00. A survey of quantitative research methods and designs associated with second language studies. Prerequisite: ENGL 51600. **Credits:** 3.00

ENGL 61900 - Qualitative Research In Second Language Studies

Credit Hours: 3.00. Introduces graduate students to the theoretical concepts and practical tools associated with situated approaches to research in second language studies. **Credits:** 3.00

ENGL 62000 - Classroom Communication In ESL For Teaching Assistants

Credit Hours: 5.00. Student must be enrolled in the Graduate School and a non-native speaker of English. Permission of department required. **Credits:** 5.00

ENGL 62100 - Written Communication For International Graduate Students

Credit Hours: 3.00. A course in English composition for non-native English-speaking graduate students. **Credits:** 3.00

ENGL 62200 - Issues In Composition Studies: Classical Period To The Renaissance

Credit Hours: 3.00. The course historicizes issues in composition studies from the sophists to the Renaissance. Prerequisite: ENGL 59100. **Credits:** 3.00

ENGL 62400 - Issues In Composition Studies: Modern Period

Credit Hours: 3.00. The course historicizes issues in composition studies from the eighteenth century to the mid-twentieth century. Prerequisite: ENGL 59100. **Credits:** 3.00

ENGL 62500 - Seminar On Empirical Research In Writing

Credit Hours: 3.00. An analysis and evaluation of empirical research concerned with composing processes, critical literacy, disciplinary writing, various writing cultures, and composition pedagogy. Students will study empirical research designs and develop a project in one of the above areas. Prerequisite: ENGL 59100. **Credits:** 3.00

ENGL 62600 - Postmodernism And Issues In Composition Studies

Credit Hours: 3.00. The course historicizes how various postmodern theories and practices (cultural, political, ethical, philosophical, technological, aesthetic) influence the study and teaching of written discourse. Prerequisite: ENGL 59100. **Credits:** 3.00

ENGL 62700 - Seminar In Linguistics

Credit Hours: 3.00. Investigation of a topic in advanced linguistics research. **Credits:** 3.00

ENGL 62800 - Natural Language Processing

Credit Hours: 3.00. (ECE 66900) This course focuses on keyword-driven question answering systems; transition networks; parsing procedures for context-free grammars; theory of transformational grammars; implementation of recursive transition networks; implementation of augmented transition networks; representation of conceptual dependencies; surface semantic conceptual analysis; conceptual dependency parsing; generating natural language from a conceptual base; scripts, plans, and goals; building conversationalist programs. Prerequisite: ENGL 50600 or ECE 57000. **Credits:** 3.00

ENGL 62900 - Seminar In English As A Second Language

Credit Hours: 3.00. In-depth study of variable subjects relating to the nature of English as a second/foreign/international language and its learning and teaching. Prerequisite: ENGL 51600. **Credits:** 3.00

ENGL 63000 - Seminar In Second Language Writing

Credit Hours: 3.00. An overview and examination of major issues in the theory, research, and practice of writing in English as a second language. Prerequisite: ENGL 51600 or ENGL 59100. **Credits:** 3.00

ENGL 63100 - World Englishes

Credit Hours: 3.00. Investigation of the use, spread, and development of English as an international language. Topics include: non-native varieties, language contact and change, new English literatures, and the teaching of English as an international language. Prerequisite: ENGL 50600. **Credits:** 3.00

ENGL 63300 - Seminar In English Literature Before 1660

Credit Hours: 3.00. Variable subjects (authors, themes, periods, movements) in English literature from Beowulf to Paradise Lost. **Credits:** 3.00

ENGL 63500 - Seminar In English Literature 1660-1783

Credit Hours: 3.00. Intensive consideration of one to three or four authors or of literary topics and genres, such as drama, fiction, literary criticism and literary history, the medieval revival, poetic and prose satire, the periodical essay, biography, etc. **Credits:** 3.00

ENGL 64200 - Seminar In Shakespeare

Credit Hours: 3.00. Special topics in Shakespeare criticism, concentrating on one or more plays. Topics such as women in Shakespeare's plays, performance theory and practice, and current theoretical approaches. Students investigate a single topic in depth. **Credits:** 3.00

ENGL 64700 - Seminar In The Romantic Movement

Credit Hours: 3.00. A close investigation of the works of one or more outstanding writers of English literature from 1783 to 1832, their place in the Romantic Movement, and their historical and cultural relations to the times. **Credits:** 3.00

ENGL 64800 - Seminar In Victorian Literature

Credit Hours: 3.00. A detailed study of the works of one or more figures of English literature from 1832 to 1880: their relation to the literary movements and historical and cultural backgrounds of the age. **Credits:** 3.00

ENGL 64900 - Seminar In English Literature 1880-1920

Credit Hours: 3.00. Subjects will range from individual authors and specific literary types to transitional literary movements. **Credits:** 3.00

ENGL 65700 - Seminar In American Literature 1630-1900

Credit Hours: 3.00. A variable content seminar on authors, themes, genres, movements, geographic regions, or cultural contexts. **Credits:** 3.00

ENGL 66500 - Seminar In Comparative Literature

Credit Hours: 3.00. (CMPL 65000 and LC 63900) Advanced study of international literary movements, influence thematology, literary theory, and genre development. See Comparative Literature Program. **Credits:** 3.00

ENGL 66700 - Seminar In Poetics And Aesthetics

Credit Hours: 3.00. Study of selected influential figures, concepts, and texts in the history of poetics and aesthetics from ancient times to the present. **Credits:** 3.00

ENGL 66800 - Seminar In Interpretation And Cultural Theory

Credit Hours: 3.00. Examination of selected developments in social, cultural, and hermeneutical theories from the eighteenth century to the present. **Credits:** 3.00

ENGL 66900 - Introduction To Visual Theory And Visual Culture

Credit Hours: 3.00. Visual studies is the multidisciplinary study of images, viewers, and vision. Students will be provided with an overview of the theories, practices, and histories of the visual from a variety of disciplinary perspectives and historical periods. The seminar will be organized around a series of basic questions (such as "What is an image?" "How do images produce meaning?" "What do images do?" "What is vision?") whose responses have come to constitute the field as well as its transdisciplinarity. Readings will be drawn from seminal works in visual theory, cultural semiotics, cultural theory, intermediality, art history, media studies as well as the psychology, philosophy, and science of vision. **Credits:** 3.00

ENGL 67200 - Seminar In Women's Literature And Feminist Theory

Credit Hours: 3.00. A variable topic course investigating gender as a category of analysis. Intensive study of one or two women authors, of a particular genre or period, or of a critical issue relevant to women's literature and/or feminist theory. **Credits:** 3.00

ENGL 67300 - Seminar In Postcolonial Studies

Credit Hours: 3.00. Advanced study of works from once-colonized cultures in Africa, Asia, the Caribbean, and/or postcolonial diasporas in the first world. Individual sections will focus on one or more of the following: literature, women's literature, film, and feminist and cultural theory. **Credits:** 3.00

ENGL 67400 - Seminar In Language Testing

Credit Hours: 3.00. An introduction to the techniques, practices, and history of language testing. Introduces the basic tenets of measurement and the issues and controversies related to the measurement of language ability. **Credits:** 3.00

ENGL 67700 - Seminar In Modern Literature

Credit Hours: 3.00. Developments in English, American, and European literature in modern times. Individual seminars will ordinarily be concerned with drama, poetry, or fiction, but may treat all three types together. **Credits:** 3.00

ENGL 67800 - Seminar In Modern American Literature

Credit Hours: 3.00. A variable content course, focusing on developments, movements, and authors in modern American literature and culture. Major research project required. **Credits:** 3.00

ENGL 67900 - Seminar In Modern British Fiction

Credit Hours: 3.00. Study in depth of one or two major novelists, a literary movement, a group of writers, or a form of modern fiction. Oral reports and research papers required. **Credits:** 3.00

ENGL 68000 - Seminar In Rhetoric And Composition

Credit Hours: 3.00. A variable content course dealing with topics such as cultural studies and composition, medieval rhetoric, renaissance rhetoric, literacy, historiographies of rhetoric, qualitative studies, and professional writing theory. Prerequisite: ENGL 59100. **Credits:** 3.00

ENGL 68100 - Hutton Lectures In Rhetoric And Composition

Credit Hours: 3.00. Reading and discussion of the work of contemporary scholarship in rhetoric and composition, accompanied by lectures by visiting scholars. **Credits:** 3.00

ENGL 69000 - Internship In Second Language Studies/ESL

Credit Hours: 1.00 to 3.00. Part-time or full-time practical work experience in selected situations related to the student's field of study. The internship must be located at an off-campus site unless a special exception is granted by the Graduate School. Permission of instructor required. **Credits:** 1.00 to 3.00

ENGL 69100 - Seminar In The English Language Arts

Credit Hours: 3.00. (EDCI 61300) Problems in the teaching of English: literature, language, rhetoric. Attention to recent scholarship and to its application in the public schools. **Credits:** 3.00

ENGL 69200 - Scholarly Writing And Publishing

Credit Hours: 3.00. Guides graduate students through preparing an essay for journal publication. Activities include selecting appropriate venues, daily revision, outlining, workshopping, and hearing guest speakers. At the end of the course, students will formally submit their essay publication. Prerequisites: ENGL 50100 or instructor permission. Students must have an essay draft in hand that they wish to work on revising. **Credits:** 3.00

ENGL 69600 - Seminar In Literature

Credit Hours: 3.00. Advanced study of special subjects. **Credits:** 3.00

ENGL 69800 - Research MA Or MFA Thesis

Credit Hours: 1.00 to 18.00. Research MA Or MFA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

ENGL 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Entomology

ENTM 10100 - Insect Biology And Societal Grand Challenges

Credit Hours: 1.00. An introduction to the roles of insect biologists in addressing societal grand challenges. **Credits:** 1.00

ENTM 10200 - The Practice Of Science

Credit Hours: 2.00. A critical examination of science, best practices for conducting science, the contribution of research to knowledge accumulation, and the ethical obligations of scientists. **Credits:** 2.00

ENTM 10500 - Insects: Friend And Foe

Credit Hours: 3.00. A one-semester course for nonscience students who want to know more about insects - the most numerous organisms on earth. An introduction to insects and their relationship with humankind, including interesting aspects of insect biology; insects in music, decoration, history; use of insects in teaching at the elementary school level; their use in art, photography, and drawing; insects as human food. **Credits:** 3.00

ENTM 12800 - Investigating Forensic Science

Credit Hours: 3.00. Designed for both forensic science majors and non-majors, this course will provide an overview of the issues affecting the study and practice of forensic science as defined by the National Academy of Science 2009 report: "Strengthening Forensic Science". Using a mixture of popular media (film, television, news articles) as well as more conventional academic peer-reviewed articles, students will learn how the scientific method is applied to forensic investigations including; identifying pseudoscience, crime lab procedures, DNA evidence, errors in thinking and problem-solving, types of fraud, and the influence of the "CSI Effect". **Credits:** 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended. **Credits:** 3.00

ENTM 20600 - General Entomology

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology. **Credits:** 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600. Insect structures and function are studied as a basis for learning to identify insects and other arthropods. **Credits:** 1.00

ENTM 21000 - Introduction To Insect Behavior

Credit Hours: 3.00. Description and introductory analysis of innate and learned insect behavior, including basic orientations and movements, behavioral periodicity, communication, chemical and structural defenses, host selection and feeding, reproduction, and insect societies. General biology and introductory entomology are desirable, but not essential. **Credits:** 3.00

ENTM 22810 - Forensic Investigation

Credit Hours: 4.00. Forensic science investigation, crime scene management and field data collection techniques. Includes crime scene recognition and the documentation, collection, preservation, and processing of crime scene evidence. Emphasizes the place of field data collection as the first step in a sequence that takes evidence from scene to the lab for analysis and finally into the court of law. **Credits:** 4.00

ENTM 22820 - Forensic Analysis

Credit Hours: 4.00. Forensic science evidence analysis, crime lab evidence management and data analysis techniques. Focuses on the accuracy, precision and integrity in evidence analysis for a survey of forensic disciplines. Emphasizes the place of forensic analysis as a necessary second step in a sequence that takes evidence from scene, to the lab for analysis and finally into the court of law. **Credits:** 4.00

ENTM 22830 - Forensic Testimony And Ethics

Credit Hours: 3.00. The final course in the forensic science program core, focuses on the legal ramifications that arise when forensic science is applied at the crime scene, in the crime lab and in the courtroom. Students are introduced to ethical issues that form the basis of all scientific investigations and the role of scientists as expert witnesses in maintaining the moral integrity of our justice system. **Credits:** 3.00

ENTM 22840 - Forensic Entomology Principles

Credit Hours: 2.00. An overview to the four disciplines of forensic entomology. An introduction to stored products, urban, medical/veterinary, and medico-legal entomology. **Credits:** 2.00

ENTM 22841 - Forensic Entomology Principles Lab

Credit Hours: 1.00. An optional laboratory component to Principles of Forensic Entomology. Insects of importance in the fields of stored products, urban, medical/veterinary, and medico-legal will be covered, including morphological identifications and an assessment of their biology and damage. **Credits:** 1.00

ENTM 24200 - Data Science

Credit Hours: 3.00. Develop a data science skill set that complements coursework in mathematics, statistics, and experimental design. Data Science facilitates research by developing skills in data sourcing, formatting and using different types of data, and hypothesis generation. Mathematical communication skills are developed through data graphics, animation, and delivery of results through multiple platforms including interactive simulations on webpages. **Credits:** 3.00

ENTM 25300 - Insect Physiology And Biochemistry

Credit Hours: 4.00. Introductory course in insect cell biology, biochemistry, and physiology including structures and functions of insect internal and external tissues and organs. A year of college biology or equivalent knowledge is expected. **Credits:** 4.00

ENTM 27500 - Honors Course - Lower Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to first and second-year students. Courses offered must be approved by departmental or program faculty, and the College of Agriculture Honors Committee. Must be enrolled in an Honors program. Permission of department required. **Credits:** 1.00 to 4.00

ENTM 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in entomology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ENTM 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in entomology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ENTM 29400 - Topics In Forensic Sciences

Credit Hours: 1.00 to 4.00. This course will address the needs for our students to have current information about important emerging areas of Forensic Science and will provide a mechanism for recording such studies on their transcript. **Credits:** 1.00 to 4.00

ENTM 29410 - Laboratory Topics In Forensic Science

Credit Hours: 1.00 to 4.00. This course provides students with combined lecture and laboratory experience in important emerging areas of Forensic Science. **Credits:** 1.00 to 4.00

ENTM 29500 - Topics In Entomology

Credit Hours: 1.00 to 4.00. Special topics in entomology not available in other entomology courses. **Credits:** 1.00 to 4.00

ENTM 29510 - Laboratory Topics In Entomology

Credit Hours: 1.00 to 4.00. Special topics in entomology not available in other entomology courses that include laboratory. **Credits:** 1.00 to 4.00

ENTM 30100 - Experimentation And Analysis

Credit Hours: 3.00. Introduction to experimentation and quantitative data analysis in the life sciences with a focus on examples from insect biology. **Credits:** 3.00

ENTM 31100 - Insect Ecology

Credit Hours: 3.00. Insect ecology investigates the fundamental concepts of ecology as they relate to insects, including insect interactions, other insects and their environment. Topics include population and community ecology, plant-insect interactions, insect biodiversity and biogeography, and theoretical and applied ecology. Examples from current entomological and ecological studies are used. Completion of college biology or an introductory course in entomology is recommended. **Credits:** 3.00

ENTM 31200 - Plant-Insect Chemical Ecology

Credit Hours: 3.00. An overview of the structure and function of natural and synthetic chemical products in insect ecology. One year of college biology. One year of college chemistry strongly recommended. **Credits:** 3.00

ENTM 32810 - Practical Molecular Biology

Credit Hours: 3.00. Students explore molecular technology commonly used in population genetics and diagnostics and apply them to questions in Insect Biology and Forensics. **Credits:** 3.00

ENTM 32820 - Medico-Legal Entomology

Credit Hours: 3.00. This course explores the main topics covered under medico-legal entomology (MLE). Specifically, the course will focus on the role that insects play in abuse, neglect, and death investigations. Students will experience rearing and identifying the major forensically important insect groups associated with medico-legal investigations. Finally, students will gain an appreciation of the scope of MLE through the analysis of two mock cases. **Credits:** 3.00

ENTM 33500 - Introduction To Insect Identification

Credit Hours: 4.00. This class is designed for learning more about the collection and identification of adult insects. Emphasis will be placed on collection and sampling techniques, the preparation of specimens for future study, and identification. **Credits:** 4.00

ENTM 35300 - Insecticides And Environment

Credit Hours: 3.00. Insecticides, their interactions with biological organisms and the environment, regulatory policies, environmental and human health outcomes, and current controversies. A year of college biology and college chemistry or equivalent knowledge is expected. **Credits:** 3.00

ENTM 39000 - Professional Experience Programs In Entomology

Credit Hours: 0.00. Supervised professional experiences in entomology, integrated pest management, or urban/industrial pest control. Programs must be preplanned and conducted under the direction of the departmental coordinator with the cooperation of an employer. Students must submit a summary report. Permission of instructor required. **Credits:** 0.00

ENTM 39100 - Professional Experience Programs In Forensic Sciences

Credit Hours: 0.00 to 8.00. The course provides a mechanism for students to record unpaid internships and appropriate professional experiences in Forensic Science on their transcript. Permission of department required. **Credits:** 0.00 to 8.00

ENTM 39300 - Insect Biology Practicum

Credit Hours: 1.00. Imbedded programmatic experiences for undergraduate students in Insect Biology including focused reflection on the knowledge, skills, and values necessary for contributions in the discipline. Permission of instructor required. **Credits:** 1.00

ENTM 39310 - Insect Biology Practicum II

Credit Hours: 1.00. This course provides imbedded programmatic experiences for undergraduate students. It introduces students to the breadth of the discipline of entomology by engaging them at a programmatic level. This is accomplished by incorporating students into laboratory meetings, research, extension or teaching activities and through discussions with the faculty instructor about the goals and motivations driving their weekly research, extension or teaching activities and how these activities address societal grand challenges. All students enrolled in ENTM 39310 will be required at the end of each of the 8-week sessions and provide a recorded presentation overviewing some aspect of the mentor's program and its linkage to societal grand challenges. Permission of department required.**Credits:** 1.00

ENTM 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in entomology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ENTM 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in entomology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ENTM 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in entomology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ENTM 40000 - Entomology Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities. **Credits:** 0.00 to 8.00

ENTM 40100 - Addressing Grand Challenges Through Insect Biology

Credit Hours: 1.00. This course engages students in an examination of societal grand challenges by identifying the problems, understanding the current state of knowledge, identifying knowledge gaps, and implementing possible solutions. Permission of department required. **Credits:** 1.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology. **Credits:** 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined. **Credits:** 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology. **Credits:** 1.00

ENTM 42820 - Carrion Ecology

Credit Hours: 3.00. This course explores how carrion interact with the environment and other organisms during the decomposition process. Focus will be given to an understanding of the process itself, how investigators collect information about the process, and how research is conducted into the process of decomposition. Students will carry out an experiment and write their results up in the format of a peer reviewed article. Typically offered Fall.**Credits:** 3.00

ENTM 42890 - Forensic Science Teaching

Credit Hours: 3.00. This course provides an opportunity for students who have completed forensic science courses to assist in that course previously taken, reinforcing the skills, expanding their mastery of the scientific method and how it pertains to forensic science as well as introducing basic pedagogical tools for instruction to the student. Permission of Instructor required. **Credits:** 3.00

ENTM 43100 - Human-Wildlife Conflicts

Credit Hours: 3.00. Exploration of conflicts between human interests and wildlife and the regulations policies and legislation used to minimize conflicts. Negative interactions may be real or perceived, economic or aesthetic, social or political, and may pose risks to human health and safety. Emphasis on the causes of conflict and resolutions that seek to balance protection or conservation of wildlife with protection of other public resources and individual property owners. Prior knowledge of college-level general biology and ecology is expected. **Credits:** 3.00

ENTM 47500 - Honors Course-Upper Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to third and fourth-year students. Courses offered must be approved by departmental or program faculty, and the College of Agriculture Honors Committee. Must be enrolled in an Honors program. Permission of department required. **Credits:** 1.00 to 4.00

ENTM 49310 - Insect Biology Capstone Experience

Credit Hours: 2.00 or 4.00. Insect Biology majors complete a capstone project under the guidance of a faculty mentor. Permission of instructor required. **Credits:** 2.00 or 4.00

ENTM 49320 - Insect Biology Capstone Experience II

Credit Hours: 2.00 to 4.00. This course is an experiential meant to familiarize students with the options and procedures associated with the Entomology capstone experience and provide students with an avenue for fulfilling their capstone requirement by conducting a capstone project. Students may use a research, extension or teaching project to meet this requirement. Although the capstone project may build on or extend a previously conducted undergraduate research project, independent study, or study abroad, students enrolled in ENTM 49320 must conduct their capstone project in a manner that is independent from any other project for which credit will be awarded or for which they will be paid as an employee. Students may enroll in ENTM 49320 and conduct the capstone project at any time during the last 2 years of study. Permission of department required.**Credits:** 2.00 to 4.00

ENTM 49390 - Insect Biology Capstone Forum

Credit Hours: 1.00. Students apply their accumulated knowledge to grand challenges and careers in insect biology. Permission of department required. **Credits:** 1.00

ENTM 49400 - Advanced Topics In Forensic Sciences

Credit Hours: 1.00 to 4.00. This course will provide an avenue for students to pursue knowledge in emerging advanced areas of Forensic Science. Permission of department required. **Credits:** 1.00 to 4.00

ENTM 49410 - Advanced Laboratory Topics In Forensic Science

Credit Hours: 1.00 to 4.00. This course will provide an avenue for students to pursue laboratory techniques in emerging advanced areas of Forensic Science. Permission of Department required. **Credits:** 1.00 to 4.00

ENTM 49500 - Advanced Topics In Entomology

Credit Hours: 1.00 to 4.00. Special topics in entomology at upper division level not available in other entomology courses. Permission of department required. **Credits:** 1.00 to 4.00

ENTM 49510 - Advanced Laboratories In Entomology

Credit Hours: 1.00 to 4.00. Special laboratories in entomology at upper division level not available in other entomology courses. Permission of department required. **Credits:** 1.00 to 4.00

ENTM 49700 - Special Problems In Forensic Science

Credit Hours: 1.00 to 4.00. This course will provide an opportunity for qualified sophomores, juniors and seniors to engage in the study of special Forensic Science problems not covered in regular coursework. It will also provide a mechanism for recording these independent studies on their transcript. Permission of department required. **Credits:** 1.00 to 4.00

ENTM 49800 - Special Problems In Entomology

Credit Hours: 1.00 to 4.00. Open to qualified sophomores, juniors, and seniors who want to study special problems in entomology not covered in regular coursework. Permission of instructor required. **Credits:** 1.00 to 4.00

ENTM 50800 - Integrative Insect Taxonomy

Credit Hours: 4.00. A multisource approach to understanding insect taxonomy, morphology, and evolution. We will compare traditional classification schemes with new hypotheses of insect evolutionary relationships based on an array of data sources. Students learn the importance of natural history collections and how to prepare insect specimens for permanent storage. We will explore insect diversity through hands-on laboratory exercises and field research. **Credits:** 4.00

ENTM 52500 - Medical And Veterinary Entomology

Credit Hours: 3.00. Introduction to the biology and control of arthropods of medical and veterinary importance, and coverage of the natural history and abatement of selected arthropod-related diseases, including arboviral encephalitis, filariasis, leishmaniasis, Lyme disease, malaria, plague, spotted fever, trypanosomiasis, and myasis. Offered in odd-numbered years. **Credits:** 3.00

ENTM 59500 - Special Topics

Credit Hours: 1.00 to 4.00. Specialized topics not covered in other courses. May be repeated for credit if the course topic is not repeated. The specific topic offered is indicated on the student's record. Permission of instructor required. **Credits:** 1.00 to 4.00

ENTM 60000 - Graduate Student Orientation

Credit Hours: 1.00. Introduction and orientation to the requirements and culture of the Department of Entomology, the College of Agriculture, and Purdue University. Intended for graduate students in their first year. **Credits:** 1.00

ENTM 60200 - Insect Biology

Credit Hours: 3.00. A comprehensive course in entomology, for graduate students with little entomological background, that introduces students broadly to insect structure, function, behavior, ecology, pest management, and systematics. Students apply broad knowledge in each of the topic areas to a specific insect and are expected to be able to read and critically evaluate primary literature and summarize it in written and oral presentations. One year of college biology is strongly recommended. **Credits:** 3.00

ENTM 60900 - Science Writing

Credit Hours: 1.00. This course is designed for graduate students (MS or PhD) at any stage in their professional career who are seeking formal training in manuscript and grant writing for a scientific audience. Students will be required to attend class and prepare for in-class group discussions and writing activities by reading assigned sections of the text or associated papers. Students will also be required to prepare a written assignment (manuscript or grant) over the course of the semester, which they will use to practice and hone newly acquired skills, as well as participating in peer evaluation of one another's writing. Permission of department required. **Credits:** 1.00

ENTM 61000 - Current Trends In Insect Pest Management

Credit Hours: 3.00. Concepts of pest management and dynamics of pest populations, with emphasis on population regulation in theory and practice. The principles of applied ecology that pertain to insects and agricultural crops and systems. Identification, biology, behavior, and relationships of pests of forage, fiber, and vegetable crops. A knowledge of introductory entomology is recommended. Offered in even-numbered years. **Credits:** 3.00

ENTM 61100 - Toxicology Of Insecticides

Credit Hours: 3.00. The chemistry, mode of action, and metabolism of insecticides and related compounds in both insect and vertebrate systems. Evaluation of toxic action, principles of selective toxicity, insecticide resistance, and environmental effects are also discussed. A minimal knowledge of entomology is required. Knowledge of biochemistry and neurobiology is useful. Offered in even-numbered years.**Credits:** 3.00

ENTM 64200 - Analysis Of Ecological Data

Credit Hours: 3.00. Intermediate course in analysis options for biological and ecological data. Topics include: univariate, multivariate, parametric and non-parametric analysis and their basis; advanced graphical techniques; basic mapping with and without geographical information systems; simulation modeling; associated coding for open source platforms. A previous graduate-level course in statistics is required. Working knowledge of ANOVA, t-tests, linear regression, and assumptions and distributions of test statistics for these is assumed. **Credits:** 3.00

ENTM 69100 - Special Problems

Credit Hours: 1.00 to 12.00. Special research topics of interest to graduate students and not included in assigned coursework. Permission of instructor required. **Credits:** 1.00 to 12.00

ENTM 69200 - Special Topics

Credit Hours: 1.00 to 4.00. Advanced topics in specialties of department members such as, but not limited to: biochemistry and physiology; biological control; insect pest management; veterinary entomology; nematode systematics; pathology; systematics. The field in which work is offered will appear on the student's record. Doctoral student standing. Permission of instructor required. **Credits:** 1.00 to 4.00

ENTM 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

ENTM 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Environmental and Ecological Engineering

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.**Credits:** 3.00

EEE 25000 - Environmental, Ecological, and Engineering Systems

Credit Hours: 3.00. An overview of systems thinking and examples, and applications to environmental, ecological, and engineering systems. Students will develop an understanding of complex and global systems, along with the tools and analysis methods required to deal with them. Basic environmental and ecological science concepts are also included. Typically offered Fall.**Credits:** 3.00

EEE 29000 - Introduction To Environmental And Ecological Engineering Seminar

Credit Hours: 1.00. Guest presenters, peer panelists, and small group discussions introduce students to the knowledge, skills, and abilities needed in order to exhibit the highest levels of professionalism and stewardship expected of an Environmental and Ecological Engineering graduate. Topics include planning a course of study; internship, research, study abroad opportunities; career planning and placement skills; professional responsibility and ethics; and functioning as a professional. **Credits:** 1.00

EEE 29001 - Introduction To Environmental & Ecological Engineering Seminar

Credit Hours: 2.00. Guest presenters, peer panelists, and small group discussions introduce students to the knowledge, skills, and abilities needed in order to exhibit the highest levels of professionalism & stewardship expected of an Environmental and Ecological Engineering graduate. Topics include planning a course of study; internship, research, study abroad opportunities; career planning and placement skills; professional responsibility and ethics; and functioning as a professional. **Credits:** 2.00

EEE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

EEE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

EEE 29500 - Experimental Course

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credit. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 0.00 to 6.00

EEE 30000 - Environmental And Ecological Systems Modeling

Credit Hours: 3.00. Introduction to computational methods for describing physical, chemical, and microbiological processes that occur in natural and engineered aqueous systems, including rivers and lakes, and within water and wastewater treatment systems. Emphases on understanding and conceptualizing important processes, data analysis, algorithm development, and competency in the use of programming tools.**Credits:** 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required. Typically offered Fall Spring Summer.**Credits:** 3.00

EEE 35500 - Engineering Environmental Sustainability

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts. Typically offered Fall Spring.**Credits:** 3.00

EEE 36000 - Environmental And Ecological Engineering Laboratory

Credit Hours: 1.00 to 3.00. An introduction to laboratory methods of analysis of Environmental and Ecological Engineering systems. Topics will change from semester to semester and will be announced in advance. The list of possible topics includes experimental design, treatment of data, the analytical determination of chemical and biological constituents in water, soil, and air; analysis of environmental and ecological engineering processes; analysis of life-cycle characteristics and impacts of consumer products and commodities; methods of prevention and remediation of manufacturing waste streams. Typically offered Fall Spring.**Credits:** 1.00 to 3.00

EEE 36001 - Water Quality And Treatment Laboratory

Credit Hours: 3.00. Laboratory procedures are described and performed that examine chemical, physical, and biological properties and constituent concentrations of natural waters. In addition, water treatment process experiments are performed to show how constituent concentrations can be altered during water treatment processes. Procedures include the analytical determination of several chemical and biological constituents in water by titrimetric, colorimetric, or chromatographic methods, whereas treatment processes include reactor design, pH adjustment, ion exchange, lime softening, coagulation, and disinfection.**Credits:** 3.00

EEE 36002 - Environmental Sustainability For Industry, Laboratory

Credit Hours: 3.00. This lab course provides an opportunity for students to gain hands-on experience with the physical and analytical tools of industrial sustainability. These include experimental methods for product testing and air quality measurement; design and planning of experiments; statistical interpretation of experimental data; design and environmental assessment of building energy use, combustion systems, and electrical circuits; and life-cycle management of electronic equipment and other household products. Students are encouraged to complete their statistics requirement.**Credits:** 3.00

EEE 38000 - Environmental Chemodynamics

Credit Hours: 3.00. Introduction to chemical thermodynamics and general equilibrium processes in environmental and ecological engineering systems. Introduction to the first and second laws of thermodynamics; properties of pure substances; ideal and real gases; thermodynamic cycles and processes; heat transfer and combustion; and chemical equilibrium in aquatic solutions, including equilibria between phases and reaction equilibria. Emphasis is on understanding and conceptualizing important processes, and competency in thermodynamic calculations. **Credits:** 3.00

EEE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional experience in Environmental and Ecological Engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required. Typically offered Fall Spring Summer.**Credits:** 0.00

EEE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional experience in Environmental and Ecological Engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required. Typically offered Fall Spring Summer.**Credits:** 0.00

EEE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional experience in Environmental and Ecological Engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required. Typically offered Fall Spring Summer.**Credits:** 0.00

EEE 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (AGRY 38500) Designed as an upper level introductory course covering environmental soil chemistry concepts in framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or math background. (el.5). Typically offered Fall.
Credits: 4.00

EEE 39000 - Environmental And Ecological Engineering Professional Practice Seminar

Credit Hours: 1.00. Seminar lectures and discussions to introduce students to aspects of professional practice within Environmental and Ecological Engineering. Topics include career planning and placement skills, professional responsibility and ethics, functioning as a professional, and other current important topics in the profession. Students will interact with several practicing Environmental and Ecological Engineers.**Credits:** 1.00

EEE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

EEE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

EEE 39500 - Experimental Course

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credits. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 0.00 to 6.00

EEE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

EEE 39699 - Professional Practice Internship

Credit Hours: 0.00. One-session professional experience in environmental and ecological engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required. Typically offered Fall Spring Summer.**Credits:** 0.00

EEE 43000 - Industrial Ecology And Life Cycle Analysis

Credit Hours: 3.00. The outputs and processes associated with industrial systems are examined, with special emphasis placed on interactions of these systems with environmental and ecological systems. A full product life cycle perspective is stresses, including energy and material flows, processes used to produce materials and realize products, and the management of end-of-life products. Typically offered Spring.**Credits:** 3.00

EEE 45600 - Wastewater Treatment Processes

Credit Hours: 3.00. (CE 45600) Fundamental design principles and practice of wastewater treatment to prepare students for designing wastewater treatment systems. The major topics include design and construction process, preliminary treatment of wastewater, primary treatment, wastewater microbiology, secondary treatment, nitrogen removal, phosphorus removal, attached microbial growth, secondary settling, disinfection and post-aeration, tertiary treatment, and wastewater plant residuals management. Typically offered Fall.**Credits:** 3.00

EEE 47200 - Community-Engaged Engineering & Design

Credit Hours: 3.00. Utilizing a transdisciplinary approach in a real-world, client-based service-learning design experience, students will lead the design and implementation of community-engaged sustainability projects integrating not only their discipline-specific knowledge, but community partner and stakeholder knowledge as well. This course will require travel outside of class to community partner sites to collaborate in the design process. Sustainability projects to improve the health and wellness of communities will be implemented at multiple sites. The complex and dynamic relationships between social, economic, environmental, and political sectors in such community-engaged projects will be investigated.**Credits:** 3.00

EEE 48000 - Environmental And Ecological Engineering Senior Design

Credit Hours: 1.00 to 3.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems. Permission of department required. Typically offered Fall Spring.**Credits:** 1.00 to 3.00

EEE 48001 - Environmental And Ecological Engineering Senior Design

Credit Hours: 1.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems. Permission of department required.**Credits:** 1.00

EEE 48002 - Environmental And Ecological Engineering Senior Design II

Credit Hours: 2.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems.**Credits:** 2.00

EEE 48100 - Reflective Practitioner

Credit Hours: 1.00. Reflective practice is a term coined by Donald Schön in The Reflective Practitioner (1983). Reflective practice is the capacity to reflect on action to engage in a process of continuous learning. Reflective practice can be an important tool in practice-based professional learning settings where people learn from their own professional experiences, rather than from formal learning or knowledge transfer. It may be the most important source of personal professional development and improvement. It is also an important way to bring together theory and practice. A person who reflects throughout their practice is not just looking back on past actions and events, but is taking a conscious look at emotions, experiences, actions, and responses, and using that information to add to their existing knowledge base and reach a higher level of understanding. Critical reflection as part of experiential education generates, deepens, and documents learning. As a result of this course, you will be able to articulate

the value of your experiential education opportunities toward marketing yourself for potential job opportunities and develop the skills needed to become a reflective practitioner for promotional growth in your future career. Permission of department required.**Credits:** 1.00

EEE 49500 - Experimental Course

Credit Hours: 0.00 to 6.00. Topics Vary. Arrange hours and credit. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 0.00 to 6.00

EEE 49800 - Environmental And Ecological Engineering Projects

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credits. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 0.00 to 6.00

EEE 53000 - Life Cycle Assessment: Principles And Applications

Credit Hours: 3.00. This course covers the basic concept of life cycle thinking, framework and computational structure of process and economic input-output based life cycle assessment (LCA), state-of-the-art LCA software tools, industrial case studies, and recent advances in LCA methodology. Students are required to complete a group project that could potentially facilitate the adaptation of LCA tools in engineering research, education, or practice.**Credits:** 3.00

EEE 54400 - Environmental Organic Chemistry

Credit Hours: 3.00. (AGRY 54400) The fundamental properties and processes responsible for the fate of organic chemicals in the environment, with emphasis on soil and water chemistry. Areas to be addressed will include both conceptual and theoretical aspects of processes relevant to environmental fate of contaminants; measurement, estimation, correlation, and application of the parameters most commonly used to assess various chemodynamic properties in soil-water systems. Typically offered Spring.**Credits:** 3.00

EEE 55000 - Physico-Chemical Processes In Environmental Engineering I

Credit Hours: 3.00. Theory and principles of design for processes used in environmental engineering, with emphasis on water and wastewater treatment. Processes include: coagulation, flocculation, sedimentation, centrifugation, filtration, disinfection, adsorption, and gas/liquid transfer. **Credits:** 3.00

EEE 55201 - Environmental Biotechnology

Credit Hours: 3.00. This course focuses on fundamentals of molecular biology and biotechnology for environmental applications. The major topics include activated sludge processes, stoichiometry, kinetics, anaerobic digestion, biological nitrogen and phosphorus removal, emerging contaminants, molecular microbiology tools, biofouling, antibiotic resistance, and biofuels. **Credits:** 3.00

EEE 55401 - Water Chemistry For Environmental And Ecological Engineering

Credit Hours: 3.00. Principles of chemistry applied to the analysis and distribution of the chemical composition of natural waters and engineered water systems. Course topics include acid/base, complexation, precipitation/dissolution, sorption and redox reactions in the context of environmental and ecological engineering. Case studies focus on water chemistry in research and practice, such as lead in drinking water, recovery of valuable products from wastewater, chemistry of engineered carbon dioxide capture, and engineered treatment of surface waters. Case studies vary each year. **Credits:** 3.00

EEE 56000 - Environmental And Ecological Engineering In-Context

Credit Hours: 0.50 to 3.00. An introduction to current challenges and issues in Environmental and Ecological Engineering (EEE) applications. Topics will change from semester to semester and will be announced in advance. The list of possible topics includes current events, emerging challenges, adaptations to new regulations, innovative environmental and ecological engineering processes, life-cycle impacts of manufactured products, and sustainable management of industrial waste streams. Typically offered Fall Spring.**Credits:** 1.00 to 3.00

EEE 57000 - Solid And Hazardous Waste Management

Credit Hours: 3.00. Students will be introduced to the regulation of solid and hazardous wastes; engineering design, planning and analysis of solid and hazardous waste management facilities. **Credits:** 3.00

EEE 59500 - Environmental And Ecological Engineering Projects

Credit Hours: 0.00 to 6.00. Topics vary. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 0.00 to 6.00

EEE 59800 - Environmental And Ecological Engineering Projects

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credit. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 0.00 to 6.00

EEE 69000 - Environmental And Ecological Engineering Graduate Seminar

Credit Hours: 0.00. Combination of invited speakers (outside and inside Purdue) including graduate students. Topics will range across environmental and ecological engineering with an emphasis on current topics. Typically offered Fall Spring Summer.**Credits:** 0.00

EEE 69199 - Professional Practice Graduate Co-Op I

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation.
Credits: 0.00

EEE 69299 - Professional Practice Graduate Co-Op II

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required. **Credits:** 0.00

EEE 69399 - Professional Practice Graduate Co-Op III

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required. **Credits:** 0.00

EEE 69500 - Experimental Courses

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credit. Permission of instructor required. Typically offered Fall Spring.**Credits:** 0.00 to 6.00

EEE 69699 - Professional Practice Internship

Credit Hours: 0.00. One-session professional experience in environmental and ecological engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required.**Credits:** 0.00

EEE 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 1.00 to 18.00

EEE 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Entrepreneurship

ENTR 20000 - Introduction To Entrepreneurship And Innovation

Credit Hours: 3.00. This course introduces students to the process of turning ideas, inventions, and innovations into new business ventures. It covers foundational entrepreneurial concepts and practices, as well as the leadership, teamwork, and communication skills required of individuals who choose to become entrepreneurs or to act entrepreneurially in established organizations. It serves as the first required core course for the Certificate in Entrepreneurship and Innovation. **Credits:** 3.00

ENTR 31000 - Marketing And Management For New Ventures

Credit Hours: 3.00. This course builds on the foundational skills developed in ENTR 20000 (prerequisite course) to bring students through the process of launching a new venture. Students work in teams to develop and validate business models for potential startups. This occurs through experiential activities including gathering feedback from potential customers, creating forecasts, developing a go-to-market strategy, and pitching to investors. Students can choose ENTR 31000, ENTR 31500, or ENTR 32500 to serve as the second required core course for the Certificate in Entrepreneurship and Innovation.**Credits:** 3.00

ENTR 31500 - Business Planning For Social Entrepreneurship

Credit Hours: 3.00. This course builds on entrepreneurship concepts and skills developed in ENTR 20000 (prerequisite course) to understand the differences, benefits, and opportunities associated with social impact business models. Students work in teams on experiential activities including gathering customer feedback, creating forecasts, developing a strategy, and pitching to stakeholders and investors. Students can choose ENTR 31000, ENTR 31500, or ENTR 32500 to serve as the second required core course for the Certificate in Entrepreneurship and Innovation.**Credits:** 3.00

ENTR 32500 - Global Entrepreneurship And Innovation

Credit Hours: 3.00. This course builds on the foundational skills developed in ENTR 20000 (prerequisite course), to provide students with a comprehensive understanding of entrepreneurship in a global context. It explores the differences, challenges, and opportunities associated with developing international ventures and expanding into overseas markets. Through topic lectures, case studies, and experiential team projects, students will gain insight into global trends, cultural nuances, business models,

strategies, and pitching to stakeholders and investors. Students can choose ENTR 31000, ENTR 31500, or ENTR 32500 to serve as the second required core course for the Certificate in Entrepreneurship and Innovation.**Credits:** 3.00

ENTR 39000 - Special Topics In Entrepreneurship And Innovation

Credit Hours: 1.00 to 3.00. The requested course will provide the opportunity to develop courses which fulfill the "option" course requirement for the Certificate in Entrepreneurship and Innovation Program. Option courses are designed to provide depth in certain disciplines related to entrepreneurship and innovation, and/or entrepreneurship and innovation in relation to specific industries or markets. **Credits:** 1.00 to 3.00

ENTR 39699 - Internship And Research Experiences

Credit Hours: 0.00. Interns for Indiana internships work experience with participating employers. Students submit a summary report and company evaluation. Through a mutual selection process, students may be placed as interns with entrepreneurial companies. Placements are determined through a screening process based upon students' skills and experiences gained through their major fields of study. Fulfills a capstone requirement for the Certificate in Entrepreneurship and Innovation Program. Contact the Office of Professional Practice. Permission of instructor required. Discovery Park Undergraduate Research Internships. Check the DURI website for further information. https://www.purdue.edu/discoverypark/duri/. **Credits:** 0.00

ENTR 46000 - Internship And Career Preparation Seminar

Credit Hours: 1.00. This course is a distance option course for the Certificate in Entrepreneurship and Innovation. It equips students with professional skills based on entrepreneurship competencies. Students develop resources to illustrate their skills, talents, abilities, and goals to increase career preparedness. They learn what it takes to successfully transfer academic skills to a workplace setting and develop an entrepreneurial mindset that sets them apart from other job seekers. **Credits:** 1.00

ENTR 47000 - Gender, Diversity And Leadership

Credit Hours: 3.00. This course serves as an option course for the Certificate in Entrepreneurship and Innovation. It provides a social and historical perspective of gender and diversity in leadership and entrepreneurship, as well as practical skills students can use to develop their own leadership abilities. This highly interactive course provides the opportunity for students to meet with diverse leaders from a variety of organizations. Topics of social, political, and economic interest are covered, as are discussions of current issues and research relevant to leadership success. **Credits:** 3.00

ENTR 48000 - Entrepreneurial Leadership And Careers

Credit Hours: 3.00. This course prepares students for entrepreneurial careers by requiring them to apply the knowledge and skills learned in prerequisite entrepreneurship courses to the development of their professional goals and networks. Students explore how they can use their entrepreneurial talents, skills, and interests in a variety of ways, including launching startups, joining family businesses, or being intrapreneurs in established organizations. The course serves as a capstone for the Certificate in Entrepreneurship and Innovation.**Credits:** 3.00

ENTR 48100 - Consulting For Emerging Enterprises

Credit Hours: 3.00. This course is an experiential course that requires students to apply the knowledge and skills learned in prerequisite entrepreneurship courses to a real-world consulting project for a startup, small business, or non-profit organization. Student teams use a three-stage consulting model to guide project contracting, data gathering, and value creation for the client. In-class time focuses on developing consulting knowledge and competencies that are applied directly to client interactions and project execution. The course serves as a capstone for the Certificate in Entrepreneurship and Innovation. Class size is limited. Permission of the instructor is required.**Credits:** 3.00

ENTR 48200 - Venture Planning Studio

Credit Hours: 3.00. This course is an experiential course that brings students through the process of creating a startup company as they would in a real-world business incubator or venture studio. They apply knowledge and methodologies related to design thinking, lean startup, financial planning, and fundraising to develop robust business models. Students can bring their own ideas to the course or contribute to one that will be identified. The purpose of this course is to develop in students the confidence and competence to transform a venture idea into a viable startup company. The course serves as a capstone for the Certificate in Entrepreneurship and Innovation.**Credits:** 3.00

ENTR 49000 - Senior Level Special Topics In Entrepreneurship And Innovation

Credit Hours: 1.00 to 3.00. The requested course will provide the opportunity to develop capstone courses for the Certificate in Entrepreneurship and Innovation Program. Capstone courses are designed to provide students with the opportunity to apply the knowledge acquired in Certificate Program "core" and "option" courses to hands-on, real world activities related to entrepreneurship and innovation. **Credits:** 1.00 to 3.00

ENTR 50000 - Technology Commercialization Seminar

Credit Hours: 2.00. This course is a seminar that focuses on topics related to technology realization, commercialization, and entrepreneurship. Topics pertaining to these areas are covered through readings, class discussion, and presentations by invited speakers. **Credits:** 2.00

ENTR 50100 - Technology Commercialization Practicum

Credit Hours: 2.00. This course introduces a variety of cross-disciplinary topics to develop the skills needed to realize technology. Each week, students learn specific methodologies and techniques and apply these through case studies and class projects. **Credits:** 2.00

ENTR 59000 - Graduate Level Special Topics In Entrepreneurship And Innovation

Credit Hours: 1.00 to 3.00. The requested course will provide the opportunity for graduate students to participate in entrepreneurship courses focused on the skills and knowledge necessary to launch and lead new business ventures, the examination of the feasibility and market potential of new technologies, and/or the development of business plans. **Credits:** 1.00 to 3.00

Film and Video

FLM 24100 - Foundations Of Cinema Production

Credit Hours: 3.00. The course introduces students to the principles and practice of professional video production. Through lectures, viewing, discussions, and laboratory exercises, students will acquire the tools necessary to transform their concepts, or those of their clients, into successful video productions. Film students have priority. **Credits:** 3.00

FLM 29100 - Special Topics In Film/Video Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization. **Credits:** 1.00 to 4.00

FLM 29102 - Special Topics In Live Production

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 29103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 29104 - Special Topics In Directing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 29105 - Special Topics In Screenwriting

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 29106 - Special Topics In Cinematography

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 29107 - Special Topics In Editing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 29108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 32100 - Live Production I: Theater/Music/Arts

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of live video production. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as narrative development. **Credits:** 1.00 to 4.00

FLM 32200 - Live Production I: Fall/Winter Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of live sports video production. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's Fall/Winter sports include Cross Country, Soccer, Volleyball, Football, Swimming & Diving, Wrestling, Basketball, or Track & Field. **Credits:** 1.00 to 4.00

FLM 32300 - Live Production I: Winter/Spring Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of live sports video production. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's Winter/Spring sports include Swimming & Diving, Wrestling, Basketball, Baseball, Softball, Tennis, Golf, or Track & Field. **Credits:** 1.00 to 4.00

FLM 33000 - International Cinema

Credit Hours: 3.00. This course is designed to develop students' seeing, reading, speaking, writing, and critical thinking skills, and especially to improve visual competency, awareness of visual culture, and knowledge of selected international cinema. All films will be shown with English subtitles. **Credits:** 3.00

FLM 35100 - Screenwriting

Credit Hours: 3.00. Students will gain a working knowledge of basic narrative elements and how these elements work to form a story. Writing and re-writing a three act outline and an original screenplay will give you an understanding of script language and process. (Film and Video majors have priority.) **Credits:** 3.00

FLM 36100 - Cinematography

Credit Hours: 3.00. This intermediate course in Cinematography will further prepare the student to use the technology of the camera as a basis for the art and visual storytelling of motion pictures. The student will also receive the basic background needed for understanding the skills and processes of a single camera production environment. **Credits:** 3.00

FLM 37100 - Editing I

Credit Hours: 3.00. The course introduces students to the principles of film and video editing. Projects, discussions, demonstrations, and hands-on exercises expose students to the technical and artistic aspects of the editing process. Film & Film and Video majors have priority. **Credits:** 3.00

FLM 37200 - Editing II

Credit Hours: 3.00. This course instructs students in advanced principles of film and video editing and color grading. Projects, discussions, demonstrations, and hands-on exercises expose students to the technical and artistic aspects of the editing process. Film and Video majors have priority. **Credits:** 3.00

FLM 41000 - Internship In Film/Video/Media Production

Credit Hours: 1.00 to 4.00. Internships in one of the professional areas of film, video or media production. Internships are supervised by appropriate faculty in a particular field of specialization. Permission of instructor required. **Credits:** 1.00 to 4.00

FLM 42200 - Live Production II: Fall/Winter Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of Producing and Directing live sports video and television. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's Fall/Winter sports include Cross Country, Soccer, Volleyball, Football, Swimming & Diving, Wrestling, Basketball, or Track & Field. Permission of instructor required.**Credits:** 1.00 to 4.00

FLM 42300 - Live Production II: Winter/Spring Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of Producing and Directing live sports video and television. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's Winter/Spring sports include Swimming & Diving, Wrestling, Basketball, Baseball, Softball, Tennis, Golf, or Track & Field. Permission of instructor required.**Credits:** 1.00 to 4.00

FLM 44200 - Directing The Narrative Short Film

Credit Hours: 3.00. Students will gain knowledge of all phases of film production in the course of completing multiple short films. This class will emulate standard film industry practices and guidelines. **Credits:** 3.00

FLM 44600 - Producing Non-Fiction Video

Credit Hours: 3.00. This advanced course builds on previous knowledge and exposes students to the role of an independent video producer. By working with real world clients on real world projects, students will gain valuable experience in guiding productions from start to finish. Additionally, students will learn basic fundamentals of entrepreneurship and business skills designed to begin to prepare students to form their own video production business. **Credits:** 3.00

FLM 49000 - Directed Readings In Film/Video Studies

Credit Hours: 1.00 to 4.00. Readings under the direction of the instructor in a particular field of study.**Credits:** 1.00 to 4.00

FLM 49100 - Special Topics In Film/Video Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization. **Credits:** 1.00 to 4.00

FLM 49102 - Special Topics In Live Production

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 49103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 49104 - Special Topics In Directing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 49105 - Special Topics In Screenwriting

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 49106 - Special Topics In Cinematography

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 49107 - Special Topics In Editing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 49108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.**Credits:** 1.00 to 4.00

FLM 49900 - Capstone In Film/Video/Media Production

Credit Hours: 2.00 or 4.00. The Capstone in Film/Video/Media Production is intended to be the culminating experience of the Film/Video Studies or Film/Video and Theatre Production major. Each student Students will create a project of their own design. Students will pitch their project ideas to the program director and/or faculty and should develop a project based around their future career goals. Example areas include narrative/fiction cinema, documentary/non-fiction filmmaking, television production, live event production, etc. Students will fulfill the role of Writer/Producer/Director for their project (and potentially Director of Photography, Editor, etc.). This creative work will culminate in a presentation to an audience. Permission of instructor required. **Credits:** 2.00 or 4.00

Food Science

FS 16100 - Science Of Food

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science. **Credits:** 3.00

FS 16200 - Introduction To Food Processing

Credit Hours: 1.00. Application of introductory food science principles (e.g., food chemistry, food microbiology, and unit operations) to food processing; emphasis will be placed on food formulation, pilot-scale process design, and resulting food quality. May require class trips. **Credits:** 1.00

FS 16300 - Introduction To Fermentation Sciences

Credit Hours: 3.00. This course will provide an overview of the use of microorganisms in the food, pharmaceutical and chemical industries. The course will introduce fundamental concepts associated to the microbiological transformation of various substrates to produce desirable products such as foods, beverages, pharmaceuticals or chemical compounds. As an introductory course, the scientific principles of fermentation processes will be gradually introduced through the analysis of familiar fermented food products, such as bread, cheese, beer, wine, cocoa, coffee, etc. Once the fundamental concepts are learned, examples of advanced fermentation technology for production of pharmaceutical products and fine chemicals will be presented. **Credits:** 3.00

FS 24500 - Food Packaging

Credit Hours: 1.00. Elements of packaging science and technology applied to preservation, distribution, and marketing of food products; packaging materials; principles of diffusion and permeability; procedures for developing, evaluating, and testing food packages; packaging requirements for specific types of foods; other special topics of current interest. **Credits:** 1.00

FS 27500 - Honors Course - Lower Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to first- and second-year students. Courses offered must be approved by instructor and College of Agriculture Honors Committee. Permission of instructor required. **Credits:** 1.00 to 4.00

FS 29100 - Special Assignments

Credit Hours: 1.00 to 3.00. Open to primarily freshmen and sophomores who desire to study special problems in science not covered in regular coursework. May be repeated for credit with instructor permission. Permission of instructor required. **Credits:** 1.00 to 3.00

FS 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in food science. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FS 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in food science. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FS 29800 - Sophomore Seminar

Credit Hours: 1.00. Current food science issues will be discussed by students, staff, and guest speakers. Career planning and improvement of communication skills will be emphasized. **Credits:** 1.00

FS 34000 - Introduction To Food Law And Regulations

Credit Hours: 1.00. This course will cover basic knowledge and familiarity of the principal law and regulations governing raw and processed foods. Class meets during weeks 1-5. **Credits:** 1.00

FS 34100 - Food Processing I

Credit Hours: 2.00. Applications of the fundamentals of food engineering, microbiology, and chemistry to methods of food processing and preservation; emphasis will be on processing concepts, preparation for food processing, food formulation, and thermal processing. **Credits:** 2.00

FS 34200 - Food Processing I Laboratory

Credit Hours: 1.00. This laboratory course applies food engineering principles and thermal processing methods for production of safe and high-quality foods. The course will include applications of mathematics and physics principles in food processing

operations, engineering problem-solving exercises and laboratory demonstrations. Engineering concepts such as heat transfer, fluid flow, mass and energy balances applied to various food systems will be a major portion of this laboratory. **Credits:** 1.00

FS 36100 - Food Plant Sanitation

Credit Hours: 1.00. Relation of food-plant sanitation to good manufacturing practices and regulations affecting sanitation; organization of a food-plant sanitation program; sanitary building and equipment construction; selection of cleaning, sanitizing, and pesticidal compounds; water, air, and waste treatment; food storage and transportation. **Credits:** 1.00

FS 36200 - Food Microbiology

Credit Hours: 3.00. Microbiology of foods, with emphasis on the conditions for growth of microorganisms and degradation of food components, preservation methods, use of Hazard Analysis and Critical Control Point (HACCP) concepts, and microorganisms associated with foodborne illness, and modern detection methods. **Credits:** 3.00

FS 36300 - Food Microbiology Laboratory

Credit Hours: 2.00. Classic and molecular methods for enumerating, isolating, and identifying spoilage, fermentative, and pathogenic food microorganisms in food systems. **Credits:** 2.00

FS 36800 - Dairy Products

Credit Hours: 2.00. Scientific and technical aspects of procurement, processing, packaging, and quality control of milk products and frozen dairy foods. Emphasis is placed on process unit operations. **Credits:** 2.00

FS 36900 - Dairy Products Laboratory

Credit Hours: 1.00. Practical laboratory applications of processing, packaging, and quality control of fluid milk products and frozen dairy foods. May require field trips. Students are responsible for providing their own laboratory coats. Permission of instructor required. **Credits:** 1.00

FS 37200 - Fermentation Microbiology

Credit Hours: 3.00. This course explores the principles underlying the design of microbes for their use in biotechnological applications. This project-based course will teach students fundamental molecular biology techniques, important parameters for strain selection and genetic engineering, and reactor design and operation in bioprocessing. Additionally, this course will cover today's diverse bioengineering goals and tools and the role of microbial biotechnology in society. **Credits:** 3.00

FS 37300 - Fermentation Microbiology Laboratory

Credit Hours: 1.00. The course provides a laboratory-based experiential learning experience with the learning of fundamental aspects of genetic, physiological and substrate manipulation to achieve product formation in industrial microbes. **Credits:** 1.00

FS 38000 - Fermented Food Products

Credit Hours: 1.00. This course will allow students to learn and integrate concepts from microbiology, biochemistry, and processing used in the production of representative fermented food products. Students will learn how to design and make specific fermented foods. **Credits:** 1.00

FS 38100 - Industrial Fermentation Products

Credit Hours: 1.00. Industrial Fermentation Products introduces students to microbial fermentations employed in the biofuels and fine chemicals industry and their role in the larger bioeconomy. Students will be introduced to diverse final products, technical challenges in the sector, and the individuals and companies working to solve them. We end our five-week module with a field trip to a local biorefinery plant. **Credits:** 1.00

FS 38300 - Fermented Beverage Products

Credit Hours: 1.00. This course will allow students to learn and integrate concepts from microbiology, biochemistry, and processing used in the production of representative fermented beverages. Students will learn how to design and make specific fermented beverages. Must be 21 years of age or older. Permission of department required. **Credits:** 1.00

FS 39000 - Food Science Cooperative Work Experience

Credit Hours: 0.00. Supervised professional experiences in the food science industry. Programs must be preplanned and conducted under the direction of the departmental coordinator with the cooperation of an employer. Students must submit a summary report. Permission of department required. **Credits:** 0.00

FS 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in food science. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.**Credits:** 0.00

FS 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in food science. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FS 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in food science. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FS 40000 - Food Science Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities. **Credits:** 0.00 to 8.00

FS 40100 - Fermentation Processing

Credit Hours: 2.00. The Integration of fermentation core concepts; the application of bioprocess engineering principles to biological systems; topics covering enzyme kinetics, fermentation, downstream processing, and integrated bioprocesses important to industries. **Credits:** 2.00

FS 40200 - Fermentation Processing Laboratory

Credit Hours: 1.00. The essential concepts of industrial bioprocessing with a focus on the physiology of fermentation; a series of laboratory experiments that follow value-adding processes from conception to completion. **Credits:** 1.00

FS 43500 - Sensory Science

Credit Hours: 1.00. Introduction to the fundamental concepts and practices of sensory analysis of food products. Technical aspects of planning and conducting human sensory panels on food products including analysis and interpretation of collected data. Course meets weeks 1-8. **Credits:** 1.00

FS 44200 - Food Processing II

Credit Hours: 2.00. Study of food processing and preservation methods based on the integrated knowledge of microbiology, chemistry, and food engineering; emphasis will be on temperature reduction, water activity, concentration, dehydration, irradiation, and extrusion. **Credits:** 2.00

FS 44300 - Food Product Design (Capstone)

Credit Hours: 3.00. Teams develop a new product from concept through marketing. Final case study defense is presented to faculty and peers. Classes include guest lectures from the food industry. **Credits:** 3.00

FS 44400 - Statistical Process Control

Credit Hours: 1.00. Basic concepts and techniques of solving quality problems and assuring the quality of production processes; emphasis is on quality improvement programs, problem-solving tools, control charts for variables and attributes, process capability analysis, and sampling methods. Course meets during weeks 6-10. **Credits:** 1.00

FS 44700 - Food Processing II Laboratory

Credit Hours: 1.00. This lab is designed to build upon fundamental concepts associated with the preservation and processing of various food products. Concepts to be covered include water activity, dehydration (drum, spray and freeze drying), frying, high pressure, microwave and ohmic heating. The focus of this lab will be hands-on production of various food products and the demonstration of fundamental food processing unit operations and calculations related to each preservation method. **Credits:** 1.00

FS 45300 - Food Chemistry

Credit Hours: 3.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods. **Credits:** 3.00

FS 45400 - Food Chemistry Laboratory

Credit Hours: 1.00. Laboratory to demonstrate application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods. **Credits:** 1.00

FS 45500 - Cereal Chemistry And Processing

Credit Hours: 1.00. Cereal grain structure, chemical and functional properties, and nutritional aspects related to grain milling and processing. Cereal processing covers dry and wet milling, brewing, baked products, pasta, breakfast cereals, snack foods, and traditional cereal foods from other countries. (Offered in even-numbered years.) **Credits:** 1.00

FS 46700 - Food Analysis

Credit Hours: 3.00. Application of quantitative and qualitative physical, chemical, and instrumental methods of analysis to the examination of food products; evaluation of methods for specific applications. **Credits:** 3.00

FS 46900 - Food Analysis Laboratory

Credit Hours: 2.00. Practical laboratory applications of food analysis, including relevant calculations using data gathered and interpretation of data. (Intended for upper-division students.) **Credits:** 2.00

FS 47000 - Wine Appreciation

Credit Hours: 3.00. A study of wine production and marketing principles with an emphasis upon consumption responsibility. Historical perspectives form the foundations for wine classification systems and traditional serving procedures. Cardinal scale sensory evaluations are conducted in relationship to various food pairings. Must be 21 years of age or older to register for this course. Permission of department required. **Credits:** 3.00

FS 47500 - Honors Course - Upper Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to third- and fourth-year students. Courses offered must be approved by instructor and College of Agriculture Honors Committee. Permission of instructor required. **Credits:** 1.00 to 4.00

FS 48200 - Food Science Senior Seminar

Credit Hours: 1.00. Oral and written reports on selected food science topics. **Credits:** 1.00

FS 48300 - Fermentation Capstone

Credit Hours: 3.00. The development of value-added fermentation processes requires a complex blend of technoeconomic and market awareness, resource gathering, strain selection and engineering, reactor optimization and operation, product recovery, and project management skills. Keeping these diverse aspects in balance while managing project timelines is essential to a successful fermentation process - that is, one that is both technically and economically successful. This course is organized to develop your knowledge of the diverse inputs into design of microbial fermentation and your ability to apply concepts learned in prior fermentation classes to the design of a fermentation process, integrating microbiology, chemistry, and processing with basic marketing and business concepts. Students will be organized into project teams for the semester and challenged to design, market, develop, prototype, and scale up a new fermentation. Classes will include guest lectures from experts in the fermentation industry and academia. Project teams will be organized and project leaders selected to manage communication between individual groups and the instructors. Final product concepts will be presented to faculty and peers for evaluation. **Credits:** 3.00

FS 49100 - Special Assignments In Food Science

Credit Hours: 1.00 to 3.00. Open primarily to qualified seniors who desire to study special problems in science not covered in regular coursework. Permission of instructor required. **Credits:** 1.00 to 3.00

FS 49900 - Thesis Research

Credit Hours: 1.00 to 6.00. For honors students doing independent research. Permission of instructor required. **Credits:** 1.00 to 6.00

FS 53000 - Food Ingredient Technology

Credit Hours: 1.00. Identifies functions of ingredients listed on ingredient labels of food products and discusses alternative ingredient choices for food products. **Credits:** 1.00

FS 53100 - Science Of Experimental Cuisine

Credit Hours: 3.00. This course brings together culinary arts and the application of food chemistry and ingredient technology principles. Emphasis will be placed on food construction and deconstruction, using common food preparation and molecular gastronomy techniques. **Credits:** 3.00

FS 53500 - Aseptic Processing Technologies

Credit Hours: 1.00. Overview of aseptic processing and packaging systems; thermal processing and fluid flow in continuous heat exchangers; food microbiology, chemistry, and packaging as applied to aseptic processing. Establishing processes for aseptic processing of liquid and particulate foods. **Credits:** 1.00

FS 54100 - Postharvest Technology Of Fruits And Vegetables

Credit Hours: 1.00. (HORT 54100) Theoretical and applied aspects of methods being used for enhancing the quality and shelf life of harvested fruits and vegetables. Factors that affect the longevity of produce and technology used to control these factors and reduce deterioration of produce between harvest and consumption/processing will be emphasized. Meets during weeks 11-15. **Credits:** 1.00

FS 55001 - Food Chemistry

Credit Hours: 1.00. Principles and concepts of the effects of heat, light, oxygen, and water activity on chemical reactions and physical events involved in processing, storage, and preparation of food products and their relationships to nutritional quality, organoleptic quality, stability, and safety. Class meets for 5 weeks. **Credits:** 1.00

FS 55101 - Food Analysis

Credit Hours: 1.00. Principles and applications of chemical, physical, and sensory techniques to analyze foods. Class meets for 5 weeks. **Credits:** 1.00

FS 55201 - Nutritional Sciences

Credit Hours: 1.00. Study of perspectives on established nutrition knowledge, concepts, and principles pertinent to the field of food science. Contemporary information about diet as it relates to health and safety issues. Controversies regarding nutrients and functional foods. Class meets 5 weeks. **Credits:** 1.00

FS 55301 - Food Microbiology

Credit Hours: 1.00. Principles and applications of the microbiology of foods. Focuses on many of the important conditions that may lead to foodborne illness and food spoilage. Structured in three main sections related to foodborne hazards: 1) identification, 2) control and prevention, and 3) detection. Class meets weeks 1-5. **Credits:** 1.00

FS 55401 - Food Processing And Packaging

Credit Hours: 2.00. Covers relevant basic engineering concepts and their applications to solve food processing and packaging problems. Key unit operations and regulations or recommended practices for manufacture of a variety of foods also will be covered. Students work in teams on a project and present their findings to the entire class. Class meets weeks 6-15. **Credits:** 2.00

FS 55402 - Food Processing

Credit Hours: 1.00. The Food Processing course will present an overview of the basic food engineering concepts and unit operations involved in the manufacture of various food products. Students will be able to understand the food processing literature and to effectively communicate with food technologists and engineers. Topics to be covered include: physical properties of foods, unit operations commonly found in the food industry, and processing equipment. Permission of department required. **Credits:** 1.00

FS 55501 - Case Study

Credit Hours: 1.00. A brief overview of problem-solving and teamwork concepts will be presented in class. A problem will be given by an industrial sponsor, and work groups (teams) will be assigned to solve the problem and present the findings. **Credits:** 1.00

FS 56000 - Food Science Graduate Cooperative Work Experience

Credit Hours: 0.00. Supervised professional experiences in the food science industry. Programs must be preplanned and conducted under the direction of the departmental coordinator with the cooperation of an employer. Students must submit a summary report. Permission of department required. **Credits:** 0.00

FS 56400 - Commercial Food And Beverage Fermentations

Credit Hours: 2.00. This course will provide a study of the principles and practices of international food and beverage fermentations with emphasis on the microbiology, biochemistry and processing techniques used in commercial fermentations that utilize fruits, vegetables, grains, dairy, and meats. Instructional Format: This is a two-credit lecture that can be linked to a separate optional one credit hour laboratory combination. Students must be 21 years of age with ID check for proof of age. Permission of department required. **Credits:** 2.00

FS 56500 - Microbial Foodborne Pathogens

Credit Hours: 3.00. The primary focus is to study the microbial pathogens involved with foodborne diseases. Course emphasis is on molecular and genetic basis of virulence of foodborne pathogens and host-parasite interactions. Topics include incidence and source of pathogens, immune response to infection, virulence factors, and mechanism of pathogenesis of specific infectious and intoxicating foodborne bacteria, mycotoxins, viruses and parasites. Typically offered odd years. **Credits:** 3.00

FS 56600 - Microbial Techniques For Food Pathogens

Credit Hours: 2.00. Molecular biology, immunochemistry and tissue culture-based rapid and automated techniques currently used for detection and identification of foodborne pathogens. The techniques include metabolic fingerprinting identification system, enzyme immunoassay and dot blotting, lateral flow assay, polymerase chain reaction, genomic fingerprinting, cytotoxicity assays, and selected biosensor tools. Laboratory experiments are scheduled for four hours, with up to two additional hours of arranged time. Offered in even-numbered years. (Weeks 6-16). **Credits:** 2.00

FS 58000 - Food And The Environment

Credit Hours: 1.00. This course is to provide information for students to understand the radical increase in food production and the associated environmental issues it has created. This course gives theoretical coverage of Life Cycle Assessment (LCA) methodology that will assist students in finding ways to evaluate the environmental sustainability of different food systems throughout their entire supply chains at local, national and global levels.**Credits:** 1.00

FS 58100 - Microbial Genomics And Metabolism

Credit Hours: 3.00. Microbial genomics and metabolism will introduce students to how genomes are assembled, how microbial functional predictions are made, and how systems biology techniques are used to query microbial function in diverse ecosystems. Students will participate in activities including classroom lecture, group discussion, reading of primary literature, hands-on computational assignments, exams, and student projects. Basic knowledge of microbiology and molecular biology is expected. Permission of department required. **Credits:** 3.00

FS 58200 - Emerging Food Technologies

Credit Hours: 1.00. This online multi-institutional course provides a broad perspective of innovation as applied to food engineering. The course constitutes weekly presentations from 12 speakers on topics in three thematic areas selected using a student survey (from 18 institutions), aiming to develop a student-centered course. This course (1) provides a broad perspective of innovation as applied to food engineering; (2) provides a general overview and case studies of current and emerging research areas in food and agricultural engineering and processing by different research groups in the nation; and (3) demonstrates the efforts among food engineers and scientists in the nation to advance engineering knowledge and technologies for the purpose of improving food safety, quality and security, and enhance health benefits of food products through extensive research in focused areas. Permission of department required. **Credits:** 1.00

FS 59000 - Special Problems

Credit Hours: 1.00 to 5.00. Specialized study in research laboratories, libraries, or computer laboratories for problems related to food science that are not taught in regular courses. Permission of instructor required. **Credits:** 1.00 to 5.00

FS 59100 - Special Topics

Credit Hours: 1.00 to 3.00. Specialized topics not covered in other courses will be offered as one-credit minicourses. Topics, requirements, and credits will be determined yearly. Permission of instructor required. **Credits:** 1.00 to 3.00

FS 60900 - Food Lipids

Credit Hours: 1.00 to 3.00. (NUTR 60900) Importance of lipids in the diet and food systems with emphasis on changes occurring during processing, preparation, and storage. Nomenclature, physical attributes, and oxidation of lipids as well as properties and characteristics of antioxidants will be major components of the course. Offered in alternate years. Prerequisite: BCHM 56100 and FS 65000 or FS 45300/NUTR 45300. **Credits:** 1.00 to 3.00

FS 61000 - Food Proteins

Credit Hours: 3.00. (NUTR 61000) Chemical and physical properties, distribution and function, and alteration of proteins in food. Protein toxicology and nutritional quality. Offered in alternate years. Prerequisite: BCHM 56100 and FS 65000. **Credits:** 3.00

FS 62000 - Scientific Writing In Food Science

Credit Hours: 2.00. This course covers the essential elements of publishing original research at professional meetings (oral presentations and papers) and in peer-reviewed journals (original research manuscripts). Topics include: ethics in writing, effective reading of the literature, organizing research data, choosing a journal, writing the manuscript (results, materials and methods, introduction, discussion, title, abstract, references), publication process, revising and reviewing, poster presentation, and short oral presentations. Each student will write a paper, prepare a 12-minute oral presentation, and prepare a poster, based on data from his/her graduate research project. Permission of instructor required. **Credits:** 2.00

FS 63000 - Carbohydrates

Credit Hours: 3.00. (NUTR 63000) Carbohydrates with an emphasis on those of low molecular weight in foods. Structures, reactions, and properties of mono- and oligosaccharides. Introduction to polysaccharides and food gums. Offered in alternate years. Prerequisite: 6 credit hours in Organic Chemistry. Prerequisite: Nine credits of chemistry. **Credits:** 3.00

FS 66000 - Intestinal Microbiology And Immunology

Credit Hours: 1.00. (ANSC 66000) Discussion and critique of recent journal articles related to intestinal microbiology/immunology. The specific areas covered under this forum are: (1) intestinal microbiology, (2) food microbiology as it relates to gastrointestinal diseases, (3) probiotics and prebiotics-related to intestinal health or pathogen control, and (4) mucosal immunity with major emphasis on intestinal immunology. **Credits:** 1.00

FS 68400 - Food Science Seminar

Credit Hours: 1.00. Current topics in food science. **Credits:** 1.00

FS 69000 - Special Topics In Food Science

Credit Hours: 1.00 to 3.00. Individual study of specialized materials. Permission of instructor required. **Credits:** 1.00 to 3.00

FS 69700 - Supervised University Teaching In Food Science

Credit Hours: 1.00. Students assist a faculty member in teaching a food science course to obtain training and experience in various aspects of classroom and laboratory teaching. Permission of instructor required. **Credits:** 1.00

FS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

FS 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Forestry and Natural Resources

FNR 12500 - Environmental Science And Conservation

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards. **Credits:** 3.00

FNR 15000 - The Nature Of Wild Things

Credit Hours: 1.00. This is the core course for "The Nature of Wild Things" learning community. The course focuses on the majors offered in the Department of Forestry and Natural Resources (FNR), and new student integration into the University and department. This course expands knowledge of academic programs and career options in FNR, and resources available on campus to facilitate student success in the first year. Permission of department required. **Credits:** 1.00

FNR 19800 - Introductory Topics In Forestry And Natural Resources

Credit Hours: 1.00 to 3.00. Subjects and problems of interest to the student. Permission of instructor required. **Credits:** 1.00 to 3.00

FNR 20100 - Marine Biology

Credit Hours: 3.00. An introduction to the major groups of marine organisms and their habitats. Emphasis on application of ecological principles to the conservation of important marine species. Offered in even-numbered years. **Credits:** 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented. **Credits:** 3.00

FNR 22310 - Introduction To Environmental Policy

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined. **Credits:** 3.00

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands. **Credits:** 3.00

FNR 23000 - The World's Forests And Society

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world. **Credits:** 3.00

FNR 24000 - Wildlife In America

Credit Hours: 3.00. History of the occurrence, exploitation, and management of North America's wildlife resources. Life histories, habitat relationships, and human impacts on selected species. Current conservation practices and future prospects. **Credits:** 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the

roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles. **Credits:** 3.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America. **Credits:** 1.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds. **Credits:** 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America. **Credits:** 1.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning. **Credits:** 1.00

FNR 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in forestry & natural resources. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FNR 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in forestry & natural resources. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FNR 29800 - Topical Problems In Forestry And Natural Resources

Credit Hours: 0.00 to 4.00. The class will be used primarily for lower-level undergraduate research projects and for the development of new and/or temporary courses for lower-division students. The course also offered for 0 credit for training opportunities (e.g., first aid for undergraduates attending summer practicum). **Credits:** 0.00 to 4.00

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and

others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered. **Credits:** 3.00

FNR 30200 - Global Sustainability Issues

Credit Hours: 2.00. This course explores global sustainability issues in natural resources with emphasis on forestry, wood products manufacturing, conservation, water management, energy and their impact on the targeted geographic location (such as Central America, Eastern Europe) and the rest of the world. The purpose of this course is to present students, regardless of their disciplinary background, with an overview of the interdisciplinary aspects of sustainable natural resource management. This colloquium course will examine global sustainable natural resources and related issues (including population, poverty, pollution, climate change, deforestation, invasive species, urbanization, habitat loss, cultural traditions, water management, energy, education, technology, and international collaboration). **Credits:** 2.00

FNR 30500 - Conservation Genetics

Credit Hours: 3.00. Fundamentals and principles of genetics, including Mendelian inheritance, genetic mapping & linkage, DNA fingerprinting, phylogeography, and speciation. Topics cover the theoretical and empirical evidence illustrating how mutation, migration, drift, and natural selection influence the evolution of genes in natural populations. Designed for ecologists and natural resource professionals. **Credits:** 3.00

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses. **Credits:** 3.00

FNR 31300 - Aquaponics

Credit Hours: 1.00. (SFS 31100) (HORT 31110) There has been a significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia; and our impending food crisis has kindled an interest in developing aquaponics systems in Western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. The waste disposal problem of the fish can become the nutrient supply to the plants. **Credits:** 1.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities. **Credits:** 3.00

FNR 33300 - Fire Effects In Forest Environments

Credit Hours: 1.00. Use of natural and set prescribed fire as a tool in management of forest and prairie ecosystems. Requires class trips. Students will pay individual lodging or meal expenses when necessary.**Credits:** 1.00

FNR 33350 - Applied Fire Ecology

Credit Hours: 3.00. Fire, either as a natural disturbance or anthropogenically mediated disturbance, has been a feature of almost every major terrestrial ecosystem in North America. In this era of climate change, land management agencies are increasingly using fire both to manage terrestrial ecosystems and to actively contain wildfire. This class will provide basic understanding to both fire behavior and its ecological impacts on terrestrial ecosystems, focusing on systems common to the Central Hardwood Region. Students will get experience conducting prescribed fire and take Firefighter Type II (FFT2) online training modules, in partial fulfillment of requirements of an Incident Qualification Card (i.e., "red card"). Students will learn how to develop a burn plan for a given property, including assessment of risks, prediction of fire behavior (i.e., BEHAVE model), and estimation of burn effects.**Credits:** 3.00

FNR 33800 - Introduction To Silviculture

Credit Hours: 3.00. This course introduces the common silvicultural systems used in North American forests for forestry and wildlife habitat management objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures present theoretical concepts in order to allow students to understand forest management practices, while the recitation portion of this course reviews these concepts in light of wildlife habitat management, biodiversity, and other non-timber resources. The recitation is writing-intensive requiring several reflection papers on assigned readings and a semester-ending term paper on a subject of the student's choosing. Credit cannot be earned for both FNR 33800 and FNR 43900. Permission of department required. **Credits:** 3.00

FNR 33900 - Principles Of Silviculture

Credit Hours: 3.00. Silviculture systems; establishment of stands; control of stand composition, growth, and quality.**Credits:** 3.00

FNR 34100 - Wildlife Habitat Management

Credit Hours: 3.00. Principles, practices, and justification of the habitat management approach to the manipulation of wildlife populations. **Credits:** 3.00

FNR 34800 - Wildlife Investigational Techniques

Credit Hours: 3.00. An introduction to current wildlife research techniques that are used in managing populations and habitats. Laboratory and field exercises are used to gather and analyze data; basic data analysis and written dissemination of results is emphasized. **Credits:** 3.00

FNR 35100 - Aquatic Sampling Techniques

Credit Hours: 3.00. An introduction to laboratory and field sampling methods in aquaculture, limnology, and fisheries biology. Emphasis will be placed on the proper use of laboratory equipment and sampling gears, as well as the development of sampling protocols for collecting representative, non-biased fisheries and aquatic sciences data. **Credits:** 3.00

FNR 35110 - Aquatic Sampling Techniques I

Credit Hours: 2.00. This course presents an introduction to field sampling methods used in aquaculture, aquatic ecology, and fisheries biology. The course emphasizes the proper care and use of field sampling gears, as well as the development of sampling protocols for collecting representative, non-biased fisheries and aquatic sciences data.**Credits:** 2.00

FNR 35150 - Aquatic Sampling Techniques II

Credit Hours: 2.00. This course presents an introduction to laboratory and field sampling methods used in aquaculture, limnology, and fisheries biology. The course emphasizes the proper care and use of laboratory equipment and field sampling gears, as well as the analyses and reporting of fisheries and aquatic sciences data.**Credits:** 2.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources. **Credits:** 3.00

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.**Credits:** 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources. **Credits:** 3.00

FNR 35900 - Spatial Ecology And GIS

Credit Hours: 3.00. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems.**Credits:** 3.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance.**Credits:** 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.**Credits:** 1.00

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.**Credits:** 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence. **Credits:** 1.00

FNR 37100 - Fisheries And Aquatic Sciences Practicum

Credit Hours: 5.00. Specific field instruction in fisheries and aquatic sciences. Students pay university tuition plus a fee for living facilities and subsistence. **Credits:** 5.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence. **Credits:** 4.00

FNR 37300 - Wildlife Practicum

Credit Hours: 4.00. Specific field instruction in wildlife science and management. Students pay university tuition plus a fee for living facilities and subsistence. **Credits:** 4.00

FNR 37500 - Human Dimensions of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations. **Credits:** 3.00

FNR 37700 - Optimize Student Conference Attendance

Credit Hours: 1.00. Participation in this course will formalize the experience of attending a professional conference by training students to optimize their experience. Students will then attend a professional conference with mentoring from the course instructors. Permission of instructor required. **Credits:** 1.00

FNR 37800 - Marine Biology Practicum

Credit Hours: 3.00. This course presents students with expanded opportunities to use field techniques to sample and report on marine habitats and organisms. The course emphasizes the proper care and use of field sampling gear and identification of fish and invertebrates samples from exposed shore, lagoon, and estuary habitats. A trip to the coast of either the Atlantic Ocean or Gulf of Mexico is a central component of this course; a course fee is required to cover the expenses of the trip. **Credits:** 3.00

FNR 38400 - Statistics For Natural Resources

Credit Hours: 3.00. Methods of statistical analysis and modeling for data and problems encountered in natural resources conservation, science and management. Emphasis is on application of methods and interpretation of results in the context of natural resource problems. Topics include introductory sampling design, exploratory analyses, general linear models, generalized linear models, introduction to resampling methods, likelihood-based model selection, and model goodness-of-fit. **Credits:** 3.00

FNR 38500 - Fish Biology And Ecology

Credit Hours: 4.00. Advanced study of the biology and ecology of fishes. In particular, the course covers aspects of the morphology, physiology, development, behavior, evolution, and diversity of fishes throughout the world. The relationship of fishes to the physical, chemical, and biological features of the environment in both natural and perturbed aquatic ecosystems will be explored. An emphasis will be placed on diversity in morphology, behavior, feeding, and reproductive strategies as they relate to individual, population, community structure, and anthropogenic effects. **Credits:** 4.00

FNR 39000 - Cooperative Professional Program

Credit Hours: 0.00. Supervised professional experience in forestry. Programs must be preplanned and conducted under the direction of a forestry faculty coordinator with the cooperation of an employer. Students must submit a summary report. Admission to forestry Co-op program. **Credits:** 0.00

FNR 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in forestry & natural resources. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FNR 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in forestry & natural resources. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FNR 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in forestry & natural resources. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

FNR 40000 - Forestry And Natural Resources Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities. **Credits:** 0.00 to 8.00

FNR 40100 - Limnology

Credit Hours: 3.00. Limnology is the study of the chemical, physical, geological, biological, and ecological processes that influence the structure and function of freshwater ecosystems. The course will focus on developing the understanding of key terms and mechanisms related to the basic understanding of limnological processes. Moreover, various applications and management considerations related to freshwater ecosystems will be presented. **Credits:** 3.00

FNR 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (AGEC 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues. **Credits:** 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs. **Credits:** 3.00

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.**Credits:** 3.00

FNR 41800 - Properties Of Wood Related To Manufacturing

Credit Hours: 3.00. Orthotopic nature of wood, grain, texture, moisture content, shrinking, swelling, specific gravity, machining, thermal properties, electrical properties, elastic properties, strength properties, vibration properties, bending, natural characteristics affecting mechanical properties, effect of manufacturing and service environment on mechanical properties, changing quality of available resources and implications of wood quality changes for manufacturing. **Credits:** 3.00

FNR 41910 - Furniture Product Development And Strength Design

Credit Hours: 3.00. Qualitative and quantitative principles of furniture construction, product development methodology and strength design principles, furniture performance testing, product sustainability and end of life options (LCA, computer-based applications and solutions). Course features laboratory evaluating, furniture joints and furniture structures. **Credits:** 3.00

FNR 42500 - Secondary Wood Products Manufacturing

Credit Hours: 3.00. Secondary wood products manufacturing; structure of the industry, organization of a furniture factory, raw materials, rough mill, finish mill, assembly, finishing, machinery, wood machining, plant layout, production methods, modern industrial engineering concepts; includes visits to manufacturing operations. Requires class trips. Students will pay individual lodging or meal expenses when necessary. **Credits:** 3.00

FNR 43200 - Human-Wildlife Conflicts

Credit Hours: 3.00. Exploration of conflicts between human interests and wildlife and the regulations policies and legislation used to minimize conflicts. Negative interactions may be real or perceived, economic or aesthetic, social or political, and may pose risks to human health and safety. Emphasis on the causes of conflict and resolutions that seek to balance protection or conservation of wildlife with protection of other public resources and individual property owners. Prior knowledge of college-level general biology and ecology is expected. **Credits:** 3.00

FNR 43300 - Grand Challenges In Forest Management

Credit Hours: 3.00. This course will guide students through readings, discussions, and presentations of the grand challenges that face the field of forest management. These topics will vary with each iteration of the class but may include topics such as climate change, invasive species, pressure on forest lands from a growing population, altered disturbance regimes, development of new silvicultural techniques, economic pressure at multiple scales, and shifting public perceptions on the management of forests. Students will examine and discuss these challenges from the vantage points of multiple stakeholders to gain insight into their complexity and importance. Students will read and discuss on average 2-4 research or review articles, book chapters, or other sources per week. **Credits:** 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors. **Credits:** 3.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900. **Credits:** 3.00

FNR 44400 - Arboricultural Practices

Credit Hours: 4.00. Course covers a broad spectrum of arboriculture principles and techniques, including pruning, transplanting, fertilization, climbing, rigging, removal, cabling, bracing, lightning protection, hazard tree evaluation, tree appraisal, and street tree inventory. **Credits:** 4.00

FNR 44500 - Urban Forest Issues

Credit Hours: 3.00. This course presents an array of topics germane to the management of trees in the urban environment. This includes the benefits of trees and general tree care, tree appraisal, tree ordinances, tree inventory and management plans, and tree preservation and construction. **Credits:** 3.00

FNR 44700 - Vertebrate Population Dynamics

Credit Hours: 4.00. Estimation and analysis of populations; computer modeling of sampling methods, population dynamics, population and habitat management. Knowledge of computer programming not required. **Credits:** 4.00

FNR 45200 - Aquaculture

Credit Hours: 3.00. Historical perspectives and current practices in aquaculture, including production systems, feeds, water quality requirements, and diseases of commercially important species. **Credits:** 3.00

FNR 45300 - Fish Physiology

Credit Hours: 3.00. Presentation and discussion of physiological mechanisms exhibited by freshwater and marine invertebrates and vertebrates. Primary materials used for class presentation and discussions will be examples from primary research literature. Topics include respiration, osmoregulation, stress physiology, absorption and metabolism of compounds, and hormonal control of selected physiological mechanisms. Offered in odd-numbered years. **Credits:** 3.00

FNR 45500 - Fish Ecology

Credit Hours: 3.00. The relationship of fishes to the physical, chemical, and biological features of the environment in both natural and perturbed aquatic ecosystems. An emphasis will be placed on diversity in morphology, behavior, feeding, and reproductive strategies as they relate to individual and population adaptation, community structure, and anthropogenic effects. Offered in even-numbered years. **Credits:** 3.00

FNR 45600 - Fish And Marine Population Dynamics

Credit Hours: 4.00. Theory of population dynamics of animal populations in freshwater and marine environments. Application of quantitative methodologies for the assessment and manipulation of aquatic habitats, marine and freshwater invertebrates, sport and commercial fish populations, and aquatic communities. Human resource users and non-users are considered. **Credits:** 4.00

FNR 45700 - Practical Fisheries Management

Credit Hours: 2.00. Theory and practice of fisheries management, with emphasis on strategies utilized for the management of freshwater and marine fisheries. Course content will include hands-on assessment of fish populations, as well as development of management plans and the setting of appropriate goals and objectives for effective, science-based management. **Credits:** 2.00

FNR 45800 - Advanced Marine Biology

Credit Hours: 3.00. Focus is placed on the structure and function of major marine ecosystems, including estuarine, mangrove, coastal, coral reef, open ocean, and deep ocean environments. Course content will include rigorous treatment of the biogeochemical processes that support these ecosystems, as well as the biology and ecology of characteristic flora and fauna. **Credits:** 3.00

FNR 46000 - International Natural Resources Summer Program

Credit Hours: 3.00. A four-week, intensive program examining the management and conservation of natural resources in Europe and the United States. Jointly taught with faculty and students from the Swedish University of Agricultural Sciences. The program topic and venue change each year, but emphasis is placed on student interaction and internationalization as well as on cross-cultural communication skills within a natural resources framework. Offered in even-numbered years at Purdue University and in odd-numbered years at the Swedish University of Agricultural Sciences in Sweden. **Credits:** 3.00

FNR 46500 - History And Role Of Hunting In North American Wildlife Conservation

Credit Hours: 1.00. Introduction to the social, economic and wildlife management importance of hunting and how it relates to North American wildlife conservation. History of hunting and the North American Model of wildlife conservation, contrasted with those of European nations. Students will be required to participate in or observe hunting-related activities outside of class. This exercise is conducted off-campus on local Purdue-maintained properties. **Credits:** 1.00

FNR 48410 - Sustainable Wood Products, Furniture Design And Manufacturing

Credit Hours: 3.00. This project-based course explains principles of product development, furniture construction, strength design, performance testing, and product sustainability (life cycle analysis and end-of-life options). The course familiarizes students with methods such as Computer-Aided Design (CAD), Computer-Aided Manufacturing (CAM), Computer Numerical Control (CNC) router operation, rapid prototyping, and basics of secondary wood products manufacturing, to build an actual product. **Credits:** 3.00

FNR 49000 - Sustainable Product/Process Design Guided Research

Credit Hours: 1.00 to 3.00. Students will be involved in efforts to solve many complex natural resource utilization issues on the local and global scale. Projects engaging with important industrial forest products stakeholders will be encouraged to allow students to demonstrate proficiency in a sustainable product development or application of sustainable manufacturing practices and communication of their ideas. Permission of Instructor required. **Credits:** 1.00 to 3.00

FNR 49800 - Special Assignments

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 3.00

FNR 49900 - Thesis

Credit Hours: 1.00 to 6.00. Thesis. Permission of instructor required.**Credits:** 1.00 to 6.00

FNR 50600 - Theory And Application Of Natural Resource Extension Programming

Credit Hours: 1.00. This course will provide an opportunity for students to develop and implement extension activities based on their research interests. The course will focus on important natural resources issues, identify common target audiences, provide examples of extension programming, discuss outputs developed from various extension programs, and outline metrics used to evaluate program impact. **Credits:** 1.00

FNR 52700 - Ecotoxicology

Credit Hours: 2.00. This course covers theoretical and applied approaches to the science of ecotoxicology, including application of the tools and procedures used to understand toxicant fate and effects in free-ranging animals and ecosystems. Students are expected to be knowledgeable in chemistry, biology, and animal physiology. **Credits:** 2.00

FNR 52800 - Wildlife And Environmental Forensics

Credit Hours: 2.00. Theoretical and applied approaches to the science of wildlife and environmental forensics. General introduction on environmental forensics followed by discussion of different types of investigations. Includes application of tools and procedures used to solve crimes, including morphological, chemical and biological analysis of evidence. All material will be discussed in relation to criminal investigation. (Offered in even-numbered years) **Credits:** 2.00

FNR 52900 - Disease Ecology

Credit Hours: 3.00. Study of the ecological and evolutionary complexity inherent to host-pathogen interactions. Includes case studies from a diverse array of systems, including plants, animals, aquatic and terrestrial systems. Emphasis is on the interactions between multiple hosts and pathogens within complex, dynamic environments. Introduction to parasite and pathogen diversity, host-pathogen coevolution, community ecology and the importance of pathogens in conservation and management. **Credits:** 3.00

FNR 53500 - Forest Regeneration And Restoration

Credit Hours: 3.00. An overview of the dynamics associated with the regeneration of forestlands in North America. Topics include: seed collection and handling, forest tree nursery operations, seedling quality, managing for environmental stresses, planting operations, early stand management, and natural regeneration. Permission of instructor required. Offered in odd-numbered years. **Credits:** 3.00

FNR 53600 - Ecology Of Disturbance

Credit Hours: 2.00. Advanced lecture- and discussion-based class examining how disturbance shapes the composition and structure of communities and landscapes across major terrestrial biomes. Students will examine and discuss the relationships between disturbance intensity, frequency, and spatial extent and how these characteristics affect ecological processes and ecologically-based management of forest and grassland ecosystems. The class will also examine the synergistic effects of multiple disturbances and the restoration of endemic disturbance regimes in contemporary ecosystems. Course is reading intensive; students will read and discuss on average 3-8 journal articles per week. Typically offered in even years. **Credits:** 2.00

FNR 53601 - Ecology Of Disturbance Practicum

Credit Hours: 1.00. This course is the practicum for FNR 53600, hence enrollment is contingent upon enrollment in FNR 53600. Course consists of a one or two-week long field trip to a remote site; prior trips have been taken to the Great Smokey National Park over spring break. Course requires an additional travel fee, depending on location visited. Typically offered in even years. **Credits:** 1.00

FNR 54300 - Conservation Biology I

Credit Hours: 3.00. Introduction to conservation biology, including population dynamics and genetic structure of rare organisms. Recovery planning, restoration ecology, environmental policy making, and sustainable developments are considered, as is ethics in conservation of biological diversity. Offered in odd-numbered years. Permission of instructor required. **Credits:** 3.00

FNR 55800 - Remote Sensing Analysis And Applications

Credit Hours: 3.00. Advanced course in the use of remote sensing techniques emphasizing the physical principles behind the remote sensing of vegetative features, present-day instrument technology, spatial data processing and analysis algorithms, error analysis and accuracy assessment procedures, and multi-source data integration. Provides hands-on experience with forest canopy modeling, atmospheric modeling, image processing, and GIS software on microcomputer and workstation platforms. **Credits:** 3.00

FNR 56700 - Advanced Mammalogy

Credit Hours: 3.00. The class explores approaches to mammalian research and wildlife management through readings, discussions, field, and laboratory exercises. Topics such as mammalian behavior, ecology, phylogeny, taxonomy, and conservation are emphasized. The intention of this class is to help students who have a sincere interest in mammalian research and management to progress beyond identification in their understanding of mammals. **Credits:** 3.00

FNR 57000 - Amphibian Ecology And Conservation

Credit Hours: 3.00. This course will address the ecology and conservation of amphibians at the global scale. Lectures will cover diversity and natural history, phylogenetic relationships, basic biology and ecology, and conservation concerns and strategies. Class materials come from a text and primary literature. Labs will focus on important characteristics of species, families and orders of amphibians, including both North American and non-North American species. Class will also discuss and debate conservation issues. Course will include guest lectures, potential field trips or a class project. Permission of department required. **Credits:** 3.00

FNR 57100 - Advanced Ornithology

Credit Hours: 3.00. Study of current avian research topics and techniques. Class discussion of recent scientific literature; field and laboratory exercises to illustrate approaches to ornithological research. One weekend field trip is offered. (Offered in even-numbered years.) **Credits:** 3.00

FNR 57400 - Big Data, AI, And Forests

Credit Hours: 3.00. This course is focused on introductory big data analysis, artificial intelligence, and associated applications in large-scale forest research. The lecture will cover the challenges we encounter in big data ecological research, and the approaches to overcome these challenges. Real-time forest inventory and wildlife survey data at national and continental levels will be utilized in this course, and actual high-impact research projects will be introduced as case studies to inform students of the state-of-the-art in this subject area. High-performance computing clusters will be utilized for big data analysis. This course is also open to non-forestry majors. We will introduce basic machine learning techniques that are applicable to other subject areas. Guest lectures may cover big data analyses in different fields, internet-of-things, and/or data management and optimization/decimation for collaborative Virtual Reality experiences. The class will be evaluated through a final project, for which students will work

independently or in a group setting to develop a 'mini' research manuscript with a title of their own selection. All the groups are encouraged to submit their manuscript for publication at peer-reviewed journals, and those whose manuscripts have passed the initial journal screening will get extra bonus points. **Credits:** 3.00

FNR 58000 - Research Methods For Natural Resource Social Science

Credit Hours: 3.00. This class covers basic elements of research design for social scientists, with an emphasis on issues pertinent to natural resource management. Topics to be covered include the role of theories and paradigms in designing sound research, writing research questions and hypotheses, and the importance of validity and reliability in research design. Qualitative, quantitative, and mixed methods designs are presented and discussed. **Credits:** 3.00

FNR 58600 - Urban Ecology

Credit Hours: 3.00. Urbanization is on the rise, transforming natural ecosystems into coupled human-natural ecosystems that encompass complex, novel functional and structural characteristics shaped by people and the inherent environment. Through local field trips and readings of the primary scientific literature, we examine the unique characteristics of coupled human-natural ecosystems. The course is designed to be broadly accessible to students from a variety of backgrounds, interests, and majors who are interested in environmental science and engineering and emphasizes the importance of incorporating an ecological perspective in environmental engineering and natural resource management. This course covers fundamental principles of ecology as applied in urban and other coupled human-natural systems with emphasis on the impacts of modern industrial society on ecosystem structure and function. Organizing themes addressed in this class include macroscale processes, systems thinking, and topics related to urban systems. **Credits:** 3.00

FNR 58700 - Advanced Spatial Ecology And GIS

Credit Hours: 3.00. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales. The lab will focus on the use and application of these databases that are common in natural resource management settings. **Credits:** 3.00

FNR 59000 - Introduction To Teaching In Natural Resources

Credit Hours: 1.00. This applied course introduces topics related to teaching science courses to facilitate and support the success of teaching assistants in Forestry and Natural Resources. Students will read and review assigned readings and then participate in a discussion at a weekly class meeting. Students also will have an opportunity to practice and apply concepts through development and presentation of a lesson plan. Permission of instructor required. **Credits:** 1.00

FNR 59100 - Teaching In Natural Resources Practicum

Credit Hours: 1.00 or 2.00. This practicum course provides students with an opportunity to gain teaching experience in natural resource courses. This course is only open to students that are not being paid as teaching assistants. Permission of Instructor required. **Credits:** 1.00 or 2.00

FNR 59800 - Topical Problems In Forestry And Natural Resources

Credit Hours: 1.00 to 3.00. Subjects and problems of interest to the student. Permission of instructor required. **Credits:** 1.00 to 3.00

FNR 64700 - Quantitative Methods For Ecologists

Credit Hours: 3.00. Examines the assumptions and utility of statistical and other data analytic techniques that are encountered commonly or increasingly being used in ecological research. Emphasis is placed on the potential applications of these quantitative methods in an ecological context. Topics include traditional multivariate methods (cluster analysis, principal components, factor analysis, discriminant analysis, multidimensional scaling, correspondence analysis), generalized linear models (logistic Poisson, and ordinal regression and derivatives), randomization methods, information-theoretic model selection and inference, and hierarchical models. An introduction to Bayesian analysis is provided for generalized linear (and mixed) models, with applications to (meta) population and (meta) community ecology. Prerequisite: BIOL 58210 or ENTM 64200 or STAT 51200, or consent of instructor. Knowledge of linear algebra and experience with R is desirable but not essential. **Credits:** 3.00

FNR 65000 - Individual-Based Ecology And Modelling

Credit Hours: 3.00. This course will provide graduate students with the opportunity to learn about the techniques and approaches used for individual-based modeling in ecological studies. Students will find relevant supplementary literature and lead class discussions on those topics as well as chapters from the course textbook and present case study examples of existing individual-based models (IBM) to the class. Students will develop individual-based models based on their own research project(s). **Credits:** 3.00

FNR 67900 - Forest Resources Seminar

Credit Hours: 0.00 or 1.00. Required for graduate students in forestry and natural resources. Topics vary. Prerequisite: Required of graduate students in forestry, natural resources. **Credits:** 0.00 or 1.00

FNR 69100 - Topical Problems In Forestry

Credit Hours: 1.00 to 3.00. Subjects and problems of interest to the student. Permission of instructor required. **Credits:** 1.00 to 3.00

FNR 69300 - Topical Problems In Wildlife Biology

Credit Hours: 1.00 to 3.00. Subjects and problems of interest to the student. Permission of instructor required. **Credits:** 1.00 to 3.00

FNR 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

FNR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

French

FR 1010N - First-Year French I

Credit Hours: 3.00 to 5.00. Introductory French language course. Emphasis on developing basic speaking, writing, listening and reading skills as well as awareness of Francophone cultures.**Credits:** 3.00 to 5.00

FR 10100 - French Level I

Credit Hours: 3.00. A beginning French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. Permission of department required. CTL:IWL 1901 French Level I **Credits:** 3.00

FR 10200 - French Level II

Credit Hours: 3.00. Continuation of FR 10100. CTL:IWL 1902 French Level II **Credits:** 3.00

FR 10500 - Accelerated Basic French

Credit Hours: 4.00. This is an accelerated beginning-level course designed to develop language proficiency in French. The course will help students progress toward competence in speaking, listening, reading, and writing, as well as toward knowledge of French and Francophone cultures. The course focuses on active language use. Students will interact meaningfully with classmates and develop communicative strategies. Course will be taught in French. Permission of Department required. **Credits:** 4.00

FR 11200 - Elementary French Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice to enhance communicative competence. Small group discussions in French on practical topics. **Credits:** 1.00

FR 20100 - French Level III

Credit Hours: 3.00. A lower intermediate French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1903 French Level III **Credits:** 3.00

FR 20200 - French Level IV

Credit Hours: 3.00. Continuation of FR 20100. CTL:IWL 1904 French Level IV **Credits:** 3.00

FR 20500 - Accelerated Intermediate French

Credit Hours: 4.00. This course is an accelerated intermediate-level course designed to develop language proficiency in French. The course will help students progress toward competence in speaking, listening, reading and writing, as well as toward knowledge of French and Francophone cultures. The course focuses on active language use. Students will interact meaningfully with classmates and develop communicative strategies. Course will be taught in French. **Credits:** 4.00

FR 21200 - Intermediate French Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group discussions in French on practical topics. Not open to students enrolled in or having credit for FR 30100 or above. **Credits:** 1.00

FR 22400 - Professional French I

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills will be developed toward use of French for business purposes. Course materials cover daily business dealings as well as national and international trade. **Credits:** 3.00

FR 23000 - French Literature In Translation

Credit Hours: 3.00. Reading and analysis of selected French writers and their works, with particular emphasis on the social, political, and intellectual climate of their times. The course content will change from semester to semester. Knowledge of French not required. **Credits:** 3.00

FR 24100 - Introduction To The Study Of French Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from France and the Francophone world; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in French. **Credits:** 3.00

FR 28000 - Second-Year French: Special Topics

Credit Hours: 3.00. Selected topics on the civilization, culture, and literature of France. Lectures and readings primarily in English, but knowledge of French at the first-year level necessary. **Credits:** 3.00

FR 30100 - French Level V

Credit Hours: 3.00. Continued development of French speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in France and the other French-speaking countries from various sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in French. **Credits:** 3.00

FR 30200 - French Level VI

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in French on the basis of materials dealing with the ideas and events that have shaped present-day France and the other French-speaking countries. Conducted primarily in French. **Credits:** 3.00

FR 31200 - Advanced French Conversation

Credit Hours: 1.00. One credit hour advanced French conversation focused on the development of oral and aural skills for self-expression. Course provides students with guided practice in conversation to enhance communicative competence. Discussions in French on various topics. Course may be taken concurrently with FR 30100, 30200, 40100 or 40200. **Credits:** 1.00

FR 32300 - French For Engineering

Credit Hours: 3.00. This course is an intermediate/advanced French course emphasizing vocabulary and structures necessary for communication within the context of the working world. In this course, students will further develop their speaking, listening, reading, and writing abilities through the study of specialized vocabulary from the engineering and technology sciences. Conducted in French.**Credits:** 3.00

FR 32400 - Professional French II

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills at an intermediate level will be developed toward the use of French for business purposes. Course materials cover daily business dealing as well as national and international trade. **Credits:** 3.00

FR 33000 - French Cinema

Credit Hours: 3.00. A general survey of major French cinematic trends from the earliest examples (Melies, Lumiere) to the New Wave (Chabrol, Truffaut, Resnais, Godard, etc.), with a discussion of the historical, social, political, aesthetic, and literary contexts. The French film in relation to world cinema. The relationship between the French cinema and French literature. Reading and analysis of scripts and historical and critical materials. Knowledge of French not required. **Credits:** 3.00

FR 34100 - French Literature I: From The Middle Ages To The Enlightenment

Credit Hours: 3.00. Reading of selected poetry, prose, and theatre of France from the Middle Ages through the Enlightenment in historical and cultural context. Readings, discussion, and papers in French. **Credits:** 3.00

FR 34200 - French Literature II: The 19th And 20th Centuries

Credit Hours: 3.00. Reading of selected French poetry, novels, theatre, and short fiction of the 19th and 20th centuries in historical and cultural context. Readings, discussion, and papers in French. **Credits:** 3.00

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French. **Credits:** 3.00

FR 39400 - Special Topics In French Literature

Credit Hours: 3.00. Studies a particular aspect in French literature (e.g., theme, device, character type, motif, place) by reading a varied selection of works of different genres, styles and/or periods. Readings, discussion, and papers in French. **Credits:** 3.00

FR 39600 - Special Topics In French Language Science

Credit Hours: 3.00. Examines a particular aspect entailed in the study of French language, e.g., language acquisition and teaching, language in society, regional dialects of France, French around the world, French creoles. Conducted in French. **Credits:** 3.00

FR 39900 - Special Study Abroad Credit In French

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in French earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

FR 40100 - French Level VII

Credit Hours: 3.00. Advanced work on development of French speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in France and the other French-speaking countries. Conducted primarily in French. **Credits:** 3.00

FR 40200 - French Level VIII

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in French. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted primarily in French. **Credits:** 3.00

FR 42400 - Professional French III

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking. **Credits:** 3.00

FR 44300 - Introduction To Francophone Literature

Credit Hours: 3.00. The study of the most representative Francophone poets, playwrights, and novelists from various countries, such as Leopold Senghor, Aime Cesaire, Jacques Romain, Gabrielle Roy, Michel Tremblay, Mohamed Dib. **Credits:** 3.00

FR 48000 - French Civilization

Credit Hours: 3.00. The study of modern French life, with special emphasis on the customs and daily life of the people. Lectures in French. **Credits:** 3.00

FR 49100 - Special Topics In French

Credit Hours: 1.00 to 4.00. This course will be offered as a guided reading or independent study course on a topic of mutual interest in French or Francophone literature, culture, film, or linguistics, to the student and faculty. Permission of instructor required.**Credits:** 1.00 to 4.00

FR 51900 - Teaching College French

Credit Hours: 3.00. A course designed to provide a forum for ideas connecting theory and research to teaching practice. Explores issues related to how learning and teaching can be enhanced and presents practical ideas that can be implemented in the classroom. Permission of department required. **Credits:** 3.00

FR 52700 - Etudes de Style

Credit Hours: 3.00. Study of the expression of affective and artistic values in literary French. Detailed grammatical analyses and study of stylistic procedures. Comparison with English usage. Introduction to explication de texte as an approach to literature. Permission of department required. **Credits:** 3.00

FR 54100 - Renaissance French Literature

Credit Hours: 3.00. Major works in verse and prose of the sixteenth century. Marot, du Bellay, Ronsard, Rabelais, Montaigne. Permission of department required. **Credits:** 3.00

FR 54900 - French Literature And Film

Credit Hours: 3.00. An examination of the interrelationships of contemporary French literature and film. Discussion of the potential of each medium as an art form, problems of visual transposition of literary works, and extension of literary concepts such as Dadaism and Surrealism into cinema. Permission of department required. **Credits:** 3.00

FR 55800 - French Novel Of The Twentieth Century

Credit Hours: 3.00. Consideration of the character, aesthetics, and evolution of the twentieth-century French novel. Readings from such representative novelists as Proust, Gide, Bernanos, Giono, Malraux, Camus, Robbe-Grillet, Saporta. Permission of department required. **Credits:** 3.00

FR 56100 - The Structure Of French I: Phonetics And Phonology

Credit Hours: 3.00. This course presents the sound system of French by examining descriptive and theoretical issues in the patterning of segments on various levels (phonetics, phonemics, morphology, etc.). Students will study current phonological and phonetic issues in recent literature. Credit will not be given for both FR 35100 and 56100. **Credits:** 3.00

FR 56200 - The Structure Of French II: Syntax And Morphosyntax

Credit Hours: 3.00. This course presents descriptive and theoretical issues concerning the grammatical structure of French, dealing both with word-level phenomena (inflectional and derivational morphology, etc.) and with phrase-, sentence-, and discourse-level phenomena (syntactic structure, sentence constituents, word order, etc.). Credit will not be given for both FR 36200 and 56200. **Credits:** 3.00

FR 56300 - History Of The French Language

Credit Hours: 3.00. A survey of the historical development of the French language from Vulgar Latin to the present and of the French language of today as a reflection of past cultural and socio-political conditions. Knowledge of a Romance language or of Latin is recommended but not required. **Credits:** 3.00

FR 56400 - Introduction To Old French

Credit Hours: 3.00. Introduction to the study of Old French. Phonetic, syntactic, and stylistic questions will be addressed through the analysis of original texts. **Credits:** 3.00

FR 58100 - French Culture

Credit Hours: 3.00. Development of the cultural life of the French people as reflected in architecture, art, history, literature, music, and philosophy. Lectures in French. **Credits:** 3.00

FR 58200 - Francophone Cultures

Credit Hours: 3.00. Examines at least three French-speaking regions outside of France (e.g., Caribbean, Maghreb, Quebec, West Africa), including contemporary civilization and the development of cultures throughout history. Explores trends in society, daily life, the arts, and the ideas. Lectures in French. **Credits:** 3.00

FR 59000 - Directed Reading In French

Credit Hours: 1.00 to 4.00. Directed readings in French. Permission of instructor required. **Credits:** 1.00 to 4.00

FR 59400 - Special Topics In French Literature

Credit Hours: 1.00 to 4.00. Special topics in French Literature. Permission of instructor required. **Credits:** 1.00 to 4.00

FR 59600 - Special Topics In French Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

FR 60100 - First Course To Establish Reading Knowledge

Credit Hours: 3.00. First Course To Establish Reading Knowledge. **Credits:** 3.00

FR 63000 - Bibliography And Literary Criticism

Credit Hours: 3.00. The use of general and specific reference materials and bibliographical aids in literary research: the basic concepts and terminology of literary criticism. Required of all MA candidates in French. **Credits:** 3.00

FR 65900 - Seminar In French Literature

Credit Hours: 3.00. Advanced study of special subjects. Topics to be announced in advance. Permission of instructor required. **Credits:** 3.00

FR 67900 - Seminar In French Linguistics

Credit Hours: 3.00. Advanced study and research on a significant topic in French linguistics. Topic to be announced in advance. Permission of instructor required. **Credits:** 3.00

FR 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

FR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Global Engineering Program

GEP 10000 - Global Design Team I

Credit Hours: 1.00. Global Design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required. **Credits:** 1.00

GEP 20000 - Global Design Team II

Credit Hours: 1.00 or 2.00. Global Design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required. **Credits:** 1.00 or 2.00

GEP 30000 - Global Design Team III

Credit Hours: 1.00 to 3.00. Global Design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required. **Credits:** 1.00 to 3.00

GEP 40000 - Global Design Team IV

Credit Hours: 1.00 to 3.00. Global design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required. **Credits:** 1.00 to 3.00

German

GER 10100 - German Level I

Credit Hours: 3.00. A beginning course in German reserved exclusively for students who have had less than two years of German at the ninth-grade level or above. Students with two years or more of previous German study may not take this course for credit. Permission of department required. CTL:IWL 1920 German Level I **Credits:** 3.00

GER 10200 - German Level II

Credit Hours: 3.00. Continuation of GER 10100. CTL:IWL 1921 German Level II **Credits:** 3.00

GER 10500 - Accelerated Basic German

Credit Hours: 4.00. This course is a first-year course in German, which covers two semesters in one. The course is appropriate for students who would like to accelerate the process of learning German, including GEARE students, graduate students, and others. The course will be conducted primarily in German and will use all modes of communication: interpersonal, presentational, and interpretive. The course book facilitates learning in context through the use of an integrated video program. The students are trained in the audio-visual interpretive mode of communication that is essential to carry out daily activities in Germany, and to be able to read and react to a variety of German texts. **Credits:** 4.00

GER 11200 - Elementary German Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group discussions in German on various topics. **Credits:** 1.00

GER 20100 - German Level III

Credit Hours: 3.00. Readings from the works of nineteenth-century and contemporary German writers; practice in speaking and writing German. CTL:IWL 1922 German Level III **Credits:** 3.00

GER 20200 - German Level IV

Credit Hours: 3.00. Continuation of GER 20100. CTL:IWL 1923 German Level IV **Credits:** 3.00

GER 20500 - Accelerated Intermediate German

Credit Hours: 4.00. An accelerated intermediate level course in German designed to achieve second year language proficiency in German. The course is appropriate for students who would like to accelerate the process of learning German. **Credits:** 4.00

GER 21200 - Intermediate German Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in German conversation to enhance communicative competence. Small group discussions in German on various topics. Not open to students enrolled in or having credit for GER 30100 or above. **Credits:** 1.00

GER 22300 - German Level IV: Science And Engineering

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills, directed toward use of German in science and technology. Work on grammar as needed. Use of materials from recent publications in science and technology. Introduction to general and technical vocabulary. Conducted primarily in German. Credit will not be given for both GER 20200 and 22300. **Credits:** 3.00

GER 22400 - German Level IV: Business German

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed toward use of German for business purposes. Work on grammar as needed. Course materials cover daily business dealings as well as national and international trade, living conditions, environmental and social problems. **Credits:** 3.00

GER 23000 - German Literature In Translation

Credit Hours: 3.00. Reading and analysis of selected German writers and their works, with particular emphasis on the social, political, and intellectual climate of the times. The course content will change from semester to semester. Knowledge of German not required. **Credits:** 3.00

GER 24100 - Introduction To The Study Of German Literature

Credit Hours: 3.00. An introduction to the study of German literature based on an overview of the formal elements of poetry, fiction, and drama as well as basic concepts of literary theory. Texts in German; conducted primarily in German. **Credits:** 3.00

GER 28000 - German Special Topics

Credit Hours: 3.00. Selected topics on the civilization and culture of German speaking countries. Lectures and readings all in English. No knowledge of German necessary. **Credits:** 3.00

GER 30100 - German Level V

Credit Hours: 3.00. Continued development of German speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Germany from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in German. **Credits:** 3.00

GER 30200 - German Level VI

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in German on the basis of materials dealing with the ideas and events that have shaped present-day Germany. Conducted primarily in German. **Credits:** 3.00

GER 31200 - Advanced German Conversation

Credit Hours: 1.00. One credit hour advanced German conversation course focused on the development of oral and aural skills for self-expression. Course provides students with guided practice in conversation to enhance communicative competence. Discussions in German on various topics. Course may be taken concurrently with GER 30100, 30200, 40100 or 40200. **Credits:** 1.00

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German. **Credits:** 3.00

GER 33000 - German Cinema

Credit Hours: 3.00. Viewing and analysis of major German contributions to the cinema from the earliest period to the present. Emphasis on relevant aesthetic theories and on the schools of literature and painting that served as sources. Evaluation of the German film on the basis of social, artistic, and political criteria. Knowledge of German not required. **Credits:** 3.00

GER 34100 - German Literature I: From The Middle Ages To The 18th Century

Credit Hours: 3.00. Reading and discussion of selected texts (poetry, prose, dramatic texts, cultural documents, and artworks) in German from the Middle Ages to the Eighteenth Century. **Credits:** 3.00

GER 34200 - German Literature II: From The 18th Century To The 21st Century

Credit Hours: 3.00. Reading and discussion of selected texts in German with the dual context of literary movements and historical developments between the 18th and 21st centuries. **Credits:** 3.00

GER 39900 - Special Study Abroad Credit In German

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in German earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

GER 40100 - German Level VII

Credit Hours: 3.00. Advanced work on development of German speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in Germany. Conducted in German. **Credits:** 3.00

GER 40200 - German Level VIII

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in German. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted in German. **Credits:** 3.00

GER 42400 - Business German

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking. **Credits:** 3.00

GER 48000 - German Civilization

Credit Hours: 3.00. The study of modern German life, with special emphasis on the daily life and customs of the people. Lectures in German. **Credits:** 3.00

GER 49800 - Advanced Topics In German

Credit Hours: 3.00. Special topics on literature, linguistics and culture of contemporary German-speaking countries. Conducted in German. **Credits:** 3.00

GER 51900 - Teaching College German

Credit Hours: 3.00. A course designed to provide a forum for ideas connecting theory and research to teaching practice. Explores issues related to how learning and teaching can be enhanced and presents practical ideas that can be implemented in the classroom. Permission of instructor required. **Credits:** 3.00

GER 52400 - German For International Trade

Credit Hours: 3.00. A broad spectrum of business and cultural materials to prepare students for work in international firms. Intensive study of technical terminology used in business transactions; stylistics in business correspondence and report writing; training for accurate oral expression in business negotiations. **Credits:** 3.00

GER 54200 - German Classicism

Credit Hours: 3.00. The study of the classical period in German literature as revealed in the works of Goethe and Schiller. **Credits:** 3.00

GER 54300 - The Age Of Enlightenment And The Storm And Stress Movement

Credit Hours: 3.00. A study of the literature of the Age of Enlightenment, the cult of feeling, and the Storm and Stress works of Goethe and Schiller. **Credits:** 3.00

GER 54400 - German Romanticism

Credit Hours: 3.00. A study of the rise and degeneration of the romantic ideal in German literature. Particular attention is paid to aesthetics, literary criticism, and the revival of a national heritage. **Credits:** 3.00

GER 54500 - German Prose From Naturalism To The Present

Credit Hours: 3.00. Development of the novel and short story of the period, with special emphasis on the major authors. **Credits:** 3.00

GER 54600 - German Literature Since 1945

Credit Hours: 3.00. Major literary movements and tendencies in East and West Germany, Austria, and Switzerland since 1945. Involves the close reading of literary texts, investigation of major problems addressed by literary criticism, and discussion of historical context. **Credits:** 3.00

GER 55100 - Lyric Poetry From Romanticism To The Present

Credit Hours: 3.00. A study of the German lyric from Romanticism to the present. The study of motif, form, and style as reflections of the aesthetic ideals of their age. **Credits:** 3.00

GER 55400 - German Drama Before Naturalism

Credit Hours: 3.00. German drama from its beginnings up to the advent of Naturalism. A study of the most significant German dramatists of the first part of the nineteenth century and earlier periods. **Credits:** 3.00

GER 55500 - German Drama From Naturalism To The Present

Credit Hours: 3.00. Developments of the drama through the various literary movements of the period, including consideration of the underlying social and ideological forces. **Credits:** 3.00

GER 56100 - The Structure Of German I: Phonology And Derivational Morphology

Credit Hours: 3.00. Linguistic analysis of German, focusing on phonetics, phonology, and word structure. The course will treat various problems of pronunciation, structural sound patterns, and word derivation. One weekly class is devoted to theoretical issues affecting German phonology and morphology. Credit will not be given for both GER 36100 and 56100. **Credits:** 3.00

GER 56200 - The Structure Of German II: Inflectional Morphology And Syntax

Credit Hours: 3.00. Linguistic analysis of German, focusing on inflectional morphology, syntax, and semantics. The course will present the grammatical structure of German, dealing with word-level phenomena (inflectional morphology), and phrase- and sentence-level phenomena (constituents, word order, syntactic structure, etc.). Credit will not be given for both GER 36200 and 56200. **Credits:** 3.00

GER 56300 - History Of The German Language

Credit Hours: 3.00. A survey of the development of the German language, with emphasis on the factors and events that brought about the ultimate unification of the major German dialects into the standard form of the present. The German language of today as a reflection of past cultural and sociopolitical conditions. **Credits:** 3.00

GER 57500 - Theories Of German Language Acquisition

Credit Hours: 3.00. Advanced course designed to provide an overview of major theoretical issues in German language acquisition research. Permission of instructor required. **Credits:** 3.00

GER 58100 - German Culture

Credit Hours: 3.00. The development of the cultural life in German-speaking lands as reflected in architecture, art, history, literature, music, and philosophy. Lectures in German. **Credits:** 3.00

GER 59000 - Directed Reading In German

Credit Hours: 1.00 to 4.00. Directed readings in German. Permission of instructor required. **Credits:** 1.00 to 4.00

GER 59400 - Special Topics In German Literature

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

GER 59600 - Special Topics In German Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

GER 60100 - First Course To Establish Reading Knowledge

Credit Hours: 3.00. First Course To Establish Reading Knowledge. **Credits:** 3.00

GER 60300 - Second Course To Establish Reading Knowledge

Credit Hours: 3.00. Second Course To Establish Reading Knowledge. For those in the physical sciences, mathematics, and engineering. Prerequisite: GER 60100. **Credits:** 3.00

GER 60500 - Second Course To Establish Reading Knowledge

Credit Hours: 3.00. Second Course To Establish Reading Knowledge. For those in the humanities and social sciences. Prerequisite: GER 60100. **Credits:** 3.00

GER 63000 - Bibliography And Literary Criticism

Credit Hours: 3.00. The use of general and specific reference materials and bibliographical aids in literary research; the basic concepts and terminology of literary criticism. Required of all MA candidates in German. **Credits:** 3.00

GER 64400 - Seminar In German Expressionism

Credit Hours: 3.00. The prose, drama, and poetry from 1910-1925. Will also examine selected political-literary essays as they relate to this artistic avant-garde generation. **Credits:** 3.00

GER 65900 - Seminar In German Literature

Credit Hours: 3.00. Advanced study of special subjects. Topics to be announced in advance. Permission of instructor required. **Credits:** 3.00

GER 66400 - Middle High German

Credit Hours: 3.00. This course introduces students to the Middle High German language, the language of medieval literary texts written in German between 1050 and 1350. The language of this period is significantly different in spelling, vocabulary, and grammar when compared to Modern Standard German. The course also provides an introduction to various genres of medieval German literary texts from this period. Many of the foundational works in the German tradition come from this period, including those of the so-called "golden age" of medieval German literature from 1170 to 1230. **Credits:** 3.00

GER 67900 - Seminar In German Linguistics

Credit Hours: 3.00. Advanced study and research on a significant topic in German linguistics. Topic to be announced in advance. Permission of instructor required. **Credits:** 3.00

GER 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

GER 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

General Science

SCI 120IN - Windows On Science

Credit Hours: 1.00. Designed for new and prospective science majors, the course covers an integrative overview of science, examining science and society, the scientific method and community of scientists, undergraduate research, professional ethics, an exploration of science-based careers, and strategies for success as a science major.**Credits:** 1.00

SCI 10000 - Multicultural Leadership Seminar

Credit Hours: 1.00. Exposes students to career opportunities via presentations from corporate and academic representatives; provides an opportunity for minority science students to share concerns and to become aware of existing academic and non-academic support systems on campus. Provides an overview of the significant contributions to the sciences by minority groups; reinforces good study habits for academic success. **Credits:** 1.00

SCI 19100 - Part-Time Curricular Practical Training

Credit Hours: 0.00. A part-time scientific work experience for Science majors. This internship experience is intended to complement the student's academic plan of study and help prepare for a future role as a practicing scientist. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description must be provided to the Dean of Science's office for approval before registration will be permitted. A minimum period of employment is required. Permission of department required. **Credits:** 0.00

SCI 19500 - Special Topics In Science

Credit Hours: 0.00 to 3.00. This is a special projects course that will be used for special circumstances with individual study or for experimental courses, pointed toward students who are first- or second-year students. **Credits:** 0.00 to 3.00

SCI 20100 - Special Topics: Integrated Science And Engineering Learning Community

Credit Hours: 1.00. This course will expose students to interdisciplinary problems scientists and engineers routinely need to solve. Students will gain an appreciation for working with individuals from diverse disciplines and backgrounds. Participation in hands-on activities is a key component of the course. **Credits:** 1.00

SCI 21000 - Teaming Principles

Credit Hours: 1.00. College of Science students will learn the principles and concepts involved in teaming, such as recognizing different learning styles, developing shared goals, addressing conflict, utilizing collaborative problem solving and utilizing

strengths of team members. These foundations will allow students to enter collaborative situations, such as lab groups and study sections, fully prepared to maximize the value of their educational experiences as well as develop positive working relationships with their fellow students. **Credits:** 1.00

SCI 29000 - Special Topics In Science

Credit Hours: 3.00. Introductory, integrated science course for engineering and science students. Beginning lectures will cover the basic chemistry of life, the organization of cells. This will be followed by more advanced topics such as photosynthesis. Each topic will emphasize how understanding the biological system requires concepts and tools from other disciplines such as chemistry and physics. Permission of instructor required. **Credits:** 3.00

SCI 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in general sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

SCI 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in general sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

SCI 29500 - Intercultural Leadership Seminar

Credit Hours: 0.00 to 3.00. This is a special projects course that will be used for special circumstances with individual study or for experimental courses, pointed toward students who are first- or second-year students. Permission of instructor required.**Credits:** 0.00 to 3.00

SCI 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in general sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

SCI 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in general sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

SCI 39500 - Special Topics In Science

Credit Hours: 0.00 to 3.00. This is a special topics course that will be used for special circumstances with individual study or for experimental courses. **Credits:** 0.00 to 3.00

SCI 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in general sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

SCI 49000 - Topics In Science For Undergraduates

Credit Hours: 1.00 to 5.00. Selected interdisciplinary topics. Offered as a scheduled course when appropriate. Also available for supervised reading and reports of an interdisciplinary nature. Permission of instructor required. **Credits:** 1.00 to 5.00

General Studies

GS 11900 - Introduction To Academic Programs At Purdue

Credit Hours: 1.00. To provide a comprehensive program describing each of the baccalaureate degree-granting schools at Purdue. The course is designed to assist students in the clarification of their degree objectives. Not open to students who have completed GS 115. **Credits:** 1.00

GS 12000 - Summer Beginners Seminar I

Credit Hours: 1.00. Summer Start students, as incoming freshmen, will learn the ins and outs of higher education - more specifically of Purdue University - and how to effectively manage their time and create successful personal habits. Whether it is learning the university course management system, understanding the bus routes, or navigating the world of financial aid, this seminar will prepare incoming students for success at Purdue's campus. Additionally, students will go through a series of lectures focused on creating successful habits, including, but not limited to: time management, study skills, cultural awareness, goal setting, and interpersonal communication.**Credits:** 1.00

GS 12001 - Summer Beginners Seminar II

Credit Hours: 1.00. This seminar course is designed for students to reflect on the hopes, assumptions, and questions they bring with them as they begin their college experience at Purdue University. The class will support student success by introducing students to campus resources, establishing connections with the campus community, expanding study skills learned during high school, and implementing appropriate time management strategies.**Credits:** 1.00

GS 17500 - Information Strategies

Credit Hours: 0.00 or 1.00. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Organization and use of electronic and print tools will be explained through discussion, hands-on exercises, and homework assignments. **Credits:** 0.00 or 1.00

GS 19501 - Preparing For Your Undergraduate Research Experience

Credit Hours: 1.00. This course is for prospective Purdue undergraduate researchers who are interested in conducting undergraduate research or creative endeavors. Purdue students who have not already started an independent research project with a research mentor will learn valuable skills to market themselves to individuals and research programs. Throughout the course, students will develop components for a final application packet to submit to a research team or program they choose. **Credits:** 1.00

GS 19505 - Introduction Of Research Essentials - Getting Started

Credit Hours: 1.00. This course is for prospective Purdue undergraduate researchers who are within their first two years at Purdue who are interested in conducting undergraduate research or creative endeavors. New Purdue Boilermakers who have not already started an independent research project with a research mentor will learn valuable skills to market themselves to individuals and research programs to prepare for a project in the following semester. Throughout the course, students will develop components for a final application packet to submit to a research team or program they choose while focusing on the transition to college expectations regarding research-related topics. Must be a first-year or second-year student. Permission of instructor required. **Credits:** 1.00

GS 19700 - Purdue Promise First-Year Experience Course

Credit Hours: 1.00. A combined lecture and experiential seminar course for new Purdue Opportunity Awards scholars. The course will focus on the transition issues for these first-year students. Permission of instructor required. **Credits:** 1.00

GS 19900 - Strategies For A Successful First Year

Credit Hours: 3.00. This course focuses on student adjustment to university life and development skills. Content includes testing to determine skills, attitudes, and interests; group activities to foster student adjustment; and training in computer usage, time management, and University policies. Open to Horizons students only. **Credits:** 3.00

GS 20000 - Preparing Tomorrow's Leaders: Purpose And Connection

Credit Hours: 1.00. A one-credit course designed to provide Purdue Promise students with skills and connections to be successful at Purdue and post graduation. This course will provide Purdue Promise students in their second year with a foundation in leadership and career development skills. **Credits:** 1.00

GS 21000 - Leadership Development Seminar

Credit Hours: 1.00. A one-credit course designed to provide Student Access, Transition and Success programs students with skills and connections to be successful student leaders at Purdue. This course will provide students a foundation I leadership skills. Permission of instructor required. **Credits:** 1.00

GS 22000 - Summer Session Special Topics

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of topics that stress interdisciplinary understanding, creative thought, and group discussion. Topics vary by semester. Permission of instructor required. **Credits:** 1.00 to 6.00

GS 29000 - Study Skills Seminar

Credit Hours: 2.00 or 3.00. Designed to help students improve their college grades by learning to study more efficiently and effectively. Deals with improving study habits, such as time scheduling, attitudes, and specific study skills, such as note-taking, listening, test-taking, memory techniques, and reading skills. **Credits:** 2.00 or 3.00

GS 29001 - Academics Success Skills

Credit Hours: 1.00. Designed to help students improve their college grades by learning to study more effectively. **Credits:** 1.00

GS 29501 - Understanding Your Undergraduate Research Experience I

Credit Hours: 1.00. This course is for Purdue undergraduates who are part of an active research project and/or creative endeavor. Students will hone skills necessary for reflecting on and completing these experiences. During this course, students will utilize their research experience to apply skills including but not limited to: managing time with a research project, communicating research findings, using Purdue Libraries' resources, and providing constructive feedback to peer researchers. Students will deliver elevator pitches on their own research projects and critique pitches from their peers. **Credits:** 1.00

GS 39501 - Understanding Your Undergraduate Research Experience II

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to build upon the previous course and focus on research data collection, analysis, and communication for current Purdue undergraduate researchers. During this course, students will learn and discuss various forms of data and collection practices. Students will develop their own academic poster to present their research project's data and implications. **Credits:** 1.00

GS 39505 - Research Peer Mentoring Training

Credit Hours: 1.00. This course is for current or past Purdue undergraduate researchers who want to learn how to serve as peer mentors to undergraduate researchers early in their careers. This course will train students on how to create mutually beneficial and productive mentorships. This course will provide research-based best practices for mentoring newer student researchers while developing as a cohort of new research mentors. This course is especially useful for those students who enjoy supporting peer researchers or plan to continue into more formal mentorship roles as a senior undergraduate researcher, graduate student, or research supervisor in academia or industry. Permission of instructor required. **Credits:** 1.00

GS 40400 - Horizons Advanced Career Preparation

Credit Hours: 1.00. Horizons Advanced Career Preparation is designed to assist students in beginning their transition from college to the workforce or graduate school. The emphasis of the course is placed on self-exploration, career search skills, graduate school preparation, professional conduct, and financial planning. **Credits:** 1.00

GS 40500 - Advancing Tomorrow's Leaders: Preparing For Employment And Life After College

Credit Hours: 1.00. A one-credit course designed to prepare Purdue Promise students for the next chapter of their professional journey through the reflection of past experiences and the acquisition of new knowledge, expectations, and skills necessary to be successful citizens and employees post-graduation. This course is only for students in the Purdue Promise program. Permission of instructor required. **Credits:** 1.00

GS 41000 - Advancing Tomorrow's Scholars: Graduate And Professional School Preparation

Credit Hours: 1.00. A one-credit course designed to prepare Purdue Promise students for a smooth transition into graduate or professional school. This course will inform Purdue Promise students of the necessary preparation, required paperwork, and skills needed to be successful in post-baccalaureate education. This course is only for students participating in the Purdue Promise program. Permission of instructor required. **Credits:** 1.00

GS 49000 - Directed Reading In General Studies

Credit Hours: 1.00 to 4.00. Reading to be done under the direction of the instructor in the particular field of specialization. Permission of instructor required. **Credits:** 1.00 to 4.00

GS 49501 - Beyond Undergraduate Research

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to build on the previous courses (GS 29501, 39501) and focus on continuing their education in graduate or professional school. During this course, students will learn and discuss the various phases of identifying, selecting, applying to and funding graduate or professional school programs. Students will also gain a deeper comprehension of the qualities and skills that make research mentors effective while developing skills they will need to be successful mentees and peer mentors. Students will conduct research to identify potential programs of interest and develop a statement of purpose. **Credits:** 1.00

Global Studies Liberal Arts

GSLA 10100 - Global Awareness

Credit Hours: 3.00. This course surveys a range of global issues to develop an understanding and appreciation of the major geographical and cultural areas of the world and the issues that both unite and divide such areas and their people. The course will examine key political, economic, social, historical and cultural patterns that define our modern world. It encourages students to raise 'big' questions about what processes and institutions helped constitute the modern moment, as well as about the dynamic interactions between our social world and the natural one. This is a gateway course for prospective Global Studies Majors and Minors. **Credits:** 3.00

GSLA 30100 - Theories Of Global Studies

Credit Hours: 3.00. The course is designed to introduce students to the major schools of thought in Global and International Studies. It provides students with critical tools to explore the interconnectedness of our world from multiple perspectives. The course will expose students to a variety of international scholars who have understood Global Studies to be more than globalization. Instead, it introduces contested issues and contradictory positions concerning the meaning and significance of globalization. **Credits:** 3.00

GSLA 39100 - Special Topics In Global Studies

Credit Hours: 3.00. This variable title course deals with topics that explore a range of experiences and analytical perspectives clustered around the contemporary global experience. The course will vary in subject matter but focus on the challenges and rewards of a globalized world as articulated through topics such as cross-border histories, music, gender, racial formations, film, and economic development. Content will vary with the instructors teaching the course. **Credits:** 3.00

GSLA 48000 - Senior Interdisciplinary Capstone Project In Global Studies I

Credit Hours: 3.00. The senior capstone course for Global Studies majors is designed to give students the chance to define and complete a research project of personal interest, and to integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001. The capstone courses are offered to students in their senior year to be completed the final two semesters of their major. Students will assemble a committee of two or more faculty members willing to direct their work. The Director of Global Studies will be an ex-officio member of the committee. Students will incorporate their prior coursework (including foreign language training), study abroad, and/or internships into their final project. The capstone may be, but is not limited to, a senior honors project, a multimedia project, service learning, or directed research. Timeline for a successful capstone project: Spring of Sophomore year: After three semesters of coursework, the student will start defining an area of interest or passion that will form the basis of their capstone research. Junior Year: The student will select courses in their interest area. They will also start speaking to faculty members in the field in order to assemble their committee. Spring of Junior Year: Students will finalize their faculty committee to direct their research. Fall of Senior Year: Research Semester, as directed by the committee. GSLA 48000. Spring of Senior Year: Complete project. GSLA 48001. **Credits:** 3.00

GSLA 48001 - Senior Interdisciplinary Capstone Project In Global Studies II

Credit Hours: 3.00. The senior capstone is a year-long course for which Global Studies majors enroll in consecutive semesters. Its primary goal is for students to define and complete a research project of personal, academic, and/or professional interest, as they integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001 in order to complete the Global Studies major. **Credits:** 3.00

Graduate Studies

GCIC 60000 - CIC Traveling Scholar

Credit Hours: 0.00 to 18.00. Topics vary. **Credits:** 0.00 to 18.00

GRAD 505GN - The Responsible Conduct Of Research

Credit Hours: 1.00. An overview of the rules and standards required for Graduate Students, Research Technicians and Post-doctoral Fellows conducting responsible scientific research.**Credits:** 1.00

GRAD 817GN - Molecular Basis Of Cell Structure Function

Credit Hours: 2.00. Organization and function of subcellular structures. Intracellular coordination of cell activities including protein and RNA processing/trafficking/quality control, chromatin dynamics, and cell division.**Credits:** 2.00

GRAD 50100 - PULSe Scientific Communications

Credit Hours: 1.00. To begin to create an atmosphere in which students learn to communicate across disciplinary lines by providing the opportunity to develop skills in presenting and evaluating research results. Students will develop short scientific presentations, an abstract, and a poster and learn to present their findings to others and to ask and answer questions from their peers. Permission of department required. **Credits:** 1.00

GRAD 50200 - Interdisciplinary AI Fundamentals: Bridging Knowledge

Credit Hours: 1.00. This course provides foundational concepts for AI for those in both MSAI majors. This course covers the history of AI, the foundations of artificial reasoning and knowledge, and practical skills for communicating about AI technology, projects, and workflow. This graduate course, designed to be accessible to learners with diverse backgrounds, serves as a foundational introduction to the field of AI. Whether you come from a technical or non-technical background, this course will provide you with a solid grasp of AI concepts, principles, and their real-world applications. To be successful in this course, we encourage students to know math (e.g., algebra and calculus) and a basic understanding of programming (e.g., R, Python, or Java).**Credits:** 1.00

GRAD 50300 - AI Essentials: A Non-Technical Introduction

Credit Hours: 2.00. This course provides students on the translator track a foundation in the principles and methodologies of Artificial Intelligence (AI) to empower them to actively engage in interdisciplinary collaborations. With a focus on the essentials of AI, machine learning, and natural language processing, students will gain the knowledge and skills needed to bridge the gap between language and technology. Students will leverage AI tools and techniques to enhance translation efficiency, accuracy, and engagement in the ever-evolving digital landscape. Students will have a foundation in the methodology so they can effectively participate in interdisciplinary collaborations, serving as a valuable resource for industries where language and technology converge.**Credits:** 2.00

GRAD 50400 - Advanced AI Fundamentals For Technical Professional

Credit Hours: 2.00. Artificial Intelligence (AI) is the driving force behind the transformation of industries, research, and technology. For students with a highly technical background, this 2-credit hour graduate course offers a deep dive into the fundamental principles, theories, and applications of AI. Specifically, this course will introduce students to the field of data mining and machine learning, which sits at the interface between statistics and computer science. Data mining and machine learning focus on developing algorithms to automatically discover patterns and learn models of large datasets. This course introduces students to the process and main techniques in data mining and machine learning, including exploratory data analysis, predictive modeling, descriptive modeling, and evaluation. To be successful in this course students should have experience with programming such as Python and R and have a background that includes calculus, linear algebra, algorithms, and probability theory.**Credits:** 2.00

GRAD 50600 - Big Data Tools And Technologies

Credit Hours: 3.00. This course is designed to equip students with the essential skills to handle big data effectively. It covers proficiency in big data technologies, scalable data processing techniques, and the integration of big data tools into data science workflows.**Credits:** 3.00

GRAD 50700 - Cross Domain Data Communication And Visualization

Credit Hours: 3.00. This course focuses on the proficient use of data communication strategies and competencies. The course will focus on identifying data narratives, generating stories from data, illustrating with powerful and self-explanatory visualization, and basic principles of ethical use of non-data narrative frames for data communication. Designed for students with a technical background pursuing a Master of Science in Data Science, this course aims to enhance students' ability to extract and communicate meaning and narratives from raw data and visually represent it.**Credits:** 3.00

GRAD 50800 - Data Analytics

Credit Hours: 3.00. This course provides an in-depth exploration of advanced data analysis techniques, predictive modeling, ensemble methods, and proficiency in data manipulation and transformation. It is designed for students with a technical background pursuing a Master of Science in Data Science.**Credits:** 3.00

GRAD 50900 - Applied Machine Learning: From Foundations To Latest Advances

Credit Hours: 3.00. This course provides an in-depth exploration of machine learning algorithms and data mining techniques, building on the foundational concepts introduced in the Foundations of Data Science course. Students will develop a comprehensive understanding of various machine learning algorithms, focusing on practical applications and hands-on experience. Additionally, the course will cover data mining techniques for dimension reduction and pattern discovery.**Credits:** 3.00

GRAD 55000 - Fellowship And Grant Application Writing

Credit Hours: 2.00. Fellowship Application Writing is open to any graduate student who is interested in applying for fellowships and other grant opportunities. Graduate students will be taught how to write personal statements, research statements, and extended research plans that they can submit for fellowship applications. Organization of research background, methods, and significance will be emphasized. Writing mechanics and addressing grant agency requirements and procedures will also be covered. Additionally, fellowship and grant opportunities will be discussed along with professional communication skills. **Credits:** 2.00

GRAD 58800 - Online Master Of Science In Data Science-Capstone

Credit Hours: 3.00. The capstone course aims to provide students with an opportunity to integrate their accumulated knowledge, technical, and social skills to identify and solve a real-world data science problem, with an emphasis on the application domain.

The capstone course for the OMSDS provides students with practical experience applying the collective set of skills developed through the OMSDS program to complete a professional project in support of a private, public, or non-profit partner. Students, in teams of 3-5 students each, will work with a product owner to scope out the project via a project charter that will include a timeline, milestones, and metrics that will yield benefits and a strategy for measuring the outcome of the project compared to a baseline.**Credits:** 3.00

GRAD 58900 - Master Of Science In Artificial Intelligence Capstone

Credit Hours: 3.00. The capstone course aims to provide students with an opportunity to integrate their accumulated knowledge, technical, and social skills to identify and solve a realistic or real-world artificial intelligence problem, with an emphasis on the application domain. The capstone course for the MSAI provides students with practical experience applying the collective set of skills developed through the MSAI program to complete a professional project in support of a private, public, or non-profit partner. Students, in teams, will select a target beneficiary, arrange a consultation, develop a problem statement, a project plan that will yield benefits, and a strategy for measuring the outcome of the project compared to a baseline. **Credits:** 3.00

GRAD 59000 - Special Topics

Credit Hours: 1.00 to 3.00. Hours and credits to be arranged. For the use of interdisciplinary programs and in other situations when appropriate departmental courses are not available or general Graduate School identification is desirable. To be used only with the consent of the dean of the Graduate School. **Credits:** 1.00 to 3.00

GRAD 59500 - Independent Study

Credit Hours: 1.00 to 6.00. This course provides a means of independent study of a special problem or research topic. Although not required, it is likely that a major result of the course will be a conference or journal publication. This course does not substitute for master's research credit on the plan of study. Permission of instructor required. **Credits:** 1.00 to 6.00

GRAD 59800 - MS Non-Thesis Research

Credit Hours: 1.00 to 18.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Permission of instructor required. **Credits:** 1.00 to 18.00

GRAD 60200 - Peer To Peer Mentoring For ESE IGP Students

Credit Hours: 1.00. This Peer-to-Peer (P2P) mentor experience is geared to enhance the professional development of our ESE students and foster enhanced success and professional development for our first year students. The P2P mentors meet once a week with Independent of GRAD 59000 and also meet with GRAD 59000. P2P mentors have to shape the syllabus for each semester including identifying readings; develop, lead, and facilitate classroom activities through both traditional and innovative and creative strategies; and provide verbal and written input on weekly student critiques. Permission of instructor required. **Credits:** 1.00

GRAD 61000 - Grant Training Program I

Credit Hours: 1.00 to 3.00. This variable topic course is designed to be used by any department at WL needing to offer a training program associated with research grants such as those required by certain NIH, NSF or other grant agencies or programs. Permission of instructor required. **Credits:** 1.00 to 3.00

GRAD 61100 - Grant Training Program II

Credit Hours: 1.00. This variable topic course is designed to be used by any department at WL needing to offer a training program associated with research grants such as those required by certain NIH, NSF or other grant agencies or programs. Instructor permission required. Prerequisite: GRAD 61000. **Credits:** 1.00

GRAD 61200 - Responsible Conduct Of Research

Credit Hours: 1.00. Overview of values, professional standards, and regulations that define responsible conduct in research. Students learn the values and standards of responsible research through readings and lecture/discussion and practice application of these values and standards to research situations through class discussion of case studies from life sciences research. Students must be registered for M.S. or Ph.D. thesis research in their home department. **Credits:** 1.00

GRAD 68900 - Special Seminars

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. For use in interdisciplinary seminars and in other cases where general Graduate School identification is desirable. To be used only with the consent of the dean of the Graduate School. **Credits:** 0.00 to 18.00

GRAD 69000 - Special Topics

Credit Hours: 1.00 to 8.00. This variable topic course focuses on advanced study of technical and professional research topics, primarily for doctoral students. **Credits:** 1.00 to 8.00

GRAD 69300 - Interdisciplinary Internship/Practicum

Credit Hours: 0.00 to 18.00. For the use of interdisciplinary programs and in other situations when appropriate departmental courses are not available or general Graduate School identification is desirable. To be used only with the consent of the dean of the Graduate School. **Credits:** 0.00 to 18.00

GRAD 69500 - Doctoral Independent Study

Credit Hours: 1.00 to 6.00. This course provides a means of independent study of a special problem under the guidance of a graduate faculty member who holds a terminal degree. It is assumed that projects in this course are research projects independent of one's doctoral research. Although not required, it is likely that a major result of the course will be a conference or journal publication. This course does not substitute for dissertation research credit on the plan of study. Permission of instructor required. **Credits:** 1.00 to 6.00

GRAD 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

GRAD 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Greek

GREK 10100 - Ancient Greek Level I

Credit Hours: 3.00. Introduction to the grammar of Attic Greek of the Classical period, and first forays into the reading of connected prose. Emphasis on accidence, syntax, and vocabulary building. **Credits:** 3.00

GREK 10200 - Ancient Greek Level II

Credit Hours: 3.00. Continuation of the study of Attic Greek grammar and reading of connected prose of the Classical period. **Credits:** 3.00

GREK 10500 - Accelerated Introductory Ancient Greek

Credit Hours: 4.00. This course is an accelerated beginning-level course designed to develop language proficiency in Ancient Greek. The course will help students progress toward competence in reading and writing, as well as toward knowledge of Ancient Greek culture. The course focuses on developing deep understanding of Greek syntax and morphology and building strategies for fluent and accurate reading of ancient texts. Primary language of instruction is English. **Credits:** 4.00

GREK 20100 - Ancient Greek Level III

Credit Hours: 3.00. Intermediate reading course in New Testament Greek, designed to strengthen students' grasp of grammar and syntax, broaden vocabulary, and develop skills in reading and translation. **Credits:** 3.00

GREK 20200 - Ancient Greek Level IV

Credit Hours: 3.00. Upper intermediate reading course in ancient Greek, designed to consolidate students' knowledge of grammar and syntax, broaden vocabulary, and develop precision and confidence in reading and translation. **Credits:** 3.00

GREK 34300 - Greek Oratory

Credit Hours: 3.00. A study of ancient Greek (Attic) orators from textual, historical, and social perspectives. **Credits:** 3.00

GREK 34400 - Greek Epic

Credit Hours: 3.00. Readings and discussion of the Greek epic, including selected passages from Homer and Hesiod. **Credits:** 3.00

GREK 35300 - Greek Tragedy

Credit Hours: 3.00. Reading and discussion of selected Greek tragedies of the 5th century BCE. **Credits:** 3.00

GREK 35400 - Greek Comedy

Credit Hours: 3.00. Readings and discussion of selected Greek comedies of the 4th and 5th centuries BCE. **Credits:** 3.00

GREK 44600 - Greek Historians

Credit Hours: 3.00. A study of the writings of the classical historians in the original Greek. **Credits:** 3.00

GREK 49000 - Directed Reading In Classical Greek

Credit Hours: 1.00 to 3.00. Directs the reading of students with special interests. Guides students in profitable reading in subjects of their own choice. Permission of instructor required. **Credits:** 1.00 to 3.00

GREK 59000 - Directed Reading In Classical Greek

Credit Hours: 1.00 to 4.00. Directed Reading In Classical Greek. Permission of instructor required. **Credits:** 1.00 to 4.00

Health and Kinesiology

HK 10000 - Foundations Of Kinesiology

Credit Hours: 3.00. This course will provide an introduction to the physical and behavioral sciences underlying kinesiology, the study of human movement. The course will cover foundational concepts in exercise physiology, biomechanics, motor behavior, sport and exercise psychology, and sociology and history of physical activity. The course will take an interdisciplinary perspective, exploring both key concepts in each of these sub-areas of kinesiology, and how they are integrated to understand problems in human movement, exercise, physical activity, sport, and healthy lifestyles. **Credits:** 3.00

HK 10100 - Clinical Practice in Athletic Training - Orientation

Credit Hours: 1.00. Under supervision of the certified athletic trainer, students will undertake observation of training room operations and duties of the athletic trainer. Acquisition of basic skills and knowledge is expected. **Credits:** 1.00

HK 13500 - Introduction To Health And Kinesiology

Credit Hours: 1.00. Overviews the disciplines of health and kinesiology. Students explore skills and academic interests in theses areas. Describes career opportunities and options for graduate study. Provides strategies for professional and portfolio development. Students complete five hours of community service per semester. Permission of instructor required. **Credits:** 1.00

HK 20100 - Clinical Practice In Athletic Training - Assist

Credit Hours: 2.00. Under supervision of the certified athletic trainer, students will be provided the opportunity to practice those skills required of the athletic trainer. The student will assist the staff and upperclass students. **Credits:** 2.00

HK 20800 - Prevention And Treatment Of Athletic Injuries

Credit Hours: 3.00. Provides the physical educator, coach, and athletic training student with an introduction to the prevention, recognition, and treatment of common athletic injuries, and response to common emergency situations. American Red Cross Community First Aid and CPR certification is included. PE teaching majors and minors, athletic training majors, and coaching endorsement students only. **Credits:** 3.00

HK 21000 - History And Philosophy Of Physical Education

Credit Hours: 2.00. Introduction to the history and philosophy of physical education to prospective teachers. Emphasis is placed on the impact of societal history on physical education and the role of philosophic thinking in curricular activities. For majors and minors only. **Credits:** 2.00

HK 21300 - Clinical Field Experience In Health And Fitness

Credit Hours: 3.00. This course is a coordinated clinical/professional experience designed to expose students to various positions within the wellness community and how clinical interactions are embedded within fitness centers. In addition to weekly in-person class meetings, students will observe and practice professional and foundational skills at different clinical sites. Professional communication, interdisciplinary interactions, and self-reflection are key skills developed in this practicum. **Credits:** 3.00

HK 22100 - Foundations For The Fitness Professional

Credit Hours: 2.00. Designed to teach the emerging Exercise and Health professional effective hands-on methodology for use in small and large group physical activity sessions. Students will be able to: identify the role of a personal trainer and group fitness coach; create and lead effective training programs or teaching progressions; and choreograph exercise programs with and without music. Students will examine the psychological effects of music to exercise adherence. Designed to prepare students for future clinical practice and certification. **Credits:** 2.00

HK 22200 - Foundations For The Health And Fitness Professional

Credit Hours: 3.00. Designed to introduce the emerging Health and Fitness professional to current trends in health and physical activity and provide effective hands-on methodology for implementation of physical activity and exercise in different settings. Students will be able to identify the role of a clinician, coach, trainer, etc. Students will obtain skills in client consultation, program design and strategies for implementing programs to the general population. Students will also be introduced to the skills and knowledge required for working with clinical populations. This course is designed to help students prepare for future clinical practice and certification. **Credits:** 3.00

HK 25300 - Principles Of Motor Development

Credit Hours: 3.00. This course provides an introduction to motor development from a life-span perspective. Students will learn how infants develop from mainly reflexive beings into children and adults that are capable of interacting with the world in a goal-directed manner. This course specifically examines how changes in physical growth, aging, and maturation of the central nervous system influence motor performance. Finally, the decline of motor skills associated with advanced age is discussed. **Credits:** 3.00

HK 25800 - Foundations Of Motor Skill Learning

Credit Hours: 3.00. Concepts and principles of motor skill learning, with emphasis on the acquisition and retention of gross movement and sport skills. **Credits:** 3.00

HK 26100 - Applied Anatomy And Kinesiology

Credit Hours: 3.00. The study of how muscles, bones, and joint structure produce human motion. Kinesiological analysis of full body, upper and lower extremity skills. **Credits:** 3.00

HK 26300 - Biomechanical Foundations Of Motor Skills

Credit Hours: 3.00. Fundamental anatomical and mechanical concepts and procedures for analyzing motor skills, with particular reference to sport, dance, and aquatic activities. **Credits:** 3.00

HK 26400 - Principles Of Motor Learning, Development, And Biomechanics

Credit Hours: 3.00. This course surveys the fundamental processes and variables related to motor development, motor learning, and biomechanics. Students will be exposed to concepts relevant to teaching motor skills and critical issues to increase knowledge of human movement. **Credits:** 3.00

HK 26900 - Career Development And Preparation For The Health And Fitness Fields

Credit Hours: 1.00. Provides students with basic professional skills and materials for subsequent practicum experience and future employment search. Students will have secured a viable practicum site, complete with written job description/responsibilities, at the completion of the course. **Credits:** 1.00

HK 28500 - Fieldwork In Athletic Training - Collegiate

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in an intercollegiate setting. Under supervision of the certified athletic trainer, students will observe facility operations and duties of the athletic trainer. Topics of instruction include history of athletic training, governance, and professional foundation and ethics. **Credits:** 1.00

HK 28600 - Fieldwork In Athletic Training - Secondary School

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in secondary school setting. Under supervision of the certified athletic trainer, students will observe facility operations and duties of the athletic trainer. Topics of instruction include basics of wound care, setup and operation of therapeutic modalities, and basic rehabilitation principles. **Credits:** 1.00

HK 28700 - Fieldwork In Athletic Training - Clinic/Industry

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in an emerging athletic training setting. Under supervision of the certified athletic trainer, students will observe facility operation and duties of the athletic trainer. Topics of instruction include basics of taping and wrapping, selection and fitting of protective equipment, and principles of risk management. **Credits:** 1.00

HK 30100 - Clinical Practice In Athletic Training - Associate

Credit Hours: 2.00. Under the supervision of a certified athletic trainer, students will be provided the opportunity to practice those skills required of an athletic trainer. Independent practice as an athletic trainer. **Credits:** 2.00

HK 30200 - Applied Clinical Anatomy

Credit Hours: 3.00. An introduction to the regional anatomical study of the human body for undergraduate allied health students. Lectures will be supplemented by observation and demonstration of prosected cadaver material, radiographs, osteology, and surface anatomy. **Credits:** 3.00

HK 30300 - Athletic Training Modalities

Credit Hours: 4.00. Theory and practice in the use of physical agents used in the management and promotion of healing of physically active injuries. **Credits:** 4.00

HK 30400 - Therapeutic Exercise

Credit Hours: 4.00. This course will introduce the athletic training student to the planning and implementation of a comprehensive reconditioning program for injuries and conditions sustained by physically active individuals. Techniques of therapeutic exercise as they apply to athletic training will be examined. **Credits:** 4.00

HK 30500 - Injury Assessment I

Credit Hours: 4.00. A guided lecture and laboratory experience designed to teach the student injury assessment techniques normally required of an athletic trainer. Topics include splinting and transportation, equipment fitting and fabrication, lower extremity injury evaluation, taping and bracing. **Credits:** 4.00

HK 30600 - Injury Assessment II

Credit Hours: 4.00. A continuation of HK 30500. A guided lecture and laboratory experience designed to teach the student injury assessment techniques of the upper extremity, head, neck, abdomen, and thorax, along with associated taping, padding, and bracing. **Credits:** 4.00

HK 30700 - Injury Assessment III

Credit Hours: 3.00. A continuation of HK 30600. A guided lecture and laboratory experience designed to teach the student injury assessment techniques of common illnesses and disease most often encountered by allied health professionals. Students will learn common prescription and over-the-counter medications, including indications, contraindications, record-keeping procedures, drug classifications, side effects, and regulations related to the use of medication with the physically active. **Credits:** 3.00

HK 30800 - Athletic Health Care

Credit Hours: 3.00. Provides students with foundational knowledge and skills for the prevention, recognition, and management of common athletic injuries and illnesses, as well as emergency conditions encountered by sports medicine professionals. **Credits:** 3.00

HK 31300 - Clinical Field Experience In Healthcare

Credit Hours: 3.00. This course will provide students with observation in various clinical settings. Students will establish a mentor with at least 1 site. Students may choose to pursue observations in various patient care environments, such as, physical therapy, occupational therapy, physician clinics, cardiac rehab, etc. Permission of department required. **Credits:** 3.00

HK 31500 - Group Fitness Leadership

Credit Hours: 2.00. This course is designed to provide students with an overview of the educational concepts, program design, and instruction/leadership skills needed to design and teach instructor-led exercise programs for small (2-3 individuals) and large (10+) groups with and without music. The course will include basic analysis and application of safe and effective exercise procedures for all fitness levels. Students will be expected to lead group classes throughout the semester as assigned by the course instructor. Preparedness and ability to execute will be assessed. This course is designed to help students prepare of future clinical practice and certification as an ACSM Certified Clinical Exercise Physiologist. **Credits:** 2.00

HK 31600 - Foundations Of Strength And Conditioning

Credit Hours: 2.00. This course will provide students with an in-depth analysis of strength and conditioning principles, and application strategies to cardiorespiratory conditioning, strength training, and flexible exercise. Students will assess the foundational application of anatomy, physiology, and biomechanics to various forms of exercise training based on standards of the American College of Sports Medicine, National Strength and Conditioning Association, and the National Academy of Sports Medicine. A major focus of this class will also prepare students to instruct and coach on an individual level to ensure proper mechanics, engagement, and execution of exercise movement. This course is designed to help students prepare for future clinical practice and certification as an ACSM Certified Clinical Exercise Physiologist. **Credits:** 2.00

HK 31800 - Strength And Conditioning And Exercise Instruction Across The Lifespan

Credit Hours: 3.00. This course is designed to provide students with an overview of educational concepts, program design and instructional/leadership skills for designing and instructing exercise programs. Students will obtain hands-on experience conducting exercise programs for strength and conditioning, cardiorespiratory fitness, and flexibility throughout the semester. Students will learn to work with a variety of populations throughout the semester. Students will be evaluated on their effectiveness in designing and instruction exercise sessions for both individual and group-led scenarios. This course is designed to help students prepare for future clinical practice and certifications, such as the ACSM Certified Clinical Exercise Physiologist. Must have CPR/AED, First Aid certifications. **Credits:** 3.00

HK 32500 - Instructional Skills For Kinesiology

Credit Hours: 3.00. Some form of instruction is part of most careers in kinesiology. In this course, students will learn about and practice using a variety of instructional skills within different movement and classroom settings. **Credits:** 3.00

HK 32600 - Foundations Of Adapted Physical Education

Credit Hours: 3.00. Lecture and physical education practicum in teaching children with disabilities. An introduction to the basic concepts and techniques of adapted physical education. Laboratory experience in carrying out adapted physical education programs for children is provided. **Credits:** 3.00

HK 32700 - Introduction To Sports Management

Credit Hours: 3.00. This course introduces the foundations and principles of sport management, focusing on the leadership, administration, business practices, and operation of sport organizations at all levels. This course offers students the opportunity to gain information and an understanding of the various practices and procedures associated with sport management and the sport industry. Students are presented with an overview of the business of sport, including a variety of different career opportunities in a multitude of sport settings as they explore the value of professional management within sport organizations. Finally, this course uses a semester-long major project that allows students to use the skills and knowledge gained from lectures, readings, and discussions to develop a comprehensive business plan integrating the various modules and topics from the semester into a cohesive administrative plan. **Credits:** 3.00

HK 32800 - Business Of Professional Sports

Credit Hours: 3.00. This course examines the rise and growth of professional sport into a multibillion-dollar industry worldwide that is both an economic giant as well as a pop cultural phenomenon. The course takes a look at the historical development of professional sport while also examining current trends that continue to shape the industry. Students learn the basics of how pro leagues and teams operate by participating in an interactive and engaging fantasy sports simulation that sees them create their own league and manage and operate their own team. In the simulation, students deal with issues real-life pro sports managers have to address every day, including roster construction and management, pricing their product, and marketing and branding their franchise and league overall. **Credits:** 3.00

HK 33100 - Developmentally Appropriate Physical Activity For Children

Credit Hours: 3.00. Introduction to the developmental stages of locomotor, non-locomotor, and manipulative skills in children. Includes the assessment of children's motor skills and physical fitness levels, and designing developmentally appropriate physical activities for children. **Credits:** 3.00

HK 34500 - The Coaching Of Interscholastic Sports

Credit Hours: 2.00. Discussion and practical experience in organizing, training, and coaching interscholastic athletes in a selected sport. A partial list of sports that may be selected: baseball, basketball, football, gymnastics, soccer, swimming, track/field/cross country, volleyball, and wrestling. **Credits:** 2.00

HK 34600 - Field Experience In Coaching

Credit Hours: 2.00. Students will be assigned to assist in coaching a team in a public-, parochial-, or selected university-sponsored program. A partial list of sports available: baseball, basketball, football, gymnastics, soccer, swimming, track/field/cross country, volleyball, and wrestling. Permission of instructor required. **Credits:** 2.00

HK 36800 - Exercise Physiology I

Credit Hours: 3.00. Physiological concepts and principles underlying human responses and adaptations to exercise stress. Included are selected methods and techniques of assessing physiological function in the laboratory setting. **Credits:** 3.00

HK 37200 - Sport And Exercise Psychology I

Credit Hours: 3.00. This course focuses on social and psychological factors related to participation in sport, exercise, and physical activity. The class explores both (a) how social and psychological factors influence participation and performance in physical activity, and (b) how sport, exercise, and physical activity participation affects psychological well-being. Topics include personality, socialization, learning and feedback, stress and coping, self-perceptions, motivation, and psychological methods for enhancing personal development and physical performance. **Credits:** 3.00

HK 37600 - History Of Sport

Credit Hours: 3.00. A prior course in American or world history is recommended but not required. A survey of historical events that have shaped classical and modern sport, with a focus on recent history of American sport. **Credits:** 3.00

HK 39900 - Internship In Athletic Training

Credit Hours: 0.00 to 3.00. Under supervision of a certified athletic trainer, students will be provided the opportunity to practice those skills required of an athletic trainer through the course of a clinical internship experience. Permission of instructor required. **Credits:** 0.00 to 3.00

HK 40100 - Clinical Practice In Athletic Training - Lead

Credit Hours: 2.00. Under the supervision of the certified athletic trainer, the student will be provided the opportunity to practice those skills acquired. The student is expected to take a leadership role in the clinical setting. **Credits:** 2.00

HK 40500 - Administration Of Athletic Training Programs

Credit Hours: 3.00. Advanced theory in the more complex injuries associated with athletics. Organization of athletic training programs, nontraumatic medical problems, pharmacology, and athletic nutrition also will be studied. **Credits:** 3.00

HK 40900 - Seminar In Sports Medicine

Credit Hours: 3.00. A review of selected medical aspects of sports. Liberal use of guest medical professionals. A broad look at the field of sports medicine. **Credits:** 3.00

HK 41100 - Clinical Applications Of Health/Fitness Concepts III

Credit Hours: 2.00. Under the supervision of the program coordinator, students will demonstrate the ability to apply specific skills, competencies, and applications of basic/advanced exercise principles in a professional setting. Required to be taken fall and spring. Permission of department required. **Credits:** 2.00

HK 41500 - Exercise As Medicine

Credit Hours: 3.00. Provide students with the concepts, techniques, and skills to investigate the scientific evidence on physical activity and health; and to design and implement interventions to make physical activity a part of daily campus culture. Permission of instructor required. **Credits:** 3.00

HK 42100 - Health Screening And Fitness Evaluation And Design

Credit Hours: 3.00. This course provides the learner with the knowledge and skills to successfully administer and interpret the results of health evaluations and fitness assessments for the purposes of analysis and the development of individualized exercise programs. **Credits:** 3.00

HK 42200 - Basic Concepts In Exercise Program Design

Credit Hours: 3.00. Introduces basic program design concepts and rationale to design fitness programs for healthy adults emphasizing cardiovascular training, strength training, flexibility training, and balance. **Credits:** 3.00

HK 42400 - Health And Fitness Program Management

Credit Hours: 3.00. Overviews major principles, competencies, and challenges involved in managing health, fitness, and sports organizations. Students will develop an understanding of the key considerations and skills needed to organize and manage human resources and facilities in health, fitness, and sport settings. **Credits:** 3.00

HK 42700 - Sports Marketing

Credit Hours: 3.00. This course introduces and examines marketing within various levels of the sport industry, with an emphasis on consumer behavior, branding, and sponsorship. This course first introduces students to the marketing of sport services, sport teams, and sport programs by examining basic marketing strategies as they relate specifically to sport settings. Second, the course examines key consumer behaviors regarding sport fans and sport fan communities. Finally, the course enables students to formulate original and creative sport marketing mixes to provide students with the hands-on practice necessary to become an effective sport marketer. **Credits:** 3.00

HK 42800 - Sports Facility And Event Management

Credit Hours: 3.00. This course is meant to introduce students to the foundations and principles of effective facility and event management. Sport facilities and the types of events they can host are essential components to understanding the field of sport management. In this course, we will explore the concepts of facility design, planning, systems, risk management, marketing, and ownership. In terms of event management, we will explore the concepts of event creation, impact on hosts, marketing/sponsorship, and the potential positive and negative outcomes of sport events. **Credits:** 3.00

HK 43500 - Student Teaching Seminar

Credit Hours: 1.00. Development and implementation of selected teaching units and plans for a specified student teaching setting. **Credits:** 1.00

HK 44300 - Neuroscience Of Movement

Credit Hours: 3.00. In this course students will learn about the neuroscience behind the control, sensation and perception of human movement. The course is divided into five sections. In the first section, students learn about the sensory systems with human movement. In the second section, students learn about the basic CNS building blocks underlying movement control and perception. In the third section, the control of balance and locomotion is the central topic. In the fourth section, students learn about the higher brain functions involved in cognition. The final section of the class examines issues regarding learning, development, and brain plasticity. **Credits:** 3.00

HK 44400 - Balance Rehab In Older Adults

Credit Hours: 3.00. In this course, students learn about the decline in motor function that occurs in older adults and techniques to improve motor function in an older population. Topics include decreased balance control, loss of muscle strength, and declines in adaptive locomotion as a function of age. Students enrolled in this class also participate in an off-campus lab. In the lab, students are paired with an older adult and use the knowledge gained in lecture to improve the motor function of the older adult. This class provides students with a unique opportunity to gain hands-on experience working with an older population. Permission of instructor required. **Credits:** 3.00

HK 45300 - Motor Coordination And Development

Credit Hours: 3.00. An advanced undergraduate motor development course that examines the processes and coordination principles related to motor behavior development across the life span. Material and concepts are concentrated around specific skills areas and SPAN a broad range of ages and theoretical approaches. **Credits:** 3.00

HK 45800 - Principles Of Motor Control And Learning

Credit Hours: 3.00. Discussion of the principles of motor learning and control. Relevant research literature will be surveyed with an historical perspective. Students will be expected to design and/or conduct a mini research project. **Credits:** 3.00

HK 46300 - Analysis Of Human Motion

Credit Hours: 3.00. An analytic approach to the mechanical analysis of human motion, including modeling procedures and computer-generated display techniques. **Credits:** 3.00

HK 46500 - Research Methods

Credit Hours: 3.00. This course will be conducted in a lecture/lab format. The lectures will introduce the basic knowledge necessary to understanding the entire research process as it is found in health and kinesiology. The laboratories will be designed to give students practice in discovering research questions, preparing research proposals, evaluating existing research, and applying research to practical problems. **Credits:** 3.00

HK 46800 - Advanced Exercise Physiology II

Credit Hours: 3.00. An advanced undergraduate course in the area of exercise and human performance. Further examination of the physiological mechanisms and theories involved in the exercise response. **Credits:** 3.00

HK 46900 - Exercise Testing And Prescription In Special Populations

Credit Hours: 3.00. Examines responses to exercise testing and prescription in healthy adults compared to exercise responses and special considerations for individuals with chronic diseases and conditions and issues of concern to pregnant women, children, and older adults, among others. **Credits:** 3.00

HK 47200 - Sport And Exercise Psychology II

Credit Hours: 3.00. Course presents topics not covered in PE 37200 and emphasizes application of psychological principles in sport and exercise settings. Topics include group dynamics, psychological benefits of exercise; exercise addiction; body image; leadership and communication; and performance enhancement principles and techniques. **Credits:** 3.00

HK 47400 - Youth Physical Activity Behavior

Credit Hours: 3.00. This course addresses developmental, psychological, social, and contextual factors associated with physical activity behavior and sedentary behavior of young people. Students will consider fundamental questions and assumptions that frame the study of youth physical behavior, be exposed to a breadth of empirical literature on youth physical activity and sedentary behavior, and learn how the existing knowledge base has been translated into physical activity promotion efforts. **Credits:** 3.00

HK 47500 - Practicum In Kinesiology

Credit Hours: 6.00. Supervised field work in university, community, hospital, business, or clinical settings where structured exercise programs or rehabilitative services are conducted. Supervisory conferences and written reports are required. **Credits:** 6.00

HK 47600 - Olympic Games: Ancient And Modern

Credit Hours: 3.00. A historical study of the nature and significance of the ancient and modern Olympic Games. Topics include genesis of the games; evolution of events; the amateur ideal; social, economic, and commercial influences; politics; modern controversies; and various reform movements. **Credits:** 3.00

HK 48500 - Electrocardiography, Cardiovascular Disease And Exercise

Credit Hours: 3.00. This course is designed to provide students with a basic understanding of electrocardiography interpretation, diagnostic testing, and exercise with cardiovascular disease. The course is designed to help students prepare for future clinical practice and certifications, such as, the ACSM Certified Clinical Exercise Physiologist. **Credits:** 3.00

HK 49000 - Special Topics In Health And Kinesiology

Credit Hours: 1.00 to 3.00. Individualized readings, topics, or projects in health and kinesiology appropriate for undergraduate students. Permission of instructor required. **Credits:** 1.00 to 3.00

HK 49100 - Research Experience In Health & Kinesiology

Credit Hours: 1.00 to 3.00. Individualized activities related to a faculty member's research in health and kinesiology appropriate for undergraduate students; no project presentation required. Permission of instructor required. **Credits:** 1.00 to 3.00

HK 49200 - Professional Work Experience IV

Credit Hours: 1.00. Practical experience in professional employment. Programs must be preplanned and conducted under direction of the departmental coordinator and agency supervisor. Students will submit documentation of practical experiences. Permission of instructor required. **Credits:** 1.00

HK 49201 - Internship For Exercise And Health

Credit Hours: 9.00. The internship experience is a valuable opportunity for students to apply the procedures, theories, skills, and techniques they have mastered in the classroom to a professional work experience in the field. The Department of Health & Kinesiology requires that each student in the Clinical Exercise Physiology concentration in the Kinesiology major at Purdue University perform a 400-hour internship experience that meets the expectations of the student, the internship/practicum site, and the University. The internship is to be a culminating experience representative of the degree program and clinical work that provides students the opportunity to acquire invaluable work experience in the field outside of the academic setting. Permission of instructor required. **Credits:** 9.00

HK 49500 - International Special Topics

Credit Hours: 1.00 to 3.00. Course taken during an international experience that is recognized by the university. Permission of department required. **Credits:** 1.00 to 3.00

HK 49600 - Mentored Research In Kinesiology

Credit Hours: 1.00 to 3.00. Students are engaged in a research project under the guidance of a faculty member in one of the areas of inquiry in the kinesiology major. Permission of instructor required. **Credits:** 1.00 to 3.00

HK 49800 - Directed Research For Undergraduates

Credit Hours: 3.00. Student designs, conducts, and writes an individual research project under the guidance of a member of the faculty. Permission of instructor required. **Credits:** 3.00

HK 50000 - Introduction To Athletic Training Practice

Credit Hours: 3.00. This course covering the roles and responsibilities of an athletic trainer as well as the history, governance structure, and regulation of the athletic training profession. Instruction and practical application of taping, wrapping, bracing techniques, and protective equipment is also included. Permission of department required. **Credits:** 3.00

HK 50600 - Evidence Based Practice In Athletic Training

Credit Hours: 2.00. Introduction to research methodology, and qualitative and quantitative data analysis as related to evidence-based practice of athletic training. The course addresses formulating clinical questions; searching, reading and appraising research; understanding levels of evidence; and citing and referencing works to become consumers of and designers of evidence. The course introduces students to the selection, application, and interpretation of basic descriptive, correlational, and interferential statistics. Permission of department required. **Credits:** 2.00

HK 51100 - Electrocardiogram And Exercise Testing

Credit Hours: 3.00. This course is designed to provide students with competencies related to electrocardiogram and exercise testing. Students will develop skills to interpret a 12-lead ECG, prep and execute a resting 12-lead ECG, complete appropriate pre-screening for graded exercise testing and develop an understanding and initial skills for administering a diagnostic exercise test. Additionally, students will explore various cardiac, pulmonary and/or metabolic testing common to the clinical exercise

testing setting. The course is designed to help students prepare for future clinical practice and certifications, such as the ACSM clinical exercise physiologist certification.**Credits:** 3.00

HK 51500 - Emergency Medical Management In Athletic Training

Credit Hours: 4.00. This course is designed to teach management concepts and skills used by athletic trainers in emergency situations. Topics addressing prevention, recognition, and management of life-threatening and/or severe injury and illness are included. Application of skills that include the environment, CPR/AED, airway management, immobilization, bleeding control and sudden illness management are also addressed. Students will become certified in CPR/AED. Permission of department required. **Credits:** 4.00

HK 52000 - Evaluation And Management Of The Lower Quarter

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the lower extremities, including joint structure and musculoskeletal/nervous systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering the assessment and management techniques for injuries commonly seen will be included. Permission of department required. **Credits:** 3.00

HK 52400 - Managing Health, Fitness, And Sports Organizations

Credit Hours: 3.00. An overview of the major principles, considerations, and techniques involved in managing health, fitness, and sports (HFS) organizations. Emphasizes the skills and competencies involved in the planning, organization, and control of opportunities, resources, and facilities in HFS settings. Permission of instructor required. **Credits:** 3.00

HK 52500 - Marketing And Promotion In Health, Fitness, And Sports Organizations

Credit Hours: 3.00. An overview of marketing and promotion in health, fitness, and sports organizations. Emphasizes the skills necessary to develop marketing and promotion plans and to develop materials and approaches for carrying out these plans in health, fitness, and sports settings. Permission of instructor required. **Credits:** 3.00

HK 53000 - Evaluation And Management Of The Upper Quarter

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the upper extremities, including joint structure and musculoskeletal/nervous systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering the assessment and management techniques for injuries commonly seen will be included. Permission of department required. **Credits:** 3.00

HK 53200 - Musculoskeletal Adaptations

Credit Hours: 3.00. This course will utilize traditional lecture combined with small group, student-lead learning to study the impact of acute and chronic exercise on skeletal muscle and tendon. Topics covered will include muscle growth, muscle metabolism, structural and functional changes in skeletal muscle and tendon, the impact of age and sex on exercise adaptations, and the impact of exogenous agents on skeletal muscle and tendon adaptations to exercise. Other topics may include the impact of unloading (e.g., bedrest) and spinal injury on skeletal muscle and tendon. This course will be relevant to those interested in exercise physiology, athletic training, physical therapy, occupational therapy, medical school, nutrition science, engineering, and similar programs of study. Permission of department required. **Credits:** 3.00

HK 53500 - Athletic Training Interventions

Credit Hours: 3.00. This course is designed to provide the student with the foundational theory and techniques related to injury and illness intervention. Included are topics addressing tissue healing, theories of pain and pain control, concepts of kinetic chain stability and mobility, as well as principles related to the use of therapeutic medications. Students will discover how to plan and implement a comprehensive reconditioning program for injuries and conditions sustained by physically active individuals. Permission of department required. **Credits:** 3.00

HK 53600 - Cardiopulmonary Physiology

Credit Hours: 3.00. This course will provide a comprehensive overview of the characteristics and regulatory mechanisms underlying the cardiorespiratory adjustments to exercise. The effects of chronic diseases, including chronic obstructive pulmonary disease, peripheral artery disease and chronic heart failure, on the cardiovascular and respiratory responses to exercise will also be discussed in detail. Permission of department required. **Credits:** 3.00

HK 54000 - Evaluation And Management Of The Spine And Head

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the spine and head, including joint structure and musculoskeletal/nervous systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering the assessment and management techniques for injuries commonly seen will be included. Permission of department required. **Credits:** 3.00

HK 54100 - Athletic Training Practicum I

Credit Hours: 2.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required. **Credits:** 2.00

HK 54200 - Athletic Training Practicum II

Credit Hours: 2.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required. **Credits:** 2.00

HK 54300 - Athletic Training Practicum III

Credit Hours: 2.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required. **Credits:** 2.00

HK 54500 - Therapeutic Modalities

Credit Hours: 3.00. Course covering the physiological effects, indications, contraindications, and precautions of contemporary therapeutic modalities. Students will design and plan therapeutic interventions. Focus will be on the application of therapeutic modalities according to evidence-based protocols. Included in this course will be the role of equipment safety and maintenance of therapeutic modalities. Permission of department required. **Credits:** 3.00

HK 55000 - Evaluation And Management Of Medical Conditions

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the thorax and abdomen, including the cardiovascular, digestive, urinary, reproductive, endocrine, and lymphatic systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering injury assessment techniques of common illnesses and disease most often encountered by allied healthcare professionals will be included. Permission of department required. **Credits:** 3.00

HK 55500 - Principles Of Manual Medicine

Credit Hours: 2.00. This course will provide students with the theory, skills, and clinical application of manual medicine. The emphasis will be placed on passive and dynamic joint mobilizations, connective tissue massage, deep friction massage, lymphatic massage, myofascial release, passive range of motion exercises, muscle energy techniques, and nerve mobilization. All skills will be introduced through onsite demonstration and hands-on practice. Permission of department required. **Credits:** 2.00

HK 56000 - Advanced Procedures In Athletic Training

Credit Hours: 2.00. This course aims to provide students with advanced psychomotor skills in athletic training, such as wound closure, orthopedic casting, orthotic fabrication, biometrics and other emerging techniques and technologies. Skill integration into practice will be considered and practice act concerns will be discussed. Permission of department required. **Credits:** 2.00

HK 56700 - Epidemiology For Public Health Practice

Credit Hours: 3.00. This course presents the fundamental principles, methods, and applications of epidemiology, including the quantification of morbidity, mortality, and disease risk. Epidemiologic study designs and the use of public health vital statistics, disease transmission evidence, and risk assessment data are explored. Historically significant epidemiological cases provide a framework for the application of ethical principles to epidemiologic research. This course meets the epidemiology core competency requirement for the Master's in Public Health (MPH) degree. **Credits:** 3.00

HK 56800 - Advanced Exercise Physiology

Credit Hours: 3.00. The study of selected concepts and principles of physiology as they relate to the exercising human. **Credits:** 3.00

HK 57400 - Advanced Exercise Psychology

Credit Hours: 3.00. This course is designed to examine psychological issues and theories related to exercise, the promotion of regular physical activity and active lifestyles. Emphasis is placed on the factors related to physical activity, health behavior theories, and the psychological and emotional consequences of exercise and physical activity. Key methodological considerations in behavioral health research will also be highlighted. **Credits:** 3.00

HK 57600 - Diversity And Health

Credit Hours: 3.00. This course is designed to examine the health status and the politics of representation of the U.S. ethnic minorities (e.g., African Americans, Latinos, Asian Americans, Native Americans, Alaskans, etc.). Emphasis is placed on factors that influence health and health-related behaviors. The course is intended to provide students with an overview of historical, political, social, and cultural factors related to the health behavior and status of minority groups in American society. **Credits:** 3.00

HK 58300 - Patient Care Simulation In Athletic Training I

Credit Hours: 2.00. This course is designed to refine psychomotor skills and apply specific athletic training proficiencies integrating cognitive concepts and skills into progressively higher-level practical application. Skill integration will be achieved through successful completion and evaluation of patient care scenarios with emphasis placed on clinical reasoning skills of the student while making point-of-care decisions. Permission of department required. **Credits:** 2.00

HK 59000 - Special Topics In Health And Kinesiology

Credit Hours: 1.00 to 3.00. Individualized readings, topics, or projects in health and kinesiology appropriate for graduate students. Permission of instructor required. **Credits:** 1.00 to 3.00

HK 60000 - Individual Research And Study

Credit Hours: 1.00 to 3.00. Each student studies a problem of interest related to physical education, health, or recreation. Permission of instructor required. **Credits:** 1.00 to 3.00

HK 60100 - HK PhD Seminar

Credit Hours: 2.00. This course is the first of a required two-course sequence for first-year health and kinesiology doctoral students. The course is designed to socialize students into the worlds of science, graduate education, and health and kinesiology research and practice. Particular emphasis is placed on the responsible conduct of research, shared and unique expectations of graduate students and mentors across various health and kinesiology subdisciplines, professional development, and the nurturing of academic community. Prerequisite: Incoming health and kinesiology doctoral students qualify for and are required to complete this course. Permission of department required. **Credits:** 2.00

HK 60200 - HK PhD Seminar II

Credit Hours: 2.00. This course is the second of a required two-course sequence for first-year health and kinesiology doctoral students. The course is designed to expose students to classic works in health and kinesiology subdisciplines, address professional development issues, and help students formulate a curricular and research program to structure the doctoral experience. Particular emphasis is placed on the interdisciplinary nature of health and kinesiology and becoming an active member of the research community. Permission of department required. **Credits:** 2.00

HK 61000 - Research Methods In Health, Physical Education, And Recreation

Credit Hours: 3.00. Application of research methodology to problems in health, physical education, and recreation. Prerequisite: 3 credit hours in Statistics. Permission of instructor required. **Credits:** 3.00

HK 61100 - Data Analysis In Health And Kinesiology

Credit Hours: 3.00. This student-driven course addresses a variety of data analysis issues in health, kinesiology, and related fields (e.g., education, psychology). The course will overview the types of data prominent in health and kinesiology research, how these data are obtained and handled by researchers, measurement/evaluation issues, and ways to present and analyze data. Heavy emphasis is placed on matching research questions and conceptualization with data analysis techniques, obtaining familiarity with widely-used data analysis software, analyzing multivariate data sets, and constructing high-quality results sections in journal manuscript format. Prerequisites: STAT 50100, STAT 50200 and access to a data set pertaining to one's area of research are expected. Permission of instructor required. **Credits:** 3.00

HK 63000 - Administration Of Athletic Training Programs

Credit Hours: 2.00. Course covering management and supervision of personnel, financial resources, as well as the preparation in planning, designing, developing, organizing, implementing, directing, and evaluating an athletic training health care program and facility. Legal concerns, risk management, insurance, and reimbursement will be discussed. Prerequisites: Completion of HK 50000 with a grade of B- or better. Permission of department required. **Credits:** 2.00

HK 63500 - Injury Prevention And Health Promotion

Credit Hours: 3.00. This course emphasizes theory and strategies for behavioral change relating to healthy lifestyles and specific health conditions. Analyses of major injury problems affecting patients in the workplace, community, at home, and in activity along with basic principles of nutrition and exercise as they pertain to individual health and activity are included. Prerequisite: HK 53500 with a grade of B- or better. Permission of department required. **Credits:** 3.00

HK 64000 - Leadership In Athletic Training

Credit Hours: 2.00. This course is designed to prepare students to embark on paths of personal leadership development. The course will examine leadership theory and research and emphasize the development of leadership and interpersonal skills. Understanding various methods of bringing about change will be provided and researched by learners, and then discussed in our time together. Students in this course will apply foundational business concepts in athletic training through self-assessment case studies and professional experiential exercises. Permission of department required. Prerequisite: HK 63000 with B- or better. **Credits:** 2.00

HK 64100 - Athletic Training Practicum IV

Credit Hours: 8.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required. Prerequisite: HK 54300. **Credits:** 8.00

HK 64200 - Athletic Training Practicum V

Credit Hours: 6.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required. **Credits:** 6.00

HK 64500 - Psychosocial Interventions In Athletic Training

Credit Hours: 2.00. The focus of this course is on identification, referral, and treatment options for patients with organic and non-organic mental health conditions commonly seen in athletic training. The course will also address cultural competence in patient care and the role of various mental healthcare providers that comprise the mental health referral network. Permission of department required. Prerequisite: HK 535 with B- or better. **Credits:** 2.00

HK 65000 - Seminar In Athletic Training

Credit Hours: 3.00. This course is a culminating experience in athletic training that will provide the student with a comprehensive review of athletic training foundational and specific knowledge regarding the Domains of Athletic Training. This course will help the student to prepare for athletic training practice. Permission of department required. Prerequisite: HK 53000 with B- or better. **Credits:** 3.00

HK 66000 - Diagnostic Imaging In Athletic Training

Credit Hours: 1.00. This course provides students with an intensive study of radiology. Students will understand the types of diagnostic images commonly used in sports medicine, as well as basic interpretive techniques used in radiology. The course will emphasize the systematic approach for diagnostic images and interpretation of various diagnostic reports. Permission of department required. Prerequisite: HK 58000 with B- or better. **Credits:** 1.00

HK 66800 - Seminar In Exercise Physiology

Credit Hours: 3.00. Review of literature; design and conduct of research in an area of current interest in exercise physiology. Permission of instructor required. **Credits:** 3.00

HK 66900 - Exercise Metabolism And Biochemistry

Credit Hours: 3.00. This course is designed to provide students with practice using basic laboratory skills which can then be applied to more sophisticated techniques in biochemical analysis. The course is a laboratory-based class and will provide considerable "hands-on" experience. Lectures will focus on laboratory procedures, calculations, common lab problems and solutions, and laboratory safety procedures. Most of these measures will be made using an exercise context, i.e., standard exercise physiology tests (VO2 max, Wingate tests, etc.) will be performed to allow us to acquire blood samples for analysis. Prerequisites: HK 56800 or permission of the instructor. **Credits:** 3.00

HK 67000 - Advanced Topics In Motor Control

Credit Hours: 3.00. Selected topics in motor control. The subject matter will be data-based and drawn from research literature encompassing behavioral and physiological experimental paradigms. Students will critically evaluate and synthesize research to better understand the integration of individual systems in sensorimotor processing. Permission of instructor required. **Credits:** 3.00

HK 67200 - Stress And Coping In Sport, Exercise And Physical Activity

Credit Hours: 3.00. This course examines stress, coping, and emotional processes as they relate to sport, exercise, physical activity, and the physical self. We will explore theoretical perspectives on stress and coping processes, examine the empirical evidence related to sport/exercise/physical activity/rehabilitation/physical self, and discuss applications of this knowledge. Course readings will cover topics including the history and conceptual issues of psychosocial stress, conceptual and methodological issues of coping, individual differences in stress and coping, the influence of sociocultural and contextual factors, and vulnerability and resilience. Prerequisite: HK 57400. **Credits:** 3.00

HK 67400 - Special Topics In Sport And Exercise Psychology

Credit Hours: 3.00. An in-depth analysis of specific areas of theoretical and empirical work in sport or exercise psychology. Emphasis is placed on the critique, integration, and application of the literature reviewed. Rotating topics. Prerequisite: HK 57400. **Credits:** 3.00

HK 67800 - Motivational Processes In Sport And Exercise

Credit Hours: 3.00. Seminar focused on motivation in sport and exercise settings. Antecedents and consequences of motivated behavior are examined from theoretical, research, and application perspectives. Topics include participation motivation in sport, intrinsic/extrinsic orientations, achievement goals, causal attributions, group processes, and exercise motivation. Prerequisite: HK 57400. **Credits:** 3.00

HK 68300 - Patient Care Simulation In Athletic Training II

Credit Hours: 3.00. This course is designed to refine psychomotor skills and apply specific athletic training proficiencies integrating cognitive concepts and skills into progressively higher-level practical application. Skill integration will be achieved through successful completion and evaluation of patient care scenarios with emphasis placed on clinical reasoning skills of the student while making point-of-care decisions. Permission of department required. Prerequisite: HK 56300 with a B- or higher. **Credits:** 3.00

HK 68600 - Theories And Concepts Of Stress Management

Credit Hours: 3.00. Development of a conceptual understanding of stress and stress management. A seminar focused on the review of literature regarding psychophysiology of stress, relationship between stress and disease, and methods of preventing/relieving stress, models of stress research, and issues surrounding stress research methodology. Prerequisite: BIOL 20300, BIOL 20400. Permission of instructor required. **Credits:** 3.00

HK 69000 - Advanced Studies

Credit Hours: 1.00 to 6.00. Topic and credit to be arranged. Individual study for the doctoral student. Permission of instructor required. **Credits:** 1.00 to 6.00

HK 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

HK 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Health Sciences

HSCI 10100 - Introduction To The Health Sciences Professions

Credit Hours: 2.00. This course will present an overview of the fields in both the preventive, Public Health, as well as the clinical, Private Health, sides of the Allied Health Science Professions as it presents the holistic nature of health maintenance. Students will have the opportunity to hear from health professionals practicing in the allied health and preprofessional concentrations as well as from School of Health Sciences faculty in their areas of expertise in the fields of industrial hygiene, ergonomics, radiological sciences, toxicology and environmental health science. **Credits:** 2.00

HSCI 11000 - Careers And Research In Occupational And Environmental Health

Credit Hours: 1.00. The goal of this course is to familiarize students to the variety of research and careers available within the broad field of environmental and occupational health. The course will focus on two areas: current research in occupational and environmental health and careers in occupational and environmental health. This content will be delivered through interactive lectures and discussions with a variety of guest speakers as well as HSCI faculty. Advice and guidance on applying for internships/jobs in the field will also be provided. A highlight of the event is a student/professional networking event which will be coordinated towards the end of the program. **Credits:** 1.00

HSCI 13000 - Introduction To Medical Laboratory Science

Credit Hours: 1.00. An introduction to career opportunities in medical technology. Preprofessional and professional requirements. A survey of the major clinical laboratory departments and their applications to patient care and management. Discussion and interpretation of some of the major diagnostic tests, i.e., for cardiac enzymes, cholesterol, blood cells, diabetes, and drug monitoring. **Credits:** 1.00

HSCI 13100 - Introduction To Medical Terminology

Credit Hours: 3.00. This self-paced learning course is designed to familiarize the student with terms used in medicine. Each body system will be studied individually. Word roots, prefixes, and suffixes will be used to build words relating to the system. Diagnostic and symptomatic terms will be introduced. CTL:IPO 1820 Medical Terminology **Credits:** 3.00

HSCI 19000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for freshmen students. Permission of instructor required. **Credits:** 1.00 to 8.00

HSCI 19501 - School Of Health Sciences Freshman Honors Seminar

Credit Hours: 1.00. This course is for Freshman students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting designed to orient and familiarize Freshman HSCI Honors students with the School of Health Sciences including research areas and current topics in public health and biomedical research. Students will interact with guest speakers and expand their knowledge base in health science research. In addition to the seminar, students will be matched to a faculty mentor in a research area of their interest during the fall semester. Students will develop and design a research project with their faculty mentor (to be conducted in HSCI 19601 during the spring semester). In the spring semester, students will enroll in the seminar series (HSCI 19501) and in the research project course (HSCI 19601) to complete their project. Each student will be responsible for presenting and reporting on their research project during the spring seminar series. Permission of departmental required. **Credits:** 1.00

HSCI 19601 - School Of Health Sciences Freshman Honors Project

Credit Hours: 1.00. This course is for Freshman students in the School of Health Sciences Honors Program. In this course students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course during the spring semester concurrently with HSCI 19501. During the fall semester in HSCI 19501, students will be matched to a faculty mentor in the research area of their choice and complete a Project Description Form based upon the work to be completed during this course. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required. **Credits:** 1.00

HSCI 20100 - Principles Of Public Health Science

Credit Hours: 3.00. This course begins with a definition of public health and a review of its history and its role in disease prevention. The basic tools of public health practice, vital statistics and epidemiology, are then presented. After gaining an understanding of how these tools are used in assessing the health status of a community, the etiology and control of infectious and non-infectious threats to our health will be examined. The course concludes with risk analysis as a basis for public health policy determination. **Credits:** 3.00

HSCI 20200 - Essentials Of Environmental, Occupational, And Radiological Health Sciences

Credit Hours: 3.00. This course is designed to introduce the essential concepts of Environmental, Occupational, and Radiological Health Science. The principles of these three fields including the environmental impacts on human health and disease, environmental toxicology, occupational health concerns, contemporary occupational health issues, radioactivity, and the human health effects of exposure to ionizing radiation will be discussed. **Credits:** 3.00

HSCI 22500 - Healthcare Leadership And Safety

Credit Hours: 3.00. This course will present topics related to effective leadership and management strategies within an organization. The course will focus on implementation of these strategies from a health and safety perspective. Specific leadership and management topics to be discussed include communication strategies, motivation, conflict management, negotiation, ethics, and professional development. In addition, important safety topics, such as fire & life safety, workplace violence, terrorism, hazard communication, and slip & fall hazards will also be addressed. **Credits:** 3.00

HSCI 26000 - Clinical Urinalysis And Body Fluid

Credit Hours: 1.00 to 10.00. Clinical Urinalysis And Body Fluid. **Credits:** 1.00 to 10.00

HSCI 29000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for sophomore students. Permission of instructor required.**Credits:** 1.00 to 8.00

HSCI 29501 - School Of Health Sciences Sophomore Honors Seminar

Credit Hours: 1.00. This course is for sophomore students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required. **Credits:** 1.00

HSCI 29601 - School Of Health Sciences Sophomore Honors Project

Credit Hours: 1.00. This course is for Sophomore students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course in both fall and spring semesters (concurrently with HSCI 29501 in the spring semester). An updated Project Description Form will be due at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required. **Credits:** 1.00

HSCI 30500 - Basics Of Oncology

Credit Hours: 3.00. This course will introduce the student to the biology of cancer and some basics of oncology. Focus will be placed on what makes cancer different from normal tissues and how those differences can be leveraged for diagnostic and treatment purposes. This course will touch on topics of epidemiology, cancer biology, common therapeutic and diagnostic approaches, and other considerations of cancer care. **Credits:** 3.00

HSCI 31000 - Imaging In Medicine

Credit Hours: 3.00. This course will introduce students to develop essential understandings of all primary medical imaging techniques utilized in hospitals such as Computer tomography, X-ray imaging, MRI, Ultrasound and Nuclear medicine imaging modalities. The course will cover basic scientific principles of each modality and introduce their underlying clinical requirements and applications. In addition, this course introduces the student to human anatomy as seen in the transverse, coronal, and sagittal planes. Anatomy of the brain, thorax, abdomen, and pelvis will be studies using CT and MRI images. Normal anatomy, anatomic variants, and selected pathologies will be discussed in the various body regions. **Credits:** 3.00

HSCI 31200 - Radiation Science Fundamentals

Credit Hours: 3.00. This course introduces principles and concepts related to nuclear energetics, radioactive decay, the interactions of ionizing radiation with matter, and the human health effects of exposure to ionizing radiation. Fundamental concepts related to atomic and sub-atomic physical processes as well as relevant aspects of modern physics are briefly reviewed. Students gain practical experience and enhance their understanding of radiation protection by participating in a radiological emergency response exercise (RERE). **Credits:** 3.00

HSCI 31300 - Principles Of Radiation Detection And Measurement

Credit Hours: 2.00. Course presents an introduction to the principles of radiation detection and measurement, including statistical models, counting statistics, error analysis, detection limits, ionization chambers, proportional counters, GM counters, scintillation counters, gamma-ray spectroscopy, solid-state detectors, TLDs, track-etch and bubble detectors. **Credits:** 2.00

HSCI 33300 - Introduction To Immunology

Credit Hours: 3.00. Introduction to Immunology will meet twice weekly and provide an overview of this evolving field of science with an emphasis on the clinical implications and application of learned knowledge. The immunologic mechanisms associated with the normal and abnormal immune response will be discussed and students will put this knowledge into practice by directing their own case study. In addition, a number of common clinical concerns with respect to immunity will be reviewed. Furthermore, we will explore the critical role our knowledge of this branch of science plays in patient diagnosis, treatment and care both now and in the future. **Credits:** 3.00

HSCI 33400 - Lung Physiology And Medicine

Credit Hours: 2.00. This course will explore the normal functioning of the respiratory system, along with a variety of diseases and disorders affecting this system. Special emphasis will be placed upon diseases which result from, or are aggravated by, environmental pollutants. The course will begin with discussing the anatomy and physiology of the respiratory system. Individual lung disorders will then be discussed with consideration of the sources of air pollution contaminants and the interaction of those contaminants with normal lung tissue. **Credits:** 2.00

HSCI 33500 - Heart Physiology And Medicine

Credit Hours: 2.00. This course will provide a discussion about diseases affecting the heart and cardiovascular system. The normal anatomy and physiology of the heart and blood vessels will be discussed. Various diseases of the heart and vasculature, including atherosclerosis, cardiomyopathies, valvular heart disease, hypertension, and stroke will be explored. Included in the discussion of each disease process will be environmental agents, which are associated with disease development and progression. **Credits:** 2.00

HSCI 33600 - Eye Physiology And Disease

Credit Hours: 2.00. This course will cover the fundamental structure and function of the eye and visual nervous system. Brief review lectures will be provided on basic cell biology and neuroscience to provide a strong foundation for topics such as phototransduction, retinal neural circuit function, and disease etiology. The first half of the course will be focused on the normal and healthy anatomy and physiology of the eye. The second half the course will be focused on eye and visual diseases and their associated pathophysiology and clinical manifestations. This part of the course will include lessons on eye imaging techniques and cutting-edge treatments used for detection and treatment of eye diseases. This course will be beneficial for any student interest in clinical or medical research, and highly recommended for those interested in optometry, ophthalmology, and visual research careers. Permission of department required.**Credits:** 2.00

HSCI 34500 - Introduction To Occupational And Environmental Health Sciences

Credit Hours: 3.00. Principles of occupational health (industrial hygiene) and environmental health as related to anticipation, recognition, evaluation, and control of hazards in the workplace and the surrounding community. Emphasis is on hazards of chemicals and their role in occupationally and environmentally related diseases. Historical basis and current legislation are discussed. In addition, the principles of epidemiology, toxicology, exposure standards, and respiratory protection are addressed. **Credits:** 3.00

HSCI 34600 - Industrial Hygiene Engineering Control

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material. **Credits:** 4.00

HSCI 34800 - Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. Sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data. **Credits:** 3.00

HSCI 35300 - Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization - protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and frontline employees. As such, the successful health and safety manager needs skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the frontline employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the frontline employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the frontline employees and upper management together in their vision of a safe and healthy workplace. **Credits:** 3.00

HSCI 36000 - Everyday Toxicology: Poisonings From Clinics To Courtrooms

Credit Hours: 2.00. Exposure to chemicals happens every day in human life through the living environment and diet; yet the health impact and toxicological consequences of these exposures are often unknown to general populations. This 300-level course examines basic concepts of toxicology in human health as they apply to the exposure of environmental agents, e.g., chemicals, metals, and poisons in daily life and attempted poisoning in criminal cases and political assassins. With an emphasis on historical accounts of poisonings and cases analyses, the course describes commonly encountered chemicals and poisons, their

symptoms, clinical diagnosis, basic toxicological mechanisms, and medical interventions. Students will also learn some of the large-scale environmental and occupational incidents that have led to legal actions, and the role of toxicology in forensic investigation of purposed poisoning. The course is ideal to students who are inspired to become a future healthcare professional in any of the health-oriented pre-professional programs or students with majors in biomedical health sciences, environmental and occupational health sciences, medical laboratory science, and/or public health. **Credits:** 2.00

HSCI 39000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for junior students. Permission of instructor required. **Credits:** 1.00 to 8.00

HSCI 39501 - School Of Health Sciences Junior Honors Seminar

Credit Hours: 1.00. This course is for Junior students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required. **Credits:** 1.00

HSCI 39601 - School Of Health Sciences Junior Honors Project

Credit Hours: 1.00. This course is for Junior students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course in both the fall and spring semesters (and concurrently with HSCI 39501 in the spring semester). An updated Project Description Form will be due at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of departmental required. **Credits:** 1.00

HSCI 40000 - International Special Topics

Credit Hours: 1.00 to 8.00. Courses taken during an International experience that is recognized by the University. Permission of Department required. **Credits:** 1.00 to 8.00

HSCI 41500 - Introduction To Nuclear And Radiological Source Security

Credit Hours: 3.00. The course focuses on the basic elements of nuclear and radiological source security. It examines methods for planning and evaluating nuclear security activities at the state and facility level, establishing nuclear security culture in different types of nuclear and radiological installations, and examines nuclear cyber and information security measures. Issues and approaches for nuclear security concerns, both state-level (e.g., nonproliferation and deterrence) and asymmetric concerns (e.g., nuclear smuggling and nuclear terrorism) will be addressed. Group exercises and simulations in applied nuclear security scenarios will complement lectures. This course is designed for both "technical" (engineering and science) and "non-technical" (policy) students and the interaction between students of different backgrounds is encouraged. **Credits:** 3.00

HSCI 42000 - Applied Anatomy For Medicine

Credit Hours: 4.00. With a focus on preparing students to be practitioners of health sciences, Applied Anatomy for Medicine (HSCI 42000) will build upon the foundational knowledge of form and function obtained in prerequisite courses through

enhancement of the relationship between bony structures, musculature, innervation, vascular perfusion, and interconnectedness with respect to human health. The significance of regional anatomy and important anatomical landmarks from a clinical perspective will be learned. The incorporation of student-driven dissection will promote a more comprehensive understanding of the correlation between structure, function, dysfunction and disease signalments. The integration of clinical application and case study investigation will facilitate the transition from learner to practitioner. **Credits:** 4.00

HSCI 44400 - Exposure Assessment In OEHS

Credit Hours: 3.00. Exposure assessment is an essential component of Environmental Health Science and industrial hygiene. This course provides students basic scientific knowledge of exposure assessment, with emphasis on practical aspects of exposure science, including study design, data and measurement collection, data analysis, and results interpretation and presentation. Course topics include major exposure media and pathways (air, water, food, soil, etc.) and important exposure routes (inhalation, ingestion, dermal absorption); exposure measurement and assessment; strengths and weaknesses of various exposure assessment techniques, how to link exposure assessment with environmental health, and human subject research in exposure studies. The course includes case studies and group projects. Students are expected to develop entry-level skills for designing exposure studies applicable to human exposure monitoring, epidemiologic investigations and health risk assessment. **Credits:** 3.00

HSCI 44500 - Industrial Hygiene Internship

Credit Hours: 2.00. Discussion class based on applied work experience as an industrial hygiene assistant or technician at an industrial, consulting, hospital, government, or education and research institution. Topics covered also include professional and ethical aspects derived from students' work experiences. Written and oral reports as well as other classroom assignments. Restricted to industrial hygiene majors who have completed an acceptable industrial hygiene work experience. **Credits:** 2.00

HSCI 44600 - Applied Industrial Hygiene

Credit Hours: 3.00. This course allows the student to synthesize his or her basic industrial hygiene fundamentals to understand how they apply in the real world. Issues faced by industrial hygienists will be addressed by a variety of guest speakers. Class projects add to the diversity of this senior capstone course. **Credits:** 3.00

HSCI 44700 - Global Workplace Health

Credit Hours: 2.00. This course will examine health and safety issues, particularly those which occur in the work setting, in various countries around the world. A particular focus will be toward developing countries in which the regulatory environment and resources to control hazards are less than those of more developed countries. Students will participate through an established professional organization. They will virtually work on specific projects in various countries, with the goal of improving the health and safety environment. **Credits:** 2.00

HSCI 45100 - Clinical Biochemistry

Credit Hours: 1.00 to 10.00. This course is designed to provide principles of biochemistry for clinical application for medical technologists. The course encompasses an introduction to carbohydrate, amino acid, and lipid metabolism. Also included are lectures on basic endocrinology, enzymes, and biosynthesis of steroid hormones. Physiological principles are stressed with respect to liver, lung, and kidney function. Special emphasis is placed on correlation of the theoretical and clinical areas. **Credits:** 1.00 to 10.00

HSCI 45200 - Clinical Chemistry

Credit Hours: 1.00 to 10.00. This course is designed to provide the medical technologist with the principles and application of clinical chemistry. Methods of instrumental analysis include a variety of automated procedures, electrophoresis, immunoelectrophoresis, immunodiffusion, radioisotopes, steroids, hormone assay, and toxicology. Quality control for clinical

chemistry is included. Supervised clinical laboratory experience is offered, with students rotating through the various areas of clinical chemistry on a sequential rotational basis. **Credits:** 1.00 to 10.00

HSCI 45300 - Clinical Hematology

Credit Hours: 1.00 to 10.00. Study of the functions, maturation, and morphology of blood cells. Blood cells, platelets, and reticulocyte counting procedure. Experiences in the study of cellular content of other body fluids are offered. Lectures and laboratory are designed to teach techniques of sedimentation rates, hematocrits, corpuscular indices, hemoglobin red cell fragility, and special staining procedures. Also, routine and special coagulation studies are taught. Supervised experience in clinical hematology offers opportunities for study in routine and special hematology and coagulation procedures. **Credits:** 1.00 to 10.00

HSCI 45400 - Clinical Immunohematology

Credit Hours: 1.00 to 10.00. A review of serologic principles and technical fundamentals of transfusion practice; a comprehensive consideration of all blood groups, with emphasis on ABO and Rh-Hr blood group systems. Extensive practice is gained in pre-transfusion techniques and antibody identification in the laboratory. Other blood types and antigen-antibody relationships are taught in laboratory and lectures. Also included are blood donor room procedures; preparation of blood components; correlation of blood component therapy with disease states; quality control of all reagents, procedures, and equipment used; and laboratory safety measures, all of which offer the best patient care and protection of laboratory personnel. **Credits:** 1.00 to 10.00

HSCI 45500 - Clinical Microbiology

Credit Hours: 1.00 to 10.00. Lectures and clinical laboratory experience in diagnostic procedures as aids to the diagnosis of human disease. Proper selection of techniques for the isolation and identification of medically important bacteria. Special emphasis is placed on newer methods for anaerobic bacteria identification. Also includes lectures and laboratory identification in the fields of mycology and microbacteriology, with emphasis on isolation and identification. Practical applications of fluorescent antibody tests are performed. **Credits:** 1.00 to 10.00

HSCI 45700 - Clinical Parasitology

Credit Hours: 1.00 to 10.00. Techniques of specimen examination, identification of cysts and ova, life cycles of parasites. **Credits:** 1.00 to 10.00

HSCI 45800 - Clinical Serology

Credit Hours: 1.00 to 10.00. Lectures and a laboratory experience in serology, including the preparation of antigen, flocculation tests for syphilis, heterophile antibody tests, creative proteins, RA test, FTA, rubella testing. Also included are lectures in immunology that include classifications of immunoglobulins; mechanism of antibody formation; immune response; types of antigen-antibody reactions; and theories of radioimmunoassay. **Credits:** 1.00 to 10.00

HSCI 46000 - Clinical Urinalysis

Credit Hours: 1.00 to 10.00. Routine analysis, chemical tests, sediment identification, renal function tests, pregnancy tests. **Credits:** 1.00 to 10.00

HSCI 46500 - Introduction To Laboratory Education And Management

Credit Hours: 1.00 to 3.00. A study of the principles and techniques of clinical instruction, and inservice and continuing education as well as administration and supervision. **Credits:** 1.00 to 3.00

HSCI 48500 - Health Physics Internship

Credit Hours: 1.00 to 8.00. Applied work experience as a health physics assistant or technician at a nuclear power generating station, government laboratory, hospital, or education and research institution. Permission of instructor required. **Credits:** 1.00 to 8.00

HSCI 49000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for senior students. Permission of instructor required. **Credits:** 1.00 to 8.00

HSCI 49200 - Professional Experience In Health Sciences Internship

Credit Hours: 0.00 to 3.00. Professional experience in Health Sciences. This experiential offering is coordinated by Health Sciences in cooperation with participating employers. Students will submit company evaluations related to the experience or summary reports and assignments related to professional development in Occupational, Environmental or other Health Sciences areas. Permission of department is required. **Credits:** 0.00 to 3.00

HSCI 49501 - School Of Health Sciences Senior Honors Seminar

Credit Hours: 1.00. This course is for Senior students in the School of Health Sciences Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required. **Credits:** 1.00

HSCI 49601 - School Of Health Sciences Senior Honors Project

Credit Hours: 1.00. This course is for Senior students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students will enroll in this course in both fall and spring semesters (and concurrently with HSCI 49501 in the spring semester). An updated Project Description Form will be at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required. **Credits:** 1.00

HSCI 51400 - Radiation Instrumentation Laboratory

Credit Hours: 2.00. Laboratory techniques required for the application of radiation and radionuclides. **Credits:** 2.00

HSCI 51500 - Introduction To Nuclear And Radiological Source Security

Credit Hours: 3.00. This course focuses on the basic elements of nuclear and radiological source security. It examines methods for planning and evaluating nuclear security activities at the State and facility level, establishing nuclear security culture in

different types of nuclear and radiological installations, and examines nuclear cyber and information security measures. Issues and approaches for nuclear security concerns, both state-level (e.g., nonproliferation and deterrence) and asymmetric concerns (e.g., nuclear smuggling and nuclear terrorism) will be addressed. The integration of safety and security and the use of alternative technologies will also be covered. Group exercises and simulations in applied nuclear security scenarios will complement lectures given by a number of national and international experts. This course is designed for both "technical" (engineering and science) and "non-technical" (policy) students and the interaction between students of different backgrounds is encouraged. **Credits:** 3.00

HSCI 51600 - Molecular Imaging-Nuclear Medicine

Credit Hours: 2.00. This course is related to molecular imaging by SPECT (single-photon emission computed tomography) and/or PET (positron emission tomography). This course is particularly useful for graduate and senior undergraduate students in the medical physics programs. It has been offered to MP and HP graduate students over the last 4 years (2014 - 2018) as a part of the 3-credit molecular imaging course with magnetic resonance spectroscopy (MRS: 1-credit) taught by Dr. Ulrike Dydak, computed tomography (CT: 1-credit) taught by Dr. Keith Stantz, and nuclear medicine (NM: 1-credit) taught by Dr. Shuang Liu. In the future, it will be expanded the "Nuclear Medicine" section as a 2-credit course on the basis on the previous lectures. This course focuses on recent development in nuclear medicine techniques for noninvasive imaging of brain diseases, cancer, and heart diseases. This course is delivered as 50-min lectures twice a week. Students are expected to spend more time for homework and literature reading. **Credits:** 2.00

HSCI 52000 - Risk Assessment In Environmental Health

Credit Hours: 3.00. Risk assessment as used in environmental health is the scientific process used to determine the extent of human exposure to an environmental hazard, and the type and quantify of health effects that are likely to result from these exposures. Information derived from risk assessments are used as the basis for setting regulatory guidelines, determinations of whether a given situation is "safe" or "hazardous" throughout government and industry. This course will cover the process and steps needed to performing a risk assessment, how risk communication can be used to discuss results of a risk assessment, and the use of risk management as a tool to translate results of a risk assessment into policy. **Credits:** 3.00

HSCI 52500 - Introduction To Statistical And Computational Approaches For Health Sciences

Credit Hours: 3.00. Statistical methods are important for data analysis and understanding the trends in the dataset. This course will provide an introduction to the analysis of biological data in a statistical framework using standard computational methods. The course will have a lecture and hands-on component to introduce students to topics and then utilize them to solve typical problems in Health Sciences. In addition to learning the statistical concepts, the students will also be introduced to computational approaches for data analysis. The combination of statistical and computational concepts along with the hands-on experience will help students in their research projects. The topics covered include data representation, sample statistics, probability, common discrete and continuous distribution, confidence interval estimation, experimental design, analysis of variance, statistical methods for hypothesis testing, linear and logistic regression, correlation, power analysis, graph theory, network analysis, omics-based analysis, and data visualization. The course is ideal for Health Sciences students who perform data analysis and are interested in implementing these approaches in their research. Permission of department required.**Credits:** 3.00

HSCI 52600 - Principles Of Health Physics And Dosimetry

Credit Hours: 3.00. Principles of health physics, radiation dosimetry, and radiation shielding. Topics covered include natural and man-made radiation environments, operational radiation quantities and units, radiation protection philosophy, risk and dose limits, dose-response models, mortality estimates and risk calculations. **Credits:** 3.00

HSCI 53400 - Applied Health Physics

Credit Hours: 3.00. Lecture and case studies related to the application of radiation dosimetry and shielding principles to the practice of health physics, including environmental and in-plant monitoring, emergency response, decommissioning and decontamination, operational criteria for meeting ALARA exposure limits, and the transport, disposal and treatment of radioactive waste. Epidemiological studies related to radiological accidents and nuclear power are also examined. **Credits:** 3.00

HSCI 54000 - Radiation Biology

Credit Hours: 3.00. Effects of ionizing radiation on living systems at the molecular, cellular and tissue levels. Biological basis for radiation therapy treatment planning and radiation protection. **Credits:** 3.00

HSCI 54400 - Advanced Topics In Exposure Assessment

Credit Hours: 2.00. The course will prepare students to use techniques of exposure assessment as it relates to environmental and occupational epidemiological studies as well as regulatory compliance at workplace and in community settings, risk science, and susceptibility factors. It will include exposure assessment study design, the strengths and weaknesses of various exposure assessment techniques, and how to link exposure assessment with occupational and environmental health. Core concepts to be covered include exposure variability and its implications for reconstructing historical exposures, the choice of exposure metric, surrogate measures and measurement errors, exposure modeling, and biomarkers of exposure. The course emphasizes critical and analytical discussions of seminal exposure assessment literature. Students are required to critically evaluate exposure assessment strategies in selected epidemiological studies from the peer-reviewed literature. Students participate in the class through presentations, class discussions, and a semester project. **Credits:** 2.00

HSCI 54600 - Advanced Industrial Hygiene Control Technology

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Engineering controls are placed in effort to reduce or remove the hazard at the source by isolating the worker from the hazard. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material. **Credits:** 4.00

HSCI 54601 - Advanced Industrial Hygiene Control Technology Project

Credit Hours: 1.00. Students study the various techniques needed to control hazards in the workplace. Engineering controls are placed in effort to reduce or remove the hazard at the source by isolating the worker from the hazard. Permission of instructor required. **Credits:** 1.00

HSCI 54700 - Fundamentals Of Epidemiology

Credit Hours: 3.00. This course is an introduction to epidemiology, which is the study of the patterns, causes, and impact of disease in populations. Epidemiology is increasingly important for public health and clinical medicine research and policy. This course will discuss the basic principles and methods of epidemiology, including measurements of disease occurrence and association, study designs, and determination of causality. Contemporary examples will be used to illustrate the application of these concepts, with an emphasis on environmental causes of disease. **Credits:** 3.00

HSCI 54800 - Advanced Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. This course covers sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data. **Credits:** 3.00

HSCI 54801 - Advanced Industrial Hygiene Instrumentation Techniques Project

Credit Hours: 1.00. This course covers sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data. Permission of instructor required. **Credits:** 1.00

HSCI 55100 - Physical Agents In Environmental Health

Credit Hours: 3.00. Physical characterization and biological interactions of non-ionizing radiation with emphasis on the adverse effects of human exposure. Topics include source characterization, environmental exposure assessment, measurement instrumentation, toxicological and epidemiological findings, control strategies. **Credits:** 3.00

HSCI 55200 - Introduction To Aerosol Science

Credit Hours: 3.00. The principles of aerosol behavior and sampling, with particular emphasis on applications in the health sciences. Topics include aerosol aerodynamics, aerosol filtration, pulmonary deposition of aerosols, methods of environmental sampling, and generation of laboratory aerosols. **Credits:** 3.00

HSCI 55300 - Advanced Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization, protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and front line employees. As such, the successful health and safety manager needs to skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the front line employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the front line employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the front line employees and upper management together in their vision of a safe and health workplace. **Credits:** 3.00

HSCI 55301 - Advanced Occupational Safety Management And Culture Project

Credit Hours: 1.00. The Occupational Health and Safety Manager assumes a critical role within an organization - protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and front-line employees. As such, the successful health and safety manager needs skill sets which transfer across organizational levels. Permission of instructor required. **Credits:** 1.00

HSCI 56000 - Toxicology

Credit Hours: 3.00. (MCMP 56000) Introduction to general principles of toxicology, target organ toxicity, and safety evaluation. Covers toxicity of metals, solvents, pesticides, gases, dusts, and food additives.**Credits:** 3.00

HSCI 56200 - Analytical Toxicology And Pathology

Credit Hours: 3.00. Historically, toxicology has been defined as the study of the adverse effects of xenobiotics. Today, toxicology encompasses much broader areas, including the study of endogenous compounds, physical agents, and even using toxicants as research tools. Basic and introductory toxicology courses cover the principles of toxicant metabolism and target organ toxicity. This course, Analytical Toxicology and Toxicologic Pathology is focused on the research and clinical applications of these principles. Two major areas will be covered: (1) principles of toxicant detection in biological matrices and (2) the assessment of pathological effects caused by toxicant exposure in biological systems. Laboratory sessions associated with each major topic allow students to have hands-on experience in these advanced analytical and pathological technologies. This course provides a unique opportunity for students to learn techniques that research and clinical toxicologists use daily in scientific or clinical laboratories. The course is suitable to both graduate and upper-class undergraduate students who are interested in toxicology, forensic science, veterinary medicine, environmental and occupational health, food toxicity, pharmaceutical drug testing, medical laboratory science, and general human and children's health. **Credits:** 3.00

HSCI 57000 - Introduction To Medical Diagnostic Imaging

Credit Hours: 3.00. This course teaches the fundamentals of medical imaging, including the basic physics and engineering associated with each imaging modality (CT, MRI, PET, and ultrasound), as well as mathematics and computational tools associated with image reconstruction and image processing. The course is intended for students in health sciences, biomedical engineering, physics, and life sciences. **Credits:** 3.00

HSCI 57200 - Radiation Oncology Physics

Credit Hours: 3.00. An introductory course to the physical principles, equipment, processes, imaging guidance, and clinical techniques involved in the treatment of cancer patients with external radiation beams and radioactive sources. Various external radiation beam types and their energy deposition characteristics are described. Treatment planning dose calculation algorithms and point dose calculations are discussed. The use of international dosimetry protocols for radiation beam calibration are covered in detail. **Credits:** 3.00

HSCI 57400 - Medical Health Physics

Credit Hours: 2.00. This course introduces the legislation and international and national recommendations relevant to the practice of radiation protection in medicine. Principles for the design of radiation use monitoring programs and shielding for radiation facilities is covered. Radiation risk avoidance and management for staff, patients and their families, and members of the public are discussed. **Credits:** 2.00

HSCI 57500 - Introduction To Environmental Health

Credit Hours: 3.00. An introduction to chemical, physical and biological factors in the environment that affect the health of the community. This course examines health issues, scientific understanding of causes and approaches to the control of major environmental health problems in industrialized and developed countries. This is a core course for the Masters in Public Health (MPH) degree at Purdue. **Credits:** 3.00

HSCI 58000 - Occupational Biomechanics And Ergonomics

Credit Hours: 2.00. Occupational safety is a cross-disciplinary area concerned with protecting the safety, health and welfare of people engaged in work. Occupational ergonomics is a branch of science that focuses on optimizing the relationships between workers and their work environment. This course focuses on the principles and applications of safety and ergonomics as it applies to workers. The first part of the course will consist of lectures on the fundamentals of safety standards and liability and the development of work-related musculoskeletal disorders, ergonomic risk factors including work practices, tools and workstation design. The last part will consist of identification and use of safety and ergonomic controls to reduce and prevent work-related fatalities, injuries, and musculoskeletal disorders. **Credits:** 2.00

HSCI 58001 - Occupational Biomechanics And Ergonomics Laboratory

Credit Hours: 1.00. This course will be the laboratory component for HSCI 58000. Occupational Biomechanics and Ergonomics. Laboratory exercises will accompany and illustrate each topic discussed during the lecture course. An ergonomic project will allow the students to evaluate an individual performing a job and provide ergonomic recommendations to improve the work situation. The course will also emphasize report writing, teamwork, and communication skills. **Credits:** 1.00

HSCI 59000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for seniors and graduate students. Permission of instructor required. **Credits:** 1.00 to 8.00

HSCI 61300 - Professionalism And Professional Development In Health Sciences

Credit Hours: 1.00. Professionalism is a skill set necessary for graduate student success and future career development. Professionalism consists of multiple attributes allowing for the development of effective and productive careers while also contributing to positive workplace environments. Specifically, these skill sets benefit all disciplines and career paths. This course will provide students with an overview of career development, soft skills, responsible conduct of research, and diversity, equity, and inclusion. This 1-credit course is specifically designed to supplement initial RCR training students receive in GRAD61200. The course is designed to support additional RCR training to meet expectations for best practices by NIH and other funding agencies. It will focus on professionalism and professional development for new students in their MS and Ph.D. programs across the Health Sciences. It will be delivered as a 50-min. combined lecture and class discussion once a week. All Ph.D. and thesis-based MS students in the School of Health Sciences are expected to take this course, typically in the Spring of their second or third year. Permission from department required. Prerequisite: GRAD 61200. **Credits:** 1.00

HSCI 62500 - Grant Writing For Health Sciences

Credit Hours: 1.00. The ability to clearly communicate research concepts, ideas, and hypotheses is an essential skill for all researchers. Specifically, concise expression of complex research rationale, experimental design, and innovation through the grant application process benefits all disciplines and career paths. This course will provide students with an overview of the entire grant writing process through expert lectures, active discussion, writing activities, and peer-review processes. **Credits:** 1.00

HSCI 67100 - Biochemical Toxicology

Credit Hours: 2.00. Toxicologists in all fields are concerned with mechanism of action or how a specific toxicant or class of toxicants produces toxicity. Introductory toxicology courses typically focus on the adverse effects exerted by a specific compound, with some examination of mechanisms. The entire focus of this upper-level graduate course is on the "how" and the "why", or a detailed examination of biochemical mechanism of toxicity. There will be some lectures, but the majority of the course will consist of student-led discussions on specific mechanisms of action. Further, students will write a review-style article on a chosen mechanism of action. Prerequisite: HSCI 56000. **Credits:** 2.00

HSCI 67200 - MRI Quality Assurance Internship I

Credit Hours: 3.00. This internship course provides didactic training and practical experience in clinical diagnostic medical physics. Students will spend 3-4 hours per week learning the responsibilities of a medical physicist in MRI quality assurance (QA) such as MRI system performance testing, setting up weekly MRI QA procedures, analysis of MRI QA data, and annual clinical system evaluations. In Part I students will observe and review the weekly MRI QA tests performed by the MR Technologists on clinical MRI scanners and be involved with data analysis of these tests (image quality assessment, reporting). Annual MRI system performance evaluations of different clinical scanners will be observed and discussed. This includes assessing magnetic field homogeneity, slice position accuracy and slice thickness accuracy, and performance of radio frequency coil tests on the various coils available at different clinical MRI sites in the Indianapolis area. Students will also work as a team

with the instructors on a course project to develop and evaluate advanced MR QA methods and procedures. Prerequisites: HSCI 57000. Having documented experience in running an MRI scanner, e.g., having primary operator status on one of the research scanners at Purdue or IU. Level II MRI Safety Training: http://www.indiana.edu/~mri/safety_nonIU/safety.html. Permission of instructor required. **Credits:** 3.00

HSCI 67300 - MRI Quality Assurance Internship II

Credit Hours: 3.00. This internship course provides didactic training and practical experience in clinical diagnostic medical physics. Students will spend 3-4 hours per week learning the responsibilities of a medical physicist in MRI quality assurance (QA) such as MRI system performance testing, setting up weekly MRI QA procedures, analysis of MRI QA data, and annual clinical system evaluations. In Part II of the course, MRI system performance evaluations of different clinical scanners will be performed by the students independently following the ACR guidelines. This includes assessing magnetic field homogeneity, slice position accuracy and slice thickness accuracy, and performance of radio frequency coil tests on the various coils available at different clinical MRI sites in the Indianapolis area. Students will also work as a team with the instructors on a course project to develop and evaluate advanced MR QA methods and procedures. Prerequisites: HSCI 67200. (This course provides the theoretical basis and opportunity to observe MRI QA on clinical scanners, and forms the basis for this course, Part II). Permission of instructor required. **Credits:** 3.00

HSCI 67400 - Radiological Diagnostic Imaging Internship

Credit Hours: 3.00. This internship course provides the student with hands-on experience with clinical imaging equipment, lectures on the fundamental operation of the equipment, and quality assurance/control methods/assessment of this equipment. Students will learn the safety and imaging performance of flat panel digital x-ray system, fluoroscopy, CT scanner, Ultrasound system, and MRI scanner. Lectures will provide fundamental physics and operation of each system, perform quality assurance methods employed by board certified Medical Physics, and subsequent analysis of these methods. This course is to be delivered as a 50-minute lecture, a 150-minute lab, which includes additional time for image analysis (computational lab). The goal of this course is to provide the necessary information as part of CAMPEP/ABR and ACVR. Prerequisite: HSCI 570 Introduction to Medical Imaging. **Credits:** 3.00

HSCI 67600 - Radiation Therapy Clinical Competencies I

Credit Hours: 3.00. The course is a clinical practicum course for Medical Physics graduate students enrolled in the Purdue-Indiana University School of Medicine joint CAMPEP accredited program. Students will spend approximately 4 hours in the clinic on a weekly basis for 10 weeks. Prerequisite: HSCI 57200.**Credits:** 3.00

HSCI 67700 - Radiation Therapy Clinical Competencies II

Credit Hours: 3.00. This is a clinical practicum course for Medical Physics graduate students enrolled in the Purdue CAMPEP accredited program. Students enrolled in this course will participate in the Radiation Oncology clinic, which will provide similar experiences as junior medical physicists in training. Students will meet with the course instructor prior to spending time in the clinic to be assigned mentors and to arrange schedules. Students will spend approximately 3 hours in the clinic on a weekly basis. Absences/vacations are allowed but must be arranged with approved by the mentor with sufficient notice. Prerequisite: HSCI 67600.**Credits:** 3.00

HSCI 69000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for graduate students. Permission of instructor required. **Credits:** 1.00 to 8.00

HSCI 69600 - Seminar In Health Science

Credit Hours: 0.00 or 1.00. Selected topics in health sciences presented by staff, students, and invited speakers. **Credits:** 0.00 or 1.00

HSCI 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

HSCI 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Health, Services, Outcomes & Policy

HSOP 45200 - Social Aspects Of Pharmacy Practice

Credit Hours: 2.00. A survey of selected social and behavioral models and related issues that affect the contemporary practice of pharmacy. Special emphasis is given to the interdependent roles of the patient, the pharmacist, and the physician. **Credits:** 2.00

HSOP 46800 - Community Pharmacy Management

Credit Hours: 3.00. Principles, practices, and case studies related to the organization, operation, and control of community pharmacies. **Credits:** 3.00

HSOP 48200 - Marketing Pharmaceutical Products

Credit Hours: 2.00. Examination of the channels of distribution for pharmaceutical products, including research-intensive and generic manufacturers, drug wholesalers, independent and chain community pharmacies, non-pharmacy retailers, prescription benefit managers, and third-party payers. Areas of special emphasis include new product development, product distribution, advertising and promotion, Rx-to-OTC switching, and product pricing and payment policies. **Credits:** 2.00

HSOP 49000 - Special Topics

Credit Hours: 1.00 to 3.00. An honors course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required. **Credits:** 1.00 to 3.00

HSOP 50100 - Food And Drug Law I

Credit Hours: 3.00. A systematic study of the structure and function of the major federal (USA) laws and regulations governing the manufacturing, distribution, and marketing of foods, drugs, cosmetics, and devices. Permission of instructor required. **Credits:** 3.00

HSOP 50200 - Food And Drug Law II

Credit Hours: 3.00. Detailed study of statutes and regulations applied to discovery, development, and marketing pharmaceutical and devices in the United States. **Credits:** 3.00

HSOP 55600 - Healthcare Economics And Public Policy

Credit Hours: 3.00. Principles and theories of healthcare economics applied in analysis of the U.S. healthcare system. Perspectives are presented on the differential roles of economic analysis and policy analysis. Topics include medical care as an input to health, pharmaceutical service market, adequacy of health manpower supply, health associations and demand for legislation. Healthcare reform, the pharmaceutical industry, and social values that guide policy are explored. **Credits:** 3.00

HSOP 69000 - Special Problems

Credit Hours: 0.50 to 3.00. Individual investigations in pharmacy marketing, retailing, and management. Permission of instructor required. **Credits:** 0.50 to 3.00

HSOP 69600 - Seminar In Pharmacy Administration

Credit Hours: 1.00. Selected topics on current research, teaching methods, and contemporary problems in management and marketing. **Credits:** 1.00

Hebrew

HEBR 10100 - Modern Hebrew Level I

Credit Hours: 3.00. Introduction to Modern Hebrew: the writing and sound systems, and systematic presentation of basic structures. All language skills - reading, writing, speaking, and comprehension - are emphasized. No previous knowledge of Hebrew required. **Credits:** 3.00

HEBR 10200 - Modern Hebrew II

Credit Hours: 3.00. Continuation and extension of the first semester. The course aims to develop fluency in reading, comprehension, and spoken language. Knowledge of grammar and vocabulary is expanded. **Credits:** 3.00

HEBR 12100 - Biblical Hebrew Level I

Credit Hours: 3.00. The first semester of biblical Hebrew will present the basic elements of the language, including alphabet, vocabulary, and grammar. No previous knowledge of Hebrew required. **Credits:** 3.00

HEBR 12200 - Biblical Hebrew Level II

Credit Hours: 3.00. The second semester of biblical Hebrew will continue the study of reading, vocabulary and grammar, based on selections from the Hebrew Bible. **Credits:** 3.00

HEBR 20100 - Modern Hebrew Level III

Credit Hours: 3.00. Extensive practice in reading, speaking, and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading both in the modern language. **Credits:** 3.00

HEBR 20200 - Modern Hebrew Level IV

Credit Hours: 3.00. Extensive practice in reading, speaking, and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading in the modern language. **Credits:** 3.00

HEBR 22100 - Biblical Hebrew Level III

Credit Hours: 3.00. The third semester of biblical Hebrew focuses on reading and translation of extended passages form the Pentateuch and the use of textual criticism. **Credits:** 3.00

HEBR 22200 - Biblical Hebrew Level IV

Credit Hours: 3.00. The fourth semester of biblical Hebrew exposes the student to both narrative and poetic sections of the Bible. **Credits:** 3.00

HEBR 28400 - Ancient Near Eastern History And Culture

Credit Hours: 3.00. This course is a survey of the development of the ancient Near East, from its pre-history to Alexander the Great. It emphasizes the evolutions of various Near Eastern cultures in their many manifestations; art, government, agriculture, economics, philosophy, religion, ethics, and science. Taught in English. **Credits:** 3.00

HEBR 38000 - Israel And The Modern World: Cinema, Literature, History And Politics

Credit Hours: 3.00. Critical survey/exploration of major traits of Israeli culture through a variety of media: literature, film and music, in the larger context of Judaism, Zionism, as well as the creation of a new state and culture. Conducted in English; no knowledge of Hebrew is necessary. **Credits:** 3.00

HEBR 38300 - Kabbalah And Jewish Mysticism: Secret Knowledge In Judaism

Credit Hours: 3.00. This course critically explores the roots, history, symbolism and major characteristics of the Jewish mystical tradition known as Kabbalah. **Credits:** 3.00

HEBR 38500 - The Holocaust In Modern Hebrew Literature

Credit Hours: 3.00. This course critically examines the Holocaust and the ways in which it has influenced modern Hebrew literature, the role it plays, and how it is represented in modern Hebrew literature. Conducted in English; no knowledge of Hebrew is necessary. **Credits:** 3.00

College Health and Human Sciences

HHS 10100 - Introduction To Health And Human Sciences

Credit Hours: 1.00. This course is intended to introduce the various programs, majors and academic units within the College of Health and Human Sciences (HHS). In addition to providing an overview of each academic unit and the majors contained within, the course content is also structured to introduce students to career pathways within each respective unit.**Credits:** 1.00

HHS 30000 - Peer Mentoring In The Health And Human Sciences

Credit Hours: 1.00. This course will explore mentoring through training, practice, and reflection. Sophomores, juniors, and seniors in the College of Health and Human Sciences must be selected as HHS mentors prior to taking this course. Student mentors will actively participate in peer mentoring in one-on-one and group settings, use knowledge and skills gained in training and reflect on their experiences. Permission of instructor required. **Credits:** 1.00

HHS 30100 - Peer Mentoring Leadership In The Health And Human Sciences

Credit Hours: 2.00. This course will explore mentoring and leadership through training, practice, and reflection. Juniors and seniors in the College of Health and Human Sciences must be selected as HHS Core Leadership Team mentors prior to taking this course. Student mentors will actively participate in peer mentoring in one-on-one and group settings, develop activities for their peers, use knowledge and skills gained in training, and reflect on their experiences. Permission of instructor required. **Credits:** 2.00

HHS 40000 - Intercultural Learning In Health And Human Sciences - Lived Experiences

Credit Hours: 1.00 to 6.00. This course focuses on intercultural learning in health and human sciences through direct experiences in a foreign country, whose culture is unique as a whole yet diverse across its different regions. Students will be guided in cognitive and affective learning through observing the destination's culture and society and interacting with its people. By direct exposure to the local customs, health conditions, history, human relations, lifestyle, and religion as they travel across the foreign destination, students are expected to develop a deeper appreciation and empathy for cultural values and traditions that are different from their own. The course will emphasize the students' understanding of how individuals and communities can benefit from learning about others in improving their quality of life. Permission of instructor required. **Credits:** 1.00 to 6.00

HHS 59000 - Special Topics In Health And Human Sciences

Credit Hours: 0.00 to 9.00. Various public health topics that may change from semester to semester. **Credits:** 0.00 to 9.00

History

HIST 10001 - Issues In African-American History

Credit Hours: 3.00. Study and analysis of selected historical issues and problems of general import. Topics will vary from semester to semester but will usually be broad subjects that cut across fields, regions, and periods. May be repeated with different topics for a maximum of 9 credit hours. **Credits:** 3.00

HIST 10300 - Introduction To The Medieval World

Credit Hours: 3.00. Barbarians, kings, queens, peasants, witches, saints, teachers, students, heretics, Moslems, Jews, Christians, love, death, monks, farm life, city life, ordinary men, women, and children as Europe develops from A.D. 500 to 1500. **Credits:** 3.00

HIST 10400 - Introduction To The Modern World

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied. **Credits:** 3.00

HIST 10500 - Survey Of Global History

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics. **Credits:** 3.00

HIST 12300 - History At Work

Credit Hours: 1.00. Students will learn how history majors' distinctive skills and expertise can help them achieve success in many different careers. Participants will explore the value of historical thinking in daily life, including causality, contingency,

and contextualization, and will refine practical reading, thinking, and communication skills crucial to career success. Permission of department required. **Credits:** 1.00

HIST 12500 - Historically Speaking: Introduction To Historical Communication

Credit Hours: 3.00. Understanding effective oral communication is a vital part of the historian's job. This course introduces a variety of speaking practices and exercises for teaching students about the best oral communication practices. Students will deliver informational and argumentative speeches, engage in oral discussion, and will consider the best means of receiving and interpreting oral messages. **Credits:** 3.00

HIST 15100 - American History To 1877

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I **Credits:** 3.00

HIST 15200 - United States Since 1877

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II **Credits:** 3.00

HIST 20100 - Special Topics In History

Credit Hours: 3.00. This variable title course deals with broad historical topics that transcend and telescope traditional analytical, chronological, and geographical boundaries. Content will vary with the instructors teaching the class. **Credits:** 3.00

HIST 21000 - The Making Of Modern Africa

Credit Hours: 3.00. This course provides students with a comprehensive introduction to modern African history from 1800 to the present. Using a variety of films, novels and scholarly resources, we will examine the major historical forces that have shaped African lives over the last two centuries. Emphasis will be placed on African experiences of slavery, colonialism, liberation struggles, and post-independence national building. Students will also learn to analyze contemporary African issues within a larger historical context. **Credits:** 3.00

HIST 21100 - The Global Field: World Soccer And Global History

Credit Hours: 3.00. This is an introductory course to the history of soccer, on and off of the pitch. It studies the history of the game itself as well as the international economic, political, social, and cultural trends that shaped it. **Credits:** 3.00

HIST 22100 - History Behind The Headlines

Credit Hours: 3.00. This course introduces undergraduate students to the study of history and provides an overview of the various ways history is communicated outside the academy in narrative nonfiction, journalism, museum exhibitions, policy documents, political speeches, advertising, podcasts, television, film, and social media. **Credits:** 3.00

HIST 22800 - English History To 1688

Credit Hours: 3.00. This course is designed to survey the growth and development of English society from its beginning through the seventeenth century. Emphasis is put upon those institutions and events that influenced the establishments of the English legal system. **Credits:** 3.00

HIST 22900 - English History Since 1688

Credit Hours: 3.00. A continuation of HIST 22800. Emphasis is placed upon Great Britain as a world and imperial power. Attention is given particularly to the industrial revolution, the growth and achievements of democratic institutions, and the role Britain has played in Western civilization in recent times. **Credits:** 3.00

HIST 23005 - Hitler's Europe

Credit Hours: 3.00. This course will examine the rise, seizure, and consolidation of power by the Nazi Party and will trace the development of Adolf Hitler from a provincial Austrian to dictator of Nazi Germany. **Credits:** 3.00

HIST 23800 - History Of Russia From Medieval Times To 1861

Credit Hours: 3.00. This course explores the main characteristics of early Russian society, culture and politics. Topics include: the Kievan principalities, Orthodox Christianity, the Mongols, the rise of Moscow, the Petrine reforms, peasant and national rebellions, revolutionary movements, and the Tsarist empire to the Crimean War. **Credits:** 3.00

HIST 23900 - History Of Russia From 1861 To The Present

Credit Hours: 3.00. This course surveys the paths of the Russian empire through economic modernization, social transformation, and World War I; the revolutionary regimes of Bolshevism, Leninism, and Stalinism; World War II and the Cold War; the collapse of the USSR; and the new Eurasian states. **Credits:** 3.00

HIST 24000 - East Asia And Its Historic Tradition

Credit Hours: 3.00. Survey of the great historic traditions of China, Japan, and Korea from earliest times to approximately 1600, with special attention to state formation, society, intellectual, philosophical, and religious developments, and the visual, musical, and literary arts. **Credits:** 3.00

HIST 24100 - East Asia In The Modern World

Credit Hours: 3.00. The response of China, Japan, and Korea to the coming of the West in modern times, with special stress on the effect of Western ideas and machines. Approximately 1600 to the present. **Credits:** 3.00

HIST 24300 - South Asian History And Civilizations

Credit Hours: 3.00. Survey history of India, Pakistan, and Bangladesh, from the origins of South Asian civilization to the present. Topics include ancient India, the Mughal Empire, the colonial experience, the independence movement, and conflict and popular culture. **Credits:** 3.00

HIST 24600 - Modern Middle East And North Africa

Credit Hours: 3.00. This course explores the political, social, and cultural factors that have contributed to the formation of the modern Middle East. Course includes short stories and a selection of documentary films from the region. **Credits:** 3.00

HIST 25000 - United States Relations With The Middle East And North Africa

Credit Hours: 3.00. This course examines US relations with the Middle East and North Africa since World War II. **Credits:** 3.00

HIST 27100 - Introduction To Colonial Latin American History (1492-1810)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the principle historical themes of Latin America during the colonial period (roughly, from 1492 to 1810). No prior knowledge of Latin American history is required. **Credits:** 3.00

HIST 27200 - Introduction To Modern Latin American History (1810 To The Present)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the study of the major economic, political, social, and cultural processes that shaped modern Latin American nations since independence. No prior knowledge of Latin American history is required. **Credits:** 3.00

HIST 27800 - Money, Trade, And Power: The History Of Capitalism

Credit Hours: 3.00. This course examines the origins of capitalist institutions and their changes over time, including banks, joint-stock companies, and modern corporations -- all viewed with respect to their impact on industrialization, colonial expansion, business cycles, and the emergence of a global economy. **Credits:** 3.00

HIST 28400 - The Computer Age From Babbage To The Blockchain

Credit Hours: 3.00. In this course we will explore the history of computing-from the pre-electronic days through the computer's ascent in the twentieth century to the various electronic computing and communications technologies that surround us today. This course will investigate why there was a desire to create computing machines in the first place, the economic and political arrangements that brought computers into existence, the debates over what computers could (and should) be used for, the development of the IT profession, and the gradual shift from computers being room-sized specialty machines to everyday objects that people carry around in their pockets.**Credits:** 3.00

HIST 30000 - Eve Of Destruction: Global Crises And World Organization In The 20th Century

Credit Hours: 3.00. Using a variety of case studies, this course considers 20th-century turning points -- often violent and disastrous ones -- in an emerging global conversation about urgent world problems and their possible solutions. **Credits:** 3.00

HIST 30105 - Big History: Time And Scale

Credit Hours: 3.00. This course explores Big History, a new form of world / global history. Like all forms of world history, Big History transcends the limitations of nation-centered perspectives. Drawing on the history of science and environmental history, Big History considers the many forces (physical, biological, environmental, social, and political) that drive change across time. **Credits:** 3.00

HIST 30200 - Historical Topics

Credit Hours: 3.00. This variable-title course deals with broad historical topics that transcend and collapse traditional analytical, chronological, and geographic boundaries. Content will vary with faculty member teaching the class. **Credits:** 3.00

HIST 30305 - Food In Modern America

Credit Hours: 3.00. This course examines the kitchen as an architectural space, a place of labor and food production, and an arena for technological innovation in modern American history. Cooking and eating reflect cultural sentiments about modernity, progress, ethnicity, and family, and the politics of how society nourishes bodies. **Credits:** 3.00

HIST 30400 - America In The 1960s

Credit Hours: 3.00. Surveys the turbulent history of the 1960s America. Topics include: the Kennedy, Johnson, and Nixon presidencies; postwar liberalism and conservatism; insurgent political and social movements; the counterculture; the sexual revolution; rock 'n roll; and the Vietnam War. **Credits:** 3.00

HIST 30505 - The United States In The World 1898-Present

Credit Hours: 3.00. This course explores the central issues and themes of American foreign relations during the twentieth century with a primary focus on the expansion of American political military, economic, and cultural power. **Credits:** 3.00

HIST 30605 - Technology And War In U.S. History

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through the present day. **Credits:** 3.00

HIST 30701 - History Of Artificial Intelligence: Minds And Machines

Credit Hours: 3.00. This course examines the long history of efforts in automating human cognition. Historically, the attempts to automate human cognitive functions - from the mere reckoning of numbers to complex decision-making have been entangled with heated debates about what counts as good, proper, and desirable thinking; whose thinking machines should emulate; and whether the thinking of some humans is inferior to that of machines. In this course, we will examine how the invention of calculating machines - analogue and then digital - has developed in tandem with philosophical and scientific theories of human thinking and intelligence. In their turn, the latter developed as a response to changing social, political, and economic currents. **Credits:** 3.00

HIST 30705 - History Of Data: How Data Became Big

Credit Hours: 3.00. This course offers a long history of Big Data. The first module focuses on how states collected data from the 16th to 19th centuries. Here we will focus on mortality bills, census, statistics, and accounting tables. In the second model, we will pay special attention to data collection and privacy in the 20th century. In the third module, students will explore how previous developments in data collection were applied to the new developments in analog and digital computing. The final weeks of the course will focus on present-day artificial intelligence, big data, their technical limitations, and the ways they often amplify, exploit, and contribute to a wide array of social problems. **Credits:** 3.00

HIST 30801 - American Eugenics

Credit Hours: 3.00. This course explores the pre-history and history of American eugenics, as well as its afterlives. It analyzes how Americans have used scientific ideas to grapple with questions of heredity and human worth from the Early Republic to the present. We will explore the social and political uses of phrenology, physiognomy, and eugenics, and consider how those scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering.**Credits:** 3.00

HIST 30805 - History Of Life Sciences

Credit Hours: 3.00. This course will examine the development of life sciences from 1750 to the present, introducing students to critical problems related to biology and society through the study of primary and secondary sources. The "life sciences" include all the sciences that deal with life as an organic entity. A prominent theme in this historical treatment is the impact of social and political ideas on the life sciences. Topics will include theories of life, the origin of life, taxonomy and classification, theories of development, natural selection, genetics, eugenics, science and religion, the evolutionary synthesis, biodiversity, ecology and environmentalism, sociobiology, the discovery of DNA, cognition and the brain, and gender in science. Students will develop crucial skills in the interpretation of primary and secondary sources, research, analysis, and presentation. **Credits:** 3.00

HIST 30902 - History Of Biotechnology

Credit Hours: 3.00. This class examines historical intersections between engineering and biology in the Western world. The course begins by considering several possible meanings of "biotechnology." It examines how and why different biotechnologies from the life sciences, biology, and medicine have arisen in specific historical contexts, changed over time, and affected society from the late 19th century to the present. We will study vaccines and beer-making in the 19th century, cell culture, birth control pills, and DNA sequencing in the 20th century, and 21st-century genome editing and synthetic biology, for example. Overall, this course argues that biotechnologies have always forced human beings to consider whether living and non-living entities are made up of the same fundamental "stuff," the implications of manipulating living things, and the nature of life itself. **Credits:** 3.00

HIST 30905 - History Of Environmental Science

Credit Hours: 3.00. This course introduces students to various approaches to environmental science through time. It considers critical problems related to the environment and society. The "environmental sciences" include all the sciences that deal with the Earth's physical and organic environments. **Credits:** 3.00

HIST 31000 - Historical Geography

Credit Hours: 3.00. Survey of historical geography. Typically offered Fall Spring Summer.**Credits:** 3.00

HIST 31005 - The Civil War And Reconstruction, 1850 To 1877

Credit Hours: 3.00. A survey of the American Civil War and Reconstruction, covering the intense sectional conflict of the 1850s; the military, social, economic, and political aspects of the war; and the political and economic reconstruction that followed. Typically offered Fall Spring.**Credits:** 3.00

HIST 31205 - The Arab-Israeli Conflict

Credit Hours: 3.00. This class traces the emergence of political fault lines in Ottoman Palestine, the immigration of European Jews in the Interwar Era and after World War II, the divisive policies of the British Mandate, the establishment of a Jewish state and the subsequent wars between Israel and surrounding Arab countries. In the end, students study religion as one part of a complex struggle for control over regional resources. **Credits:** 3.00

HIST 31305 - Medical Devices And Innovation

Credit Hours: 3.00. This course examines the history of material cultures of health care in the United States. The class will analyze how technological innovation has become central to medicine over the last two centuries and how we are coping with the consequences, both intended and unintended, of our reliance upon such medical devices. We will look at identities associated with medical devices, the ways in which disease is constructed, how technologies contribute to the naming of maladies, and implications for emergent bioengineering and biotechnologies. **Credits:** 3.00

HIST 31405 - Science, Technology, Engineering And Mathematics (STEM) And Gender

Credit Hours: 3.00. Scientific and technological innovation has been a cornerstone of American identity. How science and technology matters to gender, and gender matters to science and technology, will be explored through studying amateur and professional scientists and engineers, industrialization, education, sexual division of labor, and home and work spaces in twentieth-century America. Examining technological, scientific, and engineering innovation through the lens of gender reveals changing relationships between men and women in modern America. **Credits:** 3.00

HIST 31505 - American Beauty

Credit Hours: 3.00. This course explores twentieth-century gender history in the United States through the concept of beauty. Ideals about beauty intersect with politics, economics, technological developments, medical innovations, and nation building. A critical examination of beauty as seen through advertising, pageants, and material culture, yields insight about modern womanhood, everyday life, and identify formation in the twentieth-century United States. **Credits:** 3.00

HIST 31700 - A History Of The Christian Church And The Expansion Of Christianity I

Credit Hours: 3.00. A history of the emergence of Christianity, the development of the Christian church, and the impact of Christian thought and institutions upon western Europe prior to the Reformation. **Credits:** 3.00

HIST 31905 - Christianity In The Global Age

Credit Hours: 3.00. This course examines the social, cultural, economic, legal, and religious dynamics of global Christianity in its emerging centers of Latin America, Asia, and Africa during the 20th and 21st centuries. **Credits:** 3.00

HIST 32105 - Spain: The First Global Empire, 1469-1713

Credit Hours: 3.00. This course examines the history of Spain's global empire from the unification of the kingdoms of Castile and Aragon to the War of the Spanish Succession. Topics include Spain's European possessions, overseas empire, ruling dynasty, society, and culture. **Credits:** 3.00

HIST 32300 - German History

Credit Hours: 3.00. A survey of German history from the earliest times until the present. After a brief description of the medieval empire, we will turn to the Germany of Bismarck and Hitler and its successor states. A recurring theme will be the struggle between forces of liberalism and democracy and those of authoritarianism and militarism. **Credits:** 3.00

HIST 32400 - Modern France

Credit Hours: 3.00. A survey of modern France since 1789, including political, social, industrial, and institutional development. Emphasis is also placed upon the colonial and international aspects of French history. **Credits:** 3.00

HIST 32501 - Twentieth Century Europe Through Autobiography

Credit Hours: 3.00. Merits and limitations of autobiographies as sources for 20th-century European history. **Credits:** 3.00

HIST 32900 - History Of Women In Modern Europe

Credit Hours: 3.00. This course examines women's experiences and constructions of femininity in Europe from 1789 to the present, including women in revolutions, state intervention in the family, changing ideas of sexuality, women's movements, women in socialism and fascism, and women in war. **Credits:** 3.00

HIST 33205 - The Nuclear Age

Credit Hours: 3.00. Once seen as a revolutionary and exceptional, nuclear technologies have become central to many aspects of life in the U.S. This course uses the history of nuclear technologies to trace how American society has grappled with technological change. **Credits:** 3.00

HIST 33300 - Science And Society In Western Civilization I

Credit Hours: 3.00. A survey of the main lines in the development of science and society in Western civilization from earliest times to Newton's discovery of gravitation. Beginning with prehistory and Egyptian and Mesopotamian civilizations, the course treats in more detail the Greeks and Romans. The course then considers science during the Middle Ages, examining the transmissions of ancient science and its incorporation into the body of Christian doctrines. The course concludes with the new efforts of physicians and astronomers to free their studies from the influence of the Church and antiquity, and the new accommodations between science and society during the Scientific Revolution. **Credits:** 3.00

HIST 33400 - Science And Society In Western Civilization II

Credit Hours: 3.00. This course considers Western science and society from the time of Newton to the present. Beginning with Copernicus to Newton, topics next include biological classification, modern chemistry, and the onset of the industrial revolution. For the nineteenth century the course stresses the maturation of biology. Darwinian evolution, the dynamic synthesis and electromagnetic studies, and the second industrial revolution. In the twentieth century, the course covers modern physics, the life sciences, the understanding of the universe, and the interaction between pure and applied science. The course concludes with some of the modern social and political problems which science caused by its success. **Credits:** 3.00

HIST 33505 - Nationalism And Socialism In East Central Europe

Credit Hours: 3.00. This course examines how the peoples of East Central Europe engaged and coped with the most influential ideologies of the 20th century; with special attention to the weaknesses of the interwar and postwar regimes, strategies of modernization, survival, and dissent. **Credits:** 3.00

HIST 33605 - Global LGBTQ History

Credit Hours: 3.00. This course will examine sexual and gender diversity during the last two centuries of accelerating global interconnectivity. Although the US-derived framework of LGBTQ+ identities has become increasingly popular, people around the world have and continue to understand themselves in a multitude of ways that extend beyond this current acronym. This course will discuss the rich complexity of sexual cultures across the world as well as how they connect through global processes, such as colonialism, warfare, and migration, that have defined the nineteenth and twentieth centuries.**Credits:** 3.00

HIST 33700 - Europe Since 1945

Credit Hours: 3.00. This course traces the history of Europe, west and east, from 1945 to the present. Once viewed as a success story, culminating in the collapse of eastern European communism, developments after 1990 - such as the breakup of Yugoslavia, the European debt crisis, and the War in Ukraine - call this simplistic narrative into question. This course will consider Cold War division, decolonization, and political protest alongside democratization and economic recovery.**Credits:** 3.00

HIST 33805 - History Of Human Rights

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization. **Credits:** 3.00

HIST 33900 - Traditional China

Credit Hours: 3.00. Chinese civilization from its origins to the end of the Ming Dynasty. Attention is divided equally between political and cultural history, giving emphasis to the development of traditional institutions in Chinese society as well as to art, literature, religion, and philosophy. **Credits:** 3.00

HIST 34000 - Modern China

Credit Hours: 3.00. Chinese history from the Qing Dynasty (1644) to the present, with emphasis on the period since 1800. Attention given to internal developments and China's response to Western thought and material accomplishments. Nationalism and communism in the twentieth century are examined. **Credits:** 3.00

HIST 34300 - Traditional Japan

Credit Hours: 3.00. The course considers Japanese civilization from its origins to the establishment of the Tokugawa Shogun (1603). Divided between political and cultural history, it will emphasize the development of traditional institutions in Japanese society, religion, philosophy, art, and literature. **Credits:** 3.00

HIST 34400 - History Of Modern Japan

Credit Hours: 3.00. A survey of Japanese history from the nineteenth century to the present, including Japan's response to Western expansionism, the formation of the modern state, political parties, industrialization, the Pacific War, the American Occupation, the postwar "economic miracle," and Japan today. **Credits:** 3.00

HIST 34505 - Arabs in American Eyes

Credit Hours: 3.00. This course explores Arab-American relations over the past 300 years, using American writings on the Middle East and North Africa as a prism for viewing evolving conceptions of national identity and global power in the United States. **Credits:** 3.00

HIST 34705 - History Of Religion In America

Credit Hours: 3.00. This course examines the history of religion in the United States from the colonial period to the present. It traces the evolution of religious life in America and religion's influence on American politics, society, and culture. **Credits:** 3.00

HIST 34901 - The First World War

Credit Hours: 3.00. This course is designed to explore the origins, course, meaning, and lasting legacy of World War I. **Credits:** 3.00

HIST 35000 - Science And Society In The Twentieth Century World

Credit Hours: 3.00. An introductory survey emphasizing cultural contexts, relationships with other institutions, and the lives of major figures. Covering selected major achievements as well as the problems these generate. Neither science nor engineering background is required. **Credits:** 3.00

HIST 35100 - The Second World War

Credit Hours: 3.00. A study of the diplomacy, economic mobilization, and military operations of World War II, 1939-1945. **Credits:** 3.00

HIST 35205 - Death, Disease And Medicine In Twentieth Century American History

Credit Hours: 3.00. This course examines the history of disease, dying, and medicine in the United States in the 20th century. **Credits:** 3.00

HIST 35305 - Sports In America

Credit Hours: 3.00. Today sports virtually dominate American culture. From fantasy leagues and 24-hour a day news shows to business decisions and off-the-field troubles to the games themselves, sports entertain Americans at the same time as they define American culture and social norms. This course will look at the growth of the sport industry in the 20th Century. It will examine the lives and importance of Babe Ruth, Joe Louis, Jackie Robinson, Muhammad Ali, and other athletes, as well as the economic, social, and medical impact of the games we watch. **Credits:** 3.00

HIST 35400 - Women In America To 1870

Credit Hours: 3.00. A survey of the history of women in America from the colonial period to 1870. **Credits:** 3.00

HIST 35500 - History Of American Military Affairs

Credit Hours: 3.00. Surveys American military policy from the colonial militia to the atomic age. Covers major wars and limited wars. The course also investigates the peacetime military functions, i.e., the Navy's role in diplomacy and the Army's involvement in Indian affairs. **Credits:** 3.00

HIST 35900 - Gender In East Asian History

Credit Hours: 3.00. Examination of the construction of tradition and modernity in East Asia through the lens of gender. Topics include the influence of "Confucian" ethics; gender and imperialism, nationalism and revolution; and social change in the aftermath of war and decolonization. **Credits:** 3.00

HIST 36105 - History Of Science, Technology, And Environment In Pre-Modern East Asia

Credit Hours: 3.00. This course explores developments in scientific, technological, and ecological history specifically in Pre-modern East Asia. In this class, we will read basic theories and methods in the history of science and technology, as well as basic debates and questions that challenge scholars studying the history of science, technology, and the environment in a non-western pre-modern context. We will explore how society, culture, and politics affect knowledge production and people's engagement with nature, and how these interactions, in turn, shaped society, culture, and politics. All readings are in English. No prior knowledge of East Asia is necessary. **Credits:** 3.00

HIST 36305 - The History Of Medicine And Public Health

Credit Hours: 3.00. The purpose of this course is to provide students with a historical understanding of the role public health and medicine has played in American history during the 19th and 20th centuries. How does the health status of Americans reflect and shape the U.S. **Credits:** 3.00

HIST 36405 - Patient Voices In The History Of Medicine

Credit Hours: 3.00. This course examines the history of medicine in the United States from the early twentieth century to the present by starting with patient voices, which provide a glimpse into the experience of illness. Using patient reflections as the primary lens through which to examine the history of medicine, topics covered include historical changes and historical decision making related to the diagnostic process, therapeutic interventions, access to care, and medical institutions. The course also examines how assumptions about gender, race, and class have shaped differential health outcomes such as mortality rates, time to diagnosis, and determination of treatment approach and efficacy.**Credits:** 3.00

HIST 36600 - Hispanic Heritage Of The United States

Credit Hours: 3.00. Despite their numerical prominence, Hispanics have received relatively little attention in traditional U.S. history. Focusing primarily on Mexican-Americans, Cuban-Americans, and Puerto Ricans, this course offers a historical perspective on the Hispanic experience from colonial times to the present. **Credits:** 3.00

HIST 37005 - Queens And Empresses In Early Modern Europe

Credit Hours: 3.00. This course explores the lives and legacies of queens and empresses in early modern Europe within the wider context of gender, political authority, culture, and monarchy. Students will be introduced to new scholarly approaches to the study of female rulership. **Credits:** 3.00

HIST 37100 - Society, Culture, And Rock And Roll

Credit Hours: 3.00. Surveys American society and culture through the prism of rock and roll music. Looks at politics, gender, race, and class in the postwar era to examine and explain the social, economic, and technological forces that shaped rock and roll. **Credits:** 3.00

HIST 37200 - History Of The American West

Credit Hours: 3.00. This course explores the history of the trans-Mississippi and Pacific west from the early 17th century to the late 19th century. The diverse experiences of the inhabitants and the environmental transformations are the central themes of the course. **Credits:** 3.00

HIST 37500 - Women In America Since 1870

Credit Hours: 3.00. A survey of the history of women in the United States from 1870 to the present. **Credits:** 3.00

HIST 37600 - History Of Indiana

Credit Hours: 3.00. Economic, political, and social history of Indiana from the state's earliest beginnings as a part of the old Northwest Territory to the present. **Credits:** 3.00

HIST 37700 - History And Culture Of Native America

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants. **Credits:** 3.00

HIST 38001 - History Of United States Agriculture

Credit Hours: 3.00. This course surveys the main development in North American agricultural history, emphasizing the continental United States. Topics include early American agriculture, the plantation system, land policy, scientific and technological change, agrarian politics, water rights, migrant labor, and agricultural policy. **Credits:** 3.00

HIST 38105 - American Indians And Film

Credit Hours: 3.00. This course investigates ways that Hollywood filmmakers influenced public perceptions of Native American history and culture through feature films. Students explore issues of race, gender, class, ethnicity, ideology, and nature, as well as the work of indigenous filmmakers. **Credits:** 3.00

HIST 38200 - American Constitutional History

Credit Hours: 3.00. Survey of the fundamental principles of American constitutionalism and dominant trends in judicial interpretation, from the creation of the Constitution to the period of the New Deal. **Credits:** 3.00

HIST 38300 - Recent American Constitutional History

Credit Hours: 3.00. Intensive study of constitutional questions and Supreme Court answers from the period of the Warren Court to present. Particularly emphasized are the areas of segregation, civil rights, and civil liberties and guarantees for personal rights. **Credits:** 3.00

HIST 38400 - History Of Aviation

Credit Hours: 3.00. A comparative history of human flight and air power (in Europe, the Americas, and Asia) from its origin in the early inventors and pilots, through its reflection in the popular media, to the global development of civil and military aviation. **Credits:** 3.00

HIST 38505 - Media, Politics And Popular Culture

Credit Hours: 3.00. This class examines the relationship of media, politics, and popular culture over the course of the twentieth century in American history. Students trace how new media shaped political institutions and practices and afforded opportunities for political change. **Credits:** 3.00

HIST 38605 - Land Of The Indians: Native Americans In Indiana

Credit Hours: 3.00. This course offers a survey of Native American and Indigenous history and culture in the historic region encompassing the modern state of Indiana. The course opens in the pre-Columbian era and is organized chronologically to the present day. **Credits:** 3.00

HIST 38700 - History Of The Space Age

Credit Hours: 3.00. The historical interaction between human values and space exploration in the contemporary age, focusing on issues of global interdependence. Topics include the international competition in rocketry, the Cold War in space, the moon missions, space disasters, and satellite technology. **Credits:** 3.00

HIST 39400 - Environmental History Of The United States

Credit Hours: 3.00. This is a mid-level survey designed to provide students of environmental science with historical background and students of history with the unique perspective of environmental history. **Credits:** 3.00

HIST 39500 - Junior Research Seminar

Credit Hours: 3.00. Variable title seminar for history majors in their junior year intended to teach historical skills, including research in primary sources, analytical skills, and forming historical arguments. It is a writing-intensive course and counts as one of the major requirements. **Credits:** 3.00

HIST 39600 - African American History To 1877

Credit Hours: 3.00. This course covers major themes in African American history to 1877 that emphasizes Black Americans' African origins and their experiences in the transatlantic slave trade, American slavery, Colonial America and the early United States as well as their fight for abolition and freedom during the Civil War and Reconstruction. **Credits:** 3.00

HIST 39800 - African American History Since 1877

Credit Hours: 3.00. This course covers major themes in African American history from 1877 that focus on Black Americans' struggle to overcome social, economic, and political oppression and to win basic civil and human rights while making valuable contributions to American society. **Credits:** 3.00

HIST 40000 - Great Books And The Search For Meaning

Credit Hours: 3.00. This intellectual-history course discusses the meanings of the Great Books within their particular historical contexts and the universal quest for self-understanding, focusing on good and evil; mystery and reason; the nature of power; and what it means to be human. **Credits:** 3.00

HIST 40300 - Europe In The Reformation

Credit Hours: 3.00. A study of decay and renewal in European society, 1300 to 1650. Concentrates on the Protestant and Catholic Reformation and religious wars, but also covers the Northern Renaissance, the New Monarchies, and the discovery and exploration of the New World. **Credits:** 3.00

HIST 40500 - The French Revolution And Napoleon

Credit Hours: 3.00. A study of revolutionary France from the fall of the ancient regime to the Congress of Vienna. Divided in emphasis between the period of the revolution and the era of Napoleon, the course stresses social, political, ideological, and institutional developments. **Credits:** 3.00

HIST 40600 - Rebels And Romantics: Europe 1815-1870

Credit Hours: 3.00. Examines the dramatic social, cultural, and political developments in Europe following the defeat of Napoleon through various rebellious and romantic personalities, as well as figures who supported conservative or reformist solutions to the upheavals of industrialization, revolution, and nationalism. **Credits:** 3.00

HIST 40700 - Road To World War I: Europe 1870-1919

Credit Hours: 3.00. Studies the increase in Europe's wealth and power through conquest, industrialization, and nation-state rivalries, along with the social stress and cultural anxiety that culminated in World War I; examines the war from the perspectives of both combatants and civilians. **Credits:** 3.00

HIST 40800 - Dictatorship And Democracy: Europe 1919-1945

Credit Hours: 3.00. This course examines the fleeting triumph of democracy across Europe. Followed by the rise of fascism, communism, and Nazism. Emphasis will be placed on broad economic, social, and cultural transformations as well as individual choices to resist or conform. **Credits:** 3.00

HIST 41005 - History Of The American Presidency

Credit Hours: 3.00. Using a historical perspective, examines the shifting role of the presidency in the American imagination and the cultural, social, and economic changes that have wrought political developments in public functions and expectations of the modern presidency. Typically offered Fall Spring Summer.**Credits:** 3.00

HIST 41300 - Modern European Imperialism: Repression And Resistance

Credit Hours: 3.00. This course examines the expansion, transformation and collapse of 19th and 20th-century European empires, focusing on colonial encounters and relationships. Students should come to the course familiar with major developments, events and themes in modern European and/or global history. **Credits:** 3.00

HIST 41505 - Gender And Politics In Early Modern Europe

Credit Hours: 3.00. This course explores the role of gender (its discourse as well as its practice) in the emergence, consolidation, and centralization of European political systems from the Renaissance to the French Revolution, such as princely courts, republics and monarchies. **Credits:** 3.00

HIST 42100 - Honors Historical Methods

Credit Hours: 3.00. Designed as a prequel to Honors Thesis; this course introduces the Honors students to various advanced interpretative approaches to history and methods of historical research. Students also choose their topic for their Honors Thesis and begin research. **Credits:** 3.00

HIST 42200 - Honors Thesis In Historical Research

Credit Hours: 3.00. Designed as a sequel to HIST 42100 (Honors Historical Methods); this course is intended as the culminating academic experience for students in the Department of History Honors Program. It will require the completion of an undergraduate thesis in history. Permission of instructor required. **Credits:** 3.00

HIST 42300 - Advanced Topics In Modern Germany

Credit Hours: 3.00. This course offers a reading-intensive study of a specific period or theme in modern German history. Semester-long topics might include Imperial Germany; Weimar Germany; Divided Germany (1945-1990); or thematic studies on culture, religion, or military affairs. **Credits:** 3.00

HIST 43900 - Communist China

Credit Hours: 3.00. The evolution of the Communist movement (1921-1949) and the development of the Communist government (since 1949) in China. Attention is given to political, economic, social, and cultural changes. **Credits:** 3.00

HIST 44100 - Africa In The Twentieth Century

Credit Hours: 3.00. A problem-oriented course in the modern history of Africa from 1880 to 1975. It analyzes origins of African nationalism, European colonialism, racial conflict, and war leading to the independence revolution of the 1960s and 1970s. **Credits:** 3.00

HIST 45000 - The English Landscape:Integrating History, Horticulture & Landscape Architect

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Permission of instructor required. **Credits:** 3.00

HIST 46000 - American Colonial History

Credit Hours: 3.00. An investigation of the foundation of the American colonies, their place in the British imperial structure, and the eventual conflict of imperial exigencies with colonial self-interest and national feeling. **Credits:** 3.00

HIST 46100 - The Revolutionary Era, 1763 To 1800

Credit Hours: 3.00. An analysis of the origins, nature, and consequences of the American Revolution; of the achievements and difficulties of the new nation under the Articles of Confederation; of the drafting and adoption of the Constitution; and of the initial political, economic, and social progress of the United States under the Federalists. **Credits:** 3.00

HIST 46700 - The Emergence Of Modern America

Credit Hours: 3.00. Examines the changes in American society between 1877 and 1932. The course covers such issues as the rise of industry, the growth of consumerism, the shift to a multi-ethnic society, imperialism, Populism, Progressivism, World War I, and the 1920s. **Credits:** 3.00

HIST 46800 - Recent American History

Credit Hours: 3.00. Examines the issues that shaped American society, politics, foreign policy, and culture from 1932 to the present. Covers the Great Depression, World War II, the Cold War, and the Vietnam War as well as the social, cultural, and economic impact of those events. **Credits:** 3.00

HIST 46900 - Black Civil Rights Movement

Credit Hours: 3.00. This course will examine the origins, dynamics, and consequences of the modern black civil rights movement by exploring how struggles for racial equality and full citizenship worked to dismantle entrenched systems of segregation, repression, and discrimination within American society and culture. **Credits:** 3.00

HIST 47005 - Women And Health In America

Credit Hours: 3.00. This course examines the historical relationship between women and health by exploring a number of critical themes that have affected women's health in the United States. **Credits:** 3.00

HIST 47300 - History Of The South

Credit Hours: 3.00. Geographic, economic, cultural, social, and political aspects of the South. The significance of such figures as Jefferson, Jackson, Calhoun, Jefferson Davis, and Woodrow Wilson. The emphasis is on the evolution of the intellectual climate. **Credits:** 3.00

HIST 47600 - The Civil War In Myth And Memory

Credit Hours: 3.00. This seminar will explore how the Civil War has been celebrated and/or remembered from 1865-present. **Credits:** 3.00

HIST 47700 - Native American Women's History

Credit Hours: 3.00. This course studies the history of indigenous women in North America from pre-contact to the present era, examining their roles through the experience of colonization and decolonization underscoring issues of sovereignty, identity, activism, kinship, public images, and stereotypes. **Credits:** 3.00

HIST 48005 - Madness And The Asylum In The United States

Credit Hours: 3.00. This course explores how Americans have understood insanity and asylums. We analyze historical concepts of insanity, the evolution of asylums, how psychiatrists have debated therapeutics, and how ordinary people have experienced treatments and diagnoses. **Credits:** 3.00

HIST 48500 - Topics In American Political History

Credit Hours: 3.00. This course deals with broad thematic and chronologically defined topics in American political history from the Revolutionary Era to the late twentieth century. Content will vary with the faculty member teaching the class. **Credits:** 3.00

HIST 48800 - History Of Sexual Regulation In The United States

Credit Hours: 3.00. This course will illuminate broad themes in the historical regulation of sexual violence, consensual sex, and homosexuality. Student will understand and analyze how cultural, social, religious, and moral ideologies have influenced conceptions of deviant and normative sexuality in the United States. **Credits:** 3.00

HIST 49200 - Seminar In Historical Topics

Credit Hours: 3.00. Course description will vary according to specific topic proposed to study. **Credits:** 3.00

HIST 49400 - Science And Society In American Civilization

Credit Hours: 3.00. This course examines the development of science in the United States from colonial times to the present. Emphasis in the earlier periods is placed on comparison and contrast of the American scene with that of Europe. Subsequent treatment deals with industrialization, and maturation of the American scientific community, and the increasing social effects of science. Among those considered are the forces making for urbanization, for greater interdependence among science, industry and government, and for repercussions in intellectual affairs. **Credits:** 3.00

HIST 49500 - Research Seminar In Historical Topics

Credit Hours: 3.00. This course is designed to train history majors in the fundamentals of historical research and writing. Course descriptions vary according to specific topics proposed for study by instructors. **Credits:** 3.00

HIST 49900 - History Internship

Credit Hours: 1.00 to 3.00. This course allows students to earn credit for internships. Examples of qualified internships would include work with museums, historical societies, and various units of government. Credit and course requirements arranged with the instructor. Permission of instructor required.**Credits:** 1.00 to 3.00

HIST 51200 - England Under The Stuarts

Credit Hours: 3.00. This intensive study of seventeenth-century England focuses on the political, religious, and economic tensions under the early Stuarts; the Civil War; Cromwell's Protectorate; and The Glorious Revolution. Topics discussed include parliament, puritanism, radicalism, the Restoration, and the Whig Oligarchy. **Credits:** 3.00

HIST 57600 - Problems In Latin American History

Credit Hours: 3.00. A detailed examination of specific topics in Latin American history. Topics offered vary between colonial and national periods. **Credits:** 3.00

HIST 57700 - Contemporary Latin America

Credit Hours: 3.00. A topical and regional approach to recent political, social, and economic movements in Latin America. **Credits:** 3.00

HIST 59000 - Directed Reading In History

Credit Hours: 1.00 to 3.00. A reading course directed by the instructor in whose field of specialization the content of the reading falls. Approval of each reading project must be secured from the department. Permission of instructor required. **Credits:** 1.00 to 3.00

HIST 59500 - The Holocaust And Genocide

Credit Hours: 3.00. (POL 59500) History and analysis of the Nazi attempt to destroy the European Jews, with comparisons to other instances of genocide. **Credits:** 3.00

HIST 60100 - Reading Seminar In European History

Credit Hours: 1.00 to 3.00. Bibliography and historiography of selected fields of topics in European history; may vary in subject matter from semester to semester. Prerequisite: Master's student standing. **Credits:** 1.00 to 3.00

HIST 60200 - Seminar In European History

Credit Hours: 3.00. Individual and group study of topics in European history from the medieval period to the modern era. Topics reflect the research, teaching, or historiographical specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing. **Credits:** 3.00

HIST 61000 - History: Theory And Methods

Credit Hours: 3.00. This is the first part of an introductory two-course sequence for new graduate students intended to acquaint them with some important issues regarding the modern professional practice of history. This semester concentrates on historiography, theoretical questions, and methodological debates that today's working historians inevitably encounter. Students

read about the practice of historical scholarship and read several important example texts representing different approaches to the discipline over the past 200 years. Students write several short book reviews, position papers, and a mock grant proposal during this semester. The course is required of incoming graduate students in history. It usually will be followed by HIST 61100, Research Practicum. **Credits:** 3.00

HIST 61100 - History: Research Practicum

Credit Hours: 3.00. The second half of a two-semester sequence for new graduate students intended to acquaint them with important issues regarding the modern practice of historical scholarship. This course is a research seminar in which students shape and execute their own research projects resulting in original article-length historical essays. In addition, matters relating to ethical conduct of research and problems of historical writing and argumentation are discussed. Prerequisites: HIST 61000 or 59800. Permission of instructor required. **Credits:** 3.00

HIST 64100 - Reading Seminar In Global History

Credit Hours: 3.00. Individual and group study of topics in global history. Topics reflect the research, teaching, or historiographic specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing. **Credits:** 3.00

HIST 64200 - Seminar In Global History

Credit Hours: 3.00. Individual and group study of topics in global history. Topics reflect the research, teaching, or historiographic specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing. **Credits:** 3.00

HIST 65000 - Teaching The History Survey Course

Credit Hours: 3.00. This course provides an introduction to the literature on teaching history at the college level, especially the literature on pedagogy, theory, and conceptualization needed for the undergraduate survey course. Students will become familiar with the professional literature, develop their own syllabus for the survey course, and produce an extensive historiographical essay supporting and justifying the contents of the syllabus. Class discussions will expose students to a number of teaching strategies, concepts, and exercises. Prerequisite: Master's student standing. Permission of instructor required. **Credits:** 3.00

HIST 65100 - Reading Seminar In American History

Credit Hours: 1.00 to 3.00. Bibliography and historiography of selected fields or topics in American history; may vary in subject matter from semester to semester. Prerequisite: Master's student standing. **Credits:** 1.00 to 3.00

HIST 65200 - Seminar In American History

Credit Hours: 3.00. Individual and group study of topics in American history from the colonial period to the present. Topics reflect the research, teaching, or historiographical specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing. **Credits:** 3.00

HIST 67000 - Seminar In Latin American History

Credit Hours: 3.00. Research or reading seminar in Latin American History on a selected topic in colonial or national period of Latin American History. Topics vary. It may be repeated once with change of topic. Students must have been admitted into M.A. or Ph.D. history programs or any other graduate program at Purdue. Also, adequate knowledge of languages pertinent to research topic is expected. No prior knowledge of Latin American History is required. **Credits:** 3.00

HIST 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

HIST 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Honors

HONR 12000 - Introduction To Research

Credit Hours: 3.00. In this course you will take an idea and blow it up. You will "blow it up" to better understand its elements, and its connections to various ways of creating knowledge. Then you will take the resultant pieces and use them to construct a research plan that's inclusive of at least two forms of inquiry. **Credits:** 3.00

HONR 19900 - Interdisciplinary Honors - Introductory Seminar

Credit Hours: 1.00 to 6.00. These introductory topic seminars are designed to open intellectual horizons and allow opportunities for learning by inquiry in a collaborative environment. Courses are limited to 20 participants or less, may be team-taught, and emphasize close interaction between the professor(s) and the students. **Credits:** 1.00 to 6.00

HONR 19901 - Honors First Yr Experience I

Credit Hours: 1.00. All JMHC students take this 1 credit course each semester (fall and spring) of their first year. This "Honors First Year Experience" is designed to introduce students to college-level honors education. Learning outcomes include how to be flexible thinkers, inclusive collaborators, and ethical leaders. In fall, students explore interdisciplinary topics in small seminars with dedicated faculty and work in groups with JMHC student mentors in "world readiness" labs. **Credits:** 1.00

HONR 19902 - Honors First Yr Experience II

Credit Hours: 1.00. All JMHC students take this course each semester (fall and spring) of their first year. This course is designed to introduce students to college-level honors education. Learning outcomes include how to be flexible thinkers, inclusive collaborators, and ethical leaders. This course is the second half of the required course sequence taken by all students entering the Honors College. Restricted to Honors College students. **Credits:** 1.00

HONR 19903 - Interdisciplinary Approaches In Writing

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences. **Credits:** 3.00

HONR 22000 - Community Of Inquiry

Credit Hours: 2.00. This course is for new members of the Honors College community, who entered as continuing Purdue students or transferred to Purdue. It, being your first or one of your first courses in the Honors College, is designed to help you hone some of the fundamental learning outcomes of an honors education: interdisciplinary thinking, critical thinking, problem-solving, research thinking, collaboration, and global awareness. You will also engage with the pillars of the Honors College and develop community within the Honors College. To accomplish these objectives, the course is simultaneously project-based and

experiential. You will work in multi-disciplinary teams on applied research that emphasizes critical and multi-dimensional thinking about real-world problems. Through project-based learning, you will move your skills beyond identifying and understanding a problem to identifying and formulating solutions to that problem. The problem addressed in the course is local or global in scope and has social, economic, political, and/or environmental implications for our local and/or global community as well as begs a multi-disciplinary, innovative solution. Continuing in the vein of experiential learning and of building your honors ethos, you will attend events (some as a class, others individually) and participate in programs in the Honors College and across campus that embody the Honors College's pillars: Community and Global Engagement, Leadership, Research, and Interdisciplinary Academics. You will curate a schedule of events that take place during the semester and reflect on these experiences. Permission of department required. **Credits:** 2.00

HONR 22100 - Exploring Place

Credit Hours: 3.00. "Exploring Place" is an examination of the cultural, social and historical dynamics that influence communities and relationships of a site. Blending independent study and distance learning, in this experiential learning course, the student and the instructor work together to design an individualized, in-depth study of the place in which the student is located. This study will be attentive to the social, cultural, political, economic, and other forces that have shaped this place historically and today, while also focusing on community life and the relationships between residents, institutions, organizations, and others. Exploring Place offers students the opportunity to better understand the people and places around them, expand their worldviews, and increase their self-awareness as they engage within these spaces and understand their place in them. **Credits:** 3.00

HONR 22200 - Solutions Lab Global

Credit Hours: 2.00. In this course, students from Purdue University (West Lafayette, Indiana) and at universities abroad will collaborate virtually in interdisciplinary teams to identify solutions to a major global challenge. Each semester, the theme of the global challenge changes. At the start of the course, students at both universities will meet together as a class to learn about the topic from a range of disciplinary perspectives through guest lectures, assigned readings, and class discussions. Students will then be divided into interdisciplinary teams with members from both universities and provided a prompt related to the semester's theme. Teams will spend several weeks of the course focused on researching, developing, and packaging their solutions, before presenting them publicly at the end of the term. In addition to increasing knowledge of the topic and improving teamwork skills, students in this course will advance in intercultural knowledge, skills, and attitudes through their international collaborative experience. **Credits:** 2.00

HONR 29500 - Interdisciplinary Honors - Independent Experience

Credit Hours: 1.00 to 3.00. Individual experiential projects undertaken with faculty supervision. Permission of instructor required. **Credits:** 1.00 to 3.00

HONR 29900 - Interdisciplinary Honors - Experiential Learning

Credit Hours: 1.00 to 6.00. These interdisciplinary topics seminars are designed to offer experiential learning on campus, in the community, and around the world. Courses are limited to 20 participants or fewer, may be team-taught, and emphasize close interaction between the professor(s) and the students. Students will participate in active learning exercises that may include study away and study abroad, workshops, research and creative skill building, community collaboration, and/or service learning. Seminar topics will vary from semester to semester. **Credits:** 1.00 to 6.00

HONR 29901 - Interdisciplinary Honors - Honors Mentors

Credit Hours: 2.00. This hands-on course provides leadership training to the continuing Honors College students selected to work as mentors for the required, first-year honors course. Students work closely with a faculty instructor. Restricted to Honors College students. Department permission required. **Credits:** 2.00

HONR 31000 - Space-Time!

Credit Hours: 3.00. In Space-time!, we will explore how our relationship to space and time has changed over human history. We will focus primarily on the last two centuries and how interconnected changes in science, technology, and culture altered our sense of the scope, age, and nature of the reality around us. The ideas around space and time offer us an occasion to see how arts, philosophy, sciences, and our own experiences shape the way we see the world. Students, too, will explore the cross-influences of arts, philosophy, and sciences, as they write their own creative works, engage complex ideas from new perspectives, and expand their imaginations. **Credits:** 3.00

HONR 31100 - Replicants

Credit Hours: 3.00. From ancient mythology to Blade Runner 2049, the creation of artificial bodies has captured the human imagination. This course asks: how do the materials we use to re-create the human body affect the way that we construct our humanity? We will examine the different materials people have used to replicate the body throughout history. The course is organized thematically by materials such as wood, wax, silicone, and digital media. This course emphasizes hands-on learning; we will cast wax masks, sculpt clay figurines, and create automata, among other experiential activities. The types of replicants we will study in this course range from voodoo dolls to Real Dolls, death masks to Deep Fakes, and statues to cyborgs. For the final project, you will choose a case study of a replicant to write about in an exploratory paper. **Credits:** 3.00

HONR 31200 - Jazz

Credit Hours: 3.00. Jazz artists "speak to each other in the language of music." In Jazz, we will explore the nature of this artistic conversation with many of its cultural influences, geographical variations, and temporal iterations. Throughout our time together we will interrogate varying facets of the social impact such a conversation facilitates. Furthermore, we will explore the musical language of jazz with its power to make collective performance stronger. And we will investigate the ways in which this artists' talk became the "talk of the town" and country as a medium through which people could break from dominant cultures. We will make sense of and process our journey by creating our own jazz ensemble, featuring the layered textures of our lives as inspiration for the note and lyric. **Credits:** 3.00

HONR 31300 - Science, Technology, & Society

Credit Hours: 3.00. Science and technology are deeply intertwined with the distribution of costs and benefits in human society, underscoring the need for critical perspectives. This project-based course will examine the social and ethical implications of science and technology using interdisciplinary methodologies/approaches. Students will have the opportunity to address questions such as: How have particular scientific discoveries and technologies emerged or evolved? How have they shaped society, and how has society shaped science and technology? How have science and technology compounded social inequalities (race, class, gender), and how can they be changed to reduce inequalities? Topics that will be explored will vary each semester. **Credits:** 3.00

HONR 31400 - The Human Epoch

Credit Hours: 3.00. In this course, students will explore the entangled relations between humanity and the environment from multiple social contexts and time periods. Throughout the class, students will read, analyze, and discuss interdisciplinary scholarship from the social and behavioral sciences. Classroom activities will take the form of discussion, projects and group assignments, and writing assignments, with an emphasis on peer-to-peer learning. Students will create a project aimed at a public audience that demonstrates knowledge about key course topics and communicates connections between social/behavioral knowledge and personal, civic, ethical, or global decisions and policies. As a result of taking this course, students will be able to understand and evaluate critical questions about humanity and its ecologies, recognize the importance of those questions for various audiences, and draw connections between course materials and their own perspectives about the world. **Credits:** 3.00

HONR 31500 - Across Differences

Credit Hours: 3.00. To understand and combat systemic injustices, our students must be equipped to engage with the historical and present-day racial and ethnic "reckonings" that define the United States, and large parts of the globe. This course offers students an opportunity to focus on cultural landscapes/contexts, to learn how race and ethnicity permeate cultural texts, genres, and industries. The course trains students to recognize how race-and-ethnicity-based inequities intersect with issues of class, gender, and/or sexuality, and how these intersections articulate themselves in/through culture. Students will grapple with the colonial, national, transatlantic, trans-cultural, and diasporic underpinnings of culture. Topics that will be explored will vary each semester, but to attend to the diverse ways in which students learn and demonstrate their learning, all sections will use interdisciplinary materials like songs, films, video games, sporting events, poems, neighborhood maps, photographs, fine art pieces, oral histories, interviews, and newspapers, in addition to traditional/scholarly publications.**Credits:** 3.00

HONR 39500 - Interdisciplinary Honors - Independent Study

Credit Hours: 1.00 to 3.00. Individualized course of study undertaken with faculty supervision. Permission of instructor required. **Credits:** 1.00 to 3.00

HONR 39900 - Interdisciplinary Honors - Special Topics Seminar

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of honors seminars that stress interdisciplinary understanding, intellectual flexibility, creative thought, and group discussion. Topics vary by semester. Open to students at all levels. **Credits:** 1.00 to 6.00

HONR 46000 - Technological Justice

Credit Hours: 3.00. In this course, students will study interdisciplinary approaches to technology ethics for responding to today's pressing technological dilemmas in a range of contexts, from healthcare, mass incarceration, and airport security to social media, smart cities, and space travel. Students will grapple with how historical and present-day inequalities, institutional environments, decision-making cultures, and regulatory systems impact the technological design process and distribution of technology's risks and rewards in society. We will ask ourselves how relations of power inform the ways technologies are designed and experienced, as well as how power shapes dominant and insurgent approaches to achieving technological justice. The primary deliverable in this class is for you to conceive of and carry out your own "Technological Justice" Project, based on your interests, passions, and personal and/or professional goals. **Credits:** 3.00

HONR 46100 - Well-Being

Credit Hours: 3.00. Copenhagen, Zurich, Helsinki, Stockholm, and Tokyo are the five most livable cities in the world according to MONOCLE's 2021 Quality of Life Index. They are the highest-ranking cities when using metrics to measure crime, emergency services' response time, transportation networks, cycling culture, food, drink, retail, and the number of independent bookshops. MONOCLE's Quality of Life survey is one among the many that exist to rank the world's best cities, but wealth is one theme that emerges from among the varying indices and their respective results. The metrics, indeed the participants responding to the metrics, represent populations of people with high levels of discretionary income. How might the metrics reflect different values if these indices include a different kind of participant, such as the urban poor? **Credits:** 3.00

HONR 46200 - Protein Design With FoldIt

Credit Hours: 3.00. The protein folding problem is a grand challenge in biology. How does a protein's amino acid sequence dictate its three-dimensional structure? FoldIt is an online game in which players determine the most stable folded structure of hypothetical proteins that have been predicted by unique computer algorithms to perform specific functions in the cell. Students in this course will be introduced to the mechanics of the FoldIt software to fold computer-predicted proteins into their native structures as well as design novel proteins that can bind and deactivate the COVID-19 spike protein. **Credits:** 3.00

HONR 46300 - Research Thinking Portfolio

Credit Hours: 2.00. This course establishes a new pathway for Honors completion through a critical engagement with the Undergraduate Research pillar of the college. This course will empower Honors students to leverage their research, scholarly, and creative experiences in curricular as well as co- and extra-curricular experiences toward completing the HC curriculum. Our course will combine workshops, hands-on laboratories, group discussion, and one-on-one meetings. The major assignment is a reflective portfolio, which will serve as a record of your past experiences and an opportunity to reflect on the ways in which your time as an Honors College student has shaped your research thinking and helped prepare you for life beyond the university. Successful completion of the course fulfills the scholarly project requirement of the HC curriculum. **Credits:** 2.00

HONR 46400 - Scholarly Project

Credit Hours: 3.00. This course fulfills the scholarly project requirement of the Honors College curriculum. Students will engage in original research projects that produce new knowledge. **Credits:** 3.00

HONR 49500 - Honors Independent Research

Credit Hours: 1.00 to 6.00. Individualized research under faculty supervision. Permission of instructor required. **Credits:** 1.00 to 6.00

HONR 49900 - Honors Research Project

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of faculty-led collaborative research projects. Topics will vary by semester. Permission of department required. **Credits:** 1.00 to 6.00

HONR 59901 - Research Mentorship Development Program

Credit Hours: 3.00. The Research Mentorship Development Program is designed for Purdue based on a nationally recognized curriculum and prepares graduate students or postdocs to mentor undergraduates in research. Effective mentoring of undergraduate researchers requires specific skillsets and approaches. Implementation of these strategies can lead to a productive and mutually beneficial experience for both students and their mentors. The course is designed for graduate students who plan to work with new researchers in their labs or research groups and who plan to enter academia or pursue careers in which they will mentor others in scholarship or research. Graduate students or postdocs selected for the program are matched with honors students who are interested in research. Permission of department required. **Credits:** 3.00

Horticulture

HORT 10100 - Fundamentals Of Horticulture

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development. **Credits:** 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture. **Credits:** 1.00

HORT 12100 - Medicine In The Garden

Credit Hours: 1.00. A survey of the uses and properties of horticultural plants for human health and well-being. Topics will focus on the close relationships between plants and human physiology, nutrition, medicines, mind-altering drugs, poisons, and beverages. **Credits:** 1.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers. **Credits:** 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques. **Credits:** 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed. **Credits:** 3.00

HORT 21100 - Fundamentals Of Turfgrass Culture Laboratory

Credit Hours: 1.00. (AGRY 21100) Companion lab to AGRY 21000. Laboratory exercises will focus on turfgrass and seed anatomy, morphology, identification as well as the hands-on basic principles of turfgrass culture. Designed for the student who intends to pursue a career in turfgrass management and plans to enroll in AGRY 51000. Enrollment preference will be given to Turfgrass Science Majors. **Credits:** 1.00

HORT 21200 - Greenhouse And Landscape Fundamentals For Educators

Credit Hours: 3.00. (ASEC 21200) This course will prepare future educators in using a greenhouse and landscape as teaching tools. The key focus will be preparing students to apply greenhouse and landscape management fundamentals in order to teach these concepts in the classroom. Laboratories will explore how to identify and produce both woody and herbaceous plants while safely maintaining and operating greenhouse technologies. Students will also explore how to implement landscape design technologies and identify tools, equipment, and landscape plants. Permission of instructor required. **Credits:** 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function. **Credits:** 4.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings. **Credits:** 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings. **Credits:** 2.00

HORT 27000 - Floral Design And Interior Plant Management

Credit Hours: 3.00. Elements and principles of floral design, as well as the identification, culture, and propagation of indoor plants. Topics in the art of floral design from both the florist's and the consumer's perspective, as well as information on growing houseplants. A variety of creative, hands-on lab projects include fresh flowers & foliage, silk, and dried materials. **Credits:** 3.00

HORT 27500 - Honors Course - Lower Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to first- and second-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required. **Credits:** 1.00 to 4.00

HORT 29100 - Selected Topics In Horticulture

Credit Hours: 1.00 to 3.00. This variable-credit, lower-level selected topics course will be used for lower-division undergraduate research projects, for development of new lower-division courses and for temporary courses for lower-division students. Permission of instructor required. **Credits:** 1.00 to 3.00

HORT 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

HORT 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering. **Credits:** 4.00

HORT 30600 - History Of Horticulture

Credit Hours: 3.00. The origins and development of agriculture, with specific emphasis on horticulture from prehistory to the present in relation to civilization and modern culture. **Credits:** 3.00

HORT 31110 - Aquaponics

Credit Hours: 1.00. (SFS 31100) (FNR 31300) There has been a significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia; and our impending food crisis has kindled an interest in developing aquaponics systems in western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. The waste disposal problem of the fish can become the nutrient supply to the plants. **Credits:** 1.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary. **Credits:** 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling. **Credits:** 3.00

HORT 31900 - Controlled Environment Production Of Horticultural Crops

Credit Hours: 3.00. This course combines production principles with environmental concepts and advances in technology to provide a comprehensive training in sustainable production of herbaceous ornamentals and vegetables in controlled environment systems. The laboratory instruction provides hands-on experience with the practice of growing crops under controlled environments by combining the learning from lab prep with the use of technology to control environment during production. **Credits:** 3.00

HORT 32100 - Hydroponics Systems

Credit Hours: 3.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in controlled environment agriculture (CEA). This course offers students foundational information and hands-on experience on hydroponic and soilless cultivation of horticultural crops. Production practices, growing systems, new technologies, and current challenges are discussed.**Credits:** 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.**Credits:** 3.00

HORT 37000 - Professional Floral Design

Credit Hours: 3.00. Principles and techniques of commercial-scale floral design for weddings, funerals, hospitals, personal, and parties. Design construction for fresh, dried, and silk materials. Survey of retail florist management. Permission of department required. **Credits:** 3.00

HORT 39000 - Cooperative Program In Horticulture

Credit Hours: 0.00. Supervised work experience in horticultural industry. Programs must be preplanned and conducted under the direction of the departmental coordinator with the cooperation of an employer. Students must submit a summary report. Permission of department required. **Credits:** 0.00

HORT 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

HORT 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

HORT 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

HORT 40000 - Horticulture Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities. **Credits:** 0.00 to 8.00

HORT 40300 - Tropical Horticulture

Credit Hours: 3.00. An introduction to the agriculture of the tropics and subtropics, emphasizing horticultural crops. Offered in even-numbered years. **Credits:** 3.00

HORT 42700 - Horticulture Capstone

Credit Hours: 1.00. Based on an approved work or internship experience, or case study, or mentored research experience, or production activity, students will collect information and develop a written analytical exploration of the commercial enterprise, internship institution, or research or production activity. The written analysis will be appropriate to the student's area of concentration. In addition, a summary oral presentation based on specific aspects of their experience will be made by each student. Prerequisite: Completion of an approved work or internship experience or mentored research experience. **Credits:** 1.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management. **Credits:** 4.00

HORT 45000 - In The English Landscape: Integrating History, Horticulture, And Landscape Architecture

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Offered in even-numbered years. Permission of instructor required. **Credits:** 3.00

HORT 47500 - Honors Course - Upper Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to third- and fourth-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required. **Credits:** 1.00 to 4.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required. **Credits:** 1.00 to 3.00

HORT 49900 - Thesis Research

Credit Hours: 1.00 to 6.00. For students doing individualized research on horticultural problems; report required. Arrange with academic advisor and honors research advisor before registering. Admission to the honors program. Permission of instructor required. **Credits:** 1.00 to 6.00

HORT 50600 - Commercial Grape And Wine Production

Credit Hours: 3.00. (FS 50600) A study of professional grape growing and wine production with an emphasis on Midwestern climates, adapted varieties, and recommended wine styles. This course is especially intended for upper-level undergraduate, or graduate students in the College of Agriculture that have completed basic coursework in plant sciences, biology and chemistry. Students will learn the principles of viticulture and enology and the practices of commercial grape growing and wine making. Must be 21 years old. Permission of instructor required.**Credits:** 3.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5. **Credits:** 1.00

HORT 52500 - The Plant Microbiome

Credit Hours: 3.00. Students will learn about the latest methods to collect and analyze root and shoot exudates, quantify the composition and activity of microbes associating with plants, and determine how these associations influence plant health and productivity. Critical reviews of the primary literature and development of a research proposal will help students acquire the skills needed to conduct research on this rapidly emerging topic. **Credits:** 3.00

HORT 53000 - Introduction To Computing For Biologists

Credit Hours: 3.00. This course will teach the basic skills and knowledge required to operate in UNIX environment and program in Python. The course is designed to teach graduate, and advanced undergraduate students in plant and animal sciences the skill set required to analyze and interpret their own datasets. The lectures and associated lab section will provide students hands-on experience in working within a high-performance computing environment to analyze genome-scale datasets. **Credits:** 3.00

HORT 53100 - Applied Plant Genomics

Credit Hours: 2.00. This course aims to provide students an introduction to the theory and practice of functional genomics in plants. The course is centered around the many forms in which DNA sequencing technologies are applied to understand plant genomes, their variation and their function. The course will cover concepts in plant genome sequencing, transcriptome profiling and functional enrichment analyses in sets of genes. This is a full semester course that meets twice a week for: 1. A lecture that covers the rationale and theory of the topic and 2. A hands-on lab section that provides experiential learning with the computational tools and packages used in plant genomics and transcriptomics. **Credits:** 2.00

HORT 54100 - Postharvest Technology Of Fruits And Vegetables

Credit Hours: 1.00. (FS 54100) Theoretical and applied aspects of methods being used for enhancing the quality and shelf life of harvested fruits and vegetables. Factors that affect the longevity of produce and technology used to control these factors and reduce deterioration of produce between harvest and consumption/processing will be emphasized. Weeks 11-15. **Credits:** 1.00

HORT 55100 - Plant Responses To The Environment

Credit Hours: 3.00. Future agricultural production and the environment will encounter multifaceted challenges from global climate change, heat and drought incidence and severity, and limited land and resources. An understanding of how plant responds to these changes is essential to develop new technologies and systems approaches to mitigate the negative impacts and enhance agricultural crop productivity. This is an advanced plant biology course covering the present state of understanding of phenological, physiological, and molecular and genetic mechanisms and processes by which plants acclimate to transient and chronic environmental extremes. **Credits:** 3.00

HORT 55300 - Plant Growth And Development

Credit Hours: 3.00. (BTNY 55300) Topics include seed dormancy, cell expansion and plant growth, pattern formation, phase transition, flowering, pollination and fertilization, seed development, fruit development, and senescence. This course is the second in a series of team-taught courses in the core curriculum of the Purdue Plant Biology Program. **Credits:** 3.00

HORT 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays. **Credits:** 2.00

HORT 59000 - Special Studies In Horticulture

Credit Hours: 1.00 to 3.00. Special studies in horticulture not covered in regular coursework. The field in which work is offered will be indicated in the student's record. Permission of instructor required. **Credits:** 1.00 to 3.00

HORT 60100 - Planning And Presenting Plant Science Research

Credit Hours: 1.00. The purpose of this course is to acquaint students with the culture of scientific research and the processes of scientific discovery and review. This course will: (1) acquaint students with techniques used in presenting short scientific talks, as e.g., at national meetings, (2) expose students to procedures used in preparing scientific papers, proposals, etc., (3) introduce students to the outcomes expected to be achieved by graduate education and the processes by which students are mentored and evaluated, (4) help students begin formulating their research project proposal, (5) acquaint students with guidelines for biosafety and responsible conduct of research and provide a forum for discussion of ethical issues confronting researchers, particularly those inherent in participating in extramurally-funded research, (6) acquaint students with intellectual property issues involved in

scientific research, (7) acquaint students with core research facilities across campus, and (8) expose students to discussions regarding the importance of diversity and an atmosphere of mutual respect to research excellence. This course is taken for a letter grade and carries one hour of credit. **Credits:** 1.00

HORT 60200 - Horticulture Research Seminar

Credit Hours: 1.00. Weekly attendance at the Horticulture and Landscape Architecture Departmental seminars to help graduate students develop an appreciation for attending seminars and learning appropriate and effective presentation skills. HORT 602 compliments HORT 60100 and HORT 60300 by extending the presentation and project development approaches learned, so that students are better ready to prepare and defend their project proposals in HORT 60300. Prerequisite: BCHM 56100. **Credits:** 1.00

HORT 60300 - Grants And Grantsmanship

Credit Hours: 1.00. Focuses on funding opportunities in agricultural research and techniques of writing successful scientific grant proposals. Students will write a proposal on a research topic of their choice during the course, and they will gain experience in the peer review process by preparing written reviews of proposals and participating in a panel meeting in which proposals are discussed and ranked. **Credits:** 1.00

HORT 64000 - Metabolic Plant Physiology

Credit Hours: 3.00. (BCHM 64000, BTNY 64000) Topics include photosynthesis, respiration, carbohydrate and lipid metabolism, and nitrogen, sulfur, and secondary metabolism. This course is the third in a series of core courses in the Purdue Plant Biology Program graduate curriculum. Prerequisite: BCHM 56100, BTNY 55300 or HORT 55300, Prerequisite: BIOL 55100 or HORT 55100. **Credits:** 3.00

HORT 69500 - Horticulture Seminar

Credit Hours: 0.00. Topics of current interest to staff and students. **Credits:** 0.00

HORT 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

HORT 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Hospitality and Tourism Management

CSR 40400 - Strategic Management For Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. Through the analysis of internal and external forces, students develop strategies to help an organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of an organization. The course is structured to enhance students' analytical, critical thinking, and verbal skills by integrating academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc. **Credits:** 3.00

HTM 234TN - Cultural Heritage Tourism

Credit Hours: 3.00. Analyzes visitor and host community dynamics and the management of tangible and intangible cultural heritage assets. Elements examined include management and development of cultural tourism attractions and links to community.**Credits:** 3.00

HTM 328HN - Beers Of The World

Credit Hours: 3.00. Explore the world's great beer styles, including imports and craft beers, as well as beer flavors and off-flavors, the brewing process, ingredients, history, beer and food pairing, competitions, judging and more. Sampling and field trips will be required. Students will also be prepared to take the Certified CiceroneR exam.**Credits:** 3.00

HTM 372TN - Tourism Geography

Credit Hours: 3.00. Explores principal geographic features, population centers and attractions including travel destinations across the world.**Credits:** 3.00

HTM 10010 - Exploring Transformational Experiences In Hospitality And Tourism

Credit Hours: 1.00. In an age where experiences have become the new currency, businesses must adapt and thrive in the experience economy to succeed. This course introduces students to the concept of transformational experiences within the experience economy, providing them with the knowledge and skills needed to navigate this dynamic landscape. Students will gain a better understanding of where their passions lie within the broader scope of hospitality and tourism, preparing them for academic and career-related success. **Credits:** 1.00

HTM 10100 - Hospitality And Tourism Student Seminar

Credit Hours: 1.00. Course assists the student new to Purdue to become acquainted with the Purdue system and with the HTM department and program. Information presented to assist students with developing strategies for academic and career-related success at Purdue. **Credits:** 1.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions. **Credits:** 3.00

HTM 16200 - Introduction To Event And Meeting Planning Industry

Credit Hours: 3.00. Upon completion of this course, students will have a comprehensive overview of the event and meeting industry. Topics will include the supply and demand side of event and meeting management, the basic planning process needed for any event or meeting, sustainability, business ethics, and keeping pace with current industry trends through guest lectures from event and meeting planners. **Credits:** 3.00

HTM 17300 - Tourism Systems

Credit Hours: 3.00. Tourism is a global phenomenon impacting destination communities, incorporating a range of hospitality-related businesses and organizations, and enriching the lives of tourists and residents alike. This course examines key elements of tourism systems, how these elements interact to deliver unique travel experiences, and how destination stakeholders can use

tourism for sustainable development. The course will strengthen students' understanding of tourism systems while preparing them to successfully engage in it for a variety of career options in tourism and hospitality industries. **Credits:** 3.00

HTM 18000 - Hospitality Operations

Credit Hours: 3.00. Hospitality leaders require a deep understanding of the fundamental principles and practical aspects of managing operations within the dynamic and fast-paced hospitality industry to effectively run a business. This course will address topics including principles of management, organizational structures, managerial decision-making, hospitality metrics, and the responsibilities of managers. Through these topics, the course will strengthen students' understanding of the hospitality industry as it exists today while preparing them for the industry of the future.**Credits:** 3.00

HTM 18100 - Introduction To Lodging Management

Credit Hours: 3.00. History, features, operation procedures and management of lodging facilities both in the United States and in other parts of the world. The course involves an experiential learning component. **Credits:** 3.00

HTM 18101 - The Union Club Hotel Experience

Credit Hours: 1.00. Hospitality businesses are complex operations requiring unique managerial approaches to deliver exceptional guest and employee experiences. The Union Club Hotel is ideally positioned to expose students to managerial roles in a multi-million-dollar asset. Students will shadow managers who oversee hotel departments and interact with corporate leaders through this experiential course while learning how managers ensure an exceptional guest experience, provide a positive employee experience, and execute efficient hospitality operations. The knowledge gained in this course is transferable to all hospitality businesses, making this course valuable for all.**Credits:** 1.00

HTM 19100 - Sanitation And Health In Foodservice, Lodging, And Tourism

Credit Hours: 3.00. This course introduces students to the foodservice component of the Hospitality and Tourism industry and explores food safety and other health-related issues. Application of sanitation principles in restaurants, hospitals, schools, hotels, cruise ships, airlines, and international travel are covered. Students must pass a National Sanitation Certification Examination to receive credit. **Credits:** 3.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.**Credits:** 1.00

HTM 20200 - Hospitality And Tourism Work Experience

Credit Hours: 1.00. This course is a supervised paid industry work experience in the hospitality and tourism industry. Students are required to present a signed agreement from their employer prior to initiating employment. Students are also required to prepare a series of work and reflective reports. A minimum of 320 work hours is required for completion during either a summer or semester period. **Credits:** 1.00

HTM 21200 - Leading For Success In Service Industries

Credit Hours: 3.00. Effective leaders possess knowledge of organizational behavior and skills which provide the capacity to enhance organizational performance. Drawing upon leadership and organizational behavior theories, this course will provide students with the tools necessary to lead teams in service industries. Areas of focus include understanding individual differences and team dynamics, motivating and developing employees, effective decision-making, communication, influence, diversity, and leading change. This course will include preparation for a leadership development certificate, such as the Dale Carnegie Leadership certificate, to be earned upon successful completion of the course. **Credits:** 3.00

HTM 21800 - Creating Experiences For A Diverse Society

Credit Hours: 3.00. This course will provide students with knowledge and skills related to diversity, equity, and inclusion (DEI), and provide students an opportunity to actively increase their cultural competence to help them work with others effectively in professional settings. The course provides frameworks, terminology, and tools for engaging in productive conversations around difficult topics related to DEI. Students use critical and reflective thinking, as well as effective problem solving to create inclusive experiences for all stakeholders. **Credits:** 3.00

HTM 23100 - Marketing In Service Industries

Credit Hours: 3.00. Marketing plays a crucial role in service industries, addressing unique service challenges. Its importance lies in engaging customers, establishing trust and credibility, distinguishing from competitors, boosting revenue, and fostering sustainable growth and success. This course equips students with a customer-centric approach to service industry marketing, emphasizing the integral role of marketing in a service organization's strategic planning. The course exposes students to service marketing principles, components, and marketing practices. **Credits:** 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries. **Credits:** 3.00

HTM 25500 - Advanced Spreadsheet Techniques For Hospitality And Tourism Management

Credit Hours: 2.00. This course builds upon information and skills obtained in an entry-level-computing course. It will take students to the next level by introducing them to more advanced techniques used in Hospitality, Tourism, Retail, and Sales Management. **Credits:** 2.00

HTM 25501 - Fundamentals Of Excel And Data Analytics In Service Industries

Credit Hours: 3.00. The proper application of data analytics is important for optimizing the performance of service enterprises. Spreadsheet programs make it easy to manage and visualize data as well as perform basic data analyses. Microsoft Excel is one of the primary tools used for business reporting and decision-making tasks. In this course, students will receive hands-on training in a wide range of Excel functionalities including using functions and formulas, working with tables, creating charts, and analyzing data using PivotTables. This course will use practical, real-world applications to train students how to make business decisions.**Credits:** 3.00

HTM 26200 - Festivals And Special Events

Credit Hours: 3.00. This course offers a comprehensive overview of the theory and procedures associated with the coordination of festivals and special events. Essential topics will include the conceptualization, planning, coordination, sponsorship,

marketing, funding, staffing, legal issues, and assessment of festivals and special events. Students will gain hands-on experience by volunteering to work a minimum of six hours to set up, help coordinate, or tear down a large-scale festival or special event. **Credits:** 3.00

HTM 29000 - Seminar

Credit Hours: 1.00. Current issues facing the hospitality and tourism industry are presented and discussed. An emphasis is placed on exploring the various means used to study and understand these issues. Admittance into the HTM Honors Program. **Credits:** 1.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.**Credits:** 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries. **Credits:** 2.00

HTM 29102 - Introduction To Foodservice Management

Credit Hours: 3.00. An introduction to food preparation methods and service techniques in quantity food settings. Students become familiar with ingredients and culinary terminology, and learn to read, write and evaluate menus. Recipe conversion, inventory and costing skills are developed. Production methods, equipment, and product flow are examined. Front-of-the-house service techniques as well as front-and-back-of-the-house interactions will be studied. **Credits:** 3.00

HTM 29700 - Introduction To Honors Research

Credit Hours: 1.00. Introduces students to the design and implementation of an honors research project. **Credits:** 1.00

HTM 30000 - Semester Internship Experience In Hospitality And Tourism

Credit Hours: 0.00. Mechanism to recognize students in the Purdue system the semester they are off campus participating in an approved semester internship program with a hospitality company. Permission of department required. **Credits:** 0.00

HTM 30200 - Hospitality And Tourism Industry Internship I

Credit Hours: 1.00 or 2.00. Opportunities for learning through professional work experience that is practical, meaningful, and aligned with career aspirations are important for career development, planning, and goal setting. As part of the professional development curriculum, this internship course provides students with entry-level experience within the hospitality and tourism industry, broadening their exposure and understanding of the industry to explore potential career paths. Guided by the Ray

Kavanagh Career Center and the National Association of Colleges and Employers (NACE) Career Readiness Competencies, students apply what they are learning in the classroom to the workplace.**Credits:** 1.00 or 2.00

HTM 31100 - Procurement Management For Foodservice

Credit Hours: 3.00. Identifies and describes food, supplies, and related merchandise used in the foodservice industry. Provides methods and criteria for recognizing quality, evaluating, specifying, purchasing, and inspecting these products. Discusses the use of technology in the purchasing component of the foodservice industry. **Credits:** 3.00

HTM 31200 - Talent Management For Service Industries

Credit Hours: 3.00. Service organizations are labor-intensive, requiring effective talent management to be successful. Managers must be able to attract, develop, motivate, and retain employees to deliver exceptional service. Building on leadership skills and management principles, this course will emphasize the strategic role of human resource management with topics that span the lifecycle of a job (e.g., recruitment, selection, training, performance management, compensation, etc.). Students will explore the science behind effective talent management, developing knowledge and skills that will prepare them to manage a growing and diverse workforce. **Credits:** 3.00

HTM 31400 - Franchising

Credit Hours: 3.00. The study of franchise administration, operations, and marketing, with a special emphasis on hospitality-related franchises. Includes a study of the legal regulation of franchises, the franchisee-franchisor relationship, and unique problems in operating a franchise. **Credits:** 3.00

HTM 31500 - Club Management And Operations

Credit Hours: 3.00. A study of the organization, administration, operation, and opportunities within the private club industry, with emphasis on the manager's duties. **Credits:** 3.00

HTM 31700 - Business Etiquette For Managers

Credit Hours: 1.00. A review of contemporary standards of human interaction in the workplace. How manners, etiquette and style affect and enhance everyday dealings with others. **Credits:** 1.00

HTM 32200 - Hospitality Facilities Management

Credit Hours: 3.00. Technical and managerial issues relating to the operation and maintenance of the physical plant and equipment in hospitality industry facilities. **Credits:** 3.00

HTM 33100 - Hospitality And Tourism Sales And Service

Credit Hours: 3.00. Application of sales and customer service methods used to generate revenues for hospitality and tourism businesses. Emphasis is placed on a hands-on assignment which requires students to identify a product that they will market and sell, as well as participate in a sales blitz. **Credits:** 3.00

HTM 34100 - Operations Control And Analysis In The Hospitality Industry

Credit Hours: 3.00. Applications of the control process and quantitative analysis to effectively manage an efficient and profitable hospitality business. The emphasis is on planning budgets, controlling operational activities, and evaluating performance. **Credits:** 3.00

HTM 34200 - Financial Management For Service Industries

Credit Hours: 3.00. To create value for owners, managers need to understand the implications of long-term investment and the importance of securing finance to ensure sustainable growth. The primary purpose of this course is to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, and capital structure.**Credits:** 3.00

HTM 35100 - E-Business For The Hospitality Sector

Credit Hours: 3.00. This course introduces the students to the technological foundation of the internet, e-business strategies and models, as well as the social and ethical issues concerning the internet. The students will gain a better understanding of how hospitality and tourism organizations conduct internet-based activities, and have integrated their online and overall business strategies. **Credits:** 3.00

HTM 35700 - Disruption And Innovation In Hospitality & Tourism

Credit Hours: 3.00. Hospitality and tourism businesses face unprecedented industry shifts requiring proactive leaders. Through this course students will develop an innovative mindset, rethink the status quo, and amplify their creative thinking in designing solutions to current and future business challenges.**Credits:** 3.00

HTM 36200 - Event And Meeting Management

Credit Hours: 3.00. The principles and practices of event and meeting management will be covered in this course, including: strategic event planning process, project management, risk management, financial management, human resources, stakeholder management, meeting or event design, site location and management, marketing, professionalism, and ethics. Students will gain hands-on experience planning, directing, organizing and controlling a small-scale event. **Credits:** 3.00

HTM 37000 - Sustainable Tourism And Responsible Travel

Credit Hours: 3.00. This course will examine issues associated with sustainability in the hospitality and tourism industry. It will examine how principles of sustainable development and the triple bottom line (economic, social and environmental) are applied to hospitality and tourism. The course will address sustainability across a variety of tourism sectors including destination management, lodging, restaurants and meetings. The course will also examine consumer issues associated with sustainability. **Credits:** 3.00

HTM 37200 - Global Tourism Geography

Credit Hours: 3.00. Introduction and analysis of specific world travel destinations, including the exploration of geographic features, customs and tradition, population centers, visitor attractions, political, religious, language and other cultural differences as these relate to the hospitality and travel industry. The course is designed to teach students specific geographic knowledge and develop a deeper understanding and empathy for cultural values and traditions that exist outside their own culture. **Credits:** 3.00

HTM 38110 - Revenue Management In Service Industries

Credit Hours: 3.00. Revenue management plays a vital role in guiding service businesses to allocate resources efficiently, understand customer behavior, stay competitive, and achieve long-term sustainability and profitability. This course provides students with the theoretical foundation and practical applications of revenue management in service industries. The course cultivates students' revenue optimization mindset and analytical skills. Students will have the opportunity to earn an industry-recognized certification. **Credits:** 3.00

HTM 38600 - Fundamentals Of Hotel Asset Management

Credit Hours: 3.00. The value of a hotel is based on both its operation and the real estate holding. A successful manager needs to understand the relationship between operations and the management of the real estate asset. Hotel asset management involves overseeing operating performance and real estate planning with the goal of achieving long-term profitability and enhancing the value of the hotel property. This course will introduce students to the principles and practices of hotel asset management including real estate management, contracts, as well as the planning and execution of hotel investments. Students with an interest in hospitality finance and real estate investment are encouraged to take graduate-level courses in this area and explore the finance and real estate minors following the successful completion of this course.**Credits:** 3.00

HTM 39000 - Undergraduate Special Problems

Credit Hours: 0.00 to 6.00. Individual or group participation in supervised reading, laboratory experiences, field experiences, or research in special areas of the field. Permission of instructor required. **Credits:** 0.00 to 6.00

HTM 39001 - Undergraduate Research In Hospitality And Tourism Management

Credit Hours: 1.00 to 3.00. This course allows undergraduate students to gain valuable experience and knowledge through research in the hospitality and tourism industry. Permission of instructor required. **Credits:** 1.00 to 3.00

HTM 39200 - Classical Cuisine

Credit Hours: 1.00. Supervised hands-on cooking experience to enhance competencies needed in professional cooking. Permission of instructor required. **Credits:** 1.00

HTM 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for CFS Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required. **Credits:** 1.00 to 3.00

HTM 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University. **Credits:** 1.00 to 6.00

HTM 39900 - Special Topics In HTM

Credit Hours: 1.00 to 6.00. Various topics that may change from semester to semester are presented by HTM faculty. **Credits:** 1.00 to 6.00

HTM 40000 - Career Mastery: Navigating Your Career And Professional Development Seminar

Credit Hours: 1.00. Successful professionals possess a strong sense of self and the ability to observe the world around them, reflecting, synthesizing, and responding effectively. As the capstone to the professional development curriculum, students have the ability to refine these skills through discussion and reflection in this seminar-style course. Guided by the National Association of Colleges and Employers (NACE) Career Readiness Competencies, this course focuses on honing various aspects of personal and professional development, with a focus on contemporary issues in the workplace, ensuring students are prepared to be effective leaders. Students will be confident, proactive, and well-prepared professionals with a mindset required to successfully transition into the professional world.**Credits:** 1.00

HTM 40200 - Hospitality And Tourism Industry Internship II

Credit Hours: 1.00. Career development is an ongoing process of refinement and reflection of professional aspirations as one moves along their career path accumulating work experience. As part of the professional development curriculum, and building on the HTM 30200 entry-level internship experience, this course provides students with a graduate-ready experience in their chosen field, focusing on leadership skill development. Through hands-on experiences and guided learning, students gain real-world professional experience while refining their leadership abilities. Students reflect on their performance to foster personal growth in preparedness for careers post-graduation.**Credits:** 1.00

HTM 41100 - Hospitality And Tourism Law

Credit Hours: 3.00. Legal issues can damage or even destroy businesses. The primary goal of this course is to educate students to identify behaviors and situations that are likely to result in legal liability for themselves and their operation. By identifying potential legal liabilities, students will be able to develop strategies to reduce their exposure and better determine when to involve a lawyer. Topics include court procedures, civil rights, contracts, negligence, legal and ethical relationships with patrons, employment law, real estate law, ethics, and risk management. Students will use critical thinking and effective problem-solving to analyze cases and determine potential ways to reduce the likelihood of similar legal problems in the future. **Credits:** 3.00

HTM 42200 - Hospitality Facilities Design And Management

Credit Hours: 3.00. The facility is the largest asset for most hospitality operations and profoundly impacts guest experience. How it is designed and managed can be the difference between operational success and failure. The primary goal of this course is to foster student understanding of facility design and physical plant maintenance. Students will learn standard language and concepts along with problem-solving and project management techniques to enable cost-effective decisions in creating a physical environment that maximizes the guest experience.**Credits:** 3.00

HTM 43600 - Customer-Centric Service Design And Management

Credit Hours: 3.00. This course explores and informs the design, management, and innovative strategies of customer-centric firms through the theoretical and empirical services management literature. The course uses conceptual frameworks and cases from a variety of industry sectors. **Credits:** 3.00

HTM 44100 - Financial Management For The Hospitality Industry

Credit Hours: 3.00. This course deals with subjects and issues facing a financial manager in the hospitality and tourism industry. The primary purposes of this course are to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, capital structure. **Credits:** 3.00

HTM 44300 - Hospitality Operations Control And Analysis

Credit Hours: 3.00. To be successful, a business must maximize revenue and efficiently control costs. This course will equip students with the knowledge and skills needed to plan, analyze, and control service operations. Students will learn essential

managerial skills such as establishing operational standards, forecasting sales, budgeting, controlling, and evaluating performance throughout the product cycle.**Credits:** 3.00

HTM 46200 - Advanced Event And Meeting Management

Credit Hours: 3.00. Advanced aspects of meeting and event management principles and practices will be covered in this course. A focus is placed on: strategic planning, project management, finance and risk management, event design, site management, and ethics. **Credits:** 3.00

HTM 49000 - Independent Study

Credit Hours: 1.00 to 4.00. Independent study. Permission of instructor required. **Credits:** 1.00 to 4.00

HTM 49110 - Wine Sommelier Certification

Credit Hours: 1.00. This course involves the application of previously learned information about the principles of wine including vine growing, wine production, sensory evaluation of wine and practices involved in selection and sales of wine in a foodservice establishment. Students are immersed in the analysis and application of the principles and practices of the Guild of the Master Sommelier Program including Level one Certification. Student must be at least 21 years of age. **Credits:** 1.00

HTM 49111 - Beverage Operation Management

Credit Hours: 1.00. This course teaches students the historical background and modern day principles and management practices regarding the production, selection, purchasing, storage, and service of beverage alcohol in all aspects of the hospitality industry. Students must pass the ServSafe Responsible Service of Alcohol certification examination to earn course credit. **Credits:** 1.00

HTM 49112 - Management And Service Of Beverage Alcohol

Credit Hours: 2.00. This course introduces the principles and practices associated with the production of beverage alcohol in the hospitality industry. Lectures and structured tastings will guide students in identifying and describing the unique characteristics of fermented beverages commonly found in the hospitality industry. Course fee. Students will be tasting alcohol as part of this course, they need to be at least 21 years of age to do so legally. Department permission required. **Credits:** 2.00

HTM 49200 - Advanced Foodservice Management

Credit Hours: 4.00. Utilize managerial skills and techniques with planning, organizing, directing and controlling a full-service restaurant operation. Management teams of two to three students develop, market, and operate a restaurant that is open to the public. Emphasis is placed on utilizing effective management skills to create a high-quality, profitable operation with well planned systems and highly motivated, organized employees. **Credits:** 4.00

HTM 49201 - Hospitality Operation Management And Leadership

Credit Hours: 4.00. Students apply managerial skills and techniques in organizing, directing and controlling a full-service restaurant operation as they rotate through a variety of managerial positions. Students will also participate in lectures, assignments, and projects on topics related to leadership, such as interpersonal communications (emphasis on culture, gender and age differences), ethical leadership (emphasis on integrity and credibility), public speaking, teamwork and critical thinking. Permission of department required. **Credits:** 4.00

HTM 49700 - Honors Research Project

Credit Hours: 1.00 to 4.00. The completion of the independent honors research project for CFS Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required. **Credits:** 1.00 to 4.00

HTM 49900 - Feasibility Studies And Business Development In Hospitality And Tourism

Credit Hours: 3.00. The study of business development. The course will cover all stages in the feasibility and development process. Emphasis will be on strategic planning, design of systems, models and problem analysis, leading to the opening of a successful hospitality or tourism business. **Credits:** 3.00

HTM 49901 - Strategic Management In Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. By analyzing internal and external forces, students develop strategies to help a service organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy development and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of a service organization. The course is structured to enhance students' analytical, critical thinking, and communication skills by integrating their academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc. **Credits:** 3.00

HTM 50100 - Research Methods In Hospitality And Tourism

Credit Hours: 3.00. Introduction to behavioral and economic research design, and the development of research proposals. **Credits:** 3.00

HTM 50101 - Statistical Laboratory

Credit Hours: 1.00. Introduction to the use of software used in behavioral research projects. **Credits:** 1.00

HTM 50200 - Management Information Systems For The Hospitality Industry

Credit Hours: 3.00. Analysis and design of management information systems for hotels, restaurants, and the travel industry. Topics include cost and value information, data management, local area and wide area networks, implementation of system and impact of information systems on hospitality organizations. **Credits:** 3.00

HTM 50300 - Business Statistics And Quantitative Analysis In Hospitality

Credit Hours: 3.00. Data analysis is an important skill for effective managerial decision-making. As advances in technology have made substantial amounts of data available to managers, it is increasingly important to be able to convert business data into actionable information. This course deals with the fundamentals of statistical analysis and forecasting techniques. Students will develop the ability to summarize and quantitatively analyze business data and make forecasts while taking into account seasonality and trends. **Credits:** 3.00

HTM 50400 - Consumer Behavior

Credit Hours: 3.00. Understanding how and why consumers make decisions about purchasing goods, services, and experiences allows companies to tailor their business strategies, product development, and customer service efforts to meet the specific needs and preferences of their target customer base. This course addresses the growing demand for professionals to better understand psychological, social and situational influences of consume behavior. This course provides students not only with an understanding of consumer behavior concepts and theories, but also with the tools and methodologies that can be directly applied

to real-world scenarios to navigate dynamic markets, effectively engage customers, and drive business success in today's competitive marketplace.**Credits:** 3.00

HTM 50500 - Hotel Asset Management & Investment

Credit Hours: 3.00. Asset management is an indispensable discipline in the hospitality industry, aimed at maximizing the value of hotel properties in alignment with the owners' and investors' strategic objectives. A competent manager in the industry needs to possess basic understanding of asset management principles and practices for operational and strategic decisions. This course exposes students to the multifaceted world of representing ownership interests in managing hotel investments, and helps students to establish a robust corporate finance foundation to become a competent manager in the industry. Through this course, students develop a nuanced understanding of the intricate interplay among operational issues, real estate management, and financial decisions, and effectively apply the learned knowledge to hotel real estate investment and operation strategies.**Credits:** 3.00

HTM 50600 - Leading People In Service Industries

Credit Hours: 3.00. Leadership requires an understanding of human behavior, organizational culture, and strategy. In this class, students are exposed to leadership theory through the extant literature. Facilitated by readings and class discussion, students develop critical and analytical understanding of how theory informs and connects to practice. The course topics include human resources functions, organizational and human behavior, human values and motivations, team dynamics, decision-making, and change management. This course takes an interdisciplinary approach, with student learning drawn from different fields.**Credits:** 3.00

HTM 50700 - Integrated Marketing Communications For Service Industries

Credit Hours: 3.00. This course addresses the unique challenges and opportunities in marketing the intangible, inseparable, variable, and perishable service products. Balancing theoretical research and practical applications, this course provides a systematic review of key components and processes for an effective integrated marketing communication for service industries. Students will learn how to leverage both long-standing and emerging marketing communication approaches (e.g., strategic marketing and promotion, branding, public relations, digital marketing, social media, influencer marketing and artificial intelligence application) to create customer awareness, manage customer expectations, build customer relationships, and ensure customer satisfaction and loyalty.**Credits:** 3.00

HTM 50800 - Cultivating A Service Excellence Mindset

Credit Hours: 3.00. Understanding the fundamental principles of service management is essential to successfully manage service organizations in a complex market environment. This course utilizes major theoretical frameworks, such as Service-Dominant Logic, to address key issues in managing service organizations, including creating service culture, motivating a service-minded workforce, co-creating service value, and achieving service excellence. Students develop managerial skills through a thorough understanding of service strategies, systems, and processes to optimize service value.**Credits:** 3.00

HTM 50900 - Service Experience Design

Credit Hours: 3.00. The success of service organizations requires well-planned design of the service environment and customer experience journey to enhance operational efficiency and excellence, drive customer satisfaction and loyalty, and differentiate from competitors. Addressing the importance of developing and providing optimal customer experience in service industries, this course aims to inspire a design-thinking approach to create contemporary customer experiences in various service settings. By gaining insights from the service design theories, students will gain knowledge to effectively manage the physical environment, service interactions, and service delivery processes to enhance the overall service experience quality. Learning by practice, students will apply the learned design tools to envisage, blueprint, and devise innovative service experience solutions.**Credits:** 3.00

HTM 51000 - Strategic Revenue Management In Service Industries

Credit Hours: 3.00. Revenue management is a vital strategic tool enabling decision-makers to coordinate various functions leading to company-wide profit maximization. This course empowers students with analytical tools to generate optimal revenue solutions in a competitive marketplace. In the course, students learn economics of pricing and market competition, models and algorithms for capacity allocation, overbooking, and forecasting through a variety of real-world contexts.**Credits:** 3.00

HTM 51100 - Hospitality Business Law And Risk Management

Credit Hours: 3.00. This course provides an overview and analysis of the legal aspects of managing a hospitality and tourism business. Risk management principles will be utilized to develop liability mitigation plans. Discussion board and case studies will be utilized to facilitate students' understanding and application of legal concepts for managing and owning businesses. Topics covered include: the rights and responsibilities of hospitality businesses and owners in the areas of civil rights, employment law, negligence, contract law, relationships with guests and others, licensing, real estate law, and product liability; the principles of risk management; and the fundamentals of business insurance. **Credits:** 3.00

HTM 51200 - Leadership In Hospitality And Tourism

Credit Hours: 3.00. This course will focus on the knowledge and skills required for effective leadership. Topics will draw upon an extensive body of research on leadership theory and practice and cover organizational behavior and team dynamics, business communication, decision-making, motivation and change management. In addition, specific skill development in the areas of problem-solving, written and oral communications, leading teams and goal setting, it will include models for examining personal career paths, ethical decision-making and the role or organizational change agents. This course will take an interdisciplinary approach and analyze leadership through different lenses and how leadership insights can be effectively applied to hospitality organizations. Students will examine leadership examples where individuals moved an organization from normal to exceptional functioning and extraordinary results. **Credits:** 3.00

HTM 51300 - Strategy In Service Industries

Credit Hours: 3.00. Strategic management plays a pivotal role in helping industry leaders gain a competitive advantage and accomplish business goals in an ever-changing marketplace. This course centers on the exploration of various theories, frameworks, and models to understand contemporary issues and challenges in service industries. Through the application of strategic management principles and strategy-oriented tasks, students comprehend essential topics in strategic management, including environmental and competitor analysis, strategic planning, strategy formulation, strategy execution, and strategic evaluation and control.**Credits:** 3.00

HTM 51400 - Business Analytics For Service Industries

Credit Hours: 3.00. In today's highly dynamic business environment, decision-makers often encounter problems that are complex and data intensive. This course focuses on a variety of techniques from the field of business statistics and exposes students to statistical and decision analytics to solve data-driven decision-making problems. The course adopts a practical spreadsheet-based approach to facilitate decision-making and explores the practical applications of these techniques across various functional fields, with a specific focus on service industries.**Credits:** 3.00

HTM 52200 - Foodservice Equipment And Facility Design

Credit Hours: 4.00. Development of efficient workspaces for hospitality operations. Topics include the principles of selection, operation, and maintenance of foodservice equipment; the application of human factors, ergonomics, environmental concerns in the development of workflow patterns; and the use of computer-aided design (CAD) to prepare facility drawings. **Credits:** 4.00

HTM 53100 - Hospitality And Tourism Marketing II

Credit Hours: 3.00. This course will examine marketing strategy in tourism and hospitality organizations. Students will actively engage in the application, analysis, and evaluation of marketing principles as they are applied to tourism and hospitality. **Credits:** 3.00

HTM 53600 - Advanced Service Management In Hospitality And Tourism

Credit Hours: 3.00. Approximately two-thirds of U.S. economic activity resides in the service sector. Subsequently, service firms' foci on the needs of their customers are rewarded by positive customer outcomes such as behavioral loyalty and positive word of mouth. This course explores and informs the design, management, and innovative service strategies of firms who operate in the service sector through the theoretical and empirical services management literature. **Credits:** 3.00

HTM 54100 - Advanced Hospitality Accounting And Finance Systems

Credit Hours: 3.00. Specialized accounting and finance systems as related to the hospitality industries. Applications of budgeting and pricing models, performance evaluations and incentives systems, and short-term asset management are discussed, as well as other current subjects. **Credits:** 3.00

HTM 54200 - Strategic Revenue Management In The Hospitality Industry

Credit Hours: 3.00. In this course, we will treat revenue management as a strategic platform for maximizing property-wide incomes, thus property value. The course is designed to provide students the theoretical foundation, tactical tools, and practical applications of revenue management. At the end of the course, students should be able to identify the problems and challenges during the implementation of revenue management systems and anticipates future trends and prospects. **Credits:** 3.00

HTM 55300 - Cultivating A Service Excellence Mindset For Healthcare Professionals

Credit Hours: 3.00. Notwithstanding the importance for healthcare services to prioritize clinical outcomes for patients, there is a growing need to think about the patient experience beyond science-driven, evidence-based practices. The healthcare sector is being transformed by consumerism and transparency that demands a more holistic approach to managing the patient experience. In order to promote patient engagement and to enhance their experience, an intentional strategic intent, as reflected in a service excellence mindset, is required. This course seeks to establish the foundation of this mindset for healthcare professionals that are driven to make a difference in their patients' lives. The aim of the course is for students to develop a greater appreciation for the complexity of providing excellent service in the healthcare industry. The course will stimulate students to think differently and more deeply about the patient experience through a service management lens. In doing so they will develop the necessary skills to make effective decisions in the constantly changing patient experience landscape. Permission of department required.**Credits:** 3.00

HTM 55400 - Designing The Patient Experience For Contemporary Healthcare Systems

Credit Hours: 3.00. In the rapidly evolving healthcare industry, optimizing the patient experience remains a fundamental focus of practice. Addressing the practical challenge and complexity of providing excellent healthcare services, this class aims to inspire a design-thinking approach to reimagine and reinvent the patient experience in the contemporary healthcare systems. Learning by practice, students will apply the design tools to envisage, blueprint, and devise a patient experience solution. Gaining insights on experience-centric innovations in the healthcare domain, students will develop capabilities to better manage the service interactions, facility, and processes to enhance the quality of the patient experience and ease the stress of a hospital stay. Permission of department required.**Credits:** 3.00

HTM 55500 - Investing In Healthcare Human Capital

Credit Hours: 3.00. The modern work environment is increasingly focused on working with people in teams - working with people and for people. In seeking to motivate and lead people, it is imperative to acknowledge individuals have different backgrounds, perspectives, and viewpoints. In successfully balancing the challenges of working with people in the labor intensive, diverse and high-stakes nature of the healthcare industry, this class seeks to provide knowledge on organizational behavior concepts (e.g., employee performance, satisfaction, engagement, and motivation; group behavior, teamwork; emotional labor, stress, work-life balance) and the skills to practice this knowledge as a healthcare professional. This course will provide students with the foundational building blocks to adapt to the changing landscape of the work environment, applying theories and exercising critical thinking skills to realize a transformative healthcare workforce experience. Permission of the department required.**Credits:** 3.00

HTM 57100 - Economics Of Travel And Tourism

Credit Hours: 3.00. This course includes the asset theory of tourism, cost-benefit analysis, tax policy impacts, and other economic and statistical aspects of tourism. The course will examine research designed to determine economic impacts of the hospitality and tourism industries. **Credits:** 3.00

HTM 58100 - Advanced Hotel Management

Credit Hours: 3.00. A study of current service management theories as they apply to hotel management. Theory topics include strategic planning, hotel organization and communication, organizational leadership, and control systems. Topics will be discussed from the viewpoint of the hotel's general manager. **Credits:** 3.00

HTM 59000 - Problems In Hospitality And Tourism

Credit Hours: 1.00 to 4.00. Individual study in advanced subject areas. A course plan must be submitted to the supervising professor. Permission of instructor required. **Credits:** 1.00 to 4.00

HTM 59001 - Graduate Professional Industry Internship

Credit Hours: 1.00. The Graduate Professional Industry Internship allows graduate students to gain valuable experience through paid employment with a company in the hospitality and tourism industry or a related industry. In addition, each student will research an issue and provide a potential solution to a problem faced by the employer. This course is not repeatable without special permission from the HTM Graduate Policy Committee and is only open to HTM graduate students who have completed a minimum of two semesters and 16 hours of graduate coursework in HTM. Credit is not allowed for both HTM 59001 and HTM 59002. Permission from Graduate Professional Industry Internship Coordinator is required to enroll in this course. Permission of instructor required. **Credits:** 1.00

HTM 59002 - Graduate Professional Industry Research

Credit Hours: 3.00. The primary emphasis of the Graduate Professional Industry Research is research on a relevant issue within the hospitality and tourism industry. To enhance the research project, it is anticipated that the research will typically be linked to a paid employment experience in the hospitality and tourism industry or a related industry. This course is not repeatable without special permission from the HTM Graduate Policy Committee and is only open to HTM graduate students who have completed a minimum of two semesters and 16 credit hours of graduate coursework in HTM. Credit is not allowed for both HTM 59001 and HTM 59002. Permission from the Graduate Professional Industry Research Coordinator is required to enroll in this course. Permission of department required. **Credits:** 3.00

HTM 59100 - Research Issues In Food Service Management

Credit Hours: 3.00. The course will focus on research issues related to the food service industry and their short- and long-term implications. Topics will include essential issues in food safety, product development, food service consumer interests, food production, and waste management. Exposure to quantity food production and purchasing. **Credits:** 3.00

HTM 59500 - Applied Management Concept

Credit Hours: 4.00. In this capstone course students integrate their knowledge with concepts and skills learned from previous coursework. Students will examine and deliberate executive-level hospitality and tourism concepts. They shall create an innovative project to address the micro and macro variables of an industry problem, gap, or challenge in Hospitality and Tourism Management (HTM) that synthesizes analytical, critical thinking, business, strategic, and operational hospitality and tourism management skills. Students shall conduct applied management research, access and gather plan-specific information, and construct both hospitality-standardized written and presentation versions of the project. Permisson of department required. **Credits:** 4.00

HTM 60100 - Research Development And Design

Credit Hours: 3.00. This course will equip doctoral students to think like a scholar and develop the ability to design rigorous research. Students will learn research philosophy, research idea development, and the development and evaluation of research processes and methods. Emphases are placed on developing students' confidence in conceptualizing, developing, designing, and writing empirical and theoretical research.**Credits:** 3.00

HTM 60200 - Research Topics And Methods Seminar

Credit Hours: 1.00. Examination of current research in hospitality and tourism. Focuses on industry research needs and appropriate methodologies. Open to graduate students and honors undergraduates. Required for doctoral students. Prerequisite: HTM 50100, STAT 50100, STAT 50200. **Credits:** 1.00

HTM 61200 - HTM Management Challenge Analysis

Credit Hours: 3.00. A course designed to discuss specific management problems in the hospitality and tourism industries. Through the use of case studies, students study current challenges, management analysis, the process of decision-making, and the impacts of corporate decisions. Prerequisite: basic management organization class. **Credits:** 3.00

HTM 61400 - Theory Of The Consumer

Credit Hours: 3.00. This course will examine concepts and theories that have been developed for understanding consumer choices and behaviors in society and marketplaces. Students will learn classic and modern consumer theories, such as behavioral economics and applied psychological and sociological theories. It will discuss how these theories can help explain consumer tendencies such as preferences, choices, and other consumption-related behaviors. **Credits:** 3.00

HTM 61500 - Theory Of The Firm

Credit Hours: 3.00. In this course, students examine concepts, models, and theories developed for the understanding of firm and organizational behavior. This course equips students with knowledge of classic and contemporary theories, such as those related to managerial economics, pricing and price discrimination, organizational structure and culture, employee productivity, firm financial behaviors, marketing management, and operations management.**Credits:** 3.00

HTM 63100 - Strategic Marketing In Hospitality And Tourism

Credit Hours: 3.00. Evaluates the role of marketing strategy within overall corporate strategic planning. Segmentation theory, brand segmentation, niche marketing, program life cycles, and positioning approaches are discussed. Emerging concepts, such as visioning, relationship marketing, strategic alliances, and database marketing are studied. Prerequisite: HTM 53100. **Credits:** 3.00

HTM 64200 - Advanced Personnel Systems In Restaurants, Hotels, And Institutions

Credit Hours: 3.00. Examination of the philosophical and operational alternatives related to establishing and directing human resource systems in complex restaurant, hotel, and institutional organizations. Prerequisite: HTM 34100, 41100; 6 credit hours at the upper division undergraduate level in Business, Management, Marketing. **Credits:** 3.00

HTM 68100 - Seminar In Hotel Management Research

Credit Hours: 3.00. Analysis of hotel industry research based on current policy issues. Prerequisite: HTM 58100. **Credits:** 3.00

HTM 69000 - Hospitality And Tourism Research Problems

Credit Hours: 1.00 to 4.00. Development of an individual research project for doctoral students. Projects are designed to broaden understanding of specific research techniques or to add to subject matter knowledge necessary for completion of the doctoral thesis. A paper worthy of submission to a refereed journal is expected upon project completion. Prerequisite: Doctoral student standing. Permission of instructor required. **Credits:** 1.00 to 4.00

HTM 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

HTM 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Human Development and Family Science

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome. **Credits:** 1.00

HDFS 20100 - Introduction To Relationship And Family Science

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced. **Credits:** 3.00

HDFS 21000 - Introduction To Human Development

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology. **Credits:** 3.00

HDFS 22500 - Human Development Across Cultures

Credit Hours: 3.00. This course provides a basis for interdisciplinary exploration of cross-cultural human development and family relations throughout the lifespan. Key topics include international variation in cultural understandings of parent-child relationships, gender roles, education, work, social relationships, and health/wellness. Students will explore professional applications in an increasingly globalized world. **Credits:** 3.00

HDFS 26000 - Young Children With Exceptional Needs

Credit Hours: 3.00. A broad overview of learner characteristics and service delivery models for young children (birth-8 years) who are at-risk or have identified disabilities. Students gain understanding of disabilities in young children, of laws relating to persons with disabilities, and roles of special and general educators in providing services to students with identified disabilities. **Credits:** 3.00

HDFS 28000 - Diversity In Individual And Family Life

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course. **Credits:** 3.00

HDFS 30500 - Biosocial Foundations Of The Family

Credit Hours: 3.00. Family ties and family processes in the promotion of individual health and management of disease across the life course are covered. Course reviews research on families and health from multiple disciplinary perspectives. **Credits:** 3.00

HDFS 31000 - Guidance In Early Childhood

Credit Hours: 3.00. This course presents a developmental, child-centered approach to the guidance and discipline of young children, including children with disabilities. Influential theories, relevant research, and effective guidance methods for the early childhood teachers and other professionals working with young children and families, including families from different cultural and economic backgrounds, are discussed. Admitted to Gate B. **Credits:** 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered. **Credits:** 3.00

HDFS 31200 - Adult Development

Credit Hours: 3.00. An in-depth study of developmental processes from the transition to adulthood through old age. Particular emphasis is placed on understanding the influence of contexts on adult development. **Credits:** 3.00

HDFS 31300 - Adolescent Development

Credit Hours: 3.00. An overview of the normative developmental changes that occur during adolescence, with specific attention to individual and relational adjustment. **Credits:** 3.00

HDFS 31400 - Atypical Child Development

Credit Hours: 3.00. Atypical child development from conception to adolescence can emerge from genetic, medical/health, educational, psychological, and/or contextual factors. This course will survey factors (e.g., premature birth, obesity, neurodevelopmental disorders, learning difficulties, child abuse, and war) that contribute to atypical child development. It will assess how and when typical and atypical developmental trajectories diverge and the roles of measurement and intervention. **Credits:** 3.00

HDFS 31801 - Developmental Assessment

Credit Hours: 3.00. This course provides an introduction to the variety and characteristics of developmental assessments for young children, birth to age 8. Students learn formal and informal strategies for documenting individual development and learning; linking assessment and instruction; and, the use of assessment for determining eligibility for early intervention/early childhood special education. Students learn partnering with families, other professionals, as well as cultural and ethical issues in assessment. **Credits:** 3.00

HDFS 32500 - Health And Health Care For Children And Families

Credit Hours: 3.00. This course discusses leading causes of child health problems as well as examines the child and family reactions and adjustment to illness and disability. A developmental perspective on coping with health problems from early childhood through adolescence is presented. An overview on global child health disparities is also addressed. **Credits:** 3.00

HDFS 33000 - Sexuality And Family Life

Credit Hours: 3.00. Provides the student with a basic knowledge of human sexuality as it pertains to individuals, couples and families. The course is designed to be helpful to students who will become family life educators as well as to be helpful to students as individuals, spouses, and parents. **Credits:** 3.00

HDFS 33100 - Skills For Helping Professionals In Individual, Family And Group Settings

Credit Hours: 3.00. This course is an introduction to skills commonly used in helping professions, including relationship-building skills, beginning interviewing skills, and group process skills. Attention is paid to cultural competence and professional ethics. This course includes a weekly lab experience involving practice of the helping skills, as well as a service-learning project in which helping skills are used in a community setting. **Credits:** 3.00

HDFS 33200 - Stress And Coping In Contemporary Families

Credit Hours: 3.00. Examines theoretical perspectives related to family stress and resilience in multicultural and diverse family settings, and connects these perspectives to empirical work on family dynamics, coping, and dysfunction across the lifespan. Topics such as economic stress and poverty, immigrant families, single-parent families, homeless families, adoption, military families, maltreatment, and families coping with illness are explored. The class focuses on environmental, cultural, as well as biological contributions to both risk and resilience processes in individuals and families. **Credits:** 3.00

HDFS 34100 - Working With Parents

Credit Hours: 3.00. This course focuses on developing and maintaining effective relationships between parents and professionals working with children, within the context of family-centered practices. Issues related to cultural, linguistic, economic, and developmental differences that affect relations between families and professionals are examined. **Credits:** 3.00

HDFS 34300 - Assessment And Case Management

Credit Hours: 3.00. This course is an introduction to case management as a service delivery approach for helping individuals and families in need. This course provides opportunities to practice basic helping and case management skills such as building rapport, assessing client needs, developing intervention plans, professional ethics, and professional writing. **Credits:** 3.00

HDFS 34600 - Research Design And Program Evaluation

Credit Hours: 3.00. This course is an introduction to research methods as used in community programs for children and families including review and application of existing research literature, generating research questions, conducting program needs assessments, evaluating processes and outcomes of existing programs, designing and interpreting applied research studies, and understanding ethical responsibilities in the use and application of research. Instruction has been designed to provide the skills necessary to use existing research and generate new data to benefit programs. **Credits:** 3.00

HDFS 34800 - Administration Of Social Service Not-For-Profit Organizations

Credit Hours: 3.00. This course introduces students to aspects of not-for-profit management identified as keys by leaders in existing agencies. Students will prepare themselves for specifically establishing, building, working in and leading not-for-profit organizations. **Credits:** 3.00

HDFS 39000 - Special Topics In HDFS

Credit Hours: 1.00 to 6.00. Supervised readings, discussion, lectures and/or research on special topics in family and individual development. Permission of instructor required. **Credits:** 1.00 to 6.00

HDFS 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University. **Credits:** 1.00 to 6.00

HDFS 40000 - Social Studies In Preschool And Primary Grades

Credit Hours: 2.00. This course focuses on teaching social studies in preschool and primary grade classrooms. It covers the developmental foundations and curriculum applications of social studies teaching in pre-kindergarten and of social studies in primary grades and includes ways to plan, implement and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English. Field hours will be required.**Credits:** 2.00

HDFS 40500 - Language, Literacy, And Social Studies In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching language, literacy and social studies in preschool and primary-grade classrooms. It covers the developmental foundations and curriculum applications of language, literacy and social studies teaching in pre-kindergarten and of social studies in primary grades and includes ways to plan, implement and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English. **Credits:** 3.00

HDFS 40510 - Literacy In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching literacy in preschool and primary-grade classrooms. It covers the developmental foundations and curriculum applications of literacy teaching in pre-kindergarten and primary grades and includes ways to plan, implement, and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English. Field hours will be required.**Credits:** 3.00

HDFS 40600 - Mathematics In Preschool And Primary Grades

Credit Hours: 4.00. This course focuses on teaching mathematics in preschool and primary grade classrooms. It covers the developmental foundations and curriculum applications of mathematics teaching and includes ways to plan, implement and evaluate developmentally appropriate mathematics instructions for children with and without disabilities and children who are learning English. Field-based experiences in preschool or primary-grade classrooms are included. **Credits:** 4.00

HDFS 40800 - Early Intervention / Early Childhood Special Education: Issues And Professional Practices

Credit Hours: 4.00. An introduction to the field of early intervention / early childhood special education including its origin, services, and practices in working with young children ages birth through eight with or at risk for developmental delays and disabilities and their families. Designing curriculum, environments, and services where all children are included, have equal opportunity for access and engagement, and feel a sense of belonging is addressed. For Early Childhood Education and Exceptional Needs majors only. A field experience in preschool or primary-grade classrooms is included. **Credits:** 4.00

HDFS 40900 - Science In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching science in preschool and primary grade classrooms. Developmental foundations and curriculum applications of science teaching including ways to plan, implement and evaluate developmentally appropriate science instruction for young children with and without disabilities and those who are learning English. **Credits:** 3.00

HDFS 41200 - Professionalism And Music And Movement In Early Childhood

Credit Hours: 3.00. This course focuses on foundations of professionalism in early childhood education and early childhood special education. Additionally, this course discusses music and movement in early learning environments. It covers the developmental foundation and curriculum applications of music and movement activities and includes ways to plan, implement and evaluate developmentally appropriate music and movement instruction for children with and without disabilities and children who are learning English. **Credits:** 3.00

HDFS 41500 - Approaches To Early Childhood Education

Credit Hours: 3.00. The historical and theoretical basis for early childhood education and early intervention is emphasized. Relations between theory and practice are examined and illustrated with model early childhood programs. Addresses cultural/developmental diversity, ethics, and standards in early childhood education and intervention. **Credits:** 3.00

HDFS 41800 - Understanding Autism

Credit Hours: 3.00. (PSY 41800, SLHS 41800) This course will explore the etiology, neuroscience, diagnosis, and treatment of autism spectrum disorder (ASD). Approached from a multi-disciplinary perspective this course brings together gene, brain, and behavioral sciences with the aim of developing a better understanding of autism. The course will begin with an overview of ASD as a complex behavioral phenotype. This will include discussion of the history ASD and the expansion of the diagnostic criteria associated with the disorder. This introduction will be followed by several classes in which we will examine some of the key domains of impairment in ASD: reciprocal social interaction, language and communication, and restricted and repetitive

behaviors. We will also consider the deficits associated with, but not defining of ASD, and examine co-morbid conditions frequently present in individuals with ASD. We will then address the topics of brain architecture, neurochemistry, and genetics and gene expression, all of which we will attempt to relate back to the behavioral features of autism. We will end the course with a review of treatment practices and their efficacy and an examination of impact of ASD on the family and society. **Credits:** 3.00

HDFS 42000 - Developmental Foundations Of Infant And Toddler Curriculum

Credit Hours: 3.00. Study of typical and atypical development in infants and toddlers as well as implication for practice. Focuses on infant toddler developmental assessment and designing and implementing learning activities in all developmental areas and enhancing parent/professional relationships. Includes a practicum experience with infants and toddlers. **Credits:** 3.00

HDFS 43030 - Human Development And Family Studies Student Mentors

Credit Hours: 1.00 to 3.00. Advanced undergraduate students selected for this opportunity to serve as mentors to beginning and prospective HDFS students in the department's orientation course (HDFS 10000). Mentors will be matched with a small group of students with similar major/career interests. Mentors will lead small group discussions, provide guidance and feedback, and otherwise serve as a role model to the students. Mentors will receive support and training to be effective in this role. Permission of instructor required. **Credits:** 1.00 to 3.00

HDFS 44000 - Expanded ECEEN Student Teaching

Credit Hours: 1.00 to 3.00. This is a full semester of supervised expansion of student teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will occur the semester prior to full-time student teaching and be supervised by an HDFS faculty member and the classroom cooperating teacher. Monthly HDFS sponsored professional development seminars will also be required.**Credits:** 1.00 to 3.00

HDFS 45000 - Supervised Teaching In Inclusive Programs For Young Children

Credit Hours: **16.00.** This is 16 full-time weeks of supervised teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will be supervised by a HDFS faculty member and the classroom cooperating teacher. Monthly HDFS-sponsored professional development seminars and additional teacher education meetings will also be required. This will partially fulfill requirements for the Indiana Early Childhood Education and the Early Childhood Special Education teaching license. Admission to Student Teaching required.**Credits:** 16.00

HDFS 45010 - Supervised Teaching In Inclusive Programs For Young Children

Credit Hours: 12.00. This is 16 full-time weeks of supervised teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will be supervised by a HDFS faculty member and the classroom cooperating teacher. Monthly HDFS-sponsored professional development seminars and additional teacher education meetings will also be required. This will partially fulfill requirements for the Indiana Early Childhood Education and the Early Childhood Special Education teaching license. Admission to Student Teaching required.**Credits:** 12.00

HDFS 45100 - Internship & Career Preparation For Human Services

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement. **Credits:** 2.00

HDFS 45400 - Internship & Career Preparation For Developmental And Family Science

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement. **Credits:** 2.00

HDFS 45500 - Human Services Capstone Internship

Credit Hours: 6.00 or 12.00. Supervised full-time or half-time internship in human services, doing work typical of an entry-level bachelor-degreed professional. Students will integrate and build upon knowledge developed during their studies in human services. Students will use and enhance their skills in direct service to client or indirect service. Students will work in the placement setting secured during HDFS 45400. Example field placement sites include: government or community agencies; social service agencies; hospitals; and recreational settings. Permission of Department required. Must be a student in good academic standing during the internship semester. **Credits:** 6.00 or 12.00

HDFS 45800 - Development And Family Science Capstone Internship

Credit Hours: 6.00. Supervised internship for the Developmental & Family Science major, doing work typical of an entry-level bachelor-degreed professional. Students will integrate and build upon knowledge developed during their studies in developmental and family science. Students will use and enhance their skills in child development, family and community health, or another area related to developmental and family science. Students will work in the placement setting secured during HDFS 45400. Must be a student in good academic standing during the internship semester. Permission of Department required. **Credits:** 6.00

HDFS 49000 - Independent Study

Credit Hours: 1.00 to 4.00. Independent study. Permission of instructor required. **Credits:** 1.00 to 4.00

HDFS 49101 - Mentored Research In Human Development And Family Studies I

Credit Hours: 3.00. Independent study in which student engages in research under the supervision of a faculty member. Involves developing a research proposal, beginning the project, and submitting a summary of the project plan and progress. First semester of a two-semester sequence to fulfill the requirements of the capstone thesis for the Developmental & Family Science major. Permission of instructor required. **Credits:** 3.00

HDFS 49102 - Mentored Research In Human Development And Family Studies II

Credit Hours: 3.00. Independent study in which student engages in research under the supervision of a faculty member. Involves completing a research project, writing up the results, and presenting the results to a new audience. Second semester of a two-semester sequence to fulfill the requirements of the capstone thesis for the Developmental & Family Science major. Permission of instructor required. **Credits:** 3.00

HDFS 59000 - Special Problems

Credit Hours: 0.00 to 5.00. Special subjects for investigation and experiment according to the individual student's interest and need. Permission of instructor required. **Credits:** 0.00 to 5.00

HDFS 60000 - Families And Health Across The Life Course

Credit Hours: 3.00. Interpersonal processes of family members and close others in the promotion of individual health choices and management of disease across the life course are covered. Course topics include involvement of family and close others in: health promotion and disease prevention; disease management; interactions with healthcare providers; and informal caregiving in the family context. **Credits:** 3.00

HDFS 60100 - Advanced Child Development

Credit Hours: 3.00. This course provides an overview of foundational and current developmental research on changes that occur within the individual throughout infancy, childhood, and early adolescence. Emphasis is given to processes and mechanisms that have been proposed to explain developmental changes. This course includes attention to social and cultural contexts within which individuals develop. Prerequisite: Graduate-level coursework in Child Development or Psychology. **Credits:** 3.00

HDFS 60200 - Advanced Family Studies

Credit Hours: 3.00. Integrative and comprehensive assessment of both classic and recent contributions in the field of family studies. Other topics include major theory and research, historical, current, and future critical issues in family studies. Prerequisite: 12 hours of social sciences including six hours of advanced undergraduate courses preparing student for the study of the family. **Credits:** 3.00

HDFS 60400 - Developmental And Family Approaches To Diversity And Oppression

Credit Hours: 3.00. In this course, we will utilize an intersectional lens throughout the course to critically examine the development of individuals oppressed due to their minority status in the United States. We will review current research and literature across disciplines to: 1) understand the origin, meaning, and purpose of race and racism; 2) learn about the history of oppression and resilience of minoritized groups; 3) analyze systems of discrimination; 4) introduce theoretical frameworks for studying the unique, intersectional experiences of minoritized populations and examples of their application to empirical research, and 5) discuss how research can be used to advance social justice. Permission of department required. **Credits:** 3.00

HDFS 60600 - Advanced Human Development

Credit Hours: 3.00. This course provides an overview of human development and serves as a graduate-level introduction to HDFS. Relevant theories and models will provide the structure for consideration of the nature, processes, and mechanisms of developmental change. Particular attention will be paid to diversity in developmental influences and trajectories, including atypical development. Students will gain specific knowledge and professional skills through the pursuit of individual research interests, culminating in a written grant proposal and class presentation of the proposal. **Credits:** 3.00

HDFS 61300 - Quantitative Methods I: Inferential Statistics And ANOVA

Credit Hours: 3.00. This course provides a basic understanding of foundational concepts and tools used in statistical analysis and inference in the behavioral sciences, including data preparation, sample description, hypothesis testing, univariate and bivariate statistics, and ANOVA. Emphasis is placed on the conceptual and interpretive understanding of statistical methods. Prerequisite: Undergraduate coursework in Statistics. **Credits:** 3.00

HDFS 61500 - Research Methods In Child And Family Study

Credit Hours: 4.00. Basic research methods employed in the study of children and families are examined, including quantitative and qualitative designs, data collection, analysis, and interpretation. In the laboratory component, students are afforded supervised practice in the application of various methods using selected statistical analysis programs. Prerequisite: Graduate course in Statistics. Permission of instructor required. **Credits:** 4.00

HDFS 61700 - Quantitative Methods II: Regression

Credit Hours: 4.00. This course has two primary goals: 1) provide students with foundational knowledge related to linear regression statistical analyses, and 2) provide students with the opportunity to practice writing, interpreting, and presenting

regression analyses for the purposes of dissemination. Prerequisite: HDFS 61300 or PUBH 60100 or STAT 50100 or PSY 64600. Permission of instructor required. **Credits:** 4.00

HDFS 61900 - Adolescent And Youth Development In Context

Credit Hours: 3.00. This graduate-level course examines the major developmental issues of adolescents and youth with attention to their familial, cultural, and socio-economic backgrounds. Topics include health and well-being; biological, socio-emotional, and cognitive development; sexual and racial/ethnic identity; risks and resilience; peer and family relationships; civic engagement and activism; positive youth development; and the transition to adulthood. Course readings focus primarily on adolescents and youth in the United States, although international contexts are also incorporated across the class. **Credits:** 3.00

HDFS 62000 - Current Issues In Early Childhood Education

Credit Hours: 3.00. Emphasis on current issues in early childhood education as they are affected by contemporary social change with observation and analysis of a variety of programs for young children. Prerequisite: HDFS 60100. **Credits:** 3.00

HDFS 62200 - Child Development Within The Family Context

Credit Hours: 3.00. This course provides an overview of (1) foundational and current child development theories and (2) research on typical individual change throughout infancy and childhood within the family context. Emphasis is given to milestones, and to the processes and mechanisms proposed to explain developmental change. The course takes a chronological age-approach to study development within the family context and covers the following stages: prenatal and infancy, early childhood, and middle childhood. Initially the course places the individual within the larger family context and then delineates development/growth within the realms of physical growth, brain, motor, sensation, perception, language, social, cognitive, feeding/eating, sleep, self-regulation, attachment, and temperament/personality development. Across these realms diversity and historical standards around typical development expectations will also be incorporated. Permission of instructor required. **Credits:** 3.00

HDFS 62500 - Child And Family Social Policy

Credit Hours: 3.00. An examination of selected issues related to child and family policy relevant to scholars of CDFS. These issues include: (1) influences of research on children and families on the policy process; (2) the role of child and family specialists as advocates and analysts; (3) policy formulation, enactment, and evaluation; and (4) child and family policy in cross-national perspective. Prerequisite: HDFS 60100 and HDFS 60200. **Credits:** 3.00

HDFS 62700 - Multilevel Modeling In Developmental And Family Research

Credit Hours: 3.00. This course gives students a basic grounding in the class of statistical techniques known as multilevel modeling (MLM), also known as hierarchical linear modeling (HLM), mixed models, or random coefficient models. Primary discussions will be on applications of these models to the study of marriages, relationships, families, aging, and child and adult development, but also will touch on biomedical, educational, and economic examples. The focus is on three types of multilevel models: growth-curve models, organizational models, and daily experience models. Students will also learn how to use SAS Proc Mixed for conducting MLM analyses. Students are assumed to have taken at least two graduate statistics courses and have a solid understanding of regression analysis. Prerequisites: STAT 50100 and STAT 50200 or HDFS 61300 and PSY 63100. **Credits:** 3.00

HDFS 62800 - Structural Equation Modeling

Credit Hours: 3.00. This course provides an introduction to classic structural equation models with latent variables (SEM). The primary steps of implementing SEMs will be covered to include: model specification, model identification, parameter estimation,

and model evaluation (model fit). Background training in statistical regression is required. Permission of instructor required. **Credits:** 3.00

HDFS 62900 - Interventions Across Developmental And Family Contexts

Credit Hours: 3.00. This course will focus on the scientific foundations of designing and conducting interventions for improving the human condition across diverse developmental and family contexts. A particular emphasis in this course will be on experimental and quasi-experimental designs for making causal inferences and understanding mechanisms of intervention effects. Students will gain specific knowledge of intervention design, implementation and fidelity, and scale-up of interventions, as well as how to evaluate proposed or existing interventions. Co-design processes with intervention users and qualitative methods for understanding intervention needs and implementation will also be examined. Prerequisite: none. **Credits:** 3.00

HDFS 64400 - Biosocial Processes In Developmental And Family Research

Credit Hours: 3.00. In this course we discuss theoretical models and empirical research regarding the interplay between biology and context in development, focusing on the unique interactions that occur within families. Prerequisite: HDFS 60100 and HDFS 60200. **Credits:** 3.00

HDFS 64900 - Multidisciplinary Gerontology

Credit Hours: 3.00. A multidisciplinary overview of aging that provides a background for graduate studies on aging. An examination of sociological, psychological, and biological theory and research in the field of aging. The aging process from cells to social security will be covered. Guest lectures introduce students to experts in gerontology on Purdue's campus. Projects will assist students in developing appropriate professional skills in their field of study. Students are expected to have basic research and writing skills in their field of study. The course serves as a graduate-level introduction to the field of gerontology. There are several options for course projects. Prerequisite: HDFS 60100 and STAT 50100. **Credits:** 3.00

HDFS 65800 - Attachment Relationships

Credit Hours: 3.00. This graduate course studies child-parent relationships theory and research from the respective of Attachment Theory. Prerequisite: CDFS 60300. Permission of instructor required. Prerequisite: HDFS 60100 and a basic graduate-level statistic course. **Credits:** 3.00

HDFS 67900 - Qualitative Research On Families

Credit Hours: 3.00. Provides an introduction to qualitative research theory and methods and prepares graduate students to conduct and evaluate qualitative family research. Students conduct observations, interviews, and basic data analysis. Prerequisite: a course in research methods. **Credits:** 3.00

HDFS 68000 - Professional Issues For Child And Family Specialists

Credit Hours: 3.00. Professional issues involved in working with children and families. Questions of ethics, legal relationships, and value problems may be pursued, as may such pragmatic inquiries as the role of professional organizations and labor unions in these fields. **Credits:** 3.00

HDFS 68500 - Current Research Topics In Child Development And Family Studies

Credit Hours: 1.00 to 3.00. Consideration of current subjects in child development and family studies research. Particular emphasis will be placed on one topic each semester according to the research interests of the instructor. **Credits:** 1.00 to 3.00

HDFS 68501 - Developmental Seminar

Credit Hours: 1.00. Consideration of current subjects in child development and family studies research. Particular emphasis will be placed on one topic each semester according to the research interests of the instructor. **Credits:** 1.00

HDFS 69000 - Directed Research In HDFS

Credit Hours: 1.00 to 4.00. Directed research and supervised research on a topic in student's area of specialization. Permission of instructor required. **Credits:** 1.00 to 4.00

HDFS 69700 - Graduate Student Colloquium

Credit Hours: 1.00. Research presentations by faculty members, graduate students, and invited speakers. Includes attention to: (1) the responsible conduct of research, (2) professional/scholarly and teaching development, and (3) diversity, equity, and inclusion. **Credits:** 1.00

HDFS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

HDFS 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Industrial Engineering

IE 577 - Human Factors In Engineering

Credit Hours: 3.00. (PSY 57700) Survey of human factors in engineering with particular reference to human functions in human-machine systems, and consideration of human abilities and limitations in relation to design of equipment and work environments. **Credits:** 3.00

IE 20000 - Industrial Engineering Seminar

Credit Hours: 0.00. An orientation course to inform students of the major options in the industrial engineering program, assistance in selection of appropriate electives to meet career objectives, introduction to the faculty, and selection of an academic advisor. **Credits:** 0.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems. **Credits:** 3.00

IE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 30000 - Honors Program Seminar

Credit Hours: 0.00. An orientation course intended for juniors who have demonstrated exceptional academic ability and desire to conduct meaningful independent research or solve unique engineering design projects during their senior year of study. **Credits:** 0.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control. **Credits:** 3.00

IE 33200 - Computing In Industrial Engineering

Credit Hours: 3.00. Introduction to computing in industrial engineering. Reinforcement of scientific programming skills on typical IE tasks, together with introduction to simulation and related computer tools. **Credits:** 3.00

IE 33500 - Operations Research - Optimization

Credit Hours: 3.00. Introduction to deterministic optimization modeling and algorithms in operations research. Emphasis on formulation and solution of linear programs, networks flows, and integer programs. **Credits:** 3.00

IE 33600 - Operations Research - Stochastic Models

Credit Hours: 3.00. Introduction to probabilistic models in operations research. Emphasis on Markov chains, Poisson processes, and their application to queuing systems. **Credits:** 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400. **Credits:** 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300. **Credits:** 3.00

IE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 38300 - Integrated Production Systems I

Credit Hours: 3.00. Basic concepts in the design and operational control of integrated production systems. Includes topics on facility layout and material handling, material flow and information flow, resource and capacity planning, and shop floor control and scheduling. **Credits:** 3.00

IE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 38600 - Work Analysis And Design I

Credit Hours: 3.00. Fundamentals of work methods and measurement. Applications of engineering, psychological, and physiological principles to the analysis and design of human work systems. **Credits:** 3.00

IE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IE 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional practice with qualified employers within industry, government, or small business and a comprehensive written report of this practice. Permission of department required. **Credits:** 0.00

IE 43100 - Industrial Engineering Design

Credit Hours: 3.00. Capstone design experience for industrial engineering students involving analysis and synthesis of unstructured problems in practical settings. Students work in teams to formulate issues, propose solutions, and communicate results in formal written and oral presentations. Prerequisite: all 30000-level industrial engineering courses required for the BS IE degree. **Credits:** 3.00

IE 47000 - Manufacturing Processes II

Credit Hours: 3.00. The interrelations of materials, processes, and design with various aspects of manufacturing. **Credits:** 3.00

IE 47200 - Imagine, Model, Make

Credit Hours: 3.00. This course develops a holistic view of an initial competency in engineering design by conceiving, designing, manufacturing, and optimizing a system component such as a complex structural part. Activities include hand sketching, CAD modeling, and operation of CNC machining equipment for rapid prototyping. Tolerance requirements will be verified and optimized prior to the fabrication of the part in the laboratory using rapid prototyping techniques. The focus is on the design process itself as well as the complementary roles of human creativity and computational methods and tools. **Credits:** 3.00

IE 47400 - Industrial Control Systems

Credit Hours: 3.00. Introduction to automatic controls with reference to automation of industrial machines and processes, including linear dynamic systems, feedback control, and elements of systems analysis. Introduction to digital control. **Credits:** 3.00

IE 48100 - Introduction To System Simulation

Credit Hours: 3.00. The course presents a general introduction to simulation concept and methodology. It covers simulation modeling in specialized simulation environments. Practical application of simulation to diverse systems will be discussed. Proper design and analysis of the simulation experiment is emphasized. Permission of department required. **Credits:** 3.00

IE 48400 - Integrated Production Systems II

Credit Hours: 3.00. Extensions of topics on the design and operational control of integrated production systems. Includes production databases, facility layout, material handling, advanced control and scheduling, and physical distribution. Case studies, lab assignments, and projects. **Credits:** 3.00

IE 48600 - Work Analysis And Design II

Credit Hours: 3.00. Continuation of IE 38600. Applications of engineering, computer sciences, information sciences, and psychological principles and methods to the analysis and design of human work systems. **Credits:** 3.00

IE 49000 - Special Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Special topic courses and projects of contemporary importance or of special interest that are outside the scope of the standard undergraduate curriculum. Permission of instructor required. **Credits:** 1.00 to 6.00

IE 49500 - Industrial Practices Seminar

Credit Hours: 1.00. Solution of industrial engineering problems, with particular emphasis on current industrial experience obtained through the cooperative engineering education program. For cooperative program students only. **Credits:** 1.00

IE 49900 - Research In Industrial Engineering

Credit Hours: 1.00 to 6.00. Individual research projects for students with honors standing, or other students with the approval of their advisors. Permission of instructor required. **Credits:** 1.00 to 6.00

IE 52500 - Healthcare Delivery Systems

Credit Hours: 3.00. This course is to introduce the interconnected sectors in the complex U.S. healthcare delivery systems, including in-patient care, emergency departments, surgical services, out-patient clinics, long-term care, pharmacies, laboratories, as well as supporting industries such as insurance, food services, information technologies, etc. The course focuses on the management of healthcare services by the industrial engineering principles and quantitative decision-making methodologies. **Credits:** 3.00

IE 53000 - Quality Control

Credit Hours: 3.00. Principles and practices of statistical quality control in industry. Control charts for measurements and for attributes. Acceptance sampling by attributes and by measurements. Standard sampling plans. Sequential analysis. Sampling inspection of continuous production. **Credits:** 3.00

IE 53200 - Reliability

Credit Hours: 3.00. Reliability of components and multi-component systems. Application of quantitative methods to the design and evaluation of engineering and industrial systems and processes for assuring reliability of performance. Economic and manufacturing control activities related to product engineering aspects of reliability. Principles of maintainability. Product failure and legal liability. **Credits:** 3.00

IE 53300 - Industrial Applications Of Statistics

Credit Hours: 3.00. The application of statistics to the effective design and analysis of industrial studies relating to manufacturing and human factors engineering in order to optimize the utilization of equipment and resources. Emphasis on conducting these studies at the least cost. **Credits:** 3.00

IE 53500 - Linear Programming

Credit Hours: 3.00. Optimization of linear objective functions subject to linear constraints. Development of theory and algorithmic strategies for solving linear programming problems. **Credits:** 3.00

IE 53600 - Stochastic Models In Operations Research I

Credit Hours: 3.00. An introduction to techniques for modeling random processes used in operations research. Markov chains, continuous time Markov processes, Markovian queues, reliability and inventory models. **Credits:** 3.00

IE 53700 - Discrete Optimization Models And Algorithms

Credit Hours: 3.00. An introduction to classic models and algorithms for discrete optimization. Basic theory and computational strategies for exact and heuristic solution of integer, combinational, and network problems in the context of classic models. **Credits:** 3.00

IE 53800 - Nonlinear Optimization Algorithms And Models

Credit Hours: 3.00. Survey of computational tools for solving constrained and unconstrained nonlinear optimization problems. Emphasis on algorithmic strategies and characteristic structures of nonlinear problems. **Credits:** 3.00

IE 54100 - Nature-Inspired Computation

Credit Hours: 3.00. This course is about algorithms that are inspired by naturally occurring phenomena and applying them to optimization, design and learning problems. The focus is on the process of abstracting algorithms from the observed phenomenon, their outcome analysis and comparison as well as their "science". This will be done primarily through the lens of evolutionary computation, swarm intelligence (ant colony and particle-based methods) and neural networks. **Credits:** 3.00

IE 54500 - Engineering Economic Analysis

Credit Hours: 3.00. Analysis of engineering costs and capital investments. Applications of classical optimization, mathematical programming, and the theory of production to the analysis of investment proposals. Evaluation and selection of individual projects and formulation of capital investment programs. **Credits:** 3.00

IE 54600 - Economic Decisions In Engineering

Credit Hours: 3.00. Topics in decision-making and rationality including decision analysis, decision-making under uncertainty, and various descriptive and prescriptive models from operations research, economics, psychology, and business. Applications are drawn from engineering decision-making, public policy, and personal decision-making. Attention also is paid to designing aids to improve decision-making. **Credits:** 3.00

IE 54900 - Machine Vision In Intelligent Robotic Systems

Credit Hours: 3.00. Introduction to machine vision and learning algorithms from a human-machine interaction standpoint, and application of machine vision techniques to the design of human-integrated cybernetic systems, such as, robotic systems, flexible automation, and wearable electronics. **Credits:** 3.00

IE 55600 - Job Design

Credit Hours: 3.00. (PSY 55600) Task analysis, personnel selection and training, job and organization design, and criteria development and use. Human factors related to job design in order to increase job satisfaction and productivity. **Credits:** 3.00

IE 55800 - Safety Engineering

Credit Hours: 3.00. Application of human factors and engineering practice in accident prevention and the reduction of health hazards are presented. The objective of this course is to provide an understanding of the safety and health practices which fall within the responsibilities of the engineer in industry. Special attention is devoted to the detection and correction of hazards and to contemporary laws and enforcement on occupational safety and health. **Credits:** 3.00

IE 55900 - Cognitive Engineering Of Interactive Software

Credit Hours: 3.00. Theory and applications of software design to improve productivity and job satisfaction on information processing and cognitive tasks in the workplace. Human information processing models and cognitive theories will be used to provide a theoretical basis for how to choose and display information to the user. Other topics include user-friendly displays and empirical approaches to software design. Applications of the design theory are stressed by class projects. **Credits:** 3.00

IE 56100 - Introduction To Convex Optimization

Credit Hours: 3.00. (AAE 56100) Introduction to convex analysis, convex optimization problems, algorithms of convex optimization and measures of their complexity, and application of convex optimization in aerospace engineering. Recognition of convex optimization problems that arise in scientific and engineering applications. Introduction to software tools to solve convex optimization problems. **Credits:** 3.00

IE 56600 - Production Management Control

Credit Hours: 3.00. Background and development of production management, plus current concepts and controls applicable to production management functions. Not open to Industrial Engineering students with a minor in management. **Credits:** 3.00

IE 57000 - Manufacturing Process Engineering

Credit Hours: 3.00. Theories and applications of materials forming and removal processes in manufacturing, including product properties, process capabilities, processing equipment design, and economics. A systems approach to all aspects of manufacturing process engineering. **Credits:** 3.00

IE 57400 - Industrial Robotics And Flexible Assembly

Credit Hours: 3.00. Lab by arrangement. Design, analysis, and operation of robotic systems. System components and their control. Languages for robot control. Application design and analysis. Part feeders and tooling for robot workstations and automated assembly. Methods for planning robotic and assembly applications. **Credits:** 3.00

IE 57700 - Human Factors In Engineering

Credit Hours: 3.00. (PSY 57700) Survey of human factors in engineering with particular reference to human functions in human-machine systems, and consideration of human abilities and limitations in relation to design of equipment and work environments.**Credits:** 3.00

IE 57800 - Applied Ergonomics

Credit Hours: 3.00. Analysis, modeling, and design of jobs and systems to be consistent with human factors and ergonomic principles. **Credits:** 3.00

IE 57900 - Design And Control Of Production And Manufacturing Systems

Credit Hours: 3.00. Design and control of discrete part manufacturing systems in contemporary production environments, with emphasis on flexible, demand-driven, product-based manufacturing. Currently used planning and control methodologies, such as MRP, OPT, and JIT are reviewed and integrated with appropriate facility design methodologies, including cellular design algorithms. Introduction to Computer Integrated Manufacturing (CIM) architecture and reference models and relevant control procedures, including basis approaches to appropriate data management methodologies. **Credits:** 3.00

IE 58000 - Systems Simulation

Credit Hours: 3.00. Philosophy and elements of digital simulation language. Practical application of simulation to diverse systems. Computer simulation exercises and applications are required. **Credits:** 3.00

IE 58100 - Simulation Design And Analysis

Credit Hours: 3.00. An introduction to simulation of stochastic systems on digital computers. Emphasis is on the fundamentals of simulation as a statistical experiment. Topics include uniform random numbers, input modeling, random variate generation, output analysis, variance reduction, and optimization. **Credits:** 3.00

IE 58200 - Advanced Facilities Design

Credit Hours: 3.00. Study of the theoretical and applied aspects of manufacturing systems layout. Emphasis on contemporary manufacturing, including the layout of cellular systems, automated material handling systems, and storage systems. **Credits:** 3.00

IE 58300 - Design And Evaluation Of Material Handling Systems

Credit Hours: 3.00. Analysis for design and evaluation of material handling systems with emphasis on material flow control and storage. Analytic models and simulation used. Economic justification models for material handling systems. **Credits:** 3.00

IE 58800 - e-Work And e-Service

Credit Hours: 3.00. e-Work is defined as the collaborative, computer-and-communication-supported work in highly distributed organizations of humans/robots/autonomous systems. This course is devoted to learning the basic principles, theories, and applications for the design of effective e-Work and e-Service systems. Relevant discoveries at Purdue and elsewhere are also presented. **Credits:** 3.00

IE 59000 - Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Selected topics in industrial engineering for seniors and graduate students. Permission of instructor required. **Credits:** 1.00 to 6.00

IE 63000 - Multiple Objective Optimization

Credit Hours: 3.00. Theory and applications of multiple objective optimization and multiple criteria decision making. Existence and specification of single and multiple attributive value and utility functions. Risk aversion. Characterization and generation of efficient (Pareto optimal) solutions to vector optimization problems. Domination cones. Interactive algorithms. Prerequisite: IE 53500. **Credits:** 3.00

IE 63200 - Scheduling Models

Credit Hours: 3.00. Development and discussion of mathematical and simulation models for scheduling and sequencing the flow of jobs or activities in manufacturing environments. Techniques include dynamic programming, branch and bound, linear and integer programming, heuristics and stochastic network simulation. Prerequisite: IE 57900; IE 53500 or IE 53700. **Credits:** 3.00

IE 63300 - Dynamic Programming

Credit Hours: 3.00. Theory and applications of finite and infinite stage sequential decision processes, including Markovian decision problems, efficient computational methods, and computer software package. Prerequisite: IE 53500, IE 53600. **Credits:** 3.00

IE 63400 - Integer Programming

Credit Hours: 3.00. An advanced course on theory and algorithms for integer and mixed integer optimization problems. Convergence of integer programming algorithms, dual relaxations, Benders decomposition, cutting plane theory, group theory of integer programs, and linear diophantine equations. Prerequisite: IE 53500, IE 53700. **Credits:** 3.00

IE 63500 - Theoretical Foundations Of Optimization

Credit Hours: 3.00. An advanced course in theoretical foundations of mathematical programming. Convex analysis, global and local duality and optimality, general algorithmic convergence. Offered in alternate years. Prerequisite: IE 53500. **Credits:** 3.00

IE 63900 - Combinatorial Optimization

Credit Hours: 3.00. An advanced course in combinatorial optimization. Emphasis on the theory and strategies of combinatorial algorithms including complexity theory, advance issues in network flows, matching, matroids, and combinatorial polyhedra. Prerequisite: IE 53500. **Credits:** 3.00

IE 64600 - Advanced Decision Theory

Credit Hours: 3.00. An advanced course on the theory and models of decision-making and rationality. Material includes advanced topics in decision analysis, models of probabilistic reasoning, decision-making in competitive situations, and models of human and computer reasoning (including artificial intelligence). Prerequisite: IE 54600. **Credits:** 3.00

IE 65600 - Research Seminar In Human Factors

Credit Hours: 3.00. An in-depth study of topics of special interest in human factors. A variable title course where topics change from semester to semester. Possible topics include cognitive engineering in expert systems, human resource management, skills acquisition and retention, knowledge elicitation, and knowledge representation. Permission of instructor required. **Credits:** 3.00

IE 65900 - Human Aspects In Computing

Credit Hours: 3.00. Advanced topics in ergonomic, cognitive, and social aspects of using computerized systems are discussed with regard to comfort and user satisfaction, ease and productive use of computerized systems, and effective implementation of computerized technologies in the workplace. Prerequisite: IE 55900. **Credits:** 3.00

IE 67000 - Advanced Topics In Manufacturing Engineering

Credit Hours: 3.00. Advanced research topics and approaches in manufacturing engineering, including processes and equipment. Research methodology, nontraditional processes, manufacturing systems, and competitive aspects of manufacturing. Prerequisite: IE 57000. **Credits:** 3.00

IE 67400 - Cyber Methods For Advanced Production Control

Credit Hours: 3.00. The study of the theoretical foundation and relevance of advanced cyber methods in the planning and control of intelligent production operations; manufacturing operating systems; synchronization in decentralized systems; recovery in

decentralized systems; parallel processing; distributed databases; factory networks; reasoning and logic for production control. Prerequisite: IE 57400 or 57500 or 57900. **Credits:** 3.00

IE 68000 - Advanced Simulation Design And Analysis

Credit Hours: 3.00. An introduction to the literature of simulating stochastic systems, with emphasis on probabilistic and statistical aspects. Prerequisite: IE 58100. **Credits:** 3.00

IE 69000 - Advanced Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Advanced study in various fields of industrial engineering for graduate students. Credits and hours to be arranged. Permission of instructor required. **Credits:** 1.00 to 6.00

IE 69600 - Graduate Professional Practice

Credit Hours: 0.00. Practice in industry and comprehensive written reports of this practice. Permission of instructor required. **Credits:** 0.00

IE 69700 - Seminar

Credit Hours: 0.00. Industrial engineering problems with particular emphasis on current research. **Credits:** 0.00

IE 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

IE 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Industrial Engineering Technology

IET 11100 - Introduction To Manufacturing And Supply Chain Systems

Credit Hours: 3.00. A survey of organizational units and their function within an enterprise, including a brief history of organizations. The course emphasizes a systems perspective and how decisions in one area impact the entire system. Topics include operations, financial, marketing, planning, quality control, process strategy, logistics, and safety. **Credits:** 3.00

IET 15000 - Quantitative Methods For Technology

Credit Hours: 3.00. Application of statistical techniques to typical problems in technology. Topics include data collection, descriptive statistics calculation, hypothesis testing, sampling, continuous and discrete distribution, probability, ANOVA, and related topics. The course also introduces the use of spreadsheet and other software to solve statistical calculations. Introduction to SPC is included. Basic metrology, concepts of gage and meter calibration calculations, instrument linearity, repeatability, reproducibility, sensitivity, precision, and instrument control are included.**Credits:** 3.00

IET 19000 - Topics In Industrial Technology

Credit Hours: 1.00 to 3.00. Hours, credit, and subject matter to be arranged by staff. This is not for independent study. Permission of instructor required. **Credits:** 1.00 to 3.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements. **Credits:** 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain. **Credits:** 3.00

IET 28100 - Industrial Safety

Credit Hours: 3.00. A course designed to develop understanding of, and insight into, the basic aspects of accident prevention and safety. Specific attention will be given to (1) the psychological aspects of accident prevention; (2) the principles of accident prevention; (3) the practical aspects of planning, implementing, and maintaining a safe environment; and (4) standards, current laws, and regulations. Field trips may be required. **Credits:** 3.00

IET 31300 - Technology Innovation And Integration: Bar Codes To Biometrics

Credit Hours: 3.00. This course provides the foundation for automatically capturing data in a system. The content covers an introduction to technology used in automatic identification and data capture systems, including: bar codes; radio frequency identification; smart cards, and biometrics. Topics also include an immersive semester project that examines the integration of these technologies, as well as advanced problem-solving. **Credits:** 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.**Credits:** 3.00

IET 33100 - Advanced Industrial Safety And Health Management

Credit Hours: 3.00. An introduction to OSHA and standards development for occupational health in general industry. Special emphasis is on fire protection and egress, flammable and combustible liquids, electrical, personal protective equipment, machine guarding, industrial hygiene/blood-borne pathogens, ergonomics, and ISO 9000/14000 integration. **Credits:** 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty. **Credits:** 3.00

IET 33520 - Human Factors For Technology Systems

Credit Hours: 3.00. This course provides the foundation for examining the intersection of people, technology, policy, and work across technology systems. Topics include the evaluation, analysis, and design recommendations for improving the safety and efficiency of human-technology interactions. **Credits:** 3.00

IET 33610 - Risk Analysis And Assessment

Credit Hours: 3.00. This course introduces the tools for identifying and analyzing inherent risks associated with the decision-making process. The challenges of quantitative risk assessment are introduced using decision trees, influence diagrams, and probability models. The concepts of risk index, options, avoidance, prevention, and reduction are discussed in the context of technology systems. **Credits:** 3.00

IET 33620 - Total Productive Maintenance

Credit Hours: 3.00. This course emphasizes the importance of effective maintenance planning and execution for efficient and economical operation of service or technology systems. A systems approach to maintenance planning is taken. Maintenance activities are discussed from reliability and productivity perspectives in the context of technology systems. Semester-long, team based research project is typically required.**Credits:** 3.00

IET 34200 - Warehouse And Inventory Management

Credit Hours: 3.00. A course designed to develop understanding of types of warehouses, methods of organizing the warehouse environment, and determining efficient inventory control procedures. Technology applications related to the management of warehouse and inventory stock-keeping units (SKU) are investigated. Storage of inventory, placement of inventory, picking, packing, shipping, and other internal logistics management topics will be explored. **Credits:** 3.00

IET 34250 - Purchasing And Contract Management

Credit Hours: 3.00. This course examines the processes by which goods and services are acquired through purchasing and contract management. Topics include procurement, contract strategies, source selection, identifying contract type, product liability and risk, the bid process and response evaluation; contract risk assessment, contract negotiation, and contract law. **Credits:** 3.00

IET 34300 - Technical And Service Selling

Credit Hours: 3.00. A study of sales models and techniques for technical and service sales in business-to-business environments, including development of channel relationships, long-term sales agreements, customer relationship management efforts, total cost of ownership tools and complex sales presentations. Covers critical sales skills such as e-economy sales and marketing, lead management, building credibility, consultative selling, ethical negotiations, and sustainable product management. **Credits:** 3.00

IET 34350 - Business To Business Sales Management

Credit Hours: 3.00. This course covers key topics in sales management while emphasizing customer relationship management, sales productivity, and the effects of technology on the sales function. Topics include analyzing multiple channel models; establishing sales plans; incentivizing and motivating the sales force; and evaluating, monitoring, and managing the effectiveness of the sales force. **Credits:** 3.00

IET 36400 - Total Quality Control

Credit Hours: 3.00. This course is aimed at determining customer needs and wants and interpreting these into design during production, follow-up on field performance, and feeding back quality information to further improve the quality system.**Credits:** 3.00

IET 41100 - Applications Of Lean And Six Sigma Methodologies

Credit Hours: 3.00. This hands-on course focuses on emerging business practices that are geared toward making an organization more effective and efficient. Highlighted topics will include use of lean and six sigma methodologies in today's business environments. These methods are used for achieving long term profits through customer satisfaction, waste elimination, and elevation of employee skills to eliminate waste and defects at the source. Application of these methods in various environments such as service, health care and manufacturing organizations will be explored. Students are expected to work in teams to apply systematic problem solving processes to solve case studies and/or real-world issues. Supporting concepts such as implementation of new business practices and culture change will also be explored.**Credits:** 3.00

IET 41300 - Problem-Solving With Automatic Data Collection

Credit Hours: 1.00 to 3.00. Problem-solving skills are applied to manufacturing, distribution, or business data collection problems. Depending on the problem, one or more of the available data collection technologies will be used to address the issue of concern. Field trips may be required. Permission of instructor required. **Credits:** 1.00 to 3.00

IET 41400 - Financial Analysis For Technology Systems

Credit Hours: 3.00. The course provides students with financial tools needed by managers in technical and service fields. Topics include financial statement analysis, using common-sized statements and financial ratios; the strategic profit model; total cost of ownership; pricing for profitability; margin management; cash flow cycles; and budgeting. A corporate financial analysis project is typically required. **Credits:** 3.00

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed. **Credits:** 3.00

IET 43540 - Facilities Planning And Material Handling

Credit Hours: 3.00. This course takes a systematic approach to design of facilities and material handling systems for effective and lean production of goods and services. An array of qualitative and quantitative tools and techniques are introduced and utilized, emphasizing lean principles, waste reduction, and overall efficiency of operations. Flow analysis and optimization tools, including computer simulation, are introduced. Strong emphasis is placed on a comprehensive semester-long team project as an integral component of this course.**Credits:** 3.00

IET 43630 - Design Of Experiments

Credit Hours: 3.00. Introduction to statistical design of experiments. The course examines the difference between single, multivariate, and factorial experimental designs. Concepts of optimization and response surface methodologies are introduced. The course focuses on interpreting and communicating experimental results.**Credits:** 3.00

IET 43640 - Lean Six Sigma

Credit Hours: 3.00. A study of the Lean Six Sigma quality and process improvement methodology, using the define, measure, analyze, improve, and control (DMAIC) process. The course addresses advanced topics in statistical quality; introduces quality management concepts as they pertain to the Lean Six Sigma methodology; and provides preparation for the Green Belt Certification exam. **Credits:** 3.00

IET 44275 - Global Transportation And Logistics Management

Credit Hours: 3.00. A study of the various aspects of logistics. The development, implementation, and control of physical transportation systems, product distribution, warehousing, and inventory policy models will be emphasized. A working knowledge of third and fourth-party logistics and transportation strategies will be analyzed. The impact of logistics and transportation in the global environment will be discussed. **Credits:** 3.00

IET 44500 - Strategic Supply Chain Management

Credit Hours: 3.00. A course designed to build upon previous courses with subjects related to managing a distribution enterprise. Modules in sales management, financial analysis, strategic planning, logistics, purchasing, and the legalities of distributor and manufacturer relationships will be combined with case studies to provide students with practice in establishing policy and making decisions from the manager's point of view. Field trips may be required. **Credits:** 3.00

IET 48390 - Industrial Engineering Technology Capstone I: Problem Identification And Analysis

Credit Hours: 3.00. This is the first semester of a two-semester capstone sequence, which focuses on an industry-based, team approach to problem-solving. An array of qualitative and quantitative tools is used to identify and analyze an industrial or business process. Data collection, process maps, flow analysis, Pareto chart, computer simulation, and other optimization tools will be used to identify problem areas and possible solutions. **Credits:** 3.00

IET 48395 - Industrial Engineering Technology Capstone II: Project Design

Credit Hours: 3.00. This is the second course of two-semester capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution to the project/problem. **Credits:** 3.00

IET 48490 - Supply Chain Management Technology Capstone I: Strategic Planning

Credit Hours: 3.00. This course is the first of two integrative capstone courses for senior-level students. The focus is on how firms formulate, implement, and evaluate strategies. Teams of students will integrate program knowledge, coupled with strategic-management techniques learned, to make decisions and help chart the future of different organizations. The major responsibility of students in the capstone courses is to make objective strategic decisions and to justify them through oral and written communication. **Credits:** 3.00

IET 48495 - Supply Change Management Technology Capstone II: Strategic Analytics

Credit Hours: 3.00. This course is the second of two integrative capstone courses for senior-level students. Students will continue working in teams using a variety of planning and decision-making models to work with organizations to solve problems and make sound decisions. The major responsibility of students in the capstone courses is to make objective strategic decisions and to justify them through oral and written communication. **Credits:** 3.00

IET 49000 - Special Topics In Industrial Engineering Technology

Credit Hours: 1.00 to 3.00. Supervised individual research in industrial engineering technology topics. Permission of instructor required. **Credits:** 1.00 to 3.00

IET 50700 - Measurement And Evaluation In Industry And Technology

Credit Hours: 3.00. An introduction to measurement strategies in industrial, technical, and human resource development environments. The evaluation of measurement outcomes will be the primary focus of the course. **Credits:** 3.00

IET 50800 - Quality And Productivity In Industry And Technology

Credit Hours: 3.00. Examines the contemporary issues of continuous improvement in quality and productivity in manufacturing and service industries. Includes a close examination of the evolving philosophies bearing on the scope, improvement, and costs of quality assurance programs in industry and technology. **Credits:** 3.00

IET 53410 - Implementation And Advanced Topics Of Enterprise Six Sigma

Credit Hours: 3.00. This course is designed to expose master's and doctoral students to the theory behind implementation of Six Sigma at the Enterprise level. Students will develop their own research with regard to the future of the discipline through particular assessments. Topics include structure and methodology of Six Sigma deployment, including: systems thinking, change management, business process management, competitive intelligence through international standards, and the future of the discipline. Students will learn the methodology of Six Sigma at the project level for technical skill building in addition to practices of implementing and managing Six Sigma at an organizational level. Permission of Instructor required. **Credits:** 3.00

IET 54500 - Global Supply Chain Management

Credit Hours: 3.00. The objective of this course is to provide in-depth knowledge of global supply chain management and its application in industries. This course explores supply chain management, expanding beyond the linkage between producer and distributor to include other enterprises in the product life cycle, beginning with concept design and ending in disposal. Learning methodologies include lecture, case study, and collaborative student group activities in applied research. Permission of department required. **Credits:** 3.00

IET 58100 - Workshop In Industrial Engineering Technology

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education. **Credits:** 0.00 to 8.00

IET 59000 - Special Problems In Industrial Engineering Technologies

Credit Hours: 1.00 to 6.00. Intensive individual study of selected current developments and issues in Industrial Engineering Technology. A faculty sponsor is required for this course. Does not substitute for either M.S. thesis or M.S. project credit. Permission of instructor required. **Credits:** 1.00 to 6.00

IET 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of Instructor required. **Credits:** 1.00 to 3.00

IET 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Industrial and Molecular Pharmaceutics

IMPH 10000 - Pharmaceutical Sciences Orientation

Credit Hours: 1.00. An orientation course for incoming freshmen or CODO students enrolled in the Bachelor of Sciences in the Pharmaceutical Sciences program. Provides an introduction to the scope of the program, the career opportunities for graduates, the curriculum rationale, and the faculty and staff support structure. **Credits:** 1.00

IMPH 45100 - Industrial Practical Training

Credit Hours: 1.00. Course allows students to gain practice-related employment experience in industrial pharmacy. Students receive credit for practical experience in the session when they participate in the practical experience and complete the course paper requirement. Pre-approval of enrollment through ISS is required prior to employment experience. Permission of instructor required. **Credits:** 1.00

IMPH 49000 - Special Topics

Credit Hours: 1.00 to 6.00. An honors course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest, utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required. **Credits:** 1.00 to 6.00

IMPH 56200 - Introduction To Pharmaceutical Manufacturing Processes

Credit Hours: 4.00. A course intended to provide the student with basic understanding of both the theoretical and practical aspects of pharmaceutical manufacturing by combining a thorough classroom treatment of the underlying principles of each pharmaceutical unit operation with hands-on execution of these activities in the laboratory. Permission of instructor required. **Credits:** 4.00

IMPH 57400 - Pharmaceutical Biotechnology

Credit Hours: 3.00. Pharmaceutical biotechnology is the array of scientific and engineering principles used to develop, manufacture, and regulate biologic drugs. Biologic drugs - also known as "biologics", "biopharmaceuticals", or "large molecule drugs" - are medicinal agents derived from living systems, in contrast to more conventional "small molecule drugs" produced by organic chemical synthesis. Since the approval of the first recombinant human insulin in 1982, biologics have grown from niche products to occupy a prominent place in the pharmaceutical armamentarium. Today, biologics provide innovative treatments for a host of previously intractable diseases, including cancers, autoimmune disorders, and diabetes. The global biologics market was more than $300 billion in 2019, accounting for 20-25% of all pharmaceutical sales. This course introduces students to pharmaceutical biotechnology. The five didactic sections of the course present: (i) the biotech drug market, (ii) cellular and molecular biology foundations, (iii) formulation and stability of biotech drug products, (iv) analytical methods for quality assurance, and (v) manufacturing methods. In the sixth and final section of the course, students will present case studies on currently approved biotech drugs, integrating and applying what they've learned. The course is intended for beginning graduate students in the Departments of Industrial and Physical Pharmacy, Chemical Engineering, and Biomedical Engineering. The course may also be suitable for well-qualified upper-division undergraduates. Permission of department required.**Credits:** 3.00

IMPH 58000 - Physical Chemical Principles

Credit Hours: 3.00. Applications of physical chemical principles to pharmaceutical systems. **Credits:** 3.00

IMPH 58300 - Advanced Biopharmaceutics

Credit Hours: 3.00. A comprehensive course dealing with the interaction of biological and physicochemical considerations relating to drug effectiveness and dosage form design. **Credits:** 3.00

IMPH 58700 - Pharmaceutical Solids

Credit Hours: 2.00. Provides students with the ability to identify and characterize polymorphs and hydrates and to understand their behavior in the presence of water. Both classical methods and new techniques for the study of pharmaceutical solids and their interaction with water are included. Scientific principles are blended with practical examples to provide a conceptual basis for understanding particular problems. **Credits:** 2.00

IMPH 59000 - Special Topics In Industrial And Molecular Pharmaceutics

Credit Hours: 1.00 to 6.00. Special topics in selected areas of industrial and molecular pharmaceutics. Permission of instructor required. **Credits:** 1.00 to 6.00

IMPH 68000 - Pharmacokinetics And Biopharmaceutics

Credit Hours: 3.00. Pharmacokinetics (PK) is the study of the time course of the absorption, distribution, metabolism and excretion (ADME) of a drug, compound or new chemical entity (NCE) after its administration to the body. Biopharmaceutics examines the relationship between the physical/chemical nature of a drug, the dosage form and the route of administration on the rate and extent of systemic drug absorption. Knowledge of the pharmacokinetic and biopharmaceutics properties of an NCE are critical to its selection as a lead candidate in a drug discovery program, its use as a functional research tool, and its use as a therapeutic agent. This course will be an overview of the development of pharmacokinetic principles, including guidelines for conducting clinical studies, and equations required to characterize the disposition of drugs and their metabolite(s). Students will develop the ability to probe the mechanisms and physiological processes responsible for ADME. Pharmacodynamics, the relationship between drug concentration and effect, and the issues surrounding stereospecific PK will presented. Prerequisites: Admission to the IMPH graduate program and at least one course in pharmacology and one course in mammalian or human physiology. Permission of instructor required. **Credits:** 3.00

IMPH 69000 - Special Problems

Credit Hours: 0.50 to 6.00. Individual research topics selected from the areas of industrial pharmacy, physical pharmacy, or biopharmaceutics. Permission of instructor required. **Credits:** 0.50 to 6.00

IMPH 69600 - Seminar In Industrial And Physical Pharmacy

Credit Hours: 0.00 or 1.00. Discussion of recent research developments in physical pharmacy, industrial pharmacy, and biopharmaceutics related to the physicochemical properties, availability, effectiveness, and safety of drugs and drug products. Topics are presented by staff, students, and invited speakers. **Credits:** 0.00 or 1.00

IMPH 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Industrial Technology

IT 43500 - Distribution Management Policy

Credit Hours: 3.00. A course designed to build upon previous distribution-related courses with subjects related to managing a distribution enterprise. Modules in sales management, strategic planning, supply-chain logistics, purchasing, and the legalities of distribution manufacturer relationships will be combined with case studies to provide students with practice in making decisions and establishing policy from the manager's point of view. Field trips may be required. **Credits:** 3.00

IT 51000 - Developing Courses For Industry And Technology

Credit Hours: 3.00. Principles and procedures in planning, organizing, and developing instructional content for industrial, technical, and human resource development courses. **Credits:** 3.00

IT 53000 - Biometric Technology Test Design, Performance, And Evaluation

Credit Hours: 3.00. An introduction of methods of designing biometric testing, performance, and evaluation analyses. Specifically, methods of evaluating fingerprint, face recognition, iris, and voice recognition data are explored using ROC curves, CMC, Rank statistics, and DET curves. The course examines testing requirements from submission of IRB documents to the final analysis. A component of comparative analysis within modalities is included. **Credits:** 3.00

IT 54000 - Biometric Performance And Usability Analysis

Credit Hours: 3.00. An introduction of test methodologies from disciplines outside of biometrics, which include: usability, ergonomics, human factors, and human-computer interaction, in order to demonstrate how biometric data analysis can benefit from understanding how humans interact with biometric sensors during the testing and evaluation of biometric systems. The course explores test methods, case studies, and prior biometric testing reports in order to develop a test methodology that includes information on how users interact with biometric systems. Permission of department required. **Credits:** 3.00

IT 54500 - Biometrics Technology And Applications

Credit Hours: 3.00. Examines biometrics technology as it relates to security, access control, and the authentication of individuals. The course will examine biometric technologies including iris, face, finger, hand geometry, dynamic signature verification, skin print analysis, and voice recognition. Permission of instructor required. **Credits:** 3.00

IT 56800 - Developing Instructional Materials For Industry And Technology

Credit Hours: 3.00. Principles and procedures in locating, evaluating, producing, and integrating instructional materials and aids into industrial, technical, and human resource development programs. **Credits:** 3.00

IT 57100 - Project Management In Industry And Technology

Credit Hours: 3.00. The factors influencing decisions during the initiation, implementation, and termination of industrial and manufacturing projects are examined. Students work as project teams, using project management tools to develop implementation strategies. Permission of instructor required. **Credits:** 3.00

IT 58100 - Workshop In Industrial Technology

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education. **Credits:** 0.00 to 8.00

IT 59000 - Special Problems In Industrial Technology

Credit Hours: 1.00 to 6.00. Independent study of a special problem under the guidance of a member of the staff. Does not substitute for either M.S. thesis or M.S. project credit. Permission of instructor required. **Credits:** 1.00 to 6.00

IT 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of department required. **Credits:** 1.00 to 3.00

IT 65700 - Fingerprint Performance And Usability

Credit Hours: 3.00. This course covers topics of fingerprint capture, fingerprint feature extraction, fingerprint matching, and attacks on fingerprint systems. The course requires analysis of real fingerprint data and the integration of fingerprint recognition in existing infrastructures. Development of a fingerprint recognition system is required. Prerequisites: IT 54500 and either IET 50700 or STAT 50100. **Credits:** 3.00

IT 65800 - Biometric Systems Interoperability: Applications And Challenges

Credit Hours: 3.00. This course provides a technology neutral approach to the discussion of biometric system interoperability. It examines the issues of biometric sub-systems of different biometric modalities and sub-systems of the general biometric model. Students will be able to critically evaluate the impact of interoperability of sub-systems on the performance of the entire system. Prerequisites: IT 54500 and either IET 50700 or STAT 50100. **Credits:** 3.00

Information and Library Science

ILS 10000 - Introduction To Information Studies

Credit Hours: 3.00. This course will provide a foundation for navigating and engaging with the information-rich world. Students will define and assess information in order to address real-world situations; map their information landscape and effectively engage with information systems as well as human sources of information; develop a practice of critical and ethical information use; and conceptualize, apply, and examine the strategies for information and knowledge management, production, and dissemination. Students will examine the societal impact and implications of information and information privilege to explore the applications and consequences of information, in addition to examining data practices and methods. This will provide students with an opportunity to strengthen their research and information literacy skills, reflect in an informed and critical manner, and give them the tools to successfully make ethical, evidence-based decisions in the academic and professional context.**Credits:** 3.00

ILS 10300 - Introduction To Data Lifecycle Management

Credit Hours: 1.00. Introduces concepts of the management of data throughout its lifecycle. Understanding different types of data and their functions. Managing data in the context of a particular discipline or profession. Finding and evaluating data purposefully. Using data ethically and responsibly. Creating and sharing data for reuse, accountability, and enhancement. Making decisions and communicating using data, including data analysis and visualization. Protecting and archiving data. **Credits:** 1.00

ILS 17500 - Information Strategies For Hospitality & Tourism Management

Credit Hours: 1.00. This course will provide students with a framework of information search skills and problem-solving they can utilize in their area of study and in everyday life. It will also incorporate technology literacy components with active learning. Class sessions will consist of lecture, group discussion, demonstrations, and in-class activities and out-of-class activities. The course is intended for first-semester freshman students. Department permission required. **Credits:** 1.00

ILS 18000 - Preparing For Your Undergraduate Research Experience

Credit Hours: 1.00. This course is for prospective Purdue undergraduate researchers who are interested in conducting undergraduate research or creative endeavors. Purdue students who have not already started an independent research project with a research mentor will learn valuable skills to market themselves to individuals and research programs. Throughout the course, students will develop components for a final application packet to submit to a research team or program they choose. Department permission required. **Credits:** 1.00

ILS 19500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics from the practice of information and data science, varying from semester to semester. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of department required. **Credits:** 1.00 to 4.00

ILS 20100 - Introduction To Digital Humanities

Credit Hours: 3.00. This is an interdisciplinary foundational course that combines theory and practice to teach students in and about digitally mediated culture. Accordingly, this course fosters a critical understanding of the digital and its implication for the development of a technologically driven society. Students will be introduced to digital inquiry and critical practice and explore the ways that the digital transforms knowledge acquisition and production across the humanities, social sciences and sciences. Students will engage in readings and activities that help them form substantive perspectives on the digital formulations and practice through digital technologies and tools. Students will also experiment with digital methods and tools by building a digital project. This course places an emphasis on engaged learning through online and in-class discussion, digital activities, and collaborative work. Permission of instructor required. **Credits:** 3.00

ILS 23000 - Data Science And Society: Ethical Legal Social Issues

Credit Hours: 3.00. This course provides an introduction to Ethical, Legal Social Issues (ELSI) in Data Science. Students will be introduced to interdisciplinary theoretical and practical frameworks that can aid in exploring the impact and role of Data Science in society. This is a writing intensive course. Students will work individually and on collaborative assignments. **Credits:** 3.00

ILS 23500 - SPIRaL, Part I: Commencing Information Literacy Research

Credit Hours: 2.00. Over the course of a year-long research experience, SPIRaL undergraduate researchers engage in original research to investigate how information literacy-in its many forms-can inform real-world solutions to contemporary information challenges, such as mis/disinformation. In the first half of the semester, SPIRaL students will explore the information literacy literature to build a foundation for our research this year. In this early part of the semester, students will be introduced to the different views scholars have of information literacy, the various research approaches they employ, and the range of real-world information challenges information literacy researchers attend to with their research. Students will use the insights from the existing information literacy and information challenges research to inform the research study they will carry out over the year. In second part of the fall semester, students will commence original research that addresses a need or gap in the literature. Students will apply data collection methods and reflect on the affordances of qualitative research approaches in pursuing knowledge about information literacy's role in addressing information challenges. Across this year-long research experience, the SPIRaL research team will aim to: 1. expand what is known about the role information literacy can play in addressing significant information challenges in the world, and 2. enrich the information literacy research community by welcoming new and passionate undergraduate researchers into this work.**Credits:** 2.00

ILS 23600 - SPIRaL, Part II: Conducting Information Literacy Research

Credit Hours: 1.00. Over the course of a year-long research experience, SPIRaL undergraduate researchers engage in original research to investigate how information literacy-in its many forms-can inform real-world solutions to contemporary information challenges, such as mis/disinformation. The second semester of SPIRaL builds upon the work completed in the previous semester. We will spend the first half of the semester analyzing the data collected last semester. We will then present our research approach, findings, and implications in various scholarly venues.**Credits:** 1.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required. **Credits:** 3.00

ILS 28000 - Understanding Your Undergraduate Research Experience I

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to hone skills necessary for successfully reflecting on and completing the experience. During this course, students will utilize their research experience to apply skills such as managing time with a research project, communicating your research, utilizing Purdue Libraries' resources, and providing feedback to peer researchers. Students will deliver research pitches about their own project and provide critiques to others' pitches. Department permission required.**Credits:** 1.00

ILS 29000 - Independent Study In Information Science

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue. Plan of Study and assessment method are agreed upon by faculty and student prior to course registration. **Credits:** 1.00 to 3.00

ILS 29500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. **Credits:** 1.00 to 4.00

ILS 30000 - Information, Culture, And Society

Credit Hours: 3.00. Information and information systems shape our beliefs, influence decision-making, define our collective knowledge, and are integral to being an informed, responsible, and engaged citizen in our modern world. This course will examine the intricate relationship between information and society to better understand how information ecosystems, constituted by various technologies and practices, shape and are shaped by individual identities, structures of power, and ethical considerations/human values. Using an interdisciplinary and team-based approach, students will gain essential skills to navigate their information-rich world.**Credits:** 3.00

ILS 30100 - Data Foundations, Tools, And Applications

Credit Hours: 3.00. Data are everywhere. Data permeates every aspect of our lives, from journalistic reporting to workplace projects to artificial intelligence applications. This course covers the basics of the data research lifecycle, including locating and managing datasets, along with applying different methods and tools a to craft compelling stories about data. Students will learn the difference between data and information and how to transform raw data into information to be communicated to a wider audience. This course offers unique skills for students from any discipline who want to discover the world of data.**Credits:** 3.00

ILS 33000 - The Age Of Mis/Dis/Malinformation

Credit Hours: 3.00. In our current moment, often known colloquially as the "Information Age," the veracity of information is of incredible importance, yet we see the viral spread and consumption of "bad" information: misinformation, disinformation, and malinformation. These three forms of information are spread globally regarding every event. Even though more people have access to information sources than ever before, we still are living in the age of mis/dis/malinformation.**Credits:** 3.00

ILS 33100 - Conspiracy Theories

Credit Hours: 3.00. In the information age, we have witnessed a dramatic resurgence of paranoia and violence, fueled by the very technologies meant to provide access to knowledge and information. In this course, we will uncover conspiracies together, seeking to understand how such strange ideas originate and spread.**Credits:** 3.00

ILS 38000 - Understanding Your Undergraduate Research Experience II

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to build upon the previous course and focus on research data collection, presentation, and communication for current Purdue undergraduate researchers. During this course, students will learn and discuss various forms of data and collection practices. Students will develop their own academic poster to present their research project's data and implications. Students are encouraged to present their poster at one of Purdue's undergraduate research conferences near the end of the semester. This course is the second course taken as undergraduate researchers and introduces material at this advanced level. This higher-division course is normally scheduled for juniors and seniors. Department permission required.**Credits:** 1.00

ILS 39500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digitals scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Department approval required. **Credits:** 1.00 to 4.00

ILS 48000 - Beyond Undergraduate Research

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to build on previous courses and focus on continuing their education in graduate or professional school. During this course, students will learn and discuss the various phases of identifying, selecting, applying to and funding graduate or professional school programs. Students will also gain a deeper comprehension of the qualities and skills that make research mentors effective while developing skills they will need to be successful mentees and peer mentors. Students will conduct research to identify potential programs of interest and develop a statement of purpose. Department permission required.**Credits:** 1.00

ILS 49000 - Independent Study In Information Science

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue. Plan of Study and assessment method are agreed upon by faculty and student prior to course registration. **Credits:** 1.00 to 3.00

ILS 49500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for

data and information science, information literacy, archival literacy, and emerging trends in information and data science. **Credits:** 1.00 to 4.00

ILS 51200 - Information Strategies For Science, Technology, And Engineering Research

Credit Hours: 1.00. This course focuses on information strategies for successful research in science, engineering, and technology disciplines. Students will learn about how scholarly information and discipline relevant grey literature (e.g., patents, technical standards) are created, organized, disseminated, retrieved, and managed. In addition, students will learn strategies to critically evaluate information and present their research effectively and ethically. **Credits:** 1.00

ILS 51400 - Information Skills For Health Professionals

Credit Hours: 1.00. This course is designed to help you develop essential information skills to support your professional goals and prepare you to succeed in graduate or professional school in the health sciences. Learn how to navigate PubMed and other subject-specific databases, and differentiate between various types of research articles. Become adept at saving, organizing, and annotating articles so you can easily locate them, "cite while you write," and share them with your classmates or research group. Prepare for writing for publication. And avail yourself of the resources and services academic libraries provide, beyond books and journals, to support your coursework and research. Permission from department or instructor required. **Credits:** 1.00

ILS 54000 - Critical GIS: Theory And Applications

Credit Hours: 3.00. This course will provide students with a critical overview of the role power, culture, justice and injustice, and oppression have played in the practice and history of cartography. In this hands-on course students will learn the basic GIS skills and techniques that will help them understand place and space through critical theories of race, gender, sexuality, indigeneity, class, ability, colonialism, and the State. We will engage theoretical texts on mapping and social justice to identify how GIS and maps can expose and resist oppression and inequality. Students will apply critical theory through the practice of critical cartography to analyze a course-related topic of their choosing and use GIS tools to create an original project. Students will move away from the traditional research paper and engage with a digital research platform that enhances research impact and scholarship reach while applying such tools to interrogate the power dynamics contained within them. It provides the opportunity to serve as a tool for community collaborations in social activism as a shareable document. This class is designed to offer an interdisciplinary approach to place-based research and its connections to social justice.**Credits:** 3.00

ILS 59000 - Independent Study In Information Sciences

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue University. Plan of study and assessment is agreed upon by faculty and student before registration. Permission of department required. Permission of instructor required. **Credits:** 1.00 to 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates. **Credits:** 1.00 to 4.00

ILS 63000 - Digital Humanities Foundations

Credit Hours: 3.00. This course introduces graduate students to the core theoretical and practical components of Digital Humanities. Students engage key theoretical texts in weekly seminars and practice central methodologies in weekly work sessions. **Credits:** 3.00

ILS 63100 - Digital And Analog Archives

Credit Hours: 3.00. Digital and Analog Archives provides an overview of archival theory and practice, including archival arrangement and description, preservation, and digitization best practices. Lab components incorporate archival research, digital reformatting, metadata creation, the creation of digital archives, and presentation of archives to users. **Credits:** 3.00

ILS 65000 - Introduction To Computational Text Analysis

Credit Hours: 3.00. This course provides an introduction to the methods, debates, and tools of computational text analysis, specifically crafted for the humanities and social science graduate students. **Credits:** 3.00

ILS 69000 - Independent Study In Information Sciences

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue University. Plan of study and assessment is agreed upon by faculty and student before registration. Permission of department required. Permission of instructor required. **Credits:** 1.00 to 3.00

ILS 69500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. **Credits:** 1.00 to 4.00

Interdisciplinary Engineering

IDE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IDE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering. **Credits:** 1.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of

the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required. **Credits:** 3.00

IDE 38199 - Professional Practice Three-Session Coop I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required. **Credits:** 0.00

IDE 38299 - Professional Practice Three-Session Coop II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required. **Credits:** 0.00

IDE 38399 - Professional Practice Three-Session Coop III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required. **Credits:** 0.00

IDE 38500 - Design Methodologies For Diverse Stakeholders

Credit Hours: 3.00. This course focuses on engineering design methodologies with a concern for the needs of diverse stakeholders. The course brings together topics drawn from a variety of disciplines (including anthropology, education, psychology, human-computer interaction and engineering) to introduce interdisciplinary engineering approaches to: (1) design tools, systems, and/or environments to support cognitive processes and (2) engage in human-centered and learner-centered design. The semester design project provides a context for students to apply these methods. Permission of Instructor required. **Credits:** 3.00

IDE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IDE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IDE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

IDE 39699 - Professional Practice Internship

Credit Hours: 0.00. Internship experience in multidisciplinary engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required. **Credits:** 0.00

IDE 48000 - Engineering Ethics In Interdisciplinary Contexts

Credit Hours: 3.00. The purpose of this course is to provide students with tools and strategies to reason through situations with ethical issues that they may encounter as engineering students and in their future careers. To this end, this course seeks to enhance students' awareness of ethical issues in interdisciplinary engineering contexts, ability to reason through ethical challenges in diverse engineering contexts, courage to respond to ethical issues in their future practice, ability to work effectively on teams, and the ability to communicate with others.**Credits:** 3.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making. **Credits:** 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required. **Credits:** 1.00

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required. **Credits:** 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation. **Credits:** 1.00

IDE 49500 - Special Topics In Interdisciplinary Engineering

Credit Hours: 1.00 to 4.00. Primarily designed for interdisciplinary engineering subject areas for which there is no specific course offered, but for which there is sufficient student interest to justify teaching a specialized course on a trial basis. May be repeated for credit as long as the topic being taught is not repeated. **Credits:** 1.00 to 4.00

Interdisciplinary Studies

IDIS 20100 - Introduction To Digital Humanities

Credit Hours: 3.00. This is an interdisciplinary foundational course that combines theory and practice to teach students in and about digitally mediated culture. Accordingly, this course fosters a critical understanding of the digital and its implication for the development of a technologically driven society. Students will be introduced to digital inquiry and critical practice and explore the ways that the digital transforms knowledge acquisition and production across the humanities, social sciences and sciences. Students will engage in readings and activities that help them form substantive perspectives on the digital formulations and practice through digital technologies and tools. Students will also experiment with digital methods and tools by building a digital project. This course places an emphasis on engaged learning through online and in-class discussion, digital activities, and collaborative work.**Credits:** 3.00

IDIS 29000 - Interdisciplinary Topics

Credit Hours: 0.00 to 6.00. Course topics and patterns will vary. **Credits:** 0.00 to 6.00

IDIS 49000 - Directed Reading In Interdisciplinary Studies

Credit Hours: 1.00 to 3.00. Reading under the direction of the instructor in a particular field of study. Permission of instructor required. **Credits:** 1.00 to 3.00

IDIS 49100 - Special Topics In Interdisciplinary Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of the instructor in a particular field of specialization. **Credits:** 1.00 to 4.00

IDIS 59000 - Directed Reading In Interdisciplinary Studies

Credit Hours: 1.00 to 3.00. Reading under the direction of the instructor in a particular field of study. Permission of instructor required. **Credits:** 1.00 to 3.00

IDIS 59100 - Selected Topics In Interdisciplinary Studies

Credit Hours: 3.00. A study of selected topics, taught by an instructor in whose particular field of specialization the content of the course falls. **Credits:** 3.00

Italian

ITAL 10100 - Italian Level I

Credit Hours: 3.00. A beginning Italian course with emphasis on communicative skills (listening and speaking), literacy (reading and writing) and culture. **Credits:** 3.00

ITAL 10200 - Italian Level II

Credit Hours: 3.00. Continuation of ITAL 10100. **Credits:** 3.00

ITAL 10500 - Accelerated Basic Italian

Credit Hours: 3.00. An accelerated basic Italian course that substitutes for ITAL 10100 and ITAL 10200. Knowledge of a foreign language required. **Credits:** 3.00

ITAL 11200 - Elementary Italian Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group discussions in Italian on various topics. **Credits:** 1.00

ITAL 20100 - Italian Level III

Credit Hours: 3.00. A continuation of ITAL 10200. **Credits:** 3.00

ITAL 20200 - Italian Level IV

Credit Hours: 3.00. An intermediate Italian course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. **Credits:** 3.00

ITAL 20500 - Accelerated Intermediate Italian

Credit Hours: 3.00. An accelerated second-year Italian course with focus on furthering the development of listening, reading, speaking and writing abilities at the intermediate level. **Credits:** 3.00

ITAL 21200 - Intermediate Italian Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in Italian conversation to enhance communicative competence. Small group discussions in Italian on various topics. Not open to students enrolled in or having credit for ITAL 30100 or above. **Credits:** 1.00

ITAL 23100 - Dante's Divine Comedy

Credit Hours: 3.00. Reading and discussion of Dante's Divine Comedy. The major critical approaches to Dante's masterpiece will be reviewed. All readings, papers, and examinations will be in English. **Credits:** 3.00

ITAL 28000 - Italian Culture And Civilization

Credit Hours: 3.00. Course focuses on salient aspects of Italian culture and civilization from the Middle Ages to the present. In English. **Credits:** 3.00

ITAL 28100 - The Italian Renaissance And Its Scientific And Cultural Impact On Western Civilization

Credit Hours: 3.00. This course introduces students to the most important cultural and scientific writings of the Italian Renaissance, and shows the pivotal influence of the Renaissance on the development of Western civilization as a whole. Classes and readings entirely in English; no knowledge of Italian needed. **Credits:** 3.00

ITAL 28500 - Intercultural Migration To Italy In Film, Literature, And Art

Credit Hours: 3.00. This course introduces students to the complexities of recent migrations to Italy through the perspectives of film, literature, and art. The course covers a wide range of topics, from a historical and geographical overview of migrations to Italy, to the hotly debated issues of immigration policies, Italian citizenship law, human rights and social justice, and the process of reimagining the Italian identity in more diverse and inclusive terms. Course taught in English. No Italian knowledge required.**Credits:** 3.00

ITAL 30100 - Italian Level V

Credit Hours: 3.00. Continued development of Italian speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Italy from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Italian. **Credits:** 3.00

ITAL 30200 - Italian Level VI

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Italian, on the basis of materials dealing with the ideas and events that have shaped present-day Italy. Conducted primarily in Italian. **Credits:** 3.00

ITAL 31200 - Advanced Italian Conversation

Credit Hours: 1.00. One credit hour advanced Italian conversation course focused on the development of oral and aural skills for self-expression. Course provides students with guided practice in conversation to enhance communicative competence. Discussions in Italian on various topics. Course may be taken concurrently with ITAL 30100, 30200, 34100 and 34200. **Credits:** 1.00

ITAL 33000 - The Italian Cinema

Credit Hours: 3.00. The development and evolution of Italian cinema after World War II. The class will center on the viewing and discussion of films and will survey a broad spectrum of directors and styles. Knowledge of Italian not required. **Credits:** 3.00

ITAL 33300 - The Spirit Of Italian Comedy

Credit Hours: 3.00. This course explores various types of Italian comedy, focusing on theater and cinema. Particular emphasis will be given to Renaissance theater, commedia dell'arte, Goldoni, Pirnadello, Dario Fo, and to the new generation of Italian comedians. In English. **Credits:** 3.00

ITAL 33500 - Italian-American Cinema

Credit Hours: 3.00. This course offers an overview of the major filmmakers associated with the representation of Italian Americans in the United States film world. Students will view and discuss major filmmakers and their films, and will write critical essays on film topics. Conducted in English. **Credits:** 3.00

ITAL 34100 - Italian Literature I: From The Middle Ages To The Enlightenment

Credit Hours: 3.00. This is the first course of a two-semester sequence presenting an overview of Italian literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Readings, discussion, and papers in Italian. **Credits:** 3.00

ITAL 34200 - Italian Literature II: From Romanticism To The Present

Credit Hours: 3.00. This is the second course of a two-semester sequence presenting an overview of Italian literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Readings, discussion, and papers in Italian. **Credits:** 3.00

ITAL 38100 - Italian And Italian American Food Culture

Credit Hours: 3.00. This course provides a comprehensive exploration of the rich and diverse food cultures of Italy and Italian American communities. Through a combination of historical, cultural, visual, and culinary perspectives, students will gain an in-depth understanding of the traditions, influences, and innovations that have shaped Italian and Italian-American cuisine.**Credits:** 3.00

ITAL 39300 - Special Topics In Italian Literature Or Cinema

Credit Hours: 3.00. This course will focus on particular aspects of Italian literature, cinema or culture. No knowledge of Italian required. **Credits:** 3.00

ITAL 39400 - Special Topics In Italian Literature

Credit Hours: 3.00. This course studies a particular aspect in Italian literature (e.g., a theme, device, character type, motif, place) by reading a varied selection of works of different genres, styles, and/or periods. Readings, discussion, and papers in Italian. **Credits:** 3.00

ITAL 39900 - Special Study Abroad Credit It Italian

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Italian earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

ITAL 49300 - Advanced Topics In Italian Literature Or Cinema

Credit Hours: 3.00. This course will analyze in depth particular aspects of Italian literature, cinema or culture. No knowledge of Italian necessary. **Credits:** 3.00

ITAL 59000 - Directed Reading In Italian

Credit Hours: 1.00 to 4.00. Directed readings in Italian. Permission of instructor required. **Credits:** 1.00 to 4.00

Japanese

JPNS 10100 - Japanese Level I

Credit Hours: 3.00 or 4.00. A basic study of standard Japanese. Students will be introduced to spoken and written forms of the language from the beginning. Language form and use are equally emphasized. Relevant cultural aspects. Hiragana, Katakana, and 85 Kanji. **Credits:** 3.00 or 4.00

JPNS 10200 - Japanese Level II

Credit Hours: 0.00 to 4.00. A continuation of the study of elementary Japanese. Task-oriented activities will be incorporated to encourage language use as well as pattern practice for linguistic accuracy. Relevant cultural aspects will be introduced. 120 Kanji. **Credits:** 0.00 to 4.00

JPNS 20100 - Japanese Level III

Credit Hours: 3.00 or 4.00. A study of intermediate Japanese. Occasional use of authentic materials for listening and reading practice. Task-oriented exercises, communicative activities, and pattern practice are used to facilitate learning of the spoken and written language. 110 Kanji. **Credits:** 3.00 or 4.00

JPNS 20200 - Japanese Level IV

Credit Hours: 3.00 or 4.00. A continuation of intermediate Japanese. Active use of authentic materials for listening and reading practice. Task-oriented exercises, communicative activities, and pattern practice for learning of the spoken and written language. 150 Kanji. **Credits:** 3.00 or 4.00

JPNS 23000 - Japanese Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected texts from major writers and genres. The course provides a broad survey of the Japanese literary tradition and its cultural and historical background. Emphasis may vary from year to year. Knowledge of Japanese not required. **Credits:** 3.00

JPNS 24100 - Introduction To The Study Of Japanese Literature

Credit Hours: 3.00. Reading and discussion of selected Japanese poetry, prose, and drama; introduction to methods of literary criticism, applied to the reading of Japanese literary discourse. Texts, discussion, and written assignments largely in Japanese. **Credits:** 3.00

JPNS 28000 - Introduction To Modern Japanese Civilization

Credit Hours: 3.00. A survey of modern Japanese culture. Various aspects are covered, such as geography, economy, society, the political system, family, education, traditional arts, business, and language. Current issues will be discussed in a timely manner. Lectures in English. **Credits:** 3.00

JPNS 30100 - Japanese Level V

Credit Hours: 3.00. Continued development of Japanese speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Japan from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Japanese. **Credits:** 3.00

JPNS 30200 - Japanese Level VI

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Japanese, on the basis of materials dealing with the ideas and events that have shaped present-day Japan. Conducted primarily in Japanese. **Credits:** 3.00

JPNS 31300 - Intermediate Reading In Japanese I

Credit Hours: 3.00. This course provides students with further study in reading Japanese at the intermediate level. The course also reviews and introduces 500 basic kanji. **Credits:** 3.00

JPNS 33000 - Japanese Cinema

Credit Hours: 3.00. A survey of the development of Japanese cinema after World War II. The class focuses on the viewing and discussion of the films and examines a variety of directors with different styles and thematic messages. **Credits:** 3.00

JPNS 34100 - Japanese Literature I: Modern Japanese Literature

Credit Hours: 3.00. Selected reading of poetry, drama, and fiction of modern Japanese literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Conducted largely in Japanese. **Credits:** 3.00

JPNS 36100 - Elementary Survey Of Japanese Linguistics

Credit Hours: 3.00. This course surveys all areas of Japanese Linguistics, including phonetics, phonology, morphology, syntax, semantics, and pragmatics, focusing on systematizing fragmentary knowledge students are assumed to have acquired through Japanese language courses. **Credits:** 3.00

JPNS 36300 - Relationship Of Japanese Language And Society

Credit Hours: 3.00. This course examines the Japanese language with reference to the way the language is being used in the Japanese society. Particular areas include keigo (honorific language), aizuchi (backchannel), silence, gender issues, in-group vs. out-group. **Credits:** 3.00

JPNS 39900 - Special Study Abroad Credit In Japanese

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Japanese earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

JPNS 40100 - Japanese Level VII

Credit Hours: 3.00. Advanced work on the development of Japanese speaking, reading, and writing abilities, focusing on materials dealing with culture and the arts of Japan. Conducted mostly in Japanese. **Credits:** 3.00

JPNS 40200 - Japanese Level VIII

Credit Hours: 3.00. This course is a continuation of Fourth Year Japanese I. It continues work on the acquisition of advanced-level proficiency in speaking, listening, reading and writing. Students are given opportunities to understand the main ideas of extended discourse, to read texts which are linguistically complex, and to write about a variety of topics. **Credits:** 3.00

JPNS 44200 - Manga And Anime

Credit Hours: 3.00. In this class, students will study the globally popular art forms of Japanese comic books, known as manga, and cartoons, known as anime, from an academic perspective. We will approach the study of these media via the disciplines of literary studies, art history, visual culture studies, and the study of popular culture. While examining manga and anime as visual and literary media, we will consider topics including Japanese history, the environment, war, gender, sexuality, family, tradition, religion, philosophy, Japan's relationship to the globe, and genres of popular literature such as fantasy, horror, and science fiction. Materials to be covered include historical illustrated fiction of the 18th and 19th centuries (the prehistory of manga), foundational manga from the post-WWII era, manga by women writers, contemporary popular manga, anime films that ignited the global anime phenomenon, and anime films by the latest major directors. **Credits:** 3.00

JPNS 48500 - Culinary Culture Of Japan

Credit Hours: 3.00. Advanced-level language and culture course about the food of Japan. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of Japan. Students will further develop their speaking, listening, reading and writing abilities in Japanese. They will have the opportunity to apply their skills in practical

contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience. Conducted entirely in Japanese. Permission of department required. **Credits:** 3.00

JPNS 49000 - Special Topics In Japanese Language

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 3.00

JPNS 52100 - Teaching Japanese As A Foreign Language

Credit Hours: 3.00. Introduces a wide range of techniques used in teaching Japanese as a foreign language. Discusses theoretical issues concerned with the learning and teaching of Japanese. Permission of instructor required. **Credits:** 3.00

JPNS 56000 - Survey Of Japanese Linguistics

Credit Hours: 3.00. This course is intended to provide the student with a systematic overview of the Japanese language. It covers most major areas of linguistics, from phonetics to pragmatics. Conducted in Japanese. **Credits:** 3.00

JPNS 57500 - Theories Of Japanese Language Acquisition

Credit Hours: 3.00. Advanced course designed to provide an overview of major theoretical issues in Japanese language acquisition research. Permission of instructor required. **Credits:** 3.00

JPNS 59000 - Directed Reading In Japanese

Credit Hours: 1.00 to 4.00. Directed readings in Japanese. Permission of instructor required. **Credits:** 1.00 to 4.00

JPNS 59400 - Special Topics In Japanese Literature

Credit Hours: 1.00 to 4.00. Reading and extensive discussion of selected texts from different writers and genres. Provides in-depth research on a variety of issues related to Japanese literary and cultural traditions. Knowledge of advanced Japanese required. Permission of instructor required. **Credits:** 1.00 to 4.00

JPNS 59600 - Special Topics In Japanese Linguistics.

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

JPNS 67900 - Seminar In Japanese Linguistics

Credit Hours: 3.00. Advanced study and research on a significant topic in Japanese linguistics. Topic to be announced in advance. Permission of instructor required. **Credits:** 3.00

JPNS 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Jewish Studies

JWST 33000 - Introduction To Jewish Studies

Credit Hours: 3.00. An interdisciplinary course touching on the full range of Jewish experience from antiquity to the present. Several members of the Jewish Studies faculty and guest lecturers participate, representing such fields as anthropology, history, language, literature, philosophy, politics, religion, and sociology. **Credits:** 3.00

JWST 59000 - Directed Readings In Jewish Studies

Credit Hours: 3.00. A reading course in aspects of Judaica directed by the instructor in whose particular field of specialization the content of the reading falls. Permission of Instructor required. **Credits:** 3.00

Korean

KOR 10100 - Korean Level I

Credit Hours: 4.00. This course is the first half of the Elementary Korean language sequence. It is designed for those who have no prior (or very limited) knowledge of Korean. Lecture will introduce new material and explain conversational patterns considering grammatical, lexical, and pragmatic aspects of Korean. Some class meetings will be conducted entirely in Korean. Emphasis is placed on the fundamentals of listening, speaking, reading, and writing. In addition, students will be exposed to everyday life contexts (e.g., language use, culture, etc.) likely to be encountered in contemporary Korean society. **Credits:** 4.00

KOR 10200 - Korean Level II

Credit Hours: 4.00. This course is the second half of the elementary Korean language sequence. As a continuation of KOR 10100, the main purpose of this course is to expand on the study of the Korean language and culture. The class will introduce new material and explain conversational patterns considering grammatical, lexical, and pragmatic aspects of Korean. Some class meetings will be conducted entirely in Korean. Students continue to learn vocabulary, pronunciation, grammar, and the writing system by practicing Korean to achieve Novice High level of speaking, listening, reading, and writing. **Credits:** 4.00

KOR 20100 - Korean Level III

Credit Hours: 4.00. This course is the first half of the intermediate Korean language sequence. The main purpose of this course is to expand on the study of the Korean language and culture, and develop an Intermediate Low proficiency level. Some class meetings are conducted entirely in Korean. Students practice reading and listening comprehension, grammar, vocabulary building, and conversations that require a variety of styles, pragmatic considerations, and knowledge of Korean cultural topics. Skills for simple narration and written report will be enhanced. Students rely on authentic materials for introduction of Korean culture and authentic language usage. **Credits:** 4.00

KOR 20200 - Korean Level IV

Credit Hours: 4.00. This course is the second half of the intermediate Korean language sequence. The main purpose of this course is to expand on the study of the Korean language and culture, and develop an Intermediate Mid proficiency level. Some class meetings are conducted entirely in Korean. The course provides students with further conversational and grammatical skills. Students practice reading comprehension, grammar, vocabulary, and conversation using textbooks and authentic materials for introduction of Korean culture and authentic language usage. **Credits:** 4.00

KOR 24100 - Introduction To Korean Literature

Credit Hours: 3.00. This course will introduce students to major trends, genres, perspectives, and ideas in Korean literature, including poetry, essays, and short stories, from the early 20th century up to the present day. Covering significant historical milestones such as the Japanese Colonial Period, Liberation Day, and the post-liberation era, the literary works discussed in this course offer diverse perspectives on these time periods. By exploring prominent themes, forms, and literacy techniques, students

will gain insight into modern Korean literary traditions within the evolving context of Korean culture and society. The language of instruction will be in English.**Credits:** 3.00

KOR 28000 - Special Topics In Korean Language

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on Korean language topics such as history of Korean language, Korean linguistics, Korean dialects, Korean sociolinguistic studies, applied linguistic foci in Korean language, etc. **Credits:** 3.00

KOR 28200 - Korean Culture And Society

Credit Hours: 3.00. This course explores Korean culture from antiquity to the present. Students will investigate the dynamic political and social forces that have shaped Korean history, comparing and contrasting them with those of other Asian countries. Various hands-on activities include an introduction to Korean cuisine, traditional musical instruments and costumes, and other cultural artifacts and practices. **Credits:** 3.00

KOR 30100 - Korean Level V

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas-speaking, listening, reading, and writing-in Korean at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. Emphasis will be on the appropriate use of Korean in a variety of situations including schools, companies, and formal/informal meetings. This course also enables students to understand Korean culture and history and to develop cross-cultural insights by comparing Korean society with US society. Korean history, image of Korea, and current social trends in Korea will be discussed for a solid understanding of Korean culture in which Korean language is embedded. **Credits:** 3.00

KOR 30200 - Korean Level VI

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas-speaking, listening, reading, and writing-in Korean at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. Emphasis will be on the appropriate use of Korean in a variety of situations including schools, companies, and formal/informal meetings. This course also enables students to understand Korean culture and history and to develop cross-cultural insights by comparing Korean society with US society. Korean history, image of Korea, and current social trends in Korea will be discussed for a solid understanding of Korean culture in which Korean language is embedded. **Credits:** 3.00

KOR 33000 - Introduction To Korean Cinema

Credit Hours: 3.00. This course examines Korean society and culture through cinematic representations. Through film, the course provides a broad understanding of the major social and political changes in Korean society, as well as a brief history of Korean cinema and the transformations in the structure of the Korean film industry. Students will learn to identify major directors such as Park Chan-wook, Lee Chang-dong, and Bong Joon-ho, films, and genres. All films will be screened with English subtitles. **Credits:** 3.00

KOR 38000 - Special Topics In Korean Culture

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on traditional, historical, social, and political themes of Korea. **Credits:** 3.00

KOR 38100 - Introduction To Korean Food Culture

Credit Hours: 3.00. This course is an advanced-level language and culture course that uses food as a lens for understanding the history, cultures, and society of Korea. It covers gastronomy, history, ideologies of modern Korean cuisine, and other aspects of daily life related to Korean traditions. Through this course, students will enhance their proficiency in speaking, listening, reading, and writing in Korean. They will explore a range of topics connected to the eating, making, and representation of food. The primary language of instruction will be Korean, with some supplementary reading material in English.**Credits:** 3.00

KOR 40100 - Korean Level VII

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas (speaking, listening, reading, and writing) at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. By dealing with various topics on authentic materials including news, articles on websites, and short stories, this course enables students to enhance linguistics knowledge and skills and also helps them to understand Korean culture, history, and current issues in Korea. It is expected that students will be able to discuss various topics and express opinions fluently in both spoken and written language.**Credits:** 3.00

KOR 48000 - Special Topics In Korean Studies

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on topics related to contemporary Korean culture, arts, literature, etc. Or an internship totaling approximately 100-120 hours per semester or summer in Korea may also be credited through this course. **Credits:** 3.00

Landscape Architecture

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture. **Credits:** 2.00

LA 10600 - Accelerated Foundations Studio

Credit Hours: 6.00. Conceptualizing, recording, and presenting site design ideas through problem-solving projects. Introduction to design and to presentation techniques fundamental to landscape architecture. Short projects give students exposure to a variety of design topics and presentation materials (pencil, ink, pastel, paper and board) and freehand lettering through two- and three-dimensional creative projects. Materials used are purchased by the student. **Credits:** 6.00

LA 11600 - Graphic Communication In Design I

Credit Hours: 3.00. A foundational course that covers a broad spectrum of hand-graphic communication techniques fundamental to landscape design including hand-drafting, sketching, architectural lettering, conceptual graphics, illustrative rendering, technical drawing, and drawing to scale. A series of short studio exercises will foster three-dimensional thinking and associated drawing methods. Materials used are purchased by the student. **Credits:** 3.00

LA 11700 - Graphic Communication In Design II

Credit Hours: 3.00. A course in graphic communication theory focusing on digital skills and processes. Project-based instruction will be used to simulate design office procedures through 2D and 3D exercises using raster and vector software. **Credits:** 3.00

LA 16100 - Land And Society

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses. **Credits:** 1.00

LA 16600 - History And Theory Of Landscape Architecture

Credit Hours: 3.00. A study of the historic evolution of landscape architecture to the status of a recognized profession. The course covers the social, economic, political, climatic, and other factors that have influenced the development of design styles and theories. **Credits:** 3.00

LA 21600 - Studio I: Foundational Design

Credit Hours: 3.00. Landscape architectural site design, an introduction into processes and products. Building on the introduction to graphics in LA 11600 this is an introduction to the processes and production of site design and development drawings. Recording, conceptualizing and presenting site design ideas through problem solving projects. Emphasis on hand and computer drafting and drawing skills to communicate design ideas. Permission of department required.**Credits:** 3.00

LA 22600 - Studio II: Site Analysis And Design

Credit Hours: 4.00. Methods, principles and the process of designing in the built environment. Basic principles of site organization and composition are presented and applied in a series of exercises and studio projects. Role of the design process is reinforced both as a problem-solving tool and as a means of creativity and ideation.**Credits:** 4.00

LA 22700 - Planting I: Creating Ecologically Connected Landscapes

Credit Hours: 3.00. Review of design principles as related to plant design characteristics; design implications of plant responses to environment; review of landscape plants in fall. **Credits:** 3.00

LA 24600 - Site Engineering: Earthwork And Stormwater

Credit Hours: 4.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation, and nomenclature. Methods for calculating volumes of cut and fill. **Credits:** 4.00

LA 27500 - Honors Course - Lower Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to first- and second-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required. **Credits:** 1.00 to 4.00

LA 29000 - Special Topics In Landscape Architecture

Credit Hours: 1.00 to 4.00. Special topics in landscape architecture are explored. Topic selection is based on student interest. Permission of instructor required.**Credits:** 1.00 to 4.00

LA 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

LA 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

LA 30900 - Co-Op Preparation

Credit Hours: 1.00. The material presented in this course consists of a broad overview of the employment opportunities in the professional practice of landscape architecture and the ways to secure an internship. It provides the student with information about career choices in landscape architecture and an appropriate knowledge base with which to make informed internship choices. Students prepare written and graphic documents for seeking employment. Students prepare for interviews and communications leading to employment as an intern in landscape architecture. Course meets during weeks 1-8. **Credits:** 1.00

LA 31600 - Studio IV: Park And Open Space Design

Credit Hours: 4.00. Design theory and meaning in landscape architecture. Past, current and emerging design theories are investigated via lectures, research assignments and studio projects. Projects gain in size, complexity and depth of meaning. Emphasis on the role theory plays both as a stabilizing force and as a catalyst for change.**Credits:** 4.00

LA 32500 - Ecological Landscape Performance And Planting

Credit Hours: 3.00. Study of plants and their integration with other site features (e.g., water, landform) to increase sustainability. Plants will not only be studied for their aesthetic and spatial uses in the landscape, but also their ecological functions and temporal dynamics. The relationship of plants to site planning, ecosystems, and human use will be explored. Various scales, sustainable practices, and landscape performance will be considered. Class trip may be required. Students will pay individual lodging or meal expenses when necessary.**Credits:** 3.00

LA 32600 - Studio V: Community Design And Planning

Credit Hours: 4.00. Community planning and design. Past, current and emerging planning theories are investigated via lectures, research assignments and studio projects. The interrelationship of land use, circulation, and open space are explored using environmental and sustainable principles within a framework of traditional neighborhood design.**Credits:** 4.00

LA 34600 - Site Systems II

Credit Hours: 3.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation and nomenclature. Methods for calculating volumes of cut and fill. Methodology for horizontal and vertical alignment of roads and trails. **Credits:** 3.00

LA 35600 - Site Engineering: Construction Documents And Advanced Systems

Credit Hours: 4.00. Methods and standards of construction documentation using current technology. Preparation and packaging of site-related technical drawings and bid packages. Methods for site layout and dimensioning. Organization and composition of planting plans, plant lists, grading plans, lighting plans, and associated detail sheets. Standards and sequence of site-related specification documents.**Credits:** 4.00

LA 39000 - Professional Cooperative Programs In Landscape Architecture

Credit Hours: 0.00. Supervised work experiences in landscape architectural offices and in the landscape construction or maintenance industry. Programs must be preplanned and conducted under the direction of the cooperative educational coordinator in cooperation with an employer. Students must submit a summary report of the work experience. Consent of cooperative program coordinator required. Department permission required. Additionally, student must have a C- or better average in all LA courses taken to date. **Credits:** 0.00

LA 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

LA 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

LA 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

LA 40000 - Landscape Architecture Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities. **Credits:** 0.00 to 8.00

LA 41600 - Studio VI: Urban Design

Credit Hours: 4.00. An intensive design studio focusing on urban issues, including environmental, social, and economic approaches to the built environment. Exploration of development history, regulatory structures, local and regional demographics, economies, and environmental systems will be expressed through detailed design proposals, case study, and presentation critiques.**Credits:** 4.00

LA 42600 - Studio VII: Landscape Architecture Capstone

Credit Hours: 4.00. This course will focus on the integration and application of accumulated knowledge of landscape architecture from the student's previous coursework and internship experience. Students will be challenged to identify and solve problems in community-based projects. The students will also communicate, through reports and presentations, their results and plan to community audiences, faculty, and other students. Students will also do directed readings and then discuss topics related to the current and future practices of landscape architecture and environmental design.**Credits:** 4.00

LA 45000 - In The English Landscape:Integrating History, Horticulture, and Landscape Architecture

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Offered in even-numbered years. Permission of instructor required. **Credits:** 3.00

LA 47500 - Honors Course - Upper Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to third- and fourth-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required. **Credits:** 1.00 to 4.00

LA 47600 - Professional Practice Of Landscape Architecture

Credit Hours: 2.00. A study of the principles and practice of landscape architecture in private and public offices. The course covers project acquisition, office management, and project implementation procedures. Preparation of a professional compendium is required. **Credits:** 2.00

LA 48100 - Special Topics In Landscape Architecture

Credit Hours: 1.00 to 3.00. This variable-credit, special topics course will be used for rotating topics dealing with skills, knowledge, and experiences related to landscape architectural theory, expression, and practice. Non-Landscape Architecture students may gain enrollment with permission of instructor. **Credits:** 1.00 to 3.00

LA 48200 - Contemporary Issues In Landscape Architecture

Credit Hours: 2.00. Rotating topics that explore focused issues in landscape architecture theory and practice. Analysis and experience of contemporary issues, designs, and designers explored through presentation, discussion, critique, and practice of thematic content. Non-Landscape Architecture students may gain enrollment with permission of instructor. **Credits:** 2.00

LA 49000 - Special Problems In Landscape Architecture

Credit Hours: 1.00 to 6.00. Independent in-depth study and presentation of specific research or design problems selected by the student in consultation with the instructor. Open only to advanced students. Permission of instructor required. **Credits:** 1.00 to 6.00

LA 49900 - Thesis Research

Credit Hours: 1.00 to 6.00. For students doing individualized research on landscape architecture; report required. Arrange with academic advisor and honors research advisor before registering. Admission to the honors program required. Permission of instructor required. **Credits:** 1.00 to 6.00

LA 50100 - Research Methods For Design Applications

Credit Hours: 1.00. The growing need for understanding the role of individuals, communities, and society in shaping the natural environment has led to a greater emphasis on landscape architectural research and the need to provide training in the research methods to support these efforts. It is an exciting time to enter this arena as landscape architects are collaborating with natural and social scientist to achieve better conservation outcomes, promote sustainable behaviors, and increase awareness and understanding of the complex environmental challenges facing our society. Non-Landscape Architecture students may gain enrollment with permission of instructor. **Credits:** 1.00

LA 58100 - Special Topics In Landscape Architecture

Credit Hours: 1.00 to 3.00. Rotating topics dealing with skills, knowledge, and experiences related to landscape architectural theory, expression, and practice. **Credits:** 1.00 to 3.00

LA 58200 - Contemporary Issues - Landscape Architecture

Credit Hours: 2.00. Rotating topics that explore focused issues in landscape architecture theory and practice. Analysis and experience of contemporary issues, designs, and designers explored through presentation, discussion, critique, and practice of thematic content. Permission of instructor. **Credits:** 2.00

Languages and Cultures

LC 10100 - Special Topics In Foreign Languages I

Credit Hours: 3.00 or 4.00. Special topics in Foreign Languages. Permission of department required. **Credits:** 3.00 or 4.00

LC 10200 - Special Topics In Foreign Languages II

Credit Hours: 3.00 or 4.00. Topics vary. Permission of department required. **Credits:** 3.00 or 4.00

LC 20100 - Special Topics In Foreign Languages III

Credit Hours: 3.00 or 4.00. Topics vary. Permission of department required. **Credits:** 3.00 or 4.00

LC 20200 - Special Topics In Foreign Languages IV

Credit Hours: 3.00 or 4.00. Special Topics in Foreign Languages IV. Permission of department required. **Credits:** 3.00 or 4.00

LC 23000 - Crossing Borders: Introduction To Comparative Literature

Credit Hours: 3.00. (CMPL 23000) Foundations for comparison of works in different languages, thematic (philosophical, sociological, psychological) and structural (genre, composition, use of linguistic devices); parallel interrelation of theme and structure in works of different literatures. The importance of literary norms and systems of genres. Examination of crosscurrents in different literatures during successive periods of development. **Credits:** 3.00

LC 23100 - Fairytale, Folktale, Fable

Credit Hours: 3.00. This course provides an overview of fairytale, folklore, and fable traditions across various cultures and historical periods, as well as an examination of their ongoing influence on contemporary cultures. Taught in English. **Credits:** 3.00

LC 23500 - East Asian Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected East Asian poetry, prose, and drama. Focus will be on the traditions of China and Japan, but may include works of other cultures such as Korea. Emphasis may vary yearly, stressing traditional or modern literatures. **Credits:** 3.00

LC 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (CMPL 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities. **Credits:** 3.00

LC 23900 - Women Writers In Translation

Credit Hours: 3.00. An examination of international female writers' literary creativity in the context of women's studies and feminist theory, as articulated in their specific cultural and geographical milieu. Course content will vary in terms of cultural focus. In English. **Credits:** 3.00

LC 26100 - Introduction To The Linguistic Study Of Foreign Languages

Credit Hours: 3.00. Overview of linguistics and the role of language in society; fundamental concepts of linguistic analysis. The course focuses on linguistic phenomena found in French, German, Russian, and Spanish, with material, examples, and assignments drawn primarily from those languages whenever appropriate. **Credits:** 3.00

LC 26300 - Introduction To Computational Linguistics

Credit Hours: 3.00. This course introduces students to computational linguistics, a subfield of linguistics that studies natural languages from a computational perspective. The course covers both the theoretical and engineering topics ranging from aspects of formal linguistic structure to tools of language technology. The course will provide an understanding of the essential characteristics and differences between fields of inquiry such as computational linguistics, natural language processing (NLP), machine learning, and artificial intelligence (A.I.). There are no prerequisites and students are not expected to have any previous programming background, although the course introduces students to Python 3 programming language. Python is the ideal choice for NLP and AI due to its robust capabilities, strong community support, flexibility, and readability. It is a requirement for all NLP practitioners.**Credits:** 3.00

LC 26500 - Introduction To Neurohumanities

Credit Hours: 3.00. This course introduces students to the main developments in the neurohumanities particularly since the 1990s, with focus on cognitive literary and cultural studies. The course emphasizes not only the role of psychology, neuroscience, evolutionary biology, and other STEM and social scientific fields in interpreting cultural artifacts, but also how literary and cultural studies contribute significantly to those fields. Students will learn skills which will enable them to consider and interpret works of art, broadly defined, through a highly interdisciplinary cognitive-studies lens as they explore how the humanities are intricately intertwined with the sciences.**Credits:** 3.00

LC 26600 - World Literature: From The Beginnings to 1700 A D

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. **Credits:** 3.00

LC 26700 - World Literature: From 1700 A D To The Present

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. **Credits:** 3.00

LC 28000 - Special Topics In Languages And Cultures

Credit Hours: 3.00. Special topics relating to world languages and cultures. **Credits:** 3.00

LC 28100 - Introduction To World Food Cultures

Credit Hours: 3.00. This course introduces students to global food culture and world gastronomy. It covers different aspects of food studies such as food representations in art and literature, national identity, culinary traditions, and world trade and migration in respect to food. This course will give students a broad overview of the relation between food and many other disciplines, allowing them to connect the topics addressed to their own fields of study. Conducted in English. No prerequisites.**Credits:** 3.00

LC 30000 - World Literature Through The Photographic Lens

Credit Hours: 3.00. The course critically explores the photographic characteristics of modern world literature. It examines the deep, dynamical, and fascinating relationship between photography and literature.**Credits:** 3.00

LC 32300 - Global Sustainable Engineering

Credit Hours: 1.00 or 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life.**Credits:** 1.00 or 3.00

LC 33100 - Comparative Literature In Translation

Credit Hours: 3.00. A course in the study of a special topic related to works in several foreign literatures, directed by an instructor whose particular field of specialization will be highlighted. **Credits:** 3.00

LC 33200 - Global Horror Cinema

Credit Hours: 3.00. The course introduces horror cinema across the globe, through the technical and thematic analysis of different subgenres and domestic trends. In addition to building analytical skills regarding film concepts and theories, the course is designed to implement critical skills in film studies, cultural studies, and global studies.**Credits:** 3.00

LC 33300 - The Middle Ages On Film

Credit Hours: 3.00. Introduction to the Middle Ages through films in various languages and genres from the beginning of film history to the present. Reading literary, historical, legal, and film theory texts in conjunction with the films, students critically analyze representations of the Middle Ages and the cultural context from which these emerge. **Credits:** 3.00

LC 33800 - Language Through Films

Credit Hours: 3.00. The course critically explores language(s) via the medium of cinema where language plays a key role in the film. It is intended to introduce students to the fundamental place language occupies within human experience, to advance knowledge of some of the features of the system of language, develop a sharper ear for language, a better understanding of its

nature, and a livelier interest in all its manifestations. The course will be taught in English and films will be shown with subtitles. **Credits:** 3.00

LC 36100 - Sound And Form In Language

Credit Hours: 3.00. Examination of the nature of sound systems (phonology) and form systems (morphology) of language, as well as techniques of phonological and morphological analysis, using material from various languages. Central focus on phonetic and phonological structure, and on inflectional and derivational morphology. **Credits:** 3.00

LC 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American English in African American speech communities and the U.S. culture at large. **Credits:** 3.00

LC 37100 - Phonetics Of Foreign Languages

Credit Hours: 3.00. Introduction to articulatory phonetics for students of foreign languages. Mechanisms of production of speech sounds. Production and discrimination of sounds of other languages; contrast with English sounds; practice in pronunciation and phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be awarded for more than one of SLHS 30600, LING 31500, and LC 37100. **Credits:** 3.00

LC 39900 - Special Study Abroad Credit In Foreign Languages

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in foreign languages earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

LC 47500 - Theories Of Teaching World Languages

Credit Hours: 3.00. This course is designed to assist you in the process of becoming a skilled professional who can teach world language(s). You will develop an understanding of the connection between effective language teaching and successful language learning, be able to think critically about your own teaching and teaching materials, and gain an understanding of various theories, methods, approaches, and techniques in world language teaching. Areas of emphasis include the nature of language learning theories, early approaches to language pedagogy, communicative language teaching methodology, the relationship between theory and practice, aspects of interaction between speakers in the classroom, skills-based theories, sociocultural perspectives, individual differences between learners, and usage-based approaches to second language acquisition. **Credits:** 3.00

LC 49000 - Special Topics In Foreign Languages And Literatures

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

LC 49900 - Research In Foreign Languages

Credit Hours: 1.00 to 3.00. Undergraduate research into a topic in foreign languages. Permission of instructor required. **Credits:** 1.00 to 3.00

LC 51900 - Teaching Of Foreign Languages

Credit Hours: 3.00. A basic course designed to provide a forum for ideas connecting theory and research to teaching practice. Explores issues related to how learning and teaching can be enhanced and presents ideas that can be implemented in the classroom. Permission of instructor required. **Credits:** 3.00

LC 56300 - Historical Linguistics

Credit Hours: 3.00. (ANTH 56300, ENGL 56300) A survey of mechanisms and motivations of linguistic change. Topics include phonological, morphological, semantic and syntactic change, comparative and internal reconstruction, linguistic variation, language contact, and linguistic typology. **Credits:** 3.00

LC 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, COM 56500, ENGL 56500, LING 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism. **Credits:** 3.00

LC 57000 - Introduction To Semiotics

Credit Hours: 3.00. (ANTH 51900, SLHS 58900, COM 50700, ENGL 57000) The study of languages, literatures, and other systems of human communication. Includes a wide range of phenomena that can be brought together by means of a general theory of signs. The course deals with three fundamental areas: 1) verbal communication, 2) nonverbal communication (iconic systems, gestures, body language, etc.), and 3) communication through art forms. **Credits:** 3.00

LC 57300 - Methods Of Experimental Research In Linguistics

Credit Hours: 3.00. The course is an overview of experimental methods used in linguistic research. The goal of the course is to introduce basic concepts, terminology, and procedures associated with experimental research in general, and to survey the types of experiments typically conducted in several major subfields of linguistics, including the associated experiment designs and approaches to data analysis. The course will focus mainly on designing and conducting the experiment, rather than on data analysis, although the data analysis techniques appropriate to the types of data will be briefly discussed whenever possible. The course will also cover additional topics such as ethics of experimental research (preparing an IRB protocol), doing background research, getting funding, choosing the right conference for presenting the results, writing a conference abstract, creating and delivering a conference presentation/poster, and writing up the results for publication. **Credits:** 3.00

LC 57500 - Theories Of Foreign Language Acquisition

Credit Hours: 3.00. An advanced course designed to provide an overview of major theoretical issues in foreign language acquisition research. Provides a broad historical introduction to theories of acquisition that underlie these different perspectives. This course also provides an understanding of skills assessment and selection of instructional materials. Permission of instructor required. **Credits:** 3.00

LC 57700 - Acoustic Analysis Of Speech

Credit Hours: 3.00. This course is an introduction to those aspects of acoustics most pertinent to understanding speech production and perception. It covers sound waves and their properties, digital signal processing, hearing and loudness, sound recording, and details of the acoustics of specific speech sounds such as vowels, plosives, fricatives, and nasals. The course includes a prominent practicum component aimed at learning to use software tools, specifically Praat, for analyzing acoustic properties of speech sounds. **Credits:** 3.00

LC 59000 - Directed Reading In Foreign Languages

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

LC 59300 - Special Topics In Literature

Credit Hours: 1.00 to 4.00. Special topics in Literature. Permission of instructor required. **Credits:** 1.00 to 4.00

LC 59600 - Special Topics In Linguistics

Credit Hours: 1.00 to 4.00. Special topics in Linguistics. Permission of instructor required. **Credits:** 1.00 to 4.00

LC 63000 - Comparative Literature: Function And Methods

Credit Hours: 3.00. (CMPL 63000) An introduction to methods, problems, and the bibliographical tools pertaining to comparative study. Required of all students in the Comparative Literature Program. **Credits:** 3.00

LC 63900 - Seminar In Comparative Literature

Credit Hours: 3.00. (ENGL 66500 and CMPL 65000) Exploration of a significant topic in comparative literature, e.g., the arts of translation, thematology, genre studies, literary movements, literary relations between countries. (See Comparative Literature.) Prerequisite: ENGL 66000 or LC 63000. **Credits:** 3.00

LC 65000 - Topics In Theory

Credit Hours: 3.00. Study of theoretical approaches to literature, the arts, or general culture (e.g., cognitive science, deconstruction, feminism, hermeneutics, postmodernism, postcolonial studies, reader response, semiotics). Examines methodologies and confronts them with literary texts. Permission of instructor required. **Credits:** 3.00

LC 65900 - Seminar In Literature And Culture Of The African Diaspora

Credit Hours: 3.00. An examination of the African Diaspora through the study of literatures and cultures of Latin America and the Caribbean. Prerequisites: Experience working with literatures of the African Diaspora and critical theory. **Credits:** 3.00

LC 67900 - Seminar In Linguistics

Credit Hours: 3.00. Advanced study and research on a significant topic in linguistics. Topic to be announced in advance. Permission of instructor required. **Credits:** 3.00

LC 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

LC 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Latin

LATN 10100 - Latin Level I

Credit Hours: 3.00. Introduction to classical Latin language. Focus on grammar, syntax, vocabulary, and elementary readings. **Credits:** 3.00

LATN 10200 - Latin Level II

Credit Hours: 3.00. Second semester introduction to Latin. Focus on grammar, syntax, vocabulary, and elementary readings in classical Latin and the language of the Vulgate. **Credits:** 3.00

LATN 10500 - Accelerated Basic Latin

Credit Hours: 4.00. Foundational Latin grammar course designed to prepare students to read classical and post-classical Latin in a single intensive semester. Focus on grammar, syntax, vocabulary, and elementary readings. The accelerated Latin course assumes *no* previous knowledge of Latin and makes it possible for the diligent student to be able to read *any* Latin prose or poetry (with a dictionary) after a single semester. (Upon completion students will be prepared to enroll in Latin 201.) **Credits:** 4.00

LATN 20100 - Latin Level III

Credit Hours: 3.00. Intermediate reading course in Latin, designed to strengthen students' grasp of grammar and syntax, broaden vocabulary, and develop foundational skills in reading and translation. **Credits:** 3.00

LATN 20200 - Latin Level IV

Credit Hours: 3.00. Upper intermediate reading course in Latin prose and poetry, designed to consolidate students' grasp of grammar and syntax, broaden vocabulary, and develop precision and confidence in reading and translation. **Credits:** 3.00

LATN 31500 - Latin Paleography I

Credit Hours: 3.00. This course gives students the opportunity to work with original medieval Latin manuscripts, involving transcription and translation, as well as study of the creation, care, and preservation of rare manuscripts. **Credits:** 3.00

LATN 34300 - Roman Oratory

Credit Hours: 3.00. Development of advanced Latin reading skills, alongside exploration of social, political, and rhetorical issues raised by the published versions of speeches performed in ancient Rome. **Credits:** 3.00

LATN 34400 - Roman Epic

Credit Hours: 3.00. Development of advanced Latin reading skills, alongside exploration of social, political, and rhetorical issues raised by epics such as Vergil's Aeneid, Ovid's Metamorphoses, or other hexameter poetry. **Credits:** 3.00

LATN 34500 - Roman Elegy

Credit Hours: 3.00. Readings and discussion of selections from Roman Elegy, including selected passages from such authors as Catullus, Tibullus, Propertius, and Ovid. **Credits:** 3.00

LATN 34600 - Roman Rhetoric

Credit Hours: 3.00. Development of advanced Latin reading skills, alongside exploration of the social, political and literary questions raised by Roman rhetorical theory. **Credits:** 3.00

LATN 34700 - Roman Comedy

Credit Hours: 3.00. Readings and discussion of Roman comedy, including selected works of Plautus and Terence. **Credits:** 3.00

LATN 44200 - Roman Lyric Poetry

Credit Hours: 3.00. Readings and discussion of selections from Roman lyric poetry, with special attention to Catullus and Horace. **Credits:** 3.00

LATN 44300 - Roman Satire

Credit Hours: 3.00. Readings and discussion of Roman satire, including selected passages from Horace, Juvenal, Petronius, and Seneca. **Credits:** 3.00

LATN 44400 - Roman Philosophers

Credit Hours: 3.00. Readings and discussion of Roman philosophical texts. **Credits:** 3.00

LATN 44500 - Roman Encyclopedists

Credit Hours: 3.00. Readings and discussion of texts representative of Roman encyclopedism, including selected passages from Pliny the Elder, Aulus Gellius, and Nonius Marcellus. **Credits:** 3.00

LATN 44600 - Roman Historians

Credit Hours: 3.00. Readings and discussion of Roman historical texts. **Credits:** 3.00

LATN 49000 - Directed Reading In Latin

Credit Hours: 1.00 to 3.00. Directs the reading of students with special interests. Guides students in profitable reading in subjects of their own choice. Permission of instructor required. **Credits:** 1.00 to 3.00

LATN 59000 - Directed Reading In Latin

Credit Hours: 1.00 to 4.00. Directed reading of selected texts in classical and/or medieval Latin. Permission of instructor required. **Credits:** 1.00 to 4.00

LATN 60100 - First Course To Establish Reading Knowledge

Credit Hours: 3.00. The first of two Latin courses designed to satisfy the graduate reading proficiency requirement. **Credits:** 3.00

LATN 60500 - Second Course To Establish Reading Knowledge

Credit Hours: 3.00. Second of two courses designed to develop basic reading skills in classical and post-classical Latin. Prerequisite: LATN 60100. **Credits:** 3.00

Latina American and Latino Studies

LALS 25000 - Introduction To Latin American And Latino Studies

Credit Hours: 3.00. Interdisciplinary and integrative presentation and examination of the historical, political, economic, and cultural processes of Latin America, from independence to the present followed by an analysis of scholarly works that include theoretical models, methodological strategies, and analytical approaches to learning about US Latinos. Special emphasis is placed on the immigrant experience and its role in the incorporation of Latinos into the US society. **Credits:** 3.00

LALS 26000 - U S Latino Culture

Credit Hours: 3.00. This course uses an interdisciplinary approach to study Latino culture in the United States through art, film, literature, music and theater. **Credits:** 3.00

LALS 30100 - Latin American Literary And Cultural Studies

Credit Hours: 3.00. Focuses on Latin American literatures and cultural products, such as film, music, and/or art. As a variable-topics course, individual sections may variously focus on South and/or Central America, Mexico, the Caribbean, U.S. Latina/o populations, or any combination of the above. Individual sections may also examine major cultural and historical movements, and/or canonical and emerging authors and artists. May be repeated for credit. **Credits:** 3.00

LALS 30300 - Latin American Languages And Linguistics

Credit Hours: 3.00. Focuses on the languages and linguistic practices of Latin American and/or U.S. Latina/o populations, also including the Caribbean. As a variable-topics course, individual sections may variously focus on the nature and structure of specific languages, as well as the study of their dialects, semantics, and histories; the history, structure, uses, and educational concerns of Latin American indigenous, Caribbean Creole and/or U.S. Latina/o speech communities; or any combination of the above. May be repeated for credit. **Credits:** 3.00

LALS 34700 - Latin American Politics

Credit Hours: 3.00. Focuses on major aspects of Latin American and/or U.S. Latina/o politics and development. As a variable-topics course, individual sections may variously focus on U.S. foreign policy toward countries in Latin America, the U.S.'s historical role in the politics of the Western hemisphere, the impact of the military on political development, the dynamics of Latin American industrialization, Latin America's changing international role, Latinas/os's political participation in the United States, or any combination of the above. Individual sections may also Latin American political thought from the colonial period through the present day. **Credits:** 3.00

LALS 35500 - Political Economy Of Latin America

Credit Hours: 3.00. Examines the salient issues of the 21st century in the political economy of Latin America. The first part introduces students to the historical evolution of the region's economy and its socio-economic and political determinants. Then it focuses on topical inquiry, analyzing key policy areas, frameworks and choices at the core of the current political economy of the region's countries: fiscal and industrial policies, monetary and financial policies and policies on trade, migration and inequality, energy and the environment. **Credits:** 3.00

LALS 40100 - Special Topics In Latin American/Latino Studies

Credit Hours: 3.00. Investigation of a special topic in Latin American or US Latina/o studies. The topic will vary from semester to semester. **Credits:** 3.00

LALS 40200 - Directed Reading In Latin American/Latino Studies

Credit Hours: 1.00 to 6.00. Directs the reading of students with special interests in Latin American or U.S. Latina/o studies. Guides students in profitable reading in subjects of their own choice. Individual conferences; no class meetings. Permission of instructor required. **Credits:** 1.00 to 6.00

Linguistics

LING 20100 - Introduction To Linguistics

Credit Hours: 3.00. Basic concepts of linguistics and methods of analysis of language; overview of linguistics and the role of language in society. Introduction to phonology, morphology, syntax, and semantics, and to problem-solving techniques, with material drawn from a variety of languages. **Credits:** 3.00

LING 31100 - Fundamentals Of Phonology And Morphology

Credit Hours: 3.00. Basic concepts and tools of phonological and morphological analysis viewed through the material of American English. Current theoretical approaches to phonology and morphology, including word-formation processes and applications. **Credits:** 3.00

LING 31500 - Elements Of Phonetics

Credit Hours: 3.00. Introduction to articulatory phonetics. Mechanisms of production of speech sounds. Sounds of languages of the world, ear training for discriminating speech sounds, and practice in broad and narrow phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be given for both LING 31500 and SLHS 30600. **Credits:** 3.00

LING 32100 - Foundations Of Syntax And Semantics

Credit Hours: 3.00. Introduction to syntactic and semantic analysis based on American English and its dialects. Underlying structure and its relation to meaning. Analysis of parts of speech, constituent phrases, sentence structure, representations, ambiguity, and applications of current theory. Credit will not be given for both LING 32100 and ENGL 32800. **Credits:** 3.00

LING 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American English in African American speech communities and the United States culture at large. **Credits:** 3.00

LING 39800 - Special Topics In Linguistics I

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required. **Credits:** 3.00

LING 47000 - TENL Practicum

Credit Hours: 3.00. As the final course of the TENL program, the Practicum builds on participants' knowledge and skills of teaching multilingual learners by revisiting previous learning in the TENL program. This course requires participants to

demonstrate mastery and application of concepts covered in previous courses (e.g., oral language progression, literacy development, test construction, domains/subsystems of language, language teaching methodologies, etc.) and assesses what participants currently know and believe about English language instruction, literacy acquisition, and approaches to professional development. Experiential learning or fieldwork in a classroom setting is required. In order to qualify for TENL certification, students must obtain a grade of C or higher in all TENL courses. **Credits:** 3.00

LING 49000 - Directed Reading In Linguistics

Credit Hours: 1.00 to 4.00. Independent study and reading on a topic in linguistics directed by a faculty member. Permission of instructor required. **Credits:** 1.00 to 4.00

LING 49800 - Special Topics In Linguistics II

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required. **Credits:** 3.00

LING 49900 - Research In Linguistics

Credit Hours: 1.00 to 3.00. Undergraduate research into a designated topic in linguistics. Permission of instructor required. **Credits:** 1.00 to 3.00

LING 50000 - Introduction To Linguistics

Credit Hours: 3.00. Fundamental concepts and methods of linguistic analysis of natural languages; overview of linguistics and the role of language in society. Introduction to phonology, morphology, syntax and semantics, and to problem-solving techniques, with material drawn from a wide variety of languages. Offered in conjunction with ANTH 51400 or AUSL 58000 or ENGL 50600 or LC 56100. **Credits:** 3.00

LING 50100 - Language Acquisition

Credit Hours: 3.00. This course offers an introduction to main linguistic, psycholinguistic and sociocultural approaches to language acquisition theory and research. Through extensive reading, students will develop a deep understanding of central issues affecting language acquisition in typically developing children, including age effects, and input and output conditions in the acquisition of syntax, semantics, phonology, lexicon and morphology. Emphasis will be made on experimental approaches and research methods in the acquisition of syntax in L1 and child bilingual development. **Credits:** 3.00

LING 51100 - Phonology I: Descriptive Analysis

Credit Hours: 3.00. Foundations of phonological analysis. Development of concepts and methods for the analysis of phonological data and the phonological structures of natural languages within the framework of generative phonology. Focuses on problem solving and linguistic argumentation. Offered in conjunction with ENGL 51300. **Credits:** 3.00

LING 51101 - Methods And Materials In Tesol I

Credit Hours: 3.00. This course provides an overview and critical discussion on the profile of English language learners (ELLs), their cultural and linguistic backgrounds, features of academic language, the main language teaching theories and methods and how they inform current practices in various contexts, as well as US education policy on ELLs. The course also has an emphasis on the teaching of listening and speaking. The students are given ample opportunities to understand the integration of implicit and explicit instruction on various language concerns, e.g., phoneme-awareness, word augmentation, sentence structure, listening comprehension, oral fluency etc. Students will also apply the principles of teaching to a mini-teaching task, where they can put

theories into practice, observe and share feedback. In order to qualify for TENL certification, students must obtain a grade of C or higher in all TENL courses.**Credits:** 3.00

LING 51200 - Phonology II: Theoretical Approaches

Credit Hours: 3.00. Examination, comparison, and evaluation of contemporary phonological theories, with focus on the contribution of each theory to our understanding of representations and operations in phonological analysis. Primary emphasis is on autosegmental phonology, metrical phonology, lexical phonology, and optimality theory. **Credits:** 3.00

LING 51201 - Methods And Materials In TESOL II

Credit Hours: 3.00. This course aims at broadening course participants' understanding of principles and practices of course & lesson planning, assessment, and materials development for English as a new or foreign language (ENL/EFL) instruction. Building on topics covered in Methods and Materials for TESOL I, we will examine explicit instructional approaches and strategies with an emphasis on developing reading and writing skills in the English language for culturally and linguistically diverse learners. While there is an emphasis on literacy instruction in this course, participants should keep in mind that all of the 4 language skills (reading, writing, listening, and speaking) are integrated and evidence of this integration is expected in the design of lesson plans. Throughout the semester, we will explore 5 major interrelated topics, which are guided by and embedded in philosophies and theories of education, language, second language acquisition (SLA), teaching, and learning: standards, curriculum, pedagogy, culture, and literacy acquisition. This course involves pre-professional education/training. Experiential learning or fieldwork in a classroom setting is required. In order to qualify for TENL certification, students must obtain a grade of C or higher in all TENL courses.**Credits:** 3.00

LING 52100 - Syntax I: Syntactic Analysis

Credit Hours: 3.00. Foundations of syntactic analysis and syntactic theory within the framework of generative grammar. Focuses on the central concepts of syntactic theory and on the principles and methods of syntactic analysis and argumentation using a core of topics relevant for syntactic theory. Offered in conjunction with ENGL 51200. **Credits:** 3.00

LING 52200 - Syntax II: Issues In Syntax

Credit Hours: 3.00. Deeper examination of a wider range of syntactic phenomena and evaluation of competing theoretical analyses proposed to account for them. Constructing theoretical analyses and evaluating their explanatory adequacy for Universal Grammar. Topics include LF phenomena, functional projections, and structural representations. **Credits:** 3.00

LING 53100 - Semantics I: Lexical And Sentential Semantics

Credit Hours: 3.00. Foundations of semantic analysis and survey of current linguistic semantic theories and methods. Semantics at the lexical and sentential levels. Combinatorial, truth-conditional, pragmatic, contextual, and computational semantics. Offered in conjunction with ENGL 51100. **Credits:** 3.00

LING 53200 - Semantics II: Formal And Grammatical Semantics

Credit Hours: 3.00. A formal, logic-based study of semantic relations. Semantics of individuals and objects, attributes, determiners, definite descriptions, quantifiers, events, time, and space. **Credits:** 3.00

LING 54100 - Historical Linguistics And Language Change

Credit Hours: 3.00. A general examination of the ways in which languages and their subsystems change over time and of the forces that produce change. The comparative method; internal reconstruction; geographical variation; and social variation.

Overview of world language families and genetic relationships. Offered in conjunction with ENGL 56300 or LC 56300. **Credits:** 3.00

LING 56000 - Service Learning In Languages And Linguistics

Credit Hours: 1.00 to 4.00. This course aims to introduce the student to critical reflective thinking and experiential learning that address local and global needs and foster civic responsibility. This service learning course is a multifaceted method of teaching and learning that enriches a students' academic life and real life learning by engaging her/him in meaningful hands-on service to the community while gaining valuable knowledge and skills that integrate with course objectives. **Credits:** 1.00 to 4.00

LING 56300 - Language Acquisition

Credit Hours: 3.00. This course offers an introduction to main linguistic, psycholinguistic and sociocultural approaches to language acquisition theory and research. Through extensive reading, students will develop a deep understanding of central issues affecting language acquisition in typically developing children, including age effects, and input and output conditions in the acquisition of syntax, semantics, phonology, lexicon and morphology. Emphasis will be made on experimental approaches and research methods in the acquisition of syntax in L1 and child bilingual develpment. **Credits:** 3.00

LING 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, COM 56500, ENGL 56500, LC 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism. **Credits:** 3.00

LING 57000 - Field Methods In Linguistics

Credit Hours: 4.00. This course deals with the basic techniques for collecting language data, and is designed to reproduce and explore the conditions and methods of linguistic fieldwork in a classroom. The course also addresses questions related to the ethics of retrieving linguistic data, the relations between the linguist and the speaking communities, and the use of the collected data. A non-Indoeuropean lesser-studied language will be examined with the help of a native speaker of the language. The main area of its grammar will be covered: phonetic and phonological system, inflectional and derivational morphology, basic syntactic structures and basic semantic phenomena. The final goal is to obtain a basic grammatical description of the language. Lab sessions will be directed towards the training in the software and audio and video tools used for the trade. **Credits:** 4.00

LING 57600 - Latin American Indigenous Languages And Cultures

Credit Hours: 3.00. This course will help students to learn the importance of understanding the diversity of Latin American indigenous languages and cultures as well as the intercultural understandings gained when these indigenous languages are valued within the global context. Moreover, this course will provide a general cultural and linguistic framework to understand the sociolinguistic status of the language within the context where it exists. In this course, students will deepen their knowledge of Latin American indigenous cultures and their historics, as a means to achieving a greater understanding of both a shared humanity and the variety of human experiences. **Credits:** 3.00

LING 59000 - Directed Reading In Linguistics

Credit Hours: 1.00 to 4.00. Independent study and reading on a topic in linguistics directed by a faculty member. Permission of instructor required. **Credits:** 1.00 to 4.00

LING 59100 - Special Topics In Phonology

Credit Hours: 3.00. Investigation of an advanced topic in phonology. Topic varies from semester to semester. Permission of instructor required. **Credits:** 3.00

LING 59300 - Special Topics In Semantics

Credit Hours: 3.00. Investigation of an advanced topic in semantics. Topic varies from semester to semester. Permission of instructor required. **Credits:** 3.00

LING 59400 - Special Topics In Historical Linguistics

Credit Hours: 3.00. Investigation of an advanced topic in historical linguistics. Topic varies from semester to semester. Permission of instructor required. **Credits:** 3.00

LING 59800 - Special Topics In Linguistics

Credit Hours: 1.00 to 4.00. Investigation of an advanced topic in linguistics. Topic varies from semester to semester. Permission of instructor required. **Credits:** 1.00 to 4.00

LING 61900 - Seminar In Phonology

Credit Hours: 3.00. Intensive study and research on a selected topic in phonology. Topic varies from semester to semester. Permission of instructor required. **Credits:** 3.00

LING 62900 - Seminar In Syntax

Credit Hours: 3.00. Intensive study and research on a selected topic in syntax. Topic varies from semester to semester. **Credits:** 3.00

LING 68900 - Seminar In Linguistics

Credit Hours: 3.00. Intensive study and research on a selected topic in linguistics. Topic varies from semester to semester. Permission of instructor required. **Credits:** 3.00

LING 69000 - Individual Seminar

Credit Hours: 1.00 to 3.00. Under the individual guidance and supervision of a faculty member, students will select and investigate a topic and will produce a paper of professional caliber on the subject. Prerequisite: Doctoral student standing and Linguistics majors only. Permission of instructor required. **Credits:** 1.00 to 3.00

LING 69800 - Research MA Thesis

Credit Hours: 1.00 to 12.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 12.00

LING 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Management

MGMT 100XN - Business Administration: Introduction

Credit Hours: 3.00. Business administration from the standpoint of the manager of a business firm operating in the contemporary economic, political, and social environment. No credit for Kelley School of Business students when taken concurrently with or after the integrative core. Typically offered Fall Spring Summer.**Credits:** 3.00

MGMT 151FN - Personal Finances Of The College Student

Credit Hours: 1.00. This course is an introduction to the basic planning tools and concepts for college-age financial literacy. Emphasis on financial decisions and challenges facing a typical college student. Topics include careers, goal setting, budgeting, tax planning and credit, including options for financing higher education. Foundation of the Financial Literacy Curriculum.**Credits:** 1.00

MGMT 152FN - Basic Financial Planning And Investment

Credit Hours: 1.00. Introduction to the basic planning tools and concepts for financial literacy into adulthood and retirement. Emphasis on analyzing, selecting and managing investments over a lifetime. Topics include, time value of money, financial statements, retirement objectives, and investing in various financial assets. Part of the Financial Literacy Curriculum**Credits:** 1.00

MGMT 200AN - Foundations Of Accounting

Credit Hours: 3.00 to 5.00. The course addresses the role of accounting in society and business, with a special emphasis on fundamental concepts and the basic design of accounting systems. This course is intended for non-business majors who are interested in learning about how accounting affects their lives and businesses. Credit not given for both BUS A2000 and either BUS A2010 or BUS A2020.**Credits:** 3.00 to 5.00

MGMT 200WN - Introduction To Business And Management

Credit Hours: 3.00. Business administration from the standpoint of the manager of a business firm operating in the contemporary economic, political, and social environment. No credit for Kelley Business students when taken concurrently with or after the integrative core.**Credits:** 3.00

MGMT 254LN - Commercial Law I

Credit Hours: 3.00. Includes the nature of law, torts, contracts, the sale of goods, and the legal regulation of business competition. The purpose of this course is to examine the legal framework for business activity and to explore how to manage that framework in a rapidly changing legal environment. The areas of the law studied include contracts, torts, employment law, intellectual property, forms of business enterprises, and the legal regulation of business competition. Credit not given for both BUS L2010 and BUS L2030.**Credits:** 3.00

MGMT 300FN - Introduction To Financial Management

Credit Hours: 3.00. Broad survey of finance for non-School of Business students. Topics include the determinants of interest rates and the time value of money; the sources and uses of financial information; the structure, role, and regulation of financial markets; monetary policy; the pricing of risk in financial markets; goals of investors; and how firms manage their financial affairs, including planning, budgeting, and decision making.**Credits:** 3.00

MGMT 300MN - Introduction To Marketing

Credit Hours: 3.00. Examination of the market economy and marketing institutions in the United States. Decision making and planning from the manager's point of view; impact of marketing actions from the consumer's point of view. No credit toward a degree in business.**Credits:** 3.00

MGMT 300PN - Introduction To Operations Management

Credit Hours: 3.00. Offered for students with a formal minor in business. The operations function is concerned with the activity associated with the production of goods and services. Provides an overview of operating decisions and practices in both manufacturing- and service-oriented firms. While no attempt is made to cover any particular area in depth, standard terms and concepts required to communicate effectively with operating personnel are introduced. No credit toward a degree in business.**Credits:** 3.00

MGMT 340ZN - Introduction To Human Resources

Credit Hours: 3.00. Introduction to Human Resources.**Credits:** 3.00

MGMT 560 - Manufacturing Planning And Control

Credit Hours: 2.00 or 3.00. An advanced course in manufacturing planning and control systems, emphasizing the integration of demand forecasting, inventory control, production scheduling, and production control. Topics are linked through case studies and an elaborate manufacturing computer simulation game. **Credits:** 2.00 or 3.00

MGMT 562 - Project Management

Credit Hours: 2.00. Emphasizes the use of PC-based project management software and its applications, particularly in manufacturing organizations and especially new product development projects. Extensive use is made of several case studies to illustrate the planning and monitoring of a project. Class is held in a computer lab. **Credits:** 2.00

MGMT 571 - Data Mining

Credit Hours: 2.00. Introduces the concepts, techniques, tools, and applications of data mining. The material is approached from the perspective of a business analyst, with an emphasis on supporting tactical and strategic decisions. Includes a variety of techniques to identify nuggets of information or decision-making knowledge in bodies of data, and extracting these in such a way that they can be put to use in the area, such as decision support, prediction, forecasting, and estimation. **Credits:** 2.00

MGMT 573 - Optimization Modeling With Spreadsheets

Credit Hours: 2.00. The course emphasizes applications of optimization through cases and computer exercises. The applications are chosen to provide insights into business and economics. Areas covered include linear, network, integer, and nonlinear optimization. At the end of the course, the students should have the ability to model optimization problems work with software to solve optimization problems relate to optimization theory in a variety of application settings develop optimization insights into applications in marketing, finance, and operations and get some basic exposure to EXCEL automation. Prerequisites: Students are expected to have taken a basic MBA (core) course in business analytics (such as the masters core MGMT 67000). **Credits:** 2.00

MGMT 581 - Big Data Technologies

Credit Hours: 2.00. There is an exponential growth in the adoption of big data technologies in every walk of life. Organizations are collecting, storing, and analyzing massive amounts of data. This data is commonly referred to as big data because of its large volume, the velocity with which it is collected and transmitted, the variety of forms it takes, and veracity of its origin and content.

In order to capitalize on the opportunities presented by big data, businesses are putting in place technologies, people, and processes. Just collecting, transmitting and storing big data creates little value for an organization. For many organizations, the term big data currently represents only a data infrastructure such as the Apache Hadoop family of products. The key to delivering real value from big data is the use of analytics. Data must be analyzed and the results used by decision makers and organizational processes in order to generate value. The main objective of this course is to learn how to collect, process, store, and analyze big data. Assignments could easily be completed in Python or SQL. We assume no familiarity with Linux and will introduce you to all essential Linux commands. Students need access to a computer with a 64 bit operating system and at least 4 GB of RAM. Note: 8 GB or more of RAM is strongly recommended. **Credits:** 2.00

MGMT 582 - Management Of Organizational Data

Credit Hours: 2.00. Provides the basic concepts and skills needed to analyze and organize business data, as well as to utilize the organized data to answer a variety of business queries. After successful completion, students will have an understanding of why database management is important and what it entails, how to analyze the data requirements of a business scenario and represent these requirements by means of entity-relationship (ER) diagrams, translate an ER diagram into normalized relations for a relational database management system, write simple and relatively complex data retrieval commands in the SQL language for an Oracle database, use Microsoft Access as a front end to a server database in Oracle, be familiar with several selected topics of current interest in the data management arena. **Credits:** 2.00

MGMT 614 - Investments

Credit Hours: 2.00 to 4.00. Examination of the process of asset valuation. Emphasis on portfolio analysis, security selection, risk-return relationships, and performance evaluation. Additional topics considered include security analysis, option pricing and analysis, futures contracts, and security market operations. **Credits:** 2.00 to 4.00

MGMT 638 - Pricing Strategies And Analysis

Credit Hours: 2.00. The course enables participants to formulate a systematic framework for approaching the problem of pricing a product, and more generally, a product line. The concepts and analytical methods necessary to develop such a framework are explored and incorporate marketing, competitive, and legal aspects. The course will use a combination of lectures, case discussions and exercises. Prerequisite: MGMT 62000. **Credits:** 2.00

MGMT 642 - Portfolio Management

Credit Hours: 2.00 to 4.00. Methods of analysis of common stocks and bonds for individual and institutional portfolios. Review of the empirical evidence of security market efficiency, and implications of that evidence for various methods of security analysis. Team projects to analyze the economy, the particular industry or sector, and selected firms within the industry or sector, and to make specific buy-hold-sell recommendations for the stocks and bonds of those firms. Prerequisite:MGMT 61000 . Typically offered Fall Spring.**Credits:** 2.00 to 4.00

MGMT 644 - Venture Capital And Investment Banking

Credit Hours: 2.00 to 4.00. Examines the process of corporate value creation through financial policy choices. The sequence of topics roughly parallels the life cycle of a typical corporation. Begins by studying the financing of entrepreneurial companies. Then studies the investment banking and capital acquisition process employed for public securities issues. Also examines capital acquisition and reorganization decisions, such as the use of hybrid securities like convertible debt and PIPEs, project financing bankruptcy reorganizations, and equity structurings. Prerequisite: MGMT 61000. **Credits:** 2.00 to 4.00

MGMT 647 - Financial Engineering

Credit Hours: 2.00 or 3.00. The objective of this course is to provide students with the necessary skills to value and hedge a wide variety of derivatives contracts used in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous-time. Some basic knowledge of stochastic processes would be helpful, but not essential: we will cover what we need in class. The course covers valuation of securities using modern martingale methods as well as the necessary parameter estimation and numerical methods such as Monte Carlo simulations. Applications will include derivatives such as options on stocks, bonds and currencies, as well as valuation of defaultable securities, and modeling the term structure of interest rates and risk management with Value-at-Risk. Prerequisites: MGMT 61400, or similar coursework with instructor permission. **Credits:** 2.00 or 3.00

MGMT 652 - Entrepreneurship

Credit Hours: 2.00 or 3.00. Examines entrepreneurship with a focus on the start-up process for high growth new ventures. Cases will be used, and students will conduct a feasibility analysis of a new venture concept. Prerequisites: MGMT 61000 and MGMT 62000. Concurrent Prerequisites: MGMT 65000. **Credits:** 2.00 or 3.00

MGMT 655 - Competitive Strategy

Credit Hours: 2.00 or 3.00. Examines how firms obtain and sustain superior returns through the development and implementation of a competitive strategy at the business-unit level. Focus is on strategies that develop and exploit two sources of superior returns: unique value-creating resources (e.g., patents, brand equity, operational capabilities), and powerful positions in markets and supply chains. Participants are expected to be familiar with basic competitive strategy concepts and tools, such as "five-forces analysis", the value chain, and generic strategies. Presents a more analytical perspective of strategy, drawing from game theory. Prerequisites: MGMT 65000. **Credits:** 2.00 or 3.00

MGMT 687 - Design For Instincts: Social Networks And Engagements

Credit Hours: 1.00 to 3.00. This course will build on design thinking and game design techniques to develop process, policies, and/or products that appeal to human instincts. We will cover ideas that provide insights into, for example, new product development, entrepreneurship or designing HR policies. To name a few examples of projects we will discuss, SAP's points-based system to encourage carpooling that helps the company save on large gas expenses; at challenge.gov, the Whitehouse encourages innovative solutions through crowdsourcing; and at companies like Google, and Best-Buy, employees participate in information assimilation games called prediction markets providing information to senior managers about ongoing projects. In this course, you will examine the mechanisms behind designing for human instincts and thereby developing an understanding of their effective use in the modern firm. Gamification is one form of design for human instincts. In order for any design to be effective, it should involve clearly defined strategies and wellmanaged execution. To identify effective strategies, and metrics for the application of techniques to business, this course will draw upon interdisciplinary source material as well as real-world case studies. It will also identify a number of significant pitfalls to techniques, as well as notable legal and ethical issues, and the problems with implementing radical change in established firms. As a part of this class, you will be designing, playing, and evaluating various games. **Credits:** 1.00 to 3.00

MGMT 690 - Advanced Problems In Management

Credit Hours: 1.00 to 4.00. Advanced investigation in a specific management field at the graduate level. **Credits:** 1.00 to 4.00

MGMT 10000 - Introduction To Management

Credit Hours: 1.00. An introduction to and survey of the field of management. Exposure to the different functional areas of management will be stressed. Focus will be on the individual development of the student in regard not only to future professional employment but also to his or her educational planning. Required for freshman management students. **Credits:** 1.00

MGMT 11000 - Introduction To Management And Information Strategies

Credit Hours: 2.00. An introduction to and survey of the field of business. Exposure to the different functional areas of management will be stressed. Focus will be on the individual development of the student in regard not only to future professional employment but also to his or her educational planning. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Students apply their knowledge of business in a Case Competition. Required for freshman Krannert Leaders Academy students. **Credits:** 2.00

MGMT 17300 - Data Mining Lab

Credit Hours: 1.00. The Data Mining Lab provides a guided Experiential Learning environment for School of Business', especially BS BAIM's, freshman and sophomore students to learn the basics of business data variety, how they are organized, and what insights may be mined for. Students will have hands-on experience to get familiar with a specific data mining tool, R, for carrying out some data mining experiments. Completion of this course will not only enable students to see how the prerequisite or accompanying foundational courses are relate to their major studies but also help them better preparing for successes in their multiple upper division course studies.**Credits:** 1.00

MGMT 17500 - Information Strategies For Management

Credit Hours: 1.00. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Organization and use of electronic and print tools will be explained through discussion, hands-on exercises, and homework assignments. Permission of instructor required. **Credits:** 1.00

MGMT 19000 - Freshman Level Problems In Management

Credit Hours: 1.00 to 4.00. Investigation into a specific topic area of Management. Arrange with instructor before enrolling. **Credits:** 1.00 to 4.00

MGMT 19100 - Cooperative Work Experience I

Credit Hours: 0.00. Practice in business or other institutions. Admission to the cooperative program of education is required. **Credits:** 0.00

MGMT 19200 - Cooperative Work Experience II

Credit Hours: 0.00. Practice in business or other institutions. **Credits:** 0.00

MGMT 19300 - Cooperative Work Experience III

Credit Hours: 0.00. Practice in business or other institutions. **Credits:** 0.00

MGMT 19400 - Cooperative Work Experience IV

Credit Hours: 0.00. Practice in business or other institutions. **Credits:** 0.00

MGMT 19500 - Cooperative Work Experience V

Credit Hours: 0.00. Practice in business or other institutions. **Credits:** 0.00

MGMT 19700 - Careers In Accounting & Finance

Credit Hours: 1.00. This course explores the various career opportunities available to accounting majors, as well as opportunities available to non-accounting majors who have a strong background in accounting. While most students believe public/private accounting are the only career options for accounting majors, we examine other avenues such as hedge funds, private equity and consulting, among others.**Credits:** 1.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I **Credits:** 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CCN:IPO 1802 Accounting II **Credits:** 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations. **Credits:** 3.00

MGMT 22000 - Making The Business Case

Credit Hours: 3.00. This course develops one's ability to address situations faced by managers. This involves collecting information, analyzing that information to determine what decision or action is required and then selling the recommended decision or action to the management team. Selling this is done using one's persuasive skills in both telling a story and illustrating that story. **Credits:** 3.00

MGMT 24200 - Contemporary Problems In Personal Finance For Minorities

Credit Hours: 3.00. This course is designed to allow students to make informed decisions regarding their current and future financial position. Utilizing basic tools such as financial statements and budgets, the students can learn how to plan effectively for continuous financial stability. Students also are able to acquire a basic understanding of different saving instruments, investments, and retirement planning methods, as well as the benefits of purchasing real assets and accumulating wealth to allow stability. Students also have the opportunity to explore other interesting topics of personal finance through presentations and voluntary participation in class discussion. Permission of instructor required.**Credits:** 3.00

MGMT 24300 - Contemporary Thought Of Minorities In Management

Credit Hours: 3.00. The basic goal of this course is to introduce the minority student to the vast opportunities that are available in the field of management. The logic of a business education for the minority student is a reflection of the phenomenon that many corporations today are actively seeking minorities for managerial positions. Each semester, approximately 15 Fortune 500 companies are invited to the class to give presentations about entry-level opportunities with their firms. Other topics include the interview, resume writing, dual-career couples, the work force, affirmative action, minorities in the corporate world, etc. Each student is required to give a class presentation covering a business area of interest followed by class discussion over the topic. **Credits:** 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers. **Credits:** 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.**Credits:** 1.00

MGMT 25600 - Technology Landscape

Credit Hours: 1.00. Success in business requires an understanding of today's rapidly evolving technological landscape. This course provides students with an overview of emerging technologies that are shaping the future of business. Weekly meetings feature forums with technology experts and business practitioners, giving students insights into the latest technological advancements and their practical applications in diverse business contexts.**Credits:** 1.00

MGMT 26100 - Introduction To Supply Chain Management

Credit Hours: 3.00. This course seeks to introduce general concepts in supply chain management, including procurement, supply planning, demand planning, and logistics. This course is designed around a corporate partnership to provide students with the opportunity to collaborate on solving a large-scale supply chain challenge. In the first five weeks of the semester, students will be introduced to basics of SCM through lectures, cases, and assignments. Beginning in the sixth week, students will form teams to work on a real-world case presented by the corporate partner, a complex problem broken down into six learning areas, each with a corresponding deliverable.**Credits:** 3.00

MGMT 28500 - Knowledge Management

Credit Hours: 3.00. Practical, hands-on introduction to the major techniques of computer-based knowledge management including: text management, data base management, ad hoc inquiry, forms management, customized report generation, business graphics, spreadsheet analysis, and programming. These are examined from the standpoint of how they can be personally used by managers to solve typical problems. All are presented and illustrated within a unified conceptual framework and particular emphasis is given to the integration of techniques. The four major interface approaches are introduced. Students are also acquainted with the topics of business expert systems and remote communications. **Credits:** 3.00

MGMT 28800 - Programming For Business Applications

Credit Hours: 3.00. This course will cover the fundamentals of business rules and logic in a business application development context. Students will acquire these skills using computer programming. A modern programming language will be used to learn and reinforce logical concepts, including abstraction, process flow, variable assignment, and control structures, as well as proper programming and application development practices, including documentation. **Credits:** 3.00

MGMT 28900 - Doster Leadership Conference Board Experiential Course

Credit Hours: 1.00. This experiential course focuses on developing leadership and managerial skills through the planning and execution of the Doster Leadership Conference. The course is designed for students currently in a leadership role related to the

Doster Leadership Conference. The material is developed to offer evidence-based approaches to tasks and issues you will face in your role as a board member for the Doster Leadership Conference. In this course, you'll learn to tackle real-world challenges, improve communication, and foster effective teamwork. You'll also gain insights into event logistics, budgeting, and stakeholder engagement while honing your problem-solving abilities. By actively participating in the conference's development, you'll grow as a leader, event organizer, and team member and be better prepared for leadership and project management roles in the future. Ultimately, you will become a stronger, more thoughtful, more organized, and more creative board member and board committee as a whole. Permission of instructor required.**Credits:** 1.00

MGMT 29000 - Problems In Management

Credit Hours: 0.00 to 4.00. Arrange with instructor before enrolling. Investigation in a specific management field. Permission of instructor required. **Credits:** 0.00 to 4.00

MGMT 29050 - Professional Internship

Credit Hours: 0.00. Students should be pursuing an internship complementing their academic plans-of-study (majors, minors, and concentrations within the Krannert School of Management). The intended purpose of the internship experience is to help students clarify career interests and prepare for future roles in Accounting; Analytical Consulting; Economics; Finance; Human Resources (OBHR); Industrial Management; International Business; Management; Management Information Systems; Marketing; Supply Chain, Manufacturing, and Operations Management; Quantitative Methods; or Strategic Management. Students must be seeking a Bachelor of Science degree in the School of Management. Employment must be related to the students major, minor, or area of academic concentration. May not be taken for more than five (5) semesters. Permission of instructor required. **Credits:** 0.00

MGMT 29110 - Integrated Business & Engineering Seminar I

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate. **Credits:** 1.00

MGMT 29120 - Integrated Business & Engineering Seminar II

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate. **Credits:** 1.00

MGMT 29130 - Integrated Business & Engineering Seminar III

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial

intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate. **Credits:** 1.00

MGMT 29140 - Integrated Business & Engineering Seminar IV

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate. **Credits:** 1.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.**Credits:** 0.00

MGMT 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MGMT 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MGMT 29300 - Diversity In The Workplace

Credit Hours: 3.00. Diversity can be defined as real or perceived differences among people with regards to race, ethnicity, sexual orientation, religion, age, physical and mental ability, and family status that affect an individual's treatment, opportunities and outcomes. As demonstrated in the workplace, diversity is the numerous ways that employees are viewed as being similar or different. Through this course, students will examine the historical context and the emergence of diversity in the workplace including bias, meritocracy, privilege, social identity frameworks, organizational culture, allyship and advocacy. **Credits:** 3.00

MGMT 29400 - Navigating Gender In The Workplace

Credit Hours: 3.00. This course has four objectives: (1) To Increase self-awareness and understand its value in managing careers; (2) To learn how gender culture and implicit bias may affect workplace experiences; (3) To develop strategies to deal with gender related challenges; and (4) To develop competencies in leading effective, gender-aware teams. By exploring these areas, students

will develop new insights for managing their careers, and they will learn new leadership strategies to help their teams achieve higher levels of performance. **Credits:** 3.00

MGMT 29450 - Women In Leadership

Credit Hours: 1.00. Ready to grow your confidence in leadership? In this one-credit course, we will explore how to develop and grow your talents, strengths and leadership while also making an impact at the school of business. We'll also explore what leadership looks like in different contexts, tools you need, and how to be a more inclusive leader. **Credits:** 1.00

MGMT 29500 - Career Readiness & Exploration

Credit Hours: 1.00. Start developing career readiness competencies through an engaging, hybrid course. Come prepared to create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates! Following career necessities, you'll get a taste of what you might encounter in the workforce, and what steps you can take to explore other career options if you get into the workplace and find it's not a good fit. Jump-start your career through MGMT 29500! **Credits:** 1.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues. **Credits:** 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.**Credits:** 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed. **Credits:** 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Typically offered Fall Spring Summer.**Credits:** 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.**Credits:** 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.**Credits:** 3.00

MGMT 33100 - Development And Impact of Equal Employment Law

Credit Hours: 3.00. This class will delve into the legal issues that affect women and men with regard to gender discrimination, equality under the law, sexual harassment, the wage gap, the glass ceiling, affirmative action, family law, and more. The class will be lead through a variety of teaching formats including lectures, activities, presentations, and more. Through this course students will learn about these important areas and, in the process, develop strategies that will assist them as they pursue careers in business and management. Students will have the opportunity to delve deeply into areas that interest them and will impact their future careers. They will do this through a research topic and presentation. Sophomores and juniors are encouraged to enroll. The content may be of particular interest to women, but the course is open to all students. **Credits:** 3.00

MGMT 33200 - Business World Problem Solving

Credit Hours: 3.00. The class engages students to work in cross-functional teams to analyze business problems,develop recommendations, and persuade decision makers through the presentation of compelling solutions. In the classroom students will work together in teams to solve problems that are difficult for firms to outsource and are usually solved in-house without the opportunity to engage a consultant. **Credits:** 3.00

MGMT 33500 - Strategic Business Writing

Credit Hours 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work. **Credits:** 3.00

MGMT 33900 - Krannert Mentoring & Leadership Program

Credit Hours: 2.00. This course will help students learn mentoring best practices and qualities of an effective mentor while practicing and developing these qualities in themselves as they mentor incoming Krannert first-year students. Additional topics include: 1) how to implement and assess mentoring programs in companies, 2) how mentoring builds ethics and leadership skills, and 3) how to be a better cross-cultural mentor. **Credits:** 2.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.**Credits:** 3.00

MGMT 35000 - Intermediate Accounting I

Credit Hours: 3.00. Financial reporting for interested external parties. Emphasis on asset valuation, income measurement, and preparation of financial statements, and on appreciation of discretion available to preparers. Typically offered Fall Spring.**Credits:** 3.00

MGMT 35100 - Intermediate Accounting II

Credit Hours: 3.00. Continuation of Intermediate Accounting I. An examination of additional problems in financial reporting, including long-term assets, liabilities, owners' equity, income taxes, earnings per share, leases, and pensions. Typically offered Fall Spring.**Credits:** 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization. **Credits:** 3.00

MGMT 35300 - Intermediate Accounting For Non-Accounting Majors

Credit Hours: 3.00. The course is designed to meet the needs of students of predominantly finance students, as a firm grasp of key accounting concepts is critical to success in most finance professions. Throughout the course we will study measurement and reporting issues related to selected important financial statement items. The goal of this course is to educate students on major accounting topics that are likely to influence key financial decisions such as different inventory methods, different depreciation methods, lease recognition, pension accounting, among other topics. **Credits:** 3.00

MGMT 35500 - Consulting Tools And Skills

Credit Hours: 3.00. This novel course will provide an opportunity for motivated students to gain exposure to the skills and tools necessary to succeed in the consulting industry. There will be a chance to work in small teams to define client problems, collect and analyze data, develop solution proposals, and implement recommendations. Students will also be given an insider's look into the history of consulting, common types of consulting, and professional standards in this specialized area of management. Honing skills in project management, presentation delivery, storytelling, and stakeholder engagement will form the foundation of the tools used to solve client challenges. **Credits:** 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results. **Credits:** 3.00

MGMT 37000 - Real Estate Fundamentals

Credit Hours: 3.00. This course introduces the basic concepts, principles, and analytic methods applied in the field of real estate. The course covers topics including legal, financial, economic and marketing concepts related to real estate. The goal of the course is to expose students to the field of real estate and prepare them for more advanced real estate courses.**Credits:** 3.00

MGMT 37300 - Accounting Information Systems & Data Analytics

Credit Hours: 3.00. Learn how to manage the design, control and operation of accounting information systems. The emphasis is on identifying the information needs of decision makers and developing appropriate business process control in the design of accounting information systems. Gain an understanding and appreciation of the accounting information system and how it is used to successfully manage, audit and develop processes to support today's evolving business environment. **Credits:** 3.00

MGMT 37500 - Real Estate Law

Credit Hours: 3.00. The course provides an overview of real estate law and its influence on various aspects of the real estate industry. The course examines the legal issues surrounding the nature of real property, types of ownership and possession, real estate contracts, escrow and title and insurance, zoning, financing, landlord and tenant, land use regulations, environments law and regulations, and agency ethics.**Credits:** 3.00

MGMT 38199 - Professional Practice Co-Op I

Credit Hours: 0.00 to 3.00. Professional practice with qualified employers within industry, government, or small business. Typically offered Fall Spring Summer.**Credits:** 0.00 to 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology. Typically offered Fall Spring Summer.**Credits:** 3.00

MGMT 38299 - Professional Practice Co-Op II

Credit Hours: 0.00 to 3.00. Professional practice with qualified employers within industry, government, or small business. Industrial Practice Fee is attached to this course. Typically offered Fall Spring Summer.**Credits:** 0.00 to 3.00

MGMT 38399 - Professional Practice Co-Op III

Credit Hours: 0.00 or 1.00. Professional practice with qualified employers within industry, government, or small business. Industrial Practice Fee is attached to this course. Typically offered Fall Spring Summer.**Credits:** 0.00 or 1.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.**Credits:** 3.00

MGMT 38900 - Using R For Business Analytics

Credit Hours: 3.00. The main purpose of this course is to introduce and familiarize undergraduate students to RStudio and the R programming language as tools for business data analytics. Students will develop a small portfolio of projects that demonstrate fundamental knowledge of programming, exploratory data analysis, data visualization, and basic predictive modeling techniques using R. The emphasis of the course will be on hands-on applied projects in R in which students will be able to appreciate and visualize statistical and machine learning concepts tailored to real world business applications. **Credits:** 3.00

MGMT 39000 - Junior Level Problems In Management

Credit Hours: 0.00 to 4.00. The Accounting Internship provides work experience in businesses or other institutions. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 0.00 to 4.00

MGMT 39010 - Accounting Internship

Credit Hours: 1.00. An Accounting, Economics, Industrial Management or Management related work experience. This internship experience is intended to complement the student's academic plan-of-study and help prepare him/her for his/her future role in Accounting, Economics, Industrial Management or Management. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. Typically offered Fall Spring.**Credits:** 1.00

MGMT 39020 - Management Internship

Credit Hours: 1.00. An Accounting, Economics, Industrial Management or Management related work experience. This internship experience is intended to complement the student's academic plan-of-study and help prepare him/her for his/her future role in Accounting, Economics, Industrial Management or Management. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. Typically offered Fall Spring.**Credits:** 1.00

MGMT 39030 - Industrial Management Internship

Credit Hours: 1.00. An Accounting, Economics, Industrial Management or Management related work experience. This internship experience is intended to complement the student's academic plan-of-study and help prepare him/her for his/her future role in Accounting, Economics, Industrial Management or Management. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. Typically offered Fall Spring.**Credits:** 1.00

MGMT 39040 - Economics Internship

Credit Hours: 1.00. An Accounting, Economics, Industrial Management or Management related work experience. This internship experience is intended to complement the student's academic plan-of-study and help prepare him/her for his/her future role in Accounting, Economics, Industrial Management or Management. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. Typically offered Fall Spring.**Credits:** 1.00

MGMT 39050 - Finance Internship

Credit Hours: 1.00. A Finance-related work experience. This internship experience is intended to complement the student's academic plan of study and help prepare him/her for his/her future role in Finance. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. **Credits:** 1.00

MGMT 39060 - Human Resource Internship

Credit Hours: 1.00. A Human Resource-related work experience. This internship experience is intended to complement the student's academic plan of study and help prepare him/her for his/her future role in HR. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. **Credits:** 1.00

MGMT 39070 - Management Information Systems Internship

Credit Hours: 1.00. A Management Information Systems related work experience. This internship experience is intended to complement the student's academic plan-of-study and help prepare him/her for his/her future role in MIS. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. Typically offered Fall Spring.**Credits:** 1.00

MGMT 39080 - Manufacturing, Operations, Supply Chain Internship

Credit Hours: 1.00. A Manufacturing, Operations, or Supply Chain related work experience. This internship experience is intended to complement the student's academic plan of study and help prepare him/her for his/her future role in Manufacturing, Operations, or Supply Chain. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. **Credits:** 1.00

MGMT 39090 - Marketing/Sales Internship

Credit Hours: 1.00. A Marketing/Sales related work experience. This internship experience is intended to complement the student's academic plan of study and help prepare him/her for his/her future role in Marketing/Sales. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required. **Credits:** 1.00

MGMT 39100 - Strategic Thinking And Decision-Making

Credit Hours: 3.00. This course focuses on how to think strategically and make good business decisions. By the end of the class, you will be able to do the following: (1) Recognize biases in how people process information, conducting user tests and interviews to gain insights from prototypes to make business development decisions; (2) Engage in decision-making strategies to design/develop prototypes in a variety of media (digital and/or physical) for the appropriate level of fidelity necessary to communicate, understand, and test innovative ideas; (3) Select and use appropriate methods/tools/equipment to make decisions and design/prototype innovative ideas; (4) Pitch a viable solution for a validated problem to a variety of potential investors and/or stakeholders.**Credits:** 3.00

MGMT 39200 - Optimizing Personal Brand And Image

Credit Hours: 3.00. This course will focus on four areas: personal branding, social and digital media strategies, financial literacy and philanthropy. You'll gain an understanding of how to convey your image to an external audience, evaluate the proper channels to maximize and monetize that image responsibly, select advisors to help negotiate contracts and invest your money, and establish charities and events that support your personal causes. You'll learn which media and financial landmines to avoid while staying true to your personal principles and philosophies, and you'll gain leading-edge information about the technologies to keep you ahead in the game of life. **Credits:** 3.00

MGMT 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MGMT 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MGMT 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MGMT 39699 - Professional Practice Internship

Credit Hours: 0.00 to 1.00. Professional experience in Management. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit reflective summaries and receive company evaluation. Permission of Instructor required.**Credits:** 0.00 to 1.00

MGMT 39800 - Using R For Business Analytics

Credit Hours: 3.00. The main purpose of this course is to introduce and familiarize undergraduate students to RStudio and the R programming language as tools for business data analytics. Students will develop a small portfolio of projects that demonstrate fundamental knowledge of programming, exploratory data analysis, data visualization, and basic predictive modeling techniques using R. The emphasis of the course will be on hands-on applied projects in R in which students will be able to appreciate and visualize statistical and machine learning concepts tailored to real world business applications.**Credits:** 3.00

MGMT 40100 - Executive Forum

Credit Hours: 1.00. A lecture-discussion course featuring executives from business firms and other organizations. Emphasis is placed on the actual practice of management in corporate America, on career selection and mobility, on styles of management, and on other topics not normally covered in undergraduate courses.**Credits:** 1.00

MGMT 40300 - Database Management Systems

Credit Hours: 3.00. Intensive study of computer-based tools and methods for developing information systems for accounting and other managerial applications. The course concentrates on data base management techniques as the foundation for construction information systems. The coverage has a highly practical orientation. Specific topics include tool selection criteria, file management techniques, data base management concepts, comparative study of the major data models, schema design methodology, procedural and nonprocedural access languages, data security, data integrity, performance tuning, multiuser processing, and software integration. **Credits:** 3.00

MGMT 40500 - Six Sigma And Quality Analytics

Credit Hours: 3.00. The course is an undergraduate elective offered as part of the Center for Manufacturing Management Enterprises (CMME) quality initiatives. Provides an overview of various tools and methods for total quality management. **Credits:** 3.00

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives. Typically offered Fall Spring.**Credits:** 3.00

MGMT 41150 - Futures And Options

Credit Hours: 3.00. The course covers basic features and pricing of derivative securities such as forwards, futures, and options.**Credits:** 3.00

MGMT 41200 - Financial Institutions And Markets

Credit Hours: 3.00. Introduction to financial markets and management of financial institutions. Emphasis on determinants of interest rates, and measurement and management of financial risk. Concentration on management of depository firms such as banks and savings and loans. **Credits:** 3.00

MGMT 41220 - FinTech

Credit Hours: 3.00. Dramatic development in technology is fundamentally transforming all aspects of financial intermediation including lending, payment services, investments and trading. The goal of the course is to introduce these new developments to students with the emphasis on underlying economic mechanisms. We will start with talking about fiat money but quickly delve into cryptocurrencies and their applications. We will talk about tokens, smart contracts, automated market making and how applications of these concepts are transforming financial services and financial inclusion. We will cover these topics by analyzing real companies and contrast them with traditional players in the financial system. **Credits:** 3.00

MGMT 41250 - Fixed Income Securities

Credit Hours: 3.00. This course includes examination of fixed income securities institutions that invest, roles in institution, portfolios and math associated with assessing characteristics of fixed income securities. **Credits:** 3.00

MGMT 41300 - Corporate Finance

Credit Hours: 3.00. The course provides the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending, or investment banking setting. Topics include corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition, and mergers/acquisition. Typically offered Fall Spring.**Credits:** 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling. **Credits:** 3.00

MGMT 41350 - Venture Capital And Entrepreneurial Finance

Credit Hours: 3.00. This course includes descriptions of markets for start-up businesses, venture capital financial structures, valuation of start-ups, role of venture capital in economic development and business growth strategies. **Credits:** 3.00

MGMT 41500 - International Financial Management

Credit Hours: 3.00. The course explores financial decision making in an international framework from the perspective of the management of a multinational corporation. Topics covered include the international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations. **Credits:** 3.00

MGMT 41601 - Corporate Mergers And Acquisitions

Credit Hours: 3.00. The financial analysis of corporate acquisitions, mergers, and reorganizations including asset acquisitions, joint ventures, spin-offs, sell-offs, equity carve-outs, bankruptcy proceedings and reorganizations, and corporate governance. The course uses a combination of lectures, readings, and case analysis. Typically offered Fall Spring.**Credits:** 3.00

MGMT 41650 - Financial Engineering

Credit Hours: 3.00. The objective of this course is to develop necessary skills to value and hedge a wide variety of derivative contracts traded in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous time. Some basic knowledge of stochastic processes would be helpful, but not essential: what needed will be covered in class. The analytic valuation and hedging of derivatives using the modern martingale methods will be the main focus of the course. Applications will include forwards, futures, and options on stocks, bonds and foreign currencies. The numerical methods such as parameter estimation, Monte Carlo simulations, discretization schemes as well as the conditional volatility estimation techniques will also be addressed. In addition to the valuation and hedging derivatives, course also covers Value-at-Risk, credit risk, modeling the term structure of interest rates and the construction of the VIX index using the S&P 500 index options obtained from the IvyDB OptionMetric database.**Credits:** 3.00

MGMT 42000 - Consumer Analytics

Credit Hours: 3.00. Many firms possess extensive information about customers, their transactions, and their relationships with the firms, necessitating expertise for intelligent utilization. The objective of this course is to equip you with a scientific approach to customer marketing, featuring hands-on use of databases, analytics, and computing to collect, analyze, and act on customer information for various industries. This course specifically focuses on customer relationship analytics, including identifying promising prospects and customer acquisition, customer development through up-selling, cross-selling, and personalization, as well as managing customer attrition, retention, and evaluating customer lifetime value. It also explores advanced analytics models such as conjoint analysis, purchase forecasting, and perception analysis. **Credits:** 3.00

MGMT 42110 - Marketing Analytics

Credit Hours: 3.00. This course covers essential decision models and strategic metrics that form the cornerstone of marketing analytics. Using the insight gained in the course, students can predict the outcome of marketing plans to boost return on marketing investment (ROMI). The course emphasizes hands-on learning so students can immediately apply the econometric tools and techniques on a variety of marketing applications. A number of relevant topics are discussed, such as market sizing, forecasting and positioning, promotion budget allocation, and profit maximization. The final piece of this course is guiding the students on how best to craft data-driven presentations to key stakeholders through the use of an experiential learning project provided by an external client. **Credits:** 3.00

MGMT 42120 - Data & AI-Driven Marketing

Credit Hours: 3.00. Marketing is increasingly evolving from traditional approaches to leveraging big data and artificial intelligence (AI) to make strategic decisions and drive impactful campaigns. This course offers an immersive exploration into the intersection of data science, artificial intelligence, and marketing strategies, providing students with the knowledge and skills to thrive in the digital era. It will discuss uses of data science tools and AI algorithms in marketing applications, such as

personalized marketing, sentiment analysis, and ad campaign optimization. Students will also gain hands-on experience on applying the methods to real-world data.**Credits:** 3.00

MGMT 42130 - Consumer Behavior

Credit Hours: 3.00. Consumer behavior is the study of the processes involved when individuals or groups select, purchase, use, or dispose of products, services, ideas, or experiences to satisfy needs and desires. We will draw on research from psychology, marketing, economics and sociology to learn why consumers behave in the ways that they do. The course focuses on three general topics. 1) Consumers as individuals. We will explore basic psychological concepts like intrinsic motivation, perception, memory, and emotions to help us understand behavior. 2) Attitude change and decision-making. We will examine how consumers search and evaluate alternatives, develop attitudes, and make choices. 3) Consumers in their social and cultural settings. We will examine the interaction between the consumer and multiple external influences. We investigate how social elements (friends, family, etc.) and culture influence behavior.**Credits:** 3.00

MGMT 42210 - International Marketing

Credit Hours: 3.00. Most U.S. businesses, large and small, are becoming deeply involved in international business. The trend is going to grow even stronger because of the influence of World Trade Organization and regional trade blocks. Under these circumstances, it is imperative that business managers possess the skill sets to adapt their marketing strategies to the needs of international markets. This course will cover the concepts and theories pertaining to international marketing. It is aimed to provide students with skills in formulating a marketing plan for foreign market entry and conducting business in a foreign country. **Credits:** 3.00

MGMT 42300 - New Product Development

Credit Hours: 3.00. Provides an overview of the new product development process. Detailed insights are provided in the "fuzzy front end" of this process. Targeting positioning, and product decisions are also covered. The second half of the course completes the marketing mix and covers various market testing and product launch issues. **Credits:** 3.00

MGMT 42310 - Global Marketing Management

Credit Hours: 3.00. Most US businesses, large and small, are becoming deeply involved in international business. The trend is going to grow even stronger because of the influence of the World Trade Organization and regional trade blocks. Under these circumstances, it is imperative that business managers possess the skill set to adapt their marketing strategies to the needs of international markets. The course will cover concepts and theories pertaining to international marketing and provide the tools necessary to develop an international marketing plan. **Credits:** 3.00

MGMT 42410 - Sales & Retail Management

Credit Hours: 3.00. Understanding and executing effective sales and retail strategies are essential for achieving overall business success, impacting growth, customer relationships, and competitiveness in the market. This course combines theoretical foundations with practical applications, guiding students in integrating sales and retail management principles into comprehensive business decision-making processes.**Credits:** 3.00

MGMT 42500 - Marketing Research

Credit Hours: 3.00. The purpose of this course is to develop skills in the planning and execution of market research studies designed to acquire useful information for marketing decisions. It aims to familiarize students with techniques of research design, data collection, and analysis. Emphasis is placed on evaluating the results obtained from such investigations. **Credits:** 3.00

MGMT 42610 - Brand Management

Credit Hours: 3.00. This course is designed to provide an understanding of how to manage a brand, product, or product category. The course concerns issues related to customer behavior and customer decision making, with an emphasis on how to utilize such customer-oriented knowledge for building and maintaining brand equity. This course builds on concepts and topics covered in the core marketing course. Typically offered Fall Spring.**Credits:** 3.00

MGMT 42710 - Digital Marketing Strategy

Credit Hours: 3.00. Digital marketing is where marketing meets the internet, wireless devices, and other digital media. The course covers a variety of topics including online advertising, search engine optimization, participation in social media, online listening and monitoring, and web & social media analytics. Through a combination of lecture, case studies, hands-on exercises, and course projects, students develop capabilities in designing, implementing, and evaluating digital marketing strategies. Students can also gain hand-on learning experience in the course by participating in an online marketing project. In the online marketing project, each student team is given $50 to promote a chosen business or organization via online or social media platform (including search engine advertising and online display advertising). **Credits:** 3.00

MGMT 42810 - Pricing Strategy And Analysis

Credit Hours: 3.00. In the era of Big Data, where extensive information is available at consumer level, managers benefit from an increased ability to learn from their customers' behavior. In this scenario pricing becomes a crucial lever for increasing the relationship with the customer and maximizing profits and shareholder value. In this course, students will learn how to systematically approach pricing decisions, taking the perspective of the marketing manager. The course will use a combination of lectures, case discussions and in-class exercises to leverage micro-level transaction data for pricing decisions. **Credits:** 3.00

MGMT 42910 - Experiential Marketing

Credit Hours: 3.00. In this course, students learn to apply marketing concepts to real world marketing problems. Projects are varied and may involve marketing plan development for a start-up, market research, analysis of marketing data, digital marketing, search engine marketing, web design, and social entrepreneurship. Clients include Purdue Marketing Advisory Board members, entrepreneurs working with Purdue's Foundry and Discovery Park, Purdue Research Park start-ups, small and medium-size Indiana businesses, and non-profit organizations. Students are given flexibility in selecting projects of interest. Teams work under the direction of a faculty member. Teams meet regularly with the faculty supervisor and also the project sponsor to review project progress and discuss the next steps towards meeting project requirements. Projects are done in teams, although evaluation is individual. Permission of instructor required. **Credits:** 3.00

MGMT 42930 - Labor Relations

Credit Hours: 3.00. The course focuses on employee-employer relations. Attention is given to topics in legal aspects of union organizing and collective bargaining, labor unions history and structure in the United States, labor management negotiations, dispute resolution procedures, international labor relations, and labor-management cooperation. **Credits:** 3.00

MGMT 43000 - Professional Selling

Credit Hours: 3.00. The course covers all aspects of professional selling to help students develop an understanding of sales managers' goals, decisions, and challenges and learn about the tools, frameworks, and insights to diagnose and resolve strategic and tactical issues of selling. These concepts can help all employees promote their own ideas internally and more effectively work with the sales organization to achieve organizational success. **Credits:** 3.00

MGMT 43600 - Financial Reporting Frameworks

Credit Hours: 3.00. This course is designed to introduce students to the conceptual aspects of various U.S. and global financial reporting frameworks including: U.S. GAAP, IFRS, and Special Purpose Frameworks, as well as the COSO's Integrated-Framework for Internal Control. In addition, the course provides an overview of the FASB, its standard setting process, the Accounting Standards Codification, and a discussion of significant emerging financial reporting issues. **Credits:** 3.00

MGMT 43700 - Social Media Marketing

Credit Hours: 3.00. This course is deigned to equip students with tools and develop marketing skills required to address current marketing problems. The approach is to learn R software for conducting basic scraping on social media sites to understand user behavior and sentiment. In addition, Python will be used for web-scraping data from various websites and websites with dynamic content. The goal is to become familiar with such qualitative techniques as: word clouds, cluster dendrograms, sentiment analysis, and other methods. Occasional homework assignments or check points will be given to gain deeper understanding of the materials covered in class. The deliverables for this project will be a slide presentation (no more than 10 pages, excluding appendices) to showcase what you have learned. This may be included as a part of your resume to show your potential employers. These are some of the basic knowledge of useful skills in web crawling, data mining, and statistical analyses, so you may leverage your portfolio when seeking entry/junior level marketing analyst positions. **Credits:** 3.00

MGMT 43800 - Pricing Strategies

Credit Hours: 3.00. In the era of Big Data, where extensive information is available at the customer level, managers benefit from an increased ability to learn from their customers' behavior. In this scenario pricing becomes a crucial lever for increasing the relationship with the customer and maximizing profits and shareholder value. In this course, students will learn how to systematically approach pricing decisions, taking the perspective of the marketing manager. The course will use a combination of lectures, case discussions and in-class exercises to leverage micro-level transaction data for pricing decisions. **Credits:** 3.00

MGMT 43901 - Real Estate Investment & Development

Credit Hours: 3.00. The course will cover two main topics: real estate development and real state investment. For real estate development, we will discuss the process of the real estate development process, including the basics of the idea conception, feasibility, planning, financing, market analysis, contract negotiation, risk management, marketing, and asset management. For real estate investment, we will discuss the process and techniques of analyzing real property investment, and the effects of market conditions, government policies, and other factors on real estate investment.**Credits:** 3.00

MGMT 43902 - Real Estate Capital Markets & Securitization

Credit Hours: 3.00. The course covers debt and equity secondary markets linked to real estate assets. Main topics include features of commercial and residential mortgages, and mortgage calculation; analysis of agency and non-agency mortgage-backed securities and other instruments; history of mortgage secondary markets; commercial mortgage-based securities (CMBS), and Real Estate Investment Trusts (REITs). The advantages and drawbacks of the capital market products will be discussed and compared, and students develop a deep understanding of the alternatives that are available. The class consists of lectures, guest speakers, readings, class discussions, and case studies.**Credits:** 3.00

MGMT 43905 - Real Estate Industry Project

Credit Hours: 3.00. This course gives students opportunities of working on real-world projects provided by commercial corporations or organizations. Through the experiential learning experience, students have the opportunities to develop knowledge and skills in managing real estate projects. Depending on the available projects, students will work on topics related to real estate investment and development, facility design and renovation, asset management and other issues. The focus is on developing students' ability in applying what they've learned to solve real-world challenges and receiving coaching and feedback from industry experts.**Credits:** 3.00

MGMT 43907 - Advanced Topics In Real Estate

Credit Hours: 3.00. This course covers selected and timely topics in real estate that are not covered in other regular courses. The topics are determined by the instructor offering the course. The instructor may also include advanced analytical techniques for real estate investment decisions, real estate valuation, and other analyses. Cases and research reports may be used in this course.**Credits:** 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management. **Credits:** 3.00

MGMT 44310 - China, America And Artificial Intelligence

Credit Hours: 3.00. The key to business success is to read broadly and to understand how culture, economics, history, and politics converge. Through frequent writing assignments, close readings of personal accounts, and daily class discussions, students will gain insights into how culture, economics, history, and politics intersect to influence human behavior and worldviews. Case studies and examples will be drawn from the United States, China, and Taiwan. Finally, we will apply what we have learned to the practice of global cultural dexterity. Students will identify cultural nuances and subtleties in order to share examples of how each student has adapted or failed to adapt to different cultural dynamics. **Credits:** 3.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies. **Credits:** 3.00

MGMT 44363 - Confident Transitions And Leadership

Credit Hours: 1.00. In this course offered by the Brock Wilson Center for Women in Management, graduating senior women will prepare for a confident transition from student to professional. Students will focus on common issues for new employees as well as be paired with an alumni mentor. They will develop a personal plan for their transition from college student to successful professional through reading and discussing key business leadership books. Through this course, each student will build a plan for the first six months of their job and decide what a successful transition looks like for them. Permission of instructor required. **Credits:** 1.00

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment

centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized. **Credits:** 3.00

MGMT 44429 - Talent Management

Credit Hours: 3.00. This course focuses on the employer-employee relationship at work, and how managers work with employees to improve employee performance. Attention is given to the history of labor relations and performance management in work settings, with an emphasis, however, on contemporary approaches to managing the employer-employee relationship and the systems for managing employee performance. **Credits:** 3.00

MGMT 44430 - Staffing: Talent Acquisition

Credit Hours: 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. It will also prepare students to evaluate methods for job analysis and selection. Students will learn how to design and ask interview questions that are behaviorally anchored and focused on organization-person fit and person-job fit, both of which are important for successful adaptation and effective performance on the job. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees. **Credits:** 3.00

MGMT 44431 - Compensation: Total Rewards

Credit Hours: 3.00. This course examines the tangible and intangible aspects of compensation, through the lens of a total reward philosophy of an organization in order to attract, motivate, and retain their Human Capital. It also provides an overview of the considerations necessary to develop a compensation system that is internally and externally equitable and fiscally responsible, including the use of job evaluation and salary surveys. **Credits:** 3.00

MGMT 44432 - Employee And Leadership Development

Credit Hours: 3.00. This course focuses on key strategies and principles for developing employee and leader knowledge and skills in the workplace. The course will provide an overview of how organizations conduct performance management as well as training and development for their workforce. Building from these general overviews, the course will explore specific topics including, for example, training program design and effectiveness, performance evaluation and appraisal, feedback sessions and 360 degree feedback, mentoring, networking, as well as the specific skills and knowledge employees and leaders need to gain from these practices be successful both within their organizations and careers. Students will engage in various activities, assignments and self-assessment techniques in order to illustrate and practice the skills important for employee and leadership development. **Credits:** 3.00

MGMT 44433 - Leading And Working In Teams

Credit Hours: 3.00. This course will explore the forces that affect behavior in teams, and the factors that lead to team success. We will use a variety of readings, cases, activities, and class discussions to build concrete skills related to leading and working in teams. The course will explore the specific challenges associated with leading teams, some of which include: building and designing teams, managing information exchange within and across teams, structuring effective group decision processes, igniting creative thinking, enabling complex problem solving, managing team diversity and conflict, and managing systems of teams. Permission of instructor required. **Credits:** 3.00

MGMT 44434 - Human Resources Analytics

Credit Hours: 3.00. This course introduces concepts, tools, and methods used in collecting, interpreting, and presenting HR data. Students will learn how to gain new insights, solve problems, and drive performance through HR analytics. A central focus of

this course is the ethics of HR analytics. This course teaches students how to ask the right questions in order to intelligently use HR analytics and metrics for business decisions. It discusses the implications of internet AI, business AI, perception AI, and autonomous AI for HR. This course will cover applications including the intelligent use of analytics related to employee engagement, healthcare expenditure, learning and development, performance management, and safety. **Credits:** 3.00

MGMT 44500 - Introduction To Investments And Portfolio Management

Credit Hours: 3.00. Introduction to investments and portfolio management for non-management students. Covers characteristics of stock, bonds, portfolios, and financial markets. Includes introduction to interest rates and time value of money. **Credits:** 3.00

MGMT 44630 - Innovation Management

Credit Hours: 3.00. In this course you learn why organizations struggle to innovate, how to successfully analyze and implement an innovation strategy, and you learn to manage the innovation process. The course consists of two pillars (or 'walls') that enable a company to become innovative (Innovation Strategy and Organization Design) and the innovation process itself. The innovation process contains how to generate, select, implement, protect, experiment, scale, and diffuse ideas. Consequently, this course will provide you the skills and knowledge to manage innovations. Permission of department required.**Credits:** 3.00

MGMT 44670 - The Great Leaders Book Club

Credit Hours: 3.00. One way to learn about leadership and being an effective leader is to learn from other leaders past and present. Numerous articles and books have been written about leadership and/or profile one or more leaders. We will study leaders through historical and contemporary review and analysis of selected books that illustrate important leadership principles and situations. Course readings will typically include books that one would find on bookshelves of top-level leaders in organizations and institutions. Each week students and instructor meet to discuss the assigned readings and identify key leadership lessons and takeaways. These discussions are reinforced through role play and in-class exercises. Students are expected to be active co-participants and will be challenged to ask curious questions and develop critical thinking skills. This class is designed for high potential leaders who take leadership seriously and wish to develop their leadership capability to its fullest. Permission of instructor required. **Credits:** 3.00

MGMT 44671 - Corporate Conscience

Credit Hours: 3.00. Is there a moral component to leadership? Does a moral person translate to a moral manager? What does leading ethically entail? Where have organizations and their leaders failed to act in a way that advances the interests of their employees and society at large? This course takes a case study approach to understanding ethical leadership. We look inside organizations, through case study, to evaluate an organization's corporate conscience, defined here as the extent to which a company or organization prioritizes ethics and demonstrates ethical behavior or unethical behavior. We examine the drivers of ethical decision making and the qualities of what it means to be a servant leader. Permission of instructor required. **Credits:** 3.00

MGMT 44672 - Transformational Leadership Development Immersion Experience

Credit Hours: 1.00 to 4.00. Courses involve leadership immersion trips to develop one's leadership acumen and enable one to reflect on one's guiding principles. Immersion learning takes place in novel, inspiring settings where real leadership is/was required. Permission of instructor required.**Credits:** 1.00 to 4.00

MGMT 44673 - Intensive Leadership Sprint

Credit Hours: 1.00. Intensives are rapid leadership development experiences condensed over a weekend, with topics focused on self-leadership, teambuilding, conflict resolution, decision-making, communication, influence, and visioning. Permission of instructor required.**Credits:** 1.00

MGMT 44680 - Experiential Learning And Team Consulting Projects

Credit Hours: 1.00 to 4.00. This course is for independent team experiential consulting projects. Students work on solving a real-world problem. Projects will typically involve an external corporate or alumni partner that sponsors a project and provides a problem to be solved. Student teams will work with the client to define the scope of engagement, develop a project plan, conduct a needs assessment, provide benchmark data and market analysis, solve problems, make decisions and present recommendations. In addition, students will develop professionalism skills in communicating and interacting with corporate clients through written and oral communication, including a final presentation to corporate stakeholders. Permission of instructor required. **Credits:** 1.00 to 4.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.**Credits:** 3.00

MGMT 44710 - Competitive Strategy

Credit Hours: 3.00. This course focuses on the dynamics between a firm and the marketplace including interaction with competition. Strategy implementation occurs over multiple periods and is highly dependent on choices and behavior of competition. The course material covers how these dynamics and expectations of competitor response will shape the decisions of managers. This is inclusive of signaling intent to competitors and mutual forbearance to avoid negative sum gain competition. **Credits:** 3.00

MGMT 44810 - Technology Strategy

Credit Hours: 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage. **Credits:** 3.00

MGMT 45200 - Manufacturing Strategy And Process Innovation

Credit Hours: 3.00. This course examines the management challenges posed by the growth in worldwide manufacturing capabilities, markets, and competition and by rapid advances in technology and the concomitant decline in product life cycles. The manufacturing function is considered within a broader context encompassing design, engineering, purchasing, marketing, and customer service in an effort to assess the degree to which existing management structures successfully meet the challenges arising from the changing manufacturing environment. **Credits:** 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management. **Credits:** 3.00

MGMT 45600 - Legal Foundations For Business II

Credit Hours: 3.00. A study of commercial law as prescribed by the Uniform Commercial Code, including the law of sales, documents of title, negotiable instruments, and the law relating to security interests. Additional material is presented covering the legal aspects of real estate transactions and personal property transfer.**Credits:** 3.00

MGMT 45900 - International Management

Credit Hours: 3.00. This course focuses on the challenges top managers face in developing strategies and management policies in multinational corporations (MNCs). Major topics usually covered include foreign market entry strategies, motivations and organizational challenges of internationalization, analyzing global industries, managing MNC/host government relations, building competitive advantage in global industries, international alliances and acquisitions, structuring and controlling MNCs, risk management, and the country manager role. **Credits:** 3.00

MGMT 46200 - Advanced Manufacturing Planning And Control Systems

Credit Hours: 3.00. The course examines key concepts in the planning, control, and improvement of processes in manufacturing and service operations. Specific topics covered in the course include: (i) Product/service characteristics that provide value to customers and competitive priorities, (ii) Role of processes and key operations choices to support the competitive priorities, (iii) Process analysis and scheduling, (iv) Throughput principles to deal with adverse impacts of process uncertainties and bottlenecks, (v) Managing capacity and lead times, (vi) Throughput principles to deal with wastes and errors, including the Toyota Production System and Lean Operations, and (vii) Coordinating material/order flows in supply chain - MRP, and Resources and Production Planning - Aggregate Production Planning. The class uses a combination of lectures, cases, simulations, outside speakers, experiential exercises, and student presentations. An important component of the course is a hands-on exercise where students in teams of seven or eight design and run a production process to meet demand for a quality-conscious customer. The teams then present the lessons learned to the class. **Credits:** 3.00

MGMT 46300 - Supply Chain Analytics

Credit Hours: 3.00. This course focuses on rigorous quantitative decision-making in supply chain management. It covers optimization (linear, nonlinear, and integer), stochastics/probability, and simulation. The coursework is conducted through experiential learning activities based on real-world data, proficiency with analytics software, and operation research case studies. MGMT 30600 is highly recommended but not required. Basic Calculus, Statistics, and Excel literacy are required. **Credits:** 3.00

MGMT 46400 - Logistics: Concepts And Models

Credit Hours: 3.00. The course familiarizes students with main concepts and models of business logistics management. Through the course, students develop an ability to design, improve, and manage logistics operations such as Inventory, Transportation, Warehousing, and Logistics Network Design. Since logistics decisions often require certain trade-offs to be made, students develop necessary quantitative and qualitative analytical skills to improve their decision-making. At the end of the course, students should be able to analyze logistics strategy of a firm, identify problems and tradeoffs in different logistics functions, formulate the corresponding models, identify quantitative methods to solve it, obtain results and interpret them for small-size problems using standard spreadsheet software, communicate the results to a broader audience using business language, discuss issues and challenges in same-day delivery, humanitarian logistics, physical internet. **Credits:** 3.00

MGMT 46501 - Strategic Sourcing And Procurement

Credit Hours: 3.00. This elective course will serve as an important complement to the existing OM modules (e.g., MGMT 36100 Operations Management) to introduce more in-depth knowledge about supply chain management to undergraduate students, especially those major in SC&OM, focusing on strategic sourcing and procurement operations which are the building blocks for supply chain operations. More specifically, this course will introduce procure-to-pay process, category management, supplier selection and evaluation, supplier relationship management, vertical integration, global sourcing, outsourcing, auctioning, supply contract design and negotiation, business ethics, legal and compliance issues, etc. Sourcing and procurement is the major job title

for supply chain operations jobs in the industry and our course can also help students to get the professional certificate of sourcing and procurement. Hence, it may also help senior students prepare for the job placements. **Credits:** 3.00

MGMT 46600 - Project Management

Credit Hours: 3.00. This course seeks to introduce different phases of managing projects from conception to termination with particular emphasis on quantitative tools for planning, scheduling, resource allocation, monitoring, and control. In addition, topics such as risk management, quality management and procurement management will be covered. Students will also gain a working knowledge of MSProject software. **Credits:** 3.00

MGMT 46700 - Big Data & Cloud Computing

Credit Hours: 3.00. Cloud computing and big data technologies are rapidly enhancing an organization's business intelligence ecosystem. Two modules of the course are specially designed for students to gain valuable hands-on experience in collecting, cleaning, formatting, integrating, and storing massive amounts of data that may be structured or unstructured, archived, or streaming in a cloud platform. The first module will introduce cloud computing fundamentals, its enabling technologies, main building blocks, and hands-on experience through projects utilizing Google Cloud Platform (GCP). The second module will cover processes for creating data pipelines in GCP so that the student will be able to curate big data for training, analysis, and prediction using AI/ML and other data science techniques.**Credits:** 3.00

MGMT 46800 - Supply Chain Technology

Credit Hours: 3.00. The course will introduce the major SCM information systems and technologies utilized by industry leaders to integrate SCM operations and achieve coordination within and across various business functions. The students will learn how to manage SCM operations, including: sales & distribution, materials management, production planning and control, warehouse management, retail operations. The course will provide students the opportunity to study, analyze, and observe the information systems and technology tools. Topics include Enterprise Resource Planning Systems (ERP), Blockchain, Warehouse Management System (WMS), Transportation Management Systems (TMS), Internet of Things (IOT) in retail. The students will learn how to use the SAP software to execute SCM operations. The course will review the technology implementation process and how such projects should be organized and managed. **Credits:** 3.00

MGMT 47000 - Transport Management I

Credit Hours: 3.00. Basic concepts and models for the transporting and distributing function. **Credits:** 3.00

MGMT 47100 - Transport Management II

Credit Hours: 3.00. Application of the trends in modern management to transportation, with emphasis on effective coordination and control. **Credits:** 3.00

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc. **Credits:** 3.00

MGMT 47300 - Data Mining

Credit Hours: 3.00. Students follow a structured analytical process using popular industry tools (e.g., RStudio, Tableau, SQL) to identify, visualize, and summarize relationships within large data sets to support business problems. More focus is on descriptive analytics which includes business segmentation and clustering methods, but also introduces two predictive analytic methods, decision trees, and neural networks. **Credits:** 3.00

MGMT 47400 - Predictive Analytics

Credit Hours: 3.00. Students build and evaluate predictive models to support regression-type and classification-type business problems using popular industry tools (e.g., RStudio, SAS Enterprise Miner). Methods covered include multiple linear regression, ridge regression, lasso, CART, logistic regression, LDA/QDA, SVM, and ensemble methods such as random forests. **Credits:** 3.00

MGMT 47500 - Machine Learning For Business

Credit Hours: 3.00. This course concerns the latest techniques in machine learning, focusing on deep learning and reinforcement learning, with applications to computer vision, natural language understanding, speech recognition, news recommendation, and others. The course plans to cover Neural Nets, Backpropagation, Convolutional neural network, Recurrent Networks, Autoencoders and other architectures in Deep Learning in the rst half. Next, the course plans to cover multi-armed bandits, Contextual bandits, Markov decision process, and Policy gradient methods in Reinforcement Learning. **Credits:** 3.00

MGMT 47800 - Experiential Project In Analytics

Credit Hours: 3.00. Most degree programs offer students an opportunity to apply the knowledge learned from their studies in an applicable area via a thesis, a research project, or capstone. This course provides such an opportunity and is designed specifically for Business Analytics & Information Management undergraduate students that will pursue analytical-type careers (e.g., Data/OR Analyst, Data Scientist, Decision Scientist, Consultant, Developer, etc.). This course is designed to polish and integrate the knowledge, skills, and abilities you have developed from your coursework by successfully developing an analytics solution with an industry partner in a structured fashion. Thus, most of your time will be devoted to working with your project teammates to provide the answers and deliverables specified by the partner over the course of many two-week sprints. Every project team will be provided with a project description, data dictionary, and access to the dataset (or directions in where to find the necessary data), as well as an NDA to read, understand, sign, and return to your professor before you can gain access to the data. These are tasks that might be required of you to perform when you work on a new project or have a new client. Permission of instructor required. **Credits:** 3.00

MGMT 47900 - Data Visualization

Credit Hours: 2.00 or 3.00. This course is an introduction to the techniques and algorithms for creating effective data visualization. Visualizations are graphical depictions of data that can improve comprehension, communication, and decision making. This course emphasizes application in business settings where visual representation methods that are covered in this course will improve our understanding of complex data and models. We focus in particular on pattern identification, difference and trends in data sets across categories, space, and time. In addition to participating in in-class discussions, students will have sufficient hands-on experience with the tools and techniques covered in this course. Students will be expected to complete several short programming and data analysis assignments. Students will also have an opportunity to work as groups on a final project. Permission of department required. **Credits:** 2.00 or 3.00

MGMT 48400 - Management Of Entrepreneurial Ventures

Credit Hours: 3.00. This course teaches skills required to become an entrepreneur, succeed in a start-up venture, work in venture capital, join a family business, or develop a franchise operation. Students will learn about how to identify and shape emerging

market opportunities, innovate new business models, prepare and evaluate business plans, raise capital, build a skilled founding team, network for resources, and grow an initial market. **Credits:** 3.00

MGMT 48800 - Data-Driven Decisions In Digital Markets

Credit Hours: 3.00. This course analyzes the changes in business models that have been enabled by Internet technologies, and exposes students to hands-on data analyses to quantify the impact these technologies and business models have on firms, economies, and people. **Credits:** 3.00

MGMT 49000 - Problems In Industrial Management

Credit Hours: 1.00 to 4.00. Investigation in a specific management field. Arrange with instructor before enrolling. Permission of instructor required. **Credits:** 1.00 to 4.00

MGMT 49200 - Intellectual Property Management

Credit Hours: 2.00. Intellectual property (IP) has become a strategic opportunity for creating value for the firm. Firms are tasked with understanding how to utilize intellectual property as a competitive advantage in multiple market contexts. In the current economic environment, intellectual assets can be the largest portion of a firm's total wealth. Strategic management of these assets is very critical. Managing intellectual property is about transforming a firm's ideas, know-how, etc., into learning, products, and ultimately cash flow. In Managing Intellectual Property, we examine this topic by viewing intellectual property as both a legal asset (property ownership) and business asset (value-adding). The focus of Managing Intellectual Property is on the integration of IP generation, IP protection, and strategizing functions of the firm in creating value with an IP portfolio. Concepts and frameworks discussed/developed in lecture are exercised in case studies from multiple contexts. **Credits:** 2.00

MGMT 49300 - Storytelling With Data

Credit Hours: 2.00. Business students are trained to be experts in turning data into information. With a strong focus on data visualization, the purpose of this course (Storytelling with Data) is to help students take the next step: Turning that information into action. This course will provide you with helpful frameworks for understanding your audience, insights about how people perceive information best, and effective skills to express your ideas in ways that connect. **Credits:** 2.00

MGMT 49400 - IBE Capstone

Credit Hours: 3.00. The objective of the IBE Capstone course is to provide students with the opportunity to apply and integrate what they have learned from prior courses in "Real World" settings. There are no traditional classes. Rather, students will work in self-managed teams of 5-6 on projects that have both business and engineering elements with the support of a mentor; in many cases the mentor will be from a sponsoring company. The role of the company mentor is to provide advice and guidance to the student team as well as to expose the students to the approaches and processes used in industrial and commercial organizations. The course instructors will also meet with the student teams on a weekly basis to assess progress and provide guidance. Possible options for the projects include: 'Product Design' and 'Business Solution'. The Product Design projects would be focused on the marketing, technical, and economic feasibility of a new product concept. The Business Solution projects would be focused on technical issues in a business context and developing solutions to a "real world" problem presented by a sponsoring company. Examples of these projects might include use of 3-D printing for spare and replacement parts or incorporation of autonomous transportation into a company's operations and supply chain. **Credits:** 3.00

MGMT 49600 - Management Consulting Practicum

Credit Hours: 3.00. Management Consulting Practicum is an elective course consisting of consulting engagements with clients and projects from the Purdue Foundry and other sources. This course uses class time for students working in teams to receive timely guidance on applying a wide range of consulting skills and tools to supplement the client engagements.**Credits:** 3.00

MGMT 50300 - Advanced Accounting

Credit Hours: 3.00. Advanced course in financial accounting. A range of contemporary issues in financial reporting, such as business combinations, investments, consolidations, inflation, multinationals, and tax allocation are covered. Both technical proficiency and user applications are emphasized.**Credits:** 3.00

MGMT 50400 - Tax Accounting

Credit Hours: 3.00. Basic tax course designed to provide an understanding of the various federal taxes, including income, gift, estate, excise, federal insurance contribution, self-employment, and unemployment taxes.**Credits:** 3.00

MGMT 50500 - Management Accounting II

Credit Hours: 3.00. The focus of the course is managerial decision making and the economic role of information. Topics covered include decentralized financial performance evaluation, cost analysis, and financial planning and control systems. **Credits:** 3.00

MGMT 50600 - Auditing

Credit Hours: 3.00. A study of the concepts and procedures of auditing, which is the systematic process of objectively obtaining and evaluating evidence regarding assertions about economic actions and events. Primary emphasis is on audits conducted by independent certified public accountants, but topics covered apply to internal auditing as well. **Credits:** 3.00

MGMT 50700 - Advanced Federal Income Taxes

Credit Hours: 3.00. Advanced course in federal income taxes, with a brief study of gift and estate taxes. Some issues covered in MGMT 50400 are studied in more depth, particularly taxation of corporations and partnerships. The course, which is taught in seminar format, gives the student considerable practice in doing tax research and reporting conclusions. It is especially appropriate for the student entering a career in a tax environment. **Credits:** 3.00

MGMT 50900 - International Accounting

Credit Hours: 3.00. Provides insight into and an understanding of the many accounting problems and issues faced in an international business environment. The material is approached from two compatible and overlapping perspectives: the perspective of accounting or financial management in a U.S. multinational corporation and the perspective of an investor interested in understanding the international business environment.**Credits:** 3.00

MGMT 51099 - Practicum In Taxation Compliance And Consulting

Credit Hours: 1.00 to 3.00. This is an experiential course to provide real-world experience and significant community service through volunteer tax compliance and consulting. The course partners with the Internal Revenue Service Volunteer Income Tax Assistance Program to provide significant free tax preparation and consulting services to low- and middle-income families in the Greater Lafayette community with an additional focus on providing these services to international students at Purdue. Learning outcomes include technical tax abilities as well as soft skills in a professional services environment. **Credits:** 1.00 to 3.00

MGMT 51100 - Fixed Income Securities

Credit Hours: 2.00. Introduction to fixed income securities. Discusses a variety of contracts-starting with pure discount bonds, coupon bonds, and callable bonds. Continues with options on bonds, caps, floors, and interest rate swaps. Introduces the theory of the term structure and present models for pricing fixed income securities. Topics include: spot and forward markets for debt instruments, simple models for interest rate risk management, duration, convexity, organized exchange-traded interest rate

contracts, interest rate swaps, pricing relationships and the theory of the term structure, and single factor models for pricing interest rate claims. **Credits:** 2.00

MGMT 51300 - Student Managed Investment Fund

Credit Hours: 0.00 to 3.00. This course provides undergraduate and graduate students with hands-on portfolio management experience by investing a $300,000 (as of 2017) portfolio in the stock market. This student-managed fund is a large time commitment, and this course is a way to give students class credit for their experiential learning through SMIF. **Credits:** 0.00 to 3.00

MGMT 52000 - Pricing Strategy And Analysis

Credit Hours: 2.00. Builds on the introductory courses in marketing management. Enables students to formulate a systematic framework for approaching the problem of pricing a product, and more generally, a product line. The concepts and analytical methods necessary to develop such a framework are explored and incorporate marketing, economic, psychological, and organizational factors that influence pricing decisions, as well as competitive and legal aspects. Topics covered include value pricing, dynamic pricing, segmented pricing and price discrimination, bundling and multi-part tariffs, sales promotions, and pricing to the distribution channel. **Credits:** 2.00

MGMT 52020 - Analytics For Marketing Managers

Credit Hours: 2.00 or 3.00. The purpose of this course is to learn tools, technologies, applications and practices used to collect, integrate, analyze, and present raw data in order to create insightful visualization and actionable marketing information. It will cover conceptual understanding of marketing performance based on data and statistical methods. Once conceptual understanding is familiarized, students will learn common tools and techniques for marketing managers in today's industry. **Credits:** 2.00 or 3.00

MGMT 52100 - Brand Management

Credit Hours: 2.00. This course exposes students to the issues and activities in brand management. Topics include developing the brand marketing plan, design and execution of integrated marketing communications, testing, launching, and repositioning of brands, creating and managing brand equity, formulating strategies for leveraging and defending brands, product line and category management. **Credits:** 2.00

MGMT 52200 - New Product Development

Credit Hours: 2.00. The course covers new product development issues including idea generation, concept testing, prototype development, patent protection, and product launch. Student teams generate a new product idea, test the idea with target customers, and develop a product launch strategy. **Credits:** 2.00

MGMT 52300 - Digital Marketing Strategy

Credit Hours: 2.00. This course enables students to rethink marketing in the evolving digital age and develop capabilities in developing, implementing, and evaluating digital marketing strategies. Topics include: digital marketing strategy framework, search engine marketing, social media marketing, and location based marketing (mobile). **Credits:** 2.00

MGMT 52500 - Marketing Analytics

Credit Hours: 2.00. This course introduces modern statistical methods for marketing using big data. Firms are increasingly facing vast amounts of data on their customers and the marketplace, thanks to the rapid development of information technology

in the last couple of decades. The challenge is becoming more about how to turn the big data into information and insights to improve firms' marketing decisions and profitability. This course discusses marketing applications for which we may use econometric, statistical, and machine-learning methods to improve and optimize decisions. Students will use RStudio to analyze real-world data and gain hands-on experience on data manipulation, visualization, and analysis. Intro-level Statistics/econometrics (at the level of STAT 35000 or ECON 47200) and R coding experience (comfortable with manipulating data, plotting, defining functions, using for loops, and running linear and logistic regressions in R) are required prerequisites. **Credits:** 2.00

MGMT 52610 - Data And AI-Driven Marketing

Credit Hours: 2.00. Marketing is increasingly evolving from traditional approaches to leveraging big data and artificial intelligence (AI) to make strategic decisions and drive impactful campaigns. This course introduces modern statistical methods and AI algorithms for marketing using big data. It discusses marketing applications for which we may use statistical and machine learning methods to improve and optimize decisions. Students will use Python to analyze real-world data and gain hands-on experience on data manipulation, visualization, and analysis. **Credits:** 2.00

MGMT 52710 - Digital Marketing Applications

Credit Hours: 2.00. Companies today expect their marketing professionals to understand what it takes to develop, implement, and evaluate digital marketing strategies and campaigns. The best way for marketing professionals to gain such expertise is for them to actually build and execute specific digital marketing programs/campaigns using various digital and social media platforms for a real world client. This course offers students a unique hands-on learning opportunity with an online marketing project, each student team is given a budget up to $300 to promote a chosen business or non-profit organization via digital advertising platforms including Google AdWords, Bing Ads, Facebook Business, LinkedIn Sponsored Ads, and Twitter Ads. Students are given flexibility in selecting projects of interest. All students are also expected to pass Google Analytics certification and Google AdWords certification. **Credits:** 2.00

MGMT 52800 - Customer Analytics

Credit Hours: 2.00. Customer Relationship Management (CRM) refers to the selection or identification, acquisition, growth and retention of desired customers to maximize profit. CRM requires a shift in mindset from product-centric to customer-centric management and a new set of tools for understanding and predicting the behavior of current customers. This course focuses on analytical CRM: identifying good prospects and customer acquisition, customer development via up-selling, cross-selling and personalization, customer attrition, retention, and customer lifetime value. While traditional marketing relied on the three pillars of segmentation, targeting and positioning (STP), technological advances have made it possible to obtain customer-level transaction data, and also to target individual customers with a customized marketing mix that is designed to maximize individual customer value. Important strategic questions arise from such a radical shift in marketing mix options, questions such as: How to allocate resources to customer acquisition and to customer retention? Are loyal customers more profitable for firms? Related to these strategic questions are important conceptual and computational issues, such as: What metrics are best used to measure customer profitability? What techniques can be used to identify most profitable customers? How to target profitable customers with customized price, promotion, product, place? This course will equip you with the skills and tools you need to answer such strategic, conceptual and computational questions related to customer relationship management (CRM). Permission of instructor required.**Credits:** 2.00

MGMT 52810 - Marketplace Trends

Credit Hours: 1.00 to 4.00. Provide students with an understanding of microeconomic and macroeconomic concepts that are applicable to business decisions. Emphasis is on how markets and the overall economy work and how they impact the performance of the enterprise. Time is devoted to understanding how decisions made by public policymakers affect the economic climate and thus, the firm's financial performance. International trade topics are included in the discussions which begin with a review of supply and demand, interest rates, foreign exchange, money and banking, and competition and monopoly. The course

also emphasizes the integration of theory, data, and judgment in the analysis of corporate decisions and public policy, and in the assessment of changing domestic and international business environments.**Credits:** 1.00 to 4.00

MGMT 52850 - Consumer Behavior And Marketing

Credit Hours: 2.00. Consumer behavior is the study of the processes involved when individuals or groups select, purchase, use, or dispose of products, services, ideas, or experiences to satisfy needs and desires. We will draw on research from psychology, marketing, behavior economics and other fields to learn why consumers behave in the ways that they do. The course focuses on three general topics: 1) Consumers as individuals. We will explore basic psychological concepts like intrinsic motivation, perception, memory, and emotions to help us understand behavior. 2) Attitude change and decision making. We will examine how consumers search and evaluate alternatives, develop attitudes, and make choices. 3) Consumers in their social and cultural settings. We will examine the interaction between the consumer and multiple external influences. We investigate how social elements (friends, family, etc.) and culture influence behavior. Consumer behavior is an applied discipline rooted in other social sciences, and you will therefore learn multiple concepts, frameworks and theories. Your job is to master those concepts and use them to organize, explain, and predict consumers' judgments and choices. Ultimately you should be able to identify a consumer behavior issue, select a relevant theory to examine and explain the issue, and apply the theory properly to aid in a managerial decision. You will also learn how to run basic applied experiments in consumer behavior to test your theories with real consumers. **Credits:** 2.00

MGMT 52900 - Marketing Consulting Projects

Credit Hours: 3.00. In this course, students learn to apply marketing concepts to real world marketing problems. Projects are varied and may involve marketing plan development for a start-up, market research, analysis of marketing data, digital marketing, search engine marketing, web design, and social entrepreneurship. Clients include Purdue Marketing Advisory Board members, entrepreneurs working with Purdue's Foundry and Discovery Park, Purdue Research Park start-ups, small and medium-size Indiana businesses, and non-profit organizations. Students are given flexibility in selecting projects of interest. Teams work under the direction of a faculty member. Teams meet once a week to review project progress and discuss the next steps generally in the presence of the faculty supervisor. Projects are done in teams, although evaluation is individual. **Credits:** 3.00

MGMT 53000 - Financial Statement Analysis

Credit Hours: 3.00. The course is designed to help students: (a) understand the content of corporate financial reports and analyze the information therein, (b) use the information for evaluating the financial health, operating performance, and growth prospects of corporation-type companies, and (c) learn the various models available and estimate the value of such a company using those models and the information abstracted from the financial reports. The topics to be covered include the corporate financial statements and their relationships, ratio analysis for profitability and risk evaluation, assets/liabilities/owners' equality analysis, intercompany investments, forecasting financial statements, and company valuation models. **Credits:** 3.00

MGMT 53100 - Government/Not-For-Profit Accounting

Credit Hours: 3.00. This course is designed to provide students with a solid understanding of the financial reporting and accounting principles used in the preparation of governmental and not-for-profit entities. Topics include, but are not limited to, fund accounting, city government accounting, state government accounting, special funds, budgetary accounting for the general and special revenue funds, fiduciary funds and government-wide statements, university accounting, accounting for community foundations, not-for-profit accounting, and auditing not-for-profit entities. **Credits:** 3.00

MGMT 53200 - Forensic Accounting And Fraud Examination

Credit Hours: 3.00. This course is designed to help students apply their accounting, auditing, information systems and communication skills to detect financial fraud and unauthorized reporting acts to prepare and present a fraud case for criminal proceedings or civil litigation. These skills are highly valued in the rapidly growing field of forensic accounting. Upon

completing this course, students will understand the role of forensic accountants in examining financial records for fraud and detecting insurance fraud; in providing litigation support; and in capturing digital evidence. This course will also review material related to the Certified Fraud Examiner (CFE) exam. Throughout the course, students will have opportunities to improve their written and oral communication skills, particularly as they relate to communication in the legal settings associated with investigating accounting. **Credits:** 3.00

MGMT 53500 - International Law For Managers

Credit Hours: 2.00. Today's managers work in a highly international business environment. That creates an atmosphere where US laws interact and collide with other countries and international law. In this class we will explore contract, marketing, intellectual property, employment law and more in the international context. We will use case studies and headlines to see how these issues effect real businesses. When you leave, you will be prepared to help lead your employer in the international environment while staying on the right side of the law. **Credits:** 2.00

MGMT 53600 - Employment & Diversity Law For Managers

Credit Hours: 2.00. Managers, regardless of your industry, will routinely face HR and employment issues that collide with the law. In this course, we will examine many laws and the practical ways you can stay on the right side of the law. Don't worry, you aren't in a law school class and I don't expect you to become employment attorneys. However, I will help you gain a working knowledge of employment laws including: The Civil Rights Act, ADA, ADEA, FMLA, FLSA, and a host of alphabet soup. We will also apply these laws from posting a job description to recruiting to hiring to employee reviews to terminating an employee. While I can't guarantee you will never be sued by a disgruntled current or former employee, I can help you put yourself and your company in the best possible position to defend that suit. And don't worry: we will look at lots of quick case studies (less than a page) to give you context you can easily remember. **Credits:** 2.00

MGMT 53700 - Persuasive Communications

Credit Hours: 2.00. The purpose of this course is to work with you to improve your professional communications specifically as those communications relate to client and external communications. We will focus on oral and written communications theory, techniques, and practice. **Credits:** 2.00

MGMT 53900 - Analytics For Social Media Marketing

Credit Hours: 2.00 or 3.00. The objective of this course is to equip students with tools and develop marketing skills required to address current marketing problems. The approach is to learn R software for conducting basic scraping on social media sites to understand user behavior and sentiment. In addition, Python will be used for web-scraping data from various websites and websites with dynamic content. The goal is to become familiar with such qualitative techniques as: word clouds, cluster dendrograms, sentiment analysis, and other methods. Occasional homework assignments or check points will be given to gain deeper understanding of the materials covered in class. **Credits:** 2.00 or 3.00

MGMT 54000 - Computing For Analytics

Credit Hours: 2.00 or 3.00. The main goal of this course is to introduce students to algorithmic thinking and computational tools for data analytics. The course will focus on challenges associated with large data sets and how algorithms and data structures can aid in resolving some of those challenges. The course will introduce relevant programming techniques in Python. Permission of department required.**Credits:** 2.00 or 3.00

MGMT 54400 - Database Management Systems

Credit Hours: 3.00. Covers the theory and practice of database design and usage. Students will learn the importance of data modeling concepts and how to use these effectively and how to plan and design a database, including issues such as data security

and control. The following course is recommended: MGMT 29000 Programming for Business Applications or CS 15900 or CS 17700 or CNIT 17500, all with a C- or higher. **Credits:** 3.00

MGMT 54500 - Systems Development

Credit Hours: 3.00. Focuses on information systems development theories, practices, and tools for rapid adaptation and management of leading-edge as well as emerging computing paradigms. The following courses are recommended: MGMT 38200, with a C- or higher; and MGMT 29000 Programming for Business Applications or CS 15900 or CS 17700 or CNIT 17500, all with a minimum grade of C-. Permission of department required. **Credits:** 3.00

MGMT 54600 - Decision Support And Expert Systems

Credit Hours: 3.00. Since a large percentage of societal and management problems can be characterized as relatively unstructured, this course explores how computers can be used to aid decision makers in dealing with unstructured, as well as structured, problems. Appropriate material from knowledge representation, artificial intelligence, and language theory is considered. Applications selected from environmental management and strategic planning in large organizations are used to illustrate theoretical ideas. Since the key computer software tool is database management, a development of the CODASYL approach to data management is presented. **Credits:** 3.00

MGMT 54700 - Computer Communications Systems

Credit Hours: 3.00. Explores the convergence of telecommunications and computer technology, framed in terms of their strategic impact in the business environment. Components of computer communication systems are surveyed. Major design and analysis issues in the development, implementation, and management of computer communication systems are examined. Relevant emerging trends are highlighted. The course is devoted to technical issues, applications, and case studies covering telecommunication systems used in business. **Credits:** 3.00

MGMT 55200 - Mentoring And Socialization

Credit Hours: 2.00. Students learn about the employee socialization process through case studies, discussion, and presentations. In addition, students receive practical experience through participation in a mentoring program for new students. Class discussions and presentations evolve from students' mentoring experiences, and guest speakers provide real-world perspective on new employee programs. The course helps students develop skills in mediation, leadership, conflict management, and communication. **Credits:** 2.00

MGMT 55360 - Industrial Relations I

Credit Hours: 2.00. An in-depth examination of human resource management in the context of union-management relations. Emphasis is on understanding how and why unions form, the legal context, and changing competitive environment for labor management relations. Covers the dynamics of the collective bargaining process, including the determinants of bargaining power, preparation of labor contract demands, and negotiation tactics. The course culminates with an extended mock negotiation exercise.**Credits:** 2.00

MGMT 55400 - Leading Global Organizations And People Across Cultures

Credit Hours: 2.00 or 3.00. This course focuses on the opportunities and challenges of managing a global multicultural workforce and implementing global organizational people strategies. The overall goal of this class is to help you become a more effective professional and leader in a global world on and off the job by providing information, tools and multicultural opportunities to increase conceptual and practical understanding of how national cultures shape employment settings and its implications for your own behavior as a global business professional and leader who implements human capital and organizational strategies, policies, and practices in a cross-national context. This course will also increase knowledge of and ability to implement current global

human capital, international HRM, and organizational strategies for MNES and domestically. To achieve these goals, student engagement in class sessions, and willingness to share perspectives and opinions, and application of course readings and materials, are critical to the success of this course. A range of participative learning methods are used to facilitate an active classroom environment, including learning log journaling, case analysis, experiential exercises, small group projects, break out discussions, company guest speakers, and self-assessments. The role of the instructor in this course is not always to provide "the" answer, but to create an environment where you can collectively explore, examine and experiment with students' own ideas and share ideas and perspectives on working and managing global firms.**Credits:** 2.00 or 3.00

MGMT 55410 - Training And Development

Credit Hours: 3.00 or 4.00. This course prepares students to design training and develop training programs and to identify principles, practices and methods of staff training and career development. Students will learn and practice how to deliver and evaluate said programs for return on investment (ROI). Emphasis is placed on the application of principles related to adult learning instructional design and program development, evaluation and learning technologies. Specific objectives include topics related to communication, diversity, generational differences and group dynamics.**Credits:** 3.00 or 4.00

MGMT 55500 - Leading Management Of Diversity And Inclusion In Organizations

Credit Hours: 2.00 or 3.00. This course is designed to help participants learn to effectively manage self, peers, teams, clients, and firms in diverse organizational settings and to lead organizational change to foster inclusion, equality, and productive workplaces. The class is designed to develop your skills in leading diversity and inclusion from a multi-level view in the workplace: employee, leader, team member, organizational, and institutional/societal levels. Its goal is to a) improve your ability to work in diverse teams, as well as b) develop your ability to design, and implement strategies to foster cultural and structural change to support the management of an increasingly diverse workforce toward enhanced organizational effectiveness to benefit business, employees, and society. People and leaders in organizations are constantly working with members of different backgrounds, social identities, and experiences, often across distributed and/or digitally connected environments, fostering increased attention to diversity equity and inclusion in transforming employment settings. When understood, supported and leveraged effectively, these differences in social identities, difference and values can help attract and retain talent, strengthen societal and community economic equality, support organizational and team effectiveness; but when overlooked, or mismanaged, these differences can increase turnover, conflict, stress, talent under-utilization, and harm career and work-life wellbeing, health, and productivity. We will focus on advancing understanding of how intersecting organizational and institutional structures and cultures and their relation to strategies for creating diversity; an inclusive culture and positive climate for inclusion and talent management; and developing and retaining diverse talent to foster innovation and organizational effectiveness across multiple levels of intervention. We discuss how to conduct an organizational diagnosis of the current diversity climate and barriers and facilitators for creating a multicultural workplace and a flexible environment supportive of many identities, and how assumptions of "ideal workers" may vary across industry and cultural contexts. You as a leader will be better able to articulate your own DEI vision and develop understanding of strategies that move from description to evidence-based diagnosis to action strategies and implementation in order to move aspirations into organizational change realities. From an individual leadership perspective, we tackle the question: "Why does diversity, equity and inclusion matter in employing organizations and business, what is the state-of-the-art evidence-based knowledge, and what does it mean to me personally in my career and my leadership beliefs?" Specifically, we focus on the business and social science processes - including attitudes toward in-groups and out-groups, stereotyping, identity, privilege, and power, intersectionality, discrimination, bias, influence opportunity, bystander awareness, allyship, difficult conversations, and perspective taking - these topics relate to how members of different social groups perceive and interact with one another. Since managing social identity increasingly involves managing work-life boundaries and work and non-work public and private selves, we will also learn about authenticity choices and social and public/professional identity boundary management. Further, the opportunity to experience higher well-being and work-life balance is increasingly linked to job and life opportunities reflecting growing work-life inequality in society. From an organizational and group perspective, we address the questions: "What are best practices for successful management of diversity and inclusion? And why does it matter to me as a future leader personally and in business and in the communities and world in which I live." **Credits:** 2.00 or 3.00

MGMT 56100 - Logistics

Credit Hours: 2.00 or 3.00. Examines the distribution and delivery functions in a manufacturing or service industry. Topics include inventory control in distribution, transportation planning, distribution requirements planning, analysis of waiting lines, distribution system design and facility location and layout analysis. **Credits:** 2.00 or 3.00

MGMT 56200 - Project Management

Credit Hours: 2.00. Emphasizes the use of PC-based project management software and its applications, particularly in manufacturing organizations and especially new product development projects. Extensive use is made of several case studies to illustrate the planning and monitoring of a project. Class is held in a computer lab.**Credits:** 2.00

MGMT 56300 - Machine Learning For Business Analytics

Credit Hours: 2.00. With the rise in big data, Machine Learning has experienced rapid growth over the last ten years with major advances in its subfields of Deep Learning, Reinforcement Learning, Natural Language Processing, Computer Vision, Robotics, and other subfields. The purpose of this course is to provide the students with a systematic introduction to the recent developments in machine learning through the coverage of modern machine learning concepts and practical business applications, as well as hands-on experience with modern machine learning frameworks. The course plans to cover neural nets, convolutional neural networks, recurrent networks, deep generative models, deep reinforcement learning, and the trustworthy AI framework with the properties of safety, robustness, privacy, and fairness.**Credits:** 2.00

MGMT 56400 - Management Of Service Operations

Credit Hours: 2.00. Special characteristics of services require an interdisciplinary approach to analyzing operations. This course draws upon concepts from accounting, management science, and marketing. Differences and similarities between the service and manufacturing organizations are analyzed. Case studies of service organizations are used extensively. Prerequisite: MGMT 66000 (if Graduate student status) or else MGMT 36100 (if Undergraduate student status). **Credits:** 2.00

MGMT 56500 - Strategic Sourcing And Procurement

Credit Hours: 2.00. This course will address the process of procurement including terminology, metric, and decision making. Additionally, we will investigate the best practices and processes for managing the relationships with suppliers and their performance. We will also explore the sourcing decision and the strategic ramifications of producing/ providing goods and services internally or purchasing them from external organizations. Prerequisites: Students are expected to have taken a basic course on operations (such as the masters core class MGMT 66000: Introduction to Operations Management) and a basic course on supply chain management (such as the masters elective MGMT 66400: Supply Chain Management). **Credits:** 2.00

MGMT 56600 - Global Supply Chain Management

Credit Hours: 2.00. This course will integrate issues from marketing (channels of distribution), logistics, and operations management to develop a broad understanding of a supply chain in a global context. Students will learn how different factors, including exchange rate risk, custom duty and trading policies, geographic distribution of resources and demand, availability and reliability of local supplier, and characteristics of consumer, affect the design and execution of global supply chain strategies. Prerequisites: Students are expected to have taken a basic course on operations (such as the masters core class MGMT 66000: Introduction to Operations Management) and a basic course on supply chain management (such as the masters elective MGMT 66400: Supply Chain Management). Exposure to a course on optimization is also preferred, but not required. The course requires logical and analytical thinking. **Credits:** 2.00

MGMT 56800 - Supply Chain Analytics

Credit Hours: 2.00. There is an exponential growth in the adoption of big data technologies in every walk of life. Organizations are collecting, storing, and analyzing massive amounts of data. This data is commonly referred to as big data because of its large

volume, the velocity with which it is collected and transmitted, the variety of forms it takes, and veracity of its origin and content. In order to capitalize on the opportunities presented by big data, businesses are putting in place technologies, people, and processes. Just collecting, transmitting and storing big data creates little value for an organization. For many organizations, the term big data currently represents only a data infrastructure such as the Apache Hadoop family of products. The key to delivering real value from big data is the use of analytics. Data must be analyzed and the results used by decision makers and organizational processes in order to generate value. The main objective of this course is to learn how to collect, process, store, and analyze big data. Assignments could easily be completed in Python or SQL. We assume no familiarity with Linux and will introduce you to all essential Linux commands. Students need access to a computer with a 64 bit operating system and at least 4 GB of RAM. Note: 8 GB or more of RAM is strongly recommended. **Credits:** 2.00

MGMT 56900 - Ethical And Sustainable Supply Chain Management

Credit Hours: 2.00 or 3.00. This course provides students with knowledge and skills for building and analyzing ethical and sustainable practices in supply chains, taking a holistic view of the interaction between businesses, the environment, and society. **Credits:** 2.00 or 3.00

MGMT 57000 - Spreadsheet Modeling And Simulation

Credit Hours: 2.00. Covers up-to-date and practical spreadsheet modeling tools, which can be applied to a wide variety of business problems in finance, marketing, and operations. Consists of simulation modeling techniques to analyze risk and uncertainties in business environment, optimization techniques to determine the best managerial actions under internally- and/or externally-imposed constraints, and real-world examples and cases to demonstrate broad applications of spreadsheet modeling and simulations in manufacturing and service operations, supply chain systems, yield management, asset dynamics, option pricing, etc. **Credits:** 2.00

MGMT 57100 - Data Mining

Credit Hours: 2.00. Introduces the concepts, techniques, tools, and applications of data mining. The material is approached from the perspective of a business analyst, with an emphasis on supporting tactical and strategic decisions. Includes a variety of techniques to identify nuggets of information or decision-making knowledge in bodies of data, and extracting these in such a way that they can be put to use in the area, such as decision support, prediction, forecasting, and estimation.**Credits:** 2.00

MGMT 57200 - Six Sigma And Quality Management

Credit Hours: 2.00. Establishes the link between quality and productivity design and improvement and variance reduction. The course examines some of the more traditional views on quality, as well as those today, which are gaining greater credibility and influence under the umbrella of TQM. It also covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. **Credits:** 2.00

MGMT 57400 - Frontiers In Manufacturing Technology

Credit Hours: 1.00. This course will explore various types of technologies used in manufacturing today and the implication for future uses and applications. These modules will provide background, applications, and current use cases of the various tools. Students will also conduct weekly research on various technology applications. **Credits:** 1.00

MGMT 57500 - Supply Chain Technology

Credit Hours: 2.00. This course will emphasize the use of supply chain technology for planning and control of dynamic manufacturing systems. This requires the simulation of plans and required changes over time. Therefore, the course will revolve around active learning computer simulations in SAP. **Credits:** 2.00

MGMT 58500 - Information Technology Project Management

Credit Hours: 2.00. The purpose of this class is to provide students with a basic understanding of the tasks and challenges facing IT and analytics project managers. Students learn about projects, roles and responsibilities of project managers. We start by discussing the skills and approaches commonly used in creating and monitoring project plans and braking complex projects down into manageable segments. We also discuss important areas defined in PMI's PMBOK, like scope, time, cost and quality management. Next we look at how IT projects have traditionally been managed, and move on to the study of agile methods. We go through some of the most important aspects of agile project management, such as user stories, agile teams an agile planning, execution and tracking. In learning these tools and techniques, we take a hands-on approach wherever possible and use project management software, exercises and case studies. **Credits:** 2.00

MGMT 58600 - Python Programming

Credit Hours: 2.00 or 3.00. Because data grows exponentially and becomes complex, we need computational methods to collect, store, and analyze them in order to be successful in science, engineering, business, and other professions. Python Programming, is an introductory programming class that meets this need. You will learn how to write computer programs in Python language to solve real-world problems. This class is designed for students that want to learn to computer programming for data science. This course guides students through the basic Python programming language, from initial concepts to final data analysis using python and external packages. **Credits:** 2.00 or 3.00

MGMT 58800 - VBA Programming

Credit Hours: 2.00 or 3.00. This course takes a variety of business topics and implements with state-of-the-art spreadsheet models. Students will gain hands-on experience with a wide range of business problems and databases in finance, marketing, operations, and so on. The focus of this course is to learn Visual Basic for Applications (VBA) to design functions and macros that will enhance spreadsheet models. Students will also have exposure to basics and other advanced topics of spreadsheet modeling. In addition to in-classroom time, this course will also meet in computer-based labs for hands-on instructions and implementation. **Credits:** 2.00 or 3.00

MGMT 59000 - Directed Readings In Management

Credit Hours: 1.00 to 4.00 (West Lafayette, North Central) 2.00 to 4.00 (Calumet). Supervised reading and reports in various subjects. Open only to a limited number of seniors and graduate students. Permission of instructor required. **Credits:** 1.00 to 4.00

MGMT 59100 - Launching Global Leaders

Credit Hours: 0.00 to 2.00. Capitalizing on the unique personal and professional backgrounds of each student in our program, the Launching Global Leaders course provides a comprehensive and customizable leadership development curriculum. In this year long course, students will engage in a 360 assessment of strategically identified professional competencies critical to success in the contemporary workforce. Using these target areas as a guide, students will then customize their leadership development experience by selectively engaging in a variety of program offerings, including: interactive industry simulations, personal and team performance enhancement tools, professional coaching, interactive learning sessions with industry leaders, and workshops in developing intercultural competency, personal branding and career management. **Credits:** 0.00 to 2.00

MGMT 59200 - Contracts For Managers

Credit Hours: 3.00. Purpose of the course is to provide the student with an understanding of the contract legal environment as it pertains to profit and non-profit organizations and of the ethical considerations and social and political influences that affect such organizations. Students will examine a wide range of substantive rules of public law, which will provide a framework for a discussion of the ways in which managerial decision making affects and is affected by the legal environment. **Credits:** 3.00

MGMT 59699 - MS Internship

Credit Hours: 0.00. This course is required as part of the U.S. student visa regulation for international masters who are interning in the U.S. and want to use Curricular Practical Training (CPT). Even if a student is not being paid, they must sign up for the class unless the organization where the internship is being done is a non-profit. Students will be required to receive the necessary CPT permissions prior to enrolling in the course as well as complete paperwork from the Business Career Services office in Rawls Hall 3029. Course can also be taken by students that wish to have an internship transcripted. This course does not apply towards graduation. Does not count towards graduation. Permission of instructor required. **Credits:** 0.00

MGMT 59800 - Analyzing Unstructured Data

Credit Hours: 2.00. This course prepares master students with the advanced and frontier technique for analyzing unstructured data that is built on the prerequisite of basic data analysis on structured data (e.g., data mining using python). Upon completion, students are expected to be competent and skilled in collecting, processing, and analyzing online unstructured data using the state-of-art artificial intelligence modeling (e.g., neural networks and deep learning methods) and the mainstream open-sourced toolboxes (e.g., NLTK, scikit-learn, keras, and TensorFlow); students should at least be proficient to design and lead industry-level practical projects conceptually when working with data scientist. We take text and image as examples for illustration and cover applications of: Text mining and feature extraction (e.g., sentiment, topic, readability, etc.); Image classification (e.g., recognition, etc.); Advanced applications (e.g., translations, chatbot, image expression, etc.). The course is formatted as a combination of seminars and hands-on coding practices in class. Students are expected to code (and debug) in the class. The main method topics covered include Crawling unstructured data using scrapy. Representation and embedding of text and image. Unsupervised learning for unstructured data (e.g., LDA topic modeling, clustering, etc.) Supervised learning for unstructured data (e.g., classic ML models, A/D/C/RNN, LSTM, etc.). Permission of instructor required.**Credits:** 2.00

MGMT 60000 - Accounting For Managers

Credit Hours: 2.00 to 3.00 (West Lafayette) 3.00 (Calumet, North Central). The two-course accounting sequence employs a user's perspective on the firm's database. First, the standard accounting model is developed into a working tool, as no prior study of accounting is assumed. Then illustrative business cases are discussed to show how external reports conform to financial contracts and public regulation. Public reports primarily directed to investors and creditors are analyzed to reconstruct the economic events and managerial decisions underlying generally accepted accounting standards. Prerequisite: Masters student standing and Management majors only. **Credits:** 2.00 to 3.00

MGMT 60100 - Managerial Accounting

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (North Central). Oriented to managers, the course examines the firm's internal systems for costing products or services and their interpretation. A variety of manufacturing and service industries are studies to demonstrate design of flexible cost systems to match the firm's technological, competitive and/or multinational environments. Applications to budgeting, variance analysis, pricing models, performance evaluation and incentives are demonstrated. Case discussion and analytical "what if" modes of instruction are used to enhance managerial skills of students. Design and use of accounting data are linked to other subjects in the program core and to ethical aspects of accounting policy issues. Prerequisite: MGMT 60000. **Credits:** 2.00 to 4.00

MGMT 60200 - Valuation And Financial Statement Analysis

Credit Hours: 2.00. Establishes how to use accounting information to make business and investment decisions. Internally, the information is used to assess performance of units, to evaluate performance of upper-level management, to monitor the firm's investment and financing decisions, and for comparison purposes with the firm's rivals. Externally, accounting information is used by financial analysts, investors and (potential) acquirers to assess the value of the firm, by creditors to assess its credit-worthiness, and by regulators. Prerequisite: MGMT 60000, MGMT 60100. **Credits:** 2.00

MGMT 60300 - Taxes And Business Strategy

Credit Hours: 2.00. Provides a framework for analyzing tax planning. The framework offers an approach to tax planning and business strategy that remains useful long after the next revision of the tax code. It offers an approach that can be readily employed in an international setting. After developing the framework, it will be applied to a variety of business settings that integrate topics from accounting, finance, and economics in order to provide a more complete understanding of the role of taxes in business strategy. Two important concepts will be applied: the concept of implicit taxes (tax-induced differences in before tax rates of return) and the concept of tax clienteles (the effect of cross-sectional differences in tax rates). **Credits:** 2.00

MGMT 60410 - Financial Accounting For Managers

Credit Hours: 1.00 to 4.00. Oriented to managers, this course provides exposure to many financial accounting topics. It will introduce the student to the procedures and practices used in the recording of accounting information, the construction and use of financial statements, and the analysis of financial data. The course has been designed to enhance the student's overall ability to observe and analyze the firm's financial information in order to understand and evaluate current performance. Design and use of accounting data are linked to other subjects in the program core and to ethical aspects of accounting policy issues. **Credits:** 1.00 to 4.00

MGMT 60510 - Managerial Accounting For Managers

Credit Hours: 1.00 to 4.00. Oriented toward managers, this course provides exposure to many managerial accounting topics. It will introduce the student to the procedures and practices used in the recording of accounting information and the analysis of accounting data. The course has been designed to enhance the student's overall ability to observe and analyze the firm's accounting information in order to understand and evaluate current performance. Design and use of accounting data are linked to other subjects in the program core and to ethical aspects of accounting policy issues.**Credits:** 1.00 to 4.00

MGMT 60600 - Seminar In External Reporting I

Credit Hours: 2.00 to 4.00. Seminar examines research issues on the production, dissemination, and use of financial accounting information for economic decisions by external users. The materials covered are primarily empirically oriented. The aim is to expose students to these issues as they are covered in the accounting and related literature. Prerequisite: ECON 60000. **Credits:** 2.00 to 4.00

MGMT 60700 - Seminar In Internal Accounting

Credit Hours: 2.00 to 4.00. Development of a conceptual framework for evaluating information system alternatives. The seminar examines insights into information value provided by the literature. Both the decision-facilitating and contracting-facilitating roles of information are considered. Topics also include auditing issues. Prerequisite: ECON 60700, ECON 61500. **Credits:** 2.00 to 4.00

MGMT 60800 - Selected Research Topics In Accounting

Credit Hours: 2.00 to 4.00 (West Lafayette, North Central) 3.00 (Calumet). Individual and group study of current research problems in accounting. A limited set of problem areas will be covered in any one offering. Emphasis will be placed on current substantive problems and the research methods employed. Prerequisite: MGMT 60100. **Credits:** 2.00 to 4.00

MGMT 60900 - Seminar In External Reporting II

Credit Hours: 2.00 to 4.00. Selective investigation of analytical research of informational and incentive issues in accounting. Emphasis is on the role of externally reported accounting information in asset pricing in financial markets. Prerequisite: ECON 60700, ECON 61000, ECON 61500. **Credits:** 2.00 to 4.00

MGMT 61000 - Financial Management

Credit Hours: 0.00 to 4.00. Analysis of short-term working capital needs. Cash budgeting procedures, pro forma statements, major types of short-term loan arrangements, and short-term asset management. Prerequisite: MGMT 60000, Master's student standing or higher and Management and Computational Finance majors only. **Credits:** 0.00 to 4.00

MGMT 61100 - Advanced Corporate Finance

Credit Hours: 2.00 to 4.00 (West Lafayette, Calumet) 3.00 (North Central). Long-term capital structure planning, capital budgeting, treatment of uncertainty in investment decisions, security underwriting, dividend policies, and mergers. Prerequisite: MGMT 61000. **Credits:** 2.00 to 4.00

MGMT 61200 - Financial Management III

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (Calumet, North Central). Further treatment of topics in the financial management of nonfinancial corporations, from the viewpoint of the internal financial officer. Topics include further coverage of cost of capital and financial planning, as well as cash management, working capital management, short-term financing, advanced capital budgeting, and leasing. Emphasis on applications. Continuation of MGMT 61100 with additional depth and topic coverage. Prerequisite: MGMT 61000. **Credits:** 2.00 to 4.00

MGMT 61500 - International Financial Management

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (Calumet). Integrative course dealing with the management of firms doing business internationally. Emphasis on decision making. Will draw upon, and adapt, managerial decision models developed for domestic operations, as well as cover appropriate international institutional material. Particular focus on finance and strategic management. Prerequisites: ECON 51500. **Credits:** 2.00 to 4.00

MGMT 61601 - Seminar In Capital Markets I

Credit Hours: 2.00. This is the first in a sequence of four PhD level finance courses that cover theoretical and empirical research in capital markets. Offered in alternate years. **Credits:** 2.00

MGMT 61602 - Seminar In Capital Markets II

Credit Hours: 2.00. This is the second in a sequence of four PhD level finance courses that cover theoretical and empirical research in capital markets. Offered in alternate years. Prerequisite: MGMT 61601. **Credits:** 2.00

MGMT 61701 - Seminar In Capital Markets III

Credit Hours: 2.00. This is the third in a sequence of four PhD level finance courses that cover theoretical empirical research in capital markets. Offered in alternate years. Prerequisite: MGMT 61602. **Credits:** 2.00

MGMT 61702 - Seminar In Capital Markets IV

Credit Hours: 2.00. This is the fourth in a sequence of four PhD level finance courses that cover theoretical empirical research in capital markets. Offered in alternate years. Prerequisite: MGMT 61701. **Credits:** 2.00

MGMT 61801 - Seminar In Managerial Finance I

Credit Hours: 2.00. This is the first in a sequence of four PhD level finance courses that cover theoretical empirical research in managerial finance. Offered in alternate years. **Credits:** 2.00

MGMT 61802 - Seminar In Managerial Finance II

Credit Hours: 2.00. This is the second in a sequence of four PhD level finance courses that cover theoretical empirical research in managerial finance. Offered in alternate years. Prerequisite: MGMT 61801. **Credits:** 2.00

MGMT 61901 - Seminar In Managerial Finance III

Credit Hours: 2.00. This is the third in a sequence of four PhD level finance courses that cover theoretical empirical research in managerial finance. Offered in alternate years. Prerequisite: MGMT 61802. **Credits:** 2.00

MGMT 61902 - Seminar In Managerial Finance IV

Credit Hours: 2.00. This is the fourth in a sequence of four PhD level finance courses that cover theoretical and empirical research in managerial finance. Prerequisite: MGMT 61901. **Credits:** 2.00

MGMT 62000 - Marketing Management

Credit Hours: 2.00 to 4.00 (West Lafayette and Calumet) 3.00 (North Central). An integrated analysis of major marketing decisions, including product pricing, advertising, distribution, and sales force policies. Prerequisite: Master's student standing and Management majors only. **Credits:** 2.00 to 4.00

MGMT 62100 - Marketing Management II

Credit Hours: 2.00 to 4.00. Introduces students to the analytical, strategic, and tactical aspects of marketing management. Exposes students to the issues and challenges in the management of the marketing mix, including product policy, pricing, marketing communications, and distribution policy. Prerequisite: MGMT 62000. **Credits:** 2.00 to 4.00

MGMT 62200 - Marketing Strategy

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 or 4.00 (Calumet) 3.00 (North Central). Key aspects of marketing strategy formulation and implementation are covered, including customer needs assessment, targeting, and positioning strategies in a competitive market. A managerial perspective allows development of decision-making skills necessary for successful marketing strategies. Prerequisite: MGMT 62000, MGMT 62100. **Credits:** 2.00 to 4.00

MGMT 62300 - Business Marketing

Credit Hours: 2.00 to 4.00. This course deals with the challenges of marketing to commercial enterprises, government organizations, and non-profit institutions. It covers topics including organizational buying behavior, launching and management of new high tech products, beta testing, customer relationship management, and the importance of manufacturing-marketing coordination. Prerequisite: MGMT 62000. **Credits:** 2.00 to 4.00

MGMT 62410 - Digital Marketing Strategy

Credit Hours: 1.00 to 4.00. Developed at a high-level overview of the digital marketing environment, this course provides exposure to both paid and owned digital strategies for businesses. It walks students through the customer journey through data analysis and focuses on key areas of managerial influence along the customer acquisition funnel to understand and evaluate current performance and the areas of opportunity for growth and financial improvement.**Credits:** 1.00 to 4.00

MGMT 62500 - Marketing Research

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (Calumet). Application of statistical and other quantitative concepts to marketing management problems. Prerequisite: MGMT 67000. **Credits:** 2.00 to 4.00

MGMT 62600 - Seminar In Marketing Models

Credit Hours: 2.00 to 4.00. Treatment of theoretical marketing models. Study of marketing models in research setting. Prerequisite: MGMT 62000, 67200. **Credits:** 2.00 to 4.00

MGMT 63000 - Legal And Social Foundations Of Management

Credit Hours: 2.00 to 4.00. An examination of the nature of the legal environment from the viewpoint of the social and moral bases of law. Emphasis is given to the operation of our legal system and its significance in decision functions of management. Prerequisite: Master's student standing and Management majors only. **Credits:** 2.00 to 4.00

MGMT 63100 - The Legal And Social Foundations Of Management II

Credit Hours: 2.00 to 4.00. Covers the social and ethical dilemmas of business policy and decision making, often involving legal, social, and ethical considerations encountered by business managers. Prerequisite: MGMT 63000. **Credits:** 2.00 to 4.00

MGMT 63150 - Accounting For Private Equity

Credit Hours: 2.00 or 3.00. The course offers students with knowledge of private equity services that accounting firms provide to clients. It covers investment banking, buy- and sell-side due diligence, M&A tax services, business valuations, etc.**Credits:** 2.00 or 3.00

MGMT 63250 - Advanced International Accounting

Credit Hours: 2.00 or 3.00. This course is designed to help students a) Learn about the development of international accounting movements and implications in a globalized financial market; b) Develop the ability to read and interpret the financial statements of companies that are prepared in accordance with International Financial Reporting Standards (IFRS); c) Emphasize the importance of professional judgment in international accounting when assessing different accounting treatments for the same event; d) Learn to cope with differences in financial measurement, recognition, and reporting practices; and e) Enhance the students' communication skills. The course should also contribute to the requisite background required for professional examinations such as CPA and to become prepared for a long-range successful accounting, auditing, and/or managerial career. **Credits:** 2.00 or 3.00

MGMT 63350 - Accounting Data Analytics

Credit Hours: 2.00 or 3.00. The skill set that accountants have needed to perform math and to keep order has evolved from pencil and paper, to calculators, and then to spreadsheets and accounting software. A new skill set that is becoming more important for nearly every aspect of business is that of big data analytics: managing large amounts of data in the database, analyzing them and

finding actionable insights and visualizing the results. This course is designed to help accounting students develop an analytical mindset and prepare them to use data analytic programming languages and software like Python, SQL, and Tableau. **Credits:** 2.00 or 3.00

MGMT 63400 - Business Law For Accountants

Credit Hours: 2.00. This course is designed to help prepare students for their professional careers by familiarizing them with aspects of the law that are directly relevant to the practice of accounting. These topics are not only at work every day in business but are also tested on professional examinations such as the Uniform Certified Public Accounting (CPA) Exam. Specific topics include, but are not limited to, contract law, relevant provisions of the Uniform Commercial Code, bankruptcy, and the legal liability of accountants. The course will be taught through a mixture of lectures and class discussions. Students are expected to come to class having completed the assigned readings and ready to participate in class discussions. **Credits:** 2.00

MGMT 63410 - Communications For Accountants

Credit Hours: 2.00. Accountants spend much of their time designing and writing reports, memos, etc. and explaining those communications to others. They communicate regularly with external investors and creditors, regulators, clients and fellow professionals. This course is designed to help accounting students prepare for their professional careers by helping them develop their written and oral communication skills. The course begins with an overview of the writing process and then moves to document organization and design and how to write with conciseness and clarity. The last half of the course focuses on specific forms of written communication (e.g., letters, memos, reports, email, essays on professional exams) and oral presentations. **Credits:** 2.00

MGMT 63450 - Financial Statement Analysis And Valuation

Credit Hours: 2.00 to 3.00. This course is designed to prepare students to become intelligent financial statement users. Understanding how market participants use financial statements will assist professionals in their primary tasks of creating and communicating financial information to these individuals. **Credits:** 2.00 to 3.00

MGMT 63500 - Accounting Information Systems

Credit Hours: 3.00. Accounting information Systems is a course designed to provide students with a solid background in the information systems that accountants use. Topics include, but are not limited to, input, processing and output devices, data communications and networks, document and system flowcharts, organizing and manipulating data in databases, producing reports and forms, popular accounting software, enterprise-wide information systems, security, privacy and ethics for accounting information, and information technology auditing. The course will advance students' abilities in the following areas. **Credits:** 3.00

MGMT 63550 - Accounting Consulting For Entrepreneurship

Credit Hours: 2.00 or 3.00. This course is an experiential learning experience that is part of the Experiential Learning Initiative in the Krannert School of Management. The main goal of the course is to provide various accounting services to STEM start-up companies which are based on Purdue's innovations (www.purduefoundry.com) and to established companies in the bigger corporate world. At the same time, we also would like to give our students the opportunity to apply their acquired classroom knowledge and have them exposed to some real-world accounting problems that start-up or established companies typically experience. Our students are expected to provide various accounting support services that are related to financial accounting & reporting, managerial accounting, business planning, and/or tax issues. The format of the course is very open. The first four weeks will be spent in a classroom setting, with presentations on how to professionally manage a client relationship and how to successfully tackle projects in a challenging STEM start-up and/or established corporate environment. Each project will be completed by teams of 3-5 students, which will be formed at the beginning of the semester. After the initial classroom sessions, the project teams will be on their own, with faculty guidance, running the engagement. The teams will meet with the clients to

determine their needs and expectations. The students will do the work and deliver the output including a final presentation to the client. **Credits:** 2.00 or 3.00

MGMT 63610 - Business Ethics

Credit Hours: 2.00. This course is designed to move past a surface-level understanding that we need to act ethically in the business environment to wrestling with what does that look like and what frameworks can help us do just that. I also firmly believe that we have to prethink our decisions before we are confronted with opportunities to compromise ethically. We will incorporate current headlines to our evaluation of major ethical lapses of the past. **Credits:** 2.00

MGMT 63650 - Accounting Ethics

Credit Hours: 3.00. This course is designed to introduce students to the foundational elements underlying ethics and ethical behavior, with an emphasis on ethical issues facing professional accountants. The course will provide students with a framework of ethical reasoning, professional values and attitudes for exercising professional skepticism, and other behavior that is in the best interest of the public and accounting profession. The course will also review the core values of integrity, objectivity, and independence as well as rules of professional conduct. This course uses real-world case studies and practical hands-on applications in order to enhance the student's ability to recognize ethical dilemmas and overcome them with sound ethical decision-making. Illinois Board of Examiners ethics course required to apply for taking the Uniform CPA Examination.**Credits:** 3.00

MGMT 63750 - Advanced Taxation

Credit Hours: 2.00 or 3.00. This course is directed at students who wish to learn more about the taxation of business entities beyond the basic principles taught in MGMT 504 Introductory Tax Accounting or an equivalent course. The course will cover broad topics such as tax law sources and tax research; the tax advantages and disadvantages of various business entities as well as how entrepreneurs may choose the optimal entity for tax purposes; taxable and nontaxable methods of mergers, acquisitions, and divestitures; fundamental concepts of consolidated tax returns for C Corporations; and the accounting for income taxes under ASC 740. **Credits:** 2.00 or 3.00

MGMT 63850 - Public Company Reporting And Regulation

Credit Hours: 2.00 or 3.00. This course introduces students to the Securities and Exchange Commission's (SEC) rules and regulations as they apply to U.S. companies and their auditors. Requirements for frequently encountered annual reporting responsibilities (e.g., Forms 10-K, 10-Q, 8-K, proxy statements, etc.) and registration statements are explored and analyzed. Actual SEC filings provide real-world applications and interpretation of the SEC's rules. Rules imposed by the primary U.S.-based stock exchanges are introduced as is the history of the SEC and current trends affecting this rule-making body. Additionally, this course encompasses the enforcement power of the SEC and its implications to companies, their officers, and accountants. **Credits:** 2.00 or 3.00

MGMT 63900 - Advanced Auditing And Audit Analytics

Credit Hours: 3.00. This course is designed to help students prepare for their professional careers by strengthening their understanding of the CPA's attest function and familiarizing them with current assurance issues. After finishing the course, students should understand the current state of the Enterprise Risk Management and tools for risk evaluation, be able to identify best practices related to external audit, be prepared to manage an audit group, understand the key aspects of being an audit consultant and be able to work with all levels of internal and external audit professionals. Throughout the course, students will have opportunities to improve their written and oral communication skills, particularly as they relate to communication in the audit setting. The course will also emphasize the impact of recent and current regulatory actions, including the Sarbanes-Oxley Act of 2002, on the audit profession. Prerequisite: MGMT 50600 with a minimum grade of C. **Credits:** 3.00

MGMT 63901 - London Trip For IASB

Credit Hours: 2.00 or 3.00. This is an experiential study abroad class with workshops held at the International Accounting Standards Board (IASB) as well as at one of the leading universities in the UK. In addition, students will visit public multinational companies and/or accounting firms in the Greater London area, UK. **Credits:** 2.00 or 3.00

MGMT 63902 - Accounting And Public Policy

Credit Hours: 1.00 or 2.00. This course offers students an intensive, distinctive, personal and professional development experience, addressing critical public policy institutions, issues, and trends affecting the profession of accounting. Over 3 days in Washington, D.C., participants meet with and gain a greater understanding of the role of regulatory agencies such as the Public Company Accounting Oversight Board and the Securities and Exchange Commission. Participants also have meetings and discussions with organizations governing the accounting profession, such as the American Institute of Certified Public Accountants and the Center for Audit Quality, as well as more informal but important organizations such as trade associations and think tanks. The course often includes visits with members and staff from Congress and officials from the Executive Branch to understand their institutional roles in governing the profession. These meetings include discussions of the relevant tax, securities, commodities, and oversight committees in Congress, for example. Within the Executive Branch, discussions typically include the operations of forensic accounting and compliance within agencies such as the U.S. Treasury and Internal Revenues Service and the Federal Bureau of Investigation. Participants also gain practical insights into the strategic role of government relations, as well as the role of public policy lobbying and advocacy by the overall profession and individual firms, regarding issues that affect them and their clients. Other topical sessions often include discussions of cybersecurity policy, tax policy, and other topics relevant to the profession and key clients.**Credits:** 1.00 or 2.00

MGMT 63910 - Accounting For Managers

Credit Hours: 0.00 or 1.00. Accounting is the language of business. Understanding financial accounting enables professionals inside the firm to communicate with external users. In this course you will be introduced to financial accounting, which focuses on the reports that are generated to provide external users information about a firm's financial position and operational effectiveness. **Credits:** 0.00 or 1.00

MGMT 64000 - Financial Modeling

Credit Hours: 2.00 or 3.00. This course provides an introduction to financial modeling using computer applications. The first part of the course covers how to use Microsoft Excel to analyze historical and pro forma financial statements, stock return data, linear regression analysis, Monte Carlo simulations, Pivot Tables and also covers many advanced functions within Excel. The second part of the course provides an introduction to using SAS to analyze financial data and more advanced regression techniques. Prerequisites: MGMT 61000 (Note: Students who have not taken MGMT 61000 may enroll with instructor permission). **Credits:** 2.00 or 3.00

MGMT 64100 - Options And Futures

Credit Hours: 2.00 to 4.00. Rigorous and applied coverage of the pricing and hedging of options and futures contracts with applications. Prerequisite: MGMT 61000. **Credits:** 2.00 to 4.00

MGMT 64300 - Financial Risk Management

Credit Hours: 2.00 to 4.00. Provides a foundation for understanding ways in which financial institutions and industrial firms can optimally manage financial risks. Concentrates on various "functional" risk measurement problems related to interest rate risk, default risk, exchange rates, and commodity prices. Prerequisite: MGMT 61000. **Credits:** 2.00 to 4.00

MGMT 64500 - Mergers, Acquisitions, And Corporate Control

Credit Hours: 2.00 to 4.00. Focuses on firms' internal governance structures and on pressure from the external market for corporate control, including executive compensation, board of directors' composition, shareholder activism, mergers, and takeovers. Prerequisite: MGMT 61000. **Credits:** 2.00 to 4.00

MGMT 64810 - Marketing Analysis And Planning

Credit Hours: 2.00. The course in Market Analysis and Planning examines the issues associated with the analysis of market opportunities and the formulation of strategic marketing plans to take advantage of market opportunities. Specific analysis issues include the identification of customer needs, competitive advantages, and company capabilities. Results of these analyses lead to choices the firm makes with regard to its market segmentation, target market selection, and positioning. Topics introduced in conjunction with these analyses include product life cycle analysis, product portfolio selection, and strategic resource allocation decisions. Aspects of resource allocation include decisions regarding market research and new product development (or product repositioning). Further, the allocation of firm resources directed at fostering market demand is examined, including the deployment of marketing communications to potential customers and salesforce efforts to attain distribution. A long-term perspective on market analysis and planning is emphasized through the utilization of the Markstrat Simulation. For this computer simulation, student teams participate in multi-period decision-making for their respective companies. Prerequisite: MGMT 62000. **Credits:** 2.00

MGMT 64900 - Global Marketing Management

Credit Hours: 2.00 to 4.00. A seminar using lecture-discussions, cases, and projects. Designed to cover the global marketing environment, market-entry strategy, global marketing programs, organization and control of global marketing operations, and the future of global marketing. Prerequisite: MGMT 62000, MGMT 62100. **Credits:** 2.00 to 4.00

MGMT 65000 - Strategic Management I

Credit Hours: 2.00 to 4.00. Concepts and methods that integrate previous training in functional areas of management. The perspective is that of the general manager charged with directing the total enterprise. Emphasis is given to formulation and implementation of strategy. Prerequisite: MGMT 61000, MGMT 62000, Master's student standing and Management majors only. **Credits:** 2.00 to 4.00

MGMT 65110 - Strategy For Competitive Advantage

Credit Hours: 1.00 to 4.00. Concepts and methods that integrate previous training in functional areas of management. The perspective is that of the general manager charged with directing the total enterprise. Emphasis is given to formulation and implementation of strategy. Prerequisites: MGMT 61300 and MGMT 62000.**Credits:** 1.00 to 4.00

MGMT 65210 - Organizational Development And Consulting Rewards

Credit Hours: 2.00. The course will describe techniques for diagnosing organizations and interventions for improving organizations. Specific interventions will be examined in detail including structural interventions (e.g., organizational design, job design), interpersonal process interventions (e.g., process consultation, team building), and human resource interventions (e.g., performance management, career development). The course will attempt to both build knowledge and provide practice in the various techniques.**Credits:** 2.00

MGMT 65310 - Human Resource Systems

Credit Hours: 3.00. An overview of selected human resource activities/systems for the future human resource professional. Emphasis will be placed on building skills in areas that will provide a foundation for future coursework in human resources management. Topics covered include planning and forecasting human resource needs, job analysis, design and evaluation of training systems, design of performance appraisal systems, and safety and health in the workplace. **Credits:** 3.00

MGMT 65330 - HR Strategy

Credit Hours: 2.00 to 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on HRM, Strategic HRM, Managing Human Resources Globally, and Strategically Managing Human Resource Functions. **Credits:** 2.00 to 3.00

MGMT 65340 - Staffing Tools

Credit Hours: 2.00. Provides an in-depth analysis of the methods used in staffing and selection processes. Methods used to evaluate individuals as well as methods used to evaluate selection and promotion tools will be studied. Emphasis on the processes of designing, administering, revising, and evaluating selection programs that comply with government regulation as well as add value to the organization. This course is designed for the future HR professional. Concurrent Prerequisite: MGMT 65310 or OBHR 63300, MGMT 67100 or STAT 51200. **Credits:** 2.00

MGMT 65350 - Staffing Systems

Credit Hours: 2.00. Examines all aspects of the staffing process beginning with applicant recruitment and ending with termination and outplacement. Emphasis on building skills that the general manager will need to evaluate, design, and implement these activities. Designed for the future manager, as well as the future HR professional. Topics will be addressed from an individual perspective, as well as an organizational perspective. Prerequisite: OBHR 63100 or OBHR 63300 or MGMT 65310. **Credits:** 2.00

MGMT 65360 - Industrial Relations I

Credit Hours: 2.00. An in-depth examination of human resource management in the context of union-management relations. Emphasis is on understanding how and why unions form, the legal context, and changing competitive environment for labor management relations. Covers the dynamics of the collective bargaining process, including the determinants of bargaining power, preparation of labor contract demands, and negotiation tactics. The course culminates with an extended mock negotiation exercise. **Credits:** 2.00

MGMT 65370 - Industrial Relations II

Credit Hours: 2.00. An examination of union-management relations topics that build on material addressed in OBHR 640. Topics include causes of strikes, impasse resolution techniques, grievance and arbitration procedures, public sector labor relations, labor-management cooperation, and international labor-management relations. Emphasis is on how changes in the competitive environment have created the need for changes in the traditional union-management relationship. Films, cases, exercises, and guest speakers are utilized. Prerequisite: OBHR 64000 or MGMT 65360. **Credits:** 2.00

MGMT 65380 - Compensation And Reward Systems

Credit Hours: 3.00. The first course in a two-course master's-level sequence focusing on the use of rewards to achieve organizational objectives. Special emphasis is given to compensation as a particularly salient reward. Designed for HR professionals, the course examines the relationship between rewards and organizational characteristics to achieve effective reward practices. Lectures, discussions, case studies, and guest speakers are used to build competence in job evaluation, skill-based pay, and setting pay levels. Prerequisite: OBHR 63100 or OBHR 63300 or MGMT 65310, MGMT 67100 or STAT 51200. **Credits:** 3.00

MGMT 65390 - HR Analytics

Credit Hours: 2.00 to 3.00. This course provides an introduction to the field of HR analytics. HR Analytics is an advanced set of data analysis methodologies, tools and metrics for comprehensive workforce performance measurement and improvement. The objective of HR analytics is to drive evidence-based decisions and action in the workplace. In addition to your instructor, you may hear from expert practitioners and corporate leaders who have "been there and done that" leveraging a myriad of HR analytics along the way. We will also review (and hopefully expand) your understanding of handling data including conceptualizing models, identifying key metrics, collecting data, analyzing data, and presenting data in ways that tell a powerful story. Throughout our course, I will infuse consulting concepts, methodologies, and lessons learned that combined with your analytic skills will help you to effectively serve as an HR Business Partner (internal HR consultant). **Credits:** 2.00 to 3.00

MGMT 65410 - Training And Development

Credit Hours: 2.00 or 3.00. This course prepares students to design training and develop training programs and to identify principles, practices and methods of staff training and career development. Students will learn and practice how to deliver and evaluate said programs for return on investment (ROI). Emphasis is placed on the application of principles related to adult learning, instructional design and program development, evaluation and learning technologies. Specific objectives include topics related to communication, diversity, generational differences and group dynamics. **Credits:** 2.00 or 3.00

MGMT 65420 - Leadership

Credit Hours: 1.00 to 3.00. Examines organizational leadership responsibilities, forms of leadership, the acquisition, use, and consequences of power, critical leader skills, and how corporate environments shape leadership. Emphasis on self-discovery and development of managerial leadership knowledge and skills. **Credits:** 1.00 to 3.00

MGMT 65430 - Negotiations In Organizations

Credit Hours: 1.00 to 3.00. Decision making examines organizational context, stages, creativity, biases, and group processes. Negotiations examine strategies for preparing and conducting negotiations. The principal focus is on individual and interpersonal aspects of each. Permission of department required. **Credits:** 1.00 to 3.00

MGMT 65450 - Human Capital Consulting

Credit Hours: 2.00 or 4.00. Working in a team setting, this course provides real-life experience consulting with an organization to solve a real business problem. The focus is on human capital or human resource-related problems. Students work with a client to define the scope of their engagement, identify needs, conduct outside research (benchmark, market analysis), develop solutions, and identify key deliverables. The project culminates with an executive summary presentation with tangible recommendations to the client's senior leadership. This experience prepares students to serve as an HR Business Partner (HRBP).**Credits:** 2.00 or 4.00

MGMT 65460 - Talent Acquisition

Credit Hours: 2.00 to 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions, and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees. **Credits:** 2.00 to 3.00

MGMT 65470 - Talent Management

Credit Hours: 2.00 to 3.00. This course focuses on the employer-employee relationship and how managers work with employees to improve their performance. Attention is given to Talent, Talent Management, and Performance Management in work settings, with an emphasis, however, on contemporary approaches to managing the employer-employee relationship and the systems for managing talent. Various definitions of Employee Engagement will be explored, along with how it is, measured, and why it is so important to your organization. Finally, various methods to engage employees in the organization will be studied. **Credits:** 2.00 to 3.00

MGMT 65700 - Manufacturing Strategy And Process Innovation

Credit Hours: 2.00. In recent years many firms have rediscovered manufacturing and operations as a potential source of strategic advantage. In general, these firms have sought to develop capabilities in operations which provide a sustainable advantage in the marketplace. In addition, successful firms have developed processes for understanding the cross-functional implications of product and process choices. In this course, we will seek to understand the circumstances under which particular operating capabilities are most beneficial and how such capabilities can be developed so that operations can be exploited for competitive advantage. Concurrent Prerequisite: MGMT 61000, 65000, 66000. **Credits:** 2.00

MGMT 65730 - Technology Strategy

Credit Hours: 2.00 or 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage. We take an in-depth look at how technological innovation affects the competitive dynamics of markets, how firms can strategically manage these dynamics, and how firms can create and implement strategies to maximize their likelihood of success. The course introduces tools, concepts, and analytical frameworks that will enhance your ability to define and analyze strategic problems that stem from innovation and technological change, and to identify sources of competitive advantage from both an industry and firm-level perspective. Permission of department required.**Credits:** 2.00 or 3.00

MGMT 65810 - Corporate Consulting Experiential Learning

Credit Hours: 1.00 to 4.00. This course is an engagement with an external firm to solve challenges within the business. Students work together on project teams that require a cross-functional and interdisciplinary perspective. Student mix is determined by project needs and qualifications. Projects are typically sponsored at a senior level of the organization and address enterprise-level issues and challenges of strategic importance. Permission of instructor required. **Credits:** 1.00 to 4.00

MGMT 65900 - Strategic Management II

Credit Hours: 2.00 to 4.00. Further emphasis on understanding how organizations might achieve advantage relative to competitors. Focus is on corporate strategy: the decisions of a multi-business firm. Such decisions include: What range of businesses is appropriate within a single firm? What mode of expansion, e.g., alliance vs. acquisition, is appropriate? How should a firm's administrative systems and structure be organized across multiple businesses or markets to achieve maximum value? What is needed to foster innovation in the organization? Introduces a variety of analytical frameworks to help students qualitatively and quantitatively appraise corporate-level strategies given a firm's unique resource profile and the environment in which it competes. Prerequisite: MGMT 60000, 61000, 62000 and 65000. **Credits:** 2.00 to 4.00

MGMT 66000 - Introduction To Operations Management

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (Calumet, North Central). As goods and services are produced and distributed, they move through a set of inter-related operations or processes in order to match supply with demand. The design of these operations for strategic advantage, investment in improving their efficiency and effectiveness, and controlling these operations to

meet performance objectives is the domain of Operations Management. The primary objective of the course is to provide an overview of this important functional area of business. Prerequisite: MGMT 67000, MGMT 67100. **Credits:** 2.00 to 4.00

MGMT 66100 - Management Of Operating Systems

Credit Hours: 1.00 to 4.00. A project course in which students are exposed to a variety of operations problems as they arise in a real world setting. The focus of the course is problem formulation, analysis, and proposal(s) of an implementable scheme for their resolution. Prerequisite: MGMT 66000. **Credits:** 1.00 to 4.00

MGMT 66400 - Supply Chain Management

Credit Hours: 2.00 to 4.00. Continues the examination of the linkage between a firm's product-market strategy and the role of the operations (i.e., production) function initiated in MGMT 660. Topics include material requirements planning, production activity control, and just-in-time systems. Prerequisite: MGMT 66000. **Credits:** 2.00 to 4.00

MGMT 66700 - International Operations Management

Credit Hours: 2.00. Emphasizes the role of operations in the making of strategic decisions of where to locate and how to coordinate facilities to optimize the performance of a multinational organization. The impact of trade regulations and foreign exchange risk is considered. Case studies of international manufacturing firms develop and illustrate key concepts. Prerequisite: MGMT 66000. **Credits:** 2.00

MGMT 66900 - Operations Management: Practice And Models

Credit Hours: 2.00. A manufacturing laboratory course in which computer and visual information systems are applied to a small-scale replica of a manufacturing facility. Applications include material requirements planning, KANBAN systems, detailed scheduling, and simulation. The overriding objective is to experience how these information systems are implemented and used to improve the physical system. Concurrent Prerequisite: MGMT 66400. **Credits:** 2.00

MGMT 67000 - Business Analytics

Credit Hours: 2.00 to 4.00. Introduction to quantitative decision procedures under uncertainty. Applications of descriptive statistics, probability models, simulation models, interval estimates, and hypothesis testing to management problems. Managerial-oriented cases are used in instruction. Prerequisite: Master's student standing and Management majors only. **Credits:** 2.00 to 4.00

MGMT 67100 - Quantitative Methods II

Credit Hours: 2.00 (West Lafayette) 3.00 (Calumet, North Central). A continuation of Quantitative Methods I. Applications of regression procedure, forecasting technique, and statistical design of experiment method to management problems. Managerial-oriented cases are used throughout the course. Prerequisite: MGMT 67000. **Credits:** 2.00 to 3.00

MGMT 67200 - Advanced Business Analytics

Credit Hours: 2.00. Quantitative decision procedures under uncertainty applied to business problems. Basic concepts in econometrics and multivariate analysis are studied. Several managerial-oriented case studies are used to illustrate estimation, testing, and regression procedures. Prerequisite: MGMT 67100, Master's student standing and Management majors only. **Credits:** 2.00

MGMT 67620 - Optimization For Data Analysis And Decisions

Credit Hours: 2.00 or 3.00. This course covers optimization theory and algorithms for data analysis and decision-making. The topics covered include polyhedral analysis, duality, first-order methods, relaxation techniques, and computational aspects of optimization. The course will use business applications to demonstrate usefulness of the methods. **Credits:** 2.00 or 3.00

MGMT 67700 - Seminar In Quantitative Methods In Management Research

Credit Hours: 3.00. Applications of quantitative methods of analysis to research problems in financial, marketing, and production management. Data processing and statistical inference in management research. Prerequisite: MGMT 67000, MGMT 67100, MGMT 67200. **Credits:** 3.00

MGMT 68000 - Economic Analysis Of Technology Markets

Credit Hours: 2.00 (West Lafayette); 3.00 (Northwest). The core models of microeconomics are fundamental to day-to-day management decisions. This course will cover economic models that describe firm production, pricing, entry/exit decisions, market efficiency, and welfare. Such economic models will be applied to the analyses of a variety of market conditions, including monopoly, oligopoly, and monopolistic competition. It will provide students with an understanding of the implications of economic theory on technology products, firms, markets, and consumers. **Credits:** 2.00 to 3.00

MGMT 68200 - Digital Product Design

Credit Hours: 2.00. This course is a comprehensive exploration of designing digital products that can improve the quality of people's daily lives. It covers value creation with technology and a human-centered design process including improv brainstorming, storyboarding, interviewing, sketches, and selling. Students will learn how to ideate and how to iteratively refine ideas with real users. Students will consider factors driving technology product design decisions such as the unique economic characteristics of today's technology-intensive markets and their impact on strategic interactions among firms and consumers. Students will also learn to discover unmet user needs, reframe problematic situations, envision multiple possible product concepts, and assess their feasibility, viability, and desirability. The course culminates in the creation of a business model, a product sketch, and a plan for taking the product to market.
Credits: 2.00

MGMT 68300 - Technology-Driven Business

Credit Hours: 2.00 to 3.00. Digital technologies such as the Internet, IoT, and AI are rapidly and fundamentally transforming today's companies and industries. They have enabled completely new ways for companies to organize work, generate innovations, make decisions, and interact with customers, suppliers, and competitors. This course is designed for students who want to deeply analyze digital transformations and, more importantly, manage technology-driven businesses. Applying information economics principles and theoretical rigor, this course studies how digital technologies affect consumer behavior, business model innovations, market design, and competitive outcomes. This course trains students to apply data analytics skills to real business problems and develop a rich understanding of the strategic value of digital transformations. **Credits:** 2.00 to 3.00

MGMT 68400 - Information Risk Management

Credit Hours: 2.00. Explores the various issues pertinent to maintaining acceptable levels of information security within organizations. Topics include risk analysis, resource identification, a basic introduction to information security architecture and infrastructure, policy development and deployment, and legal and regulatory issues, including those pertaining to privacy. The course is intended to raise awareness of information security issues across organizations and will be targeted towards managers in all areas, not just information systems. Prerequisite: MGMT 68300. **Credits:** 2.00

MGMT 68600 - Knowledge Management Systems

Credit Hours: 2.00. Discusses the fundamentals of knowledge management and the role of information technology and systems in supporting organizational knowledge management. With a growing emphasis toward managing intangible knowledge assets (compared to tangible physical assets), knowledge management has become an indispensable tool kit for managers. Prerequisite: MGMT 68300. Typically offered Fall.**Credits:** 2.00

MGMT 68700 - AI For Business Decisions

Credit Hours: 1.00 to 3.00. Leading-edge companies in every industry are relying on data and AI to replace intuition and guesswork in their decision-making. This course prepares students to understand how AI can be utilized to create value and a sustainable competitive advantage. It teaches the scientific process of using AI to transform data into predictions and insights for making better business decisions in a real-world setting. Upon completion, students should be able to identify and evaluate value propositions of AI advances, conduct successful AI implementations, and manage AI-driven digital transformations. **Credits:** 1.00 to 3.00

MGMT 68800 - Developing A Global Business Strategy

Credit Hours: 2.00 to 4.00. Provides an introduction regarding the business and strategy challenges faced by managers in our global economy, regardless of whether the firm is a small domestic company or a large multi-national. Major topics for the course include motivations and challenges of internationalization, international business fundamentals, foreign market entry strategies, organizing across countries, analyzing global industries, building competitive advantage in global industries, and the influence of culture and institutions. Prerequisite: MGMT 65000. **Credits:** 2.00 to 4.00

MGMT 69100 - Special Problems In Management

Credit Hours: 1.00 to 4.00. Advanced investigation in a specific management field at the graduate level. For students in the master's programs in management who are registered in the master's program summer session. Permission of instructor required. **Credits:** 1.00 to 4.00

MGMT 69200 - Managerial Communication Skills

Credit Hours: 1.00. Enhances student professionalism in managerial contexts by improving oral communication skills by developing strong oral presentation techniques. **Credits:** 1.00

MGMT 69410 - Communication And Persuasion

Credit Hours: 2.00. Business students are trained to be experts in turning data into information. With a strong focus on data visualization, the purpose of this course is to help students take the next step: Turning that information into action. This course will provide you with helpful frameworks for understanding your audience, insights about how people perceive information best, and practical skills to express your ideas in ways that connect. Permission from department required. Co-requisite: MGMT 69000 - Industry Practicum**Credits:** 2.00

MGMT 69600 - Theoretical Principles For Deep Learning

Credit Hours: 2.00 or 3.00. This course aims to expose you to one of the most active contemporary research directions within machine learning: theoretical principles for deep learning. Despite its undisputedly useful empirical breakthroughs, their understanding is still in many ways nascent. This course provides the latest theoretical aspects of deep learning and representation learning, accompanied by a mixture of reading group sessions and student projects. This is an advanced graduate course designed for master's and Ph.D.-level students and assumes a substantial degree of quantitative research background. **Credits:** 2.00 to 3.00

MGMT 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Manufacturing Engineering Technology

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.**Credits:** 3.00

MFET 11301 - Product Data Management

Credit Hours: 3.00. This course provides an understanding of the types of data generated and used in the product lifecycle, the current tools and methodologies in the management of that data, and system analysis and implementation techniques for using PDM as the backbone supporting a company's product development and implementation activities. Interaction between various enterprise systems is discussed.**Credits:** 3.00

MFET 15900 - Introduction To The Smart Manufacturing Enterprise

Credit Hours: 1.00. This course serves as an introduction to modern smart manufacturing methods and processes. The course explores the manufacturing enterprise in different industry contexts to illustrate multiple, varied paths to inform students of multiple career opportunities. **Credits:** 1.00

MFET 16300 - Graphical Communication And Spatial Analysis

Credit Hours: 2.00. An introductory course in computer graphics applications for mechanical- and aeronautical-related professions. Experiences focus on visualization, sketching, graphic standards, and problem-solving strategies for engineering design. The course will emphasize the proper use of parametric solid modeling for design intent.**Credits:** 2.00

MFET 20301 - Model-Based Definition

Credit Hours: 3.00. This course provides experience in the development of model-based product definition through the use of contemporary modeling tools and the application of ASME dimensional standards. This course also covers product data exchange and interoperability standards from the perspective of neutral and proprietary data formats and models. Long-term archival concepts are also covered. **Credits:** 3.00

MFET 20401 - Data Capture, Collection, Analysis, And Visualization In Smart Manufacturing

Credit Hours: 3.00. This course provides an introduction as well as hands-on experience in data analysis and visualization in the Smart Manufacturing environment. It introduces students to the role of data in a Smart Manufacturing Enterprise, concepts and techniques of data analytics, and design principles for creating effective data visualization to facilitate managerial decision-making. This course is part of Smart Manufacturing Enterprise Fundamentals and should be taken after completing Introduction to the Smart Manufacturing Enterprise course.**Credits:** 3.00

MFET 21301 - Simulation And Visualization Applications

Credit Hours: 3.00. This course provides an investigation of predictive and documentary capabilities of engineering simulation and visualization tools. The course is based on concepts derived from theoretical computer graphics and related industrial standards, as well as the use of the geometric model-based product definition.**Credits:** 3.00

MFET 23000 - Industrial Internet Of Things, Networks, And Systems I

Credit Hours: 3.00. This course provides an introduction to Industrial Internet of Things (IIoT) devices, networks, and standards in the context of converged information technology (IT) and operations technology (OT) industrial automation systems. Course topics include an examination of IT and OT networks, hardware, architecture, protocols, standards, and security practices in the context of industrial applications.**Credits:** 3.00

MFET 23100 - Industrial Internet Of Things, Networks, And Systems II

Credit Hours: 3.00. This course offers a practical exploration of Industrial Internet of Things (IIoT) in converged information and operations technology (IT/OT) industrial automation systems. Course topics include IT and OT reference architectures, industrial network convergence, standards, and security practices in the context of Edge, hybrid, and Cloud-based industrial applications. Specific focus is given to integrating and securing networked industrial devices with local and cloud-based IT systems in greenfield and brownfield scenarios. **Credits:** 3.00

MFET 24100 - Automatic Control Systems

Credit Hours: 3.00. This course provides students with a comprehensive understanding of feedback control systems and their practical implementation. Students will learn modeling and simulations of linear/linearized dynamic systems, stability study, time domain analysis, frequency domain analysis, root-locus method, design of PID control, compensators, derivation of control law, and system performance analysis through hands-on exercises and simulations. The curriculum emphasizes applications of mechatronics, robotics, and mechanical/electrical engineering technology fields.**Credits:** 3.00

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration. **Credits:** 3.00

MFET 25000 - Smart Manufacturing Cloud Computing Applications

Credit Hours: 3.00. This course introduces concepts and principles of cloud computing and the virtualization of computing resources and services for smart manufacturing applications. The fundamental topics of cloud computing will be addressed, including virtually processing, storing, modeling and analyzing of data in the cloud environment. Fundamental concepts about cloud tools, applications, and services from a production and manufacturing perspective will be presented. Typically offered Fall Spring Summer.**Credits:** 3.00

MFET 28800 - Smart Manufacturing Operational And Information Networks

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial communication systems and networks. Network devices, intelligent sensors, operations software and controls components are presented. Students learn how connect and provision devices, establish communications between devices and databases, and configure systems for reliable and secure operation. Industrial standards, practices and safety are emphasized throughout the course. **Credits:** 3.00

MFET 29000 - Special Topics In Manufacturing Engineering Technology

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of Manufacturing Engineering Technology is provided by Technology faculty, subject to MFET curriculum subcommittee approval. **Credits:** 1.00 to 3.00

MFET 29200 - Projects In Automation, Robotics And Mechatronics

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Course is for supervised project development, subject to MFET curriculum subcommittee approval. Intended for lower division students. Permission of instructor required. **Credits:** 1.00 to 3.00

MFET 29900 - Manufacturing Engineering Technology Independent Project

Credit Hours: 1.00 to 3.00. Hours and subject matter to be arranged by instructor and approved by the MFET curriculum committee. Primarily for third- and fourth-semester students with special interests. Permission of instructor required. **Credits:** 1.00 to 3.00

MFET 30000 - Applications Of Automation In Manufacturing

Credit Hours: 3.00. Basic introduction to automation applications in manufacturing and the impact of computer-based systems on a manufacturing company. Coverage includes practices and the various issues related to the application of computer-integrated manufacturing. Emphasis placed on CAD, CAM, CNC, robotics, industrial control elements, PLCs, and computer-based process controls. Does not carry credit toward graduation in MFET. **Credits:** 3.00

MFET 30301 - Digital Manufacturing

Credit Hours: 3.00. This course investigates digital manufacturing methods, tools, and processes. Topics include additive and subtractive production techniques, CNC tools, geometric dimensioning and tolerance, model-based definition, measurement instruments and metrology, and scanning techniques for geometry validation.**Credits:** 3.00

MFET 31301 - The Business Of Managing Digital Product Data

Credit Hours: 3.00. This course provides experience in the business-related aspects of PLM tools and methods. Topics include identifying specifications and roles for system users within an organization, creating database models for digital product information, workflows, virtual machine installation and configuration of PLM systems, budgeting, and benchmarking.**Credits:** 3.00

MFET 32100 - Nature-Inspired Design And Materials

Credit Hours: 3.00. In this course, students will work at the intersection of nature, design, materials, and devices. We will begin by exploring structures in nature, from the microscale to the macroscale. Inspired by nature, teams will design structures, objects, tools, machines, or sensors that incorporate aesthetic elements inspired by their exploration and observation of nature. These designs will then be realized through 3-D printing and will be realized in a proof-of-concept device.**Credits:** 3.00

MFET 34100 - Process And Continuous Control Applications

Credit Hours: 3.00. An examination of devices, algorithms, strategies, and standards used in smart manufacturing continuous process and control serves as the basis of this course. Concepts include Proportional, Integral, & Derivative Control (P&ID), loop

modeling, transfer functions, PID design, implementation and tuning. Course laboratories focus on implementing and tuning systems using industry-grade hardware and devices. **Credits:** 3.00

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification. **Credits:** 3.00

MFET 34800 - Introduction To Robot Kinematics

Credit Hours: 3.00. This course introduces the fundamentals of robotics with an emphasis on solutions to the kinematics problems of serial robotic manipulators. It covers robot modeling and simulation, forward kinematics, inverse kinematics, analysis of robot motion and static forces, and trajectory planning. **Credits:** 3.00

MFET 35000 - Smart Manufacturing Systems Modeling & Simulation

Credit Hours: 3.00. This course addresses application of industrial internet of things (IIoT) for modeling and simulation of smart manufacturing assets, processes, and operations. Emphasis is on synchronizing modeling/simulation with real-time data to develop innovative services, create efficiencies, and enable productivity improvement in smart factories. **Credits:** 3.00

MFET 35100 - Mixed Reality Smart Manufacturing Applications & Design

Credit Hours: 3.00. The course investigates development strategies, use cases, and mixed reality (MR) application in industrial IoT (IIoT)-based smart manufacturing systems. Emphasis is on superimposing digital content onto physical systems, integrating data from smart and connected manufacturing production operations, processes, and machines. **Credits:** 3.00

MFET 35200 - Smart Manufacturing Production Information Systems

Credit Hours: 3.00. An examination of smart manufacturing information systems with particular focus on applications for horizontal- and vertically-integrated manufacturing organizations. Topics include cloud-based integrated information systems to provide connectivity, visibility, and analytics of production and shop-floor execution systems and integrating manufacturing execution, manufacturing operations management, and enterprise resource planning (ERP) systems. **Credits:** 3.00

MFET 35800 - Smart Manufacturing And The Global Economy

Credit Hours: 3.00. The impact of digital transformation and the study of the contribution of fully integrated, collaborative, smart cyber physical production systems on the global, national, and regional manufacturing economies. **Credits:** 3.00

MFET 36100 - Machine Learning And Manufacturing Analytics

Credit Hours: 3.00. Machine learning (ML) algorithms are used to extract and analyze large amounts of manufacturing data. Fundamental ML analytic techniques and commonly used ML algorithms for manufacturing applications will be introduced. Students will create, train, and deploy ML models on a cloud platform to create enterprise-ready smart manufacturing artificial intelligence (AI) solutions. **Credits:** 3.00

MFET 36300 - Intelligent Manufacturing Systems I

Credit Hours: 3.00. This course investigates how artificial intelligence, industrial IoT, and big data are used to enable predictive analytics with machine learning. Emphasis is on optimizing production processes, improving productivity, quality, efficiency, and integrating predictive maintenance applications in smart manufacturing operations. **Credits:** 3.00

MFET 36400 - Intelligent Manufacturing Systems II

Credit Hours: 3.00. Artificial intelligence (AI), machine learning (ML), industrial IoT (IIoT), and big data are applied to enable predictive analytics with machine learning for optimizing processes and operations in a horizontally-integrated smart manufacturing value-chain network. **Credits:** 3.00

MFET 37100 - Introduction To Precision Machine Design

Credit Hours: 3.00. This is a multidisciplinary course focusing on engineering techniques that are employed to design and develop high-precision automation products equipped with precision mechanisms. Fine mechanisms and precision instruments will be used to illustrate the concepts and applications. Topics covered include design strategy, high-precision mechanical components, sensors and measurement, servo control, design for controllability, control software development, controller hardware as well as automated error detection and recovery.**Credits:** 3.00

MFET 37400 - Manufacturing Integration I

Credit Hours: 3.00. The fundamentals of data communications and local area networks are taught in order to show students how to integrate modern manufacturing systems. Emphasis is on the various levels of communications between shop floor computers, PLCs, robots, and automatic identification equipment. Database technology is used as an integration tool. This course prepares students for the MFET capstone course. **Credits:** 3.00

MFET 39200 - Advanced Projects In Automation, Robotics, And Mechatronics

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Course is for supervised project development, subject to MFET curriculum subcommittee approval. Intended for upper division students. Instructor of permission required. **Credits:** 1.00 to 3.00

MFET 39500 - Smart Manufacturing Enterprise Organization And Operations

Credit Hours: 3.00. This course provides an introduction and overview of dealing with organizational change management needed to address existing cultures within organizations dealing with the digital transformation required to implement a Smart Manufacturing Enterprise. It introduces students to the cultural and organizational barriers that exist and the theories, tools, and best practices used to overcome them.**Credits:** 3.00

MFET 41000 - Introduction To Additive Manufacturing

Credit Hours: 3.00. This course covers topics in additive manufacturing (AM) technologies. Topics include the AM benefits and drawbacks of additive as compared to subtractive manufacturing, additive manufacturing process and material selection, design for additive manufacturing, support structure generation, printing process planning, and quality control techniques, such as monitoring, inspection, and surface modification.**Credits:** 3.00

MFET 44000 - Smart Manufacturing Autonomous Human Robot Systems

Credit Hours: 3.00. This course explores robot cognition with application of intelligent human-robot systems in unstructured manufacturing environments. Topics include intelligent robotics, machine learning, machine vision, and human-robot interaction with particular emphasis on applications for smart manufacturing. Typically offered Fall Spring Summer.**Credits:** 3.00

MFET 44100 - Robotics and IoT Seminar

Credit Hours: 0.00 or 1.00. The Robotics Seminar is a series of lectures from eminent local, national and international researchers in the field of robotics and the internet of things (IoT) and related areas, such as computer vision, autonomy, cyber-physical systems, wearables, etc. **Credits:** 0.00 or 1.00

MFET 44200 - Programming Robots With ROS

Credit Hours: 3.00. Robot Operating Systems (ROS) will be used as a programming platform to explore the topics of computer vision, SLAM (Simultaneous Localization and Mapping), path planning, grasping, and social interaction in robotic systems, as well as programming large systems for physical interaction with the world. Self-contained implementation projects are core to the class. Student knowledge of a procedural programming language, familiarity with robotics, and a rudimentary understanding of matrices is assumed. Typically offered Fall Spring Summer.**Credits:** 3.00

MFET 47100 - Electric Machines

Credit Hours: 3.00. This course provides a comprehensive introduction to electrical machines fundamentals, three-phase circuits, electromagnetic principles, AC and DC motors, transformers, magnetism in motors, energy conversion in electric machines as well as their industrial and commercial applications.**Credits:** 3.00

MFET 48000 - Project Planning For Integration

Credit Hours: 3.00. This is the first of two courses that complete the capstone requirement. The course focus is on the project planning, system design and management activities necessary for the implementation of a successful manufacturing integration project. **Credits:** 3.00

MFET 48100 - Integration Of Manufacturing Systems

Credit Hours: 3.00. This capstone course emphasizes the integration of manufacturing activities into a complete system. The course brings together elements of prior courses including: production processes, planning systems, system integration, and manufacturing controls. Primary course activities are centered around a semester-long team project. **Credits:** 3.00

MFET 49000 - Special Topics In Manufacturing Engineering Technology

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of Manufacturing Engineering Technology is provided by Technology faculty, subject to MFET curriculum subcommittee approval. **Credits:** 1.00 to 3.00

MFET 49900 - Manufacturing Engineering Technology Independent Project

Credit Hours: 1.00 to 3.00. Hours and subject matter to be arranged by instructor and approved by MFET curriculum committee. Primarily for seventh- and eighth-semester students with special interests. Permission of instructor required. **Credits:** 1.00 to 3.00

MFET 51400 - Product Lifecycle Management

Credit Hours: 3.00. A survey of the graphical knowledge base with business and industry applications that support the product lifecycle management process is presented. Graphical applications used in the development of a product from an initial concept through its disposal are covered. Current and past application topics are reviewed in both theoretical and technological aspects

and are validated through applied research. Emphasis is placed on the interdisciplinary nature of product lifecycle management through industrial case studies. **Credits:** 3.00

MFET 51700 - Product Development Using Virtual Environments

Credit Hours: 3.00. This course presents the concepts of product development using virtual reality and haptic devices in the development and manufacture of products. Students learn how this technology is currently being used in industry and anticipated technological advancements. Some of the major topic areas covered are: virtual reality technologies, product design and development processes, virtual environments and virtual prototyping, 3D modeling, design analysis and visualization, simulation visualization, multimodal user interface in virtual environments, and real-world applications of product development. Knowledge of 3D computer graphics fundamentals. **Credits:** 3.00

MFET 52400 - Model-Based Definition In The Digital Enterprise

Credit Hours: 3.00. This course will explore Model-based definition (MBD), an emerging industry technique that uses 3D CAD models with annotations to communicate information between people and equipment instead of using drawings. This technique results in reduced variability during data translation, more accurate product definition information and wider dissemination of product data through an increasingly digital corporate enterprise. **Credits:** 3.00

MFET 53400 - Technical Documentation In The Digital Enterprise

Credit Hours: 3.00. This course will explore the different ways technical documentation manifests itself within the enterprise to support the digital thread. We will use various industry applications to create and modify technical documentation and explore the processes and applications that facilitate the creation, storage, and configuration of technical documentation. **Credits:** 3.00

MFET 55700 - Smart Manufacturing Enterprise: Exploring The Applied Technologies

Credit Hours: 3.00. The core foundations of digital transformation in manufacturing for making all things digital, making all things smart, and making all things connected to drive business value. **Credits:** 3.00

MFET 63400 - Automation Of Digital Product Development Processes

Credit Hours: 3.00. This course introduces students to advanced computer programming techniques in the context of Computer-Aided Design and Manufacturing by focusing on automation and customization procedures of 3D solid modeling, design, and management tasks. The course emphasizes problem-solving skills and creative thinking by developing solutions to manipulate CAD applications, files and PDM systems programmatically. By the end of the semester, students should be able to identify characteristics and common patterns in tasks that lend themselves to automation and select and evaluate the most appropriate mechanisms to implement different levels of automation. Pre-Requisite: CGT 52000 or equivalent. **Credits:** 3.00

MFET 64200 - Programming Robotics And Cyber-Physical Systems With The Robotics Commons

Credit Hours: 3.00. Robot Operating System (ROS) is an open-source programming platform that allows the sharing of software packages for more in-depth exploration of complex software projects involving robotics and cyber-physical systems. The basic tools of simulation, visualization, computer vision, simultaneous localization and mapping (SLAM), path planning, manipulation, grasping, and social interaction in robotic systems will be presented in the context of advanced projects with a publishable result. Students will develop complex, independent projects as part of the class that will result in a final report in the form of a publication-worthy paper suitable for submission to an international conference. Student knowledge of a procedural programming language, familiarity with robotics, and a rudimentary understanding of linear algebra is assumed. Prerequisites: ECE 56900. **Credits:** 3.00

Mathematics

MA I am requesting a sp - History Of Mathematics

Credit Hours: 3.00. The purpose of this course is to help students understand and appreciate the growth and development of mathematical ideas across various cultures. Students will study the achievements of people who have made significant contributions to the development of both ancient and modern mathematical concepts.**Credits:** 3.00

MA 1530N - College Algebra

Credit Hours: 3.00. MA 15300-15400 is a two-semester version of 15100. Not open to students with credit in MA 15100. Not available for credit toward graduation in the School of Science.**Credits:** 3.00

MA 1540N - Trigonometry

Credit Hours: 3.00. Continuation of MA 15300. Not open to students with credit in MA 15100. Open to students with an "A" or "B" in MA 15200. Not available for credit toward graduation in the School of Science.**Credits:** 3.00

MA 1590N - Precalculus

Credit Hours: 5.00. Algebra and Trigonometry topics designed to prepare students for calculus.**Credits:** 5.00

MA 1601N - Brief Survey Of Calculus I

Credit Hours: 3.00. Sets, limits, derivatives, integrals, and applications.**Credits:** 3.00

MA 1710N - Multidimensional Mathematics

Credit Hours: 3.00. An introduction to mathematics in more than two dimensions. Graphing of curves, surfaces and functions in three dimensions. Two and three dimensional vector spaces with vector operations. Solving systems of linear of equations using matrices. Basic matrix operations and determinants.**Credits:** 3.00

MA 2610N - Multivariate Calculus

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.**Credits:** 4.00

MA 2660N - Ordinary Differential Equations

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations.**Credits:** 3.00

MA 3510N - Elementary Linear Algebra

Credit Hours: 3.00. Systems of linear equations, matrices, vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, applications. Not open to students with credit in MATH 51100.**Credits:** 3.00

MA 5110N - Linear Algebra With Applications

Credit Hours: 3.00. Real and complex vector spaces; linear transformations; Gram-Schmidt process and projects; least squares; QR and LU factorization; diagonalization, real and complex spectral therorem; Schur triangular form; Joran canonical form; quadratic form.**Credits:** 3.00

MA 5230N - Introduction To Partial Differential Equations

Credit Hours: 3.00. First order quasi-linear equations and their application to physical and social sciences; the Cauchy-Kovalevsky theorem; characteristics, classification, and canonical form of linear equations; equations of mathematical physics; study of the Laplace, wave and heat equations; methods of solution**Credits:** 3.00

MA 5280N - Advanced Mathematics For Engineering And Physics II

Credit Hours: 3.00. Courses MA 527 and 528 constitute a two-semester sequence covering a broad range of subjects useful in early graduate engineering courses. Topics in MA 528 include divergence theorem, Stokes' theorem, complex variables, contour integration, calculus of residues and applications, conformal mapping, and potential theory.**Credits:** 3.00

MA 10800 - Mathematics As A Profession And A Discipline

Credit Hours: 1.00. A seminar course for undergraduate students interested in majoring in an area of mathematics at Purdue. The purpose is to build prospective mathematics majors' awareness of opportunities to enhance their experiences at Purdue and of career paths available for graduates with a good mathematical background. The format of most classes is a presentation and discussion with an invited speaker/guest, including experts on a different aspect of mathematics in our world today. This course is recommended for undergraduates in their first or second year at Purdue. **Credits:** 1.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.) **Credits:** 3.00

MA 13800 - Mathematics For Elementary Teachers II

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability. **Credits:** 3.00

MA 13900 - Mathematics For Elementary Teachers III

Credit Hours: 3.00. Geometric, measurement and spatial reasoning in one, two and three dimensions as the basis for elementary school geometry. Metric and non-metric geometry, transformation geometry. (Not available for credit toward graduation in the College of Science.) **Credits:** 3.00

MA 15300 - College Algebra

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra **Credits:** 3.00

MA 15555 - Quantitative Reasoning

Credit Hours: 3.00. This course will cover important mathematical ideas, including proportion, weighted averages, linear models, exponential models, basic probability and statistics, and some algebra, by using concrete real-world problems. It will not be a prerequisite for any other mathematics course. **Credits:** 3.00

MA 15800 - Precalculus - Functions And Trigonometry

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800. **Credits:** 3.00

MA 16010 - Applied Calculus I

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I **Credits:** 3.00

MA 16019 - Applied Calculus I For Technology

Credit Hours: 4.00. This course develops topics from analytical geometry and introduces differentiation and integration. **Credits:** 4.00

MA 16020 - Applied Calculus II

Credit Hours: 3.00. This course covers techniques of integration; infinite series, convergence tests; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems; matrices, determinants, eigenvalues and eigenvectors. Applications. CTL:IMA 1605 Calculus - Short II **Credits:** 3.00

MA 16100 - Plane Analytic Geometry And Calculus I

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500. Demonstrated competence in college algebra and trigonometry. **Credits:** 5.00

MA 16200 - Plane Analytic Geometry And Calculus II

Credit Hours: 5.00. Continuation of MA 16100. Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course. **Credits:** 5.00

MA 16290 - Data Science Labs: Calculus

Credit hours: 1.00. This course consists of weekly computer laboratories which apply concepts learned in Calculus I and II to data science problems. Main topics covered include function sampling and approximation, numerical differentiation, numerical

integration, Jupyter notebooks, introductory Python programming, object oriented programming, and data acquisition with microcontrollers and sensors. **Credits:** 1.00

MA 16500 - Analytic Geometry And Calculus I

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I **Credits:** 4.00

MA 16600 - Analytic Geometry And Calculus II

Credit Hours: 4.00. Continuation of MA 16500. Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200. CTL:IMA 1603 Calculus - Long II **Credits:** 4.00

MA 17000 - Introduction To Actuarial Science

Credit Hours: 2.00. (STAT 17000) An introduction to actuarial science from the point of view of practicing actuaries from life insurance, casualty insurance and consulting; introduction to insurance and the mathematical theory of interest; application of spreadsheets to problems related to actuarial science. **Credits:** 2.00

MA 18300 - Professional Practicum I

Credit Hours: 0.00. Professional Practicum. For Cooperative Education students only; must be accepted for the program by the cooperative program coordinator. Permission of department required. **Credits:** 0.00

MA 19000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

MA 25000 - Problem Solving In Probability

Credit Hours: 2.00. (STAT 25000) This course is designed to teach techniques for solving problems in probability theory which are relevant to the actuarial sciences. It is intended to help actuarial students prepare for the Society of Actuaries and Casualty Actuarial Society Exam P/1. Credit of Examination is not available for this course. **Credits:** 2.00

MA 26100 - Multivariate Calculus

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100. **Credits:** 4.00

MA 26190 - Data Science Labs: Multivariate Calculus

Credit Hours: 1.00. This course consists of weekly computer laboratories which apply concepts learned in Multivariate Calculus (Calculus III) to data science problems. The students will also practice programming in Python and use sensors and microprocessors to acquire data. Topics covered include representation and perception of color, motion detection in videos, and construction of a planimeter based on Green's theorem. **Credits:** 1.00

MA 26200 - Linear Algebra And Differential Equations

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600. **Credits:** 4.00

MA 26500 - Linear Algebra

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100. **Credits:** 3.00

MA 26600 - Ordinary Differential Equations

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600. **Credits:** 3.00

MA 27101 - Honors Multivariate Calculus

Credit Hours: 5.00. This course is the Honors version of MA 26100, Multivariate Calculus; it will also include a review of infinite series. The course is intended for first-year students who have credit for Calculus I and II. There will be a significant emphasis on conceptual explanation, but not on formal proof. Permission of department is required. **Credits:** 5.00

MA 27300 - Introduction To Financial Mathematics

Credit Hours: 3.00. A mathematical treatment of some of the fundamental concepts of financial mathematics and their application to business situations and basic risk management. Includes discussions of interest rates, discount rates, annuity valuation, bond valuation, cash flow valuation, spot rates, forward rates, Macaulay duration, modified duration, convexity, immunization, and asset-liability management. Provides preparation for the SOA/CAS Actuarial Exam FM/2. **Credits:** 3.00

MA 27900 - Modern Mathematics In Science And Society

Credit Hours: 3.00. The course covers topics in combinatorics and probability applied to real life situations such as the paradoxa of democracy, weighted voting, fair division, apportionment, traveling salesmen, the mathematics of networks, Fibonacci numbers, golden ratio, growth patterns in nature, mathematics of money, symmetry, fractals, censuses and surveys, random sampling, sample spaces, permutations and uniform probability spaces. **Credits:** 3.00

MA 29000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

MA 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MA 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MA 30100 - An Introduction To Proof Through Real Analysis

Credit Hours: 3.00. An introduction to abstract reasoning in the context of real analysis. Topics may include axioms for the real numbers, mathematical induction, formal definition of limits, density, decimal representations, convergence of sequences and series, continuity, differentiability, the extreme value, mean value and intermediate value theorems, and cardinality. The emphasis, however, is more on the concept of proof than on any one given topic. **Credits:** 3.00

MA 30300 - Differential Equations And Partial Differential Equations For Engineering And The Sciences

Credit Hours: 3.00. This is a methods course for juniors in any branch of engineering and science, designed to follow MA 26200 or MA 26600. Materials to be covered are: linear systems of ordinary differential equations, nonlinear systems, Fourier series, separation of variables for partial differential equations, and Sturm-Liouville theory. **Credits:** 3.00

MA 32500 - History Of Mathematics

Credit Hours: 3.00. The purpose of this course is to help students understand and appreciate the growth and development of mathematical ideas across various cultures. Students will study the achievements of people who have made significant contributions to the development of both ancient and modern mathematical concepts.**Credits:** 3.00

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required. **Credits:** 3.00

MA 34900 - Signals And Systems For Mathematicians

Credit Hours: 3.00. This course introduces the mathematical framework for the description, analysis and processing of signals such as music, speech and images. Main topics covered include signal representations in different bases; continuous-time signal sampling; and signal processing by linear and time-invariant systems. **Credits:** 3.00

MA 34990 - Data Science Labs: Signals And Systems

Credit Hours: 1.00. This course consists in weekly computer laboratories. The laboratories introduce students to the application of concepts learned in Signals and Systems or Fourier Analysis course to Data Science problems. The courses also provide opportunities to practice programming in Python and use sensors and microprocessors to acquire and manipulate data.**Credits:** 1.00

MA 35100 - Elementary Linear Algebra

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500. **Credits:** 3.00

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares. **Credits:** 3.00

MA 36200 - Topics In Vector Calculus

Credit Hours: 3.00. Multivariate calculus; partial differentiation; implicit function theorems and transformations; line and surface integrals; vector fields; theorems of Gauss, Green, and Stokes. Credit granted for only one of MA 36200 and MA 51000. **Credits:** 3.00

MA 36600 - Ordinary Differential Equations

Credit Hours: 4.00. An introduction to ordinary differential equations with emphasis on problem solving and applications. The one-hour computer lab will give students an opportunity for hands-on experience with both the theory and applications of the subject. **Credits:** 4.00

MA 37300 - Financial Mathematics

Credit Hours: 3.00. A mathematical treatment of some fundamental concepts of financial mathematics and their application to real world business situations and basic risk management. Includes discussions of valuing investments, capital budgeting, valuing contingent cash flows, yield curves, spot rates, forward rates, short sales, Macaulay duration, modified duration, convexity, and immunization. Provides preparation for the SOA/CAS Actuarial Exam FM/2. **Credits:** 3.00

MA 37400 - Mathematical Foundations For Machine Learning

Credit Hours: 3.00. This course combines data, computation, and inferential thinking to solve challenging problems. In this class, we explore key areas of machine learning including question formulation, statistical inference, predictive modeling, and decision making. Through a strong emphasis on data-centric computing, and quantitative critical thinking, this class covers key principles and techniques of machine learning. These include algorithms for machine learning methods including regression, classification, and clustering; and statistical concepts of measurement error and prediction. **Credits:** 3.00

MA 37500 - Introduction To Discrete Mathematics

Credit Hours: 3.00. Induction, permutations, combinations, finite probability, relations, graphs, trees, graph algorithms, recurrence relations, generating functions. Problem solving in all these areas. Credit granted for only one of MA 27600 and 37500. **Credits:** 3.00

MA 38500 - Introduction To Logic

Credit Hours: 3.00. Propositional calculus and predicate calculus with applications to mathematical proofs, valid arguments, switching theory, and formal languages. **Credits:** 3.00

MA 38600 - Professional Practicum IV

Credit Hours: 0.00. Professional Practicum. Permission of department required. **Credits:** 0.00

MA 39000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

MA 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MA 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MA 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. **Credits:** 3.00

MA 41690 - Data Science Labs: Probability

Credit Hours: 1.00. This course consists in weekly computer laboratories. The laboratories introduce students to the application of concepts learned in an introductory Probability course to Data Science problems. This course also provides opportunities to practice programming in Python and use sensors and microprocessors to acquire and manipulate data.**Credits:** 1.00

MA 42100 - Linear Programming And Optimization Techniques

Credit Hours: 3.00. Solution of linear programming problems by the simplex method, duality theory, transportation problems, assignment problems, network analysis, dynamic programming. **Credits:** 3.00

MA 42500 - Elements Of Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions; differentiation of complex functions; power series, uniform convergence; integration, contour integrals; elementary conformal mapping. **Credits:** 3.00

MA 42800 - Introduction To Fourier Analysis

Credit Hours: 3.00. Topics include: Fourier series, convolutions, kernels, summation methods, Fourier transforms, and applications to the wave, heat, and Laplace equations. **Credits:** 3.00

MA 43200 - Elementary Stochastic Processes

Credit Hours: 3.00. An introduction to some classes of stochastic processes that arise in probabilistic models of time-dependent random processes. The main stochastic processes studied will be discrete time Markov chains and Poisson processes. Other possible topics covered may include continuous time Markov chains, renewal processes, queueing networks, and martingales. **Credits:** 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals. **Credits:** 3.00

MA 44200 - Honors Real Analysis II

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces--continued from MA 44000. Topics include mappings of Euclidean spaces and their derivatives, multivariable chain rule, inverse function theorem and implicit function theorem, sets with content and integration in n dimensions, the integrability theorem, Jacobian and change of variables theorem, related topics. **Credits:** 3.00

MA 45000 - Algebra Honors

Credit Hours: 3.00. This course, which is essentially the first half of MA 55300, is recommended for students wanting a more substantial background in algebra than is afforded by MA 45300, in particular students intending to do graduate work in science or engineering. Topics include the elements of number theory and group theory; unique factorization in polynomial rings and in principal ideal domains. **Credits:** 3.00

MA 45300 - Elements Of Algebra I

Credit Hours: 3.00. Fundamental properties of integers, polynomials, groups, rings, and fields, with emphasis on problem solving and applications. Not open to students with credit in MA 45000. **Credits:** 3.00

MA 45401 - Galois Theory Honors

Credit Hours: 3.00. This course will give a thorough introduction to Galois theory. Galois theory is a fundamental tool in many areas of mathematics, including number theory and algebraic geometry. This course will increase students' mathematical maturity and prepare them for graduate school. Topics include finite extension fields and their symmetries, ruler and compass constructions, complex roots of unity, solvable groups, and the solvability of polynomial equations by arithmetic and radical operations. This course is intended for third- or fourth-year students who have taken MA 45000 (Algebra Honors) or MA 45300 (Elements of Algebra I). **Credits:** 3.00

MA 46000 - Geometry

Credit Hours: 3.00. This course begins at the high-school level and then moves quickly to intermediate and advanced topics including an introduction to non-Euclidean geometry. Emphasis on proofs. **Credits:** 3.00

MA 46200 - Elementary Differential Geometry

Credit Hours: 3.00. The geometry of curves and surfaces based on familiar parts of calculus and linear algebra. An introduction to the study of differentiable manifolds and Riemannian geometry. **Credits:** 3.00

MA 47201 - Fundamental Long Term Actuarial Mathematics

Credit Hours: 4.00. Mathematical foundation of actuarial science, emphasizing probability models for life contingencies as the basis for analyzing life insurance and life annuities and determining premiums and reserves. This course provides the background for Course MLC of the Society of Actuaries and Course 3L of the Casualty Actuarial Society.**Credits:** 4.00

MA 48100 - Advanced Problem-Solving Seminar

Credit Hours: 3.00. Seminar intended to prepare students for the national Putnam examination in mathematics. There is no formal prerequisite, but students should be familiar with basic elements of Linear Algebra, Analysis, Geometry and Trigonometry. **Credits:** 3.00

MA 48200 - Advanced Short Term Actuarial Mathematics

Credit Hours: 3.00. This course provides comprehensive coverage of a wide range of advanced short-term actuarial analysis techniques including severity and aggregate models, parametric models' estimation and selection, parametric and empirical credibility, and reserving, pricing for short-term insurance coverages. This course prepares actuarial students for the SOA Exam ASTAM: Advanced Short-Term Actuarial Mathematics.**Credits:** 3.00

MA 48400 - Seminar On Teaching College Algebra And Trigonometry

Credit Hours: 3.00. This course is a seminar on the teaching of mathematics for our best undergraduate mathematics education students. It provides supervised teaching experience along with a chance for the students to perfect their knowledge of algebra before going on to be high school teachers. Students who take this class will also teach a section of MA 15300. Permission of instructor required. **Credits:** 3.00

MA 48700 - Professional Practicum V

Credit Hours: 0.00 or 1.00. Professional Practicum. Permission of department required. **Credits:** 0.00 or 1.00

MA 49000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 6.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 6.00

MA 49500 - Advanced Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Advanced topics courses in mathematics for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

MA 50300 - Abstract Algebra

Credit Hours: 3.00. Group theory: definitions, examples, subgroups, quotient groups, homomorphisms, and isomorphism theorems. Ring theory: definitions, examples, homomorphisms, ideals, quotient rings, fraction fields, polynomial rings, Euclidean domains, and unique factorization domains. Field theory: algebraic field extensions, straightedge and compass constructions. **Credits:** 3.00

MA 50400 - Real Analysis

Credit Hours: 3.00. Completeness of the real number system, basic topological properties, compactness, sequences and series, absolute convergence of series, rearrangement of series, properties of continuous functions, the Riemann-Stieltjes integral, sequences and series of functions, uniform convergence, the Stone-Weierstrass theorem, equicontinuity, and the Arzela-Ascoli theorem. **Credits:** 3.00

MA 51000 - Vector Calculus

Credit Hours: 3.00. Calculus of functions of several variables and of vector fields in orthogonal coordinate systems. Optimization problems, implicit function theorem, Green's theorem, Stokes' theorem, divergence theorems. Applications to engineering and the physical sciences. Not open to students with credit in MA 36200 or MA 41000. **Credits:** 3.00

MA 51100 - Linear Algebra With Applications

Credit Hours: 3.00. Real and complex vector spaces; linear transformations; Gram-Schmidt process and projections; least squares; QR and LU factorization; diagonalization, real and complex spectral theorem; Schur triangular form; Jordan canonical form; quadratic forms. **Credits:** 3.00

MA 51400 - Numerical Analysis

Credit Hours: 3.00. (CS 514) Iterative methods for solving nonlinear; linear difference equations, applications to solution of polynomial equations; differentiation and integration formulas; numerical solution of ordinary differential equations; roundoff error bounds. **Credits:** 3.00

MA 51800 - Advanced Discrete Mathematics

Credit Hours: 3.00. The course covers mathematics useful in analyzing computer algorithms. Topics include recurrence relations, evaluation of sums, integer functions, elementary number theory, binomial coefficients, generating functions, discrete probability, and asymptotic methods. **Credits:** 3.00

MA 51900 - Introduction To Probability

Credit Hours: 3.00. (STAT 51900) Algebra of sets, sample spaces, combinatorial problems, independence, random variables, distribution functions, moment generating functions, special continuous and discrete distributions, distribution of a function of a random variable, limit theorems. **Credits:** 3.00

MA 52000 - Boundary Value Problems Of Differential Equations

Credit Hours: 3.00. Separation of variables; Fourier series; boundary value problems; Fourier transforms; Bessel functions; Legendre polynomials. **Credits:** 3.00

MA 52100 - Introduction To Optimization Problems

Credit Hours: 3.00. Necessary and sufficient conditions for local extrema in programming problems and in the calculus of variations. Control problems; statement of maximum principles and applications. Discrete control problems. **Credits:** 3.00

MA 52300 - Introduction To Partial Differential Equations

Credit Hours: 3.00. First order quasi-linear equations and their applications to physical and social sciences; the Cauchy-Kovalevsky theorem; characteristics, classification and canonical forms of linear equations; equations of mathematical physics; study of Laplace, wave and heat equations; methods of solution. **Credits:** 3.00

MA 52500 - Introduction To Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions of one complex variable; differentiation and contour integration; Cauchy's theorem; Taylor and Laurent series; residues; conformal mapping; applications. Not open to students with credit in MA 42500. **Credits:** 3.00

MA 52700 - Advanced Mathematics For Engineers And Physicists I

Credit Hours: 3.00. MA 52700 is not a prerequisite for MA 52800; these courses can be taken independently. Topics in MA 52700 include linear algebra, systems of ordinary differential equations, Laplace transforms, Fourier series and transforms, and partial differential equations. MA 51100 is recommended. **Credits:** 3.00

MA 52800 - Advanced Mathematics For Engineers And Physicists II

Credit Hours: 3.00. MA 52700 is not a prerequisite for MA 52800; these courses can be taken independently. Topics in MA 52800 include divergence theorem, Stokes theorem, complex variables, contour integration, calculus of residues and applications, conformal mapping, and potential theory. MA 51000 is recommended. **Credits:** 3.00

MA 53000 - Functions Of A Complex Variable I

Credit Hours: 3.00. Complex numbers and complex-valued functions of one complex variable; differentiation and contour integration; Cauchy's theorem; Taylor and Laurent series; residues; conformal mapping; special topics. More mathematically rigorous than MA 52500. **Credits:** 3.00

MA 53100 - Functions Of A Complex Variable II

Credit Hours: 3.00. Advanced topics. **Credits:** 3.00

MA 53200 - Elements Of Stochastic Processes

Credit Hours: 3.00. (STAT 53200) A basic course in stochastic models, including discrete and continuous time Markov chains and Brownian motion, as well as an introduction to topics such as Gaussian processes, queues, epidemic models, branching processes, renewal processes, replacement, and reliability problems. **Credits:** 3.00

MA 53800 - Probability Theory I

Credit Hours: 3.00. (STAT 53800) Mathematically rigorous, measure-theoretic introduction to probability spaces, random variables, independence, weak and strong laws of large numbers, conditional expectations, and martingales. **Credits:** 3.00

MA 53900 - Probability Theory II

Credit Hours: 3.00. (STAT 53900) Convergence of probability laws; characteristic functions; convergence to the normal law; infinitely divisible and stable laws; Brownian motion and the invariance principle. **Credits:** 3.00

MA 54200 - Theory Of Distributions And Applications

Credit Hours: 3.00. Definition and basic properties of distributions; convolution and Fourier transforms; applications to partial differential equations; Sobolev spaces. **Credits:** 3.00

MA 54300 - Ordinary Differential Equations And Dynamical Systems

Credit Hours: 3.00. This course focuses on the theory of ordinary differential equations and methods of proof for developing this theory. Topics include basic results for linear systems, the local theory for nonlinear systems (existence and uniqueness, dependence on parameters, flows and linearization, stable manifold theorem) and the global theory for nonlinear systems (global existence, limit sets and periodic orbits, Poincare maps). Permission of instructor required. **Credits:** 3.00

MA 54400 - Real Analysis And Measure Theory

Credit Hours: 3.00. Metric space topology; continuity, convergence; equicontinuity; compactness; bounded variation, Helly selection theorem; Riemann-Stieltjes integral; Lebesgue measure; abstract measure spaces; LP-spaces; Holder and Minkowski inequalities; Riesz-Fischer theorem. **Credits:** 3.00

MA 54500 - Functions Of Several Variables And Related Topics

Credit Hours: 3.00. Differentiation of functions; Besicovitch covering theorem; differentiation of one measure with respect to another; Hardy-Littlewood maximal function; functions of several variables; Sobolev spaces. **Credits:** 3.00

MA 54600 - Introduction To Functional Analysis

Credit Hours: 3.00. Fundamentals of functional analysis. Banach spaces, Hahn-Banach theorem. Principle of uniform boundedness. Closed graph and open mapping theorems. Applications. Hilbert spaces. Orthonormal sets. Spectral theorem for Hermitian operators and compact operators. **Credits:** 3.00

MA 55300 - Introduction To Abstract Algebra

Credit Hours: 3.00. Group theory: Sylow theorems, Jordan Holder theorem, solvable groups. Ring theory: unique factorization in polynomial rings and principal ideal domains. Field theory: ruler and compass constructions, roots of unity, finite fields, Galois theory, solvability of equations by radicals. **Credits:** 3.00

MA 55400 - Linear Algebra

Credit Hours: 3.00. Review of basics: vector spaces, dimension, linear maps, matrices determinants, linear equations. Bilinear forms; inner product spaces; spectral theory; eigenvalues. Modules over a principal ideal domain; finitely generated abelian groups; Jordan and rational canonical forms for a linear transformation. **Credits:** 3.00

MA 55600 - Introduction To The Theory Of Numbers

Credit Hours: 3.00. Divisibility, congruences, quadratic residues, Diophantine equations, the sequence of primes. **Credits:** 3.00

MA 55700 - Abstract Algebra I

Credit Hours: 3.00. Review of fundamental structures of algebra (groups, rings, fields, modules, algebras); Jordan-Holder and Sylow theorems; Galois theory; bilinear forms; modules over principal ideal domains; Artinian rings and semisimple modules. Polynomial and power series rings; Noetherian rings and modules; localization; integral dependence; rudiments of algebraic geometry and algebraic number theory; ramification theory. **Credits:** 3.00

MA 55800 - Abstract Algebra II

Credit Hours: 3.00. A continuation of MA 55700. **Credits:** 3.00

MA 56000 - Fundamental Concepts Of Geometry

Credit Hours: 3.00. Foundations of Euclidean geometry, including a critique of Euclid's "Elements" and a detailed study of an axiom system such as that of Hilbert. Independence of the parallel axiom and introduction to non-Euclidean geometry. **Credits:** 3.00

MA 56200 - Introduction To Differential Geometry And Topology

Credit Hours: 3.00. Smooth manifolds; tangent vectors; inverse and implicit function theorems; submanifolds; vector fields; integral curves; differential forms; the exterior derivative; DeRham cohomology groups; surfaces in E3., Gaussian curvature; two dimensional Riemannian geometry; Gauss-Bonnet and Poincare theorems on vector fields. **Credits:** 3.00

MA 57100 - Elementary Topology

Credit Hours: 3.00. Fundamentals of point set topology with a brief introduction to the fundamental group and related topics, topological and metric spaces, compactness, connectedness, separation properties, local compactness, introduction to function spaces, basic notions involving deformations of continuous paths. **Credits:** 3.00

MA 57200 - Introduction In Algebraic Topology

Credit Hours: 3.00. Singular homology theory; Eilenberg-Steenrod axioms; simplicial and cell complexes; elementary homotopy theory; Lefschetz fixed point theorem. **Credits:** 3.00

MA 57300 - Numerical Solution Of Ordinary Differential Equations

Credit Hours: 3.00. Numerical solution of initial-value problems by Runge-Kutta methods, general one-step methods, and multistep methods; analysis of truncation error, discretization error, and rounding error; stability of multistep methods; numerical solution of boundary- and eigen-value problems by initial-value techniques and finite difference methods.**Credits:** 3.00

MA 57400 - Numerical Optimization

Credit Hours: 3.00. Convex optimization algorithms using modern large-scale algorithms for convex optimization, with a heavy emphasis on analysis including monotone operator, fixed point iteration and duality in splitting methods. The course will cover and focus on the following three parts: smooth optimization algorithms, nonsmooth convex optimization algorithms, and stochastic and randomized algorithms. Permission of department required. Prerequisites: MA 51100 and MA 50400.**Credits:** 3.00

MA 57500 - Graph Theory

Credit Hours: 3.00. Introduction to graph theory with applications. **Credits:** 3.00

MA 58400 - Algebraic Number Theory

Credit Hours: 3.00. Dedekind domains, norm, discriminant, different, finiteness of class number, Dirichlet unit theorem, quadratic and cyclotomic extensions, quadratic reciprocity, decomposition and inertia groups, completions and local fields. **Credits:** 3.00

MA 58500 - Mathematical Logic I

Credit Hours: 3.00. Propositional and predicate calculus; the Gdel completeness and compactness theorem, primitive recursive and recursive functions; the Gdel incompleteness theorem; Tarski's theorem; Church's theorem; recursive undecidability; special topics such as nonstandard analysis. **Credits:** 3.00

MA 59000 - Topics In Mathematics

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as dual-level special topics courses are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

MA 59500 - Topics In Mathematics

Credit Hours: 1.00 to 5.00. Special topics courses including dual-level special topics. Permission of instructor required. **Credits:** 1.00 to 5.00

MA 59800 - Topics In Mathematics

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as dual-level special topics courses are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

MA 61100 - Methods Of Applied Mathematics I

Credit Hours: 3.00. Banach and Hilbert spaces; linear operators; spectral theory of compact linear operators; applications to linear integral equations and to regular Sturm-Liouville problems for ordinary differential equations. Prerequisite: MA 51100, MA 54400. **Credits:** 3.00

MA 61500 - Numerical Methods For Partial Differential Equations I

Credit Hours: 3.00. (CS 61500) Finite element method for elliptic partial differential equations; weak formulation; finite-dimensional approximations; error bounds; algorithmic issues; solving sparse linear systems; finite element method for parabolic partial differential equations; backward difference and Crank-Nicholson time-stepping; introduction to finite difference methods for elliptic, parabolic, and hyperbolic equations; stability, consistency, and convergence; discrete maximum principles. Prerequisite: MA 51400, MA 52300. **Credits:** 3.00

MA 62000 - Mathematical Theory Of Optimal Control

Credit Hours: 3.00. Existence theorems; the maximum principle; relationship to the calculus of variations; linear systems with quadratic criteria; applications. Offered in alternate years. Prerequisite: MA 54400. **Credits:** 3.00

MA 63100 - Several Complex Variables

Credit Hours: 3.00. Power series, holomorphic functions, representation by integrals, extension of functions, holomorphically convex domains. Local theory of analytic sets (Weierstrass preparation theorem and consequences). Functions and sets in the projective space Pn (theorems of Weierstrass and Chow and their extensions). Prerequisite: MA 53000. **Credits:** 3.00

MA 63800 - Stochastic Processes I

Credit Hours: 3.00. (STAT 63800) Advanced topics in probability theory which may include stationary processes, independent increment processes, Gaussian processes; martingales, Markov processes, ergodic theory. Prerequisite: MA 53900. **Credits:** 3.00

MA 63900 - Stochastic Process II

Credit Hours: 3.00. (STAT 63900) Continuation of MA 63800. **Credits:** 3.00

MA 64200 - Methods Of Linear And Nonlinear Partial Differential Equations I

Credit Hours: 3.00. Second order elliptic equations including maximum principles, Harnack inequality, Schauder estimates, and Sobolev estimates. Applications of linear theory to nonlinear equations. Prerequisite: MA 52300. **Credits:** 3.00

MA 64300 - Methods Of Partial Differential Equations II

Credit Hours: 3.00. Continuation of MA 64200. Topics to be covered are Lp theory for solutions of elliptic equations, including Moser's estimates, Aleksandrov maximum principle, and the Calderon-Zygmund theory. Introduction to evolution problems for parabolic and hyperbolic equations, including Galerkin approximation and semigroup methods. Applications to nonlinear problems. Prerequisite: MA 64200. **Credits:** 3.00

MA 64400 - Calculus Of Variations

Credit Hours: 3.00. Direct methods; necessary and sufficient conditions for lower semicontinuity of multiple integrals; existence theorems and connections with optimal control theory. Prerequisite: MA 54400. **Credits:** 3.00

MA 65000 - Commutative Algebra

Credit Hours: 3.00. The study of those rings of importance in algebraic and analytic geometry and algebraic number theory. Prerequisite: MA 55800. **Credits:** 3.00

MA 66100 - Modern Differential Geometry

Credit Hours: 3.00. Topics chosen by the instructor. Prerequisite: MA 55400. **Credits:** 3.00

MA 66300 - Algebraic Curves And Functions I

Credit Hours: 3.00. Algebraic functions of one variable from the geometric, algebraic, or function-theoretic points of view. Riemann-Roch theorem, differentials. Prerequisite: MA 55800. **Credits:** 3.00

MA 66400 - Algebraic Curves And Functions II

Credit Hours: 3.00. Continuation of MA 66300. Topics chosen by the instructor. Prerequisite: MA 66300. **Credits:** 3.00

MA 66500 - Algebraic Geometry

Credit Hours: 3.00. Topics of current interest will be chosen by the instructor. Prerequisite: MA 65000 or MA 66300. **Credits:** 3.00

MA 68400 - Class Field Theory

Credit Hours: 3.00. Ideles, adeles, L-functions, Artin symbol, reciprocity, local and global class fields, Kronecker-Weber Theorem. Prerequisite: MA 58400. **Credits:** 3.00

MA 69000 - Topics In Algebra

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 3.00

MA 69200 - Topics Applied Math

Credit Hours: 1.00 to 3.00. Topics in applied math. Permission of instructor required. **Credits:** 1.00 to 3.00

MA 69300 - Topics In Analysis

Credit Hours: 1.00 to 3.00. Topics in analysis. Permission of instructor required. **Credits:** 1.00 to 3.00

MA 69400 - Topics In Differential Equations

Credit Hours: 1.00 to 3.00. Topics In Differential Equations. Permission of instructor required. **Credits:** 1.00 to 3.00

MA 69600 - Topics In Geometry

Credit Hours: 1.00 to 3.00. Topics in geometry. Permission of instructor required. **Credits:** 1.00 to 3.00

MA 69700 - Topics In Topology

Credit Hours: 1.00 to 3.00. Topics in topology. Permission of instructor required. **Credits:** 1.00 to 3.00

MA 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Materials Engineering

ME 59800 - Mechanical Engineering Graduate Seminar

Credit Hours: 0.00. Acquaint graduate students with a broad spectrum of research in various areas of mechanical engineering. Weekly seminars by invitees/researchers from academia, national labs, or industry. Seminar topics provide a mix of subjects, areas and disciplines, and can involve considerable technical depth, a broad overview and/or historical perspectives. Permission of department required. Typically offered Fall Spring.**Credits:** 0.00

MSE 19000 - Introduction To Materials Engineering

Credit Hours: 1.00. An introduction to materials science and engineering. Emphasis on the "processing, structure, properties, performance" relationships that lead to the development of materials for society's needs. Examples drawn from the major materials classes. **Credits:** 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.**Credits:** 3.00

MSE 23500 - Materials Properties Laboratory

Credit Hours: 3.00. Laboratory experiments involving usage of standard equipment in the measurement of mechanical, microstructural, thermal, electrical, and optical properties. Introduction to computer-aided data analysis. Experiments are carried out with metal, ceramic, and polymeric materials to illustrate property-structure-processing relationships. **Credits:** 3.00

MSE 25000 - Physical Properties In Engineering Systems

Credit Hours: 3.00. Class connects math, science and engineering practice and applications. Presents foundational aspects of engineering problem solving, use of computer math tools for engineering problem solving, basic engineering statics, dynamics and mechanics, group problem solving approaches, and introductory aspects of design and materials selection. **Credits:** 3.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.**Credits:** 3.00

MSE 27000 - Atomistic Materials Science

Credit Hours: 3.00. Introductory course with an atomistic view point on material properties. Three primary class sections: bonding crystallography and statistical mechanics. Bonding topics include introduction to quantum mechanics, emphasis on understanding of metallic, ionic and covalent bonding. Crystallography topics include crystal descriptions and symmetry principles. Statistical mechanics development with application to electronic and thermodynamic properties. **Credits:** 3.00

MSE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MSE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MSE 33000 - Processing And Properties Of Materials

Credit Hours: 3.00. An introduction to the relationships between the processing of materials and their properties. Heat treating, forming, casting, consolidation, and other more material-specific manufacturing processes. Elucidation of the role of phenomena such as heat flow, mass diffusion, nucleation, interfacial tension, elastic and plastic deformation, precipitation, grain growth. **Credits:** 3.00

MSE 33500 - Materials Characterization Laboratory

Credit Hours: 3.00. The principles of analytical methods for characterization of materials for structure and composition; optical microscopy, scanning electron microscopy, X-ray spectroscopy and diffraction, atomic absorption, emission spectroscopy, and mass spectrometry. Laboratory experiments in X-ray spectroscopy, X-ray diffraction, optical microscopy, and scanning electron microscopy. **Credits:** 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.**Credits:** 3.00

MSE 36700 - Materials Processing Laboratory

Credit Hours: 3.00. This laboratory is intended as an intensive experience in processing techniques used for ceramics, metals, and polymers. Sintering of a ceramic, casting and post-processing (work hardening, heat treatment, etc.) of a metal, and preparation and extrusion of a polymer are the suggested processes. The measurements (e.g., powder size, compaction force, temperature, grain size, molecular weight) applicable to the successful processing of the material and the final properties (e.g., hardness, ductility, strength, stiffness) will be emphasized.**Credits:** 3.00

MSE 37000 - Electrical, Optical, And Magnetic Properties Of Materials

Credit Hours: 3.00. An introductory course to provide basic background on the behavior of materials; electronic band structure, electronic and ionic conduction, electronic processes in semiconductors, dielectric, optical, and magnetic properties, and superconductivity; emphasis is on the relation between the properties and the structural aspects of materials. **Credits:** 3.00

MSE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required. **Credits:** 0.00

MSE 38200 - Mechanical Response Of Materials

Credit Hours: 3.00. This course encompasses deformation-based microscopic mechanisms, including dislocation motion, diffusion, and viscoplasticity. Macroscopic mechanical response of metals, ceramics, polymers, and composites will be related to elasticity and plasticity concepts for single crystal, polycrystalline, and amorphous materials. Practical design considerations for deformation will be included as well as an introduction to fracture mechanisms. **Credits:** 3.00

MSE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required. **Credits:** 0.00

MSE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required. **Credits:** 0.00

MSE 39000 - Materials Engineering Seminar

Credit Hours: 0.00. Presentation and discussion of current topics in materials engineering. **Credits:** 0.00

MSE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MSE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MSE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

MSE 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in Materials Engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required. **Credits:** 0.00

MSE 42000 - Structure And Properties Of Organic Materials

Credit Hours: 3.00. This course presents information on the chemical and physical structure and basic material properties of organic materials, including synthetic plastics and specialty polymers and surfactants as well as select natural materials (e.g., proteins, carbohydrates, lipids). Fundamental concepts from organic chemistry will be presented along with descriptions of how the chemical and physical structures of organic molecules directly impact the properties of bulk materials over multiple length scales, from the molecular-level to the macroscale. This course will prepare students to be successful in higher-level polymer and soft material elective courses in materials engineering. **Credits:** 3.00

MSE 43000 - Materials Processing And Design I

Credit Hours: 3.00. Experience in the initiation and execution of a specific materials project or study involving research, processing, and design; a written proposal on the project prepared by the student under the supervision of an individual faculty member; oral progress report at the end of the semester. **Credits:** 3.00

MSE 44000 - Materials Processing And Design II

Credit Hours: 3.00. Continuation and completion of the materials project or study initiated in MSE 43000 and presentation of a written dissertation on the results and conclusions. Competence in technical writing is emphasized in the preparation of the dissertation. **Credits:** 3.00

MSE 44500 - Materials Engineering Systems Analysis And Design

Credit Hours: 3.00. Integration of materials engineering core coursework with statistical, economic and environmental considerations for analysis and design of systems. Analysis of primary materials processing operations using mathematical and statistical models for predicting interactive effects and process optimization. Specification of materials and processes for mechanical designs, incorporating properties assessment and tradeoffs, cost analysis, and performance optimization with multiple constraints.**Credits:** 3.00

MSE 48900 - Ethics In Engineering Practice

Credit Hours: 3.00. Presentation and discussion of common ethical theories, including ethical egoism, legal positivism, utilitarianism, duties and rights, and virtue ethics. Application of these theories to the practice of engineering, including professionalism, codes of ethics, trust and loyalty, confidentiality, whistle blowing, respect for legitimate authority, risk and reliability, and fraud. Examples of application of ethical theory and case studies drawn from across the engineering profession and include discussion of the interrelated technical and ethical issues. **Credits:** 3.00

MSE 49000 - Directed Studies In Materials Engineering

Credit Hours: 1.00 to 3.00. Supplementary individual instruction for students from other engineering schools enrolled in 30000-50000 level MSE courses. Permission of instructor required. **Credits:** 1.00 to 3.00

MSE 49700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Topics vary. Permission of instructor required. **Credits:** 0.00 to 18.00

MSE 49900 - Research In Materials Engineering

Credit Hours: 0.00 to 18.00. Available upon prior approval of, and arrangement with, a faculty research advisor. Permission of instructor required. **Credits:** 0.00 to 18.00

MSE 50200 - Defects In Solids

Credit Hours: 3.00. Structures and interactions of point, line, and planar defects in solids, with emphasis on properties of defects. Generic basis of defect energies and interactions, with reference to specific materials and material classes as examples. Types of point defects found in crystals, their origins, interactions, and motion. Overview of dislocation theory and point-defect/dislocation interactions. Structural aspects of surfaces and interfaces, including point and line defect interactions. **Credits:** 3.00

MSE 50500 - Modeling And Simulation Of Materials Processing

Credit Hours: 3.00. Modeling of various materials processes using finite volume techniques, with an introduction to finite difference and finite element methods. Simulation of microstructural evolution using cellular automata. Links between microscopic and macroscopic modeling. Approximate modeling, uncertainty analysis, and sensitivity analysis as aids to numerical simulation. Limitations on numerical modeling in practical problems. Project work drawn from current problems in materials processing. Offered in alternate years. **Credits:** 3.00

MSE 50800 - Phase Transformations In Solids

Credit Hours: 3.00. Description of stress effects on transforming systems. Development of classical models for nucleation and growth and spinodal decomposition. Application of models to discontinuous precipitation, bainite formation, and martensitic transformations. **Credits:** 3.00

MSE 51000 - Microstructural Characterization Techniques

Credit Hours: 3.00. A broad variety of analytical tools will be presented. The intent is to allow the student to make an educated selection of characterization techniques, or critical analysis of published data, for materials and defect analysis. The techniques will be assessed in terms of the probe type and material response, of what device and specimen requirements are typical, and of what data can or cannot be derived from each type of analysis. **Credits:** 3.00

MSE 51200 - Powder Processing

Credit Hours: 3.00. Processing of engineering materials from powders. Synthesis of metals, ceramics, and polymers in powder form. Characteristics of particulates. Behavior of collections of particles; surface forces, particle agglomeration and dispersion, gelation, particle packing. Consolidation of powders; mechanics of dry flow and compaction, slurry rheology, shaping processes. Densification and microstructural development; geometry, thermodynamics, and kinetics of sintering, liquid-phase sintering, reaction densification, infiltration. Powder processing of composites. **Credits:** 3.00

MSE 51700 - Materials For Hypersonics

Credit Hours: 3.00. This course will include a brief history of hypersonic flight and design, along with a description of the aerothermal environment, to provide motivation for the use of ceramic materials as thermal protection systems and window materials. The classroom approach is to develop a fundamental understanding of materials structure, forming and sintering, and properties (mechanical and thermal) of ceramics, and then apply that knowledge for hypersonic applications such as ultra-high temperature ceramics (UHTCs including ZrB2), ceramic matrix composites (including Cf/SiC, SiCf/SiC, and Carbon/Carbon), and materials requirements for RF and IR radomes and windows. Permission of instructor required.**Credits:** 3.00

MSE 51800 - Failure Analysis

Credit Hours: 3.00. Introduction to failure analysis and prevention. Concepts of materials failure, root cause analysis, manufacturing aspects of failure, techniques for identifying failure, fracture, corrosion, wear, and case studies. Also includes business and entrepreneurship aspects. **Credits:** 3.00

MSE 52000 - Steel And Aluminum Alloys: Processing, Structure And Properties

Credit Hours: 3.00. Steel and aluminum alloy processing will be studied to provide fundamental understanding of how the final properties are influenced by processing from the extraction of metal from ore, through shaping by casting, hot-working and cold-working, and heat treatment for control of microstructure. This understanding will enable the student to go beyond comparisons of standard handbook values and recognize the fundamental metallurgical phenomena leading to differences in performance among the main alloy classifications. By examining the relationships among processing, microstructure, and properties, the course will provide the "know-how" for specifying, designing, and manufacturing with steels and aluminum alloys.**Credits:** 3.00

MSE 52300 - Physical Ceramics

Credit Hours: 3.00. Physical and chemical processes responsible for microstructure development in modern ceramic materials, and the relationship between microstructures and physical properties. The material covered is divided into three parts: solid state processes, including structural defects, diffusion, sintering and grain growth, reaction rates, nucleation and growth, and microstructure development; mechanical and thermal behavior, including deformation, strength, thermal properties, and thermal and compositional stresses; and electrical and magnetic behavior, including electrical conductivity, dielectric properties, and magnetic properties. Offered in alternate years. **Credits:** 3.00

MSE 52400 - Mechanical Behavior Of Polymers

Credit Hours: 3.00. This course will focus on the mechanical properties and behaviors of polymeric materials. The course will utilize fundamental solid and fluid mechanics to understand the response of bulk polymers (solid and liquid, above and below T_g). The impact of deformation rate and temperature on the mechanical response of polymers will be covered in detail. The course will start with an overview of linear elastic mechanics, move to rubber elasticity, and then viscoelasticity (concentrating on time-temperature superposition). We will also cover fluid dynamics and the rheology of non-Newtonian fluids. We will conclude with a section on deformation, yield, and fracture mechanisms (focusing on those phenomena that are unique to polymers such as rubber cavitation, drawing, and crazing). **Credits:** 3.00

MSE 52500 - Struct-Property Relationships Of Engineering Polymers

Credit Hours: 3.00. Structure-property relationships developed for commodity and engineering resins. Focus on connecting bonding and polymer structure (i.e., molecular weight, tacticity, crystallinity as it regards spherulites) to mechanical (yield phenomena and fracture) and thermomechanical behavior (viscoelasticity). Thermal characterization techniques, including DSC, TGA, TMA, and DMTA. Flow of polymer melts related to common melt processing techniques (i.e., extrusion and injection molding). Offered in alternate years. **Credits:** 3.00

MSE 52700 - Introduction To Biomaterials

Credit Hours: 3.00. This course aims to introduce students to Biomaterials concepts: structure, properties, and applications. The class will cover the main classes of materials: metals, ceramics and polymers in the context of their use in medicine as implant materials, drug delivery vehicles, and as tissue engineering scaffolds. Permission of instructor required. **Credits:** 3.00

MSE 53000 - Materials Processing In Manufacturing

Credit Hours: 3.00. Examination of the production/synthesis of engineering materials and the subsequent processing steps required to obtain a desired shape and microstructure. The course covers four major categories of materials processing: primary processing or materials synthesis, solidification processing, deformation processing, and powder processing, and provides specific examples from the processing of polymers, metals, and ceramics. The goal is to connect fundamental principles of materials processing to manufacturing processes. Credit will not be given for both MSE 5300 and MSE 36700. **Credits:** 3.00

MSE 53100 - Quantitative Analysis Of Microstructure

Credit Hours: 3.00. A review will be presented of basic probability theory and statistical analysis, with particular emphasis on terms and definitions of a microstructure. The properties accessible to quantification, the basic stereological relationships and the mathematical foundations, and the microstructural tools needed to quantify the structure will be emphasized. The last one-third of the course will cover applications of quantitative metallography to problems in failure analysis, solidification, heat treatment, phase equilibria, and deformation behavior. Offered in alternate years. **Credits:** 3.00

MSE 53500 - Lean Manufacturing Of Materials

Credit Hours: 3.00. This course provides perspectives on materials processing and product innovation with an economic lens on efficiency and elimination of waste. It includes an historical perspective of manufacturing via the transition from mass to lean production in the automotive industry; and extends manufacturing and product development in context of emerging trends in automation (e.g., control and PAT, I4.0), modular design, supply chain, and sustainability. The class covers lean tools, focusing on value stream analyses and optimization using simulations. As an elective, the course accommodates a range of student interest profiles. It includes both individual and interest-based group assignments. The mix of students adds to the effectiveness of group exercises. A term paper enables individuals to do a deeper dive into specific interests. Overall, the course has shown to be adaptable over a broad range of students representing a variety of departments and professional backgrounds. **Credits:** 3.00

MSE 53600 - Solidification Of Castings

Credit Hours: 3.00. A study of solidification of metal in molds involving the characteristics of liquid-solid phase transformations, sand and metal thermal behavior, macroscopic structures, mechanical properties, and casting defects. **Credits:** 3.00

MSE 54700 - Introduction To Surface Science

Credit Hours: 3.00. Classical thermodynamics of surfaces: surface tension, surface excess properties, and surface segregation. Atomic structure of surfaces and surface reconstruction. Electronic structure of surfaces, surface states, and the electronic structure/properties of interfaces. Adsorption, surface diffusion, and clustering of adsorbates. Chemical reactions at surfaces. Offered in alternate years. **Credits:** 3.00

MSE 54800 - Deposition Processing Of Thin Films And Coatings

Credit Hours: 3.00. Processing and microstructural development of thin films and layered structures. Includes vapor, liquid, and reactive processing, as well as layer modification by annealing and beam techniques. Offered in alternate years. **Credits:** 3.00

MSE 55000 - Properties Of Solids

Credit Hours: 3.00. Critical examination of fundamental concepts of physical properties of solids and the relation of these properties to thermal and mechanical treatments. Approach is atomistic rather than electronic, and an emphasis is made to connect the fundamental knowledge of solid state physics to actual processing of materials and to a qualitative understanding of current research in the area of materials science. Offered in alternate years. **Credits:** 3.00

MSE 55500 - Deformation Mechanisms In Crystalline Solids

Credit Hours: 3.00. Focuses on the mechanisms for deformation and fracture of metal, intermetallic, and ceramic materials, with particular emphasis on high temperature properties. The industrial success of superalloys, dispersion-strengthened alloys, stainless steels, composites, and thermal barrier coatings will serve as the basis for exploring the relationship between composition, microstructure, and component application in high temperature performance. Topics included are alloying effects on dislocation climb and glide, grain boundary and lattice diffusion, and dynamic recrystallization. The interactions between environment and thermal and mechanical cycling also will be considered. Design tools for prediction and evaluation of component life will be investigated in detail, including an exploration of deformation mechanism maps. Offered in alternate years. **Credits:** 3.00

MSE 55600 - Fracture Of Materials

Credit Hours: 3.00. The failure and fracture of materials under applied stress are the focal points of this course, with particular emphasis on the material characteristics that influence fracture. The initial subjects covered in this course will include introductions to linear elastic fracture mechanics (LEFM) and elastic plastic fracture mechanics (EPFM). Subsequently, the strength and toughness of metals, ceramics, and polymers will be explored with regard to processing property relationships and microstructure. Special topics will include fracture mechanism maps, Weibull statistics, toughening mechanisms, and failure analysis. This course is distinct from a course on fracture mechanics in that the fundamental materials aspects of fracture are of paramount importance. Offered in alternate years. **Credits:** 3.00

MSE 55900 - Phase Equilibria In Multicomponent Systems

Credit Hours: 3.00. A detailed examination of the thermodynamics of phase equilibria in multicomponent systems, experimental methods of determining these equilibria by measurements of thermodynamic activity and graphical method of representing the equilibria. This is followed by an examination of theoretical models of the behavior of solutions and an examination of the extent to which observed phenomena can be understood and predicted in terms of the models. Offered in alternate years. **Credits:** 3.00

MSE 56000 - The Production Of Inorganic Materials

Credit Hours: 3.00. Examination of the production of inorganic materials of engineering importance (metals, ceramics, and glasses) from ore concentrates, raw materials, and recycled materials. Individual stages in the extraction, refining, and syntheses processes are examined from the viewpoints of thermodynamics and kinetics, and alternative production routes are compared and contrasted. Topics covered include carbothermic and metallothermic reduction of oxide concentrates, smelting and conversion of sulfide mattes, electrolysis and electrowinning from aqueous solutions and molten salts, distillation and vacuum refining, glass-forming, and the synthesis of carbide and nitride ceramics. Offered in alternate years. **Credits:** 3.00

MSE 56200 - Soft Materials

Credit Hours: 3.00. Soft materials are an important and diverse class of materials that share the common trait of being easily deformable by external stresses, electric or magnetic fields or even thermal fluctuations. These materials are the foundation of important technologies that are used in everyday life including ceramic and pharmaceutical processing (tablet formation), cosmetics (hand creams), cleaning products, foods (milk, mayonnaise) and bio-technologies (drug delivery). The aim of this class is to gain a fundamental understanding of the physical and chemical underpinnings of common soft materials systems and how they are used to engineer technologically relevant materials and structures. **Credits:** 3.00

MSE 56700 - Polymer Synthesis

Credit Hours: 3.00. Analyze properties of polymers and correlate them to chemical structure. Apply methods and mechanisms of polymer chemistry to industrial and laboratory synthesis. Examine the kinetic and design factors that control polymer structures. Offered in alternate years.**Credits:** 3.00

MSE 57000 - Introduction To Materials Modeling And Informatics

Credit Hours: 3.00. This course provides an introduction at the graduate level to theory and methods for simulating the structure and properties of materials. The course will provide a broad initial overview of many atomistic modeling techniques, followed by a detailed study of density functional theory (DFT) over several weeks, then a few lectures on classical molecular dynamics (MD) and Monte Carlo (MC) simulations, and finishing with an introduction to materials informatics techniques which rely on learning from materials data. Students will obtain an essential understanding of quantum and classical theory and become acquainted with practical methods for running DFT, MD and MC simulations, as well as combining such simulations with simple machine learning and data science methods for materials design. Existing and new tools on nanoHUB, access to open-source simulation software, and writing simple Python code will be utilized for all necessary coursework and exercises. Permission of department required.**Credits:** 3.00

MSE 57400 - Sports Engineering And Entrepreneurship

Credit Hours: 3.00. This course provides an introduction at the graduate level to sports engineering and entrepreneurship. Students will be immersed in the state-of-the-art of industry and interact with renown experts in the field. This course is a comprehensive exploration of the key areas of sports engineering (digitalization, equipment and apparel, fan experience, data, etc.) with an emphasis on the future of the industry. The course includes the development of a business plan for a start-up in sports engineering, encouraging students to critically think about where they see opportunities for innovation based on knowledge gained in the course. This is not only for students looking to start their own business, but for any student interested in working in sports engineering field. Permission of instructor required.**Credits:** 3.00

MSE 57500 - Transport Phenomena In Solids

Credit Hours: 3.00. Energetics and kinetics of phase changes in metals and alloys. Nucleation and growth models, with special emphasis on the role of crystal defects. Selected topics in multicomponent diffusion. Offered in alternate years. **Credits:** 3.00

MSE 57600 - Corrosion

Credit Hours: 3.00. Rate-controlling steps in electrode processes; activation, ohmic, and concentration polarization; passivation; potentiostatic studies and alloy design; applications to engineering systems. Offered in alternate years. **Credits:** 3.00

MSE 57700 - Materials Science Of Rechargeable Batteries

Credit Hours: 3.00. This course is aimed at junior/senior undergraduate and graduate students interested on developing an understanding on the Materials Science of Rechargeable Batteries. The focus is on electrochemical materials, its non-idealities (e.g., transport limitations, failure mechanisms), and its application to energy storage devices, such as batteries and fuel cells, particularly for portable electronics and hybrid/electric vehicles. This course will deliver an introduction to basic electrochemistry, principles of electrochemical devices, and electroactive materials as used in such systems. Current trends and directions in the field of battery technology will be outlined. Permission of department required. **Credits:** 3.00

MSE 58100 - Scanning Electron Microscopy Skills

Credit Hours: 1.00. Components and operation of the scanning electron microscope (SEM). Limits to resolution; signals, detectors, and imaging modes; and interpretation of results. Laboratory sessions emphasize the practical operation of the instrument and culminate in a test of student skills. This course must be completed before undertaking any SEM research in the School of Materials Engineering. Weeks 1 - 5. Permission of instructor required. **Credits:** 1.00

MSE 58200 - Transmission Electron Microscopy Skills

Credit Hours: 1.00. Principal components and operation of the transmission electron microscope (TEM). Limits to resolution; imaging and diffraction modes; and interpretation of results. Laboratory sessions emphasize the practical operation of the instrument and culminate in a test of student skills. This course must be completed before undertaking any TEM research in the School of Materials Engineering. Weeks 6 - 10. Permission of instructor required. **Credits:** 1.00

MSE 58300 - Energy-Dispersive X-Ray Microanalysis Skills

Credit Hours: 1.00. Theory of X-ray generation, components and operation of the energy dispersive X-ray spectrometer (EDS); limits to resolution; qualitative, semi-quantitative and fully quantitative analysis; and interpretation of results. Laboratory sessions emphasize the practical operation of the instrument and culminate in a test of student skills. Weeks 11 - 15. Permission of instructor required. **Credits:** 1.00

MSE 58500 - Magnetic Materials: Physical Properties And Applications

Credit Hours: 3.00. This course provides an introduction of the basic physical and structural properties that determine the functionality of magnetic materials and devices. Starting from basic concepts on the physics of magnetism, materials synthesis and device fabrication, the functional requirements of magnetic materials for diverse applications will be discussed. Magnetic material properties depend on the electronic structure of the constituent elements and their electronic interactions. These interactions are controlled by their atomic arrangement, microstructure, defects, and strain fields that distort the local atomic order. Furthermore, the role of reduced dimensionality on the physical and functional properties of nanoscale materials will be discussed.**Credits:** 3.00

MSE 58600 - Experimental Characterization Of Advanced Composite Materials

Credit Hours: 3.00. The characterization of advanced composite materials is a combined lecture/laboratory course in which polymeric composite laminates will be fabricated of carbon fiber epoxy and subjected to classical test methods appropriate to the determination of the anisotropic, thermoelastic properties. Properties measured will include thermal expansion coefficients,

anisotropic elastic constants, biaxial strength properties and interlaminar fracture strengths. The autoclave processing of composite laminates will be discussed and the consolidation, degree of cure and glass transition temperature of the polymeric matrix will be modeled. Microscopic analysis of the composite will be carried out to observe microstructure and measure composition fractions. Lectures will precede each experiment. **Credits:** 3.00

MSE 58900 - Archaeology And Materials

Credit Hours: 3.00. This course provides instruction in the methods and theories used by archaeologists and materials scientists to study ancient and historic technology. The course will focus on the analysis and interpretation of archaeological artifacts and provide opportunities for hands-on learning. Permission of department required. **Credits:** 3.00

MSE 59700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. Permission of instructor required. **Credits:** 0.00 to 18.00

MSE 60000 - Materials Engineering Fundamentals

Credit Hours: 3.00. Fundamental relationships between the internal structure, properties and processing in all classes of engineering materials. Comprehensive coverage spanning physical, chemical, thermal, mechanical, electrical, magnetic, and optical responses. The course is intended for materials researchers from all backgrounds, as well as engineers working in product design, development and manufacturing who seek a deeper understanding of the full spectrum of engineering materials. **Credits:** 3.00

MSE 64000 - Transmission Electron Microscopy And Crystal Imperfections

Credit Hours: 3.00. Theory and application of TEM to problems in materials science and engineering. Principles of electron diffraction and microscopy are reviewed with the emphasis on the relationship between real and reciprocal space. Diffraction theory of imperfect crystals will be introduced. A primary part of the course will be a discussion of image contrasts in terms of atomistic structures of key crystal imperfections, including dislocations and grain boundaries. Experimental applications and image simulations will be included to amplify theoretical concepts. Offered in alternate years. Permission of instructor required.**Credits:** 3.00

MSE 67000 - Atomistic View of Materials: Theory, Modeling And Simulations

Credit Hours: 3.00. In this course students will be introduced to the fundamental physics required to describe materials in terms of electrons and atoms, learn how these processes relate to macroscopic behavior and become familiar with advanced modeling and simulation techniques that enable quantitative predictions. Students will gain hands-on experience with several simulation tools, including ab initio calculations using density functional theory, molecular dynamics simulations and other advanced modeling techniques. Pre-Requisites: BS degree in materials, mechanical, chemical, electrical or aerospace engineering or in physics or chemistry. Permission of department and instructor required.**Credits:** 3.00

MSE 69000 - Seminar In Materials Engineering

Credit Hours: 0.00. Required of all MSE graduate students. **Credits:** 0.00

MSE 69600 - Graduate Professional Practice

Credit Hours: 0.00. Professional practice in Industry. Restrictions: MSE graduate students only. Permission of instructor required. **Credits:** 0.00

MSE 69700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. Prerequisite: two upper-division mathematics courses: one on linear algebra and one on abstract algebra. Permission of instructor required. **Credits:** 0.00 to 18.00

MSE 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

MSE 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Mechanical Engineering

ME 19800 - PMEA Leadership Program

Credit Hours: 1.00. A weekly seminar that includes topics such as leadership, professional skills, teamwork, and the Mechanical Engineering culture. Students will utilize these skills while representing Mechanical Engineering to current and prospective students, alumni, donors, and other visitors to the school. **Credits:** 1.00

ME 19900 - How Stuff Works

Credit Hours: 1.00. An introduction to Mechanical Engineering for First-Year Engineering students interested in exploring a career in ME. The course is student led and involves a mix of presentations from successful mechanical engineers about their chosen careers coupled with fun hands-on experiences related to better understand how everyday products work from a mechanical engineering perspective. A variety of common products are disassembled, evaluated, and reassembled to understand the underlying engineering design and fabrication fundamentals. Little or no mechanical experience is required. **Credits:** 1.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems. **Credits:** 3.00

ME 22001 - Fundamentals Of Energy Materials

Credit Hours: 3.00. This course examines the chemistry and structure of materials and their correlation with various electrochemical properties including their suitability for use in conversion and storage of electrochemical energy, energy related materials, and chemical and renewable energy sources.**Credits:** 3.00

ME 22501 - Mechanical Engineering Laboratory I

Credit Hours: 1.00. Experiments in thermodynamics, parametric design and component fabrication. Typically offered Fall Spring.**Credits:** 1.00

ME 22510 - Energy Engineering Laboratory I

Credit Hours: 1.00. Experiments on testing of thermodynamics, parametric design and electrochemistry.**Credits:** 1.00

ME 24000 - Basic Engineering Mechanics

Credit Hours: 4.00. This course is an introductory mechanics course in energy engineering, covers force systems and couples, equilibrium, centroids, friction, kinematics, kinetics of particles & rigid body, Newton's second law, energy, and momentum methods; equations of motions, and application to machine elements. Permission of department required.**Credits:** 4.00

ME 25001 - Mechanical Engineering Laboratory II

Credit Hours: 1.00. Experiments on data analysis, hands-on programming with devices and fabrication. Typically offered Fall Spring.**Credits:** 1.00

ME 25010 - Energy Engineering Laboratory II

Credit Hours: 1.00. Experiments on testing of thermodynamics, parametric design and electrochemistry.**Credits:** 1.00

ME 26000 - Sustainable Energy

Credit Hours: 3.00. The objective of this course is to familiarize the students with various forms of available energy. The concept of these energies in terms of efficiency, raw material, safety, economy and environmental impact will be introduced. Permission of department required.**Credits:** 3.00

ME 26201 - Design, Ethics, And Entrepreneurship

Credit Hours: 2.00. Basic concepts of the design process. Innovative engineering design of real life applications. Engineering ethics topics. Fundamentals of Entrepreneurship. Design projects focus on open-ended problems. Design modeling, simulation, documentation and communication. Implementation and use of modern computer tools in solving design problems and completing team design projects in the area of Energy Engineering. Typically offered Fall Spring.**Credits:** 2.00

ME 26300 - Introduction To Mechanical Engineering Design, Innovation And Entrepreneurship

Credit Hours: 3.00. The product design process. Development of product design specifications using customer inputs, benchmarking, product/market research and patent review. Concept generation and evaluation using brainstorming, functional decomposition, modeling and decision matrices. Detailed product design including assembly, economic analysis, CAD, and bill of materials. Oral and written design reviews. Key skills developed include teamwork, communication, project planning, innovation, design, and entrepreneurship. **Credits:** 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.**Credits:** 3.00

ME 27200 - Mechanics of Materials

Credit Hours: 3.00. Kinematic and dynamic analysis of linkages and mechanical systems. Analytical and graphical approaches to analysis. Vector loop and relative velocity/acceleration solutions. Design and analysis of cams and gears. Static and dynamic balancing. Design for strength of various machine components. Reliability principles. Design documentation and communication. Laboratory experiments on mechanical design and strength. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems. **Credits:** 3.00

ME 28500 - Industrial Practice I

Credit Hours: 0.00. Professional practice of engineering in industry. Comprehensive written report of this experience required. For cooperative program students only. **Credits:** 0.00

ME 28600 - Industrial Practice II

Credit Hours: 0.00. Professional practice of engineering in industry. Comprehensive written report of this experience required. For cooperative program students only. **Credits:** 0.00

ME 29000 - Global Engineering Professional Seminar

Credit Hours: 1.00. Forum on contemporary issues in the global profession of mechanical engineering. Professionalism and ethics. Interactions with engineering faculty and with professionals outside the University. Quizzes on assigned readings in the areas of globalization, cultural difference and collaborating across cultural boundaries. Individually developed professional profiles describe technical interests and convey awareness of ethical responsibilities in global context. **Credits:** 1.00

ME 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 29601 - Experimental Courses

Credit Hours: 0.00 to 6.00. Experimental classes offered at the freshman or sophomore level on a temporary basis to test the viability of offering the course on a permanent basis. **Credits:** 0.00 to 6.00

ME 29700 - Mechanical Engineering Sophomore Projects

Credit Hours: 0.00 to 6.00. Projects or special topics of contemporary importance can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest. Students submit a summary report. Permission of instructor required. **Credits:** 0.00 to 6.00

ME 30000 - Thermodynamics II

Credit Hours: 3.00. Properties of gas mixtures, air-vapor mixtures, applications. Thermodynamics of combustion processes, equilibrium. Energy conversion, power, and refrigeration systems. **Credits:** 3.00

ME 30800 - Fluid Mechanics

Credit Hours: 3.00. Continuum description, velocity field, fluid statics, manometers, basic conservation laws for systems and control volumes, dimensional analysis. Bernoulli's equation along a streamline and with head losses. Flow over submerged bodies, boundary layers. Viscous flows in pipes, turbomachinery, system performance. One-dimensional gas dynamics. **Credits:** 3.00

ME 30801 - Fluid Mechanics Laboratory

Credit Hours: 1.00. This course is the lab component of an already established ME 30900 Fluid Mechanics (4 cr) course, which is now being split into an ME 30800 (3 cr) Fluid Mechanics lecture course, and the material covered in this new ME 30801 (1 cr) Fluid Mechanical Laboratory. The content of both of these courses remains unchanged. The splitting of the lab from the lecture will enable better enrollment load balancing in the existing ME undergraduate laboratory facilities. Details of this new laboratory are outlined in the appended material below. **Credits:** 1.00

ME 31002 - Fundamentals Of Fluid Mechanics

Credit Hours: 3.00. Continua, velocity fields, fluid statics, basic conservation laws for systems and control volumes, dimensional analysis. Euler and Bernoulli equations, viscous flows, boundary layers, flows in channels and around submerged bodies, and one-dimensional gas dynamics. Typically offered Fall Spring.**Credits:** 3.00

ME 31401 - Fundamentals Of Heat And Mass Transfer

Credit Hours: 3.00. Fundamental principles of heat transfer by conduction, convection, and radiation; mass transfer by diffusion and convection. Application to engineering situations. Typically offered Fall Spring.**Credits:** 3.00

ME 31500 - Heat And Mass Transfer

Credit Hours: 4.00. Fundamentals of heat transfer by conduction, convection, and radiation; mass transfer by convection. Relevance to engineering applications. **Credits:** 4.00

ME 31600 - Fluid Mechanics

Credit Hours: 3.00. Continua, velocity fields, fluid statics, basic conservation laws for systems and control volumes, dimensional analysis. Euler and Bernouilli equations, viscous flows, boundary layers, flows in channels and around submerged bodies, and one-dimensional gas dynamics.**Credits:** 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle. **Credits:** 3.00

ME 32301 - Mechanics Of Materials Laboratory

Credit Hours: 1.00. Experimental methods and techniques employed for the measurement of mechanical properties and evaluation of mechanical structures. Application of mechanics of materials and fundamental concepts to measuring and analyzing mechanical structures. A laboratory design project on mechanical structures. **Credits:** 1.00

ME 32501 - Mechanical Engineering Laboratory III

Credit Hours: 1.00. Experiments on testing of Mechanics of Materials and Fluid Mechanics. Typically offered Fall Spring.**Credits:** 1.00

ME 32510 - Energy Engineering Laboratory III

Credit Hours: 1.00. Experiments on testing of Fluids Mechanics and energy engineering.**Credits:** 1.00

ME 32700 - Engineering Economics

Credit Hours: 3.00. (ECE 32700) Engineering Economics is designed as an overview of economics with a focus on how it relates to the practice of engineering. Topics include interest formulas, rate of return, life cost analysis, depreciation, taxes, and cash flow. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 33000 - Modeling and Analysis of Dynamic Systems

Credit Hours: 3.00. Introduction to dynamic engineering systems; electrical, mechanical, fluid, and thermal components; linear system response; Fourier series and Laplace transform. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 33010 - Modeling And Measurements Of Dynamic Systems

Credit Hours: 3.00. This course will cover the fundamentals of instrumentation, measurement, and dynamic systems modeling. Design, selection, and usage of the instrumentation systems and the interpretation of experimental results are also introduced. Basic concepts of measurements methods, measurement system response, assessment, uncertainty analysis of measured data, sensors, signal conditioning, recording / display devices, digital techniques, instrument interface, and measurement theories on stress and strain, temperature, pressure, fluid flow and velocity will also be covered. Additionally, fundamentals of dynamic systems including mechanical, electrical, and electromechanical systems will be introduced. Laplace transform, block diagram, transient and frequency response of linear first and second order system will be covered as well.**Credits:** 3.00

ME 34001 - Instrumentation And Measurement Systems

Credit Hours: 2.00. Modeling and formulation of differential equations for dynamic systems, including mechanical vibratory systems, thermal systems, fluid systems, electrical systems, and instrumentation systems. Analysis of dynamic systems and measuring devices including transient response and frequency response techniques, mechanical systems, transducers, and operational amplifiers. Consideration of readout devices and their responses to constant, transient, and steady-state sinusoidal phenomena. Calibration and data analysis techniques are introduced. Both analog and digital computation are included. Typically offered Fall Spring.**Credits:** 2.00

ME 34400 - Introduction To Engineering Materials

Credit Hours: 3.00. Introduction to the structure and properties of engineering materials, including metals, alloys, ceramics, plastics, and composites. Characteristics and processing affecting behavior of materials in service.**Credits:** 3.00

ME 34600 - Renewable Energy Systems And Design

Credit Hours: 3.00. This course is designed to introduce the system and design of energy conversion and storage devices for renewable energy sources. Students will first learn about energy sources available on earth including kinetic, solar, and chemical. Next, the course will provide students with a review of the thermodynamic concepts behind energy constant and energy transfer via an energy conversion device. Finally, this course will tie together concepts of renewable energy sources and thermodynamics teaching students about design elements for energy conversion and storage devices, in which renewable energy sources are converted and stored. Permission of Instructor required.**Credits:** 3.00

ME 35001 - Mechanical Engineering Laboratory IV

Credit Hours: 1.00. Experiments on testing of Dynamic Systems, Heat & Mass transfer, and Materials. Typically offered Fall Spring.**Credits:** 1.00

ME 35010 - Energy Engineering Laboratory IV

Credit Hours: 1.00. Experiments on testing of heat and mass transfer, and energy engineering.**Credits:** 1.00

ME 35200 - Machine Design I

Credit Hours: 4.00. Introduction to the principles of design and analysis of machines and machine components. Design for functionality, motion, force, strength, and reliability. Review of fatigue failure theories and analysis of fatigue stresses. Laboratory experience provides open-ended projects to reinforce the design process. **Credits:** 4.00

ME 35400 - Machine Design

Credit Hours: 3.00. Design, analysis, and selection of machine components for fluctuating loading. Application of design fundamentals to mechanical components and integration of components to form systems. Open-ended design projects reinforce the design process. **Credits:** 3.00

ME 35401 - Machine Design Laboratory

Credit Hours: 1.00. Physical experiments on static and fatigue failure of mechanical parts. Application of failure theories to design of mechanical components and systems. Open-ended design projects to reinforce the design process. **Credits:** 1.00

ME 36300 - Principles And Practices Of Manufacturing Processes

Credit Hours: 3.00. Manufacturing processes for engineering materials, both metallic and non-metallic. Fundamentals of manufacturing processes with a "hands-on" laboratory sequence. Analysis and design of processes for various engineering materials and their link to engineering design. Hands-on experiences through laboratory experiments and demonstrations. Not open to students with credit in IE 37000. **Credits:** 3.00

ME 36500 - Measurement And Control Systems I

Credit Hours: 3.00. The fundamentals of dynamic system modeling are reviewed with special reference to measurement systems. Analytical and experimental techniques of general importance in systems engineering are presented, including sensor utilization in feedback control. Engineering measurement fundamentals, including digital and frequency domain techniques noise and error analysis are covered.**Credits:** 3.00

ME 37200 - Design Of Mechanisms

Credit Hours: 3.00. Kinematic and dynamic analysis of linkages and mechanical systems. Analytical and graphical approaches to analysis. Vector loop and relative velocity/acceleration solutions. Design and analysis of cams and gears. Static and dynamic balancing. Design documentation report writing and communication.**Credits:** 3.00

ME 37500 - Measurement And Control Systems II

Credit Hours: 3.00. This course provides an introduction to modeling electrical, mechanical, fluid, and thermal systems containing elements such as sensors and actuators used in feedback control systems. Modeling techniques based on physical laws and principles are used to generate subsystem and system transfer functions. Closed-loop system analysis will include the use of proportional, integral, and derivative elements to control system response. **Credits:** 3.00

ME 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

ME 39600 - Professional Internship II

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit a summary report. **Credits:** 0.00

ME 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required. **Credits:** 0.00

ME 39700 - Selected Topics In Mechanical Engineering

Credit Hours: 0.00 to 6.00. Topics of contemporary importance or of special interest in Mechanical Engineering. Permission of instructor required.**Credits:** 0.00 to 6.00

ME 40600 - Robust Design, Standards And Contemporary Issues

Credit Hours: 1.00. The role of standards, robust design and lifelong learning in engineering design. Application to contemporary issues. Typically offered Fall Spring.**Credits:** 1.00

ME 40700 - HVAC Design

Credit Hours: 3.00. The fundamentals required to design and analyze HVAC systems used in buildings. This includes the fundamentals of the thermodynamics of HVAC systems and buildings, the thermodynamics of moist air (psychometrics), calculating building heating / cooling loads, application of HVAC equipment to buildings, HVAC component analysis, energy reduction strategies. Application to real building designs.**Credits:** 3.00

ME 41300 - Noise Control

Credit Hours: 3.00. Fundamentals of acoustic waves. Psychoacoustics and theories of hearing. Environmental and building acoustics. Measurement methods and common instrumentation. Noise control methods. Machinery noise. Community reaction. Legal aspects. Design-oriented semester project. Course work in differential equations. **Credits:** 3.00

ME 41400 - Thermal-Fluid Systems Design

Credit Hours: 3.00. Application of basic heat transfer and fluid flow concepts to design of thermal-fluid systems. Emphasis on design theory and methodology. Design experience in thermal-fluid area such as piping systems, heat exchangers, HVAC, and energy systems. Design projects are selected from industrial applications and conducted by teams.**Credits:** 3.00

ME 41500 - Energy Systems Engineering

Credit Hours: 3.00. Application of Thermodynamics, fluid mechanics, and heat transfer fundamentals to the design of energy systems. Applications include thermal regulation in buildings, electronic equipment, energy generation, conversion, and storage, manufacturing processes, and combustion processes. Beyond the fundamentals, this course will focus on design and analysis techniques, including analysis of energy costs, economics, and environmental issues. **Credits:** 3.00

ME 41800 - Engineering Of Environmental Systems And Equipment

Credit Hours: 3.00. Design and analysis of systems and equipment used in conditioning buildings. Review of fundamentals in thermodynamics, heat transfer, fluid mechanics, economics, non-linear equation solving, optimization. Analysis of building heating and cooling requirements for design and annual energy use. Design and selection of equipment. **Credits:** 3.00

ME 42501 - Mechanical Engineering Laboratory V

Credit Hours: 1.00. Experiments on testing of Mechanical Measurements and Control Systems. Typically offered Fall Spring.**Credits:** 1.00

ME 42510 - Energy Engineering Laboratory V

Credit Hours: 1.00. Experiments on testing of mechanical measurements, control systems and alternative energy systems.**Credits:** 1.00

ME 43000 - Power Engineering

Credit Hours: 3.00. Rankine cycle analysis, fossil-fuel steam generators, energy balances, fans, pumps, cooling towers, steam turbines, availability (second law) analysis of power systems, energy management systems, and rate analysis. **Credits:** 3.00

ME 43300 - Principles Of Turbomachinery

Credit Hours: 3.00. Unified treatment of principles underlying fluid mechanic design of hydraulic pumps, turbines and gas compressors. Similarity and scaling laws. Cavitation. Analysis of radial and axial flow machines. Blade element performance. Radial equilibrium theory. Centrifugal pump design. Axial compressor design.**Credits:** 3.00

ME 43400 - Gas Turbines For Power And Propulsion

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet, turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component matching and off-design performance. Coursework in thermodynamics and fluid mechanics. **Credits:** 3.00

ME 44000 - Automotive Prime Movers: Green Engines And Clean Fuel

Credit Hours: 3.00. Internal combustion engines (ICE), hybrid engines (HE), fuel-cell engines (FCE), and alternative/renewable fuels. ICEs topics- engines with advanced combustion systems such as clean diesels, direct-injection spark-ignition engines (DISI), and low-temperature combustion (LTC) compression-ignition. HE topics- different components of hybrid engines and the powertrain design. FCE topics- fundamentals of fuel cells and automotive applications. Clean fuel topics- biofuels, hydrogen, and natural gas, as well as, other cleaner fossil fuels for automotive applications. Well-to-wheel energy and cost analysis of prime mover designs/fuels. **Credits:** 3.00

ME 44400 - Computer-Aided Design And Prototyping

Credit Hours: 3.00. Introduction to advanced computer-aided design (CAD) for product design, modeling, and prototyping. Individual use and team-based environment to design and prototype a functional and marketable product. Projects include use of the advanced design tools to produce a working prototype that is manufacturable. Application to design, manufacturing, and analysis. **Credits:** 3.00

ME 44700 - Compressible Flow And Renewable Kinetic Energy

Credit Hours: 3.00. This course is designed to introduce compressible flow, turbomachines and design of kinetic energy conversion and storage devices for wind, wave and tidal renewable energy sources. Students will first learn about compressible flow, turbomachines concepts and kinetic energy sources available on earth. Next, the course will provide students with analysis, design parameters and control renewable kinetic energies.**Credits:** 3.00

ME 45500 - Vehicle Design And Fabrication

Credit Hours: 3.00. Open-ended project course to design and build competitive prototype vehicles. Integration of design concept formulation, engineering analysis and testing, and prototype fabrication. Product development activities in a hands-on setting. Design constraints imposed by manufacturing limitations, funding constraints and market competition. Permission of instructor required.**Credits:** 3.00

ME 45900 - Mechanism And Machine Theory

Credit Hours: 3.00. Introduction to the principles of the analysis and design of mechanisms and machinery. Design for functionality, motion constraints, inertia force effects, and static and dynamic balancing. **Credits:** 3.00

ME 46200 - Capstone Design

Credit Hours: 3.00. Concurrent engineering design concept is introduced. Application of the design is emphasized. Design problems from all areas of mechanical engineering are considered.**Credits:** 3.00

ME 46300 - Engineering Design

Credit Hours: 3.00. Application of the design process to the design of various engineering components and systems. Mathematical modeling in design is emphasized. Design problems from all areas of mechanical engineering are considered. **Credits:** 3.00

ME 47500 - Automatic Control Systems

Credit Hours: 3.00. Controller design in frequency domain with introduction to digital systems and control. **Credits:** 3.00

ME 48200 - Control System Analysis and Design

Credit Hours: 3.00. (MSTE 36000) Classical feedback concepts, root locus, Bode and Nyquist techniques, state-space formulation, stability, design applications. Students may not receive credit for both ECE 38200 and ME 48200. Typically offered Fall Spring.**Credits:** 3.00

ME 48900 - Introduction To Finite Element Analysis

Credit Hours: 3.00. Introduction to finite element analysis with focus on linear elasticity and heat transfer. Matrix analysis and assembly of solutions. Strong form and weak form as a general solution process for differential equations. **Credits:** 3.00

ME 49200 - Technology And Values

Credit Hours: 3.00. The impact of science and technology on personal and societal value systems. The special responsibility of engineers. Practical methods for using human values to guide future technological developments. Societal problems considered: warfare, energy, overpopulation, resource depletion, and environmental degradation. Interdisciplinary approaches stressed. Offered in alternate years. **Credits:** 3.00

ME 49601 - Experimental Courses

Credit Hours: 1.00 to 6.00. Experimental classes offered at the junior or senior level on a temporary basis to test the viability of offering the course on a permanent basis. **Credits:** 1.00 to 6.00

ME 49700 - Mechanical Engineering Projects

Credit Hours: 1.00 to 6.00. Projects or special topics of contemporary importance or of special interest outside the scope of the standard undergraduate curriculum. Interested students seek a faculty advisor in their area of special interest and together prepare a brief description of the work to be undertaken. Permission of instructor required. **Credits:** 1.00 to 6.00

ME 49800 - Research In Mechanical Engineering I

Credit Hours: 0.00 to 6.00. Individual research projects for students with honors classification. Requires prior approval of, and arrangement with, a faculty research advisor. Honors classification. Permission of instructor required. **Credits:** 0.00 to 6.00

ME 49900 - Research In Mechanical Engineering II

Credit Hours: 0.00 to 6.00. Continuation of ME 49800. Requires submission of a written thesis, public presentation, and oral defense of the research project. Honors Classification. Permission of instructor required. **Credits:** 0.00 to 6.00

ME 50000 - Advanced Thermodynamics

Credit Hours: 3.00. The empirical, physical basis of the laws of thermodynamics. Availability/exergy concepts and applications. Properties and relations between properties in homogeneous and heterogeneous systems. The criteria of equilibrium. Application to a variety of systems and problems, including phase and reaction equilibrium. Offered in alternate years. **Credits:** 3.00

ME 50100 - Statistical Thermodynamics

Credit Hours: 3.00. The molecular interpretation of thermodynamic equilibrium. Development of the partition function. Introduction to quantum mechanics and molecular spectroscopy. The Maxwell-Boltzmann formulation of statistical mechanics and applications to ideal gases, solids, radiation, and laser diagnostics. The Gibbs formulation of statistical mechanics and application to real gases. Kinetic theory and applications to transport properties and chemical kinetics. Offered in alternate years. **Credits:** 3.00

ME 50101 - Energy Assessment Of Industrial Processes

Credit Hours: 3.00. The course provides and analyzes methodologies for improving energy efficiency in the manufacturing sector. The manufacturing equipment and processes will be analyzed in terms of energy consumption and optimization. It provides the technical and analytical foundation for students on assessing industrial processes to evaluate measures for optimizing energy efficiency in industrial, electrical, motor drive, compressed air, process heating, process cooling, lighting, space conditioning, combined heat and power systems. This course is designed for students who are interested in energy efficiency. Permission of instructor required. Typically offered Fall Spring.**Credits:** 3.00

ME 50102 - Energy Management Principles

Credit Hours: 3.00. This course provides energy management principles for industrial applications. Various energy management methods, commitments, and strategies for continuous improvement as well as international standards will be analyzed and integrated. This course emphasizes real world applications including: critiquing utility rates structure and assessing costs; characterizing and quantifying energy saving opportunities at industrial facilities; determining investment payback scenarios and considerations. Permission of instructor required. Typically offered Spring.**Credits:** 3.00

ME 50103 - Industrial Energy Assessment: Tools And Applications

Credit Hours: 3.00. This course synthesizes advanced energy efficiency, energy auditing, and energy assessment methods and practices. Several types of industrial audits will be analyzed with respect to the methods, tools (hand and software), and industrial application. Topics include: the audit process for energy, industrial productivity, and waste stream audits; audit components:

energy bill analysis and economic analysis: audit system mechanics related to building envelop, electrical system, HVAC system, waste heat recovery, lighting, cogeneration, and other prevalent industrial systems; and measurement instrumentation issues for each industrial system. Students will enhance learning from a class project, which requires completion of an industrial scale energy audit. Permission of instructor required. Typically offered Spring.**Credits:** 3.00

ME 50104 - Powertrain Integration

Credit Hours: 3.00. The holistic view of powertrain development that includes engine, transmission, and driveline is now well accepted. Current trends indicate an increasing range of engines and transmissions in the future with, consequently, a greater diversity of combinations. This course discusses engines, transmissions, and drivelines in relation to their interfaces with chassis systems. This course also explores various aspects of powertrain integration. Novel concepts relating, for example, to continuously variable transmissions (CVTs) and hybridization as well as approaches to modeling, analysis, and simulation will be discussed. Permission of instructor required. Typically offered Spring.**Credits:** 3.00

ME 50105 - Hybrid And Electric Transportation

Credit Hours: 3.00. This course will cover fundamentals of hybrid electric and battery electric transportation systems with particular emphasis on automotive vehicles. It will cover powertrain configurations of Hybrid Electric Vehicle (HEV), Plug-in Hybrid Electric Vehicle (PHEV), and Battery Electric Vehicle (BEV). The principal element of the powertrain of these vehicles will be discussed: Battery, Electric Motor, Engine, Transmission. This course will cover design concepts for HEV / PHEV and BEV powertrain. Optimal methods of component sizing via appropriate modeling and analysis methodologies will also be introduced. An introduction to power electronic components and microprocessor based controllers for these powertrains will also be given. An in-depth coverage, including optimal energy management, will be given on the energy and power management of HEV / PHEV and BEV powertrain once the design is complete. Introduction of various concepts and terminologies, the state of the art development, energy conversion and storage options, modeling, analysis, system integration and basic principles of vehicle controls will be covered as well. Upon completion of this course, students should be able to follow the literature on these subjects and perform modeling, design, analysis and development work in this field. A field demonstration of a PHEV will be used to further enhance the learning experience in this course. Permission of department reqjuired. Prerequisite: ME 48200/ECE 38200. Typically offered Spring.**Credits:** 3.00

ME 50106 - Industrial Energy Audit

Credit Hours: 1.00 or 2.00. Students enrolled in this course will investigate, evaluate, conjecture, formulate and author during their participation in professional energy audits at multiple manufacturing sites. Students earn one credit during the fall semester and two credit hours during the spring semester of this two-part course. Permission of instructor required.**Credits:** 1.00 or 2.00

ME 50300 - Micro-And-Nano-Scale Energy Transfer Processes

Credit Hours: 3.00. Transport of energy in natural and fabricated micro- and nano-scale structures. Physical nature of energy transport by three carriers-electrons, phonons, and photons. Bulk material properties (e.g., thermal/electrical conductivity) are derived from statistical particle transport theories. Effects of spatial confinement on bulk properties are quantified. Contemporary interdisciplinary engineering applications. **Credits:** 3.00

ME 50400 - Automotive Control

Credit Hours: 3.00. Basic engine operation; lambda control, speed control, knock control, fuel injection timing control, ignition control of SI engines; driveline modeling, automatic transmission control, clutch phasing control; wheel model, complete vehicle model; observers, friction coefficient estimators, tire contact patch force estimators; anti-lock brake control, traction control, yaw stability control; drive-by-wire systems. The distance offering of this course originates from the IUPUI campus, is offered through streaming video via ProEd, and may be made available at the West Lafayette campus.**Credits:** 3.00

ME 50500 - Intermediate Heat Transfer

Credit Hours: 3.00. Heat and mass transfer by diffusion in one-dimensional, two-dimensional, transient, periodic, and phase change systems. Convective heat transfer for external and internal flows. Similarity and integral solution methods. Heat, mass, and momentum analogies. Turbulence. Buoyancy-driven flows. Convection with phase change. Radiation exchange between surfaces and radiation transfer in absorbing-emitting media. Multimode heat transfer problems. **Credits:** 3.00

ME 50600 - Two-Phase Flow And Heat Transfer

Credit Hours: 3.00. Basic two-phase flow equations, homogeneous model, drift-flux model, flow regimes, pressure drop in two-phase flow. Nucleation and bubble dynamics, pool boiling, subcooled boiling, forced convection boiling, critical heat flux in pool boiling, critical heat flux in forced convection boiling, minimum heat flux, film boiling, post dryout heat transfer. Flow instabilities, choking in two-phase flow, film and dropwise condensation. Applications to heat exchangers. Special boiling and two-phase flow problems. Offered in alternate years. **Credits:** 3.00

ME 50601 - Design Optimization Methods

Credit Hours: 3.00. In this course, the general theory of optimization, concepts and problem statement are presented. Methods for minimization of a function of one or n-variables with and without constraints are discussed. Response surface methods and design of experiments are shown to significantly reduce analysis time. Applications using a commercial software package to solve typical engineering design optimization problems are demonstrated. Uncertainty in the design process is introduced. In addition to engineering, the methods studied can be applied to a variety of diverse disciplines such as finance, investment portfolio management, and life sciences. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 50700 - Laser Processing

Credit Hours: 3.00. Introduces background knowledge in laser science and laser technology and fundamentals involved in laser processing and manufacturing. The following topics are discussed: laser fundamentals, industrial laser systems and processes, and the laser-induced thermal, thermo-mechanical, and thermo-acoustic effects. The course also discusses emerging areas of laser applications, such as microscale laser processing, ultrafast laser processing, and the related energy transport analyses. Laboratory and video demonstration sessions are used to enhance the overall understanding of the course materials. Offered in alternate years. **Credits:** 3.00

ME 50800 - Heat Trans In Biological Systems

Credit Hours: 3.00. Introduction to applications of heat transfer in living systems to students who have general interests in biomedical engineering. Fundamental concepts of biology and engineering involved in these applications are introduced. Regulation of blood flow under external thermal stimuli and its effect on heat transfer are discussed. Clinical applications of heat transfer, including cancer therapy and gene therapy. Prerequisite: first course in fluid or aerodynamics. Offered in alternate years. **Credits:** 3.00

ME 50801 - Orthopaedic Tissue Mechanics

Credit Hours: 3.00. Orthopaedic tissues, such as bone, cartilage, tendon and ligament, serve functions that are largely mechanical in nature and that are critical for our health. This course is structure around classical topics in mechanics of materials and their applications in biomechanics and musculoskeletal tissues. Primary emphasis will be on the mechanical behavior of tissues, including elastic and failure properties as well as more advanced topics such as anisotropy, nonlinearity, viscoelasticity, poroelasticity, damage and fatigue. Importantly, the theories used to describe these mechanical properties were originally developed for advanced engineering materials such as fiber composites, polymers, elastomers, hydrogels, etc. Thus, while the theories will be presented in the context of biological materials, potential applications are much broader. Tissue microstructure and its importance to the material properties will be covered. Mechanics of whole bones and implants (composite and asymmetric

beam theories) and the mechanical function of native and artificial joints (contact mechanics, lubrication and wear) may also be discussed, time permitting. Some homework assignments will emphasize the use of experimental data to develop and test theoretical models via nonlinear curve fitting and optimization using Matlab. Students will receive an introduction to tissue mechanics literature to better understand how the concepts presented in class are used in the research setting.**Credits:** 3.00

ME 50900 - Intermediate Fluid Mechanics

Credit Hours: 3.00. Fluid properties. Basic laws for a control volume. Kinematics of fluid flow. Dynamics of frictionless incompressible flow and basic hydrodynamics. Equations of motion for viscous flow, viscous flow applications, boundary layer theory. Wall turbulence, lift and drag of immersed bodies.**Credits:** 3.00

ME 51000 - Gas Dynamics

Credit Hours: 3.00. Flow of compressible fluids. One-dimensional flows including basic concepts, isentropic flow, normal and oblique shock waves, Rayleigh line, Fanno line, and simple waves. Multidimensional flows including general concepts, small perturbation theory for linearized flows and method of characteristics for nonlinear flows. Prerequisite: first course in fluid or aerodynamics. **Credits:** 3.00

ME 51100 - Heat Transfer In Electronic Systems

Credit Hours: 3.00. This course covers both traditional and more innovative methods for heat extraction in electronic systems and the effectiveness and applicability of these methods over a wide range of scales. Special emphasis is given to industry-related applications with experts often attending and presenting material as part of class instruction. **Credits:** 3.00

ME 51201 - Energy Storage Devices And Systems

Credit Hours: 3.00. The basic concepts and components of primary and rechargeable batteries; Faraday's Law: electrode process and kinetics; electric double layer; electroanalytical techniques; battery standard, operation, and other considerations; materials for Li-ion batteries; next generation high energy rechargeable lithium batteries; batteries for electric vehicles and hybrid electric vehicles; and battery for the electrodes, electrolytes, temperature range and operation of different types of batteries. Permission of instructor required. Typically offered Fall Spring.**Credits:** 3.00

ME 51300 - Engineering Acoustics

Credit Hours: 3.00. The simple oscillator. Lumped acoustical elements. Electro-mechanical-acoustical analogies. Wave motion in strings and membranes. Introduction to linear acoustics through derivation of the wave equation and simple solutions. Plane and spherical waves. Acoustic intensity. Plane wave transmission through fluid layers and simple barriers. Sound absorption. Modeling of acoustical sources: monopoles, dipoles, quadrupoles. Mechanisms of sound generation and directionality. Sound propagation in one-dimensional systems (e.g., ducts and mufflers). Introduction to room acoustics. **Credits:** 3.00

ME 51400 - Fundamentals Of Wind Energy

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet, turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component machine and off-design performance. Inspection trip to industrial plan required.**Credits:** 3.00

ME 51800 - Analysis Of Thermal Systems

Credit Hours: 3.00. Modeling and optimization of thermal systems with a focus on heat-pumping equipment, such as vapor compression, absorption, and some advanced heat-pumping cycles. Students combine the use of thermodynamics, heat transfer, fluid mechanics, and numerical methods to develop and apply mathematical models for the analysis and optimization of specific equipment. Offered in alternate years. **Credits:** 3.00

ME 52000 - Imaging-Based Computational Hemodynamics For Cardiovascular Assessment

Credit Hours: 3.00. Image-based computational hemodynamics is a newly-emerged computational technique for non-invasive and patient-specific assessment of cardiovascular diseases based on medical imaging data. In this course, students will learn (1) concepts and principles of cardiovascular circulation in the human body and imaging modalities for cardiovascular diseases; (2) image-based computational modeling methods for quantification of hemodynamics (velocity, pressure, and wall-shear stress) in human vessels based on CT/MRI and Doppler ultrasound imaging data; and (3) computational analysis to assess the severity of cardiovascular diseases. Team projects to non-invasively assess the severity of arterial stenosis in renal, iliac, and coronary arteries via quantification of trans-stenotic pressure gradient and/or fractional flow reserve will provide first-hand experience of how computational modeling and analysis can contribute to medical innovation and advanced precision medicine.**Credits:** 3.00

ME 52200 - Indoor Environmental Analysis And Design

Credit Hours: 3.00. Review of current trend of building and indoor environment design. Theory of thermal comfort, indoor air quality, visual comfort, and acoustic comfort. Introduction of experimental techniques and advanced computer tools for indoor environment analysis and design. **Credits:** 3.00

ME 52301 - Nanosystems Principles

Credit Hours: 3.00. (ECE 52301) This is the introductory course in the nanosystems area. It introduces students to the principles and applications of nanosystems. The course begins with an introduction to the nanometer scale phenomena. It then introduces students to the basic elements resulting in nanosystems: nanoscale materials, processes, and devices. It also provides students with a basic understanding of the tools and approaches that are used for the measurement and characterization of nanosystems, and their modeling and simulation. Moreover, the course covers the applications of nanosystems in a wide range of industries, including information technology, energy, medicine, and consumer goods. The course concludes with a discussion of the societal and economical significance of these applications, including benefits and potential risks. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 52500 - Combustion

Credit Hours: 3.00. Physical and chemical aspects of basic combustion phenomena. Chemical energetics and equilibrium. Basic chemical kinetics, chain reactions, and explosions. Chain and thermal ignition. Homogeneous combustion models. Detonations and deflagrations. Laminar flame speed and flame extinction. The Shvab-Zeldovich formulation of the multicomponent conservation equations. Diffusion flames and droplet combustion. Introduction to turbulent combustion. **Credits:** 3.00

ME 52600 - Spray Applications And Theory

Credit Hours: 3.00. Theory of spray formation and evolution as well as treating a host of spray applications. Topics include drop size distributions, breakup of liquid sheets and ligaments, drop formation and breakup, drop motion and the interaction between a spray and its surroundings, drop evaporation, nozzle internal fluid mechanics, external spray characteristics, nozzle performance, and experimental techniques relevant to these subjects. Applications include: (1) agricultural sprays, (2) consumer products, (3) gas turbine combustion, (4) heat transfer, (5) internal combustion engines, (6) paints and coatings, (7) pharmaceutical and medicinal sprays, and (8) spray drying. Offered in alternate years. **Credits:** 3.00

ME 52601 - Integrated Nanosystems Processes And Devices

Credit Hours: 3.00. (ECE 52601) This course covers processes and devices associated with integrated nanosystems. Integrated nanosystems refer to systems which consist of integrated micro-, meso-, and/or macro-scale parts, and their core components are realized by nano-scale materials, processes, and devices. The course, while covering processes which result in integrated nanosystems, will focus on the theory and operation of select electronic, electromechanical, and biomedical devices which are used for information technology, sensing, medical, and other applications. The lectures will be complemented by hands-on laboratory experience. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 52900 - Sustainable Energy Options And Analysis

Credit Hours: 3.00. This course develops an understanding of the current energy situation and impacts of energy choices on economics and sustainability metrics. A range of different technologies and approaches are presented for meeting future energy needs. Students learn how to assess the potential for alternative energy technologies in terms of economic and sustainability metrics and gain experience in assessing different energy technologies for specific case studies. **Credits:** 3.00

ME 53100 - Characteristics Of Particles, Powders, And Compacts

Credit Hours: 3.00. Familiarize students with the properties and methods used to characterize the mechanical behavior of particles, powders, and compacts, with the intention of using these properties for process and performance design. Students work with a subset of the measurement methods in a laboratory setting. Students successfully completing the course will be able to define and describe the significant properties of particles, powders, and compacts; describe and demonstrate techniques used to measure these properties; and demonstrate how these properties are useful in product and manufacturing performance. Offered alternate years. **Credits:** 3.00

ME 53101 - Particle, Powder, And Compact Characterization

Credit Hours: 2.00. The goal of this course is to familiarize students with the properties and methods used to characterize the physical and mechanical behavior of particles, granules, and compacts with the intention of using these properties for process and performance design. **Credits:** 2.00

ME 53102 - Particle, Powder, And Compact Characterization Laboratory

Credit Hours: 1.00. The goal of this laboratory course is to train students on state-of-the-art laboratory equipment used to measure the mechanical properties of particles, granules, powders, and compacts. **Credits:** 1.00

ME 53300 - Turbomachinery II

Credit Hours: 3.00. Aerodynamic analysis and design of axial flow and radial flow gas compressors and gas turbines. Blade element performance (deflection, profile and shock losses, etc.). Meridional flow analysis for general radial equilibrium. Secondary flow and end-wall boundary layer models. Centrifugal compressor modeling. Unsteady flow, rotating stall, and surge. **Credits:** 3.00

ME 53500 - Design And Modeling Of Fluid Power Systems

Credit Hours: 3.00. Introduction to fluid power technology. Design of hydraulic systems for mobile and industrial application for functionality, cost and energy efficiency. Modeling strategies for fluid power systems. Labs and class projects are given to reinforce the design and modeling learning projects. **Credits:** 3.00

ME 53501 - Introduction To Systems Engineering

Credit Hours: 3.00. This course offers an examination of the principles of systems engineering and their application across the system life cycle. Special emphasis is given to concept exploration, requirements analysis and development, analysis of alternatives, preliminary design, integration, verification, and system validation. The students will use the international space station (on-orbit modules) for practical application of the principles introduced in this course. This is the first of two courses in systems engineering and is a prerequisite to the Systems & Specialty Engineering course. Both courses use the same text book and have a 15% overlap of the text material. Permission of instructor required. Typically offered Fall.**Credits:** 3.00

ME 53502 - Systems And Specialty Engineering

Credit Hours: 3.00. This course offers an examination of the interaction between the principles of systems engineering and the design for specialty engineering areas. The focus of their interactions is viewed across the system life cycle. Special emphasis is given to contributions of the specialties to the essential knowledge development needed for concept exploration, requirements analysis and development, trade-offs and decisions with uncertainty, preliminary design, system integration, verification, and system validation. Students will use the international space station and its support systems for practical application of the principles introduced in this course. Permission of instructor required. Typically offered Fall Spring.**Credits:** 3.00

ME 53503 - Model-Based Systems Engineering

Credit Hours: 3.00. This course focuses MBSE or Model-Based Systems Engineering (i.e. the model-based version of Systems Engineering) with an emphasis on its intelligent implementation using SysML graphical language for systems representation. The other two pillars for implementing MBSE are also covered: a methodology (OOSEM) and a tool (Cameo Systems Modeler). The coursework incorporates theoretical concepts learned in earlier systems engineering classes and is structured around the Object Modeling Group's SysML which is used in modeling systems. SysML's application to real-life projects and businesses to define, track and visualize various aspects of a system is investigated. Case studies from a variety of disciplines - including engineering and healthcare - are used as teaching tools.**Credits:** 3.00

ME 53504 - Systems Driven Product Development

Credit Hours: 3.00. Integrated Model-Based Systems Driven Product (and Process) Development, or SDPD (Systems Driven Product Development) is a methodology and framework for integrating system behavioral modeling with downstream design and manufacturing practices to plan multi-domain, complex, systems. SDPD is an implementation of MBE (Model-based Engineering) which integrates MBSE (Model-based Systems Engineering) and PLM (Product Lifecycle Management) to create the "Digital Twin" of a product/process and support the digital transformation resulting in the digital enterprise of Industry 4.0 (4th Industrial Revolution). The course covers key concepts and definitions pertaining to SDPD including MBSE, PLM, Digital Manufacturing, Digital Twin, Digital Thread, Industry 4.0, Interoperability, Traceability, Validation/Verification, Optimization, and Predictive Analytics. State-of-the-art engineering software tools are taught and used by students to design, optimize and verify multi-domain complex products (or systems) following the SDPD methodology. The graduate level project consists of a comprehensive implementation of SDPD methodology in real-life/industry relevant design and optimization of complex (multi-domain) systems.**Credits:** 3.00

ME 53800 - Air Breathing Propulsion

Credit Hours: 3.00. (AAE 53800) Analysis of operating characteristics of turbojet, turbofan, turboshaft, afterburning, and ramjet propulsion systems. Analysis and design of inlet, diffuser, combustor, compressor, turbine, and nozzle. Component matching and off-design performance. Inlet distortion, nozzle-afterbody, and installation losses. Mission analysis. **Credits:** 3.00

ME 53900 - Introduction To Scientific Machine Learning

Credit Hours: 3.00. Introduction to the fundamentals of predictive modeling for advanced undergraduates and graduate science and engineering students that work in the intersection of data and theory.**Credits:** 3.00

ME 54000 - Internal Combustion Engines

Credit Hours: 3.00. Spark-ignition and compression-ignition engine processes. Study of the fundamentals of turbulence, boundary, layers, liquid atomization, sprays, combustion, and pollutant formation as applied to engines. Engine after treatment. Modeling of engine flows, sprays, combustion, and pollutants. Offered in alternate years. **Credits:** 3.00

ME 54100 - Engineering Design: A Decision-Based Perspective

Credit Hours: 3.00. Multi-objective decision making under risk and uncertainty; Group decision making; Sequential decision making; Model-based and data-driven decision making; Heuristics and biases in design decision making. Applications to engineering design including estimation of customer preferences, simulation-based design, and sustainable design. **Credits:** 3.00

ME 54200 - Introduction To Renewable Energy

Credit Hours: 3.00. An introductory course on renewable energy. Students will learn the fundamental principles of the various renewable energy options and their applications and costs. After taking this course, students will be familiar with the economic and societal impact of renewable energy systems, and be able to participate in the design or selection of renewable energy systems. Typically offered Fall.**Credits:** 3.00

ME 54510 - Advanced Finite Element Analysis

Credit Hours: 3.00. Theory of the course covers various algorithms for linear, non-linear and time-depended problems: equilibrium, propagation, and eigenvalue problems, transient problems, Galerkin method, iterative methods. Applications of the course cover the advanced topics with problems chosen from solid mechanics, heat transfer, and fluid dynamics. Commercial FEA packages ANSYS is applied to solve various engineering problems. Permission of department required. **Credits:** 3.00

ME 54600 - CAD/CAM Theory And Advanced Applications

Credit Hours: 3.00. Theory of CAD/CAM. Geometric modeling for seamless CAD/CAM integration. Solid modeling data structure design/manipulation. CAD and CAM tools with a focus on product development integration and automation. Machining theory, automated CNC machining, and process control. CAD/CAM applications using programming languages and open architecture kernel for modeling. Projects involve CAD/CAM aspects for advanced engineering. Typically offered Fall Spring.**Credits:** 3.00

ME 54800 - Fuel Cell Science And Engineering

Credit Hours: 3.00. Fundamental principles of fuel cell science and engineering (fuel cell reactions, charge and mass transport in fuel cells, water transport management, and materials development in the fuel cells, fuel cell system designs and integrations), current state-of-the-art fuel cell technology and the current technical challenges on the development of fuel cells, codes and standards for safe handling of fuel cells. Permission of instructor required. Typically offered Fall Spring.**Credits:** 3.00

ME 55000 - Advanced Stress Analysis

Credit Hours: 3.00. Studies of stresses and strains in three-dimensional problems. Failure theories and yield criteria. Stress function approach to two-dimensional problems. Bending of nonhomogeneous asymmetric curved beams. Torsion of bars with noncircular cross sections. Energy methods. Elastic stability. Introduction to plates. Students may not receive credit for both ME 55000 and CE 57000. Typically offered Spring.**Credits:** 3.00

ME 55100 - Finite Element Analysis

Credit Hours: 3.00. An introduction to the basic principles of finite element method. Weak variational form of boundary-value problems. Finite element formulation of one- and two-dimensional boundary-value problems. Time-dependent problems. Computer implementation. Examples are chosen from heat transfer, solid mechanics, and fluid mechanics areas. Typically offered Fall.**Credits:** 3.00

ME 55200 - Advanced Applications of Finite Element Method

Credit Hours: 3.00. Various algorithms for nonlinear and time-dependent problems in two and three dimensions. Emphasis on advanced applications with problems chosen from fluid dynamics, heat transfer, and solid mechanics areas. Independent project required. Typically offered Spring.**Credits:** 3.00

ME 55300 - Product And Process Design

Credit Hours: 3.00. Fundamental principles of product and process design to produce a marketable product, develop a preliminary business strategy, and construct an operational prototype. Overview of relevant principles related to product and process design. Market analysis, design parameters, manufacturing prototype plan, production process plan, and a business strategy developed in teams. Broad overview of the entire product development process, including patents, commercialization of new technologies, and the highly interdisciplinary nature of product design through industry guest lectures. Impact of information technologies and the Internet on product design, prototyping, marketing, and customization. Product prototype is required. Design and product software information technology service-type concepts. Permission of instructor required. **Credits:** 3.00

ME 55400 - Intellectual Property For Engineers

Credit Hours: 1.00. Survey of the law of patents, trade secrets, trademarks, and copyrights, with special emphasis on the process of defining inventions broadly and diversely. Obtaining, registering, licensing, and litigation of intellectual property. **Credits:** 1.00

ME 55401 - Design For IP Protection And Commercialization

Credit Hours: 3.00. Present topics of intellectual property (IP) such as copyright, trademark, and trade secret, topics directed to patents including a through introduction to subject matter eligibility, novelty, and non-obviousness as well as topics related to enablement and written description requirements of a patent and how each of these concepts can affect design choices. Learn how to navigate patent databases. Develop patentable designs, as well as designs that do not infringe on existing IP. Learn about technology commercialization from an IP perspective.**Credits:** 3.00

ME 55600 - Lubrication, Friction & Wear

Credit Hours: 3.00. Science, technology, and application of lubricated interacting surfaces in relative motion. Advanced analysis techniques and hands-on exposure to modern experimental methods provide an enhanced understanding of fundamental principles of lubrication, friction, and wear. Basics of design and analysis of machine components operating in the presence of air and liquid lubricants. Rolling fatigue, friction and wear models, and measurement techniques. Offered in alternate years. **Credits:** 3.00

ME 55700 - Design For Manufacturability

Credit Hours: 3.00. Introduction to manufacturing concerns, such as efficient design, producibility, and quality, which must be considered early in the engineering design process. Topics include the product development cycle, manufacturing process selection, tolerancing, quality function deployment (QFD), design for assembly (DFA), quality control techniques, Taguchi's robust design methodology, life cycle engineering, and reliability. Laboratory projects in the area of tolerancing, assembly, and manufacturability are included along with a project from industry in which the students can disassemble, analyze, and redesign a product while obtaining feedback from industry concerning manufacturability. **Credits:** 3.00

ME 55800 - Composite Materials

Credit Hours: 3.00. Portential applications of composite materials. Basic concepts of fiber reinforced composites. Manufacturing, micro- and macro-mechanics, and static analysis of composite laminates. Performance (fatigue and fracture) and their application to engineering design. Typically offered Fall Spring.**Credits:** 3.00

ME 55801 - Composite Materials For Automotive Applications

Credit Hours: 3.00. This course focuses on development of low-cost carbon fiber for automotive applications, mechanical properties of advanced pore morphology foam composites, automotive composite structures for crashworthiness, crashworthiness analysis of composite, hybrid structures consisting of sheet metal and fiber reinforced plastics for structural automotive and design solutions to improve crash-box impact efficiency for racing applications.**Credits:** 3.00

ME 55802 - Design And Analysis Of Materials And Structures In Lightweight Vehicles

Credit Hours: 3.00. This course focuses on materials, their properties, processing technology and design and materials selection issues pertinent to designing lightweight vehicles. It will provide first-hand knowledge and experience of working with these advanced materials. It starts with a broad review of the materials scenario and design considerations for lightweight automotive structures. It is then divided into to major parts: materials, and design and manufacturing.**Credits:** 3.00

ME 55900 - Micromechanics Of Materials

Credit Hours: 3.00. Prediction of the macroscopie behavior of materials from their microstructure and the design of new materials. Microstructure-property relationships between the macroscopie material behavior and microscopic structure. Application to traditional structure as well as to new engineering materials. Adapting emerging constitutive relations into structure analyses. Introduction of this new approach to materials, its applications in predictive analysis tools, and its importance in simulation-based engineering. **Credits:** 3.00

ME 56000 - Kinematics

Credit Hours: 3.00. Geometry of constrained plane motion with applications to linkage design. Type and number synthesis, size synthesis. Path curvature, inflection circle, cubic of stationary curvature. Finite displacements, three and four separated positions. Graphical, analytical, and computer techniques.**Credits:** 3.00

ME 56200 - Advanced Dynamics

Credit Hours: 3.00. Dynamics of multi-degrees-of-freedom mechanical systems. Holonomic and nonholonomic constraints. Lagrange's equations of motion. Hamilton's principle for holonomic systems. Kinematics and kinetics of rigid body motion, including momentum and energy methods. Linearized equations of motion. Classification of vibratory systems - gyroscopic, circulatory forces. Stability of linear systems - divergence and flutter. Applications to gyroscopes, satellite dynamics, etc. Typically offered Spring.**Credits:** 3.00

ME 56300 - Mechanical Vibrations

Credit Hours: 3.00. Review of systems with one degree for freedom. LaGrange's equations of motion for multiple degree of freedom systems. Introduction to matrix methods. Transfer functions for harmonic response, impulse response, and step response. Convolution integrals for response to arbitrary inputs. Principle frequencies and modes. Applications to critical speeds, measuring instruments, isolation, torsional systems. Introduction to nonlinear problems. **Credits:** 3.00

ME 56500 - Vehicle Dynamics

Credit Hours: 3.00. Modeling of wheeled vehicles to predict performance, handling, and ride. Effects of vehicle center of mass, tire characteristics, traction and slip, engine characteristics, and gear ratios on performance. Suspension design. Steady state and transient handling models of four-wheeled vehicles and car-trailer systems to determine oversteer and understeer characteristics, critical speeds, and stability. Multi-degree-of-freedom ride models, including tire and suspension compliance. Computer simulations. Current research topics in vehicle vibration isolation.**Credits:** 3.00

ME 56802 - Ceramic Materials

Credit Hours: 3.00. Fundamental concepts of ceramic materials. Atomic structure, bonding the transport of charged defects and their relationships to conductivity in ceramics, phase diagrams and glasses. Solid state processes, including sintering and grain growth. Physical properties including mechanical, thermal, magnetic, dielectric, and optical properties. Application to energy and biomedical applications. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 56900 - Mechanical Behavior Of Materials

Credit Hours: 3.00. A study of load and environmental conditions that influence the behavior of materials in service. Elastic and plastic behavior, fracture, fatigue, low and high temperature behavior. Fracture mechanics. Failure analysis case studies emphasis on design.**Credits:** 3.00

ME 57000 - Machine Design

Credit Hours: 3.00. Analysis of stresses and deflections due to complicated loading. Investigation of specific design problems through application of theory of elasticity, failure criteria, energy approach, and numerical methods. Individual design project. Typically offered Fall.**Credits:** 3.00

ME 57100 - Reliability Based Design

Credit Hours: 3.00. Basic concepts of probability and random variables. Time-dependent reliability models. Strength-based reliability and interference theory. Weakest-link and fail-safe systems. Extremal distributions. Monte Carlo methods. Maintainability and availability. Fault tree analysis. Quality control and reliability. Offered in alternate years. **Credits:** 3.00

ME 57101 - Probabilistic Engineering Design

Credit Hours: 3.00. This course presents probabilistic methodologies for engineering design under uncertainty. It is intended for students who are interested in statistical/probabilistic methods for engineering analysis and design. The outcomes of the course are 1) an ability to model uncertainties in engineering applications, 2) an ability to performance basic statistics, risk, and reliability analyses, and 3) an ability to integrate probabilistic design with simulations, optimization, Design for Six Sigma, and Design of Experiments. The course is lecture and project based.**Credits:** 3.00

ME 57200 - Analysis And Design Of Robotic Manipulators

Credit Hours: 3.00. Introduction to the analysis and design of robotic manipulators. Topics include: kinematic configurations, forward and inverse position solution, velocity and acceleration, path planning, workspace analysis, force and torque solutions, rigid body dynamics, motors and actuators, robot design, sensors and controls, computer simulation, and graphical animation. **Credits:** 3.00

ME 57201 - Analysis And Design Of Robotic Manipulators

Credit Hours: 3.00. The basic components of robotic systems; selection of coordinate frames; homogeneous transformations; solutions to kinematics of manipulator arms; velocity and force-torque relations; dynamic equations using Euler-Lagrange

formulation; motion planning; obstacle avoidance; controller design using torque method; and classical controllers for manipulators. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 57301 - Air Pollution And Emission Control

Credit Hours: 3.00. This course is designed to integrate the real-world problem solving experience into the course curriculum through project / lab environment. Students will study the air pollution sources and fundamental mechanisms of their impact on the environment and human health, and how automotive emission can be measured and controlled. In particular, measurement of particulate emission deposited in a diesel particulate filter will be studied. Here the students will have a chance to optimally design the sensor components. The course topics are chosen in this context so that they align with the local industry / lab well. Topics in emission control technologies, including sensors, control mechanisms, remedial systems will be taught and combined into the course projects that students will complete over the course of a semester. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 57401 - Additive Manufacturing

Credit Hours: 3.00. During this course, students evaluate the engineering aspects and physical principles of available AM technologies (binder and material jetting, sheet lamination, vat photopolymerization, directed energy deposition, powder bed fusion, and material extrusion technologies) as well as these technologies' most relevant applications and criteria in order to successfully select the AM technology that is best suited for the embodiment of a particular design (material compatibility, interface issues, strength requirements). The topics of this course are grouped into three modules: (1) AM Technologies (2) Design for AM (3) AM Process Planning. During the first module (50% of the course), the historical development of AM is examined and then the underlying physical principles of current AM technologies are evaluated. The second module (25% of the course) focuses on investigating the mathematical principles and technical aspects of design optimization methods for AM (including topology optimization). The third module (25% of the course) incorporates product evaluation (mechanical properties and dimensional accuracy), process optimization, and applications. Students taking this course will create original products using CAD/CAE systems and topology optimization tools. Students will hone skills on image post-processing, segmentation, vectorization, and generation of STL files. Students also will execute tasks using several 3D printers and manipulate different AM technologies including material extrusion, vat photopolymerization, and powder-bed fusion. They will also have the opportunity to visit local industries in the areas of manufacturing, design, and materials.**Credits:** 3.00

ME 57500 - Theory And Design Of Control Systems

Credit Hours: 3.00. Covers the analysis and design of control systems from both a classical and modern viewpoint, with emphasis on design of controllers. Classical control design is reviewed, including both root locus and Bode domain design methodologies. The state space representation is introduced, along with notions of stability, controllability, and observability. State feedback controllers for pole placement and state observers are discussed with emphasis in their frequency domain implications. **Credits:** 3.00

ME 57600 - Computer Control Of Manufacturing Processes

Credit Hours: 3.00. Fundamental elements for manufacturing process control are presented with advanced control theories, modeling and analysis of actuators, controller architecture, interfacing and programming. Emphasis is on computer integrated manufacturing with computer numerical control of machine tools, automation via programmable logic controllers, motion control, process control examples, and manufacturing process monitoring. Hands-on experience is attained through laboratory experiments with state-of-the-art equipment. **Credits:** 3.00

ME 57700 - Human Motion Kinetics

Credit Hours: 3.00. Study of kinetics related to human motion. Review of human anatomy and anthropometric data. Planar and three-dimensional kinematic analysis of gross human motion. Detailed kinematic studies of human joints. Newton-Euler and

Lagrangian methods for joint torques. Muscle force and power analysis. Studies on walking, jumping, cycling, and throwing exercises. **Credits:** 3.00

ME 57800 - Digital Control

Credit Hours: 3.00. Introduction to, and overview of, the field of digital control. Prior knowledge of continuous control techniques is assumed. Topics include mathematical background from residue theory through integral transforms; sampled data systems, including A/D, D/A, and hold properties, aliasing, and Z transforms. Digital control design via continuous, discrete, and state space design techniques. Implementation considerations, including nonlinear effects. Mechanical engineering examples. **Credits:** 3.00

ME 57900 - Fourier Methods In Digital Signal Processing

Credit Hours: 3.00. Fundamentals of signal processing associated with Fourier analyzer systems are presented. Emphasis is on amplitude accuracy and frequency resolution properties necessary for reliable experimental methodologies in system identification, spectrum estimation, and correlation analysis. Deterministic, as well as random, data analyses are presented. Students are required to develop algorithms that significantly expand the utility of Fourier analyzer systems. **Credits:** 3.00

ME 58000 - Nonlinear Engineering Systems

Credit Hours: 3.00. Methods of analysis for nonlinear ordinary differential equations arising in engineering systems. Review of linear systems. Stability concepts. Phase plane methods. Perturbation and averaging methods of analysis. Self-excited and parametrically-excited systems. Relaxation oscillations. Systems with more than one degree of freedom. **Credits:** 3.00

ME 58100 - Numerical Methods In Mechanical Engineering

Credit Hours: 3.00. The solution of problems arising in mechanical engineering using numerical methods. Topics include nonlinear algebraic equations, sets of linear algebraic equations, eigenvalue problems, interpolation, curve fitting, ordinary differential equations, and partial differential equations. Applications include fluid mechanics, gas dynamics, heat and mass transfer, thermodynamics, vibrations, automatic control systems, kinematics, and design. **Credits:** 3.00

ME 58400 - System Identification

Credit Hours: 3.00. Theory and application of System Identification methods. Connecting the world of mathematical models to experimental data - least squares methods and difference equation models. Background in probability and analysis: algebra of random variables, law of large numbers, central limit theorem. The ARMA family of models; mapping physics models to generalized ARMAX forms (linear and nonlinear); mapping the parameter estimation problem to the least squares problem (batch and recursive), and numerical solution techniques. Model (in)validation, optimal identification criteria, experiment design and data preprocessing considerations. Issues of signal-to-noise ratio, persistency of excitation, sampling frequency, data accuracy and data sizes. **Credits:** 3.00

ME 58600 - Microprocessors In Electromechanical Systems

Credit Hours: 3.00. Architecture of microcomputers; operating systems, logic functions, logic circuit design; I/O structure and interfacing; assembly language, manual assembly; software and hardware interrupts; data acquisition, serial and parallel communications; the role of high-level languages. Laboratory experiments on applications to electrical, mechanical, and thermofluid systems. **Credits:** 3.00

ME 58700 - Engineering Optics

Credit Hours: 3.00. Fundamentals of geometrical and physical optics as related to problems in engineering design and research. Characteristics of imaging systems; properties of light sources; optical properties of materials. Diffraction, interference, polarization, and scattering phenomena as related to optical measurement techniques. Introduction to lasers and holography. (Laboratory work can be undertaken for additional credit by special arrangement.). **Credits:** 3.00

ME 58800 - Mechatronics - Integrated Design Of Electro-Mechanical Systems

Credit Hours: 3.00. Electronic and interfacing techniques for design and control of electro-mechanical systems. Basic digital and analog design with applications to electro-mechanical interfacing via hands-on laboratory experience. Commonly used actuators and sensors and corresponding interfacing techniques. Realistic and integrated product development experience provided through a comprehensive final project where working prototypes are built to defined specifications. **Credits:** 3.00

ME 58901 - Optimal Design Of Mechatronic Systems: Robots And Interactive Structures

Credit Hours: 3.00. This course will introduce the fundamentals of transformation of knowledge from art/design to engineering/technology applications. Different variant forms of free form design, in relation to various structural topologies common in engineering and technology applications and related optimization techniques will be discussed. This course will utilize the epistemology of studio practice implicit in the artistic process in order to acquire embodied knowledge. Reasoning innovative process can be taught through the crafting of mechanical structures while experiencing bodily interactions with the nature of materials and tools. Thus, this course introduces a range of design principles and critical studio practice methodologies while working with a range of variable materials and aims to help students grow in their creative thinking. It will integrate mechatronic modeling / simulation, optimal design, and hands-on fabrication of robotic systems (sensors, actuators, electric circuits, and embedded controllers) and interactive structures in a makerspace environment. Permission of instructor required. Typically offered Fall Spring Summer.**Credits:** 3.00

ME 59100 - Mechanical Engineering Project

Credit Hours: 1.00 to 3.00. Individual advanced study in various fields of mechanical engineering. May be repeated for up to 6 credit hours. Students registered for this course must have weekly meeting with the instructor for at least an hour. Permission of department required.**Credits:** 1.00 to 3.00

ME 59500 - Special-Topic Minicourses

Credit Hours: 1.00. A series of one-credit-hour courses on special topics offered as ME 59500, 59500, etc. These special-topic minicourses will provide an opportunity for introducing students to topics of contemporary importance or special interest that fall outside the scope of the curriculum. Information about current offerings may be obtained from the schedule of classes or the mechanical engineering registration deputy. **Credits:** 1.00

ME 59700 - Advanced Mechanical Engineering Projects I

Credit Hours: 0.00 to 6.00. Projects or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest and prepare a brief description of the work to be undertaken in cooperation with their advisor. Permission of instructor required. **Credits:** 0.00 to 6.00

ME 59999 - PMP Professional Development

Credit Hours: 1.00 to 3.00. Projects or special topics in professional development as it relates to ME. Permission of department required.**Credits:** 1.00

ME 60101 - Computational Modeling Of Turbulence

Credit Hours: 3.00. This course consists of three parts. The first part is on the fundamentals of turbulence inlcuding turbulence concepts, statistical description, and Kolmogorov hypothesis. The second part covers major practical modeling concepts and formulations such as direct numerical simulation (DNS), large eddy numercial simulation (LES), and Reynolds averaged Navier-stokes simulation (RANS). The third part is team project related to turbulence computation with applications in environment, industry, biomechanics for visualizing and experiencing turbulence. Prerequisite: Intermediate Fluid Mechanics (ME 50900) or consent of instructor. Typically offered Fall Spring.**Credits:** 3.00

ME 60500 - Convection Of Heat And Mass

Credit Hours: 3.00. Heat and mass transfer in moving fluid media; free, forced, and mixed convection for internal and external flows; differential and integral treatments of boundary layer problems; convection analogies for heat, mass, and momentum transfer; combined heat and mass transfer with chemical reactions; special topics and applications to electronic cooling, materials processing, transpiration and film cooling. Prerequisite: ME 31500. **Credits:** 3.00

ME 60600 - Radiation Heat Transfer

Credit Hours: 3.00. Thermodynamics and physics of radiation and its interaction with interfaces and matter; radiation characteristics of surfaces and radiation properties of solids, liquids, and gases; analysis of radiation exchange between real and idealized surfaces; fundamentals of radiation transfer in absorbing, emitting, and scattering media; interaction of radiation with conduction and convection; remote temperature sensing and applications to selected problems involving combined energy transfer mechanisms. Offered in alternate years. Prerequisite: ME 31500. **Credits:** 3.00

ME 60601 - Optimal Design Of Complex Mechanical Systems

Credit Hours: 3.00. The objective of this research course is to prepare students to address mechanical systems design and innovation challenges through appropriate advanced optimal design methodologies. This course will focus on current design approaches, which are rapidly expanding in research and industrial applications, but are not commonly included in engineering curricula. The course also focuses on the theoretical aspects of multi-objective optimization, global approximation methods (metamodel-based optimization), and applications in mechanical engineering systems. Students of this research course will acquire an understanding of state-of-the-art analysis and optimization tools through hands-on experience and the involvement in research projects. The research experiential learning will prepare students to design innovative mechanical systems and to increase their problem solving capabilities through the use of effective design methodologies. Pre-requisite or co-requisite: ME 50601. Permission of instructor required. Typically offered Fall Spring.**Credits:** 3.00

ME 60800 - Numerical Methods In Heat, Mass, And Momentum Transfer

Credit Hours: 3.00. Governing conservation equations and their classification according to numerical properties. Discretization by Taylor series, weighted residual, and control volume methods. Solution of systems of algebraic equations. Discretization and solution of the convection-diffusion equation. Methods of solving the equations governing fluid flow. Mathematical modeling of turbulence, combustion, and radiation. Prerequisite: ME 50500, ME 58100. **Credits:** 3.00

ME 61000 - Boundary Layer Theory

Credit Hours: 3.00. Fundamentals of continuum fluid mechanics; Navier-Stokes equations. Laminar flow; boundary-layer concept; similarity solutions; transformation methods; integral and finite difference solution techniques for general pressure gradients. Should be preceded by intermediate fluid mechanics. **Credits:** 3.00

ME 61100 - Principles Of Turbulence

Credit Hours: 3.00. Methods of description and basic equations for turbulent flows. Isotropic and homogeneous turbulence, energy spectra, and correlations. Introduction to measurements. Transition theory and experimental evidence. Wall turbulence, engineering calculations of turbulent boundary layers. Free turbulent jets and wakes. Prerequisite: ME 61000. **Credits:** 3.00

ME 61200 - Continuum Mechanics

Credit Hours: 3.00. A unified and exact mathematical treatment of the mechanics of solids and fluids. Cartesian tensor algebra and calculus; stress tensor, principle stresses and invariants; material and spatial coordinates, deformation gradient, strain and stretch tensors; balance of mass, momentum, and energy; constitutive equations of elasticity, hyperelasticity, viscous fluids and viscoelasticity. **Credits:** 3.00

ME 61201 - Continuum Mechanics

Credit Hours: 3.00. This course will cover the formal, consistent and unified mathematical treatment of the mechanics of continuous solids and fluids. Topics covered include the kinematics of deformation, the concept of stress, and the conservation laws for mass, momentum and energy. This is followed by an introduction to constitutive theory with applications to well-established models for viscous fluids and elastic solids. The concepts are illustrated through the solution of tractable initial boundary-value problems.**Credits:** 3.00

ME 61300 - Advanced Engineering Acoustics

Credit Hours: 3.00. An extension of ME 51300. Sound transmission between two media. Acoustic resonators and application to muffler theory. Structural radiation and sound. Acoustical measurements and signal processing: sound intensity, surface intensity, coherence and cepstral techniques. Numerical acoustics: finite element analysis, boundary integral equation analysis and statistical energy analysis. Advanced topics. Prerequisite: ME 51300. **Credits:** 3.00

ME 61400 - Computational Fluid Dynamics

Credit Hours: 3.00. Application of finite difference methods, finite element methods, and the method of characteristics for the numerical solution of fluid dynamics problems. Incompressible viscous flows: vorticity transport equation, stream function equation, and boundary conditions. Compressible flows: treatment of shocks, implicit and explicit artificial viscosity techniques, and boundary conditions. Computational grids. Prerequisite: ME 50900 or ME 58100. **Credits:** 3.00

ME 61500 - Aeroacoustics

Credit Hours: 3.00. (AAE 61500) Quantitative measures of sound (decibel scales, spectra, energetics of acoustic motions, and measurement techniques). The wave theory of sound (basic equations and properties, sound propagation in homogeneous and inhomogeneous media, one-, two- and three-dimensional sound fields and distributed sources). Effects of source movement. Aerodynamic noise generation - acoustic analogy (Lighthill's equation and Ffowcs Williams-Hawkings equation). Introduction to Computational Aeroacoustics (CAA). Noise from turbulent shear flows (jet noise, cavity noise, and noise from flow over objects). Noise from turbomachinery, propellers, and rotors. Prerequisite: ME 30900 or ME 51300 or AAE 51100. **Credits:** 3.00

ME 61700 - Applied Thermal Physics And Molecular Spectroscopy

Credit Hours: 3.00. The fundamentals of statistical mechanics, kinetic theory, and molecular spectroscopy will be taught in order to predict and characterize the behavior of non-equilibrium gases using optical and laser diagnostics. This material will be taught within the context of applications involving combustion, plasmas, propulsion, energetic materials, shock waves and laser radiation. Pre-requisite: Thermodynamics I, ME 20000 or Heat Transfer 1, ME 31500 or Chemistry 1, CHM 12500. **Credits:** 3.00

ME 62000 - Combustion Of Energetic Materials

Credit Hours: 3.00. Students will learn the concepts of how to approach research in the area of Energetic Materials (EM) based on an understanding of the fundamental principles. Students will learn how energetic materials are fabricated, safety used, as well as understand life cycle issues, homogeneous & heterogenous combustion, and advanced energetic material concepts. Multiphase combustion phenomena will be introduced and emphasized. They will apply these concepts to a literature review and group research project, as well as that includes applying thermochemistry and chemical kinetic software. In addition, six hands-on labs are performed. This material will be covered in the context of real-world applications, with an emphasis on energetic materials, combustion, propulsion, explosives, pyrotechnics, and detonation phenomenon. Pre-requisite: ME 52500 or AAE 53900 or consent of instructor. **Credits:** 3.00

ME 62500 - Advanced Combustion

Credit Hours: 3.00. Coupling of the energy, species, and mass conservation equations with the momentum equation. Statistical treatment of turbulence and the problems of interactions of turbulence with chemistry, radiation, and two-phase flows. Critical study of at least 10 seminal and recent contributions in the combustion literature. Offered in alternate years. Prerequisite: ME 52500. **Credits:** 3.00

ME 64000 - Structural Acoustics

Credit Hours: 3.00. Waves in fluids and structures, dispersion relations, sound radiation from structures, radiation efficiency, radiation from concentrated forces, effect of fluid loading on wave propagation, transmission of sound through barriers, effect of panel lining, enclosures, acoustically induced vibration of structures and numerical calculation of fluid-structure interaction. Offered in alternate years. Prerequisite: ME 51300, ME 56300. **Credits:** 3.00

ME 65000 - Computational Fracture Mechanics

Credit Hours: 3.00. Advanced concepts of methods for the analysis of cracks, of crack propagation and damage evolution. Prediction of the macroscopic behavior of structures as it emerges from the presence of defects such as cracks, voids, or delamination. Linear elastic and nonlinear fracture problems. Rate independent and rate dependent problems. Methods in computational fracture mechanics where material separation emerges as an outcome of the boundary value problem. Demonstrations of how mechanical design can take advantage of the methods of computational fracture mechanics by introducing such concepts into structural analyses. Applications of computations in predictive analysis and its importance in simulation-based engineering. Prerequisites: AAE 55800 or ME 48900, or similar courses in finite element analysis or ME 57000 or ME 61200 or AAE 55300, or similar courses on advanced solid mechanics. Recommended but not required: CEE 597-109 or AAE 65400. **Credits:** 3.00

ME 65100 - Advanced Finite Element Method For Solids

Credit Hours: 3.00. This course is designed to teach students advanced finite element techniques for solid mechanics stress and heat transfer analysis. Those include: techniques for modeling beams, plates and 2D/3D continua with material non-linearity, material plasticity and geometric non-linearity; heat transfer; modeling thermos-mechanical systems; frequency domain, time domain and quasi-static solutions; modeling of frictional contact; modeling rigid-bodies. Applications of the modeling techniques taught in this course will be introduced, including: modal analysis; stress-analysis with material and geometric non-linearity; structural dynamics with material and geometric non-linearity; frictional contact problems; metal forming and crash analysis. Prerequisites: ME 55100 and ME 58100. Graduate Standing. Permission of instruction required. Typically offered Spring.**Credits:** 3.00

ME 65500 - Computational Mechanics Of Materials

Credit Hours: 3.00. Prediction of the mechanical behaviors of engineering materials employing computational methods, at atomistic, discrete, and continuum levels. Continuum and discrete models for material deformation in brittle and ductile materials. Atomistic models for fracture in nanomaterials. Applications to engineering structures on the macro-micro and nanoscale.**Credits:** 3.00

ME 66400 - Vibrations Of Continuous Systems

Credit Hours: 3.00. Theory of small oscillations of continuous systems. Love's equations for thin shells, reduction to special cases of shallow shells, plates, beams, etc. Initial stresses; influence of shear; thermal excitation. Initial value problems; forced vibrations; structural damping. The dynamic Green's function, impedance concepts; variational approaches. Experimental procedures, scaling, composite, and stiffened shells. Prerequisite: knowledge of one degree of freedom system vibrations. **Credits:** 3.00

ME 67500 - Multivariable Control System Designs

Credit Hours: 3.00. Fundamentals of the frequency response loop shaping methodology for the analysis and design of robust multivariable control systems will be presented. Emphasis is on suitable extensions of the classical Bode-Nyquist design techniques to systems with not only uncertain parameters but also multiple inputs and outputs. Instrument and environmental signal level constraints on the performance of control systems will be critically evaluated. Students are required to develop ability to handle open-ended design issues involving significant multiobjective performance trade-offs. Prerequisite: ME 57500. **Credits:** 3.00

ME 67700 - Nonlinear Feedback Controller Design

Credit Hours: 3.00. Controller design and analysis of nonlinear feedback systems. Topics include the design of linear/nonlinear feedback controllers. Describing Function (DF) techniques for design, Popov and Generalized Circle Criterion for closed-loop stability, functional analysis and Volterra series approaches, and introduction to existing nonlinear controller design tools. Offered in alternate years. Prerequisite: ME 67500. **Credits:** 3.00

ME 68000 - Bifurcations And Chaos

Credit Hours: 3.00. Basic concepts in stability of systems, nonlinear dynamical systems, and bifurcation theory. Algebraic and geometric techniques for local bifurcation analysis. Models governed by difference, ordinary, and particle differential equations. Examples from mechanical, structural, chemical, and electrical systems. Models of chaotic behavior. Techniques for prediction of chaos. Routes to chaos. Offered in alternate years. Prerequisite: ME 58000. **Credits:** 3.00

ME 68100 - Finite And Boundary Element Methods

Credit Hours: 3.00. The solution of problems in mechanical engineering using the generalized numerical techniques; the finite element method and the boundary element method. Topics include reformulation of partial differential equations into appropriate form for each method. The development and implementation of code and solution of problems. Applications include: acoustics, fluid dynamics, heat transfer, design, mechanics and biomechanics. Prerequisite: ME 58100. **Credits:** 3.00

ME 68700 - Laser Diagnostics For Reacting Flows

Credit Hours: 3.00. The principles of spectroscopic laser diagnostics including absorption, fluorescence, and Raman scattering techniques. Theory of the interaction of laser radiation with atomic and molecular resonances. Lasers and detectors for optical diagnostics. Offered in alternate years. Prerequisite: ME 50100. **Credits:** 3.00

ME 68900 - Adaptive Control

Credit Hours: 3.00. Theory and application of adaptive control of linear systems in both continuous and discrete time domain. Real-time parameter estimation algorithms, direct and indirect adaptive methods, deterministic self-tuning regulators, Lyapunov stability theory, input-output stability, model-reference adaptive control, stability and convergence of adaptive algorithms, robustness, and implementation issues, with laboratory experiments and demonstrations. Offered in alternate years. Prerequisite: ME 57500. **Credits:** 3.00

ME 69000 - Individual Study In Mechanical Engineering

Credit Hours: 0.00 to 18.00. Individual study in advanced areas not currently available through formal course offerings within the University. Course plan must be approved by professor in charge prior to registering for the course. Written report and presentation of a departmental seminar based on material studied are required at the end of the semester. Permission of instructor required. **Credits:** 0.00 to 18.00

ME 69100 - Mechanical Engineering Graduate Seminar

Credit Hours: 0.00. Acquaint graduate students with a broad spectrum of research in various areas of mechanical engineering. Weekly seminars by invitees/researchers from academia, national labs, or industry. Seminar topics provide a mix of subjects, areas and disciplines, and can involve considerable technical depth, a broad overview and/or historical perspectives. **Credits:** 0.00

ME 69600 - Advanced Professional Internship

Credit Hours: 0.00. Advanced professional experience in mechanical engineering. The program is coordinated by the school with cooperation of participating employers. Students submit a summary report. Prerequisite: Master's student standing. **Credits:** 0.00

ME 69700 - Advanced Mechanical Engineering Projects II

Credit Hours: 1.00 to 6.00. Projects or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest and prepare a brief description of the work to be undertaken in cooperation with their advisor. Prerequisite: Doctoral student standing. Permission of instructor required. **Credits:** 1.00 to 6.00

ME 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

ME 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Mechanical Engineering Technology

MET 09000 - Industrial Applications Of Mechanical Engineering Technology

Credit Hours: 1.00 to 3.00. This course includes specialized topics, skills, and applied problem-solving associated with mechanical engineering technology. The level of coverage varies according to the audience. Varied topics may be offered under this title. Does not carry credit toward degree requirements in Mechanical Engineering Technology. **Credits:** 1.00 to 3.00

MET 10200 - Production Design And Specifications

Credit Hours: 3.00. The design, evaluation, and documentation of engineering specifications required of manufacturability and assembly are introduced. Emphasis is on CAD-based details, assemblies, design layouts, equipment installations, and related industrial practices.**Credits:** 3.00

MET 11100 - Applied Statics

Credit Hours: 3.00. Force systems, resultants and equilibrium, trusses, frames, beams, and shear and moments in beams are studied. Typically offered Fall Spring Summer.**Credits:** 3.00

MET 11300 - Mechanics Applications

Credit Hours: 1.00. Concepts of mechanics are applied to structures, machine components, and frames. Stresses and deformations resulting from axial, shear, torsional, and flexural loads are considered. Kinematics and kinetics of motion are introduced. **Credits:** 1.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing. **Credits:** 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing. **Credits:** 3.00

MET 16000 - Analytical And Computational Tools In MET

Credit Hours: 3.00. The skills needed to solve technical problems in mechanical engineering technology are developed. Instruction is given in analytical and computational problem-solving techniques. The electronic calculator, the factor-label method of unit conversions, engineering graphs, and the computer are used to solve problems. Computer emphasis is on spreadsheet analysis, graphics, and generation of technical reports through the integrated use of software packages. Credit will not be granted for MET 16000 and MET 16200 or MET 16300. Typically offered Fall Spring.**Credits:** 3.00

MET 16200 - Computational Analysis Tools In MET

Credit Hours: 1.00. Instruction is given in analytical and computational problem-solving techniques. The electronic calculator, the factor-label method of unit conversions, and engineering graphs are used to solve technical problems in mechanical engineering technology. Credit will not be granted for both MET 16000 and 16200. **Credits:** 1.00

MET 16400 - Computing In Engineering Technology

Credit Hours: 3.00. Fundamental programming concepts are introduced using an interpreted high level programming language. Programming topics such as variable types, arrays, input/output tasks, and conditional and repetition executions will be applied to address technical problems seen in the first two years of engineering technology curricula. **Credits:** 3.00

MET 20400 - Production Drawing

Credit Hours: 3.00. Application of principles of engineering drawing to design layout, detail, and assembly. A 2D PC CAD-centered laboratory. Typically offered Fall Spring Summer.**Credits:** 3.00

MET 21100 - Applied Strength Of Materials

Credit Hours: 4.00. The principles of strength, stiffness, and stability are introduced and applied primarily to mechanical components. **Credits:** 4.00

MET 21102 - Applied Strength Materials Lab

Credit Hours: 1.00. This laboratory course focuses on testing of materials to determine their physical and mechanical properties. Students will verify physical testing through computer analysis using appropriate computer application and prepare reports from data secured from such tests and analysis.**Credits:** 1.00

MET 21300 - Dynamics

Credit Hours: 3.00. Kinematics and kinetics principles of rigid-body dynamics are introduced. Emphasis is on the analysis of bodies in plane motion. **Credits:** 3.00

MET 21400 - Machine Elements

Credit Hours: 3.00. The methods developed in statics, dynamics, and strength of materials are applied to the selection of basic machine components. The fundamental principles required for the selection of individual elements that compose a machine are developed. Selected course topics are included as computer exercises. **Credits:** 3.00

MET 22000 - Heat And Power

Credit Hours: 3.00. Heat/Power is an introduction to the principles of thermodynamics and heat transfer. Basic thermodynamic processes are used to evaluate the performance of energy-based systems such as internal combustion engines, power plants, and refrigeration equipment.**Credits:** 3.00

MET 22010 - Heat-Power Laboratory

Credit Hours: 1.00. Laboratory course that introduces the principles of thermodynamics and heat transfer through energy systems. Permission of department required. **Credits:** 1.00

MET 23000 - Fluid Power

Credit Hours: 3.00. This course consists of the study of compressible and incompressible fluid statics and dynamics as applied to hydraulic and pneumatic pumps, motors, transmissions, and controls. **Credits:** 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing. Typically offered Fall Spring Summer.**Credits:** 3.00

MET 27300 - Study Abroad For Innovators

Credit Hours: 3.00. Students will learn the rich history of inventions and technologies of the country, from early ages to the present. An Engineering Challenge activity provides students an opportunity to design and build a product. Students also learn and experience culture including arts, sports and sporting events, food and drinks, and politics. Lectures and field visits are required. Permission of department required. Permission of instructor required. **Credits:** 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course. **Credits:** 3.00

MET 29000 - Special Topics In MET

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of Mechanical Engineering Technology is provided by MET faculty, subject to MET curriculum subcommittee approval. **Credits:** 1.00 to 3.00

MET 29900 - Mechanical Engineering Technology

Credit Hours: 1.00 to 3.00. Independent project or laboratory work is conducted under the supervision of appropriate MET faculty. Hours and subject matter must be arranged by instructor and approved by MET curriculum subcommittee. Permission of instructor required. **Credits:** 1.00 to 3.00

MET 30200 - CAD In The Enterprise

Credit Hours: 3.00. Theory and practice of management, use and integration of computer-aided design systems, and related engineering tools and practices are studied as they are applied in the industrial enterprise. Emphasis is on course projects.**Credits:** 3.00

MET 31000 - Computer-Aided Machine Design

Credit Hours: 3.00. Introduction to the use of specialized programs to analyze machine components such as shafts, linkages, springs, and cams. Use of finite element analysis to analyze mechanical systems. Typically offered Fall.**Credits:** 3.00

MET 31100 - Experimental Strength Of Materials

Credit Hours: 3.00. Selected advanced topics from the areas of mechanics of materials, structures, stress analysis, and strain measurements are considered. Basic electronic strain gage circuits and instrumentation are presented, with emphasis on transducer applications. **Credits:** 3.00

MET 31300 - Applied Fluid Mechanics

Credit Hours: 3.00. The fundamental principles of fluid mechanics are developed, including properties of fluid, pressure, hydrostatics, dynamics of fluid flow, friction losses, and sizing of pipes. Emphasis is on problem solving.**Credits:** 3.00

MET 31400 - Applications Of Machine Elements

Credit Hours: 3.00. The methods developed in statics, dynamics, and strength of materials are applied to the selection of basic machine components (gears, shafts, bearings, chain and belt drives, clutches and brakes, and motors). **Credits:** 3.00

MET 31500 - Applied Mechanism Kinematics And Dynamics

Credit Hours: 3.00. Displacements, velocities, and accelerations are determined using graphical, semi-graphical, and numerical analyses of rotational and translational motions of common mechanisms such as linkages, cams, gears, screws, and chains as well as their loading.**Credits:** 3.00

MET 31601 - Mechanics Of Machine Design

Credit Hours: 3.00. Concepts of stress and strain analysis under combined loadings are introduced. Analyses emphasize use of von Mises stress, Mohr's circle, static failure theories, and fatigue failure criteria. Structural joints and buckling are also analyzed. **Credits:** 3.00

MET 31700 - Machine Diagnostics

Credit Hours: 3.00. A broad spectrum of equipment behavior is introduced through the study of four major operating parameters: vibration, noise, temperature, and lubrication. Emphasis is placed on measurement and analysis of data using diagnostic instrumentation and techniques found in modern process and manufacturing plants. Typically offered Fall Spring Summer.**Credits:** 3.00

MET 31800 - Applied Room Acoustics

Credit Hours: 3.00. Concepts of acoustics are applied to rooms, automotive applications, speakers, musical instruments, audio electronics, and other areas of interest. Modeling and design skills are developed through applied labs and a semester project. Lectures and mathematical exercises are combined with hands-on labs and a semester project to link abstract and physical concepts. As part of the semester project, a special fee will be assessed to be used towards materials for the semester project. **Credits:** 3.00

MET 32000 - Applied Thermodynamics

Credit Hours: 3.00. Following a review of fundamental concepts, advanced power and refrigeration cycles are analyzed. Applications such as gas mixtures, air-vapor mixtures, and chemical reactions of combustion processes are presented. **Credits:** 3.00

MET 32800 - CAD/CAM For Mechanical Design Drafting

Credit Hours: 3.00. Basic operation of mechanical design-drafting. A PC CAD (2D and 3D) laboratory-centered course introducing the basic steps involved in the geometric design of mechanical parts. This class provides an overview and continues into a detailed investigation of parametric modeling. Parametric modeling concepts will be applied to problems using standard industrial practices. Students must possess a solid background in engineering or technical graphics. Typically offered Fall Spring Summer.**Credits:** 3.00

MET 33400 - Advanced Fluid Power

Credit Hours: 3.00. Hydraulic and pneumatic circuits and their steady state and time-variant behavior as it affects the selection and design of components and systems used in fluid power transmission and motion control are studied. Emphasis is placed on

industrial and mobile applications, but the principles also apply to aerospace, marine, and other fluid power systems. **Credits:** 3.00

MET 33800 - Manufacturing Processes

Credit Hours: 4.00. Course covers basic fabrication and material removal manufacturing processes. Areas studied include casting, forging, material joining, forming, basic metal removal mechanisms, automated manufacturing processes, dimensional metrology for quality control and manufacturing process planning. The course emphasizes the selection and application of the various manufacturing processes. Permission of department required. Typically offered Fall Spring.**Credits:** 4.00

MET 34500 - Welding Processes

Credit Hours: 3.00. Welding processes, equipment, and weldments are studied. An in-depth look is taken into welding processes, welding problems, quality control, inspection methods, welding filler metals, welding equipment, and weldment design. **Credits:** 3.00

MET 34600 - Advanced Materials In Manufacturing

Credit Hours: 3.00. Metals, polymers, ceramic, and composite materials are studied. Crystal structure, molecular behavior, and the effects of various processes on material properties are considered. Course emphasizes the development and control of material properties to meet engineering requirements and specifications. **Credits:** 3.00

MET 34800 - Engineering Materials

Credit Hours: 4.00. An overview of structures, properties and applications of metals, polymers, ceramics, and composite materials is presented. Problem-solving skills are developed in material selection, evaluation, measurement, and testing. Laboratory activities include testing various properties of different materials, and the selection of materials for engineering application. Permission of department required. Typically offered Fall Spring.**Credits:** 4.00

MET 34900 - Stringed Instrument Design And Manufacture

Credit Hours: 3.00. Concepts, knowledge, and skills in experimental mechanics, production processes, and design are integrated to manufacture a working musical instrument. Production concerns such as fixture design, process variability, and validation testing comprise key course elements.**Credits:** 3.00

MET 35000 - Applied Fluid Mechanics

Credit Hours: 3.00. The fundamentals of fluid mechanics including properties of fluid, pressure, hydrostatic force on submerged areas; kinematics and dynamics of fluid flow; friction losses and sizing of pipe. Typically offered Spring.**Credits:** 3.00

MET 36000 - Heating, Ventilating, And Air-Conditioning

Credit Hours: 3.00. A study of heat losses, heat-producing equipment, and cooling equipment in addition to the design of the direct systems. Includes controls and cost estimating for commercial, industrial, and residential systems. Codes and standards are emphasized throughout the course. Typically offered Spring.**Credits:** 3.00

MET 38200 - Controls And Instrumentation For Automation

Credit Hours: 3.00. Study of the procedures and techniques essential to industrial measurement and transmission of data is provided in the areas of microprocessor control, process control, and automated testing. Concepts of hysteresis, repeatability, weighted signals, span, suppression, range, and closed loop control are emphasized. Typically offered Fall Spring Summer.**Credits:** 3.00

MET 39200 - Laboratory Assistant In Engineering Technology

Credit Hours: 0.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Intended for upper division students. Course content meets the MET Professional Experience requirement. Permission of department and instructor required. **Credits:** 0.00 to 3.00

MET 40000 - Mechanical Design

Credit Hours: 3.00. Theory and practice in mechanical design are presented. Modern design methodologies will be studied. The integrative methods discussed in this course reflect the current industry trend to perform product design and development in cross-functional teams. Emphasis is on multiple open-ended projects. **Credits:** 3.00

MET 40100 - Capstone Projects I

Credit Hours: 3.00. This course deals with the planning for capstone projects. Methods to develop engineering requirements to meet project needs and formal design techniques are studied. Planning and design alternatives to meet cost, performance, and user-interface goals are emphasized. System tests and measurements are considered. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. **Credits:** 3.00

MET 40200 - Capstone Projects II

Credit Hours: 3.00. This is the second of two courses in a capstone project sequence. Project management and system engineering methods are applied to solving an engineering problem. Permission of instructor required. **Credits:** 3.00

MET 41100 - Introduction To The Finite Element Method

Credit Hours: 3.00. The finite element method is introduced, with emphasis on modeling and interpretation of results. Linear static problems are solved using commercial FEA software, and FEA results are verified through laboratory tests and/or theoretical calculations. Topics include trusses, frames, plane stress/strain, torsion, 3D structures, buckling, and natural frequency/mode shape analyses. **Credits:** 3.00

MET 41400 - Design Of Mechanical Projects

Credit Hours: 3.00. Application of the fundamental principles of mechanical, hydraulic, and electrical technology to the design of mechanical systems. Discussion of the design process and continuation of topics in the design of machine elements. A semester design project is required. Typically offered Spring.**Credits:** 3.00

MET 42100 - Air Conditioning And Refrigeration

Credit Hours: 3.00. Heat gains and losses, heat-producing equipment, cooling, and refrigeration equipment are studied. System design is presented, including controls and instrumentation for commercial, industrial, and residential systems. **Credits:** 3.00

MET 42200 - Power Plants And Energy Conversion

Credit Hours: 3.00. The theories and skills learned from prerequisite coursework are applied to the analysis and design of power plants and their systems and to selected technologies of energy conversion. Industrial procedures and methods are emphasized. **Credits:** 3.00

MET 42600 - Internal Combustion Engines

Credit Hours: 3.00. Introduces the operating principles of internal combustion engines with emphasis on performance, efficiency, and emissions. Students will evaluate engine performance through geometric, kinematic, and thermodynamic analysis. Introduces advanced thermodynamic cycles and trends in internal combustion engine technology. **Credits:** 3.00

MET 43200 - Hydraulic Motion Control Systems

Credit Hours: 3.00. Hydraulic feedback motion control systems, types, and applications are studied. Simulation and performance of closed loop control systems with single and multiple signal paths are emphasized. Dynamic system performance is predicted and evaluated. System parameters including accuracy, response speed, fluid compressibility effects, load disturbances, and nonlinear behavior of the components are studied. **Credits:** 3.00

MET 43600 - Pneumatic Motion Control Systems

Credit Hours: 3.00. The application of pneumatic motion control systems to industrial motion control and robotics is studied. Circuit design with control logic of both fluid and electronic types is stressed, as applied to pneumatic point-to-point and proportional controls. Control designs are implemented, tested, and evaluated in the laboratory. **Credits:** 3.00

MET 44200 - Plastics Manufacturing Systems

Credit Hours: 3.00. Basic control theory, heat transfer, machine design principles, and basic polymer science are applied to analysis and design of polymer manufacturing systems. Emphasis is placed on thermoplastics processes such as extrusion and injection molding. Projects include design of new machinery, major renovations of existing processes, and automation of processes. **Credits:** 3.00

MET 44301 - Joining Processes

Credit Hours: 3.00. Topics cover joining technologies such as fastening, welding, brazing/soldering, adhesive, and diffusion bonding processes of metals, ceramics, plastics, and composites. The materials, processes, destructive and non-destructive evaluation, and design aspects of these technologies as well as current production practices will be presented. Emphasis will be placed on identification and optimization of key processing parameters. Students will be exposed to commonly used technologies, equipment, and methods for joint design, formation, testing, and optimization to better understand key parameters and process variables, and their influence on optimum joint designs. **Credits:** 3.00

MET 44400 - Applied Metallurgy

Credit Hours: 3.00. Metals used in common engineering applications are studied to determine how their properties are achieved. Photomicrographic and other methods are employed to investigate the alloying, hotworking, coldworking, and heat treating processes of these metals. Detection, identification, and diagnosis of metal failure are included. **Credits:** 3.00

MET 44500 - Applied Metalcasting

Credit Hours: 3.00. This course applies metalcasting principles from concept through final product. Students design and optimize essential elements of casting systems using both simulation and fabrication methods and testing.**Credits:** 3.00

MET 45100 - Manufacturing Quality Control

Credit Hours: 3.00. (MFET 45100) Quality control practices used in manufacturing industries; management, statistical control charts, reliability, sampling plans, economics, computer methods, and test equipment are presented and applied. Credit will not be granted for both MET 45100 and MFET 45100 . **Credits:** 3.00

MET 45200 - Advanced GD&T Concepts Applied To Product Quality

Credit Hours: 3.00. This course explores the theory and application of Geometric Dimensioning and Tolerance (GD&T) to measurement systems and the programming necessary to insure product quality. **Credits:** 3.00

MET 48200 - Mechatronics

Credit Hours: 3.00. Fundamental concepts and applications of practical mechatronics are presented, with emphasis on product design, systems integration, and functional relationships between mechanical structure, sensor data, precision actuators, power resources, embedded microcontrollers, control logic, and drives. Students gain hands-on experience with mechatronics components and measurement equipment which is applied in a team-based design-build mechatronics system project. Typically offered Fall Spring Summer.**Credits:** 3.00

MET 49000 - Special Topics In MET

Credit Hours: 1.00 to 3.00. Group instruction in new or specialty areas of mechanical engineering technology is provided by MET faculty, subject to MET curriculum subcommittee approval. Hours, subject matter, and credit to be arranged by faculty. **Credits:** 1.00 to 3.00

MET 49900 - Mechanical Engineering Technology

Credit Hours: 1.00 to 6.00. Independent project or study of a special topic is conducted under the supervision of appropriate MET faculty. Hours and subject matter must be arranged with the instructor and approved by the MET curriculum subcommittee before enrolling in the course. Permission of instructor required. **Credits:** 1.00 to 6.00

MET 50300 - Applied Optimization

Credit Hours: 3.00. This course will introduce technology graduate students and senior undergraduates to the basic concepts of optimization methods with particular emphasis on applications in product and process design. Unconstrained nonlinear problems will be presented and solved using steepest descent and conjugate directions. Constrained problems will be solved using exterior penalty functions. Permission of department required. **Credits:** 3.00

MET 50700 - Organizational Environmental Quality

Credit Hours: 3.00. The principles of organizational environmental quality characterization, regulatory management, and engineering control will be covered. The health effects realized by significant exposures to potential indoor and outdoor organizational environmental pollutants from all media types (water, soil, air, artifact) will be elucidated. A special emphasis will be placed on how to develop a sound foundation for designing appropriate engineering control technologies such as ventilation and filtration. Permission of department required. **Credits:** 3.00

MET 51500 - Mechanics For Engineering And Technology

Credit Hours: 2.00. Evaluation of static and dynamic systems through the application of mechanics principles. Course will focus on aircraft applications and associated human factors. Topics to be covered include analysis of force equilibrium, kinematics with constant and varying acceleration, kinetics, work, energy, impulse and momentum. **Credits:** 2.00

MET 52700 - Technology From A Global Perspective

Credit Hours: 3.00. Introduction to the challenges faced by the practicing technologist when working and interacting with international technical personnel, both here and abroad, including history, standards, education, and practice of technology outside the United States. Permission of department required. **Credits:** 3.00

MET 53000 - Facilities Engineering Technology

Credit Hours: 3.00. A study of the application of the engineering sciences and technology to the solution of problems associated with mechanical and electrical systems in buildings. Emphasizes commercial and industrial facilities. Identifying energy conservation measures for both mechanical and electrical systems and evaluating their economic impact are an important focus of the course. **Credits:** 3.00

MET 53500 - Optimization Of Metalcasting Design

Credit Hours: 3.00. The course focuses on optimal design of metalcastings to fit structural requirements (applied loads) and to assure sound manufacturability (castability). Students are expected to learn the general principles of design optimization through hands-on laboratory exercises based on the application of finite element and computational fluid dynamics software. **Credits:** 3.00

MET 54600 - Industrial Applications Of Computer Integrated Manufacturing

Credit Hours: 3.00. A study of the development of CIM (computer integrated manufacturing) from the application of basic automation to a fully integrated system for the operation of the business enterprise. Emphasis is placed on the technology, systems, and human resources, which are integrated to accomplish the objectives of the company. Permission of instructor required. **Credits:** 3.00

MET 54900 - Micro And Nanomachining

Credit Hours: 3.00. Micro and nanomachining introduces technology students of many disciplines to discover how machining processes enable the development of MEMS and NEMS products and services. The focus of this course is to develop an understanding of machining processes at the micro and nanoscales. **Credits:** 3.00

MET 58100 - Workshop In Mechanical Engineering Technology

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education. **Credits:** 0.00 to 8.00

MET 59000 - Special Problems In Mechanical Engineering Technology

Credit Hours: 1.00 to 6.00. Independent study of a special problem under the guidance of a member of the staff. Does not substitute for either M.S. thesis or M.S. project credit. Permission of instructor required. **Credits:** 1.00 to 6.00

MET 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of instructor required. **Credits:** 1.00 to 3.00

MET 64500 - Design And Control Of Rehabilitation And Assistive Robots

Credit Hours: 3.00. This course focuses on studying the fundamentals of the design and control of rehabilitation and assistive robots and evaluating their performances. Topics in multiple areas, including robotics, biomechanics, controls, and mechatronics, are included in this course. Specifically, the students study various applicable control methods, including impedance control for the physical interaction of humans and robots. Additionally, the students conduct gait experiments and analyze the data to determine the gait parameters relevant to the design of lower leg assistive and rehabilitation robots, including human joint impedance. Supportive topics such as user intent recognition and relevant instrumentation are also discussed. Prerequisites: MFET 44200 or ECE 56900 or ME 57200.**Credits:** 3.00

MET 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Medicinal Chemistry and Molecular Pharmacology

MCMP 49000 - Special Topics

Credit Hours: 1.00 to 3.00. A course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest, utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required. **Credits:** 1.00 to 3.00

MCMP 51400 - Biomolecular Interactions: Theory And Practice

Credit Hours: 1.00 to 4.00. Theory and applications of biophysical and bioanalytical methods for the identification and qualification of biological and pharmaceutical samples. Methods to be discussed include chromatography, electrophoresis, optical spectroscopy, mass spectrometry, electrochemical methods, radiochemical analysis, ultracentrifugation, calorimetry and surface plasmon resonance. Physical measurements, such as binding equilibrium, kinetics and macromolecular structure will be discussed. While fundamentals of each technique will be discussed, a major focus will be on the application and integration of presented methods for the analysis of biological problems. The course will be organized into four general topic areas around the theme of medicinal analysis, and variable credit will be available based on a student's interest in the four topic areas (i.e., 1 credit per topic area). Students should register for 1 credit hour, and the variable credit option will be discussed and determined at the first class period. Permission of instructor required. **Credits:** 1.00 to 4.00

MCMP 54400 - Drug Classes And Mechanisms

Credit Hours: 3.00. The course will integrate basic principles of medicinal chemistry and pharmacology to achieve an understanding of drug mechanisms as applied to autonomic/endocrine, cardiovascular/renal, CNS, and chemotherapy/infectious diseases. The course will apply concepts from organic chemistry, biochemistry, anatomy, physiology, and principles of drug action to describe how drugs are used to treat the symptoms and causes of disease.**Credits:** 3.00

MCMP 57000 - Basic Principles Of Chemical Action On Biological Systems

Credit Hours: 3.00. Detailed description of modern pharmacology with emphasis on the mechanism of drug action and approaches used to understand their therapeutic and toxic effects. Topics include receptor theory and signal transduction,

pharmacokinetics and pharmacogenetics with emphasis on current concepts in molecular pharmacology. Permission of instructor required. **Credits:** 3.00

MCMP 59800 - Introduction To Research

Credit Hours: 1.00 to 3.00. Introduction to research in synthetic and analytical medicinal chemistry, pharmacognosy, and natural products under the direction of a member of the graduate faculty. Permission of instructor required. **Credits:** 1.00 to 3.00

MCMP 61700 - Molecular Targets: Neuro Function And Dysfunction

Credit Hours: 2.00. The application of basic scientific principles from medicinal chemistry and molecular pharmacology, and new discoveries in biology, to the development of new drugs to treat psychiatric disorders and diseases of the central nervous system. Important examples of drug targets, and small molecules (either currently approved drugs or those under investigation) that target them, are discussed. Classes of drug target examples discussed include: G protein-coupled receptors, neurotransmitter transporter proteins, and ion channels. Processes of neurosecretion and neurodegenerative processes will also be discussed, as well as target validation and examples of the use of genetic models to identify CNS targets. Prerequisites: MCMP 57000. This course is offered even numbered years. **Credits:** 2.00

MCMP 61800 - Molecular Targets: Cancer

Credit Hours: 2.00. The application of basic scientific principles from medicinal chemistry and molecular pharmacology, and new discoveries in biology, to the development of new anti-cancer drugs. Important examples of drug targets and small molecules (either currently approved drugs or those under investigation) that target them, are discussed. Classes of drug targets discussed include: kinases, small monomeric G proteins, prenyltransferases, transcription factors, nuclear receptors, cell cycle proteins, cytoskeletal proteins, and topoisomerases. Prerequisites: MCMP 57000. **Credits:** 2.00

MCMP 62500 - Grant Writing

Credit Hours: 1.00. Strategies for preparation of grant proposals; generating ideas for proposals and peer review. Lecture and laboratory periods will alternate each week (i.e., lecture week one, laboratory week two). Permission of department required. **Credits:** 1.00

MCMP 69000 - Special Topics In Medicinal Chemistry And Molecular Pharmacology

Credit Hours: 0.00 to 6.00. Special topics, projects, or laboratory exercises in selected areas of medicinal chemistry and molecular pharmacology. Permission of instructor required. **Credits:** 0.00 to 6.00

MCMP 69600 - Seminar In Medicinal Chemistry And Molecular Pharmacology

Credit Hours: 0.00 or 1.00. Faculty and student participation in discussion of current research and developments in synthetic medicinal products, quality control, instrumentation, biosynthesis, and structure elucidation of natural products. **Credits:** 0.00 or 1.00

MCMP 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

MCMP 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Medieval and Renaissance Studies

MARS 22000 - Introduction To Medieval And Renaissance Studies

Credit Hours: 3.00. An introduction to the interdisciplinary study of the Middle Ages and Renaissance. **Credits:** 3.00

MARS 42000 - Medieval And Renaissance Studies Seminar

Credit Hours: 3.00. An interdisciplinary seminar in some aspect of medieval and Renaissance studies. Permission of instructor required. **Credits:** 3.00

Military Science and Leadership

MSL 10100 - Introduction To The Army

Credit Hours: 1.00 to 2.00. An introduction to the army, the profession of arms, and basic soldier skills. Students learn what it means to be a professional in the U.S. Army. The overall focus is introducing them to the Army Leadership Requirements Model and the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Other topics include map reading, land navigation, fieldcraft, first aid, and individual/team movement techniques.**Credits:** 1.00 to 2.00

MSL 10200 - Foundations Of Leadership

Credit Hours: 1.00 to 2.00. An introduction to the personal challenges and competencies that are critical for effective leadership. Topics include critical thinking, time management, goal setting, and communication. The course emphasizes the communications process and the importance for leaders to develop essential skills to effectively communicate in the Army. Basic squad-level tactics will be reinforced.**Credits:** 1.00 to 2.00

MSL 20100 - Leadership And Ethics

Credit Hours: 2.00 to 3.00. An examination of leadership and ethics through the study and analysis of famous leaders. Army values and ethics and their relationship to the Law of Land Warfare is stressed. Emphasizes the philosophy of military service and how military leaders can apply values and ethics to a variety of situations they might encounter in the Army.**Credits:** 2.00 to 3.00

MSL 20200 - Army Doctrine And Decision Making

Credit Hours: 2.00 to 3.00. The course explores using analytical techniques, creative-thinking skills, and the Army problem-solving process to help with situational decision making. Troop-leading procedures (TLP) and operational orders (OPORD) are used to explain Army Doctrine and symbology. Topics include using unified land operations, offensive operations, and defensive operations in squad-level tactics.**Credits:** 2.00 to 3.00

MSL 30100 - Training Management And The Warfighting Function

Credit Hours: 3.00 to 4.00. Examines how the Army operates through warfighting functions. Emphasizes planning, preparing, and executing training for small-unit tactics.**Credits:** 3.00 to 4.00

MSL 30200 - Applied Leadership In Small Unit Operations

Credit Hours: 3.00 to 4.00. An examination of the fundamentals of direct-level leadership and small-unit tactics at the platoon level in preparation for Cadet Summer Training Advance Camp. Emphasizes the planning, coordinating, navigating, motivating, and leading a platoon to execute a mission.**Credits:** 3.00 to 4.00

MSL 35000 - American Military History And Leadership

Credit Hours: 3.00. This course provides a historical perspective for the decisions made by American military leaders. In addition, the course examines the external political and social environments within which the military, and in particular its leaders, operate. Emphasis is placed on using common themes that relate to the American experience in war to determine how periods of peace and war challenged the nation and influenced the development of its military policy. This course is required for Army ROTC cadets but it open for all students on campus. **Credits:** 3.00

MSL 40100 - The Army Officer

Credit Hours: 3.00 to 4.00. An examination of Army officer development to include planning, resourcing, and assessing training at the small-unit level. Topics include counseling subordinates, evaluating performance, values and ethics, career planning, legal responsibilities, and programs that support Army officers in these endeavors.**Credits:** 3.00 to 4.00

MSL 40200 - Company Grade Leadership

Credit Hours: 3.00 to 4.00. This course explores the roles and responsibilities of company-grade Army officers with respect to unified land operations. Emphasizes the knowledge, skills and abilities required of junior officers in preparation for commissioning.**Credits:** 3.00 to 4.00

MSL 49000 - Directed Studies In Military Science

Credit Hours: 1.00 to 3.00. Individual readings, topics, or projects in military science appropriate for advanced undergraduate students. Permission of instructor required. **Credits:** 1.00 to 3.00

Motorsports Engineering

MSPE 27200 - Introduction To Motorsports

Credit Hours: 3.00. This course provides an introduction to the Motorsports Industry, including careers available, the organization and history of the industry, and technology development that has occurred due to the industry. A student project is required.**Credits:** 3.00

MSPE 29000 - Motorsports Engineering Seminar

Credits: 1.00

MSPE 29700 - Computer Model For Motorsports

Credit Hours: 1.00. This course covers basic computer aided design and 3D modeling of systems as needed for the motorsports industry. Permission of department required.**Credits:** 1.00

MSPE 29701 - Computer Modeling For Motorsports

Credit Hours: 2.00. An introductory course detailing methods for designing and modeling motorsports components using Computer Aided Design (CAD) software.**Credits:** 2.00

MSPE 29800 - Programming And Computer Modeling For Motorsports

Credit Hours: 2.00. Introductory course detailing methods for creating virtual models of objects and systems for design, analysis and optimization of motorsports components. Virtualization methods include object-oriented programming techniques for creating mathematical models, and solid modeling techniques for visualizing objects as three-dimensional representations. The methods introduced through this course lay the foundation for advanced courses in vehicle design, simulation, and analysis. Admission to MSPE program required.**Credits:** 2.00

MSPE 29900 - Motorsports Engineering Directed Study

Credit Hours: 1.00 to 3.00. This is a directed study course for students wishing to pursue additional motorsports studies under the direction of a faculty advisor. Permission of instructor required.**Credits:** 1.00 to 3.00

MSPE 31201 - Business of Motorsports

Credit Hours: 3.00. This course covers the unique aspects of the motorsports industry, especially race teams, including organizations, budgeting, marketing, and sponsorships through an examination of literature and guest speakers.**Credits:** 4.00

MSPE 31700 - Motorsports Practicum II

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a professional motorsports organization.**Credits:** 1.00

MSPE 32000 - Motorsports Design I

Credit Hours: 3.00. This course explores the design concepts and approaches of the Motorsports Industry, creating connectivity between the couress of the first two years of the Motorsports Engineering BS Program and preparing students for internships in the industry. Permission of instructor required.**Credits:** 3.00

MSPE 33001 - Data Acquisition For Motorsports I

Credit Hours: 2.00. This course introduces students to motorsports data acquisition systems and the associated hardware and software that are comprised therein. A hands-on lab component is included int he class where in students learn how to specify a motorsports data system, understand vehicle network communication and build a motorsport industry standard data acquisition wiring harness.**Credits:** 2.00

MSPE 33100 - Data Acquisition For Motorsports II

Credit Hours: 3.00. This course explores the appliaction of vehicle dynamics principles to motorsport vehicles. Students will utilize engineering software tools to develop motorsport engineering worksbooks for vehicle performance analysis. Driver performance analysis and race strategy topics are introduced to provide the student with the full fundamentals of race engineering.**Credits:** 3.00

MSPE 34000 - Dynamic Signals And Systems

Credit Hours: 3.00. Introduction to dynamic engineering systems and continuous-time and discrete-time signals, mechanical electromechanical components, linear system response, Fourier and Laplace Transforms. The course is designed to teach the student the basic concept for modeling the behavior of dynamic systems.**Credits:** 3.00

MSPE 35000 - Computer Aided Design And Manufacturing

Credit Hours: 3.00. This course provides the basis for the computer-aided engineering and analysis skills needed in the Motorsports Industry. The ability to visualize and conceptualize a real part in the physical world and produce graphical representations of it in 2D and 3D in Solidworks or an equivalent is a primary objective. Further skills to be developed include the ability to produce large assemblies of such parts with appropriate tolerancing, free form surfacing, casting shapes and casting machining, 2D drawings for use in 3D sheet metal fabrication including shrink and stretch, use of 3D models to facilitate Finite Element Analysis, Conversation of CAD model to programming of CAM machining.**Credits:** 3.00

MSPE 41000 - Motorsports Internship

Credit Hours: 1.00 to 3.00. A semester or summer of external, full-time, related career experiences designed to enhance the student's preparedness for entering an initial or second career. Permission of department required.**Credits:** 1.00 to 3.00

MSPE 41400 - Motorsports Design II

Credit Hours: 3.00. This is the culminating course in the Motorsports Engineering Plan of Study, tying together concepts from all the other courses in the curriculum, and requires a capstone design project representative of a real world project with the Motorsports Industry.**Credits:** 3.00

MSPE 41700 - Motorsports Practicum III

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a race team in the motorsports industry. Students will be expected to show mastery of at least 12 of the 12 skills outlined in the Course Objectives.**Credits:** 1.00

MSPE 41800 - Advanced Motorsports Practicum

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a race team in the motorsports industry. Students will be expected to show mastery beyond the 12 skills outlined in the course objectives. Permission fo instructor required.**Credits:** 1.00

MSPE 42600 - Internal Combustion Engines

Credit Hours: 3.00. This course covers the fundamentals of internal combustion engine design and operation, with a focus on high performance.**Credits:** 3.00

MSPE 43100 - Race Engineering

Credits: 3.00

MSPE 47200 - Vehicle Dynamics

Credit Hours: 3.00. This course develops students understanding in the mathematical model development of the motorsports vehicle. Students will utilize these models to understand how key vehicle parameters influence vehicle performance in the longitudinal and lateral direction. **Credits:** 3.00

MSPE 48200 - Motorsports Aerodynamics

Credit Hours: 3.00. Study of fluid flow and aerodynamics as applied to race car design and Computational Fluid Dynamics (CFD) Analysis.**Credits:** 3.00

MSPE 49000 - Motorsports Engineering Independent Study

Credit Hours: 1.00 to 3.00. This is an independent study course for students wishing to pursue advanced studies under the direction of a faculty advisor. Permission of instructor required.**Credits:** 1.00 to 3.00

MSPE 49700 - Motorsports Design Project

Credit Hours: 3.00. This is an independent study version of the MSPE 41400 culminating course in the Motorsports Engineering Plan of Study, tying together concepts from all the other courses in the curriculum, and requires a capstone design project representative of a real world project within the Motorsports Industry. Permission of instructor required.**Credits:** 3.00

MSPE 49900 - Motorsports Engineering Special Topics

Credit Hours: 1.00 to 3.00. This is a special topics course for students wishing to pursue advanced studies under the direction of a faculty advisor. Permission of instructor required.**Credits:** 1.00 to 3.00

MSPE 57200 - Vehicle Dynamics

Credit Hours: 3.00. Vehicle dynamics is the study of behavior of vehicles in motion. The study is one of the most important activities in the Vehicle design and development cycle to design vehicles which drive well and are comfortable to ride in. The course focuses on the development of advanced mathematical engineering models that represent the behavior of automotive vehicles and vehicle subsystems. Topical emphasis is focused on rectilinear performance, steady state handling behavior, tire models and suspension models.**Credits:** 3.00

MSPE 57400 - Advanced Vehicle Dynamics

Credit Hours: 3.00. An investigation into advanced topics in the field of vehicle dynamics. This course covers the principles and applications of vehicle handling dynamics from an advanced perspective in depth. The methods required to analyze and optimize vehicle handling dynamics are presented, including tire compound dynamics, vehicle planar dynamics, vehicle roll dynamics, full vehicle dynamics, and in-wheel motor vehicle dynamics. The provided vehicle dynamic model is capable of investigating drift, sliding, and other over-limit vehicle maneuvers. This is an ideal course for postgraduate and research students and engineers in motorsports, mechanical, automotive, transportation, and ground vehicle engineering.**Credits:** 3.00

MSPE 57800 - Composite Materials For Automotive Applications

Credit Hours: 3.00. This course focuses on development of low-cost carbon fiber for automotive appliactions, mechanical properties of advanced composities, automotive composite structures for crashworthiness, crashworthiness analysis of composite, hybrid structures consisting of sheet metal and fiber reinforced plastics for structural automotive and design solutions to improve crash-box impact efficiency for racing applications.**Credits:** 3.00

MSPE 57900 - Design And Analysis Of Materials And Structures In Lightweight Vehicles

Credit Hours: 3.00. The materials for the construction of automobiles are changing from mostly low carbon steels to a combination of steels, light alloys, such as aluminum and magnesium alloys, and polymer matrix composites. Many of these materials are already used in today's vehicles, albeit in smaller volumes. Future vehicles, which will have to be much lighter in weight for improved fuel economy and reduced environmental pollution, will contain much larger volumes of these materials. The selection of materials will not only be influenced by their weight reduction potential, but also by factors such as safety, durability, processing, joining, recycling and cost. This course focuses on materials, their properties, processing technology and design and materials selection issues pertinent to designing lightweight vehicles. It will provide first-hand knowledge and experience of working with these advanced materials. It starts with a broad review of the materials scenario and design considerations for lightweight automotive structures. It is then divided into two major parts: materials, and design and manufacturing. The materials part contains topics on advanced steels, aluminum alloys, magnesium alloys and polymer matrix composites. It will provide information on material properties, processing characteristics and application examples. The design and manufacturing part contains information on manufacturing processes for light alloys, joining, crash worthiness considerations, recycling and life-cycle issues.**Credits:** 3.00

MSPE 58200 - Motorsports Aerodynamics

Credit Hours: 3.00. A study and adaptation of fluid flow and aerodynamics as applied to motorsports design and performance optimization. This course is designed to reinforce student's understanding of aerodynamics as it pertains to a race car. This course breaks down the differences between actual air flow while driving / racing versus air flow within a wind tunnel, and how these flows are different. It discusses how to evaluate those flows, and determine if they need to be improved. It discusses ways to improve the aero on race cars.**Credits:** 3.00

MSPE 58400 - Advanced Motorsports Aerodynamics

Credit Hours: 3.00. This advanced course is designed to adapt the secrets of the rapidly developing field of high-speed vehicle design. From F1 to Indy Car, Advanced drag simulation and Sedan racing, this course provides clear advanced explanations for students and engineers who want to improve their design skills and to interpret how their favorite race cars aerodynamics is designed. It differentiates how aerodynamics win races, why downforce is more important than streamlining and drag reduction, designing wings and venturis, plus wind tunnel designs and more. Appraises the development process of advanced motorsports aerodynamics engineering. Extensive use of CFD in the development of race car aerodynamics.**Credits:** 3.00

MSPE 59200 - Motorsports Simulations

Credit Hours: 3.00. A course on mathematical modeling and computer simulation of mechanical systems offering a complete tool for modeling and simulation of integrated and complex systems for use within automotive and motorsports applications. Complex multi-disciplinary systems modeling and analysis problems will be solved, using a modeling and simulation environment for complex systems analysis such as Dymola's Modelica simulation technology. Dymola is a complete environment for model creation, testing, simulation and post-processing. Equal emphasis is placed on model development and simulation via Dymola GUI interface. Models range from simple spring-mass-damper system to whole vehicle models will be covered.**Credits:** 3.00

MSPE 59700 - Selected Topics In Motorsports Engineering

Credit Hours: 1.00 to 6.00. Topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be offered temporarily under the selected topics category until the course receives a permanent number.**Credits:** 1.00 to 6.00

MSPE 59800 - Motorsports Engineering Projects

Credit Hours: 1.00 to 3.00. Individual research projects of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Motorsports Engineering Projects course.**Credits:** 1.00 to 3.00

MSPE 59900 - Motorsports Advanced Internship

Credit Hours: 1.00 to 3.00. Graduate-level based course, in an off-campus internship position.**Credits:** 1.00 to 3.00

MSPE 69800 - Research MS Thesis

Credit Hours: 1.00 to 6.00. Research credit for students in thesis option.**Credits:** 1.00 to 6.00

Music History and Theory

MUS 101LN - Beginning Guitar Class

Credit Hours: 1.00 to 3.00. Classical guitar instruction in a class situation for non-music majors.**Credits:** 1.00 to 3.00

MUS 105ZN - Traditions In World Music

Credit Hours: 3.00. Explore the diversity of musical traditions found throughout the world by studying the various means of transmission, musical instruments, musical meaning, musical sound, as well as the rituals, any myths commonly associated with an assortment of music cultures. No prior music experience required. Offered through the Web.**Credits:** 3.00

MUS 111ZN - Introduction To Music Theory

Credit Hours: 3.00. A study of fundamentals of the language and notation of music: listening, music reading and writing, and the elements of music as used in a variety of genres. Open to all students interested in a general background in music. Recommended for singers, instrumentalists, and keyboard players.**Credits:** 3.00

MUS 201ZN - History Of Rock And Roll Music

Credit Hours: 3.00. A survey of the major trends, styles, and genres of rock music from the earliest recordings to the present day, focusing on the work of the artist and groups who have proven to be of the most enduring significance.**Credits:** 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.**Credits:** 0.00

MUS 11200 - Fundamentals Of Music

Credit Hours: 3.00. Fundamentals of music notation, ear training, and music reading. **Credits:** 3.00

MUS 13200 - Music Theory I

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam. **Credits:** 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques. **Credits:** 3.00

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation. **Credits:** 3.00

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation. **Credits:** 3.00

MUS 17100 - Jazz Improvisation I

Credit Hours: 2.00. This course is an introduction to the development of beginning jazz improvisational and theoretical skills for all instrumentalists and vocalists. Fundamentals theoretical and musicianship skills are addressed through practical application, guided listening, dictation, transcription, harmonic and rhythmic analysis, and performance of standard jazz repertoire. **Credits:** 2.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. Analytic study of art music and popular music representative of diatonic and chromatic tonal processes. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques. Creative applications are encouraged. **Credits:** 3.00

MUS 23300 - Music Theory IV: Contemporary Music

Credit Hours: 3.00. A study of the music of the 20th century and beyond. Class activities are focused on analysis of music representative of various genres. **Credits:** 3.00

MUS 25000 - Music Appreciation

Credit Hours: 3.00. The traditions, forms, and styles of classical music. Other types of music may be examined as well. (Students may register through the Continuing Education Student Learning Center at the Tech Statewide locations via distance education.) CTL:IFA 1330 Music Appreciation **Credits:** 3.00

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices. **Credits:** 3.00

MUS 27100 - Jazz Improvisation II

Credit Hours: 2.00. This course is a continuation of MUS 17100, Jazz Improvisation I. Students will continue to develop their jazz improvisation skills that include scale development, pattern playing, guided listening, dictation, transcription skills, harmonic, melodic and rhythmic studies as well as performing standard jazz repertoire. Students should have at least two years of previous experience in band, orchestra, choir, or piano study prior to enrolling in this course. Students will be required to perform in class. Prerequisites for this class are MUS 13200, Music Theory I and MUS 17100, Jazz Improvisation I or consent of the department.**Credits:** 2.00

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological possibilities of media and music, willing to explore its many dimensions. **Credits:** 3.00

MUS 32100 - Songwriting

Credit Hours: 3.00. This course is an introduction to contemporary songwriting. Topics covered will include the study of contemporary chord progressions, melodic development, essential songwriting forms and lyric writing. Students will analyze and compose original songs that will cover a wide range of musical styles and genres including folk, country, pop, rock, jazz and hip-hop. Students interested in Art Song composition should take MUS 34100 or 34200, Composition I-II. Prerequisites include MUS 13200, Music Theory I and MUS 27000, Computer Skills in Music or consent of department.**Credits:** 3.00

MUS 32400 - Teaching Music In The Elementary School

Credit Hours: 3.00. Develops basic musicianship through singing, playing instruments, reading and writing music, listening and moving to music. Surveys music teaching methods and materials. Includes lesson planning, experiences in teaching, and observation of children in music classes. **Credits:** 3.00

MUS 32800 - Jazz Theory, Composition And Arranging

Credit Hours: 3.00. This course is an introduction to contemporary jazz theory, composition and arranging practices. Topics covered will include the study of chord and scale constructions, substitutions, analyzing and building harmonic progressions, modal functions, identifying various styles and idioms, and writing for combo and big band. Students will learn how to compose in various jazz styles and score their works for small and large ensembles. Prerequisites: MUS 13300, Music Theory II and MUS 27000, Computer Skills in Music or consent of instructor.**Credits:** 3.00

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects. **Credits:** 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required. **Credits:** 3.00

MUS 34500 - History Of Rock Music

Credit Hours: 3.00. This course is a survey of the major trends, styles, and genres of rock music from the earliest recordings to the present day. It focuses on the work of the artists and groups who have proven to have the most enduring significance.**Credits:** 3.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.**Credits:** 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated. **Credits:** 2.00

MUS 36000 - Singing For The Theatrical Stage

Credit Hours: 2.00. A workshop/lab in which students explore how to sing musical theater repertoire for the stage. Students will learn about musical theater auditioning, character analysis and development through song, and performance on stage as a singing actor. The course will have both in-class and out-of-class performance opportunities as well as research experiences that use performance-based methods to explore oneself in social contexts (autoethnography). It is recommended that students have at least two years of singing experience prior to taking this course. Exceptions may be made with instructor's approval. The course may be repeated.**Credits:** 2.00

MUS 37000 - Introduction To Instrumental And Choral Conducting

Credit Hours: 3.00. This course is an introduction to instrumental and choral conducting. Topics covered will include the study of essential skills necessary to lead vocal and instrumental ensembles that will involve warmup techniques, choral and instrumental tone production, baton and directing patterns, ensemble organizational leadership and score analysis. Prerequisites include MUS 13300, Music Theory II or consent of the department.**Credits:** 3.00

MUS 37500 - Selected Topics In Music

Credit Hours: 3.00. A study of a specific genre in music (symphony, opera, chamber music, etc.) or the works of a single composer. **Credits:** 3.00

MUS 37600 - World Music

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music. **Credits:** 3.00

MUS 37800 - Jazz History

Credit Hours: 3.00. A historical and stylistic study of jazz. **Credits:** 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart. **Credits:** 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.**Credits:** 3.00

MUS 38300 - Digital Audio Recording And Production I

Credit Hours: 3.00. This course is an introduction to digital audio recording and production practices. Topics covered will include design and structure of sound studios, musical sequencing and recording, microphones, fundamentals of sound reinforcement, and sound editing. Students will be required to develop music recording projects.**Credits:** 3.00

MUS 38400 - Digital Record And Production II

Credit Hours: 3.00. This course is a continuation of MUS 38300, Digital Audio Recording and Production I. Topics covered will include advanced musical sequencing, multitrack audio recording, audio signal processing, mixing, mastering and advanced audio and digital production. Students will be required to develop music recording and production projects.**Credits:** 3.00

MUS 49000 - Guided Reading In Music

Credit Hours: 1.00 to 6.00. For students with specialized needs and interests in the field. Permission of instructor required. **Credits:** 1.00 to 6.00

MUS 59000 - Special Problems In Music

Credit Hours: 1.00 to 4.00. An individualized and intensive study of any aspect of music required by the student's plan of study. Permission of instructor required. **Credits:** 1.00 to 4.00

Natural Resources and Environmental Science

NRES 12100 - Stepping Stones To Environmental Science

Credit Hours: 1.00. Intended to expose first-year students to emerging environmental problems and innovative solutions, to support their transition to Purdue through a sense of community and increased engagement, and to provide students access to faculty in the environmental sciences in a small group setting. Activities include field trips, hands-on learning, study halls, and meals together. Enrollment is restricted to members of the environmental science learning community. Department permission required. **Credits:** 1.00

NRES 12500 - Environmental Science And Conservation

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards. **Credits:** 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work. **Credits:** 1.00

NRES 23000 - Survey Of Meteorology

Credit Hours: 3.00. (EAPS 22100) An introductory course for both science and non-science students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate, ozone depletion, and other contemporary issues. **Credits:** 3.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000. **Credits:** 3.00

NRES 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning. **Credits:** 1.00

NRES 33700 - Environmental Hydrology

Credit Hours: 3.00. (AGRY 33700) This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales. **Credits:** 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This laboratory course is designed to provide hands-on examples of the hydrologic concepts covered in the AGRY 33700 Environmental Hydrology class and with practical experience in hydrologic field techniques. **Credits:** 1.00

NRES 38010 - Hazardous Waste Handling

Credit Hours: 3.00. This course trains individuals to stop the release or potential releases of hazardous substances. They have a more aggressive role than first responders at the operations level by approaching the point of the release to plug, patch, or otherwise stop it or manage offensive operations. This course satisfies the OSHA standards for completion of the 40-hour Hazardous Waste Operator/Emergency Response Technician certification, 29CFR1910.120. Topics covered include implementing an employer's emergency response plan; classification and identification of unknown materials using field survey instruments; functioning within the Incident Command System; specialized chemical protective equipment; hazard and risk assessment techniques; advanced product control operations; decontamination procedures; proper termination procedures; and basic chemical and toxicological terminology. **Credits:** 3.00

NRES 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (AGRY 38500) Designed as an upper level introductory course covering environmental soil chemistry concepts in the framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or mathematics background. **Credits:** 4.00

NRES 39300 - Interdisciplinary Approaches To Environmental And Sustainability Studies

Credit Hours: 3.00. This course is the lynchpin of the undergraduate Certificate in Environmental and Sustainability Studies. It will present a series of case studies, core concepts, and problem questions that integrate the following three academic approaches: 1) Human Dimensions and Environment/Sustainability, 2) Engineering and Environment/Sustainability, and 3) Environmental/Sustainability Sciences. **Credits:** 3.00

NRES 40000 - Natural Resources And Environmental Science Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities. **Credits:** 0.00 to 8.00

NRES 41000 - Research In Natural Resources And Environmental Science

Credit Hours: 1.00 to 3.00. Supervised individual research. NRES 41000 provides the opportunity to participate in independent undergraduate research with the goal of learning how to design, execute, and report research. Students will properly and permanently record their information in a timely fashion and learn how to examine, analyze, and interpret their results. One credit hour corresponds to one how of laboratory preparation and three hours of laboratory research. Total credits in NRES 41000 and NRES 41100 may not exceed six credits. Permission of instructor required. **Credits:** 1.00 to 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required. **Credits:** 1.00

NRES 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (AGRY 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage. **Credits:** 3.00

NRES 48000 - Hazardous Waste Certification Renewal

Credit Hours: 0.00. Upon completion of this course, students will be able to 1) analyze a response scene to stop the release or potential releases of hazardous substances, and 2) connect knowledge and awareness to meet OSHA requirements (29 CFR 1910.120) for working on projects that involve the handling of hazardous materials. Students successfully completing all requirements will receive their 40-hour HAZWOPER Certification. **Credits:** 0.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication

products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. **Credits:** 3.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework. **Credits:** 2.00

NRES 49800 - Individual Studies In Environmental Science

Credit Hours: 1.00 to 3.00. An opportunity for upper-level undergraduates to focus their interests and knowledge on an environmentally related problem. Arrangements must be made with a Natural Resources and Environmental Science Program faculty member before registration. Permission of instructor required. **Credits:** 1.00 to 3.00

NRES 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays. **Credits:** 2.00

Naval Science

NS 11000 - Introduction To Naval Science

Credit Hours: 3.00. This course is a general introduction to the USN and USMC that emphasizes organizational structure, warfare components and assigned roles/missions of USN/USMC. It covers all aspects of naval service from its relative position within the DoD to the specific warfare community/career paths and includes basic elements of leadership and USN and USMC core values. The course provides students with initial exposure to many elements of naval culture and provides the conceptual framework/working vocabulary for students to use on summer cruise.**Credits:** 3.00

NS 20200 - Naval Science Laboratory

Credit Hours: 2.00. This lab is designed to develop students morally, mentally, and physically and to imbue in them the highest ideals of duty, honor, and loyalty. Topics shall cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science Courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science Courses and provide additional time for projects, such as navigation chart work. Open to Naval ROTC students only.**Credits:** 2.00

NS 21200 - Naval Ships Systems II (Weapons)

Credit Hours: 3.00. This course outlines the theory and employment of weapons systems. Students explore the processes of detection, evaluation, threat analysis, weapon selection, delivery, guidance, and explosives. Fire control systems and major weapons types are discussed, including capabilities and limitations. The physical aspects of radar and underwater sound are described. Facets of command, control, communications, computers, and intelligence are explored as a means of weapons system integration. The tactical and strategic significance of command and control warfare and information warfare is discussed.**Credits:** 3.00

NS 21300 - Sea Power And Maritime Affairs

Credit Hours: 3.00. This course is a study of the U.S. Navy and sea power's influence on history and the political process. Students will explore the major events, attitudes, personalities, and circumstances that have imbued the U.S. Navy with its proud history and rich tradition. It deals with issues of national imperatives in peacetime, as well as war, varying maritime philosophies that were interpreted into naval strategies/doctrines, budgetary concerns that shaped force realities, and the pursuit of American diplomatic objectives. It concludes with a discussion of the Navy's strategic and structural changes at the end of the Cold War and its new focus, mission, and strategy in the post-September 11, 2001 world.**Credits:** 3.00

NS 21400 - Naval Leadership And Management

Credit Hours: 3.00. Introduces the student to many of the fundamental concepts of leading Sailors and Marines, which shall be expanded upon during the continuum of leadership development throughout NROTC. It develops the elements of leadership vital to the effectiveness of Navy/Marine Corps officers by reviewing the theories and parameters of leadership and management within and outside of the Naval Service and progressing through values development, interpersonal skills, management skills, and application theory. Practical applications are explored through the use of experiential exercises, readings, case studies, and laboratory discussions.**Credits:** 3.00

NS 31000 - Naval Navigation

Credit Hours: 3.00. This course is an in-depth study of the theory, principles, procedures, and application of plotting, piloting, and electronic navigation, as well as an introduction to maneuvering boards. Students learn piloting techniques, the use of charts, the use of visual and electronic aids, and the theory of operation of both magnetic and gyrocompasses. Students develop practical skills in plotting and electronic navigation. Other topics include tides, currents, effects of wind/weather, voyage planning, and an application and introduction to the international/inland rules of navigation.**Credits:** 3.00

NS 31100 - Naval Operations And Seamanship

Credit Hours: 3.00. This course is a continued study of relative motion, formation tactics, and ship employment. It includes introductions to naval operations and operations analysis, ship behavior and characteristics in maneuvering, applied aspects of ship handling, afloat communications, naval command and control, naval warfare areas, and joint warfare.**Credits:** 3.00

NS 33000 - Evolution Of Warfare

Credit Hours: 3.00. The purpose of Evolution of Warfare is to imbue students with an understanding of the origins of modern warfighting theory through an analysis of historical philosophies, domains, tactics and technology. Through a study of military history, students explore the timeless fundamentals of armed conflict as well as the central role of innovation. They will apply these fundamental warfighting concepts to historic amphibious and expeditionary operations through guided analysis and decision games. **Credits:** 3.00

NS 35000 - Naval Ship Systems-Engineering

Credit Hours: 3.00. In this course, students learn detailed ship design, hydrodynamic forces, stability, propulsion, electrical theory and distribution, hydraulic theory and ship control, and damage control. The course includes basic concepts of theory/design of steam, gas turbine, diesel, and nuclear propulsion.**Credits:** 3.00

NS 41300 - Naval Leadership And Ethics

Credit Hours: 3.00. This course completes the final preparations of ensigns and second lieutenants for service in the Navy and Marine Corps. The course integrates an intellectual exploration of Western moral traditions and ethical philosophy with a variety of topics, such as military leadership, core values, professional ethics, the UCMJ and Navy regulations, and discussions relating to the roles of enlisted members, junior and senior officers, command relationships, and the conduct of warfare. The course provides midshipmen with a foundation of moral traditions, combined with a discussion of actual current and historical events in

the Navy and Marine Corps, to prepare them for the roles and responsibilities of leadership in the Naval Service of the 21st century. Permission of instructor required.**Credits:** 3.00

NS 44000 - Fundamentals Of Maneuver Warfare

Credit Hours: 3.00. The purpose of this course is to introduce the student to the foundational concepts and history of the USMC as the premier maneuver warfighting organization. It is a theoretical class that utilizes both historical examples from previous military operations as well as current doctrine, developing an individual who is both a critical thinker and scholar in the profession of arms. The goal is to educate the student to read military history analytically.**Credits:** 3.00

Nuclear Engineering

NUCL 11000 - Introduction To Energy Engineering

Credit Hours: 1.00. This course, designed for first-semester freshmen, reviews and discusses the history of energy use by the world, the relation between energy usage and quality of life, the social impact of energy use, and the environmental constraints on energy usage. In particular, the role that engineering disciplines play in solving energy problems will be discussed. The full impact that the various energy alternatives have on economic and environmental issues will be reviewed in order to provide a rational basis for energy choices for the future. **Credits:** 1.00

NUCL 12000 - Freshman Research Project

Credit Hours: 1.00. In this course, the student performs a small independent project in nuclear engineering under direct faculty supervision. **Credits:** 1.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion. **Credits:** 3.00

NUCL 20500 - Nuclear Engineering Undergraduate Laboratory I

Credit Hours: 2.00. A laboratory course designed for the study of the properties of radiation, radioactive material, and radiation detectors. The hazards of radiation and safe handling techniques are emphasized. **Credits:** 2.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics. **Credits:** 3.00

NUCL 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 29800 - Sophomore Seminar

Credit Hours: 0.00. Career areas in nuclear engineering, job opportunities, areas of related study, topics of current interest, orientation, professional ethics, and responsibility. **Credits:** 0.00

NUCL 30000 - Nuclear Structure And Radiation Interactions

Credit Hours: 3.00. Review of atomic properties and introduction to nuclear models. Discussion of radioactive decay and the interaction of nuclear radiation and reaction products with matter. Energetics and cross-sections of nuclear reactions with applications to problems typical of nuclear engineering. **Credits:** 3.00

NUCL 30500 - Nuclear Engineering Undergraduate Laboratory II

Credit Hours: 2.00. Continuation of NUCL 20500. Experiments with scintillation detectors, multichannel analyzers, neutron detectors, the subcritical pile, and the reactor will be performed. Measurements will be made to demonstrate neutron activation analysis techniques, neutron slowing down, neutron flux distributions, and the effects of control rods on neutron fluxes. **Credits:** 2.00

NUCL 31000 - Introduction To Neutron Physics

Credit Hours: 3.00. Development of diffusion theory for neutrons. Neutron interactions and development of one-group neutron diffusion theory with point, plane, and fission sources. Application to one- and two-region reactors. Introduction to buckling, multiplication constants, critical size, neutron slowing down, and resonance capture. Applications using two-group theory. **Credits:** 3.00

NUCL 32000 - Introduction To Materials For Nuclear Applications

Credit Hours: 3.00. Nuclear environments and materials selection for nuclear applications, bonding, crystal structure and symmetry, defects and irradiation, chemical thermodynamics, phase equilibria, phase transformations, and corrosion in nuclear systems and design. **Credits:** 3.00

NUCL 32500 - Nuclear Materials Laboratory

Credit Hours: 3.00. Nuclear materials laboratory that evaluates various characterization techniques and technologies, tensile properties, hardness, fracture toughness, microstructures, X-ray diffraction, electron microscopy, mechanical properties of thin-films, NDE techniques and data acquisition in materials characterization techniques. **Credits:** 3.00

NUCL 35000 - Nuclear Thermal-Hydraulics I

Credit Hours: 3.00. The first of an integrated two-course sequence introducing the concepts of nuclear reactor thermal transport and associated hydraulics with applications to design and safety. Macroscopic balances, dimensional analysis, and flow measurement. Fluid behavior, momentum transfer, and applications to reactor systems and design. **Credits:** 3.00

NUCL 35100 - Nuclear Thermal-Hydraulics II

Credit Hours: 3.00. Emphasis is given to the fluid transport of heat from reactor fuel elements. Heat transfer in fluids, analogies, and applications to reactor coolant channel analysis. Two-phase flow and convective boiling. Radiative heat transfer. Applications to safety analysis and reactor design. **Credits:** 3.00

NUCL 35500 - Nuclear Thermohydraulics Laboratory

Credit Hours: 3.00. Laboratory course corresponding to NUCL 35000 and NUCL 35100. Various fluid flow and heat transfer phenomena applied to nuclear reactor systems and design. **Credits:** 3.00

NUCL 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUCL 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required. **Credits:** 0.00

NUCL 39800 - Junior Seminar

Credit Hours: 0.00. Continuation of NUCL 29800. **Credits:** 0.00

NUCL 40200 - Engineering Of Nuclear Power Systems

Credit Hours: 3.00. Principles and practice of power plant systems with design applications; thermal cycles, heat transport, mechanical designs, control, safety analysis, shielding analysis, fuel cycles; resources, optimization, options, waste management. Fusion and alternate energy sources. **Credits:** 3.00

NUCL 41000 - Introduction To Reactor Theory And Applications

Credit Hours: 3.00. Intermediate treatment of reactor theory and its relevance to routine design engineering calculations, including introduction to transport theory, criticality evaluation, multi-group theory, isotopic depletion, and concludes with short overview of multi-level reactor design calculations, critical experiments, and treatment of neutronic uncertainties. List of Topics: Derivation of Boltzmann transport equation, and its reduction to steady state and time dependent diffusion equation. Introduction to multi-group theory, and evaluation of group parameters in both wide and narrow resonance approximations. Introduction to homogenization theory, and evaluation of lattice parameters. Evaluation of criticality condition for bare and reflected reactor geometries. Development of discretization techniques for the time-dependent multi-group diffusion theory equation. Reactor kinetics, reactivity coefficients and reactivity balance equation. Flowchart of multi-level reactor design calculations. Introduction to critical experiments and startup reactor physics test. Sources and treatment of uncertainties in reactor calculations. **Credits:** 3.00

NUCL 42001 - Radiation Interaction With Materials And Applications

Credit Hours: 3.00. Fundamental of radiation interaction with materials and applications, types of radiation and radiation sources, physical mechanisms of radiation interaction with solids, radiation damage, ion mixing, applications in nuclear fission and fusion reactors, applications in materials synthesis. **Credits:** 3.00

NUCL 44900 - Senior Design Proposal

Credit Hours: 1.00. The course outcome is the writing and presentation of a proposal for the senior design project, NUCL 45000. The tasks include the selection of project design topics (various nuclear engineering components and systems designs), the selection of teams, introduction to design process, team management, communication, and engineering ethics, literature and patents survey, initiation of design activities and familiarization with design tools (for example software). **Credits:** 1.00

NUCL 45000 - Design In Nuclear Engineering

Credit Hours: 3.00. Application of the design process to the project design topics identified in NUCL 44900. The design process usually includes, but not limited to, mathematical modeling in design, neutronic, thermal-hydraulics and safety studies, risk assessment, economics, policy and regulation, environmental impact. **Credits:** 3.00

NUCL 46000 - Introduction To Controlled Thermonuclear Fusion

Credit Hours: 3.00. Energy resources and the potential role of nuclear fusion. Ignition and breakeven conditions for fusion power plants. Particle and energy confinement in linear and toroidal magnetic fields. Review of magnetic and inertial confinement experiments and conceptual reactor configurations. **Credits:** 3.00

NUCL 47000 - Fuel Cell Engineering

Credit Hours: 3.00. The principles of electromechanical energy conversion for a single fuel cell, fuel cell stack, process engineering in the fuel and oxidizer supply systems. Principles, components, operation and performance for alkaline, phosphoric

acid, solid polymer, molten carbonate and solid oxide fuel cells. Provides broad insight into science, technology, system design, and safety concerns in design and operation of fuel cells. **Credits:** 3.00

NUCL 48000 - Nuclear Engineering Technical Communications

Credit Hours: 3.00. This course makes students aware of the importance of communication skills-written, oral, graphical and interpersonal-in a successful nuclear engineering career and gives them the opportunity to develop and practice those skills. Students will learn how to access, evaluate, use and synthesize relevant technical literature. In addition, through the writing and speaking assignments, students develop team work skills, gain an understanding of professional and ethical responsibilities of engineering, learn to write a simple propose and learn about selected contemporary global economic, social and political issues, particularly with respect to nuclear topics. **Credits:** 3.00

NUCL 49000 - Independent Study In Nuclear Engineering

Credit Hours: 1.00 to 6.00. Projects or research of contemporary importance or special interest. Interested students seek a faculty advisor in their area of special interest and together prepare a brief description of the work to be undertaken. May be taken for 1-6 credits in Fall, Spring, or Summer. May be repeated as many times as desired, but only 6 credits may be counted for the technical elective requirement. Permission of instructor required.**Credits:** 1.00 to 6.00

NUCL 49700 - Selected Topics In Nuclear Engineering

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 3.00

NUCL 49800 - Senior Seminar

Credit Hours: 0.00. Lectures to acquaint the senior students with professional ethics, job opportunities, graduate schools, continuing study, and services of professional societies. **Credits:** 0.00

NUCL 50100 - Nuclear Engineering Principles

Credit Hours: 3.00. A first course for graduate students desiring a nuclear engineering sequence and an elective for students in science or engineering. The course is structured in four parts: (1) Nuclear structure and radiation, biological effects and medical applications of radiation. (2) Basics of neutron and reactor physics, neutron diffusion and reactor criticality. (3) Nuclear materials and waste. (4) Reactor systems and safety. **Credits:** 3.00

NUCL 50200 - Nuclear Engineering Systems

Credit Hours: 3.00. Engineering aspects of nuclear power. Materials of construction; fuel and fuel cycles; heat removal; radiation shielding; economics; and nuclear power systems. Permission of instructor required. **Credits:** 3.00

NUCL 50300 - Radioactive Waste Management

Credit Hours: 3.00. Will familiarize students with the nature of the risks associated with radioactive waste and the history, regulations, and worldwide status for the safe storage of various types of radioactive waste. The sources, characteristics, and magnitudes of radioactive wastes are described, and the current and proposed engineered waste management systems are examined along with the analysis of their associated risks. **Credits:** 3.00

NUCL 50400 - Nuclear Engineering Experiments

Credit Hours: 3.00. A laboratory course that, when coupled with NUCL 50100, produces a sequence that contains both the theoretical and engineering aspects of nuclear engineering. Topics include radiation detection and analysis, neutronics, and nuclear reactor experiments. **Credits:** 3.00

NUCL 51000 - Nuclear Reactor Theory I

Credit Hours: 3.00. Methodologies of neutron flux calculations, diffusion and slowing down theory, flux separation, material buckling, resonance absorption, Doppler effect, 2-group and multi-group theories, and reactivity balances for design and operation. Introduction to reactor kinetics, delayed neutrons, point reactor kinetics, transient behavior, load changes, reactivity feedback, and safety implications. **Credits:** 3.00

NUCL 51100 - Reactor Theory And Kinetics

Credit Hours: 3.00. Advanced methodologies for neutron flux calculation, nodal methods, introduction to transport theory, transport correction, multigroup theory, and introduction to the generation of group constants. Reactor kinetics, perturbation theory, adjoint fluxes, reactivity calculation from perturbation theory, reactivity coefficients due to Doppler effect, temperature and density changes, void coefficient, and energy and power coefficients. Microkinetics, theory of reactivity measurements, approximate methods: prompt jump approximation, and prompt kinetics. Transients with feedback, safety implications, and spatial kinetics. **Credits:** 3.00

NUCL 51200 - Computers In Reactor Analysis

Credit Hours: 3.00. The application of computational methods in reactor systems analysis. Theory behind modern numerical methods (e.g. SOR, Conugate Gradient, etc.) for solving large, sparse systems on linear equations that result from the discretization of elliptical and parabolic partial differential equations. Applications include the multigroup, multi-dimensional neutron transport equation and two-phase flow fluid dynamics. Extensive use of MATLAB, FORTRAN, and UNIX(tm). No written exams, and the majority of problem sets are performed as group projects. Knowledge of FORTRAN required. **Credits:** 3.00

NUCL 52000 - Radiation Effects And Reactor Materials

Credit Hours: 3.00. Introduction to radiation effects in solids and a survey of nuclear reactor materials. Radiation interaction mechanisms and effects on properties. Reactor material characteristics, selection criteria, testing, and economic considerations. **Credits:** 3.00

NUCL 55100 - Mass, Momentum, And Energy Transfer In Energy Systems

Credit Hours: 3.00. Formulations for analyzing complicated thermal-hydraulic phenomena in energy systems. Derivation of two-phase flow field equations and constitutive relations. Thermal-hydraulic modeling of nuclear reactor systems. Analyses of nuclear reactor safety related phenomena based on conservation principles. **Credits:** 3.00

NUCL 55200 - Thermal-Hydraulics And Reactor Safety

Credit Hours: 3.00. Applications of thermal-sciences to nuclear reactor safety design and risk assessment. Emphasis on illustrating the use of basic principles in quantitative safety assessments of practical and current interest. The basic topics revolve around multiphase transients and applications which include study of accident analysis and its applications to licensing for light water reactor systems and for liquid metal fast breeder reactor. **Credits:** 3.00

NUCL 55300 - Nano-Macro Scale Applications Of Nuclear Technology

Credit Hours: 3.00. Introduction of the principles of nuclear science and engineering for addressing industrial and scientific issues ranging from sub-nano-to-macro scales. Areas to be covered include: propulsion, high-energy density materials, supercooling, medical applications, sonoluminescence, novel detection systems for special nuclear and contraband materials, and advanced nuclear fusion power systems. **Credits:** 3.00

NUCL 55500 - Thermal Hydraulics Measurement And Instrumentation

Credit Hours: 3.00. Measurement techniques in fluid flow, heat transfer, and multi-phase flow. The principle and practice of measurement of temperature, flow, level, pressure, and void fraction (in two-phase flow systems) as applied to nuclear reactor systems. Instrument error and measurement errors, and data acquisition system using PC. Hands-on experience in the laboratory with instruments. **Credits:** 3.00

NUCL 56000 - Introduction To Fusion Technology

Credit Hours: 3.00. Introduction to electricity and magnetism, magneto-fluid-mechanics and plasma physics. Thermonuclear reactions, power balances, macroscopic and microscopic instabilities. Principles of operation and conceptual design of Tokamaks, Mirror, Theta-Pinch, and Laser-Driven fusion reactors. **Credits:** 3.00

NUCL 56300 - Direct Energy Conversion

Credit Hours: 3.00. Review of energy sources and study of the basic processes of direct energy conversion and their applications to energy utilization, based on both conventional and nuclear energy conversion schemes. Conventional schemes include thermoelectric, photovoltaic, thermionic, magnetohydrodynamic generators, fuel cell systems, etc.; and nuclear energy conversion schemes correspond to nuclear radiation and fusion energy conversion. Permission of instructor required. **Credits:** 3.00

NUCL 57000 - Fuzzy Approaches In Engineering

Credit Hours: 3.00. Presentation of the mathematical fundamentals of fuzzy logic theory and a survey of engineering applications. Fuzzy sets; the extension principle; fuzzy numbers; fuzzy relations and composition; linguistic descriptions; implication operators and fuzzy algorithms are formally developed. Applications emphasize the engineering utilization of approximate reasoning to diagnostics, control, safety, and decision-making problems. **Credits:** 3.00

NUCL 57500 - Neural Computing In Engineering

Credit Hours: 3.00. Mathematical fundamentals of computing with neural networks. Survey of engineering applications. Computational metaphors from biological neurons. Artificial neural networks modeling of complex, nonlinear and ill-posed problems. Emphasizes engineering utilization of neural computing to diagnostics, control, safety, and decision-making problems. **Credits:** 3.00

NUCL 58001 - Essential Communication Skills For Nuclear Engineering

Credit Hours: 3.00. Essential communications skills for engineers with emphasis on communicating subject matter specific to the nuclear engineering field. Includes instruction, practice, and detailed feedback on written, oral, and graphical communications. Students learn to access, evaluate, and synthesize technical literature and practice skills necessary to prepare a literature review. Ethics and professional responsibilities, along with contemporary global economic, social and political issues are among the topics discussed. The only prerequisite is admission to the graduate program in Nuclear Engineering. **Credits:** 3.00

NUCL 59000 - Independent Study In Nuclear Engineering I

Credit Hours: 1.00 to 6.00. Independent study projects. Interested students seek a faculty instructor in their area of special interest and prepare a brief description of the independent project to be undertaken. May be taken for 1-6 credits in Fall, Spring, or Summer. May be repeated as many times as desired, but only a maximum of 6 credits may be counted for the degree program requirement. Permission of instructor required.**Credits:** 1.00 to 6.00

NUCL 59700 - Selected Topics In Nuclear Engineering I

Credit Hours: 1.00 to 3.00. Development of individual research and study projects. Permission of instructor required.**Credits:** 1.00 to 3.00

NUCL 61000 - Nuclear Reactor Theory II

Credit Hours: 3.00. This course covers advanced reactor physics topics including the neutron transport theory, slowing down and resonance escape, and generalized perturbation theory. The neutron transport theory is the fundamental theory describing the neutron flux behaviors in nuclear systems. The slowing down and resonance escape calculations are essential for generating the multi-group cross sections required in the whole-core neutron transport calculations. The generalized perturbation theory is a powerful method for determining the changes in response parameters due to the variations in nuclide densities and microscopic cross sections. Prerequisites: NUCL 51000 and advanced engineering mathematics covering complex analysis, partial differential equations, and integral equations. **Credits:** 3.00

NUCL 61200 - Applied Reactor Analysis

Credit Hours: 3.00. Reactor physics analysis of existing reactors and critical experiments through the use of digital computers and reactor programs. One-, two-, and three-dimensional solutions of the diffusion and transport equations. Calculation methods for lifetime effects on excess reactivity, power distribution, breeding ratio, and temperature, void, and Doppler coefficients of reactivity. Fuel shuffling and safety calculations for fuel handling and storage. Concurrent Prerequisite: NUCL 61000. **Credits:** 3.00

NUCL 62000 - Advanced Topics In Radiation Damage

Credit Hours: 3.00. Materials phenomena unique to nuclear reactor environments are examined quantitatively. The relation between these phenomena and the structure and properties of engineering materials is discussed. Coupled phenomena are considered in relation to materials modeling codes. Prerequisite: NUCL 42000 and NUCL 52000 (or other related/similar courses). **Credits:** 3.00

NUCL 64000 - Fast Reactor Theory

Credit Hours: 3.00. Course is designed to teach reactor physics specific to fast spectrum reactors and the associated computational methods. Topics include breeding and actinide burning capabilities, core design implications, and reactivity feedback mechanisms. Computational methods will be specific to fast reactor physics analysis and include the fast neutron spectrum calculation, group constant generation and reactivity feedback calculations for Doppler, thermal expansions, and sodium void. Prerequisites: NUCL 51100 and advanced engineering mathematics covering complex analysis, partial differential equations, and integral equations. **Credits:** 3.00

NUCL 65000 - Thermal Hydraulics For Nuclear Reactor Safety

Credit Hours: 3.00. Safety philosophy, levels and goals of safety. Approaches used for nuclear reactor safety for the protection of public health. Design basis accidents. Engineered safeguards and inherent safety features. Fundamentals of safety related thermal-hydraulic phenomena and their integration into a methodology for containment assessment. Prerequisite: ME 50500. **Credits:** 3.00

NUCL 65100 - Dynamics Of Nuclear Thermal-Hydraulics System

Credit Hours: 3.00. This course discusses and analyzes various two-phase flow instabilities important for nuclear reactor systems. For the interfacial stabilities, Kelvin-Helmholtz and Rayleigh-Taylor instabilities as well as flooding and flow reversal instabilities are addressed. For the static instabilities, flow excursion instability that can reach the critical heat flux condition is analyzed relative to fast reactor and high flux research reactors. For the dynamic instabilities the density wave instabilities are discussed in detail. The characteristic equation is obtained and how to determine the stability of the system is discussed. Both the encirclement theory and the D-Partition stability boundary theory are explained. In addition, each student's research is studied through presentations, questions and discussions. Permission of instructor required. Prerequisites: NUCL 55100 and NUCL 55200. **Credits:** 3.00

NUCL 65500 - Two-Phase Flow Computational Fluid Dynamics Applications

Credit Hours: 3.00. The course guides the student to two-fluid model solutions using computational fluid dynamics (CFD). Topics include: review of the two-fluid model, review of elliptic and parabolic partial differential equations, description of numerical algorithms, and two-phase flow channel and jet flows. Prerequisite: NUCL 56000. **Credits:** 3.00

NUCL 66000 - Magnetic Confinement Fusion

Credit Hours: 3.00. Applications of plasma physics for analysis and design of plasma configurations in fusion reactors. Topics include beam-driven fusion systems, plasma heating and ignition via neutral beams and RF wave heating, plasma waves, kinetic and fluid descriptions of plasmas, and energy transport; blanket neutronics for tritium breeding, energy conversion, and reactor design considerations. Prerequisite: NUCL 56000. **Credits:** 3.00

NUCL 66100 - Inertial Confinement Fusion Technology

Credit Hours: 3.00. Inertially confined thermonuclear fusion reactions and energy gains; laser-plasma interactions; hydrodynamic compression; energy transports including electron thermal conduction and radiation transport; beam transport and instabilities; driver energy deposition and the driver development for lasers, particle beams and accelerators; and target designs. Approval of Instructor required. Prerequisite: NUCL 56000 or equivalent. **Credits:** 3.00

NUCL 69000 - Independent Study In Nuclear Engineering II

Credit Hours: 1.00 to 6.00. Independent research projects. Interested students seek a faculty instructor in their area of special interest and prepare a brief description of the independent project to be undertaken. May be taken for 1-6 credits in Fall, Spring, or Summer. May be repeated as many times as desired, but only maximum of 6 credits may be counted for the degree program requirement. Permission of instructor required. **Credits:** 1.00 to 6.00

NUCL 69600 - Nuclear Engineering Seminar

Credit Hours: 0.00. Discussion by graduate students and invited speakers of their research projects and topics of interest in nuclear engineering. Prerequisite: Master's student standing and Nuclear Engineering majors only. **Credits:** 0.00

NUCL 69700 - Selected Topics In Nuclear Engineering II

Credit Hours: 1.00 to 3.00. Courses on topics of contemporary importance or special interest in nuclear engineering. Hours and credits to be arranged. Permission of instructor required. **Credits:** 1.00 to 3.00

NUCL 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

NUCL 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Nuclear Pharmacy

NUPH 49000 - Special Topics

Credit Hours: 1.00 to 3.00. An honors course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required. **Credits:** 1.00 to 3.00

NUPH 49100 - Introduction To Nuclear Pharmacy

Credit Hours: 1.00. This course will serve as an introduction to nuclear pharmacy practice and serve as the first course in the nuclear pharmacy elective series. Successful completion of the nuclear pharmacy series can be used to meet the 200 hour didactic training requirement set forth by the Nuclear Regulatory Commission (NRC) towards achieving Authorized User status. This course will provide basic information about the profession of nuclear pharmacy, as well as an introduction to radioactive material and radiation safety concepts. The course will conclude with guest lectures from practitioners in several different areas of nuclear pharmacy practice to provide information about the different areas of practice available to nuclear pharmacists. **Credits:** 1.00

NUPH 49200 - Basics Of Nuclear Pharmacy Practice

Credit Hours: 1.00. This course emphasizes some of the daily tasks performed by nuclear pharmacists when working in the nuclear pharmacy. **Credits:** 1.00

NUPH 49300 - Regulatory Considerations For Nuclear Pharmacy Practice

Credit Hours: 2.00. This is the second course in the nuclear pharmacy series, with an emphasis on the regulatory oversight of nuclear pharmacy practice. While the previous course dealt with radiation safety issues, this course outlines how these safety skills relate to the regulatory requirements set forth by the various regulatory agencies. **Credits:** 2.00

NUPH 49400 - Clinical Aspects Of Nuclear Pharmacy Practice

Credit Hours: 2.00. This course will be offered as a lecture course with some interactive discussion and problem solving applications. In addition, students will be required to complete several distance learning activities that relate to/enhance the materials that will be covered in the lecture period. This course is the final course in the NUPH series that can be used to count toward the 200 hours of didactic training required for Authorized Nuclear pharmacist (ANP) status. **Credits:** 2.00

NUPH 49500 - Applied Nuclear Pharmacy

Credit Hours: 2.00. This is an elective course that consists of lecture, laboratory, and distance education components which will count as part of the 200 hours of didactic training required for Authorized Nuclear Pharmacist (ANP) status. This course focuses on the preparation, dispensing and clinical applications of radiopharmaceutical products. **Credits:** 2.00

NUPH 49600 - Case Studies In Clinical Nuclear Medicine

Credit Hours: 1.00 or 2.00. Introduction to the clinical applications of radiopharmaceutical drug products and the associated practice of nuclear medicine, through analysis of a series of current clinical case studies. Factors examined include: patient medical history, with emphasis on recent diagnostic procedures and pharmacotherapy; radiopharmaceutical selection, dosage, and preparation; possible contraindications for the nuclear medicine procedure and associated interventional agents; diagnostic findings; and the impact of study outcome on subsequent patient treatment. Permission of instructor required. **Credits:** 1.00 or 2.00

NUPH 69000 - Special Problems

Credit Hours: 0.00 to 18.00. Individual investigations in the applications of radionuclides to research and nuclear pharmacy. Hours and credits to be arranged. Permission of instructor required. **Credits:** 0.00 to 18.00

NUPH 69600 - Seminar In Nuclear Pharmacy

Credit Hours: 0.00 or 1.00. Selected topics in nuclear pharmacy, radiopharmaceutical chemistry, health physics, and radiation biology, presented by staff, students, and invited speakers. **Credits:** 0.00 or 1.00

Nursing

NUR 10800 - Introduction To Nursing

Credit Hours: 1.00. Introduce students entering the nursing profession to foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements and responsibilities within the profession. Students are introduced to the rigor of the curriculum and begin to build a sense of community within the Purdue School of Nursing. **Credits:** 1.00

NUR 10900 - Introduction To Nursing II

Credit Hours: 1.00. Using knowledge acquired in NUR 10800 students will examine the profession of nursing and their role and responsibilities within the profession. Topics to be discussed include informatics and technology, the importance of professional communication in oral and written form, the global image of nursing, wellness and self-care, and preparation for progression into the sophomore year. Permission of department required. **Credits:** 1.00

NUR 21400 - Introduction To Pathophysiology

Credit Hours: 3.00. An introduction to pathophysiological alterations in major regulatory mechanisms of the body. Provides a foundation for understanding general nursing practice, various diagnostic procedures, and selected therapeutic regimens. **Credits:** 3.00

NUR 21801 - Health Assessment And Essentials Of Nursing Practice I

Credit Hours: 5.00. Focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client centered safe nursing care to meet basic healthcare needs in diverse populations across the lifespan. **Credits:** 5.00

NUR 21901 - Pathopharmacology I

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance,

sensory perception and alteration in comfort and the pharmacotherapies utilized as treatment for alterations and disease states. This introductory knowledge provides the foundation for the understanding and practice of general nursing. **Credits:** 3.00

NUR 22001 - Essentials Of Nursing Practice II

Credit Hours: 5.00. Continues to expand on the professional nursing role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan. **Credits:** 5.00

NUR 22101 - Pathopharmocology II

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function and the pharmacotherapies utilized as treatment for alterations and disease states. This course builds on the learning objectives from Pathopharmacology I to provide the foundation for the understanding and practice of general nursing. **Credits:** 3.00

NUR 22201 - Population Health

Credit Hours: 2.00. A comprehensive introduction to population health concepts and practices through examination of philosophy, purpose, functions, activities and tools. Multiple determinants (genetics, cultural, social, and behavioral factors) that influence population health and illness are explored including the contribution of these factors to health disparities. Population-focused initiatives for health promotion and disease prevention are examined within the context of local to global public health systems. **Credits:** 2.00

NUR 22301 - Foundations Of Research And Evidence-Based Practice

Credit Hours: 3.00. Students gain foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. Students learn the principles of research process and identify strengths and limitations of research articles in relation to EBP in nursing and healthcare. **Credits:** 3.00

NUR 22401 - Nursing Practice Foundations I: Health Assessment

Credit Hours: 4.00. Designed for second degree students, this course focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical experience, learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client-centered, safe nursing care to meet basic healthcare needs in diverse populations across the lifespan. **Credits:** 4.00

NUR 22501 - Nursing Practice Foundations II: Fundamentals

Credit Hours: 4.00. Designed for second degree students, this course continues to expand on the professional nurse role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan. **Credits:** 4.00

NUR 22601 - Topics In Nursing Research And Evidence-Based Practice

Credit Hours: 3.00. Introduces foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. The principles of research process and strengths and limitations of research articles in relation to EBP in nursing and healthcare are identified. **Credits:** 3.00

NUR 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUR 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUR 31401 - Health Alterations In Adults I

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of well-being as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in tissue integrity related to surgical interventions, cellular division, reproductive function, elimination, nutrition and sensory function that typically result in hospitalization. **Credits:** 6.00

NUR 31501 - Nursing Of Childbearing Families

Credit Hours: 5.00. Promotes the development of nursing skills when caring for families and their newborns during uncomplicated and/or complicated childbearing experiences within a variety of clinical settings. Emphasizes the study and application of the nursing process, integrating evidence based practice while meeting the health and safety needs of diverse childbearing families. **Credits:** 5.00

NUR 31601 - Integration Seminar I

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and obstetrical diagnoses. Through the course activities the students will be challenged to look at healthcare from a patient perspective. **Credits:** 1.00

NUR 31701 - Health Alterations In Adults II

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of wellbeing as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in health related to oxygenation, circulatory dynamics, endocrine regulation, neurological regulation, immune regulation and musculoskeletal dynamics that typically result in hospitalization. **Credits:** 6.00

NUR 31801 - Psychiatric And Mental Health Nursing

Credit Hours: 5.00. Focuses on providing nursing care that supports mental health and the care of persons with mental illness while providing a conceptual integration of the nursing process, theories, and research from the biopsychosocial sciences and humanities. Demonstrates the relevance of psychiatric-mental health nursing concepts to all areas of professional practice. **Credits:** 5.00

NUR 31901 - Integration Seminar II

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and psychiatric diagnoses. Through the course activities, the students will be challenged to look at healthcare from a patient perspective. **Credits:** 1.00

NUR 33001 - Nursing Peer Mentors

Credit Hours: 2.00. Peer mentorship role to assist students entering the nursing profession to develop an understanding of the foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements, and responsibilities within the profession. To help students acclimate to college and begin to build a sense of campus community and community within the Purdue School of Nursing. Important attributes of a peer mentor are the desire to develop and help others, an openness to spending time with diverse individuals who may not share a common background, values, or goals, and a willingness to share failures and personal experiences to provide valuable opportunities for learning. A peer mentor should have a growth mindset and learning attitude, skill in developing others through active listening, asking open-ended questions, self-reflection, and providing feedback, and the ability to commit time and energy to the mentoring relationship. Permission of department required. **Credits:** 2.00

NUR 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUR 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUR 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUR 39699 - Professional Practice Internship

Credit Hours: 0.00. Program coordinated by Nursing with cooperation of participating employers and the Office of Professional Practice. Students will submit summary reports and company evaluations related to the experience. Professional Practice students only. Permission of department required. **Credits:** 0.00

NUR 39801 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University. Permission of department required. **Credits:** 1.00 to 6.00

NUR 39900 - Special Topics

Credit Hours: 0.00 to 3.00. Hours, credit, and subject matter to be arranged by faculty. **Credits:** 0.00 to 3.00

NUR 40200 - Public Health Nursing

Credit Hours: 3.00. Grounded in the historical tenets of public health nursing, this course builds on the knowledge from nursing and public health science to address the heath promotion and illness prevention of culturally diverse aggregates. **Credits:** 3.00

NUR 40300 - Public Health Nursing Clinic

Credit Hours: 2.00. This course is a synthesis of nursing practice and public health science. Health promotion, health maintenance, health teaching and counseling, and coordination of care are utilized in providing population-focused care to individuals, families, and groups in the community. A select caseload of clients, as well as special projects, are assigned to develop student skills in the practice of public health nursing. **Credits:** 2.00

NUR 41001 - Issues In Professional Nursing

Credit Hours: 2.00. Promotes the use of critical thinking, clinical reasoning, and active learning to analyze contemporary issues related to professional nursing practice. Issues and key trends surrounding social determinants of health policy and economics, regulatory agencies, political action, cultural diversity, practice competency, nursing informatics and ethics are used as a framework. Permission of department required. **Credits:** 2.00

NUR 41200 - Pediatric Nursing

Credit Hours: 3.00. A study of the factors influencing health promotion, protection, and maintenance of infants, children, and adolescents. Family theory; growth and development; primary healthcare; and acute, chronic, and terminal conditions are examined. **Credits:** 3.00

NUR 41300 - Pediatric Nursing - Clinic

Credit Hours: 2.00. Experience is provided in caring for healthy, at risk, acutely, and chronically ill infants, children, and adolescents and their families. **Credits:** 2.00

NUR 41401 - Pediatric Nursing

Credit Hours: 5.00. Explores factors influencing the health and wellness of children and families. Students will apply principles, concepts and research from the health and human sciences to the care of children and families across the health-illness continuum. A structured clinical component focuses on clinical reasoning and evidence based practice. Students will provide family centered care to healthy, at risk and ill children across a variety of clinical settings. **Credits:** 5.00

NUR 41501 - Public Health Nursing

Credit Hours: 5.00. Utilize health promotion, maintenance, education and disease prevention in coordinating and providing population-focused care to individuals, families and aggregates in the community. A variety of clinical settings are used to offer students a broad, comprehensive perspective of public health nursing, a field that synthesizes content from nursing, social and public health sciences. Collaboration with the community and implementation of population-focused interventions foster critical thinking and independent decision making in the delivery of nursing care. **Credits:** 5.00

NUR 41601 - Management Of Clients With Complex Health Issues

Credit Hours: 2.00. Focuses on nursing care of adults, children, and families with complex healthcare needs. Challenges students to use critical thinking and clinical reasoning to identify, prioritize, and evaluate nursing care interventions for clients with complex healthcare issues. **Credits:** 2.00

NUR 41701 - Leadership In Nursing

Credit Hours: 3.00. Studies the components of nursing leadership and management functions with an emphasis on critical thinking, problem solving, communication, and team building within the context of experiential problem-based group projects. This course will provide specific practice and evaluation of strategic and financial planning, conflict management, delegation, and complex change. Competencies to be gained, at a novice level, include professional communication, sound ethical and legal judgments within personal and organizational frameworks, leadership skills in the management and evaluation of others, and an understanding of the drivers of healthcare change and finances. **Credits:** 3.00

NUR 41801 - Clinical Capstone And Issues In Professional Practice

Credit Hours: 4.00. Promotes the use of critical thinking, clinical reasoning, and active learning to analyze contemporary issues related to professional nursing practice. Issues surrounding political action, socio-legal concerns, cultural diversity and ethics in nursing practice are used as a framework. A supportive and structured clinical component in a real-world setting encourages the learner to focus on refining clinical, leadership, and time-management skills in the delivery of care to diverse groups of clients across the lifespan. The clinical component assists the learner to transition from the role of students to novice nurse. **Credits:** 4.00

NUR 41901 - Professional Nursing: Evolution As A Clinician And Leader

Credit Hours: 3.00. Incorporate the use of critical thinking, clinical reasoning, and active learning in analyzing contemporary issues related to professional nursing practice and obtaining professional nursing licensure. Issues surrounding political action, socio-legal concerns, cultural diversity and ethics in nursing practice are used as a framework. **Credits:** 3.00

NUR 42001 - Transition To Professional Nursing Practice

Credit Hours: 4.00. This course challenges students to use critical thinking and clinical reasoning to identify, prioritize and evaluate nursing interventions for clients with complex healthcare issues. Students interact with members of the healthcare team and clinical faculty to practice effective leadership, delegation and supervision of nursing students in clinical environments. **Credits:** 4.00

NUR 43001 - NCLEX Review

Credit Hours: 2.00. The NCLEX-Prep is a pre-graduation comprehensive review of nursing content implemented in the senior year. The course is utilized as supplemental to assist with overall content review. Students will use their ATI account to access the content and will be assigned an ATI educator. The course is used to assist students to prepare for the ATI Comprehensive Predictor (Program Exit Exam), and NCLEX (National Council Licensure Examination). **Credits:** 2.00

NUR 43700 - Clinical Leadership Development

Credit Hours: 2.00 or 3.00. Senior nursing students in collaboration with nursing faculty refine leadership behaviors in a clinical setting. **Credits:** 2.00 or 3.00

NUR 50000 - Theoretical Constructs In Nursing

Credit Hours: 3.00. This course examines the integration of theory/conceptual relationships in the development of nursing knowledge. Students explore ways in which nurses in advanced practice incorporate theoretical knowledge in the implementation of the advanced practice in nursing role. Students analyze the clinical relevance of mid-range and practice theories. Students examine the relationship of theoretical constructs to research and praxis through concept analysis, theory evaluation, and

discussion of the application of theory to practice. This course examines ways in which theoretical thought is embedded in evidence-based nursing practice. **Credits:** 3.00

NUR 50100 - Foundations Of Advanced Practice In Nursing

Credit Hours: 2.00. This course builds on the knowledge and experiences that students possess when beginning their advanced practice in nursing education. Students explore their assumptions about advanced practice in nursing, its historical context and definitions of the various advanced practice roles, conceptual underpinnings and role competencies. Students develop an appreciation for how evidence based practice influences advanced practice in nursing. They develop skills that include using information communication technologies, identifying problems, posing questions that lead to evidence sources, searching and differentiating among various sources and types of evidence. **Credits:** 2.00

NUR 50200 - Pharmacotherapeutics For Advanced Practice Nursing

Credit Hours: 3.00. Course includes pharmacodynamics, pharmacokinetics, and pharmacotherapeutics of broad categories of pharmacologic agents. Students apply these principles and also consider the role of best available evidence and patient preferences as a basis for managing pharmacologic regimens. Students review regulations relevant to prescriptive authority for advanced practice nurses. **Credits:** 3.00

NUR 50300 - Advanced Health Assessment

Credit Hours: 3.00 (West Lafayette, Fort Wayne); 4.00 (Calumet). Students develop advanced, evidence-based health assessment skills that build on their current knowledge and abilities. Major concepts of the course include comprehensive and focused history taking and advanced physical assessment. Students relate underlying physiologic mechanisms with normal and abnormal findings from the history and physical assessment. The course provides a basis for designing a culturally sensitive and evidence-based plan of care within the situational context of the individual. **Credits:** 3.00 to 4.00

NUR 50500 - Sociocultural Influences On Health

Credit Hours: 2.00 to 3.00. This course examines the influences of cultural and sub-cultural variables on health and health care delivery. Students analyze and apply appropriate theoretical perspectives and current research to design evidence-based strategies that ground clinical decision making in advanced practice nursing. Students use the National Standards on Culturally and Linguistically Appropriate Services (CLAS) as the basis for providing culturally competent care. As students apply principles of culturally competent communication they are encouraged to develop insight and an attitude of resistance to stereotyping. Students gain an understanding of the context of vulnerable and marginalized populations through the analysis of social, cultural, and economic influences that impact health and illness. **Credits:** 2.00 to 3.00

NUR 50700 - Physiologic Concepts For Advanced Practice Nursing

Credit Hours: 4.00. Students examine the principles of physiologic function at all levels of organization from cells to organ systems as they affect human function. The course uses homeostasis as a model to account for regulatory and compensatory functions in health. Students develop the necessary theoretical and empirical foundation for subsequent understanding of the diagnosis and management of human responses to disease and non-disease based etiologies. **Credits:** 4.00

NUR 51000 - Research And Evidence Based Nursing Practice

Credit Hours: 3.00. This course focuses on both the generation of primary evidence through an in-depth examination of the research process and its critical use in evidence based practice. Students systematically search, appraise and interpret the best available evidence that informs advanced practice nursing and health related disciplines.**Credits:** 3.00

NUR 51100 - Health Promotion For Advanced Practice In Nursing

Credit Hours: 2.00 to 3.00. Students analyze health promotion/disease prevention, and health education frameworks combined with best available evidence as a foundation for advanced practice in nursing. Students promote the health of diverse client populations by incorporating the Healthy People goals, clinical practice guidelines, risk assessment, epidemiological data and evidence based screening tools into nursing practice. In collaboration with selected clients and/or families, students implement health coaching/teaching through the integration of family, health promotion and health literacy theories. **Credits:** 2.00 to 3.00

NUR 51200 - Clinical Applications In Pharmacotherapeutics

Credit Hours: 1.00. This course applies information from NUR 50200 to the care of clients through the use of case studies. Emphasis is placed on incorporating information from pharmacology, physiology, and physical assessment.**Credits:** 1.00

NUR 51300 - Health Promotion In Special Populations

Credit Hours: 3.00. Examination of wellness and health promotion issues unique to three special populations: clients in rural areas, women, and adolescents. Legal and ethical issues related to practice with special populations is addressed. Evidence-based standards will be utilized.**Credits:** 3.00

NUR 51400 - Clinical Application In Pharmacotherapeutics For Pediatric Nurse Practitioners

Credit Hours: 1.00. Applies information from NUR 50200, Pharmacotherapeutics in Primary Care, to the care of infants, children, and adolescents through the use of case studies. Emphasis is placed on incorporating information from pharmacology, physiology, and physical assessment. **Credits:** 1.00

NUR 51500 - Health Promotion In Pediatric Populations

Credit Hours: 3.00. Examines wellness and health promotion issues unique to children from birth through adolescence. Concepts of growth and development are integrated into health promotion activities. Legal and ethical issues related to practice with children and adolescents are addressed. Evidence-based practice standards will be utilized.**Credits:** 3.00

NUR 51601 - Clinical Applications In Pharmacology Family Nurse Practitioner

Credit Hours: 1.00. This course applies information from Pharmacotherapeutics in primary care (NUR 50200) to the care of infants, children, adolescents and adults through the use of case studies. Emphasis is on incorporating from pharmacology, physiology and physical assessment.**Credits:** 1.00

NUR 51700 - Doctor Of Nursing Project Seminar, Doctor Of Nursing Practice

Credit Hours: 0.00. This seminar will allow the student to begin contemplating and organizing their thoughts in developing the DNP project. In this seminar, the student will be introduced to the requirements for the DNP project and begin to cultivate feasible project questions that have an impact in clinical care, obtain feedback and network with peers.**Credits:** 0.00

NUR 52200 - Psychopharmacology Across The Lifespan

Credit Hours: 2.00. Signs and symptoms of all major psychiatric disorders and the medications used to treat them across the life-span are discussed. Classes of psychiatric medications are considered; including indications, therapeutic uses, neurophysiological mechanism of action and side effects. **Credits:** 2.00

NUR 52500 - Informatics In Nursing

Credit Hours: 3.00. Integrates nursing science with computer technology and information science to identify, gather, and manage information. Emphasis on technology based health applications with support clinical, administrative, research, and educational decision making enhancing the efficacy of nursing endeavors. **Credits:** 3.00

NUR 52800 - Acute Illness: Pediatric Health Practice

Credit Hours: 3.00. A developmentally organized course to provide knowledge and experience to care for acute episodic illnesses of children and adolescents in primary healthcare settings. Examines pathophysiological alterations and clinical management. Students will synthesize knowledge of developmental, physiological, psychological, and sociocultural factors in the assessment and management of acute illness. The focus is on differential diagnosis, clinical management, and child and family education within the context of primary care. Health promotion models, and biopsychosocial, developmental, and cultural theories are integrated throughout the course. Individual, family, and group intervention strategies are addressed. **Credits:** 3.00

NUR 52900 - Acute Illness: Pediatric Health Preceptorship

Credit Hours: 3.00. Assists students to develop and broaden clinical judgment and skills. Content includes the study of primary health care of children and adolescents with acute conditions and the impact of those conditions on family members. The focus is on growth and development, assessment, differential diagnosis, clinical decision making, management, and patient and family education within the context of primary care. Professional issues, collaboration and scope of practice, and advocacy are emphasized. Clinical seminars focus on variations of child health in the context of health promotion and advanced assessment.**Credits:** 3.00

NUR 53200 - Acute Illness: Adult Health Practice

Credit Hours: 3.00. Examination of pathophysiological alterations and clinical management of acute conditions in adolescents and adults. Students will synthesize knowledge of physiological, psychological, and sociocultural factors in the assessment and management of acute illness. Focus is on the differential diagnosis, clinical management, patient and family education within the context of primary care. Health promotion models, as well as biopsychosocial and cultural theories are integrated throughout the course. The adult nurse practitioner role is analyzed in the context of caring for persons with acute conditions.**Credits:** 3.00

NUR 53300 - Acute Illness: Adult Health Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of primary care of adolescents and adults with acute conditions and the impact of those conditions on family members. Focus is on assessment, deferential diagnosis, clinical decision making and management, as well as patient and family education within the context of primary care. The adult nurse practitioner role is analyzed in the context of caring for persons with acute conditions. Professional issues, collaboration and scope of practice, and advocacy are emphasized.**Credits:** 3.00

NUR 53800 - Psychiatric Mental Health Nurse Practitioner Roles And Psychotherapeutic Framework And Modalities

Credit Hours: 2.00. Scope and standards of practice for psychiatric mental health advanced practice nursing is set forth in this course. Content includes Psychiatric Mental Health Nurse Practitioner (PMHNP) functioning based on the state practice act as well as additional functions of the PMHNP including providing integrative therapy interventions, community interventions, case management, consultation and liaison services, clinical supervision, and policy development. Students will explore principles of evidence-based psychotherapy interventions including individual and group therapy, family and play therapy, and demonstrate competency in two forms of psychotherapeutic interventions.**Credits:** 2.00

NUR 53900 - Psychiatric Mental Health Nurse Practitioner Roles And Therapeutic Modalities Preceptorship

Credit Hours: 2.00. Psychotherapeutic frameworks and modalities are analyzed within the role of the PMHNP. Students participate in the application of individual and group psychotherapeutic interventions in a clinical setting by a PMHNP or therapist/clinical social worker.**Credits:** 2.00

NUR 54200 - Chronic And Commonly Recurring Conditions: Adult Health Practice

Credit Hours: 3.00. Examination of pathophysiological alterations and clinical management of chronic conditions and illnesses in adolescents and adults. Students will synthesize knowledge of physiological, psychological, and sociocultural factors in the assessment and management of chronic conditions. Focus is on the differential diagnosis, clinical management, and patient and family education within the context of primary care. Chronic illness and health promotion models, as well as biopsychosocial and cultural theories are integrated throughout the course. Individual, family, and group intervention strategies are addressed. The adult nurse practitioner role is analyzed in the context of caring for persons with acute conditions.**Credits:** 3.00

NUR 54300 - Chronic Illness: Adult Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of chronic illness and recurring conditions in adolescents and adults and the impact of those conditions on family members. Focus is on the differential diagnosis, clinical decision making and management, as well as patient and family education within the context of primary care. The adult nurse practitioner role is analyzed in the context of caring for persons with chronic conditions. Professional issues, collaboration, scope of practice and advocacy are emphasized.**Credits:** 3.00

NUR 54400 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan

Credit Hours: 3.00. Evidence-based treatment methods including principals of psychopharmacology and psychotherapeutic modalities across the life span are examined, evaluated and implemented in clinical practice. Factors, such as culture, neurobiology, developmental level and gender that impact disease expression, therapeutic approaches and treatment response are explored. Mental health assessment including standardized psychiatric assessment tools, including Mental Status Exam, Mood Disorder Questionnaire, Patient Health Questionnaire (PHQ-9), Columbia-Suicide Severity Rating Scale (C-SSRS), DSM V and ICD is presented. In addition, developmental and functional level, and cultural influences are included. Substance use assessment skills and substance use interventions will be examined including how substance use impacts psychiatric symptom expression and response to treatment. Legal and ethical implications of care will be discussed.**Credits:** 3.00

NUR 54500 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan I Preceptorship

Credit Hours: 3.00. Students engage in the PMHNP role in a clinical setting under the supervision of a Psychiatric Mental Health Nurse Practitioner (PMHNP) or MD. Students implement and evaluate mental health assessment skills, evidenced based treatment interventions and evaluate effectiveness integrating principals of neurobiology, culture, developmental and functional abilities.**Credits:** 3.00

NUR 55200 - Chronic Illness And Commonly Recurring Conditions: Pediatric Health Practice

Credit Hours: 3.00. Examines pathophysiological alterations and clinical management of chronic conditions and illnesses in children and adolescents. Students will synthesize knowledge of developmental, physiological, psychological, and sociocultural factors in the assessment and management of chronic conditions. The focus is on the differential diagnosis, clinical management, and child and family education within the context of primary health care. Chronic illness and health promotion models, as well as

biopsychosocial, developmental, and cultural theories are integrated throughout the course. Individual, family, and group intervention strategies are addressed.**Credits:** 3.00

NUR 55300 - Chronic Illness And Commonly Recurring Conditions: Pediatric Health Preceptorship

Credit Hours: 3.00. Assists students to develop and broaden clinical judgment and skills. Content includes the study of chronic illness and recurring conditions in children and adolescents and the impact of those conditions on family members. The focus is on growth and development, differential diagnosis, clinical decision making and management, and child and family education within the context of primary care. The pediatric nurse practitioner role is analyzed in the context of caring for children with chronic conditions. Professional issues, collaboration, scope of practice, and advocacy are emphasized.**Credits:** 3.00

NUR 57600 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan II

Credit Hours: 3.00. The practice of Psychiatric Mental Health Nurse Practitioner (PMHNP) is further expanded to include identification and management of the complex patient across the life span. Explore how co-morbid health conditions impact psychiatric disorders and treatment response. Differentiate psychiatric diagnoses, personality disorders, social, family and cultural influences, developmental disorders and how these factors impact treatment. Apply a variety of approaches including inter-and intra-professional resources, and psychopharmacological interventions to the management of complex patients. Legal and ethical implications of care are discussed.**Credits:** 3.00

NUR 57700 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan II Preceptorship

Credit Hours: 3.00. Students engage in the Psychiatric Mental Health Nurse Practitioner (PMHNP) role in a clinical setting under the supervision of a PMHNP or Medical Doctor. Students continue to develop and broaden clinical judgment, psychiatric assessment skills, and evidenced-based treatment interventions while considering cultural influences, and developmental and functional abilities. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of mental health.**Credits:** 3.00

NUR 59800 - Master's Capstone

Credit Hours: 1.00 or 3.00. Students apply research principles through problem identification, proposal development, implementation, and evaluation of a clinical problem. Students synthesize principles of health assessment and advanced practice nursing through a clinical research project. The project may be an evaluation study or part of an ongoing faculty research project. **Credits:** 1.00 or 3.00

NUR 59900 - Special Topics/Independent Study In Nursing

Credit Hours: 0.00 to 6.00 (West Lafayette, Calumet) 1.00 to 6.00 (Fort Wayne). Special topics in nursing are critically examined. Hours, credit, and subject matter are determined by the staff. Permission of instructor required. **Credits:** 0.00 to 6.00

NUR 60400 - PhD Seminar

Credit Hours: 0.00. This seminar is taken by Ph.D. nursing students each semester to integrate themselves to the academic and professional roles of the Ph.D. prepared nurse. This seminar will facilitate students to share their research ideas and progress through networking and collegial discourse. It also provides a low-stake forum where students can give and receive feedback on each other's research. Seminar goals include improving students' presentation and writing skills, teaching how to give constructive criticism, and advising on the academic and professional job market.**Credits:** 0.00

NUR 61100 - Primary Care Of The Young Family

Credit Hours: 3.00. Prepares family nurse practitioner students to assume responsibility for the coordination and delivery of culturally appropriate health services to childbearing and childrearing families. Students apply theory and research to the management of pregnancy, well-child care, stable chronic conditions, and acute episodic illnesses commonly encountered in primary care settings. The course emphasizes a sound conceptual basis for practice and an appreciation for evidence-based care. Students continue to integrate health promotion and health maintenance into the primary care of young families. **Credits:** 3.00

NUR 61300 - Primary Care Of The Young Family Practicum

Credit Hours: 3.00. Students progress in their ability to master the competencies of the family nurse practitioner, using critical thinking and diagnostic reasoning skills. Students apply knowledge of clinical research, pharmacology, physiology, and conceptual frameworks to the primary care of childbearing and childrearing clients and families. Prerequisite: NUR 50000, NUR 51100. **Credits:** 3.00

NUR 61500 - Primary Care Of The Young Family Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of primary care of the young family with acute and chronic conditions, and the impact of those conditions on family members. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of primary care. The Family Nurse Practitioner role is analyzed in the context of caring for the young family with acute and chronic conditions. Professional issues, collaboration and scope of practice, advocacy are emphasized. Prerequisites: NUR 50700 and NUR 50200 and NUR 50300 and NUR 51600 and NUR 51100 and NUR 51300. Co-requisite: NUR 61100.**Credits:** 3.00

NUR 62200 - Primary Care Of The Aging Family

Credit Hours: 3.00. Prepares family nurse practitioner students to assume responsibility for the coordination and delivery of culturally appropriate health services to middle-aged and older families. Students learn to manage stable chronic conditions and acute episodic illnesses commonly encountered in primary care settings. The course emphasizes the conceptual basis for practice and an appreciation for evidence-based care. Students continue to integrate health promotion and health maintenance into the primary care of older clients and their families. **Credits:** 3.00

NUR 62300 - Primary Care Of The Aging Family Practicum

Credit Hours: 3.00. Students progress in their ability to master the competencies of the family nurse practitioner, using critical thinking and diagnostic reasoning skills. Students apply knowledge of clinical research, pharmacology, physiology, and conceptual frameworks to the primary care of middle-aged and older clients and families. Prerequisite: NUR 61300. **Credits:** 3.00

NUR 62400 - Evidence-Based Practice

Credit Hours: 3.00. This course focuses on discovery and utilization of evidence-based care to produce the best outcomes for patients. The student develops a problem statement, performs a comprehensive literature search, and critically evaluates the evidence to determine best practice and formulate recommendations. The implementation of evidence-based practice (EBP) practical strategies, and analysis of components of EBP are examined throughout the course. Prerequisite: and either an undergraduate or graduate statistics course within the last five years. is recommended. **Credits:** 3.00

NUR 62500 - History, Ethics, And Innovations In Health-Care Delivery Systems

Credit Hours: 3.00. Broadens and refines the student's view of the current health-care delivery system by providing an analysis from an historical perspective, of the forces that have shaped the system, including scientific discoveries, technological advances, social justice issues and the development of health professions and institutions. Nursing knowledge is influenced by these multiple factors; thus, the course provides students with tools to lead others in meeting the many challenges the health-care system brings. A chronological and topical format is used, which investigates policy and societal trends affecting health care, the nursing and medical professions, and professional practice. Changes in the roles of health-care providers and consumers are assessed from economic, social, organizational, political, ethical, legal, and technological perspectives. **Credits:** 3.00

NUR 62600 - Applied Biostatistics For Outcome Evaluation

Credit Hours: 3.00. This course applied biostatistical methods commonly used in epidemiologic research to large data sets. Students learn to use statistical software to compute descriptive, bivariate, and multivariate statistics. Students translate statistical findings into conclusions relevant to the delivery of health care. Prerequisites: NUR 51000 and an undergraduate statistics course within the last five years.**Credits:** 3.00

NUR 62700 - Primary Care Of The Aging Family Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of primary care of the aging family with acute and chronic conditions and the impact of those conditions on family members. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of primary care. The Family Nurse Practitioner role is analyzed in the context of caring for the aging family with acute and chronic conditions. Professional issues, collaboration and scope of practice, advocacy are emphasized. Prerequisites: NUR 50700 and NUR 50200 and NUR 50300 and NUR 51600 and NUR 51100 and NUR 51300. Co-requisite: NUR 62200. **Credits:** 3.00

NUR 63100 - Family Nurse Practitioner Preceptorship Clinical Synthesis

Credit Hours: 2.00 to 3.00. This course assists students to integrate clinical knowledge and skills from prior course work when providing care to patients across the lifespan. The Family Nurse Practitioner role is analyzed in the context of caring for patients of all ages with acute and chronic conditions. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of primary care. Prerequisites: NUR 50700 and NUR 50200 and NUR 50300 and NUR 51600 and NUR 51100 and NUR 51300. Co-requisite: NUR 61100 and NUR 61500 and NUR 62200 and NUR 62700.**Credits:** 2.00 to 3.00

NUR 63200 - Health Policy: Local To Global

Credit Hours: 3.00. This course provides an overview of health policy not only in the context of health care policy, but also the broader concepts of policies which affect health outside of the realm of health care delivery. Social, ethical, cultural, economic, and political issues that affect the delivery of health and nursing services are critically analyzed. Roles of health care providers and consumers of health care services, as well as government and entrepreneurial interest are examined. Emphasis is placed on the impact of policy decisions and advocacy on professional nursing practice, health services, health equity. **Credits:** 3.00

NUR 64000 - Human Factors In Healthcare Engineering

Credit Hours: 3.00. This course provides a foundation for healthcare professionals in the application of human factors, ergonomics, theories, and principles to improve the healthcare system. The interaction between humans and artifacts, environments, culture, and social structures as they apply to patient safety and healthcare system improvement issues are presented. Prerequisites: NUR 51000 or equivalent. Undergrad Statistics course within the past five years. **Credits:** 3.00

NUR 64100 - Principles Of Epidemiology

Credit Hours: 3.00. This course will provide the student with an introduction to epidemiology - the study of the distribution and determinants of health status. This course focuses on application of epidemiologic descriptive and analytic study as it relates to the distribution and determinants of health status. Topics will include the scope and history of epidemiology, basic quantitative methods and measures used in the field, and an introduction to the design and implementation of epidemiological studies. The course will also include the examination of cases from infectious disease, various forms of applied epidemiology (e.g., clinical and field epidemiology), surveillance/screening tests, types of epidemiological studies, concepts of disease transmission, and causality. Prerequisites: At least one undergraduate or graduate level statistics course. Permission of department required.**Credits:** 3.00

NUR 64200 - Systems Approaches In Healthcare

Credit Hours: 3.00. Students are introduced to the fundamentals of systems engineering tools and approaches through hands on problem solving exercises. Systems Engineering tools/methods are applied to a clinical problem. Upon completion of this course, the participants will have had exposure to system engineering tools and approaches such as process mapping, bottle-neck analysis, queuing, lean engineering, simulation, optimization, dealing with uncertainty, what-if analysis, quality control and performance monitoring techniques.**Credits:** 3.00

NUR 65500 - Advanced Practice In Nursing Seminar

Credit Hours: 1.00. Students analyze movements and trends that influence advanced practice in nursing. Students dialogue with peers on issues related to advanced practice, nursing as a profession and discipline, healthcare and other related topics of interest. Prerequisite: NUR 60100, NUR 60300, NUR 61300. **Credits:** 1.00

NUR 65600 - Healthcare Organization, Policy And Economics

Credit Hours: 3.00. Students use theories to understand the various models that influence health care policy and organize health care delivery. Students investigate the processes of analyzing and forming health policy. The reciprocal relationship between evidence-based practice and health care policy is explored. Students examine health care economics from a micro and macro perspective and their impact on health care delivery systems. Students also explore issues such access to health care, health care quality, and cost. Prerequisite: NUR 50100. **Credits:** 3.00

NUR 65700 - FNP Practicum: Clinical Synthesis

Credit Hours: 2.00. This is the final clinical capstone course in a sequence of clinical courses designed to prepare graduate nursing students for FNP practice. Students synthesize and apply theoretical and empirical knowledge in primary-care settings with culturally diverse clients and families. Emphasis is given to the clinical management of a wider spectrum of clients and to the more complex, co-morbid conditions seen in family practice. Prerequisite: NUR 62300 .Corequisite: NUR 65500, NUR 65600. **Credits:** 2.00

NUR 67300 - DNP Health Policy Residency

Credit Hours: 2.00. This residency course provides an opportunity for students to gain greater understanding of how public policy affects state, national, and international health-care delivery systems and resources. Students will interact with top policy makers at the local, state, national, and/or international level to explore the many forces, including political, economic, social, and technological, that influence current policy and the policy-making process. Prerequisite: NUR 65600.**Credits:** 2.00

NUR 67400 - Quality Initiatives, Leadership And Advanced Practice Nursing

Credit Hours: 2.00. This course develops concepts of the guiding principles of quality, system and leadership initiatives in the Nurse Practitioner Role. The students explore principles and techniques of health coaching, interprofessional team work, delegation and prioritization that can be used in various healthcare settings. Potential quality initiatives will be identified and an

improvement plan will be developed using various quality initiatives modalities in the healthcare system to improve quality care, safety and patient outcomes. Permission of department required.**Credits:** 2.00

NUR 67500 - Role Transition And Synthesis

Credit Hours: 2.00. This course provides an integration of core, cognate, and specialty knowledge, with an emphasis on role transition and synthesis. Focuses on internal and external healthcare organizational factors at the local, state, national, and international levels. Seminars explore role issues, licensure, credentialing, finances, legislation, healthcare policy, legal issues, ethics, cultural diversity, evidence-based practice, emerging trends in the management of acute and chronic conditions of adults, and independent and collaborative practice. Prerequisite: NUR 53200, NUR 53300. Corequisite: NUR 54200, NUR 54300, NUR 59800. **Credits:** 2.00

NUR 67800 - Healthcare Economics And Finance

Credit Hours: 3.00. This class will provide an introduction to the application of health economics principles as it relates to various health care systems, health care stakeholders and health policy issues in the United States. The course will explore the allocation and distribution of resources in the health care industry and the nature of the constantly changing relationship between health care and its major constituencies. Topics include the demand for health care, access to care, health care parity, health care reimbursement, economic evaluation, health care delivery models, and health care professionals' services.**Credits:** 3.00

NUR 68000 - DNP Cognate Residency: Direct Practice/Systems Management I

Credit Hours: 3.00. This is the first in a series of two courses that applies knowledge and skill to improve healthcare outcomes in systems. The emphasis is the application of engineering principles to health care including human factors, systems analysis and design, and optimal use of information technology and simulation. Residency activities provide students with opportunities to participate in professional service activities, attend institutes and conferences to expand their area of research or clinical interest and/or develop significant scholarly pursuits. The focus is on creating change in the healthcare system through analysis, synthesis, critique, and application of evidence-based practice to support accessible high quality, safe, efficient, and effective health care. Prerequisites: NUR 68700. **Credits:** 3.00

NUR 68001 - PhD Cognate Residency

Credit Hours: 3.00. The PhD Cognate includes experiential learning that provides preliminary preparation for conducting the PhD Dissertation Proposal. The course will incorporate guidelines for ethical conduct of human studies, research-based studies, and evaluation of evidence-based literature for study design. The course will assist students to develop the project reflective of previous courses, evidence, project feasibility, theoretical frameworks, appropriate methodology and data analysis.**Credits:** 3.00

NUR 68100 - DNP Cognate Residency: Direct Practice/Systems Management II

Credit Hours: 3.00. This is a second in a series of two courses that applies knowledge and skill to improve healthcare outcomes in systems. The emphasis is the advanced application of engineering principles to health care including human factors, systems analysis and design, and optimal use of information technology and simulation. Students assume a leadership role in the application process utilizing skills acquired in DNP Residency: Direct Practice Management I. Residency activities provide students with opportunities to participate in professional service activities, attend institutes and conferences to expand their area of research or clinical interest and/or develop significant scholarly pursuits. The focus is on providing leadership in creating change in the healthcare system through analysis, synthesis, critique, and application of evidence-based practice to support accessible high quality, safe, efficient, and effective health care and systematic evaluation of outcomes. Clinical sites for the DNP Residency may include collaboration with experts in local, state, national, and international healthcare agencies. Residency activities are selected by the student under the guidance of the faculty advisor and preceptor, DNP program director, and approved by the director of graduate programs in nursing. Prerequisite: NUR 68700. **Credits:** 3.00

NUR 68300 - DNP Cognate Residency: Public Health/Homeland Security Practice I

Credit Hours: 3.00. This is the first in a series of two courses that provides an opportunity to explore a public health topic of interest under the direction of a faculty member. The focus is on implementation of an evidence-based practice model and evaluation of their effectiveness in improving community health outcomes. Residency activities provide opportunities to utilize research and evidence-based practice to expand the knowledge base needed for the development, implementation, and evaluation of programs to meet the public health needs of specific communities with risk assessment analysis. Students will assess, plan, and evaluate the preparedness and response to mass casualty disasters or other public health concerns. Prerequisites: NUR 51000 and NUR 63200. Concurrent Prerequisites: NUR 62400 and NUR 62600. **Credits:** 3.00

NUR 68500 - DNP Cognate Residence: Public Health/Homeland Security Practice II

Credit Hours: 3.00. This is the second in a series of two courses that provides an opportunity to further explore a public health topic of interest under the direction of a faculty member. The focus is on implementation of an evidence-based practice model and advanced application of evaluation techniques in establishing their effectiveness in improving community health outcomes. Residency activities provide ongoing opportunities to refine research and evidence-based practice to expand the knowledge base needed for the development, implementation, and evaluation of programs to meet the public health needs of the community and systems of care. Emphasis is on providing leadership in incorporating assessment of health needs of specific communities with risk assessment analysis to implement models to improve community outcomes. Students assume a leadership role as they assess, plan, and evaluate the preparedness and response to mass casualty disasters or other public health concerns. Residency sites may be local, state, national, and/or international settings. Residency activities are selected by the students under the guidance of the faculty advisor and preceptor, DNP program director, and approved by the director of graduate programs in Nursing. Prerequisite: NUR 68300. **Credits:** 3.00

NUR 68700 - Doctor Of Nursing Practice (DNP) Practice Inquiry: Evidence-Based Practice I

Credit Hours: 3.00. This course is first of a two part series that provides the opportunity to develop, implement and evaluate an evidence-based inquiry project. Students gain competence in activities aimed at improving the healthcare practice and systems, outcome evaluations, translation of research into practice, participation in interdisciplinary and collaborative research, and dissemination of research results. Total clinic hours 192. Prerequisites: NUR 51000, NUR 62600, NUR 62400 and Cognate Residencies. **Credits:** 3.00

NUR 68900 - Doctor Of Nursing Practice (DNP) Practice Inquiry: Evidence-Based Practice II

Credit Hours: 3.00. This course is second in the series that provides the opportunity to develop, implement and evaluate an evidence-based inquiry project. Students gain competence in activities aimed at improving the healthcare practice and systems, outcome evaluations, translation of research into practice, participation in interdisciplinary and collaborative research, and dissemination of research results. Total clinic hours 192. Prerequisites: NUR 68700 and Cognate Residencies. **Credits:** 3.00

NUR 69010 - Research Seminar

Credit Hours: 1.00. The Seminar in Nursing Research is a discussion-based course intended to socialize the nursing student to the role of an independent scholar. Discussion concentrates upon current topics and issues in nursing research, with an emphasis on targeting the most supportive trajectories for individual student research foci. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor. **Credits:** 1.00

NUR 69020 - Leadership Seminar

Credit Hours: 1.00. The nurse as leader is deconstructed and reconstructed within the realms of scientific knowledge, theory, education, and healthcare delivery. Nurse leaders as members of collaborative teams and the influence of nursing intelligence on research teams are examined. Historical and societal influences affecting nurse leaders are examined, including media portrayals of nursing, transformational leadership, critical theory and feminist theory. Models of leadership are explored within the context of scientific work; the student is challenged to evaluate themselves as present and future leaders and members of nursing's academe. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor. **Credits:** 1.00

NUR 69030 - Communication Seminar

Credit Hours: 1.00. Original research findings, using a global framework, are analyzed. The effectiveness of communication to implement and evaluate programs designed to promote innovative change in healthcare is critiqued. Communication as a mechanism to develop pathways to ensure accuracy of scientific information transfer, and as a necessary component of policy and major public health events is appraised. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor. **Credits:** 1.00

NUR 69040 - Collaboration Seminar

Credit Hours: 1.00. Principles of collaboration to generate scientific knowledge, which is used to improve nursing and healthcare practice, education, policy, and outcomes, are discussed. Evidence generated from transdisciplinary teams is analyzed with attention given to specific professions contributions and roles. The specific role of the nurse scientist and the value of nursing intelligence within the context of collaborative projects are discussed. Best practices in collaboration as exemplified by select research teams are presented. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor. **Credits:** 1.00

NUR 69050 - Implementing Theory In Healthcare Research

Credit Hours: 3.00. Historical and contemporary social, ethical, educational, scientific, and professional influences on the development of theoretical knowledge in nursing and health research are analyzed. Various methods of theory development are reviewed. Selected biological/physiological, behavioral, and health service theories that form the basis of nursing science are critically evaluated. Skills needed for theory analysis and theory development are emphasized. The role of theoretical knowledge to innovation in nursing science and healthcare is presented. Scientific bridges between theoretical frameworks and research methods are appraised. Selected nursing and healthcare scientists communicate the theoretical aspects of their programs of research with an emphasis on collaboration between disciplines. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor. **Credits:** 3.00

NUR 69060 - Innovative Care/Innovations In Healthcare Delivery

Credit Hours: 3.00. Historical, ethical, financial, and social influences on contemporary innovations in healthcare practices and delivery systems are analyzed. The genesis and diffusion of both micro- and macro-level innovations are reconstructed with the use of theories, organizational and transdisciplinary factors, and effective processes. Quality of care issues are synthesized utilizing innovations in care and health delivery systems as a framework. With innovative care and innovations in healthcare delivery systems as frameworks, quality of care issues are appraised. Selected exemplars of successful innovations, with an emphasis on strategies to evaluate dissemination and impact, are analyzed. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor. **Credits:** 3.00

NUR 69100 - Health Care Research Methods

Credit Hours: 3.00. This course advances knowledge and skill in quantitative research methods for health program evaluation, population health, healthcare quality improvement, and other healthcare research applications. Topics include design of experimental, quasi-experimental, and observational studies; primary data collection through surveys and other techniques; use of clinical, administrative, and other secondary data sources; and data analysis strategies appropriate to each design and type of data. The course addresses basic issues of sampling, measurement, and validity and reliability, as well as practical issues that arise in healthcare research. **Credits:** 3.00

NUR 69200 - Applied Statistics In Healthcare Research

Credit Hours: 3.00. This course advances knowledge and skills in statistical approaches for analyzing complex healthcare data. It focuses on statistical analysis in contexts such as evidence-based practice, quality improvement, evaluation, and behavioral and population health. Topics include probability and descriptive statistics, nonparametric statistics, risk and odds ratios, sensitivity and specificity, logistic and multinomial regression, multiple linear regression, general linear models, survival and time-to-event analysis, and mixed effect modeling. The course will provide hands-on experience in statistical analysis of healthcare data. Prerequisites: Introductory course in statistics or biostatistics at the advanced undergraduate or graduate level. **Credits:** 3.00

NUR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Nutrition Science

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements. **Credits:** 1.00

NUTR 10600 - Introduction To The Profession Of Dietetics

Credit Hours: 1.00. Overview of the dietetics profession, including standards, ethics, educational and employment opportunities, and professional credentialing. Spring semester offered only through distance learning. **Credits:** 1.00

NUTR 10700 - Introduction To Nutrition Science

Credit Hours: 1.00. An overview of professional opportunities for nutrition scientists. Introduces tools and resources available for becoming a nutrition scientist. **Credits:** 1.00

NUTR 12500 - Food Safety Certification And Career Development

Credit Hours: 1.00. Training in ServSafe food safety certification program. **Credits:** 1.00

NUTR 20200 - Principles Of Food Preparation And Nutrition

Credit Hours: 4.00. Chemical, physical, microbiological, and nutritional principles of food preparation. Functions and sources of nutrients, their relationship to a healthy lifestyle and incorporating the benefits into marketing of foodservice. **Credits:** 4.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation. **Credits:** 3.00

NUTR 24500 - Rookie Experience In Sports Nutrition

Credit Hours: 1.00. For students without prior experience within the specialty dietetics practice of sports nutrition, this course provides traditional and experience-based learning in a Division I Collegiate sports setting. Guest speakers will present on various aspects of the athletics work setting. Basics of sports nutrition are taught and students must pass an exam to progress to NUTR 34500, Continuing Experience In Sports Nutrition. Written application and interview process required prior to instructor approval. Permission of Instructor required. **Credits:** 1.00

NUTR 29700 - Introduction To Honors Research

Credit Hours: **2.00.** Introduces students to the design and implementation of an honors research project.**Credits:** 2.00

NUTR 30300 - Essentials Of Nutrition

Credit Hours: 3.00. Basic nutrition and its application in meeting nutritional needs of all ages. Credit not given for both FN 30300 and FN 31500. CTL: Human Nutrition **Credits:** 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle. **Credits:** 3.00

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation. **Credits:** 3.00

NUTR 33200 - Nutrition Counseling

Credit Hours: 3.00. Develop communication skills and counseling techniques necessary to elicit nutrition-related behavior changes in individuals. **Credits:** 3.00

NUTR 34000 - Field Experience In Nutrition, Fitness And Health

Credit Hours: 1.00 to 3.00. Field experience in NFH-related setting that provides an opportunity for the application of the classroom experience. For NFH majors only. The student secures his/her own field experience, which must be approved by the NFH program coordinator in order to receive academic credit. **Credits:** 1.00 to 3.00

NUTR 34500 - Continuing Experience In Sports Nutrition

Credit Hours: 1.00. Traditional and experience-based learning within the specialty dietetics practice of sports nutrition in a Division I Collegiate sports setting. Guest speakers will present on various aspects of the athletics work setting. Students must pass an exam given in NUTR 24500, Rookie Experience In Sports Medicine, to enroll. Permission of Instructor required. **Credits:** 1.00

NUTR 35000 - Dietetics Practicum In Quantity Food Production

Credit Hours: 1.00 to 3.00. Supervised on-the-job experience related to the food service management in health care facilities, schools, community programs, etc. Student is responsible for arrangement and approval of the experience through the supervising food service manager or dietitian and the course instructor. Permission of instructor required. **Credits:** 1.00 to 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being. **Credits:** 3.00

NUTR 37500 - Foods And Nutrition Internship

Credit Hours: 1.00 to 4.00. Food science or nutrition professionally related work experience in industry, institutions, or business. Permission of instructor required. **Credits:** 1.00 to 4.00

NUTR 39000 - Independent Undergraduate Research

Credit Hours: 1.00 to 3.00. Individual research projects undertaken with faculty supervision. Permission of instructor required. **Credits:** 1.00 to 3.00

NUTR 39100 - Independent Study

Credit Hours: 1.00 to 3.00. Independent scholarly activity undertaken with faculty supervision. Permission of instructor required. **Credits:** 1.00 to 3.00

NUTR 39200 - Undergraduate Instruction In Nutrition

Credit Hours: 1.00 to 5.00. Problems dealing with various aspects of nutrition. Permission of instructor required. **Credits:** 1.00 to 5.00

NUTR 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for Honors College and Department of Nutrition Science Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required. **Credits:** 1.00 to 3.00

NUTR 39800 - International Special Topics

Credit Hours: 1.00 to 3.00. Course taken during an international experience that is recognized by the University. **Credits:** 1.00 to 3.00

NUTR 40000 - Executive In The Classroom

Credit Hours: 1.00. Lecture and discussion, featuring industrial and business executives in food-related areas. Emphasis is placed on careers in the food industry. **Credits:** 1.00

NUTR 41100 - Dietetics Career Planning

Credit Hours: 1.00. This course will prepare students to successfully apply and interview for dietetics supervised practice experience, jobs and graduate programs. **Credits:** 1.00

NUTR 41500 - Practicum In Nutrition, Fitness, And Health

Credit Hours: 2.00. Application of nutrition and exercise knowledge and skills by performing assessments, interpreting data, designing and implementing programs, documenting progress, and counseling of an adult client. **Credits:** 2.00

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels. **Credits:** 3.00

NUTR 42600 - Laboratory In Community Nutrition

Credit Hours: 3.00. Application of previous knowledge and communication skills in nutrition of community settings, such as school nutrition, health facilities, and federal or state nutrition programs. **Credits:** 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs. **Credits:** 2.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment. **Credits:** 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease. **Credits:** 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease. **Credits:** 3.00

NUTR 44200 - Foodservice Systems Management

Credit Hours: 3.00. Systems approach to foodservice management. Foodservice operations based on nutritional goals of the target market. Food sanitation and safety, management of human resources, and supervision. Emphasis on applications to health-care facilities.**Credits:** 3.00

NUTR 44300 - Laboratory In Foodservice Systems Management

Credit Hours: 9.00. Application of knowledge relating to foodservice. Responsibilities may include communication skills and tasks equivalent to supervising foodservice operations. **Credits:** 9.00

NUTR 45300 - Food Chemistry

Credit Hours: 4.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods. **Credits:** 4.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method. **Credits:** 2.00

NUTR 46100 - Laboratory In Medical Nutrition Therapy

Credit Hours: 10.00. Application of previous knowledge and communication skills of medical nutrition therapy in the hospital/patient care setting to ultimately include responsibilities equivalent to staff relief. **Credits:** 10.00

NUTR 46500 - Laboratory In Engagement

Credit Hours: 3.00. Culminating experiences in community nutrition, foodservice, medical nutrition therapy, public health, research and/or nutrition related business. Placements will be arranged based on individual student's preferred track in long-term care facilities, hospitals, public health or community agencies, and/or business and industry. **Credits:** 3.00

NUTR 48000 - Medical Nutrition Therapy I

Credit Hours: 4.00. Nutrition assessment in humans and introduction to the nutrition care process. Application of the nutrition care process to various disease states.**Credits:** 4.00

NUTR 48100 - Medical Nutrition Therapy II

Credit Hours: 3.00. Application of the Nutrition Care Process in various disease states and conditions to prepare students for supervised practice programs. **Credits:** 3.00

NUTR 48800 - Topics In Nutrition, Fitness, And Health

Credit Hours: 3.00. This course critically evaluates the interrelationships between nutrition and exercise and their impact on physical performance and health. Concepts combining nutritional sciences and exercise physiology will be presented. Emerging science and controversies in the current literature will be discussed. **Credits:** 3.00

NUTR 49000 - Independent Undergraduate Research

Credit Hours: 1.00 to 4.00. Independent research projects undertaken with faculty supervision. Permission of instructor required. **Credits:** 1.00 to 4.00

NUTR 49100 - Independent Study

Credit Hours: 1.00 to 4.00. Independent scholarly activity undertaken with faculty supervision. Permission of instructor required. **Credits:** 1.00 to 4.00

NUTR 49200 - Undergraduate Instruction In Nutrition

Credit Hours: 1.00 to 5.00. Problems dealing with various aspects of nutrition. Permission of instructor required. **Credits:** 1.00 to 5.00

NUTR 49500 - Undergraduate Seminar In Foods And Nutrition

Credit Hours: 1.00. Instruction and application of concepts for effective oral presentations in the field of nutrition sciences. **Credits:** 1.00

NUTR 49600 - Evaluation Of Nutrition Science Research

Credit Hours: 3.00. Evaluation of nutrition science research as it relates to health and disease. **Credits:** 3.00

NUTR 49700 - Honors Research Project

Credit Hours: 1.00 to 3.00. The completion of the independent honors research project for Honors College and Department of Nutrition Science Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.**Credits:** 1.00 to 3.00

NUTR 51100 - Applied Nutrition Counseling

Credit Hours: 3.00. Field experience in one-on-one nutrition counseling that requires application of prior learning of theory, knowledge and skills. **Credits:** 3.00

NUTR 51200 - Dietary Supplements

Credit Hours: 2.00. Provides advanced training to evaluate concepts and issues of dietary supplement use in various populations. Students develop critical thinking skills through activities such as case studies to make appropriate recommendations for nutrition supplementation.**Credits:** 2.00

NUTR 51300 - Food Chemistry

Credit Hours: 2.00. Application of fundamental laws and concepts of chemistry, physics, and biology to foods and the sensory and analytical properties of food. Evaluation of the validity of health controversies related to food ingredients. Completion of a food additive assessment.**Credits:** 2.00

NUTR 51400 - Food Chemistry Laboratory

Credit Hours: 2.00. Application of fundamental laws and concepts of chemistry, physics, and biology to foods and eating. Experiments with food will be designed, reported and critiqued using the scientific method.**Credits:** 2.00

NUTR 51500 - Nutrition Pathophysiology

Credit Hours: 2.00. A review of the underlying nutritional components and pathophysiology of common human diseases/disorders and current approaches for the prevention, management, and treatment of nutrition-related diseases. Building upon previous coursework in micronutrient and macronutrient metabolism, the focus is on the metabolic disturbances occurring with diseases such as diabetes, GI diseases, obesity kidney diseases, cardiovascular disease, and anemia.**Credits:** 2.00

NUTR 51600 - Eating Disorders And Healthy Weight Management

Credit Hours: 3.00. An evidence-based, application-focused exploration of the continuum of healthy eating to eating disorders and the factors that influence body weight. This includes review of each eating disorder diagnosis from an interdisciplinary perspective with emphasis on the role of the registered dietitian nutritionist in prevention, identification, treatment, and recovery.**Credits:** 3.00

NUTR 52100 - Advanced Medical Nutrition Therapy

Credit Hours: 3.00. Application of the Nutrition Care Process in various disease states and conditions to prepare students for supervised practice. **Credits:** 3.00

NUTR 52200 - Advanced Nutrition Communications

Credit Hours: 3.00. Provides advanced training and skill development to effectively implement and evaluate food and nutrition communication to lay and professional audiences through oral, written, and mass media channels. Permission of department required.**Credits:** 3.00

NUTR 52300 - Trends In Nutrition & Dietetics

Credit Hours: 2.00. Analysis and discussion of current trends in dietetics practice and nutrition including such topics as nutrigenomics, informatics, sustainability, agricultural practices, food policies, and global health. Permission of department required. **Credits:** 2.00

NUTR 52900 - Basic Bone Biology

Credit Hours: 3.00. This course is designed to present the fundamentals of bone biology. The course objectives are designed to provide learners with a solid framework for understanding mechanisms, diseases, and treatments associated with the musculoskeletal system as they advance in their education and training.

- Approximately 45 hours of lecture will help the learner achieve the objectives outlined. Lectures will be given to present information and tie into information learners have acquired or will acquire in other courses (e.g. biomechanics, physiology, molecular biology, etc.) to assist them in combining all of their courses and research experiences together into one interdisciplinary learning experience.
- Directors will attend and supervise the scheduled lecture sessions if they are not providing the lecture content, and they will be available during these times to answer questions. However, it is expected that students take additional time outside of scheduled class time to further learning.
- Materials for the learners will be posted on the course's website. These materials will include:
- Lecture notes and PowerPoints: Each lecturer will post his/her lecture notes and associated PowerPoint slides prior to the lecture.
- Additional information: As the course progresses, instructors may come across additional information that they may find useful for student learning of the material. These materials will be posted for students to utilize as they see fit.

** Materials found on other sites (e.g. social networking sites) will not be official course materials, so use at your own risk.*

** Course offered every other spring***Credits:** 3.00

NUTR 53100 - Ethical Practice And Professionalism In Dietetics

Credit Hours: 1.00. Evaluation of concepts and issues of ethical practice in the dietetics profession and the application of the Scope/ Standards of Practice for Nutrition and Dietetics Practitioners and the Code of Ethics for the Nutrition and Dietetics Profession. Permission of department required.**Credits:** 1.00

NUTR 53200 - World Food Problems

Credit Hours: 3.00. (AGEC 53200) This course focuses on the multi-disciplinary challenges that exist in meeting the food and nutrition needs of a growing world population. The course aims to instill an appreciation of the importance of economics, food production and technology, trade, culture, communication, political processes and institutions, demography and related factors in determining adequate food availability and health globally. Permission of instructor required. **Credits:** 3.00

NUTR 53300 - Community Nutrition Experience

Credit Hours: 3.00. Application of previous knowledge and communication skills in nutrition of community settings, such as school nutrition, health facilities, and federal or state nutrition programs. **Credits:** 3.00

NUTR 53400 - Human Sensory Systems And Food Evaluation

Credit Hours: 3.00. Overview of human chemosensory (taste, smell, chemesthetic) mechanisms and function, as well as procedural and statistical methods for evaluating the sensory responsiveness of people and the sensory properties of foods. **Credits:** 3.00

NUTR 53500 - Leadership In Dietetics

Credit Hours: 1.00. Evaluation of concepts and development of skills relevant to leadership in dietetics including staff development, budgeting, strategic planning, quality improvement, regulatory compliance and embracing human diversity.**Credits:** 1.00

NUTR 53900 - Foodservice Systems Management Experience

Credit Hours: 4.00. Application of previous knowledge and communication skills in foodservice facilities. Student's performance will ultimately include responsibilities equivalent to staff relief. Must have ServSafe Certification (manager level) prior to enrollment. **Credits:** 4.00

NUTR 54100 - Food Policy And Nutrition

Credit Hours: 3.00. We will explore the nature of contemporary United States food policy and key events throughout history that have shaped what it is today. We will investigate and discuss the roles individuals, corporations, and federal, state, and other government agencies play in creating food policy, and how these stakeholders as well as complex sociological and economic factors influence the way Americans eat. These questions will lead us to consider the future of food and food policy in the United States. Can Americans develop food policy that supports the agricultural economy AND promotes the consumption of healthy foods? Could our agricultural system support this? We will learn about and explore these questions with class discussions, debate, research, guest lectures, relevant documentary films, and thought-provoking readings that present a variety of viewpoints. You will explore current, real-life problems and have an opportunity to develop potential solutions.**Credits:** 3.00

NUTR 54200 - Engagement Experience

Credit Hours: 3.00. Application of previously acquired knowledge and communication skills in a culminating supervised practice experience in one of seven engagement tracks. Placements at professional sites incorporate individual student's preferred track in foodservice, industry, nutrition-fitness-wellness-energy balance, community/public health, long-term care, medical nutrition therapy or research. Students complete a major project demonstrating readiness to practice as an entry-level dietitian. **Credits:** 3.00

NUTR 54300 - Medical Nutrition Therapy Experience

Credit Hours: 4.00. Application of previous knowledge and communication skills of medical nutrition therapy in the hospital/ patient care setting to ultimately include responsibilities equivalent to staff relief. **Credits:** 4.00

NUTR 54400 - Advanced Medical Nutrition Therapy For Special Populations

Credit Hours: 1.00. Application of Medical Nutrition Therapy for special populations including enhanced skills for the practice of dietetics. Lectures and laboratory activities supplement training in various diagnoses and conditions not routinely encountered during supervised practice experiences in NUTR 56100 Medical Nutrition Therapy Experience.**Credits:** 1.00

NUTR 59000 - Special Problems In Nutrition

Credit Hours: 1.00 to 4.00. Individual problems dealing with various aspects of nutrition. Permission of instructor required. **Credits:** 1.00 to 4.00

NUTR 60500 - Nutritional Biochemistry And Physiology I

Credit Hours: 4.00. (ANSC 62500) Integration of biochemical and physiological functions of nutrients in humans and animals emphasizing interactions in bone and gut metabolism and physiology. Permission of instructor required. **Credits:** 4.00

NUTR 60600 - Nutritional Biochemistry And Physiology II

Credit Hours: 2.00. (ANSC 62600) Integration of biochemical and physiological functions of nutrients in humans and animals emphasizing post-absorptive use of nutrients as sources of energy and for the synthesis of macromolecules, emphasizing integrative metabolism in liver, muscle and adipose tissues. Offered weeks 1 - 8. Prerequisite: NUTR 60500. **Credits:** 2.00

NUTR 60700 - Nutritional Biochemistry And Physiology III

Credit Hours: 2.00. (ANSC 62700) Integration of biochemical and physiological functions of nutrients in humans and animals, emphasizing lipid metabolism and transport in the context of cardiovascular function. Offered weeks 9 - 16. Prerequisite: NUTR 60600. **Credits:** 2.00

NUTR 60900 - Food Lipids

Credit Hours: 1.00 to 3.00. (FS 60900) Importance of lipids in the diet and food systems with emphasis on changes occurring during processing, preparation, and storage. Nomenclature, physical attributes, and oxidation of lipids as well as properties and characteristics of antioxidants will be major components of the course. Offered in alternate years. Prerequisite: BCHM 56100; Prerequisite: NUTR 45300 or FS 45300. **Credits:** 1.00 to 3.00

NUTR 61200 - Obesity: Behavior, Physiology And Policy

Credit Hours: 2.00. The topics in this course provide a firm conceptual foundation for graduate students interested in issues related to obesity. Topics include issues ranging from molecular to policy: there is a strong emphasis on interdisciplinary approaches and critical thinking as it is a goal to integrate the sophisticated analyses of the physiological, nutritional, developmental, genetic, sensory, socio-economic, and experiential determinants of food and fluid intake. In addition, topics in this course such as health implications of obesity, epidemiology of obesity, endocrine, energy metabolism/integration, and neurochemistry will provide the opportunity for greater interdisciplinary collaborations. **Credits:** 2.00

NUTR 61600 - Special Topics In Ingestive Behavior

Credit Hours: 3.00. Explore, in-depth, important and current issues in ingestive behavior, enhance critical thinking skills, acquire professional skills (e.g. organizational, interpersonal), and develop rapport with scholars in the field. Typically offered in even ending years. **Credits:** 3.00

NUTR 61700 - Ingestive Behavior Seminar

Credit Hours: 1.00. (PSY 61801) Fosters an exchange of ideas and promotes greater familiarity among individuals from different laboratories and departments with interests related to ingestive behavior, and gives students opportunities to build their communication skills and lead/mediate discussions at a high scholarly level. Typically offered in alternate years. **Credits:** 1.00

NUTR 62600 - Advanced Presentation Skills

Credit Hours: 1.00. This course will teach graduate students how to synthesize information from multiple scientific studies and then communicate that information effectively to others in the form of a 40 minute long scientific seminar. The course is designed to provide students with clear guidelines for effective long-form oral communication of scientific information and then give students an opportunity to put those guidelines into practice. Prerequisites: Graduate standing past the first year. NUTR 69400 or equivalent course (determined by instructor review). For PhD students; INP Scientific Writing Course NUTR 62700. For MS students; a statement from the research mentor that the student has a clear thesis topic, that the student has completed the majority of work on the thesis, and that the student has conducted background reading on the thesis topic. **Credits:** 1.00

NUTR 62700 - Scientific Writing In Nutrition Science

Credit Hours: 1.00. The goal of this course is to develop and practice skills for clear scientific writing. The course is designed to introduce and practice the building blocks of scientific writing, including word choice, sentence structure and paragraph structure. In addition, students will be introduced to components of a hypothesis testing biomedical research paper in order to communicate a storyline. In addition, the publication cycle will be discussed. Prerequisites: Graduate standing past the first year. NUTR 60500 and NUTR 60600 and NUTR 60700. Other students can be approved for entry by permission of the instructor. **Credits:** 1.00

NUTR 63000 - Carbohydrates

Credit Hours: 3.00. (FS 63000) Carbohydrates with an emphasis on those of low molecular weight in foods. Structures, reactions, and properties of mono- and oligosaccharides. Introduction to polysaccharides and food gums. Offered in alternate years. Prerequisite: 6 credit hours in Organic Chemistry. **Credits:** 3.00

NUTR 63400 - Nutrition And Cancer Prevention

Credit Hours: 2.00. An in-depth examination of the role of nutrition in cancer prevention. Typically offered in alternate years. **Credits:** 2.00

NUTR 64000 - Human Feeding

Credit Hours: 2.00. Critical review of the genetic, neural, metabolic, endocrine, sensory, cognitive, and cultural determinants of appetite, food selection, and energy balance. Offered in alternate years. Prerequisite: physiology, biochemistry. Masters student standing. **Credits:** 2.00

NUTR 69000 - Interdepartmental Nutrition Program Grant Writing

Credit Hours: 1.00. Fulfillment of grant writing requirements for graduate students enrolled in the Interdepartmental Nutrition Program. Prerequisite: Interdepartmental Nutrition Program graduate students status. Permission of instructor required. **Credits:** 1.00

NUTR 69400 - Introductory Presentation Skills In Nutrition Science

Credit Hours: 1.00. Introductory training and application of concepts for effective communication through oral and poster presentations in the field of nutrition science. **Credits:** 1.00

NUTR 69500 - Interdepartmental Nutrition Program Seminar

Credit Hours: 0.00 or 1.00. Develop and strengthen skills in organization, preparation, and presentation of scientific information relevant to nutrition science to an audience of scientists. **Credits:** 0.00 or 1.00

NUTR 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

NUTR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Organizational Behavior and Human Resources

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.**Credits:** 3.00

OBHR 42900 - Labor Relations

Credit Hours: 3.00. The course focuses on employee-employer relations. Attention is given to topics in legal aspects of union organizing and collective bargaining, labor unions history and structure in the United States, labor management negotiations, dispute resolution procedures, international labor relations, and labor-management cooperation. **Credits:** 3.00

OBHR 49000 - Problems In Organizational Behavior

Credit Hours: 1.00 to 4.00. Supervised readings and reports in various subjects. Arrange with instructor before enrolling. Permission of instructor required. **Credits:** 1.00 to 4.00

OBHR 59000 - Problems In Organizational Behavior And Human Resource Management

Credit Hours: 1.00 to 4.00. Advanced study and investigation in a field of organizational behavior and human resource management under the guidance of staff. Permission of instructor required. **Credits:** 1.00 to 4.00

OBHR 60500 - Research Methods I

Credit Hours: 3.00. An introduction to research methods. This seminar examines the use of research methods to develop empirical tests for theoretical and practical issues. It includes readings and discussions on the philosophy of science, reliability, validity, research design, threats to research, ethics, and other issues in research methodology. Students formulate hypotheses and an original research design to test their hypotheses. **Credits:** 3.00

OBHR 60600 - Research Practicum

Credit Hours: 2.00 or 3.00. Independent empirical research in organizational behavior and human resource management, including the submission of a written report. Prerequisite: OBHR 60500. Permission of instructor required. **Credits:** 2.00 or 3.00

OBHR 63300 - Human Resource Management

Credit Hours: 2.00 (West Lafayette) 3.00 (Calumet, North Central). Introduction to human resource management for general managers. Emphasis is on the impact of human resource components (e.g., staffing, rewards, labor relations) on the performance of the firm. Case analyses and computerized databases are used to illustrate major components of human resource decision making. Not open to students with credit in MGMT 63100/MGMT 65310. Prerequisite: Master's student standing and Management majors only. **Credits:** 2.00 to 3.00

OBHR 64600 - Human Resource Information Systems I

Credit Hours: 2.00. Designed to gain an understanding of and appreciation for the use of information systems as a tool for managing human resources. The course will introduce and master, and then apply to HR problems, a set of topical hardware and software solutions. The class project, an HRIS consulting assignment with a major corporation, will commence. Prerequisite: MGMT 65310 or OBHR 63300. **Credits:** 2.00

OBHR 64700 - Teams, Technology And Human Capital

Credit Hours: 2.00. Human capital-people and their collective knowledge, skills and abilities-is the lifeblood of organizations. Today's managers must be equipped to leverage technology effectively, which requires an understanding of how technology alters the social dynamics of work. Drawing on an interdisciplinary, socio-technical framework, this course develops an understanding of the interplay between information and communication technologies and human capital, and applies this knowledge to timely work topics, including change management, knowledge management, virtual and alternative work structures, ethics and fairness, distance leadership and control, security, privacy, and trust. Prerequisite: Master's student standing and Management majors only. **Credits:** 2.00

OBHR 65000 - International Human Resource Management

Credit Hours: 2.00. Explores the international dimensions of human resource management. Focuses on the human resource policies and practices that are adhered to in various regions of the world. The process of expatriating and repatriating managers to and from the U.S. is examined. International issues faced by a manager working for a multinational organization in the U.S. are studied. Prerequisite: MGMT 65310 or OBHR 63300. **Credits:** 2.00

OBHR 65200 - Organizational Development And Consulting

Credit Hours: 2.00. Organizational development (OD) refers to the application of behavioral sciences knowledge and techniques to improve organizational effectiveness (e.g., productivity, quality, service, employee satisfaction, etc.). The course will describe techniques for diagnosing organizations and interventions for improving organizations. Specific interventions will be examined in detail including structural interventions (e.g., organizational design, job design), interpersonal process interventions (e.g.,

process consultation, team building), and human resource interventions (e.g., performance management, career development). The course will attempt to both build knowledge and provide practice in the various techniques. The course will not duplicate material in other current course offerings by this professor, and it will not require prior courses in human resources. **Credits:** 2.00

OBHR 66310 - Leader Communication & Negotiation

Credit Hours: 1.00 to 4.00. The best leaders are effective communicators and negotiators. They know how to use all the levers at their disposal to engage, inform, persuade, inspire, and instill confidence in key stakeholders. They look at each interaction as an opportunity to advance their agenda and/or achieve a specific outcome. This course will examine key internal and external engagement moments through your lens as an individual leader. Students will learn how to map communications best practices to real-world scenarios and make use of frameworks and guidance that will improve their ability to effectively use communications to help teams/organizations navigate issues. Students will also dissect the nature of negotiations, understand frameworks for building strategies for effective negotiations and explores the nature of conflict and conflict resolution.**Credits:** 1.00 to 4.00

OBHR 66410 - Leading Collaboration And Inclusion

Credit Hours: 1.00 to 4.00. This course is a study of teams at work, and the rich and varied experiences of people different in cognition, race, gender, religion, language, ability/disability, age and more. The purpose of the course is to explore diversity within and among teams. The course is grounded in both empirical research and practice. This course focuses on teams in today's modern organizations and global team leadership. **Credits:** 1.00 to 4.00

OBHR 68100 - Managing Behavior In Organizations

Credit Hours: 2.00 to 4.00. Individual and group behavior are the central components of the study of behavior in organizations. Focus is on the managerial application of knowledge to issues such as motivation, group processes, leadership, organizational design structure, and others. The course employs cases, exercises, discussions, and lectures. Prerequisite: Master's student standing and Management majors only. **Credits:** 2.00 to 4.00

OBHR 68300 - Individual Behavior In Organizations

Credit Hours: 1.00 to 3.00. This seminar provides an analysis of theory and research on individual and group behavior in organizations. Readings and discussion focus on motivation, attitudes and job satisfaction, employee participation and turnover, stress, leadership, group processes, and other issues. **Credits:** 1.00 to 3.00

OBHR 68400 - Research In Human Resource Management

Credit Hours: 1.00 to 3.00. Focuses on research methods, theories, and issues in HR management. A doctoral-level course designed for students interested in a research and teaching career in HR or organizational behavior. Objectives are to learn the primary theories and theoretical issues in each major area in HR, to learn the primary research methods and methodological issues, to attain a comprehensive reading list of the literature, to learn about publishing and the article review process, and to develop ideas for potential research projects. **Credits:** 1.00 to 3.00

OBHR 69000 - Advanced Problems In Organizational Behavior And Human Resource Management

Credit Hours: 2.00 to 4.00. Advanced investigation in a specific organizational behavior or human resource field at the graduate level. **Credits:** 2.00 to 4.00

OBHR 69100 - Special Problems In Organizational Behavior And Human Resource Management

Credit Hours: 1.00 to 4.00. Advanced investigation in a specific management field at the graduate level. For students in the master's programs in management who are registered in the master's program summer session. Prerequisite: Master's student standing and Management majors only. Permission of instructor required. **Credits:** 1.00 to 4.00

OBHR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Organizational Leadership and Supervision

OLS 10000 - Introduction To Organizational Leadership

Credit Hours: 1.00. Transitional course to orient the Organizational Leadership and Supervision freshman to the department and Purdue. **Credits:** 1.00

OLS 27400 - Applied Leadership

Credit Hours: 3.00. Introduction to applied leadership in the context of organizational functions, structures, and operation. **Credits:** 3.00

OLS 29801 - Leadership Seminar I For ET Student Leaders

Credit Hours: 0.00 or 1.00. New student peer leaders in Engineering and Technology will receive training to facilitate a mentoring relationship, lab, and/or recitation within the School of Engineering and Technology's formal and PLTL programs. Selected topics focus on leadership styles, group dynamics, facilitation techniques, collaborative learning techniques, redirecting strategies, and student motivation. Permission of department required.**Credits:** 0.00 or 1.00

OLS 29900 - Organizational Leadership And Supervision

Credit Hours: 1.00 to 3.00. Variable topics in organizational leadership. **Credits:** 1.00 to 3.00

OLS 30200 - Leadership And Economic Aspects Of Sustainability

Credit Hours: 3.00. The main focus of this course is to learn how organizations make sustainability work in their organizations. You will learn about the triple bottom line (environment, social and economic aspects of business decisions) and how to make "sustainability" thrive in an organization. This course will look at how organizations: describe the benefits of sustainability for corporations and society; build a framework for implementing corporate sustainability; lead and design strategies for corporate sustainability; organize, perform evaluations and create reward systems for sustainability; implement social, environmental, and economic measuring systems; improve corporate processes, products, projects for sustainability; and manage reports for sustainability. This course will view various examples of sustainable practices in organizations, such as, Interface, Novartis, CEMEX, DuPont, Timberland, and Chiquita Brands, which are making sustainable practices thrive in their organization. Typically offered Fall.**Credits:** 3.00

OLS 32500 - Meeting Management

Credit Hours: 3.00. An applications-oriented course in presenting technical information and conducting problem-solving and decision-making meetings. Special emphasis on leading and facilitating interactive meetings, as well as structuring information for effective presentations. **Credits:** 3.00

OLS 32700 - Leadership For A Global Work Force

Credit Hours: 3.00. This course is for present and future leaders interested in the increasingly diverse global workforce. The course will present a variety of leadership issues including expatriate assignments, international business strategies and their cultural and managerial impact, and a review of business practices around the world. Typically offered Fall Spring Summer.**Credits:** 3.00

OLS 33100 - Occupational Safety And Health

Credit Hours: 3.00. A presentation of the aspects of occupational safety and health that are essential to the organizational leaders. Special emphasis is placed on developing an understanding of the economic, legal, and social factors related to providing a safe and healthy work environment. **Credits:** 3.00

OLS 34400 - Employee Benefits

Credit Hours: 1.00 to 3.00. This course will promote an understanding of employee benefit programs. Students will learn about the strategic importance of employee benefits and approaches to planning a benefits program while applying the legal, regulatory, and industry influences on employee benefits practices. Typically offered Fall Spring Summer.**Credits:** 1.00 to 3.00

OLS 34500 - Critical Thinking In Organizations

Credit Hours: 3.00. This course focuses on systems thinking and the understanding of research design and measurement theory used in solving organizational and human resource development problems. The emphasis is on applied methodology rather than on statistical issues, with the intent of the student becoming an effective consumer of information. The students will learn how to report findings in a practical and influential manner. Includes the importance of knowledge management issues in organizations. **Credits:** 3.00

OLS 34600 - Critical Thinking And Ethics

Credit Hours: 3.00. A course in complex problem solving and creative thinking with an emphasis on the ethical impacts of these solutions.**Credits:** 3.00

OLS 34800 - Human Resources Analytics

Credit Hours: 1.00 to 3.00. This course provides insight into uses of analytics in Human Resources (HR), why it is important, and how HR analytics add value to organization. Students will explore resources that will align an organization's mission and goals with key metrics and benchmarks. Typically offered Fall Spring Summer.**Credits:** 1.00 to 3.00

OLS 35000 - Creativity In Business And Industry

Credit Hours: 3.00. A study of the ways an individual can become more creative and how they can develop an environment which encourages creativity from employees. **Credits:** 3.00

OLS 35100 - Innovation And Entrepreneurship

Credit Hours: 3.00. An in-depth study of innovation in existing organizations, as well as entrepreneurship in start-up businesses, franchises, family-owned firms, and other business formats. **Credits:** 3.00

OLS 36200 - Cooperative Education Program

Credit Hours: 2.00. Supervised work experience directed toward professional development in supervisory or related leadership positions. Rotational work-study periods planned and coordinated by department staff in conjunction with the student and the employing organization. Permission of instructor required. **Credits:** 2.00

OLS 36400 - Professional Development Program

Credit Hours: 3.00. A survey course covering many professional and personal facets relative to entering the work force upon graduation. Major areas addressed include resume preparation, interviewing techniques, development of job-search plans, social skills, and analysis of career fields and opportunities. **Credits:** 3.00

OLS 36800 - Employment Law

Credit Hours: 3.00. This course covers the regulatory environment of the employment relationship. Topics will include discrimination and Title VII of the Civil Rights Acts of 1964, recruitment and selection, affirmative action, rights of union and nonunion employees, Fair Labor Standards Act, Equal Pay Act, employee benefit plans, unemployment compensation, and right to discharge. Typically offered Fall Spring.**Credits:** 3.00

OLS 37100 - Project Management

Credit Hours: 3.00. This course provides the basics of the project management discipline and allows the student to apply these skills in team-based situations. Typically offered Fall Spring Summer.**Credits:** 3.00

OLS 37500 - Training Methods

Credit Hours: 3.00. Principles, practices, and methods of employee training. Introduction to systematic training program design, development, and evaluation. Emphasis is on the supervisor as a trainer. **Credits:** 3.00

OLS 37600 - Human Resource Issues

Credit Hours: 3.00. Analysis and discussion of case problems concerning typical leadership and personnel situations that impact upon the supervisor/manager. Emphasis directed toward development of attitude, philosophy, analytical ability, and problem-solving skills within the working environment. **Credits:** 3.00

OLS 37800 - Labor And Management Relations

Credit Hours: 3.00. An introduction to, and overview of, the fundamental concepts of labor relations, collective bargaining, and dispute resolution procedures. An international comparative analysis is used to assess some of the legal, economic, and political structures of labor relations. **Credits:** 3.00

OLS 38300 - Human Resource Management

Credit Hours: 3.00. This course teaches an overview of the human resource function in organizations today. Case studies are used to explore applications of human resource principles. Typically offered Fall Spring.**Credits:** 3.00

OLS 38400 - Leadership Process

Credit Hours: 3.00. An in-depth study of a sequence of manager actions that influence employees to achieve desired performance results. How these manager actions are transformed by employees into desired performance is also covered. **Credits:** 3.00

OLS 38500 - Leadership Strategies For Quality And Productivity

Credit Hours: 3.00. Knowledge and applied leadership skills essential for establishing and continuously improving organizational effectiveness by forestalling and solving workplace problems. Typically offered Fall Spring.**Credits:** 3.00

OLS 38600 - Leadership For Organizational Change

Credit Hours: 3.00. Introduction to and overview of fundamental concepts of leading organizational change. Topics include setting the stage for organizational change, implementing organizational change, sustaining organizational change, and the role of the change manager. Concepts and frameworks taught in this course are applicable to change at multiple scales from small enterprises and large corporations to communities and ecosystems. **Credits:** 3.00

OLS 38800 - Leadership Through Teams

Credit Hours: 3.00. The group process, team development and exploration of dynamics that impact group and team performance. **Credits:** 3.00

OLS 39000 - Leadership Theories And Processes

Credit Hours: 3.00. This course integrates knowledge and skills from all associate level OLS courses and allows students to define, reflect upon, and improve their leadership abilities. Typically offered Fall Spring Summer.**Credits:** 3.00

OLS 39801 - Leadership Seminar II For ET Student Leaders

Credit Hours: 0.00 or 1.00. This course introduces ET student peer leaders to the knowledge, attitudes, and inner resources needed to be an effective leader. Students will utilize their first hand experiences to obtain the techniques to improve their leadership skills. Permission of department required.**Credits:** 0.00 or 1.00

OLS 39900 - Special Topics

Credit Hours: 1.00 to 6.00. Hours and subject matter to be arranged by staff. **Credits:** 1.00 to 6.00

OLS 39901 - Special Topics In Project Management

Credit Hours: 3.00. Hours and subject matter to be arranged by faculty/staff. Primarily for upper-division majors with specific interests in project management. Permission of instructor required. **Credits:** 3.00

OLS 44000 - Leading With Integrity

Credit Hours: 3.00. An investigation of ethical problems in business practice. Topics include personal morality in profit-oriented enterprise; codes of ethics; obligations to employees and other stakeholders; truth in advertising; whistle-blowing and company loyalty; regulation, self and government; the logic and future of capitalism. Emphasis on business law and legal impacts on ethical decision making. **Credits:** 3.00

OLS 45000 - Advanced Project Management

Credit Hours: 3.00. An introduction to project management concepts and practices in the context of human resource development projects. **Credits:** 3.00

OLS 45400 - Gender And Diversity In Management

Credit Hours: 3.00. The work force of the future will represent multiple differences including gender, race, culture, ethnicity, physical abilities, and age. Following this broad-based perspective of diversity, this course will focus on using knowledge of diversity to develop the leadership potential of individuals in organizations. Typically offered Summer Fall Spring.**Credits:** 3.00

OLS 45600 - Leadership In A Global Environment

Credit Hours: 3.00. Exploration of leadership strategies for organizations engaged in international business. Includes understanding of cultural differences and diverse business practices, and challenges of competing in a global marketplace. **Credits:** 3.00

OLS 46700 - Service Learning

Credit Hours: 3.00. Service learning is a reflective experience in which students are actively engaged in the community and integrate that experience into the classroom. Permission of instructor required. **Credits:** 3.00

OLS 47600 - Compensation Planning And Management

Credit Hours: 3.00. Planning and implementation of a total compensation system, including job analysis, job evaluation, salary survey and analysis, benefits and development of a structured pay system. Includes behavioral implications and legal compliance issues. **Credits:** 3.00

OLS 47700 - Conflict Management

Credit Hours: 3.00. A study of the methods for dealing with innerpersonal, interpersonal, and political disputes by means generally outside the traditional court system. Students will investigate the theoretical and practical aspects of conflict assessment, negotiation, problem solving, mediation, and arbitration. **Credits:** 3.00

OLS 47900 - Staffing Organizations

Credit Hours: 3.00. An applications-oriented study of key concepts in staffing organizations, including principles and issues in conducting job analysis; preparing job descriptions/specifications; and screening/selecting employees. Special emphasis on the design, validation, and operation of high-volume staffing systems. **Credits:** 3.00

OLS 48400 - Leadership Strategies For Quality And Productivity

Credit Hours: 3.00. A study of how organizational leaders create an environment conducive to high levels of employee self-motivation, quality, and productivity (TQM). Actual case situations are used to illustrate the application of course content. **Credits:** 3.00

OLS 48500 - Leadership For Team Development

Credit Hours: 3.00. An in-depth study of self-directed work teams and team processes in the work setting, with a view to understanding team functions under varying task conditions. Especially emphasized will be the leadership of teams for effective performance and maximum member satisfaction. This course deals extensively with maintenance and task behaviors of team members. **Credits:** 3.00

OLS 48600 - Management Of Change

Credit Hours: 3.00. A survey of the concepts that provide a foundation for the understanding of leadership and its relationship to the management of organizational change, with special emphasis on managing the human side of quality improvement. **Credits:** 3.00

OLS 48700 - Leadership Philosophy

Credit Hours: 3.00. A review of current managerial, education, and development theories and practices; discussions of fundamental social, economic, and political changes affecting business and the art of managing; implications of these changes for individual development and continued growth. **Credits:** 3.00

OLS 48800 - Leadership For Lean Enterprise

Credit Hours: 3.00. A study of how organizational leaders create an environment conducive to lean enterprise. Actual case studies of leadership techniques are used to illustrate the application of course content. **Credits:** 3.00

OLS 48900 - Digital Transformation

Credit Hours: 3.00. This course covers the role of digital transformation and what it means for companies. This course includes practicums in digital transformation, including business transformation strategies, and AI driven insight. **Credits:** 3.00

OLS 49000 - Senior Research Project

Credit Hours: 1.00 to 6.00. Opportunity to study specific problems in the field of personnel, safety, supervision, and training under the guidance of an OLS faculty member. Typically offered Fall Spring Summer.**Credits:** 1.00 to 6.00

OLS 49100 - Internship Program

Credit Hours: 3.00 (West Lafayette and Tech Statewide); 1.00 to 3.00 (Calumet and North Central). A practicum designed to combine University study with work experience directly related to the student's plan of study. Permission of department required. **Credits:** 3.00 or 1.00 to 3.00

OLS 49101 - Internship Experiences

Credit Hours: 2.00. A practicum designed to combine University study with work experience directly related to the student's plan of study. Includes a design of an optimal interning experience as well as a written final paper and oral presentation covering the student's internship experience. Permission of department required. **Credits:** 2.00

OLS 49200 - Individual Research Problems

Credit Hours: 1.00 to 3.00. Supervised individual research on appropriate topics. Hours and subject matter to be arranged by staff. Permission of instructor required. **Credits:** 1.00 to 3.00

OLS 49900 - Special Topics In Organizational Leadership And Supervision

Credit Hours: 1.00 to 3.00. Hours and subject matter to be arranged by staff. Permission of instructor required. **Credits:** 1.00 to 3.00

OLS 50701 - Quantitative Analysis And Analytics For Leaders

Credit Hours: 3.00. This course emphasizes the use of statistical analysis in critical decision making. Specifically, the course focuses on selecting data and running appropriate statistical analyses, synthesizing findings based upon the analyses, making decisions based upon the findings, and using multiple modes to present the data, the findings, and recommendation(s) for action.**Credits:** 3.00

OLS 51500 - Foundations Of Human Resources

Credit Hours: 3.00. A survey course emphasizing the human resource function (and its development) in the context of the work organization. Human resource development topics include exploration of various training and development techniques, the relation of training to organizational strategies, training needs analysis, evaluation of training, and career development. The strategic approach to human resource management also is covered, including what human resource professionals can and should do to help the organization succeed. Permission of Department required. Typically offered Spring.**Credits:** 3.00

OLS 51600 - Diversity, Equity, And Inclusion For Organizational Leaders

Credit Hours: 3.00. This course will assist students in identifying and understanding diversity, equity, and inclusion issues in the workplace. Students will engage with various theories and concepts related to workplace and societal diversity, equity and inclusion and apply them to organizational settings.**Credits:** 3.00

OLS 57100 - Advanced Project Management In Technology

Credit Hours: 3.00. This course helps students learn project management through applying technology project approaches in teams. Using project tools and templates, students learn the technology project life-cycle through actual and simulated situations. The course presents terms and approaches used in industry and allows students to apply methods individually and in teams. Typically offered Fall Spring Summer.**Credits:** 3.00

OLS 57200 - Integration Of Project Management For Leaders

Credit Hours: 3.00. This course emphasizes critical analysis, synthesis, and evaluation of theories and applications of project management knowledge and skills, leadership, communication, and stakeholder engagement. Students integrate theoretical and applied skills in planning, distributing, and managing communication; analyzing and interpreting project organization in context; and applying best practices in team management.**Credits:** 3.00

OLS 57400 - Managerial Training And Development

Credit Hours: 3.00. Review of current managerial education and development theories and practices; discussion of fundamental social, economic, and political changes affecting business and the work of managing; implications of these changes for individual manager development and continued growth. **Credits:** 3.00

OLS 57600 - Advanced Topics In Human Resource Management

Credit Hours: 3.00. Current topics and issues in the legal, behavioral, and technical environment of human-resources management. Topics may include employment practices, labor-management relations, wage and salary administration, treatment of employees on the job, or productivity-improvement programs. Employs seminar format with emphasis on applications research. Course may be offered in traditional, distance, or blended format. **Credits:** 3.00

OLS 57700 - Organization And Administration Of Training And Development

Credit Hours: 3.00. The function and management of training and development in the world of work. **Credits:** 3.00

OLS 57800 - Leadership In International Human Resources

Credit Hours: 3.00. Explores issues and practices in technologically-driven international organizations pertaining to the six major HR functions (recruitment and selection, performance management, training and development, organizational development, compensation and benefits, and labor-employee relations). These are considered in the context of technologically-driven multinational organizations with the United States being the foundation for comparison. The course is strategic in focus. A "best practices" approach, utilizing the case method, is emphasized. **Credits:** 3.00

OLS 57900 - Emerging World-Class Leadership Strategies

Credit Hours: 3.00. Exposes graduate students to the theoretical foundation and empirical research associated with emerging strategies and theories in the study of world-class leadership. The structure of the course is four fold: the discovery of critical leadership skills and behaviors, discovery of critical world-class leadership strategies, encouragement of self analysis, discovery of leadership strengths, and conducting research on leadership issues. Permission of instructor required. **Credits:** 3.00

OLS 58000 - Interpersonal Skills For Leaders

Credit Hours: 3.00. Development and improvement of interpersonal and group dynamic skills for effective leadership in organizations. Emphasis on action learning and real-world application of skills. Course may be offered in traditional, distance, or blended format. Open to all graduate students with special consideration given to senior OLS students with 3.0 GPA and School of Technology graduate students. **Credits:** 3.00

OLS 58100 - Workshop In Organizational Leadership And Supervision

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education. Course may be offered in traditional, distance, or blended format. Course format may vary, depending upon topic of course. **Credits:** 0.00 to 8.00

OLS 58200 - Leadership And Organizational Change

Credit Hours: 3.00. Explores issues in leadership and organizational change. Included are change theories, utilizing resistance to change, contemporary approaches to change, the future workplace, and researching best practices in organizational change. **Credits:** 3.00

OLS 58300 - Coaching And Mentoring In Organizations

Credit Hours: 3.00. This course explores issues and practices in technologically-driven organizations pertaining to the roles and functions that coaching and mentoring play in employee development. A "best practices" approach, utilizing the case method, is emphasized. Presented from the point of view of a human resource manager/leader, the focus of the course is on identifying coaching opportunities, enhancing communication skills, developing and implementing coaching and mentoring strategies, and evaluating the outcomes of these strategies. Attention is directed to facilitating personal coaching mentoring skills. Course may be offered in traditional, distance, or blended format. Permission of department required. **Credits:** 3.00

OLS 58900 - Leadership And Ethics

Credit Hours: 3.00. An examination of ethical, legal and policy issues facing business and technology leaders. Topics include ethical decision making, corporate social responsibility, codes of ethics, public policies and government regulations, international business practices, technology innovation, risk management in a global environment, and specific areas of law - employment, health and safety, environment, contract, warranties and liabilities, intellectual property, technology law, and international laws

and regulations. Graduate student standing or senior status with consent of instructor. Graduate students without an OLS background may be required to take some leveling course. **Credits:** 3.00

OLS 59000 - Individual Research Problems In Supervision And Personnel

Credit Hours: 1.00 to 6.00. Opportunity to study specific problems in the field of supervision and personnel under the guidance of a qualified faculty member within the department. Does not include thesis work. Permission of instructor required. **Credits:** 1.00 to 6.00

OLS 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of instructor required. **Credits:** 1.00 to 3.00

OLS 62300 - Contemporary Organizational Leadership And Supervision Problems

Credit Hours: 3.00. Theory and practice in the development of comprehensive solutions to problems in industrial, technical, and human resource development environments. Solutions based on emerging procedures will be emphasized. Permission of instructor required. **Credits:** 3.00

OLS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Pharmaceutical Science

PHSC 10000 - Pharmacy Orientation I

Credit Hours: 1.00. This first semester pre-pharmacy course is designed to provide the pre-pharmacy student with an introduction to the profession of pharmacy and to Purdue University College of Pharmacy. The topics presented in this course will allow the pre-pharmacy students to develop informed perspectives on: pharmacy summer employment opportunities for students; pharmacy career opportunities; current pharmacy practice trends; the importance of professionalism, values, and ethics as it pertains to the profession; resume and cover letter development; the College's curriculum, admissions process, and course registration process. **Credits:** 1.00

PHSC 20000 - Introduction To Pharmacy And Admissions Process

Credit Hours: 2.00. A second orientation course to provide students interested in pre-pharmacy an introduction to the profession of pharmacy and to the Purdue University College of Pharmacy. Topics include personal development, academic program and career planning, pharmacy career opportunities, professionalism and ethics, and the Pharm.D. curriculum and the pharmacy admissions process. The course builds on PHPR 10000, but students are not required to have taken that course in order to enroll in this course. **Credits:** 2.00

PHSC 20100 - Bachelor Of Science In The Pharmaceutical Sciences Orientation II

Credit Hours: 1.00. This seminar course is designed to enhance the BSPS student's professional skills career exploration and prepare for post-graduation employment. It provides the academic content to link experiences in professional fields to study in Pharmaceutical Sciences as well as social, economic and intellectual forces that shape views and work experiences. The intent is

to prepare the student to successfully transfer skills to workplace. Typically taken in the junior year. The course builds on IMPH 10000, but students are not required to have taken that course. The course consists of a mix of on-line modules and assignments and in-person class sessions. **Credits:** 1.00

PHSC 20400 - Organic Chemistry I

Credit Hours: 3.00. A study of the compounds of carbon on a functional group basis, with particular emphasis on those organic compounds of pharmaceutically important classes of compounds. This course presents organic chemistry concepts that are essential for understanding various topics in biochemistry and principles of drug action.**Credits:** 3.00

PHSC 20401 - Organic Chemistry I Laboratory

Credit Hours: 1.00. Laboratory experiments to accompany PHSC 20400 performing laboratory experiments involving the methods of purification, reactions, and synthesis of organic compounds.**Credits:** 1.00

PHSC 20500 - Organic Chemistry II

Credit Hours: 3.00. PHSC 20500 is a continuation of PHSC 20400. You will learn the principles of organic chemistry with an emphasis on reactions of pharmaceutically important classes of compounds. This course presents organic chemistry concepts that are essential for understanding various topics in biochemistry and principles of drug action. You will continue to apply the fundamentals learned in general chemistry to the functional classes of compounds that are most important in pharmaceutical and biological chemistry.**Credits:** 3.00

PHSC 20501 - Organic Chemistry II Lab

Credit Hours: 1.00. This course has been designed to help you apply the concepts of organic chemistry and to enhance your understanding of the subject. This lab is an extension of the PHSC 20401 laboratory, and you will continue to use the concepts and techniques that you learned in organic chemistry I.**Credits:** 1.00

PHSC 20800 - Biochemistry For Pharmaceutical Sciences

Credit Hours: 3.00. The overall objectives of this course are to increase students' biomedical understanding and knowledge and their ability to apply that understanding and knowledge. This requires the students in this course to learn and understand the facts, concepts, and formulaic processes, and to become skilled at applying what they have learned. **Credits:** 3.00

PHSC 42200 - Immunology

Credit Hours: 3.00. This course exposes students to the basic principles of immunology, teaches students to use those principles to understand the cause of immunological disease and the basis of immunoprophylaxis and immunotherapy, and provides students with sufficient information to understand the principles and challenges of gene therapy and the application of genomics to future drug development. **Credits:** 3.00

PHSC 42400 - Principles Of Pathophysiology And Drug Action

Credit Hours: 3.00. This course introduces the basic principles of pathophysiology, pharmacodynamics, toxicology and medicinal chemistry necessary to understand the therapeutic use and adverse actions of drugs. The course will integrate and apply concepts of science courses, including organic chemistry, biochemistry, anatomy and physiology into an understanding of the basic fundamentals of disease processes, toxicology and drug actions. Thus, this course will provide students with the basic background necessary to understand and apply pharmacotherapeutics to the practice of pharmacy. **Credits:** 3.00

PHSC 42800 - Dosage Forms I

Credit Hours: 3.00. The purpose of this course is to provide a foundation in the basic concepts of pharmaceutics that are the foundation of drug delivery. The course begins by presenting the molecular basis for aqueous and lipid solubility of drugs, pharmacokinetic principles that are related to dosage forms, mechanisms by which excipients or manufacturing processes affect bioavailability, and chemical kinetics applied to the shelf-life of dosage forms. The pharmaceutics principles are then applied to successively more complex liquid dosage forms: solution, emulsion, and suspension. The excipients that are required to prepare the dosage forms: buffers, preservatives, emulsifiers, suspending agents, wetting agents, etc., and the method of preparing each dosage form in both a compounding and manufacturing setting are covered. **Credits:** 3.00

PHSC 42900 - Dosage Forms II

Credit Hours: 2.00. The purpose of this course is to educate beginning pharmacy students to thoroughly understand the basic physical-chemical principles involved in preparing liquid and semisolid dosage forms and controlled drug delivery systems used in the practice of pharmacy. **Credits:** 2.00

PHSC 46000 - Drug Discovery And Development I

Credit Hours: 3.00. Focuses on the strategies, current methods and technologies used in early stage pre-clinical research to discover, validate and select lead drug candidates. **Credits:** 3.00

PHSC 46100 - Drug Discovery And Development II

Credit Hours: 3.00. The course focuses on the process of drug development from pre-formulation to unit operations. The emphasis is on the scientific principles behind every step in moving from a drug molecule to its products.**Credits:** 3.00

PHSC 48500 - Intercultural And Global Health Issues

Credit Hours: 2.00. This course is designed to meet the University Embedded Outcomes of Intercultural Knowledge, and Global Citizenship and Social Awareness. Students will discuss and develop presentations (verbal and written) about various intercultural and global health issues. **Credits:** 2.00

Pharmacy

PHRM 10000 - Pharmacy Orientation I

Credit Hours: 1.00. This first semester pre-pharmacy course is designed to provide the pre-pharmacy student with an introduction to the profession of pharmacy and to Purdue University College of Pharmacy. The topics presented in this course will allow the pre-pharmacy students to develop informed perspectives on: pharmacy summer employment opportunities for students; pharmacy career opportunities; current pharmacy practice trends; the importance of professionalism, values, and ethics as it pertains to the profession; resume and cover letter development; the College's curriculum, admissions process, and course registration process.**Credits:** 1.00

PHRM 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHRM 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHRM 31600 - Drug Abuse/Addiction Education

Credit Hours: 1.00. An overview of alcoholism and other chemical addictions. Students are given the information and experience necessary to present a five-hour drug abuse education program to the public and specifically middle school students. Course is taught by undergraduate pharmacy students with oversight by staff. **Credits:** 1.00

PHRM 38199 - Industrial Practice I

Credit Hours: 1.00. Professional practice of pharmaceutical sciences in industry. Comprehensive written report of this experience required. For cooperative program students only enrolled in the College of Pharmacy. Permission of Department required. **Credits:** 1.00

PHRM 38299 - Industrial Practice II

Credit Hours: 1.00. Professional practice of pharmaceutical sciences in industry. Comprehensive written report of this experience required. For cooperative program students only enrolled in the College of Pharmacy. Permission of Department required. **Credits:** 1.00

PHRM 38399 - Industrial Practice III

Credit Hours: 1.00. Professional practice of pharmaceutical sciences in industry. Comprehensive written report of this experience required. For cooperative program students only enrolled in the College of Pharmacy. Permission of Department required. **Credits:** 1.00

PHRM 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHRM 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHRM 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHRM 39699 - Pharmaceutical Science Internship Experience

Credit Hours: 1.00 to 3.00. Professional practice with qualified employers within the pharmaceutical industry. Pre-approval of enrollment by the BSPS Committee is required as well as completion of a course paper. Department and instructor permission required.**Credits:** 1.00 to 3.00

PHRM 40500 - Mindfulness

Credit Hours: 1.00. The goal of the course is to introduce students to intercultural development, identify stressors in life, and learn simple methods to reduce stress of pharmacy students. This introductory course comprises of class activities/discussions and assignments. *It is very important that respect is demonstrated by being considerate, courteous, and professional, and by maintaining confidentiality of others' information. There are no exams in this course.***Credits:** 1.00

PHRM 41000 - Professional Communications

Credit Hours: 1.00. Professional communications will focus on developing verbal, written, and nonverbal communication skills. The goals of the course are to augment the students' knowledge about soft and hard communications, reinforce necessary skills for interactions and engagement in various healthcare settings, and develop professional and personal confidence. Class participation is expected and the format will be active learning with very few lectures. All pharmacy students are welcome - this course is not intended to focus on any particular group or class. This course comprises of home study and class discussions. *All discussions in class shall remain confidential. There are no exams in this course.* **Credits:** 1.00

PHRM 41900 - Experiential Reflections In The Pharmaceutical Sciences

Credit Hours: 0.00. This course meets the requirement for the experiential component of the BSPS program in the College of Pharmacy. Students will be required to submit a written reflection on a practical experience of a minimum of 8 weeks duration that was accomplished in the past year. This reflection will include a description of the location, duration, and type of practical experiences. Students will provide a summary of key learning through the experience and how it has impacted their career plans. Students will also be required to submit a letter from their practical experience supervisor confirming the dates, place, and nature of the experience. Permission of department and instructor required. **Credits:** 0.00

PHRM 42500 - Pharmacy Leadership And Innovation Forum

Credit Hours: 1.00. This course introduces students to emerging trends and career opportunities in pharmacy and the pharmaceutical sciences through exposure to leaders in professional and corporate environments. **Credits:** 1.00

PHRM 42700 - Conversations About Death And Dying

Credit Hours: 1.00. This course is open to all years of the professional pharmacy program or others with instructor permission. This course provides opportunity for open discussion of the topics of death and dying in the provision of healthcare. **Credits:** 1.00

PHRM 43600 - Biochemistry For Pharmaceutical Sciences II

Credit Hours: 2.00. The overall objective of this course is to expand students' knowledge of biochemistry obtained in the prerequisite one-semester Biochemistry course to understanding advanced aspects of human biochemistry related to pharmaceutical sciences.**Credits:** 2.00

PHRM 43900 - Vulnerable And Underserved Patient Care

Credit Hours: 2.00. The goal of this course is to increase knowledge of the challenges faced by underserved patient populations and ways healthcare providers can assist patients in overcoming these challenges. The course also provides exposure and

experience in patient care provided in two rural federally qualified health centers (FQHCs). Students will be able to challenge preconceived notions that they may have about underserved populations and learn the impact that pharmacists can have in caring for these populations. **Credits:** 2.00

PHRM 44200 - Introduction To The Pharmaceutical Industry

Credit Hours: 2.00. While providing an overview of the pharmaceutical industry, this course focuses on the drug development process, including clinical research, regulatory affairs, pharmacovigilance and marketing. Pharmaceutical company executives serve as guest lecturers and discuss their individual areas of expertise. **Credits:** 2.00

PHRM 45600 - Pharmaceutical Care Of Diabetes

Credit Hours: 1.00. The purpose of this course is for students to obtain a comprehensive knowledge of the pharmaceutical care of diabetes. Students will participate in class discussions related to patient cases and learn about effective communication with patients with diabetes. In class discussions will expose the students to patient case scenarios in which they will gain an appreciation for the complexities involved with diabetes, construct evidence-based treatment plans, and enhance overall understanding of effective diabetes management. This course provides a platform for shaping future pharmacists into excellent caregivers for patients with diabetes. Permission of instructor required. **Credits:** 1.00

PHRM 46400 - Preparing For Postgraduate Residency Program

Credit Hours: 2.00. This elective course will focus on preparing for the pharmacy residency program selection process. The purpose of this course is to discuss various aspects of the selection process, provide students with guidance regarding each step of the process, and provide feedback regarding materials such as curriculum vitaes (CVs), letters of intent, and thank you notes. This course is intended to guide the students through the process using events, which normally occur during the residency search including pre-Midyear preparation, navigating American Society of Health-System Pharmacists (ASHP) Midyear, the post-Midyear application and interview process, and the Match. Permission of instructor required. **Credits:** 2.00

PHRM 46600 - Pharmaceutical Care In Oncology

Credit Hours: 1.00. This course aims to expand students' understanding of hematology and oncology topics. After completion, the student should be able to apply course concepts to actual patient cases. CLPH 49000 will be collaboratively taught by oncology pharmacists and residents from the greater Indianapolis area hospitals. Students will be exposed to relevant topics including current events, supportive care, bone marrow transplant, renal cell carcinoma, specialty pharmacy administration and leadership, oral chemotherapy, palliative care and career paths in oncology pharmacy. **Credits:** 1.00

PHRM 46800 - Clinical Integration And Application

Credit Hours: 2.00. This is an elective class which gives participants more experience working up patient cases with multiple complications and an opportunity to make recommendations to a team. The material for each case will be derived from actual cases and topics will include continuity of care problems, typical problems/diseases seen in hospitalized patients, and a host of other chronic illnesses. During the 3-week class, students will have 1-1.5 hours to work on a patient case in class and address challenges faced in the clinical setting. The second half of class will be used for students to present their recommendations to a "medicine team" (made up of your classmates and teachers). Students will be responsible for creating a pharmacist problem list and making verbal drug therapy recommendations. The majority of the grade will come from in-class participation with other points coming from online quizzes, communication exercises, and follow-up answers from clinical questions. **Credits:** 2.00

PHRM 49000 - Special Topics

Credit Hours: 0.00 to 3.00. Subject matter and method of approach individually directed by instructor. Permission of instructor required. **Credits:** 0.00 to 3.00

PHRM 49500 - Pharmaceutical Research Special Topics

Credit Hours: 1.00 to 3.00. Ongoing involvement in pharmaceutical research. Pharmaceutical research subject matter and method of approach individually directed by instructor. Permission of instructor required. **Credits:** 1.00 to 3.00

PHRM 69500 - Introduction To Pharmaceutical Sciences Research

Credit Hours: 0.50. Introduction of new graduate students to graduate programs, various disciplines, and the research environment in the College of Pharmacy, and prepare them for their graduate studies at Purdue College of Pharmacy. Each meeting is expected to have ~90 minutes presentation(s) and 30 minutes student discussion. Permission of department required. **Credits:** 0.50

PHRM 81000 - Basics Of Immunology

Credit Hours: 1.00. The goal of PHRM 81000 (Basics of Immunology) is to expose the student to the basic principles of immunology and enable the student to use these principles to understand how the immune system combats infections. This goal will be achieved through online recorded lecture and out of class reading assignments and quizzes. The student will be expected to understand basic immunological concepts and apply this knowledge to solving problems involving the integration of the various components of the immune system.**Credits:** 1.00

PHRM 82000 - Professional Skills Laboratory I

Credit Hours: 2.00. Experiments, computer simulations, case studies, and problem sets that actively involve the student in problem-solving, applying and interrelating important concepts from the core courses taught that semester.**Credits:** 2.00

PHRM 82100 - Professional Skills Laboratory II

Credit Hours: 2.00. Continuation of PHRM 82000 with emphasis upon modules that provide laboratory practice experience designed to integrate basic science concepts and practice applications. Small group problem-solving methodology will be utilized as appropriate.**Credits:** 2.00

PHRM 82200 - Pharmacy Skills And Patient Counseling

Credit Hours: 2.00. Pharmacy Skills and Patient Counseling is a two credit hour, required first professional year experiential course combining practical experience in the Purdue University Pharmacy with lecture. Students are monitored by faculty instructors, staff pharmacists and Advanced Pharmacy Practice Experience (APPE) students. Students must have a valid Social Security number the first week of class. **Credits:** 2.00

PHRM 82400 - Principles Of Pathophysiology And Drug Action

Credit Hours: 3.00. This course introduces the basic principles of pathophysiology, pharmacodynamics, toxicology and medicinal chemistry necessary to understand the therapeutic use and adverse actions of drugs. The course will integrate and apply concepts of science courses, including organic chemistry, biochemistry, anatomy and physiology into an understanding of the basic fundamentals of disease processes, toxicology and drug actions. Thus, this course will provide students with the basic background necessary to understand and apply pharmacotherapeutics to the practice of pharmacy. Prerequisite: MCMP 20400, 20500, 20800, and BIOL 20300, 20400 or 30100, 30200. Departmental permission required. **Credits:** 3.00

PHRM 82500 - Integrated Pharmacotherapy I

Credit Hours: 6.00. This course will serve as an integrated approach to the physiology/pathophysiology, medicinal chemistry, pharmacology, pharmacokinetics/ pharmaceutics, and pharmacotherapeutics of the following topics: fluids/electrolyte pharmacotherapy, renal diseases, acid/base disorders, clinical nutrition, autonomic nervous system (ANS), pulmonary diseases, hematology, immunology, and rheumatology. The emphasis of this course is knowledge and skill development. Also in the process of completing the objectives, attitudes toward the role of the pharmacist and patient-related issues will be imparted. **Credits:** 6.00

PHRM 82600 - Introduction To Patient Centered Care

Credit Hours: 4.00. The introductory course teaches students the key communication principles and skills necessary to deliver patient care and interact with other health care professionals. This includes performing basic physical assessments, evaluating patient comprehension, and improving personal communication skills. **Credits:** 4.00

PHRM 82800 - Dosage Forms I

Credit Hours: 3.00. The purpose of Dosage Forms I is to provide a foundation in the basic concepts of pharmaceutics that are the foundation of drug delivery. The course begins by presenting the molecular basis for aqueous and lipid solubility of drugs, pharmacokinetic principles that are related to dosage forms, mechanisms by which excipients or manufacturing processes affect bioavailability, and chemical kinetics applied to the shelf-life of dosage forms. The pharmaceutics principles are then applied to successively more complex liquid dosage forms: solution, emulsion, and suspension. The excipients that are required to prepare the dosage forms: buffers, preservatives, emulsifiers, suspending agents, wetting agents, etc. and the method of preparing each dosage form in both a compounding and manufacturing setting are covered. **Credits:** 3.00

PHRM 82900 - Dosage Forms II

Credit Hours: 2.00. Education in the use of dosage forms to deliver drugs. Collaboration with peers and other members of the health care team regarding the proper use of the various dosage forms so that the desired therapeutic objective is achieved.**Credits:** 2.00

PHRM 83100 - Health Care Systems

Credit Hours: 2.00. This course is envisioned as a primarily didactic course whose main purpose is to provide students with an introduction to the structures and functions of the United States Health Care System. It is also designed to provide the student an opportunity to compare and contrast the methods used in other countries to address the needs of society for provision of health care to its members. **Credits:** 2.00

PHRM 83300 - Introduction To Case Studies

Credit Hours: 1.00. This course will focus on medical terminology, discovery of different sections of a patient chart, exploration of the components of a SOAP note and other documentation types, orientation to the teaching electronic medical record (tEMR), and reinforcement of the Pharmacists' Patient Care Process (PPCP) with a focus on what is unique or different in the care provided by a pharmacist. A primarily online method for content delivery will be utilized. Multiple in person case-based sessions will be incorporated throughout the semester. Material covered is meant to supplement and augment that gained in PHRM 82600, PHRM 82500, and the PPL sequence. **Credits:** 1.00

PHRM 83400 - Pharmaceutical Calculations

Credit Hours: 1.00. Mastery of pharmaceutical calculation skills is vital and PHRM 83400 prepares students to apply calculation problem solving skills to clinical practice. PHRM 83400 prepares students to perform pharmaceutical calculations necessary for prescription/drug order preparation, compounding dosage forms, and medication dosage calculations based on patient specific factors. Pharmacists must perform error-free pharmaceutical calculations. Correct calculations contribute as much to

pharmaceutical care as the newest methods/guidelines for diagnosis, treatment, and prevention. The development of problem solving skills with pharmaceutical calculations is an important component of this course. In addition, practice and repetition of problems is necessary to develop confidence as well as accuracy. Appropriate documentation of work/set up and numerical answers (including units) is required. Approaches to minimize errors and maximize accuracy with pharmaceutical calculations are emphasized. **Credits:** 1.00

PHRM 83500 - Principles Of Pharmacokinetics

Credit Hours: 3.00. This course introduces the theory and concepts of pharmacokinetics and biopharmaceutics. It provides the student with a foundation for more advanced therapeutic concepts in subsequent courses. The learner will develop expertise in quantifying drug absorption, distribution and elimination from concentration vs. time data or urinary drug excretion vs. time data to estimate primary pharmacokinetic parameters. Use of these parameters is required to design and modify individual drug-dosing regimens.**Credits:** 3.00

PHRM 83600 - Biochemistry For Pharmaceutical Sciences II

Credit Hours: 2.00. This course provides instruction in biochemistry that builds on basic knowledge by presenting content on advanced aspects of human biochemistry for students in pharmaceutical sciences. The content emphasizes the integration of biochemical knowledge and the application of biochemical understanding to medically relevant situations including disease etiology, medical diagnosis, disease research, drug discovery, drug and toxin mechanisms of action, and mechanism of drug metabolism. **Credits:** 2.00

PHRM 83800 - Interprofessional Education (IPE) Experience I

Credit Hours: 0.50. An Interprofessional Learning Anchor (IPLA) is a common event or experience in which all P1-P4 students will participate. The purpose of this course is to provide first through fourth professional year pharmacy students with an interprofessional education (IPE) activity, and expose them to concepts related to interprofessional care and practice. This course will also involve interaction and collaboration with students and professionals from other healthcare disciplines (i.e. medicine, nursing, social work, physical therapy, dentistry, and others). This course will feature one to three components offered over the Fall and/or Spring academic semesters. **Credits:** 0.50

PHRM 83900 - Interprofessional Education (IPE) Experience II

Credit Hours: 0.50. An Interprofessional Learning Anchor (IPLA) is a common event or experience in which all P1-P4 students will participate. The purpose of this course is to provide first through fourth professional year pharmacy students with an interprofessional education (IPE) activity, and expose them to concepts related to interprofessional care and practice. This course will also involve interaction and collaboration with students and professionals from other healthcare disciplines (i.e. medicine, nursing, social work, physical therapy, dentistry, and others). This course will feature one to three components offered over the Fall and/or Spring academic semesters.**Credits:** 0.50

PHRM 84000 - Professional Skills Laboratory III

Credit Hours: 2.00. Experiments, simulations, case studies, and problem sets that actively involve the student in problem-solving, applying and interrelating important concepts from the core courses taught that semester.**Credits:** 2.00

PHRM 84100 - Professional Skills Laboratory IV

Credit Hours: 2.00. Experiments, simulations, case studies, and problem sets that actively involve the student in problem-solving, applying and interrelating important concepts form the core courses taught that semester.**Credits:** 2.00

PHRM 84200 - Community Pharmacy IPPE

Credit Hours: 3.00. A 3-credit hour required experiential course in the summer before the 2nd year of professional Doctor of Pharmacy program. Students learn community pharmacy operations and patient counseling skills.**Credits:** 3.00

PHRM 84400 - Integrated Pharmacotherapy II

Credit Hours: 6.00. This course will provide an integrated approach to instruct the students in physiology, pathophysiology, pharmacology, medicinal chemistry, and therapeutics relevant to diseases of the endocrine and cardiovascular systems. When applicable, special emphasis will be placed on presenting the interrelationships between deficits in endocrine function and cardiovascular disease. In addition, students will study and critique current therapeutic approaches and opinions in the application of replacement therapy with natural, synthetic, or recombinant hormone preparations.**Credits:** 6.00

PHRM 84500 - Integrated Pharmacotherapy III

Credit Hours: 6.00. This course will develop knowledge and skills regarding the physiology/ pathophysiology, medicinal chemistry, pharmacology, pharmacokinetics/pharmaceutics, and pharmacotherapy of specific cardiovascular diseases, neurology diseases, and psychiatric disorders.**Credits:** 6.00

PHRM 84700 - Principles Of Pharmacogenomics

Credit Hours: 2.00. This course is designed to introduce the theory and concepts of pharmacogenetics, pharmacogenomics, and precision medicine. The course will provide the student learner broad knowledge for advanced integrated therapeutic strategy based on a patient's genetic information. The learner will develop expertise in informed patient care by selecting the proper drug, dose, and/or dosage form for a specific patient care based on personalized data and pharmacogenomic information. This course offers a platform for shaping next-generation pharmacists into an era of precision medicine.**Credits:** 2.00

PHRM 84800 - Principles Of Drug Information And Literature Evaluation

Credit Hours: 3.00. This course is designed to provide students with the fundamental skills needed for the provision of drug information in pharmacy practice. Emphasis is placed on the evaluation, interpretation, and practical implications of primary medical literature on the delivery of pharmaceutical care. Four recently published clinical trials will be reviewed and discussed throughout the semester to illustrate contemporary issues in the interpretation of biomedical research.**Credits:** 3.00

PHRM 84900 - Population Health Management

Credit Hours: 2.00. This two-credit hour course aims to provide students with the core knowledge and basic skills used in managing the health of populations. Core content will include managed care principles, pharmacist involvement in managed care, and program designs. The course will also provide instruction in the topic areas of pharmacoepidemiology and pharmacoeconomics.**Credits:** 2.00

PHRM 85000 - Immunization Certification

Credit Hours: 1.00. The purpose of the course is to provide immunization training certification for students in the Doctor of Pharmacy program. Certification is awarded based on completion of the Pharmacy-Based Immunization Delivery program content that is provided through the American Pharmacists Association (APhA). All students will be expected to have completed immunization training as a graduation requirement. **Credits:** 1.00

PHRM 85200 - Public Health Pharmacy

Credit Hours: 3.00. The course is designed to provide the pharmacy student with a comprehensive overview of key public health and wellness principles and related to self-care and nonprescription products as they impinge upon the ability of patients to assume active roles and function effectively on their own behalf in health promotion and disease prevention, detection, and treatment.**Credits:** 3.00

PHRM 85400 - Interprofessional Education (IPE) Experience III

Credit Hours: 0.50. An Interprofessional Learning Anchor (IPLA) is a common event or experience in which all P1-P4 students will participate. The purpose of this course is to provide first through fourth professional year pharmacy students with an interprofessional education (IPE) activity, and expose them to concepts related to interprofessional care and practice. This course will also involve interaction and collaboration with students and professionals from other healthcare disciplines (i.e. medicine, nursing, social work, physical therapy, dentistry, and others). This course will feature one to three components offered over the Fall and/or Spring academic semesters.**Credits:** 0.50

PHRM 85500 - Interprofessional Education (IPE) Experience IV

Credit Hours: 0.50. An Interprofessional Learning Anchor (IPLA) is a common event or experience in which all P1-P4 students will participate. The purpose of this course is to provide first through fourth professional year students with an interprofessional education (IPE) activity, and expose them to concepts related to interprofessional care and practice. The course will also involve interaction and collaboration with students and professionals from other healthcare disciplines (i.e., medicine, nursing, social work, physical therapy, dentistry and others). This course will feature one to three components offered over the Fall and/or Spring academic semesters.**Credits:** 0.50

PHRM 86000 - Professional Skills Laboratory V

Credit Hours: 2.00. This course is an interdisciplinary laboratory course that presents a practical application of scientific and clinical knowledge in the context of patient-centered pharmaceutical care.**Credits:** 2.00

PHRM 86100 - Professional Skills Laboratory VI

Credit Hours: 2.00. This course is an interdisciplinary laboratory course that presents a practical application of scientific and clinical knowledge in the context of patient-centered pharmaceutical care. It serves as a one credit hour course. In accordance with university policy, this course may require up to three hours of work weekly outside of the arranged class time.**Credits:** 2.00

PHRM 86200 - Institutional Pharmacy Introductory Pharmacy Practice Experience

Credit Hours: 2.50. A 2.5-credit hour required experiential course in the summer prior to the third year of the professional Doctor of Pharmacy program. Students learn basic institutional pharmacy operations and sterile product compounding.**Credits:** 2.50

PHRM 86400 - Integrated Pharmacotherapy IV

Credit Hours: 6.00. This course will develop knowledge and skills regarding the physiology, pathophysiology, medicinal chemistry, pharmacology, pharmacokinetics, pharmaceutics, and pharmacotherapeutics of oncology and hematologic malignancies, hepatic disorders, gastrointestinal disorders, and women's and men's health. This knowledge will be utilized in subsequent integrated pharmacotherapy modules, skills labs and practice experience that follow.**Credits:** 6.00

PHRM 86500 - Integrated Pharmacotherapy V

Credit Hours: 6.00. This course provides an integrated approach to the physiology, pathophysiology, medicinal chemistry, pharmacology, pharmacokinetics, pharmacodynamics and pharmacotherapeutics of infectious diseases. It covers a vast array of microbiological pathogens, including bacteria, fungi, viruses, mycobacteria, parasites, protozoa and malaria.**Credits:** 6.00

PHRM 86600 - Biotech/Advanced Parenteral Dosage Forms

Credit Hours: 2.00. This course covers the different types of parenteral products derived from biotechnology. The lectures encompass the origin, chemical characteristics and therapeutic use of biopharmaceuticals. This course builds on the concepts and skills gained by the student from taking Dosage Forms II (PHRM 82900) and Professional Program Laboratory II (PHRM 82100).**Credits:** 2.00

PHRM 86700 - Introduction To The Advanced Pharmacy Practice Experience

Credit Hours: 1.00. The Introduction to Advanced Pharmacy Practice Experience (APPE) course was designed to provide students with the tools needed to be successful clerkship students. Students will participate in a variety of activities, including case studies, group work, evaluations and assessment, review of therapeutic topics, and student/preceptor panel interactions. Activities will be supplemented by didactic lecturing for each topic. The activities and lecture topics were selected based on feedback from previous clerkship students, preceptors, and faculty, and are intended to de-mystify the clerkship experience. This course prepares students to enter the clerkship year with the ability to successfully submit required clerkship forms, evaluate preceptors and peers, avoid common clerkship student mistakes, document clinical interventions, review medical charts, and prepare for therapeutic and pharmacokinetic responsibilities.**Credits:** 1.00

PHRM 86800 - Patient Safety And Informatics

Credit Hours: 3.00. This course provides core knowledge and skills needed by pharmacists to promote patient safety and use the tools of healthcare informatics; understand the landscape, epidemiology and culture of patient safety data privacy and security. Case studies will address disclosure of medication errors and reporting adverse events. Informatics tools such as computer order entry, electronic medical record systems, health information exchanges, and decision support will be explained. The use of informatics tools to promote patient safety will be emphasized.**Credits:** 3.00

PHRM 86900 - Practice Management And Marketing Of Professional Services

Credit Hours: 2.00. Introduces essential pharmacy practice managerial skills including personnel management, addressing conflict, CQI, change management and leadership. Builds upon these skills in the development of a business plan to implement an innovative pharmacy service.**Credits:** 2.00

PHRM 87000 - Health Policy Applications

Credit Hours: 1.00. This course will explore policy issues that influence health care. The course will provide students opportunities to apply material from prior courses in Health Systems, Population Health Management, and Public Health as it relates to the impact of health policy. Students will gain an understanding of how policy development must address competing interests and goals, and how policy can influence the scope of pharmacist's professional roles. Timely materials on current policy, current policy debates, and professional advocacy will be discussed.**Credits:** 1.00

PHRM 87100 - Jurisprudence

Credit Hours: 2.00. An in depth study of federal and Indiana laws, regulations, and rules affecting pharmacy practice. Primary emphasis is on Retail and Hospital Pharmacy settings. Lecture is supported by an instructor-created text covering the Food, Drug, and Cosmetic Act (21 USC), the Controlled Substances Act 21 CFR 1300 et. seq. and Indiana Food and Drug law IC 25-26-13 et. seq. and Indiana rules 856 IAC-1-43.**Credits:** 2.00

PHRM 87400 - Interprofessional Education (IPE) Experience V

Credit Hours: 0.50. An Interprofessional Learning Anchor (IPLA) is a common event or experience in which all P1-P4 students will participate. The purpose of this course is to provide first through fourth professional year students with an interprofessional education (IPE) activity, and expose them to concepts related to interprofessional care and practice. The course will also involve interaction and collaboration with students and professionals from other healthcare disciplines (i.e. medicine, nursing, social work, physical therapy, dentistry and others). This course will feature one to three components offered over the Fall and/or Spring academic semesters.**Credits:** 0.50

PHRM 87500 - Interprofessional Education (IPE) Experience VI

Credit Hours: 0.50. An Interprofessional Learning Anchor (IPLA) is a common event or experience in which all P1-P4 students will participate. The purpose of this course is to provide first through fourth professional year students with an interprofessional education (IPE) activity, and expose them to concepts related to interprofessional care and practice. The course will also involve interaction and collaboration with students and professionals from other healthcare disciplines (i.e. medicine, nursing, social work, physical therapy, dentistry and others). This course will feature one to three components offered over the Fall and/or Spring academic semesters. **Credits:** 0.50

PHRM 88000 - Advanced Pharmacy Practice Experience

Credit Hours: 3.00. This final year begins in May and continues through the following April. The 36 weeks of rotation are broken down as follows: 4 weeks Hospital Operations 2, 4 weeks Community Pharmacy Operations 2, 8 weeks Ambulatory rotations, 4 weeks inpatient rotations, and 16 weeks General Electives (4 of which must be additional patient care rotation).**Credits:** 3.00

Pharmacy Practice

PHPR 42700 - Pharmacy Leadership Seminar

Credit Hours: 2.00. This course is specifically designed to mentor enthusiastic leaders and enhance their ability to become an effective leader in the practice of pharmacy. The objective of this course is not to build a leader, rather to augment the characteristics the particular leader possesses. Students have the opportunity to partake in a variety of activities including the development of a proposal with implementation plan to address a current school-wide issue. A variety of outside speakers share their leadership experiences with the class. The course has a maximum enrollment and requires instructor approval to enroll. Students interested in enrolling in the course must submit a course application packet. Students are assessed on written reflections, oral presentation, written reports, and a group project. **Credits:** 2.00

PHPR 45000 - Introduction To Institutional Pharmacy Practice

Credit Hours: 1.00. An overview of the delivery of pharmaceuticals and the provision of clinical and administrative services to patients in institutional settings is presented along with the various roles pharmacists play both within the pharmacy department and the institution. Course content focuses on the provision of services and career development rather than on drug therapy. The course features a series of presentations by practitioners from a variety of practice settings. Enrollment is limited to Doctor of Pharmacy students or by consent of course coordinator. **Credits:** 1.00

PHPR 45500 - Medicare In Pharmacy Practice

Credit Hours: 1.00. Elective course providing an in-depth review of Medicare and related topics beyond that covered in the core curriculum. A service-learning component involving hands-on experience with Medicare beneficiaries is part of the course requirements. **Credits:** 1.00

PHPR 48000 - Self-Care Pharmacy Practice I

Credit Hours: 1.00. This course is specifically designed to provide students with guided experience in the application of knowledge acquired during previous professional course work to the solution of simulated problems which occur in self-care pharmacy practice. Specifically, the course is designed to introduce students to the appropriate selection and use of nonprescription medications and devices for the treatment of minor health complaints by patients. A principle theme throughout the course is that the solution of all self-care problems (i.e., regardless of the context in which they occur) involves the application of the same basic problem-solving process. Course activities, readings and homework assignments will provide students with illustration of how the problem-solving process can be applied to specific self-care situations that arise in practice. Active learning methods will be employed to involve students directly in the actual application of this process to simulated practice problems. Topics: Colds, Coughs, Allergies. **Credits:** 1.00

PHPR 48200 - Self-Care Pharmacy Practice II

Credit Hours: 1.00. This course is specifically designed to provide students with guided experience in the application of knowledge acquired during previous professional course work to the solution of simulated problems which occur in self-care pharmacy practice. Specifically, the course is designed to introduce students to the appropriate selection and use of nonprescription medications and devices for the treatment of minor health complaints by patients. A principle theme throughout the course is that the solution of all self-care problems (i.e., regardless of the context in which they occur) involves the application of the same basic problem-solving process. Course activities, readings and homework assignments will provide students with illustration of how the problem-solving process can be applied to specific self-care situations that arise in practice. Active learning methods will be employed to involve students directly in the actual application of this process to simulated practice problems. Topics: Gastrointestinal Disorders. **Credits:** 1.00

PHPR 48300 - Self-Care Pharmacy Practice III

Credit Hours: 1.00. This course is specifically designed to provide students with guided experience in the application of knowledge acquired during previous professional course work to the solution of simulated problems which occur in self-care pharmacy practice. Specifically, the course is designed to introduce students to the appropriate selection and use of nonprescription medications and devices for the treatment of minor health complaints by patients. A principle theme throughout the course is that the solution of all self-care problems (i.e., regardless of the context in which they occur) involves the application of the same basic problem solving process. Course activities, readings and homework assignments will provide students with illustration of how the problem solving process can be applied to specific self-care situations that arise in practice. Active learning methods will be employed to involve students directly in the actual application of this process to simulated practice problems. Topics: Dermatology. **Credits:** 1.00

PHPR 48400 - Self-Care Pharmacy Practice IV

Credit Hours: 1.00. This course is specifically designed to provide students with guided experience in the application of knowledge acquired during previous professional course work to the solution of simulated problems which occur in self-care pharmacy practice. Specifically, the course is designed to introduce students to the appropriate selection and use of nonprescription medications and devices for the treatment of minor health complaints by patients. A principle theme throughout the course is that the solution of all self-care problems (i.e., regardless of the context in which they occur) involves the application of the same basic problem-solving process. Course activities, readings and homework assignments will provide students with illustration of how the problem-solving process can be applied to specific self-care situations that arise in practice. Active learning methods will be employed to involve students directly in the actual application of this process to simulated practice problems. Topics: Determined by students taking PHPR 48300. **Credits:** 1.00

PHPR 48600 - Beyond Ecstasy

Credit Hours: 1.00. The goal of the course is to augment the students' knowledge about commonly used street drugs including: pharmacology and mechanisms of action; interactions and adverse effects; law enforcement and policing; available support and treatment for addiction, abuse, and misuse; and the role of pharmacists. **Credits:** 1.00

PHPR 48900 - Complementary And Alternative Medicine

Credit Hours: 1.00. This course is intended to expose students in health care fields to alternative health care practices used by people around the world. **Credits:** 1.00

PHPR 49000 - Special Topics

Credit Hours: 1.00 to 3.00. An honors course to be used to relate to, and supplement, an existing course. Subject matter and method of approach individually directed by instructor. Permission of instructor required. **Credits:** 1.00 to 3.00

PHPR 59000 - Special Topics In Pharmacy Practice

Credit Hours: 1.00 to 3.00. Special topics in selected areas of pharmacy practice. Permission of instructor required. **Credits:** 1.00 to 3.00

PHPR 59800 - Introduction To Research

Credit Hours: 1.00 to 3.00. Qualified students will undertake a project in an area of pharmacy practice, clinical pharmacy, or pharmacy administration under a member of the graduate faculty. Permission of instructor required. **Credits:** 1.00 to 3.00

PHPR 66400 - Research Techniques And Proposal Development

Credit Hours: 2.00. A consideration of current trends in pharmacy practice, clinical pharmacy, and pharmacy administration relating to healthcare services and systems. Offered in alternate years. **Credits:** 2.00

PHPR 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

PHPR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

PHRM 42400 - Principles Of Pathophysiology And Drug Action

Credit Hours: 3.00. This course introduces the basic principles of pathophysiology, pharmacodynamics, toxicology and medicinal chemistry necessary to understand the therapeutic use and adverse actions of drugs. The course will integrate and apply concepts of science courses, including organic chemistry, biochemistry, anatomy and physiology into an understanding of the basic fundamentals of disease processes, toxicology and drug actions. Thus, this course will provide students with the basic background necessary to understand and apply pharmacotherapeutics to the practice of pharmacy.**Credits:** 3.00

PHRM 42800 - Dosage Forms I

Credit Hours: 3.00. The purpose of this course is to provide a foundation in the basic concepts of pharmaceutics that are the foundation of drug delivery. The course begins by presenting the molecular basis for aqueous and lipid solubility of drugs,

pharmacokinetic principles that are related to dosage forms, mechanisms by which excipients or manufacturing processes affect bioavailability, and chemical kinetics applied to the shelf-life of dosage forms. The pharmaceutics principles are then applied to successively more complex liquid dosage forms: solution, emulsion, and suspension. The excipients that are required to prepare the dosage forms: buffers, preservatives, emulsifiers, suspending agents, wetting agents, etc., and the method of preparing each dosage form in both a compounding and manufacturing setting are covered.**Credits:** 3.00

PHRM 46000 - Drug Discovery And Development I

Credit Hours: 3.00. Focuses on the strategies, current methods and technologies used in early stage pre-clinical research to discover, validate and select lead drug candidates.**Credits:** 3.00

PHRM 46100 - Drug Discovery And Development II

Credit Hours: 3.00. The course focuses on the process of drug development from pre-formulation to unit operations. The emphasis is on the scientific principles behind every step in moving from a drug molecule to its products.**Credits:** 3.00

PHSC 43600 - Biochemistry For Pharmaceutical Sciences II

Credit Hours: 2.00. The overall objective of this course is to expand students' knowledge of biochemistry obtained in the prerequisite one-semester Biochemistry course to understanding advanced aspects of human biochemistry related to pharmaceutical sciences.**Credits:** 2.00

Philosophy

PHIL 1110N - Ethics

Credit Hours: 3.00. A study of ethics in relation to personal and societal decision making. Typically addresses such topics as abortion, world hunger, assisted suicide, sexual morality, animal rights, moral education, virtue and character, and environmental ethics.**Credits:** 3.00

PHIL 1500N - Logic

Credit Hours: 3.00. A study of the principles of logic. The course covers a variety of traditional topics, selected for their practical value, within formal and informal logic. Among the topics typically covered are fallacies, syllogisms, causal hypotheses, logic diagrams, argument analysis, and truth-functional reasoning.**Credits:** 3.00

PHIL 11000 - The Big Questions: Introduction To Philosophy

Credit Hours: 3.00. The basic problems and types of philosophy, with special emphasis on the problems of knowledge and the nature of reality. CTL:ISH 1050 Introduction To Philosophy **Credits:** 3.00

PHIL 11005 - I Play, Therefore I Am: Introduction To Philosophy Through Video Games

Credit Hours: 4.00. This course uses video games to demonstrate many of the fundamental problems of philosophy. To better understand the philosophical problems presented in text, students will watch online walkthroughs and live demonstrations of video games in class. Students will also engage with these problems through active learning by occasionally playing video games.**Credits:** 4.00

PHIL 11100 - Introduction To Ethics

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics **Credits:** 3.00

PHIL 11400 - Global Moral Issues

Credit Hours: 3.00. A systematic and representative examination of significant contemporary moral problems with a focus on global issues such as international justice, poverty and foreign aid, nationalism and patriotism, just war, population and the environment, human rights, gender equality, and national self-determination. **Credits:** 3.00

PHIL 11500 - Philosophy: What Are You Going To Do With That?

Credit Hours: 1.00. This course is designed for all philosophy majors, but is open to anyone interested in minor/majoring in philosophy. The format for this course is based on three components: reading and reflection, along with in-class discussion; in-class guest speakers who will address various topics in philosophy as a field, and/or professionalization (both within and outside of academia); and short written exercises, often done in class, which are designed to build up to the final project. Most classes will begin with a guest speaker giving a brief introduction to a particular area or topic within philosophy. Students will have a short reading assigned for each class period that will be discussed with the instructor following the guest's presentation. The course readings will be, as best as possible, related to the area/topic introduced by the guest. Certain classes will be dedicated solely to career/professionalization interests and will feature guests with expertise in these areas. The professionalization experts will help students develop their career goals, identify possible internships and scholarships to pursue while a student at Purdue, and develop career goals for after they have graduated. Finally, certain classes will be dedicated to writing and the development of the final project, which will include a proposed 8-semester path of study, a polished resume/CV, and career/professionalization goals. **Credits:** 1.00

PHIL 12000 - Critical Thinking

Credit Hours: 3.00. This course is designed to develop reasoning skills and analytic abilities, based on an understanding of the rules or forms as well as the content of good reasoning. This course will cover moral and scientific reasoning, in addition to ordinary problem solving. This course is intended primarily for students with nontechnical backgrounds. **Credits:** 3.00

PHIL 15000 - Principles Of Logic

Credit Hours: 3.00. A first course in formal deductive logic; mechanical and other procedures for distinguishing good arguments from bad. Truth-tables and proofs for sentential (Boolean) connectives, followed by quantificational logic with relations. Although metatheoretic topics are treated, the emphasis is on methods. **Credits:** 3.00

PHIL 20600 - Introduction To Philosophy Of Religion

Credit Hours: 3.00. The course encourages critical reflection on traditional and contemporary views about God and other religious ideas. Topics include arguments for God's existence, the problem of evil, understanding the divine attributes, miracles, religious pluralism, and life after death. CTL:ISH 1052 Philosophy Of Religion **Credits:** 3.00

PHIL 20700 - Ethics For Technology, Engineering, And Design

Credit Hours: 3.00. This course is designed to increase your understanding of professional and ethical responsibilities in national, international, and cross-cultural environments, helping you to anticipate, understand, and navigate issues that will likely arise in your working life as an engineer or designer. The focus of the course is on developing the ability to apply a general ethical framework to new and unique situations, including those arising from the global cultural context of modern engineering. The

course covers how this ethical framework should be constituted, and provides practice in applying this a framework to specific, concrete cases. Together, these components work toward your development as a better engineer and a more responsible global citizen. The readings, case studies, and exercises are geared towards the development of a well-researched original case study that you will present to the class, which is informed by your past experiences and future aspirations related to engineering. **Credits:** 3.00

PHIL 20800 - Ethics Of Data Science

Credit Hours: 3.00. As applications of data science permeate more aspects of our lives, new and important ethical issues are arising. However, especially because we are entering uncharted territory, reasoning clearly about the ethical implications of data science isn't easy. This course provides students with the tools for doing so, including a conceptual framework for ethical reasoning in professional settings, as well as a procedure for case-study analysis that allows students to practice employing this conceptual framework. Together, these components help prepare students to be ethical professionals and responsible global citizens.**Credits:** 3.00

PHIL 21900 - Philosophy And The Meaning Of Life

Credit Hours: 3.00. Does life have meaning? If so, in what sense? If not, does this matter? Does the answer depend on the existence of God and an afterlife? What, if anything, makes existence worthwhile? Might the question - 'does life have meaning?' - be malformed? This course explores these and related questions, as well as answers to them, with the aim of teaching students to think critically and rigorously about matters of perennial existential importance. In previous iterations of this course, readings have been chosen from the following writers: Kierkegaard, Nietzsche, Dostoevsky, Kafka, Marcel, Heidegger, Camus, Sartre, Jaspers, de Beauvoir, Ortega, and Merleau-Ponty. **Credits:** 3.00

PHIL 22100 - Introduction To Philosophy Of Science

Credit Hours: 3.00. An introduction to the scope and methods of science and to theories of its historical development. Topics include scientific revolutions, theories of scientific method, the nature of scientific discovery, explanation, and the role of values in scientific change. **Credits:** 3.00

PHIL 22300 - Fate And Free Will

Credit Hours: 3.00. This course encourages critical reflection on the nature and possibility of human freedom in a world like ours that appears to be determined by unchanging causal and physical laws. Topics include the compatibility of free will and determinism, the possibility of moral responsibility without free will, and the incentives (if any) for future planning if our future fate is already sealed. **Credits:** 3.00

PHIL 22500 - Philosophy And Gender

Credit Hours: 3.00. An examination of the beliefs, assumptions, and values found in traditional and contemporary philosophical analyses of women. A range of feminist approaches to knowledge, values, and social issues will be introduced. **Credits:** 3.00

PHIL 22700 - Science And Religion

Credit Hours: 3.00. Are science and religion irrelevant to each other? Or can one of them challenge, support, shape, presuppose, explain-or explain *away*-the other? This course examines how science in general, as well as specific scientific disciplines such as evolutionary biology, physical cosmology, and cognitive science, are related to religion in general, and to particular religious traditions. **Credits:** 3.00

PHIL 23000 - Religions Of The East

Credit Hours: 3.00. (REL 23000) A study of the history, teachings, and present institutions of the religions of India, Southeast Asia, China, and Japan. This will include Hinduism, Jainism, Sikhism, Buddhism, Confucianism, Taoism, Shintoism, and Zoroastrianism. **Credits:** 3.00

PHIL 23100 - Religions Of The West

Credit Hours: 3.00. (REL 23100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam. **Credits:** 3.00

PHIL 24000 - Social And Political Philosophy

Credit Hours: 3.00. A study of some major social and political philosophers from Plato to contemporary authors. Issues such as justice, rights and freedom, community, and the "globalized" future will be considered. **Credits:** 3.00

PHIL 24100 - Philosophy, Politics, And Economics

Credit Hours: 3.00. Many important issues, such as environmental pollution, global poverty, and the proliferation of nuclear weapons, have philosophical, political, and economic aspects. Accordingly, his interdisciplinary course deals with issues of interest to philosophers, political scientists, and economists alike. Possible topics to be studied include: the basis for political authority, game theory and rational choice, property rights, market advantages and market failures, justice, equality, and freedom.**Credits:** 3.00

PHIL 24200 - Philosophy, Culture, And The African American Experience

Credit Hours: 3.00. The purpose of this course is to consider African American based or inspired conceptions of Western philosophy and new visions of what it is to do philosophy sensitive to culturally rooted diversity. **Credits:** 3.00

PHIL 25501 - Introduction To Cognitive Science: Minds, Brains, And Machines

Credit Hours: 3.00. This will provide an introduction to foundational topics in the philosophy of mind. We will consider the relationship between the mind and the body, and the mental to the physical more generally. We'll ask, and look at some candidate answers to, questions like "What is a mind, and what are its component parts? How does a mind work? How are minds related to brains, and to the physical bodies that they seem to animate and control? How do minds represent the world around them? What is a self? What is the nature of consciousness and subjective experience? Could other animals, aliens, computers, robots or other types of entities have minds, or be conscious? How would we know? How can empirical efforts like the cognitive sciences help shed light on these questions? Could scientific theories of the mind supplant our intuitive conceptions of the mind? If so, what would be the implications?"**Credits:** 3.00

PHIL 25601 - Philosophy And Artificial Intelligence

Credit Hours: 3.00. Just what is it to be artificially intelligent and what will be AIs impact on our future? This course tackles these questions using an interdisciplinary and historically anchored approach beginning with the development of AI to arrive at a more holistic, socially- and ethically-ensconced account of what it means to be artificially intelligent. Will AI agents change the nature of work? Can they be used to regulate individuals and their opportunities through automated algorithms and sorting software? What are the human and environmental costs of a full-throated adoption of AI? This class will arm you with the philosophical and historical background to begin to devise and weigh the creative opportunities and challenges posed by this future. We'll first consider traditional questions and issues in the philosophy of computation, epistemology, ethics and justice before turning to home onto a series of specific challenges that may include issues of AI in equity, AI and the law, AI and gender, AI and labor, AI and policy, the future of AI, and whether we can even design 'ethical' AI. **Credits:** 3.00

PHIL 25701 - Moral Minds: The Nature Of Right And Wrong

Credit Hours: 3.00. This course will explore questions about the nature of morality that lie at the intersection of philosophy and psychology. Is genuine altruism possible, or is everybody selfish deep down? Is moral thinking driven by reason or emotion? Is there such a thing as moral character? Is anyone ever truly responsible for their actions? Do facts about our evolutionary history undermine objective morality? Is empathy...bad? What makes someone a jerk? We'll also think about what happens to moral psychology when it gets plugged into social media algorithms and polarized political environments. **Credits:** 3.00

PHIL 26000 - Philosophy And Law

Credit Hours: 3.00. A discussion of philosophical issues in the law: a critical examination of such basic concepts in law as property, civil liberty, punishment, right, contract, crime and responsibility; and a survey of some main philosophical theories about the nature and justification of legal systems. Readings will be drawn from both law and philosophy. **Credits:** 3.00

PHIL 27000 - Biomedical Ethics

Credit Hours: 3.00. An examination of the moral problems raised by developments in medicine and the biomedical sciences. Topics include abortion, reproductive technologies, euthanasia and physician-assisted suicide, experiments involving human subjects, and health care delivery. **Credits:** 3.00

PHIL 27500 - The Philosophy Of Art

Credit Hours: 3.00. A survey of the principal theories concerning the nature, function, and value of the arts from classical times to the present. **Credits:** 3.00

PHIL 28000 - Ethics And Animals

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized. **Credits:** 3.00

PHIL 29000 - Environmental Ethics

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations. **Credits:** 3.00

PHIL 29300 - Selected Topics In Philosophy

Credit Hours: 1.00 to 3.00. A critical examination of some special topic or topics in philosophy. Details concerning topics selected for treatment in a given semester may be obtained in advance from the Department of Philosophy. Sections of this course may sometimes be initiated by students upon petition to the department. **Credits:** 1.00 to 3.00

PHIL 30100 - History Of Ancient Philosophy

Credit Hours: 3.00. A survey of Greek philosophy from its beginning in the Milesian school through the Presocratics to Plato and Aristotle. **Credits:** 3.00

PHIL 30200 - History Of Medieval Philosophy

Credit Hours: 3.00. A survey of the main trends and figures of medieval philosophy, with an emphasis on metaphysics, epistemology, and ethics. Readings (in English translation) may include Augustine, Boethius, Avicenna, Anselm, Abelard, Maimonides, Aquinas, Scotus, Ockham and Suarez. **Credits:** 3.00

PHIL 30300 - History Of Modern Philosophy

Credit Hours: 3.00. Concentrates on the major philosophical writers from the Renaissance to the beginning of the nineteenth century: Descartes, Hobbes, Spinoza, Locke, Leibniz, Berkeley, Hume, Kant. Some in other areas, e.g., Galileo, Newton, Calvin, are also considered. **Credits:** 3.00

PHIL 30400 - Nineteenth-Century Philosophy

Credit Hours: 3.00. A study of the major movements and directions of nineteenth-century philosophy, including such figures as Hegel, Comte, Mach, Schopenhauer, Nietzsche, Mill, Royce and Peirce. **Credits:** 3.00

PHIL 30600 - Twentieth-Century Philosophy

Credit Hours: 3.00. A critical examination of the main currents of contemporary philosophical thought, such as pragmatism, analytic philosophy, phenomenology, and existentialism, and other recent developments. The course will cover selected works of such philosophers as Russell, Wittgenstein, Peirce, Whitehead, Heidegger, and Sartre. **Credits:** 3.00

PHIL 31000 - Classical Chinese Philosophy

Credit Hours: 3.00. In this course, we will survey the classic works of classical Chinese philosophy (c. 600-200 BCE). We will focus on seven major philosophers (and their followers): Kongzi (Confucius), Mozi, Mengzi (Mencius), Zhuangzi, Laozi, Xunzi, and Han Feizi. We will use their work to consider topics such as: the nature and value of morality, the proper role of ritual in human life, whether human nature is good or bad, how one becomes a moral person, the proper role and function of government, and more. In addition to introducing the competing traditions of Confucianism, Mohism, Daoism, and Legalism, the course will help students to develop basic philosophical skills as they develop and defend their own views on these topics. No knowledge of Chinese is expected. **Credits:** 3.00

PHIL 32200 - Philosophy Of Technology

Credit Hours: 3.00. A philosophical examination of the nature and history of technology, as well as its complex impact on humans and the world. **Credits:** 3.00

PHIL 32600 - Business Ethics

Credit Hours: 3.00. Philosophic examination of such topics as morality and self-interest, freedom and coercion, distributive justice, limits of the law, moral and legal rights, fair equality of opportunity, justice between nations. These topics are seen from a new perspective when they are connected to discussions of fair wages and capitalism, legal constraints on manufacturers and advertisers, affirmative-action programs, environmentalism, and multinational corporations. **Credits:** 3.00

PHIL 35000 - Philosophy And Probability

Credit Hours: 3.00. This course introduces the student to mathematical probability and its philosophical applications. Topics may include theories of probability, Hume's problem of induction, Goodman's paradox, and the foundations of scientific reasoning. **Credits:** 3.00

PHIL 35501 - Major Questions In Cognitive Science

Credit Hours: 3.00. The philosophy of cognitive science uses tools from philosophy, psychology, neuroscience, linguistics, and computer science to answer foundational questions about how the mind works. In this course, we'll survey a range of contemporary debates in the philosophy of cognitive science, focusing on topics like the distinction between perception and cognition, the relationship between memory and imagination, the relationship between language and thought, whether there exist basic emotions and more.**Credits:** 3.00

PHIL 40200 - Studies In Medieval Christian Thought

Credit Hours: 3.00. A survey of medieval (and patristic) philosophical theology. Issues include the nature and existence of God, religious language, and doctrines such as the Trinity, Incarnation, and Atonement. Readings (in English translation) will include, among others, Augustine, Boethius, Anselm, and Aquinas. **Credits:** 3.00

PHIL 40300 - Moral Psychology And Climate Change

Credit Hours: 3.00. This course investigates the ethical challenges posed by climate change in conjunction with the deep cognitive and motivational factors that shape our individual and collective responses to it. Current research on human moral psychology is examined, drawing on work from a range of disciplines. Ethical theories concerning the unique moral challenges posed by a threat that spans national borders and human generations are considered. Strategies for addressing climate change that try to avoid our common cognitive foibles, and to leverage what we know about human moral capacities for collective action, are examined. **Credits:** 3.00

PHIL 40600 - Intermediate Philosophy Of Religion

Credit Hours: 3.00. An intensive study of some important problems such as the existence of God, the problem of evil, immortality, or the nature of religion. Or the religious philosophy of some significant thinkers such as Buber, Berdyaev, Tillich, Barth, Maritain, or Chardin may form the content of the course. Subject matter may vary. **Credits:** 3.00

PHIL 41000 - Mock Trial Practicum

Credit Hours: 1.00. This course prepares students to represent Purdue University in American Mock Trial Association competitions by focusing on legal reasoning, argumentation, and advocacy. Mock Trial students will become familiar with the United States' legal system and conduct a trial over a fictional civil or criminal case. Students develop and deliver opening statements, introduce and examine testimonial, physical, and demonstrative evidence, examine and cross examine witnesses, and develop and deliver closing statements. Permission of instructor required. **Credits:** 1.00

PHIL 41100 - Modern Ethical Theories

Credit Hours: 3.00. An examination of the major controversies in the history of modern ethics, including: the place of reason in ethics, the basis of moral obligation, and the relation between science and morals. **Credits:** 3.00

PHIL 41500 - Philosophy Practicum

Credit Hours: 1.00 to 3.00. This course is for philosophy students who are pursuing internship, research opportunities, and professional experience in various fields, industries, and sectors. The aim of this course is for students to apply concepts and skills they have gained in the philosophy curriculum to research and professional experience. The applicable skills students can bring to their internship/research/professional experience include logic, analytical reasoning, critical thinking, written and oral communication, textual analysis, and persuasive argumentation. Students can take the course up to two times for no more than 6.00 total credits. Internships and research positions can be offered remotely or on-site. **Credits:** 1.00 to 3.00

PHIL 42100 - Philosophy Of Science

Credit Hours: 3.00. An examination of central issues in philosophy of science. Topics include theories of explanation, confirmation, reduction, laws, the status of theoretical entities, and the epistemological foundations of scientific theories. **Credits:** 3.00

PHIL 42400 - Recent Ethical Theory

Credit Hours: 3.00. A philosophical examination of significant issues in recent ethical theory and metaethics, such as the nature of value, obligation, virtue, rationality, moral knowledge, the status of ethical sentences, practical applications, and the relationship between ethics and science or religion. **Credits:** 3.00

PHIL 42500 - Metaphysics

Credit Hours: 3.00. A concentrated investigation of some of the basic problems concerning essence, existence, time, space, substance, causality, permanence, and change. Readings and discussions will center on representative metaphysical thinkers. **Credits:** 3.00

PHIL 43200 - Theory Of Knowledge

Credit Hours: 3.00. An analysis of selected texts on knowledge and rationality. Topics such as the following will be considered: foundationalism, coherentism, internalism, externalism, skepticism, contextualism, empiricism, rationalism, analyses of epistemic concepts, and the Gettier problem. **Credits:** 3.00

PHIL 43500 - Philosophy Of Mind

Credit Hours: 3.00. An examination of some central issues in the philosophy of mind. Attention is given to such topics as the knowledge of other minds, the relation between mind and body, the nature of persons, and the analysis of certain relevant concepts such as action, emotion, and perception. Readings are selected primarily from the writings of contemporary philosophers. **Credits:** 3.00

PHIL 44000 - Advanced Topics In Political Philosophy

Credit Hours: 3.00. An examination of central issues in political philosophy. The course will focus on topics such as theories of justice, authority, legitimacy; questions about foundational political values like freedom, equality, and community; and methodological issues concerning ideal versus non-ideal theory, contractualism versus contractarianism; political versus comprehensive liberalism; and nationalism versus cosmopolitanism.**Credits:** 3.00

PHIL 45501 - Studies In Cognitive Science

Credit Hours: 3.00. The subject matter will alternate between an in-depth study of a particular aspect of cognition (e.g., memory, belief, concepts) and a study of a specific explanatory framework in the philosophy of cognitive science (e.g., the computational theory of mind, predictive processing, gene-culture co-evolution).**Credits:** 3.00

PHIL 46500 - Philosophy Of Language

Credit Hours: 3.00. An examination of some of the central issues in the philosophy of language, such as meaning, reference, truth, propositions, and speech acts. **Credits:** 3.00

PHIL 49000 - Advanced Topics In Philosophy

Credit Hours: 1.00 to 3.00. An advanced study of a significant topic in philosophy. **Credits:** 1.00 to 3.00

PHIL 50100 - Studies In Greek Philosophy

Credit Hours: 3.00. The subject matter will alternate between the intensive study of some fairly specific topic in Greek philosophy (e.g., Plato's theory of knowledge, Aristotle's ethics, etc.) and a general study of either the philosophy of Plato or the philosophy of Aristotle. **Credits:** 3.00

PHIL 50200 - Studies In Medieval Philosophy

Credit Hours: 3.00. An intensive study of some central topics in the thought of major medieval philosophers. Subject matter will vary. Philosophers most often studied are Augustine, Thomas Aquinas, Duns Scotus, and Ockham. **Credits:** 3.00

PHIL 50300 - Studies In Early Modern Philosophy

Credit Hours: 3.00. A detailed study of either: 1) one or more central philosophical themes or 2) one or more major figures (typically, but not restricted to, Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, and/or Kant) in the early modern period. Offered in alternate years. **Credits:** 3.00

PHIL 50500 - Islamic And Jewish Philosophy And The Classical Tradition

Credit Hours: 3.00. A study of representative texts and issues in medieval Islamic and Jewish philosophy. Possible topics include the commensurability of philosophy and (revealed) law, the creation or eternity of the world, the nature of prophecy, the human good, the nature of God, and divine language. **Credits:** 3.00

PHIL 50600 - Advanced Philosophy Of Religion

Credit Hours: 3.00. A detailed critical investigation of some central problems in a philosophical approach to religion. Readings will be selected from leading representatives of traditional theism and various contemporary schools. The thought of the representative thinkers will be analyzed, discussed, and critically evaluated. The problems discussed will be selected from the existence of God, the problem of evil, freedom and determinism, the problem of immortality, and the nature of religious language. Variable content. **Credits:** 3.00

PHIL 50700 - Recent American Philosophy

Credit Hours: 3.00. A detailed examination of the central doctrines of one or more of the following six American philosophers: Peirce, James, Royce, Santayana, Dewey, and Whitehead. **Credits:** 3.00

PHIL 51000 - Phenomenology

Credit Hours: 3.00. A detailed, critical examination of some major issue(s) in phenomenology. Attention will be given to either the historical development or contemporary relevance of phenomenological philosophy. Readings will be drawn from the works of Husserl, Heidegger, Merleau-Ponty, and others. **Credits:** 3.00

PHIL 51400 - Twentieth-Century Analytical Philosophy I

Credit Hours: 3.00. A detailed study of the origins and development of contemporary philosophical analysis, and how it was pursued in movements such as logical atomism, logical positivism, ordinary language philosophy, and others. Readings will

cover a selection of the writings of Frege, Russell, Moore, Wittgenstein, Ayer, Ryle, Austin, and others. Need not be followed by PHIL 51500. **Credits:** 3.00

PHIL 51500 - Twentieth-Century Analytical Philosophy II

Credit Hours: 3.00. The development of philosophical analysis through logical positivism and the various forms of linguistic philosophy. An examination of some of the important writings of Moore, Ayer, Ryle, Wisdom, Austin, and the later Wittgenstein. Need not be preceded by PHIL 51400. **Credits:** 3.00

PHIL 52000 - Existentialism

Credit Hours: 3.00. A detailed exploration and examination of the existentialist movement in modern thought, including its historical roots, its philosophical formulations, and its influence and expression in and relation to art, literature, psychology, social criticism, and religion. Readings will be from at least some of the major existentialists: Kierkegaard, Nietzsche, Jaspers, Heidegger, and Sartre. In addition, texts from existentialist thinkers in other areas will be used. **Credits:** 3.00

PHIL 52400 - Contemporary Ethical Theory

Credit Hours: 3.00. A critical review of twentieth-century developments in ethical and value theory, with particular reference to the dispute between utilitarianism and deontological theories, and to the problem of justification. **Credits:** 3.00

PHIL 52500 - Studies In Metaphysics

Credit Hours: 3.00. An intensive and critical examination of one or more of the basic problems of ontology and cosmology, such as substance, existence, causality, change, time, space, teleology, freedom, and universals. Variable content. **Credits:** 3.00

PHIL 53000 - Deconstructionist And Postmodernist Philosophy

Credit Hours: 3.00. An examination of the main currents of deconstructionist and postmodernist thought in the latter part of the twentieth century. Texts to be studied will be selected from the writings of Heidegger, Derrida, Foucault, Kristeva, Irigaray, Deleuze, Guattari, Lyotard, Baudrillard, and Rorty. **Credits:** 3.00

PHIL 53200 - Studies In Theory Of Knowledge

Credit Hours: 3.00. An intensive examination of selected problems concerning the nature of human knowledge, its scope and limits, its relation to sense-perception and memory. Variable content. **Credits:** 3.00

PHIL 53500 - Studies In Philosophy Of Mind

Credit Hours: 3.00. An intensive study of select topics in the philosophy of mind such as the explanation of human behavior, knowledge of other minds, the relation between mind and body, and the nature of persons. Variable content. **Credits:** 3.00

PHIL 54000 - Studies In Social And Political Philosophy

Credit Hours: 3.00. A detailed study of one or more important concepts in social or political philosophy, such as natural rights, revolution, law, freedom, justice, or political obligation. Variable content. **Credits:** 3.00

PHIL 54500 - Recent Analytic Philosophy

Credit Hours: 3.00. A survey of contemporary developments in analytic philosophy, with emphasis on major issues relevant to the philosophy of language, epistemology, and metaphysics. The course will cover such figures as W.V.O. Quine and Saul Kripke, and such problems as analyticity and necessity, ontological relativity, and the definition of knowledge. **Credits:** 3.00

PHIL 55100 - Philosophy Of The Natural Sciences

Credit Hours: 3.00. A survey of issues and theories in contemporary philosophy of science. Variable content. **Credits:** 3.00

PHIL 55200 - Philosophy Of The Social Sciences

Credit Hours: 3.00. An exploration of the nature of the concepts in the social sciences, and a study of the ways in which they have been and are employed. **Credits:** 3.00

PHIL 55300 - Mathematical Logic

Credit Hours: 3.00. This class is an introduction to various logical foundations of mathematics as well as the basics of logical metatheory.**Credits:** 3.00

PHIL 55500 - Critical Theory

Credit Hours: 3.00. An analysis of either the historical development or the contemporary relevance of critical theory. Primary texts may be selected from the "old" Frankfurt School (Horkheimer, Adorno, Marcuse, Benjamin, Fromm) or from "new" critical theory (Habermas, Wellmer, Honneth, Benhabib, and others). **Credits:** 3.00

PHIL 56100 - Reading Philosophy: Skills And Strategies

Credit Hours: 3.00. Repeatable twice for a maximum of 9 credits. Academic philosophy demands both the ability to read large amounts of texts fluently, carefully, and closely. Furthermore, the abstract nature of philosophical discourse places a large cognitive demand upon readers. This course prepares non-native English speakers philosophy students for these intensive reading demands. The course has three major learning areas: the language skills that students need to read fluently (i.e., the efficient processing of language for general comprehension of meaning); reading strategies that students can use to improve comprehension and learning; and communication about readings, as the close reading of texts is essential to communicating one's ideas both orally and in writing. Students are also supported in their regular philosophy courses. This course is linked to one or more 500+ level philosophy seminars that students in this course are enrolled in. Reading materials, writing activities, and projects for the course are designed to complement tasks and projects required in the linked philosophy seminar. Permission of department required. **Credits:** 3.00

PHIL 56200 - Reading To Argue

Credit Hours: 3.00. Repeatable twice for a maximum of 9 credits. Closely and critically reading philosophical arguments is the first step to composing your own arguments in philosophy. In addition, developing these skills will help you to orally discuss philosophical ideas, both in classroom discussions as well as when giving presentations. This class aims to prepare students for these tasks by developing the skills of close and critical reading in philosophical discourse. All the while, students will continue improving their reading, writing, and speaking skills in the English language through specifically designed language learning components for non-native English speakers. Students are also supported in their regular philosophy courses. This course is linked to one or more 500+ level philosophy seminars that students in this course are enrolled in. Reading materials, writing activities, and projects for the course are designed to complement tasks and projects required in the linked philosophy seminar. Permission of department required. **Credits:** 3.00

PHIL 56300 - Directed Reading: Greek Philosophy Texts And Translations

Credit Hours: 1.00. In this course we shall focus on an important Greek philosophical text in fine detail. We will be working in the original language, not from an English translation. Participants will translate the text at hand and philosophical discussion will follow. Normally a Platonic dialogue or a work of Aristotle will be selected. **Credits:** 1.00

PHIL 56400 - Walk-Along Language Lab

Credit Hours: 1.00. This course is a co-requisite, language-focused class linked to a philosophy seminar. Walk-along courses provide opportunities to shift focus from content to language form and use. Activities and projects for the course are designed to complement tasks and projects required for the seminar. Thus, the purpose of the walk-along course is to help you develop linguistic abilities required to succeed in your coursework. In addition, because of the centrality of writing for philosophy, walk-along courses will predominantly focus on developing your writing skills. Permission of department required. **Credits:** 1.00

PHIL 56500 - Directed Reading: Political Philosophy

Credit Hours: 1.00. A reading group focused run by faculty members aimed at an in-depth exploration of some thread of research emerging in the contemporary literatures.**Credits:** 1.00

PHIL 56700 - Directed Readings In Philosophy Of Mind

Credit Hours: 1.00. A reading group focused run by faculty members aimed at an in-depth exploration of some thread of research emerging in the contemporary literatures.**Credits:** 1.00

PHIL 57100 - Writing To Learn

Credit Hours: 3.00. Repeatable twice for a maximum of 9 credits. Writing on a higher academic level can be especially challenging for non-native English-writers. Thus, this course aims to develop students' graduate-level skillsets in philosophical practices in an English language environment to help them gain confidence and become productive members of the philosophical community. Students will learn writing processes that will aid their ability to effectively compose in English, including developing a thesis statement, outlining, drafting, formatting, and editing. As all four chief skillsets in second-language proficiency development work in tandem and enhance each other, the course will rely on writing, reading, speaking, listening, and presenting work for learning and further developing these advanced language skills. Students are also supported in their regular philosophy courses. This course is linked to one or more 500+ level philosophy seminars that students in this course are enrolled in. Reading materials, writing activities, and projects for the course are designed to complement tasks and projects required in the linked philosophy seminar. Permission of department required. **Credits:** 3.00

PHIL 57200 - Writing To Argue

Credit Hours: 3.00. Repeatable twice for a maximum of 9 credits. Writing is a primary mode of communication in philosophy. This course aims to prepare students for the writing demands of philosophy by having students develop their ability to analyze, interpret, and critique philosophical arguments through written works and, in the process, construct their own philosophical arguments. Students will also learn writing processes that will aid their ability to effectively and clearly compose philosophical arguments, including outlining, drafting, and editing. Finally, the class will also pay attention to genre and rhetorical features of philosophical discourse, such as how philosophers enact criticism and write introductions to research papers. All the while, students will continue improving their writing and speaking skills in the English language through specifically designed language learning components for non-native English speakers. Students can use their course paper as a draft of a writing sample for PhD programs. Students are also supported in their regular philosophy courses. This course is linked to one or more 500+ level philosophy seminars that students in this course are enrolled in. Reading materials, writing activities, and projects for the course are designed to complement tasks and projects required in the linked philosophy seminar. **Credits:** 3.00

PHIL 60100 - Special Topics In Ancient Philosophy

Credit Hours: 3.00. A detailed critical analysis of special problems or texts in ancient philosophy. Prerequisite: PHIL 50100. **Credits:** 3.00

PHIL 61000 - Seminar In Recent Continental Philosophy

Credit Hours: 3.00. An intensive, critical examination of some of the current modes of thought in recent continental philosophy, including phenomenology, critical theory, hermeneutics, deconstruction, and postmodernism. Selected writings from representative figures. Topics and texts will vary from semester to semester. Prerequisite: PHIL 51000 or PHIL 52000. **Credits:** 3.00

PHIL 62400 - Seminar In Ethics

Credit Hours: 3.00. An intensive study of some persistent problems of ethics, metaethics, and theory of action such as: intrinsic goods, ends and means, the concepts of utility, justice, and duty; facts and values, justification, ethical relativism, free will and blame-worthiness, belief, and action. Emphasis will be on contemporary discussions. Variable subject matter. Prerequisite: PHIL 52400. **Credits:** 3.00

PHIL 66500 - Philosophy Of Language

Credit Hours: 3.00. An introduction to some of the main concepts and problems in the philosophy of language, such as meaning, reference, and private languages, through readings in the chief contributors to the field. Prerequisite: 6 credit hours in Philosophy. **Credits:** 3.00

PHIL 68000 - Seminar In Philosophy

Credit Hours: 3.00. An intensive course for graduate students majoring or minoring in philosophy. The content of the seminar will be determined in accordance with the needs and interests of the students. Prerequisite: 6 credit hours at the graduate level in Philosophy. **Credits:** 3.00

PHIL 68300 - Studies In Continental Rationalism

Credit Hours: 3.00. An intensive study of Descartes, Spinoza, or Leibniz, or of certain themes and ideas that played an important role in the development of their philosophies. Variable subject matter. Prerequisite: PHIL 30300. **Credits:** 3.00

PHIL 68400 - Studies In British Empiricism

Credit Hours: 3.00. An intensive study of Locke, Berkeley, or Hume, or of certain themes and ideas that played an important role in the development of their philosophies. Variable subject matter. Prerequisite: PHIL 30300. **Credits:** 3.00

PHIL 68500 - The Philosophy Of Kant

Credit Hours: 3.00. This course will be concerned with the critical philosophy as a whole. Primary emphasis, however, will be on the theories of knowledge and metaphysics as developed in the Critique of Pure Reason. Lesser attention will be paid to Kant's ethics and the principles of judgment as time permits. Prerequisite: PHIL 30300. **Credits:** 3.00

PHIL 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

PHIL 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Physical Education Skills

PES 11100 - Lifetime Fitness

Credit Hours: 2.00. Provides students opportunities to assess levels of physical fitness, develop an exercise plan, and experience activities designed to improve cardiovascular condition, strength, and flexibility. Presents current findings and provides laboratory experiences regarding techniques of initiation, maintaining, and evaluating personal fitness. For non-H&K majors only. **Credits:** 2.00

PES 11200 - Aquatic Movement Forms

Credit Hours: 1.00. Instruction and practice in aquatic movement forms. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: beginning swimming; intermediate swimming; advanced swimming; synchronized swimming. **Credits:** 1.00

PES 11400 - Exercise And Conditioning

Credit Hours: 1.00. Instruction and practice in various types of exercise programs. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: body conditioning; exercise and fitness; exercise to music; jogging and running; swimnastics; relaxation techniques; weight training; exercise and principles of weight control. **Credits:** 1.00

PES 11500 - Individual And Dual Movement Forms I

Credit Hours: 1.00. Instruction and practice in individual and dual movement forms conducted in an indoor setting. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: badminton; billiards; bowling; fencing; judo; karate; beginning gymnastics; intermediate gymnastics; squash; racquetball; yoga; kung fu; personal defense. Special fee required. **Credits:** 1.00

PES 11600 - Individualized And Dual Movement Forms II

Credit Hours: 1.00. Instruction and practice in individual and dual movement forms conducted mainly in outdoor settings. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: beginning golf; intermediate golf; advanced golf; bicycling; beginning tennis; intermediate tennis; advanced tennis; track and field. Special fee required. **Credits:** 1.00

PES 11700 - Team Movement Forms

Credit Hours: 1.00. Instruction and practice in team movement forms. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: basketball; field hockey; lacrosse; softball; soccer; power volleyball I; power volleyball II. **Credits:** 1.00

PES 11800 - Horseback Riding

Credit Hours: 1.00. Instruction and practice in hunter seat equitation. Class meets off campus, and students are expected to provide their own transportation. Following is a partial list of offerings: beginning; intermediate; advanced; combined training. **Credits:** 1.00

PES 12000 - Officiating

Credit Hours: 1.00. Theory and practice in officiating movement forms. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: basketball; field hockey; gymnastics; swimming; softball; volleyball; track and field. **Credits:** 1.00

PES 14600 - Advanced Golf Applications

Credit Hours: 1.00. Designed for the student who has either already taken PES 11600, or established themselves as a golfer by having a golf handicap, or by playing on a golf team in the past. Students learn methods to improve course management and strategies on the golf course. Students will receive intense levels of one on one instruction, utilizing video to analyze every student's swing. In addition to instruction, a league will be formed in which the students play 9 holes each week. **Credits:** 1.00

Physics

PHYS 2180N - General Physics

Credit Hours: 4.00. Mechanics, heat, and sound, primarily for technology students.**Credits:** 4.00

PHYS 2720N - Heat, Electricity And Optics

Credit Hours: 5.00. Heat, kinetic theory, elementary thermodynamics, heat transfer. Electrostatics, AC/DC circuits, electromagnetism, magnetic properties of matter; geometrical and physical optics.**Credits:** 5.00

PHYS 10400 - First Year Physics Seminar

Credit Hours: 1.00. A one-credit course for first-year Physics majors designed to develop concepts and skills in team building, time management, and professional development that complement the students' academic and research training. Talks from a broad range of speakers are included. **Credits:** 1.00

PHYS 17200 - Modern Mechanics

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I **Credits:** 4.00

PHYS 19000 - Special Assignments

Credit Hours: 1.00 to 4.00. Readings, discussions, written reports, or laboratory work selected for enrichment in special areas of physics. Permission of instructor required. **Credits:** 1.00 to 4.00

PHYS 19400 - Freshman Physics Orientation

Credit Hours: 1.00. Designed to provide incoming physics majors with the academic, survival, and computational skills to make a successful transition from high school to college. Discussion of opportunities within the Department including degree options, co-op program, undergraduate research, careers in physics, use of spreadsheet software, graphing packages, and drawing programs. Attendance and performance on assigned projects are the basis of the Pass/Not Pass requirement. **Credits:** 1.00

PHYS 21400 - The Nature Of Physics

Credit Hours: 3.00. Development of basic concepts and theories in physics; a terminal survey course designed for non-science majors. CTL:IPS 1750 Survey Of Physical Science **Credits:** 3.00

PHYS 21500 - Physics For Elementary Education

Credit Hours: 2.00. The curriculum draws heavily on Project 2061 Benchmarks and NRC Science Education Standards for content and nature of science materials and focuses on middle school learning goals (especially those with strands at elementary level). Each learning goal was expanded to finer-grained target ideas creating more steps to make concepts more understandable and explicit. Activities were designed to enable students to develop deep conceptual understanding of each target area and the structure and sequence were guided by research on student learning. In this class social interactions are used to clarify ideas and to encourage peer teaching. The students' understandings are based on prior knowledge. The class is based on a constructivist framework where new understandings are scaffolded from partial to incomplete understandings, and those are refined over time. **Credits:** 2.00

PHYS 21600 - Introduction To Science-Based Dating

Credit Hours: 3.00. An introduction to age determination techniques used in archaeology and the earth sciences. Various techniques currently in use, and their impact on our understanding of the past, will be described qualitatively. Topics covered include dating by use of Carbon 14, thermoluminescence, tree rings, and fission tracks, and surface exposure dating by use of cosmogenic nuclides. **Credits:** 3.00

PHYS 21700 - Introduction To Current Physics And Forefront Research Honors

Credit Hours: 1.00. This course introduces new physics majors to current physics and the research areas of the department. There are multiple sections with each section having eight or less students meeting with a professor. The course is part seminar, part interactive discussion and questions and answers and part laboratory visits to research areas. Topics cover a wide range including the evolution of the Universe, astrophysics, elementary particle physics, nuclear physics, geophysical dating, nanoscience and imaging. Topics evolve to match current physics and the interests of the students. **Credits:** 1.00

PHYS 21800 - General Physics

Credit Hours: 4.00. Mechanics, heat, and sound, primarily for technology students. **Credits:** 4.00

PHYS 21900 - General Physics II

Credit Hours: 4.00. Electricity, light, and modern physics, primarily for technology students. **Credits:** 4.00

PHYS 22000 - General Physics

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I**Credits:** 4.00

PHYS 22100 - General Physics

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II **Credits:** 4.00

PHYS 23000 - Physical Science For Elementary Education

Credit Hours: 3.00. The course is aimed at facilitating future elementary teachers to learn physical science that will prepare them to teach these concepts to future elementary students grades K-6. The course will be focused on learning physical science by doing science i.e. developing understanding by collaborative activities and discussion in the laboratory and lecture and communicating your ideas to others. The course will have one 50-minute lecture and two 110-minute laboratory meetings each week. The course content is consistent with the CAEP (Council for the Accreditation of Educator Preparation) K-6 Elementary Teacher Preparation Standards (Standard 2: Understanding and Applying Content and Curricular Knowledge for Teaching in *Physical Science* and *Engineering Design*) and the NGSS (Next Generation Science Standards) Disciplinary Core Ideas (DCIs) for the Physical Sciences (*Physical Sciences* PS1, PS2, PS3, and PS4) as well as many of the Science and Engineering Practices (SEPs). The course will be divided into four units: 1) Matter and Interactions, 2) Motion and Stability, 3) Energy, and 4) Waves and their applications. All of these units will be delivered through the paradigm of solving engineering design problems. Engineering design involves many different practices: problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions. **Credits:** 3.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics. **Credits:** 4.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study. **Credits:** 4.00

PHYS 23500 - Seminar In Careers In Physics

Credit Hours: 1.00. Course is designed to help physics majors evaluate different career options. Permission of instructor required. **Credits:** 1.00

PHYS 24100 - Electricity And Optics

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics. **Credits:** 3.00

PHYS 25200 - Electricity And Optics Laboratory

Credit Hours: 1.00. Selected experiments in electric fields, magnetic fields, steady-state and transient DC circuits, thermodynamics, and optics. **Credits:** 1.00

PHYS 27000 - Special Topics In Physics

Credit Hours: 1.00 to 5.00. Specialized topics in physics. Permission of department required. **Credits:** 1.00 to 5.00

PHYS 27200 - Electric And Magnetic Interactions

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout. **Credits:** 4.00

PHYS 29000 - Special Assignments

Credit Hours: 0.00 to 3.00. Readings, discussions, written reports, or laboratory work selected for enrichment in special areas of physics. Permission of instructor required. **Credits:** 0.00 to 3.00

PHYS 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in physics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHYS 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in physics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHYS 29500 - Outreach Assistance As Service Learning

Credit Hours: 1.00 to 3.00. Physics 29500 is a service learning class available to students willing and able to deliver physics lessons to K-12 classrooms and to other public events. Students are required to prepare and rehearse labs/activities so they are able to offer professional presentations. Students are also required to maintain a reflection journal, where they record notes about their experiences. Although efforts are made to work around students' schedules, students should have at least on open morning or afternoon each week (preferably 2-3) that allows them to visit an assigned site on a regular, consistent basis. One credit is equivalent to 32 hours of involvement in preparation and/or delivery of activities, and journaling time. Prerequisites: desire, commitment, dependability responsibility. **Credits:** 1.00 to 3.00

PHYS 30600 - Mathematical Methods Of Physics I

Credit Hours: 3.00. Discussion of wide-ranging physics problems from mechanics, E&M, thermal, and modern physics with emphasis on reviews and introductions of mathematical methods and techniques that are essential in such discussion. Relevant mathematical methods include one-and multi-variable calculus, complex numbers and functions of a complex variable, and vector calculus. Intended primarily for sophomore physics majors. **Credits:** 3.00

PHYS 30700 - Mathematical Methods Of Physics II

Credit Hours: 3.00. Discussion of wide-ranging physics problems from mechanics, E&M, thermal, and modern physics with emphasis on reviews and introductions of mathematical methods and techniques that are essential in such discussion. Relevant mathematical methods include vectors, matrices and normal modes as well as ordinary and partial differential equations. Intended primarily for sophomore physics majors. **Credits:** 3.00

PHYS 31000 - Intermediate Mechanics

Credit Hours: 4.00. For students familiar with calculus. Elements of vector algebra; statics of particles and rigid bodies; theory of couples; principle of virtual work; kinematics; dynamics of particles and rigid bodies; work, power, and energy. **Credits:** 4.00

PHYS 31700 - Special Nuclear Materials

Credit Hours: 3.00. This Great Issues course addresses the impact of science and technology of the special nuclear materials (so designated by Congress as they could be used to make nuclear weapons as well as to produce low-cost electric power) on society and the ethical issues that arise. The course is designed to be a dynamic, interactive learning experience, and topics covered range from the technical issues involved in searching, transporting, and safely utilizing these materials to social and economic impact of these activities, and to the ethical and philosophical issues presented by the flow of modernity. **Credits:** 3.00

PHYS 32200 - Intermediate Optics

Credit Hours: 3.00. Wave optics and properties of light, including reflection, refraction interference. Fraunhofer and Fresnel diffraction dispersion, polarization, double refraction, introduction to lasers and holography. **Credits:** 3.00

PHYS 32300 - Research With Big Data I

Credit Hours: 3.00. This course is to conduct physics research in a class-based environment. As such, we will perform authentic research, defined as work with the potential for results that are of interest to the scientific community. We will work with large data sets, such as those collected by survey telescopes, dark matter experiments, or detectors at the Large Hadron Collider. **Credits:** 3.00

PHYS 32400 - Research In Big Data II

Credit Hours: 3.00. This course is to conduct physics research in a class-based environment. As such, we will perform authentic research, defined as work with the potential for results that are of interest to the scientific community. We will work with large data sets, such as those collected by survey telescopes, dark matter experiments, or detectors at the Large Hadron Collider. **Credits:** 3.00

PHYS 33000 - Intermediate Electricity And Magnetism

Credit Hours: 3.00. Electrostatics; electric currents; magnetostatics; electromagnetic induction; Maxwell's equation; electromagnetic waves. **Credits:** 3.00

PHYS 34000 - Modern Physics Laboratory

Credit Hours: 1.00. Laboratory experiments to accompany PHYS 34400. **Credits:** 1.00

PHYS 34202 - Introduction To Quantum Science

Credit Hours: 3.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.**Credits:** 3.00

PHYS 34300 - Modern Physics Laboratory

Credit Hours: 1.00. Laboratory experiments to support PHYS 34200. **Credits:** 1.00

PHYS 34400 - Introduction To Quantum Science

Credit Hours: 4.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.**Credits:** 4.00

PHYS 34500 - Optics Laboratory I

Credit Hours: 1.00. Laboratory experiments in geometrical and physical optics and spectrometry. **Credits:** 1.00

PHYS 36000 - Quantum Mechanics

Credit Hours: 3.00. Historical development of quantum mechanics, wave packets, uncertainty principle, Schrodinger equation, operators, the hydrogen atom, electron spin, angular momentum, perturbation theory, and other selected topics. **Credits:** 3.00

PHYS 38199 - Professional Practice I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. **Credits:** 0.00

PHYS 38299 - Professional Practice II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. **Credits:** 0.00

PHYS 38399 - Professional Practice III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. **Credits:** 0.00

PHYS 39000 - Special Assignments

Credit Hours: 1.00 to 4.00. Readings, discussions, written reports, or laboratory work selected for enrichment in special areas of physics. Permission of instructor required. **Credits:** 1.00 to 4.00

PHYS 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in physics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHYS 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in physics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHYS 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in physics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PHYS 41000 - Physical Mechanics I Honors

Credit Hours: 3.00. Newtonian, Lagrangian, and Hamiltonian mechanics. Emphasis on point mass mechanics. Free, driven, and damped harmonic motion, central force problem. **Credits:** 3.00

PHYS 41100 - Physical Mechanics II Honors

Credit Hours: 2.00. Continuation of mechanics in PHYS 41000. Coupled systems, general theory of small oscillations, the vibrating string, perturbation theory. Rigid body motion. Motion of charged particles in electromagnetic fields. Elements of continuum mechanics. **Credits:** 2.00

PHYS 41600 - Thermal And Statistical Physics Honors

Credit Hours: 4.00. Thermal equilibrium; first, second, and third laws; entropy; probability and statistics; canonical ensembles; chemical potential and Grand Canonical Ensemble; classical and quantum ideal gases; chemical reactions; phase equilibria; critical phenomena. **Credits:** 4.00

PHYS 42200 - Waves And Oscillations

Credit Hours: 3.00. Physics of waves and oscillations including sound, elastic waves, and electromagnetic waves such as light. Topics range from the theory of simple harmonic oscillators, transverse modes of a continuous string, and physical optics including interference, Fresnel and Fraunhofer diffraction, and resolution, to diffraction of X-rays and electrons by crystals. Optionally includes topics such as nonlinear waves and surface waves. **Credits:** 3.00

PHYS 43000 - Electricity And Magnetism I Honors

Credit Hours: 3.00. Electrostatics, solutions of Poisson's equation in spherical and cylindrical coordinates, macroscopic and microscopic theory of dielectrics, electrostatic energy, conduction; magnetostatics, electromagnetic induction, and magnetic properties of matter. **Credits:** 3.00

PHYS 43100 - Electricity And Magnetism II Honors

Credit Hours: 2.00. A continuation of PHYS 43000. Magnetic energy; applications of Maxwell's equations to a.c. circuits, filters, transmission lines, waveguides, and antennae; Lienard-Wiechert potentials. **Credits:** 2.00

PHYS 45000 - Intermediate Laboratory

Credit Hours: 2.00. Laboratory primarily intended for junior year physics majors. Assorted experiments in optics and other fields using lasers, photodiodes, computers, and other modern technology. **Credits:** 2.00

PHYS 46000 - Quantum Mechanics I Honors

Credit Hours: 3.00. Limits of classical physics, wave packets. Bohr model, atomic systems, Schrodinger equation, eigen-functions, one-dimensional potentials, wave mechanics general structure, multiparticle systems, Pauli principle, operator methods. **Credits:** 3.00

PHYS 46100 - Quantum Mechanics II Honors

Credit Hours: 3.00. Angular momenta, radial equation, operators, matrices, spin, time-independent perturbation theory, electron-electromagnetic field interaction, hydrogen atom, structure of atoms, molecules, radiation; selected topics in radiative transitions, collision theory, solids, nuclei, elementary particles and their symmetries. **Credits:** 3.00

PHYS 47000 - Special Topics In Physics

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required. **Credits:** 1.00 to 5.00

PHYS 49000 - Special Assignments

Credit Hours: 1.00 to 3.00. Reading, laboratory work, or research in special areas of physics. Intended for upperclass students. Permission of instructor required. **Credits:** 1.00 to 3.00

PHYS 51000 - Physical Mechanics

Credit Hours: 3.00. Mechanics of particles, rigid bodies, and vibrating systems. **Credits:** 3.00

PHYS 51500 - Thermal And Statistical Physics

Credit Hours: 3.00. Equilibrium states, the concept of heat, and the laws of thermodynamics; the existence and properties of the entropy; different thermodynamic potentials and their uses; phase diagrams; introduction to statistical mechanics and its relation to thermodynamics; treatment of ideal gases.**Credits:** 3.00

PHYS 52100 - Survey Of Classical Physics

Credit Hours: 3.00. This course is intended for first-year graduate students in the Department of Physics. It provides an intensive problem solving environment encompassing a broad survey of major topics in classical mechanics, electromagnetism, and thermal physics. The primary objective is to prepare beginning graduate students for continuing on to higher level of work in the physics graduate program. **Credits:** 3.00

PHYS 52600 - Physics Of Quantum Computing And Quantum Information

Credit Hours: 3.00. An introduction to the physics of quantum information science. Starting with the concepts of quantum superposition, it defines and describes qubits (quantum bits) and their manipulation by quantum logic gates. The topics of quantum entanglement and the EPR paradox are introduced, and their importance for quantum teleportation, communication, and quantum cryptography are covered. Quantum computing is described in terms of quantum circuits of logic gates, and also in terms of quantum algorithms, such as Deutche's algorithm, the quantum Fourier transform, Shor's prime factoring algorithm, and Grover's search algorithm. The final topic is quantum decoherence and the limits it places on practical implementations of quantum computing. **Credits:** 3.00

PHYS 53000 - Electricity And Magnetism

Credit Hours: 3.00. Electrostatic problems; theory of dielectrics; theory of electric conduction; electromagnetic effects due to steady and changing currents; magnetic properties of matter; Maxwell's equations; electromagnetic radiation. **Credits:** 3.00

PHYS 53600 - Electronic Techniques For Research

Credit Hours: 4.00. A summary of principles of modern electronics currently used in research Coursework will include broad coverage of the field and selected topics in electronics instrumentation. **Credits:** 4.00

PHYS 54500 - Solid-State Physics

Credit Hours: 3.00. Crystal structure; lattice vibrations and electronic band structure of crystals; electrical, optical, and thermal properties of solids; transport and other nonequilibrium phenomena in uniform and nonuniform materials. **Credits:** 3.00

PHYS 55000 - Introduction To Quantum Mechanics

Credit Hours: 3.00. Brief historical survey of the development of quantum mechanics; wave-packets, uncertainty principle, wave functions, operators, Schrodinger equation with application to one-dimensional problems, the hydrogen atom, electron spin, selected topics in perturbation theory, scattering theory, and compounding of angular momenta. Not available for students with credit in PHYS 36000 or PHYS 46000. **Credits:** 3.00

PHYS 55600 - Introductory Nuclear Physics

Credit Hours: 3.00. Theory of relativity, brief survey of systematics of nuclei and elementary particles, structure of stable nuclei, radioactivity, interaction of nuclear radiation with matter, nuclear reactions, particle accelerators, nuclear instruments, fission, nuclear reactors. **Credits:** 3.00

PHYS 56000 - Stellar Evolution

Credit Hours: 3.00. (ASTR 56000) Observational basis of astrophysics; formation of galaxies and stars; evolution of stars; white dwarfs, supernovae and neutron stars, pulsars, quasars, black holes; cosmic rays, their origin and acceleration; radio astronomy, radio galaxies; the H-21 cm line and the 3mK blackbody radiation; gravitational radiation; X-ray and g-ray astronomy; cosmology; space physics, magnetosphere, and solar wind. **Credits:** 3.00

PHYS 56100 - Galaxies And Large Scale Structure

Credit Hours: 3.00. (ASTR 56100) Covers basic observed properties and models of galactic structure, dynamics of stars, physics of interstellar medium, formation of galaxies, properties of clusters of galaxies, and dark matter. **Credits:** 3.00

PHYS 56200 - Introduction To High Energy Astrophysics

Credit Hours: 3.00. (ASTR 56200) An overview of important physical processes in a variety of astronomical settings and of the experimental techniques employed in the field of high energy astrophysics. Covered in more detail are individual systems that include black holes, neutron stars, white dwarfs, supernova remnants, active galactic nuclei, clusters of galaxies, gamma-ray bursts, and cosmic rays, with special emphasis on several research frontiers. **Credits:** 3.00

PHYS 56300 - Astroparticle Physics

Credit Hours: 3.00. (ASTR 56300) An overview of an emerging research frontier in modern physics that lies at the interface of particle physics and astrophysics. Emphasis is on topics that are particularly relevant to both fields, including cosmology, cosmic ray physics, very-high-energy gamma ray astrophysics, neutrino astrophysics, and gravitational wave physics. **Credits:** 3.00

PHYS 56400 - Introduction To Elements Particle Physics

Credit Hours: 3.00. This course brings students up to the current status of research in elementary particle physics. The focus of the course is the construction of the Standard Model with emphasis on the electroweak theory. The seminal experiments that confirmed the predictions of the Standard Model is presented. The solar neutrino problem, the search for nonzero neutrino masses, and the efforts to construct a theory which unifies all interactions, including gravity, is discussed. **Credits:** 3.00

PHYS 56500 - Introduction To Elementary Particle Physics II

Credit Hours: 3.00. This course follows PHYS 56400, and it continues to present current topics in elementary particle physics. It focuses on the Higgs mechanism, and it explores physics beyond the standard model. Special attention is devoted to supersymmetry and searches for new particles. **Credits:** 3.00

PHYS 56600 - Introduction To Quantum Chromodynamics

Credit Hours: 3.00. An introduction to the fundamental theory of strong interactions, Quantum Chromo-Dynamics (QCD), which describes the interactions of quarks and gluons. The main focus is on a reasonably self-contained approach. All the necessary ingredients will be introduced within the course. Knowledge of graduate-level E&M and Quantum Mechanics is helpful but not essential. **Credits:** 3.00

PHYS 56700 - Observational Techniques In Astronomy

Credit Hours: 3.00. (ASTR 56700) Fundamental concepts in observational astronomy, including coordinate and time systems, telescopes and detectors, radiation and optics, and methods of statistical data analysis. **Credits:** 3.00

PHYS 57000 - Selected Topics In Physics

Credit Hours: 3.00. Specialized topics in physics selected from time to time. Permission of instructor required. **Credits:** 3.00

PHYS 58000 - Computational Physics

Credit Hours: 3.00. Introduction to computationally based problem solving in physics, emphasis on understanding and applying various numerical algorithms to different types of physics problems. Topics will include chaos in mechanical systems, stochastic systems including percolation and fractal structures, molecular dynamics and the properties of simple fluids, Monte Carlo methods and phase transitions, and time dependent as well as time dependent problems in quantum mechanics. **Credits:** 3.00

PHYS 59000 - Reading And Research

Credit Hours: 1.00 to 3.00. (Calumet, Fort Wayne) 1.00 to 6.00 (West Lafayette, IUPUI). Reading and research in Physics. Permission of instructor required. **Credits:** 1.00 to 3.00

PHYS 59300 - Independent Research

Credit Hours: 1.00 to 4.00. Research in some area of modern physics (spectroscopy, nuclear physics, solid state physics, elementary particle physics, biophysics, geophysics, etc.) with student receiving individualized supervision and guidance from

staff member. This course may be used to satisfy the independent project or 500-level elective requirement of the undergraduate majors in Honors and Applied Physics Honors Programs. Permission of instructor required. **Credits:** 1.00 to 4.00

PHYS 59500 - Instructional Design In Physical Science

Credit Hours: 1.00 to 3.00. This course builds on collaborative interactions among current Purdue Physics or Education students, K-12 science educators, Physics and Purdue College of Science faculty, and Physics Outreach. The goal for this course is to provide opportunities and mentorship for independent work that could include the design, piloting, and assessment of instructional materials, relevant to learning and teaching topics and concepts related to the physical sciences. With a "service learning" orientation, students enrolled in this course should expect to learn and build upon the fundamental principles related to the design and implementation of instructional materials in classroom or informal learning environments, and assessment of learning. Materials developed could contribute to the repertoire of practicing teachers and/or Physics Outreach. **Credits:** 1.00 to 3.00

PHYS 60000 - Methods Of Theoretical Physics I

Credit Hours: 3.00. This course is designed to provide first-year physics graduate students with the mathematical background for subsequent studies of advanced mechanics, electrodynamics, and quantum theory. Topics treated include functions of complex variable, ordinary and partial differential equations, eigenvalue problems and orthogonal functions. Green's functions, matrix theory, and tensor analysis in three and four dimensions. **Credits:** 3.00

PHYS 60100 - Methods Of Theoretical Physics II

Credit Hours: 3.00. A continuation of PHYS 60000. Prerequisite: PHYS 60000. **Credits:** 3.00

PHYS 60300 - Methods Of Theoretical Physics IIIB

Credit Hours: 3.00. Basic theory of groups and group representations. Finite groups and abelian infinite groups, with applications to atomic physics. Elements of Lie group theory. The three-dimensional rotation group. The group SU(3). Application to particle physics. Prerequisite: PHYS 60100. **Credits:** 3.00

PHYS 60500 - Pedagogical Methods For Physics Graduate Students

Credit Hours: 2.00. This course prepares physics graduate students for classroom and laboratory teaching assignments. Through 100 minutes per week of lectures and hands-on recitations, it provides an intensive survey of basic pedagogical methods, both theoretically and in practice. Students will learn and practice teaching techniques via various forms and microteaching, reading, and class discussion. A broad range of results from physics education research will be studied in detail. Additional topics include grading and assessment, responsible conduct in teaching related to issues such as gender, culture and ethnicity, students with disabilities, and ethics in academia, generally, including ethical conduct of research. **Credits:** 2.00

PHYS 61000 - Advanced Theoretical Mechanics

Credit Hours: 3.00. Lagrangian and Hamiltonian mechanics; variational principles; canonical transformations; Hamilton-Jacobi theory; theory of small oscillations; Lagrangian formulation for continuous systems and fields. Prerequisite: PHYS 51000. **Credits:** 3.00

PHYS 61700 - Statistical Mechanics

Credit Hours: 3.00. Classical and quantum statistical mechanics. Prerequisite: PHYS 66000. **Credits:** 3.00

PHYS 63000 - Advanced Theory Of Electricity And Magnetism

Credit Hours: 3.00. The experimental origins of Maxwell's equations. Electrostatics and magnetostatics; solution of boundary value problems. Quasi-static currents. Electromagnetic energy and momentum and the Maxwell stress tensor. Foundations of optics. Radiation from antennas, multi-pole expansion; waveguides. Prerequisite: PHYS 53000, PHYS 60000. **Credits:** 3.00

PHYS 63100 - Advanced Theory Of Electricity And Magnetism

Credit Hours: 3.00. Covariant formulation of electrodynamics; Lienard-Wiechert potentials; radiation from accelerated particles; Cerenkov radiation; dynamics of relativistic particles; radiation damping; introduction to magneto-hydrodynamics. Prerequisite: PHYS 63000. **Credits:** 3.00

PHYS 64500 - Electron Theory Of Solids I

Credit Hours: 3.00. Electronic energy bands in crystalline solids; crystal symmetry and Brillouin zones, approximate methods of calculation, electrons and holes under applied fields. Lattice dynamics and thermal conductivity. Electron-lattice interactions. Transport phenomena in metals and semi-conductors. Prerequisite: PHYS 54500, PHYS 60100, PHYS 66100. Permission of instructor required. **Credits:** 3.00

PHYS 64600 - Electron Theory Of Solids II

Credit Hours: 3.00. Crystal imperfections, impurities and lattice defects. Magnetic properties: diamagnetic effects, paramagnetism, ferromagnetism, resonance phenomena. Ferroelectricity. Optical properties of metals and semiconductors; interband and intraband transitions, excitons, effects of crystal imperfections. Prerequisite: PHYS 64500. Permission of instructor required. **Credits:** 3.00

PHYS 65800 - Theoretical Techniques Of Elementary Particle Physics I

Credit Hours: 3.00. Theory and phenomenology of the standard model of elementary particle interactions. Electro-weak model of Glashow, Salam, and Weinberg: spontaneous symmetry breaking, mass generation, Cabibbo-Kobayashi-Maskawa mixing in charged weak current, path integral quantization, R3 gauge Feynman fules, renormalization. Parton model. Neutral current phenomenology. Comparison to high energy high precision electron-positron annihilation and deep inelastic scattering experiments: weak mixing angle, heavy top quark constraints. Prerequisite: PHYS 66200, PHYS 66300. Permission of instructor required. **Credits:** 3.00

PHYS 65900 - Theoretical Techniques Of Elementary Particle Physics II

Credit Hours: 3.00. Theory and phenomenology of the standard model of elementary particle interactions. Quantum Chromodynamics (QCD) theory of strong interactions: asymptotic freedom, perturbative QCD applied to high energy electron-positron annihilation and deep inelastic phenomena using operator product expansion, renormalization group, extended parton model, and Altarelli-Parisi equation. SU(3)xSU(3) current algebra and effective Lagrangians, chiral perturbation theory and chiral anomalies. Weak decay of heavy quarks: Cabibbo-Kobayashi-Maskawa mixing matrix, CP violation. Neutrino physics. Electroweak symmetry breaking and Higgs physics. Other topics of current research interests in and beyond the standard model. Prerequisite: PHYS 65800. Permission of instructor required. **Credits:** 3.00

PHYS 66000 - Quantum Mechanics I

Credit Hours: 3.00. Origins of the quantum theory, the uncertainty and complementarity principles. The Schrodinger equation and its solutions for simple physical systems. Mathematical formulation of the quantum theory. Applications: simple harmonic oscillator, theory of angular momentum, the hydrogen atom. Time-independent and time-dependent perturbation theory. The

Pauli exclusion principle. Spin of the electron. Elementary theory of scattering. Prerequisite: PHYS 53000, PHYS 55000, PHYS 60000, PHYS 61000. Corequisite: PHYS 60100. **Credits:** 3.00

PHYS 66100 - Quantum Mechanics II

Credit Hours: 3.00. Symmetry and conservation laws. The Klein-Gordon and Dirac equations. Interaction of radiation with matter. Applications of quantum mechanics to atomic structure. Scattering theory. Prerequisite: PHYS 60100, PHYS 63000, PHYS 66000. **Credits:** 3.00

PHYS 66200 - Quantum Field Theory I

Credit Hours: 3.00. Introduction to relativistic quantum field theory. Representations of the Lorentz and Poincare groups. Noether's theorem: symmetries and conservation laws. Canonical quantization of free Klein-Gordon, Dirac, Maxwell fields. Interacting field theory: Lehmann-Kallen representations. LSZ reduction formula. Schwinger action principle. Quantum Electrodynamics (QED): Gell-Mann Low expansion, Wick's theorem, Feynman rules for Green functions and S-matrix elements. Scattering processes in QED: cross sections in low orders of perturbation theory. Prerequisite: PHYS 66100. Permission of instructor required. **Credits:** 3.00

PHYS 66300 - Quantum Field Theory II

Credit Hours: 3.00. Concepts and techniques of relativistic quantum field theory. Quantum Electrodynamics: radiative corrections, renormalization program, infrared divergences, external field problem. Feynman path integral quantization. Global symmetries and Ward identities. Quantum effective action: effective potential, loop expansion. Non-Abelian gauge theories: quantization via Faddeev-Popov prescription, Feynman rules, BRS invariance. Quantum Chromodynamics. Callen-Symanzik equation and renormalization group. Prerequisite: PHYS 66200. Permission of instructor required. **Credits:** 3.00

PHYS 66400 - Quantum Theory Of Many-Body Systems

Credit Hours: 3.00. Practical introduction to modern quantum field theory techniques as applied to the study of many-body phenomena occurring in solid state systems. Standard perturbative-theoretic results based on zero- and finite-temperature Green's functions, with application to specific physical situations. Introduction to nonperturbative methods. PHYS 64500 and PHYS 64600 are recommended. Prerequisites: PHYS 61700, PHYS 66000, PHYS 66100. Permission of instructor required. **Credits:** 3.00

PHYS 67000 - Selected Topics In Physics

Credit Hours: 1.00 to 3.00. Specialized topics in physics, varied from time to time. Permission of instructor required. **Credits:** 1.00 to 3.00

PHYS 67200 - Advanced Physics Laboratory

Credit Hours: 3.00. Provides modern laboratory experience for graduate students in physics. Emphasis is on student initiative in accomplishing difficult but meaningful results. The course is intended to fill the gap between undergraduate-level laboratory, with detailed description of each experiment, and real-life experimental work. Students will share in the responsibility of determining how to conduct many of these experiments, learn how to use original equipment manuals, redesign experiments, and redefine goals depending on the progress. Prerequisite: graduate level E & M and QM courses, undergraduate level laboratory course. Permission of instructor required. **Credits:** 3.00

PHYS 67500 - General Relativity

Credit Hours: 3.00. Theoretical and experimental general relativity. The equivalence principle and its experimental basis. The Einstein field equations; classical tests of general relativity; gravitational radiation, cosmological considerations; topics to be chosen. Prerequisite: PHYS 60000, PHYS 61000, PHYS 63000. **Credits:** 3.00

PHYS 69600 - Introduction To Physics Research

Credit Hours: 1.00. Seminar designed to acquaint first-year physics graduate students with the research programs of the department. **Credits:** 1.00

PHYS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.**Credits:** 1.00 to 18.00

PHYS 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Political Science

POL 1010N - Introduction To American Politics

Credit Hours: 3.00. Introduction to the nature of government and the dynamics of American politics. Origin and nature of the American federal system and its present political party base.**Credits:** 3.00

POL 10100 - American Government And Politics

Credit Hours: 3.00. A study of the nature of democratic government, the U.S. Constitution, federalism, civil rights, political dynamics, the presidency, Congress, and the judiciary. CTL:ISH 1002 American Government **Credits:** 3.00

POL 12000 - Introduction To Public Policy And Public Administration

Credit Hours: 3.00. An introduction to the fields of public policy and public administration. Processes of policy formation and administration are examined. Different approaches to evaluating and improving public policies are discussed. **Credits:** 3.00

POL 13000 - Introduction To International Relations

Credit Hours: 3.00. An analysis of the fundamentals of international law, organization, and politics, particularly as relevant to contemporary international relations. CTL:ISH 1003 Introduction To World Politics **Credits:** 3.00

POL 14100 - Governments Of The World

Credit Hours: 3.00. An introduction to the politics and government in selected foreign countries. The course presents the tools and background needed to understand contemporary events in the world beyond the United States. Readings and discussions pay special attention to democratization and development. **Credits:** 3.00

POL 15000 - Introduction To Political Thought

Credit Hours: 3.00. Introduction to basic concepts in political philosophy, such as conflict and community, justice and the good society, the origins of democracy, and the intersections of class, race, gender, and sexuality. Selected classical and contemporary political thinks covered. **Credits:** 3.00

POL 20000 - Introduction To The Study Of Political Science

Credit Hours: 3.00. Introduction to basic concepts and methods of political science. Basic concepts including, among others, power, justice, authority, ideology, and democracy, and a variety of quantitative and qualitative methods of analysis will be explored. **Credits:** 3.00

POL 20400 - Spies And Lies: Studies In Intelligence And National Security

Credit Hours: 3.00. This course examines the role that the collection, analysis, and dissemination of intelligence plays in US foreign policy and national security. We will unpack the missions and methods of the US Intelligence Community. Who does what? What are the different challenges for those engaged in the different aspects of intelligence? Why is the intelligence community configured like it is? We will also spend time with more contemporary topics in intelligence. What role does intelligence play meeting future national security and foreign policy challenges? What is the role of intelligence in modern warfare, including cyber-warfare? What role does intelligence play in a liberal democracy? What should intelligence oversight look like? **Credits:** 3.00

POL 22200 - Women, Politics, And Public Policy

Credit Hours: 3.00. An introduction to women's participation in politics, with an emphasis on America. Structural and attitudinal conditions limiting women's political roles and contemporary efforts to change women's status in society through politics. **Credits:** 3.00

POL 22300 - Introduction To Environmental Policy

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined. **Credits:** 3.00

POL 22800 - Data Science And Public Policy

Credit Hours: 3.00. This course is an introduction to the politics and policies of data science and "big data." Students will (1) gain an understanding of how public policy is made, including the role of data in policymaking; (2) learn about whether and what policies govern the use of data in various applications (such as autonomous vehicles, ownership of health care data, etc.); and (3) explore the ethical, legal, and social implications of data science and big data. **Credits:** 3.00

POL 22900 - Emerging Problems In Political Science

Credit Hours: 1.00 to 3.00. This course focuses on problems and issues that are beginning to be recognized as worthy of public discussion or policy action, or that may be new areas of expertise and interest for our faculty members. We use it to introduce new topics and approaches, including experimental pedagogies, courses that involve travel, and the like. The content of the course varies from one offering to the next. Possible topics are Bioethics and Politics, Food Policy, and Bicycle Politics. **Credits:** 1.00 to 3.00

POL 23000 - Introduction To Peace Science

Credit Hours: 3.00. This course provides an introduction to the field of peace science, the systematic study of the causes and consequences of conflict between and within states, including conflict resolution and strategies for creating sustainable peace. **Credits:** 3.00

POL 23100 - Introduction To United States Foreign Policy

Credit Hours: 3.00. Designed to introduce students to the major themes and issues in contemporary U.S. foreign policy. Lectures, discussion, and readings will examine such areas as U.S. relationships with the major powers, the Third World, and international organizations. **Credits:** 3.00

POL 23200 - Contemporary Crises In International Relations

Credit Hours: 3.00. The focus of this course will be on major world crises, such as in the Middle East and Southern Africa, and ways in which these crises may be analyzed. **Credits:** 3.00

POL 23400 - The Politics Of Terrorism

Credit Hours: 3.00. This class examines the phenomenon of terrorism and counterterrorism. Why do terrorists do what they do? What can governments do to stop them? We will begin with issues of definition, and theoretical and empirical approaches to the study of terrorism. We will then delve into the history and evolution of the tactic (taking time to study some of the more notorious organizations). At this point in time it is critical that we look at both domestic-particularly in the United States-and transnational forms of terrorism. The study of terrorism is rife with puzzles that we will explore. Why resort to violence in the first place? How and why do groups evolve over time? How and why do some groups end, and others continue for years? Why are some individuals/groups not classified as terrorists? What are the consequences of terrorism? We will also look closely at counterterrorism policy. What are the most effective ways to respond to terrorism? What doesn't work? How do policies differ between states? To what extent is there global cooperation on counterterrorism? We will conclude the class by taking a critical look at US counterterrorism policy and the massive counterterrorism apparatus that has developed in the aftermath of the attacks of September 11, 2001. Should counterterrorism dominate US national security priorities to the degree it does? **Credits:** 3.00

POL 23500 - International Relations Among Rich And Poor Nations

Credit Hours: 3.00. Introduction to the major themes in the contemporary international relations among rich and poor nations. Examines such areas as North-South relations, interdependence, international organizations, and global development. **Credits:** 3.00

POL 23700 - Modern Weapons And International Relations

Credit Hours: 3.00. This course introduces the student to the roles that modern weapons systems play in contemporary international relations. **Credits:** 3.00

POL 30000 - Introduction To Political Analysis

Credit Hours: 3.00. An introduction to the study of politics, its basic concepts and major areas of concern; also review of important research techniques, including methods of data collection and analysis. **Credits:** 3.00

POL 31400 - The President And Policy Process

Credit Hours: 3.00. A study of presidential leadership as the embodiment of social forces and as reflective of the personality of the incumbent; the president as national leader reflecting national myths and ideologies; the growth of the presidency; issues and forces affecting the continuity of presidential leadership; the degree of institutionalization of the presidency. **Credits:** 3.00

POL 32300 - Comparative Environmental Policy

Credit Hours: 3.00. Comparative study of environmental policy development and processes in industrialized democracies, former and current communist states, and developing nations. **Credits:** 3.00

POL 32600 - Black Political Participation In America

Credit Hours: 3.00. An examination of African American political participation in the United States. Analyzes political culture and socialization, with a focus on the interaction between African Americans and actors, institutions, processes, and policies of the American system of politics and governance. **Credits:** 3.00

POL 32700 - Global Green Politics

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations. **Credits:** 3.00

POL 32930 - Topics In Global Politics And International Relations

Credit Hours: 3.00. Variable topic course that examines conflict, competition, and cooperation in global politics and international relations. Students examine the historical background of the topic and apply current political science theories to understand the institutions, participants, and outcomes. Course may be repeated for a maximum of 9 credit hours.**Credits:** 3.00

POL 33500 - China And The Challenges Of Globalization

Credit Hours: 3.00. Globalization is a very popular topic, resulting in a lot of loose and poorly thought-through talk and writing around the subject. The view taken in this course is that to understand current processes of globalization we need to examine it in less broad and amorphous ways by focusing on its specific manifestations. Thus, this course focuses on how China has managed the challenges of globalization. China is a particularly useful case study because it failed the challenges of globalization in the late 19th and early 20th centuries. For an ancient civilization such as China, this failure had tremendous impact on its national pride. The Chinese refer to this historical juncture as the "century of shame." Towards the end of the 20th century and the onset of the 21st, China faced again the challenges of globalization and has arisen to the tasks in a spectacular fashion, transforming a largely rural and agriculture economy into the world's second largest economic power. This amazing transformation is leading some to proclaim that the 21st century will belong to China! **Credits:** 3.00

POL 34500 - West European Democracies In The Post-Industrial Era

Credit Hours: 3.00. An introduction to the political institutions and processes in West European democracies. The course focuses on the ability of Western democracy to survive the transition to the post-industrial era. **Credits:** 3.00

POL 34700 - Introduction To Latin American Politics

Credit Hours: 3.00. Major aspects of Latin American politics and development. Questions such as the impact of the military on political development, the dynamics of Latin American industrialization, and Latin America's changing international role will be explored. **Credits:** 3.00

POL 34800 - East Asian Politics

Credit Hours: 3.00. The course will examine East Asian politics and society, with special emphasis on Japan. **Credits:** 3.00

POL 35000 - Foundations Of Western Political Theory: From The Renaissance To Marx

Credit Hours: 3.00. A survey of modern political thought from Machiavelli through Marx. Major writers studied include Machiavelli, Hobbes, Locke, Rousseau, the Utilitarians, and Marx. **Credits:** 3.00

POL 35100 - Foundations Of Western Political Theory: From Plato To The Reformation

Credit Hours: 3.00. A survey of ancient and medieval political theory in the West. Major writers include Plato, Aristotle, St. Augustine, and St. Thomas Aquinas. **Credits:** 3.00

POL 35200 - Selected Topics In Political Theory

Credit Hours: 3.00. This course is intended to provide a more narrowly focused analysis of selected problems and topics that are briefly presented in POL 35000 and POL 35100, giving special emphasis to their conceptual frameworks and their significance in the history of political philosophy. This course also will allow students to see the practical role of the political theorist by stressing the methods and criteria used in the selection, formulation, and solution of problems in political philosophy. Course topics will be different each semester. **Credits:** 3.00

POL 35300 - Current Political Ideologies

Credit Hours: 3.00. Liberalism, conservatism, socialism, fascism, communism, and other political ideologies. **Credits:** 3.00

POL 36000 - Women And The Law

Credit Hours: 3.00. An introductory survey of women's legal status in America. Topics include constitutional law, marriage and divorce, reproductive rights, employment discrimination, and crimes of violence. **Credits:** 3.00

POL 37200 - Indiana Government And Politics

Credit Hours: 3.00. An examination of the political and governmental organization of the state of Indiana. Includes the political and historical development of Indiana state government and comparison of policies and institutions with those of other states. **Credits:** 3.00

POL 37300 - Campaigns And Elections

Credit Hours: 3.00. This course analyzes the role of political parties, issues, candidates, media, funding, and electoral and campaign strategies in presidential, congressional, and state campaigns. Contemporary election examples will be utilized. **Credits:** 3.00

POL 40200 - Topics In Political Research Methods

Credit Hours: 3.00. This variable topics course in political methodology acquaints students with the scientific process of political research by applying different research designs and methodological approaches to analyzing political data. Students must complete POL 30000 before taking this course. This variable topic course may be repeated for up to 9 credit hours.**Credits:** 3.00

POL 40300 - Field Experience In Political Science

Credit Hours: 1.00 to 9.00. Students are able to earn credit for internships in federal, state, and local government offices as well as with political parties, campaign organizations, nonprofit organizations, legislative bodies, and interest groups. Credit and course requirements to be arranged with the instructor. Permission of instructor required. **Credits:** 1.00 to 9.00

POL 40301 - Local Partner Internship In Political Science

Credit Hours: 3.00. This course in Political Science offers experiential learning opportunities to qualified junior and senior political science majors. These competitive internships allow students to explore a political science-related field, apply classroom knowledge and skills, and gain valuable work experience for academic credit. Employers recognize that the most qualified graduates come into the workforce with a combination of strong academic preparation and practical on-the-job experience. Political science internship partners include city and county governments, non-profit agencies, political parties, and other community organizations. Public policies affect every aspect of community life, and our internship partners enable students to experience first-hand the impact of government actions on local organizations' work and the constituencies they serve. POL 403 internships provide the opportunity to develop and refine skills that are important to academic success, career readiness, and personal growth. All internships for credit must be approved by the Department of Political Science through the application process. Students can only take either POL 40301, 40302, or 40303 once for a letter grade and 3 credit hours. Students have the option to take up to 6 additional credit hours as Pass/Not Pass by enrolling in POL 40300. Internships can be paid or unpaid. Some internships require a background check. Permission of department required. **Credits:** 3.00

POL 40302 - Self-Initiated Internship In Political Science

Credit Hours: 3.00. This course in Political Science offers the opportunity to complete a self-initiated internship for academic credit. Employers recognize that the most qualified college graduates come into the workforce with a combination of strong academic preparation and practical on-the-job experience. Internships strengthen resumes and law and graduate school applications. All internships for credit must be approved by the Department of Political Science through the application process. Students can only take either POL 40301, 40302, or 40303 once for a letter grade and 3 credit hours. Students have the option to take up to 6 additional credit hours as Pass/Not Pass by enrolling in POL 40300. Internships can be on-site or virtual, or a hybrid. Internships can be paid or unpaid. Some internships require a background check. Permission of department required. **Credits:** 3.00

POL 41000 - Political Parties And Politics

Credit Hours: 3.00. An analysis of the nature and functioning of U.S. political parties in terms of social and economic forces that shape our political system. Interactions among political parties, pressure groups, and formal government structures are emphasized throughout. Special attention is devoted to political leadership, nominating processes, campaign management, voting behavior, and other important aspects of American politics. **Credits:** 3.00

POL 41100 - Congress: Structure And Functioning

Credit Hours: 3.00. A study of how Congress actually operates. Formal and informal power structures within both chambers and roles of the individual members of Congress are analyzed. Attention is directed to latent, as well as manifest, functions of legislative, investigative, and other major activities of Congress. The problem of bringing expertise to bear on the legislative process is considered throughout. **Credits:** 3.00

POL 41300 - Analysis Of Political Attitudes And Behavior

Credit Hours: 3.00. A broad-based survey of human political attitudes and behavior and the forces that underlie them, utilizing contemporary research tools to examine and evaluate theoretical claims. Examines how people respond to information about politics, communicate about politics, form attitudes and preferences about politics, and their political interactions with other individuals, groups, and nations. Introduces survey research methodology, its uses, and its challenges in measuring political attitudes and behavior. **Credits:** 3.00

POL 41500 - US Politics And The Media

Credit Hours: 3.00. This course examines the roles and influences of the mass media on American politics generally and with particular emphasis on election campaigns and the evolving political culture of the United States. **Credits:** 3.00

POL 42300 - International Environmental Policy

Credit Hours: 3.00. Environmental policy development in the international arena, with attention to international law, international organizations, and transboundary environmental problems. **Credits:** 3.00

POL 42500 - Environmental Law And Politics

Credit Hours: 3.00. This course provides an introduction to statutory and case law relating to environmental policy. Regulatory schemes in environmental policy and the legal framework for environmental regulation are presented. Market alternatives to various regulatory mechanisms will also be treated. **Credits:** 3.00

POL 42800 - The Politics Of Regulation

Credit Hours: 3.00. Politics and policies of federal and state regulatory agencies. Explanations of regulatory agency behavior, arguments for and against government regulation, and alternatives to government regulation. **Credits:** 3.00

POL 42900 - Contemporary Political Problems

Credit Hours: 3.00. Contemporary political problems in the United States affecting the interpretation of democracy, human rights and welfare, social pressures, and intergovernmental relations. **Credits:** 3.00

POL 43000 - Selected Problems In International Relations

Credit Hours: 3.00. An in-depth analysis of selected problems in international relations. **Credits:** 3.00

POL 43200 - Selected Problems In World Order

Credit Hours: 3.00. An in-depth analysis of how selected problems in international relations are treated within international organizations. **Credits:** 3.00

POL 43300 - International Organization

Credit Hours: 3.00. A study of the structure and functions of the United Nations and associated agencies, with an emphasis on the role of this system in contemporary international relations. **Credits:** 3.00

POL 43500 - International Law

Credit Hours: 3.00. A study of international legal theories, principles, and practices, with an emphasis on the role and utility of law in contemporary international relations. **Credits:** 3.00

POL 43801 - International Human Rights

Credit Hours: 3.00. This course exposes students to the politics of international human rights through reading, lectures, film, discussion, and student research. Topics include the concept of human rights, international law related to the protection of human

rights, empirical research on political and economic causes of human rights violations in individual countries, and research on prevention efforts and remedies for past violations. This political science course is also part of Purdue's Human Rights Minor program. **Credits:** 3.00

POL 43900 - United States Foreign Policy Making

Credit Hours: 3.00. An analysis of the decision-making process in United States foreign policy. **Credits:** 3.00

POL 45000 - Game Theory And Strategy In Political Science

Credit Hours: 3.00. This course introduces students to the basics of game theory and its applications in political science. The course will cover foundational concepts in game theory, including strategic rationality, best responses, normal and strategic form games, backward induction, and games of incomplete information. Students will complete problem sets to demonstrate mastery of these subjects. We will also apply these basic game theoretic tools to important problems in political science to better understand the dynamics of bargaining, coercion, reassurance, cooperation, and other key concepts. **Credits:** 3.00

POL 46000 - Judicial Politics

Credit Hours: 3.00. A survey of judicial processes as they operate in America. Both trial courts and appellate courts will be examined in light of the procedures with which they operate. The external social, economic, and political pressures surrounding courts and the impact courts have on society will be considered. **Credits:** 3.00

POL 46100 - Constitutional Law I

Credit Hours: 3.00. A survey of selected areas of constitutional law, considering the political and social influences as well as the doctrinal forces that have produced these policies and interpretations. **Credits:** 3.00

POL 46200 - Constitutional Law II

Credit Hours: 3.00. An examination of the development of individual rights and civil liberties through constitutional law and interpretation of the Bill of Rights and Civil War Amendments. Both doctrinal and political pressures will be discussed to illustrate the evolution of these rights. **Credits:** 3.00

POL 46400 - Legal Writing, Ethics, And Professionalism

Credit Hours: 3.00. This class is designed to provide students with the practical skills and knowledge they will need to embark on an internship or career in the legal environment. The class will focus on legal ethics, writing and research skills.**Credits:** 3.00

POL 49100 - Political Science Senior Seminar

Credit Hours: 3.00. This is a variable-title seminar focusing on contemporary issues in political science at the senior level. It is part of the "capstone" experience for political science majors. **Credits:** 3.00

POL 49300 - Interdisciplinary Undergraduate Seminar

Credit Hours: 1.00 to 3.00. An undergraduate seminar devoted to an interdisciplinary examination of social, economic, political, and intellectual movements, using the faculty resources of the participating departments. Subject matter will vary. Each offering of the seminar will be approved by a committee of department heads from the sponsoring departments. Permission of instructor required. **Credits:** 1.00 to 3.00

POL 49500 - Undergraduate Research Experience

Credit Hours: 1.00 to 3.00. Students are able to earn credit by working on a research project with a faculty member. Students will become familiar with all phases of the research process. Credit and course requirements are arranged with the instructor. Permission of instructor required. **Credits:** 1.00 to 3.00

POL 49505 - Undergraduate Research Experience Capstone

Credit Hours: 3.00. Students are able to earn credit by working on a research project with a faculty member to count as capstone credit on plan of study. Students will become familiar with all phases of the research process. Credit and course requirements are arranged with the instructor. Permission of department required. **Credits:** 3.00

POL 50100 - Political Science: Methodology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to political science data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis. Permission of instructor required. **Credits:** 3.00

POL 50601 - Data, Machine Learning, And Artificial Intelligence For The Public Sector

Credit Hours: 3.00. This course examines how machine learning algorithms and tools related to artificial intelligence can be used to advance our understanding in public sector domains. Students will develop a comprehensive understanding of how to apply AI and various machine learning algorithms, focusing on practical applications and hands-on experience. It provides an overview public sector data sources and addresses ethical and privacy issues associated with this type of data.**Credits:** 3.00

POL 51700 - Applied Political Economy

Credit Hours: 3.00. An examination of the core concepts of political economy, the interaction of political institutions, markets, and economic choices, including the nature of capital and labor in the political process. Understand how political institutions and policies influence the organization of economic activity, and the role of the state and policy in shaping the domestic and global political economy since World War II. **Credits:** 3.00

POL 52000 - Special Topics In Public Policy

Credit Hours: 3.00. This is a course focused on a specific current public policy topic, chosen for its contemporary political relevance, which varies from semester to semester. In general, each topic will be examined in terms of its historical roots, past policy initiatives, present policy proposals, and its enduring political and social challenges. **Credits:** 3.00

POL 52101 - Applied Public Policy: Institutions, Processes, Practices

Credit Hours: 3.00. Applied introduction to the institutions, processes, and practices in the field of public policy. Students will examine the role of government institutions, standards organizations, corporate actors, and non-governmental organizations, policymakers, regulators, and the public in the policy process. The course will draw examples from one or more applied policy areas such as economic development, emerging technology policy, sustainability policy, energy, foreign policy, or social policy.**Credits:** 3.00

POL 52300 - Environmental Politics And Public Policy

Credit Hours: 3.00. The political problems of natural resource use and environmental quality. Theoretical foundations for environmental policy and its evaluation, the political context of environmental policy, principles of administering environmental policies, and the significance of international law and institutions for environmental policies. **Credits:** 3.00

POL 52400 - Public Policy And The Family

Credit Hours: 3.00. An intensive examination of the interrelationships between public policy making and the structure and quality of life of families. The primary focus is the United States, but consideration is given to family policies in other capitalist nations. **Credits:** 3.00

POL 52601 - Technology, AI, And Ethics In Public Policy And Public Administration

Credit Hours: 3.00. Examines how emerging technologies like artificial intelligence (AI), automated decision systems, and digital platforms are being adopted in the public sector. It explores the benefits as well as ethical risks and challenges associated with implementing these technologies in areas like healthcare, education, child welfare, and criminal justice. Students will analyze governance strategies, policies, and administrative procedures to promote responsible technology use in government.**Credits:** 3.00

POL 52701 - Local To Global Governance Of Data, AI, And Emerging Technology

Credit Hours: 3.00. This course introduces students to the institutions and governing systems at the subnational, national, supranational, and international levels that regulate emerging technology, AI, and data. Focusing on laws, standards, and best practices, students will examine comparative case studies of regulation of big tech in differing governing environments. Students will explore how social, economic, and political factors shape differences in technology regulation across the globe.**Credits:** 3.00

POL 52901 - Applied Policy And Program Evaluation

Credit Hours: 3.00. This course introduces students to the logic of designing and implementing program evaluations to assess implemented policies and programs. The course examines research designs for different evaluation goals, the application of evaluation strategies, and strategies for reporting results to specialist and non-specialist audiences.**Credits:** 3.00

POL 53100 - Terrorism And WMD Threat Assessment

Credit Hours: 3.00. "Terrorism and WMD Threat Assessment" is designed to teach students how to analyze and assess the threats terrorist organizations present in the area of nuclear and radiological security and weapons of mass destruction more generally. The goal of this class is to enable students to identify, prioritize, and assess terrorist threats and propose appropriate, proportional, and cost-effective counter-measures. **Credits:** 3.00

POL 53200 - Nuclear Strategy And Proliferation

Credit Hours: 3.00. "Nuclear Strategy and Proliferation" is designed to teach students about 1) the conceptual elements and operational requirements of nuclear deterrence and 2) the historical dynamics of nuclear proliferation and nonproliferation. The goal of the class is to enable students to 1) evaluate the deterrent effects of different nuclear weapons and various configurations of nuclear arsenals and 2) analyze the technological, political and legal incentives and obstacles for acquiring nuclear weapons. **Credits:** 3.00

POL 54101 - Applied Foundations Of Global Development

Credit Hours: 3.00. Describes the foundational concepts of economic development and the historical emergence of global inequality, provides explanations of global inequality, and explores Western efforts to mitigate it through foreign aid. Applies concepts to analyze current trends in development and emerging practices in foreign aid.**Credits:** 3.00

POL 59000 - Directed Reading In Political Science

Credit Hours: 1.00 to 3.00. A reading course directed by the instructor in whose field of specialization the content of the reading falls. Approval of each reading project must be secured from the department. Permission of instructor required. **Credits:** 1.00 to 3.00

POL 60000 - Political Science: Discipline And Profession

Credit Hours: 3.00. An exploration of the scope of political science and of its development as a profession, with a focus on what American political scientists do as disciplinary professionals. Analysis of major approaches to the study of politics and of current developments. Prerequisite: 6 credit hours in Political Science. **Credits:** 3.00

POL 60500 - Research Design And Methods

Credit Hours: 3.00. Selection of research problems involving political phenomena; formulation of concepts and hypotheses; research design; data collection techniques; data processing, analysis, and interpretation, with attention to uses of high-speTed facilities. Students will design a research project and, as appropriate, carry out the project in the laboratory or in the field. Prerequisite: POL 50100. **Credits:** 3.00

POL 60600 - Advanced Quantitative Techniques In Political Science

Credit Hours: 3.00. This course deals with advanced quantitative techniques useful in political science research. These include multiple correlation and regression, causal modeling, dynamic (time series) analysis, dimensional analysis (Coombsean scaling, Shepard-Kruskal scaling, and factor analysis), and cross-level inference techniques. Prerequisite: POL 50100, POL 60500. **Credits:** 3.00

POL 60800 - Qualitative Methods In Political Science

Credit Hours: 3.00. This course is an introduction to the use of qualitative methods in political science. In addition to a detailed consideration of several leading qualitative approaches to political research, the course will also consider the distinctive issues of research design for qualitative research as well as the relationship of qualitative and quantitative methods. Prerequisite: POL 50100 Political Science Methodology or equivalent or consent of instructor. **Credits:** 3.00

POL 60900 - Advanced Applied Research Design

Credit Hours: 3.00. The main goal of this seminar is to guide graduate students when preparing their Ph.D. dissertation proposals. The seminar aims to do two things. The first is to provide an overview of the crucial research design tools and research planning considerations that can help students plan and carry out better dissertation projects. The second is to offer a structured forum where students can present and receive feedback on their dissertation proposals. With permission from the Director of Graduate Studies, this course may be repeated and used to support the development of a grant proposal or research publication. Pre-requisite: POL 60000 with a grade B or better.**Credits:** 3.00

POL 61000 - Proseminar In American Political Systems, Processes, And Behavior

Credit Hours: 3.00. An introduction to American political systems, processes, and behavior as a field of graduate study with an emphasis on literature. **Credits:** 3.00

POL 61100 - Research Seminar In American Government And Politics

Credit Hours: 3.00. Topics vary. Permission of department required. **Credits:** 3.00

POL 61500 - Proseminar In Electoral Behavior And Political Socialization

Credit Hours: 3.00. A reading and lecture course acquainting the student with the general literature in the field. Traces the descriptive aspects, causes, and consequences of electoral behavior and political socialization in the American polity and selected European countries. Emphasis on the processes of citizen integration into the larger political system. Both historical and comparative approaches to the material will be used. **Credits:** 3.00

POL 61600 - Research Seminar In Political Behavior

Credit Hours: 3.00. Extends the work of POL 51600 (Group Politics) to the empirical study of primary groups, cliques, social groups, voluntary associations, experimental and occupational groups (insofar as they have political impacts) and of political clubs and associations, paraparties, and inchoate political movements and parties. Training will be given in the use of phenomenological observation, interaction analysis, content analysis, personality inventories, and other instruments that reveal the social structure and dynamics of groups. Students will conduct field studies of politically-relevant groups, or will conduct or participate in conducting laboratory experiments. **Credits:** 3.00

POL 62000 - Proseminar In Public Policy And Processes

Credit Hours: 3.00. An introduction to public policy and processes as a field of graduate study with an emphasis on the literature. **Credits:** 3.00

POL 62200 - Research Seminar In Public Policy And Public Administration

Credit Hours: 3.00. Investigation in depth of a substantive aspect of public policy such as energy policy or social policy, or of a theoretical topic, for example, policy formulation, enactment, implementation, impact, or evaluation. Permission of instructor required. **Credits:** 3.00

POL 62300 - Research Seminar In Environmental Policy

Credit Hours: 3.00. Investigation in depth of a substantive aspect of environmental policy or a theoretical approach to environmental policy, with emphasis on student research. Permission of instructor required. **Credits:** 3.00

POL 63000 - Proseminar In International Relations

Credit Hours: 3.00. An introduction to international relations as a field of graduate study with an emphasis on literature. **Credits:** 3.00

POL 63100 - Research Seminar In International Relations

Credit Hours: 3.00. Topics vary. Permission of department required. **Credits:** 3.00

POL 63200 - Research Seminar In Peace And World Order Studies

Credit Hours: 3.00. A study of some of the forces which endanger the planet, the related political problems, and prospective strategies to overcome these problems. Particular attention will be directed to problems such as war, population pressure,

resource shortages, and environmental deterioration. Students will examine a variety of ideas that might contribute to the elimination or control of these problems, and their overarching objective will be to conceptualize a "world order model" in conformity with basic canons of scientific inquiry. Permission of department required. **Credits:** 3.00

POL 64000 - Proseminar In Comparative Political Systems

Credit Hours: 3.00. An introduction to comparative political systems, processes, and behavior as a field of graduate study with an emphasis on literature. **Credits:** 3.00

POL 64100 - Research Seminar On Comparative Politics

Credit Hours: 3.00. Topics vary. Prerequisite: POL 64000. **Credits:** 3.00

POL 65000 - Proseminar In Political Theory

Credit Hours: 3.00. An introduction to political theory as a field of graduate study with special emphasis on the literature of great political thinkers. Prerequisite: Master's student standing. **Credits:** 3.00

POL 65100 - Research Seminar In Political Theory

Credit Hours: 3.00. Investigation in depth into a selected area of political thought. Intensive study and close analysis of the selected topic, school, or theoretic system. Development of historic and philosophic methods applicable to the study of political thought. Prerequisite: POL 35000, POL 35100. **Credits:** 3.00

POL 66200 - Proseminar In Political Economy

Credit Hours: 3.00. An introduction to political economy as a field of graduate study with an emphasis on literature. **Credits:** 3.00

POL 68500 - Professional Development Practicum

Credit Hours: 0.00 or 1.00. This course examines the ethics, norms, and expectations of the profession of political science and public policy for those engaged in doctoral level study. the course explores topics of professional development to support progress in the degree and building a successful career. Permission of department required.**Credits:** 0.00 or 1.00

POL 68600 - Career And Placement Practicum

Credit Hours: 2.00. Provide practical guidance and workshops to help students plan job searches, prepare application materials, and develop skills in public presentations such as video interviews, in-person interviews, job talks, teaching talks, and other public talks. Permission of department required.**Credits:** 2.00

POL 69300 - Interdisciplinary Seminar

Credit Hours: 3.00. Topics vary - Interdisciplinary Seminar. Permission of instructor required. **Credits:** 3.00

POL 69500 - Directed Reading And Research Topics

Credit Hours: 1.00 to 3.00. Individual topics involving research by the student other than on a thesis topic. Admission and hours require the consent of instructor who will supervise the research. Approval of each topic must be secured from the department. Permission of instructor required. **Credits:** 1.00 to 3.00

POL 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. **Credits:** 1.00 to 18.00

POL 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Polytechnic

PTEC 10601 - ePortfolio I

Credit Hours: 1.50. Part one of creation and curating of an electronic portfolio demonstrating foundational levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. Permission of department required. **Credits:** 1.50

PTEC 10602 - ePortfolio II

Credit Hours: 1.50. Part two of creation and curating of an electronic portfolio demonstrating foundational levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. Permission of department required. **Credits:** 1.50

PTEC 10800 - Guided Exploration

Credit Hours: 4.00 to 8.00. The first in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learners experience, goals, and learning needs. Permission of department required. **Credits:** 4.00 to 8.00

PTEC 10801 - Guided Exploration I

Credit Hours: 3.00. Part one of the first in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. Permission of department required. **Credits:** 3.00

PTEC 10802 - Guided Exploration II

Credit Hours: 3.00. Part two of the first in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. **Credits:** 3.00

PTEC 20601 - ePortfolio III

Credit Hours: 1.50. Part one of creation and curating of an electronic portfolio demonstrating foundational to developing levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. **Credits:** 1.50

PTEC 20602 - ePortfolio IV

Credit Hours: 1.50. Part two of creation and curating of an electronic portfolio demonstrating foundational to developing levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. **Credits:** 1.50

PTEC 20700 - ePortfolio I

Credit Hours: 0.50. Creation and curating of an electronic portfolio demonstrating developing and emerging levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. Permission of department required. **Credits:** 0.50

PTEC 20800 - Formation And Immersion

Credit Hours: 4.00 to 8.00. The second in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. Permission of department required. **Credits:** 4.00 to 8.00

PTEC 20801 - Formation And Immersion I

Credit Hours: 3.00. Part one of the second in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. **Credits:** 3.00

PTEC 20802 - Formation And Immersion II

Credit Hours: 3.00. Part two of the second in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. **Credits:** 3.00

PTEC 30601 - ePortfolio V

Credit Hours: 1.50. Part one of students curating an electronic portfolio demonstrating emerging to proficient levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. **Credits:** 1.50

PTEC 30602 - ePortfolio VI

Credit Hours: 1.50. Part two of students curating an electronic portfolio demonstrating emerging to proficient levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. **Credits:** 1.50

PTEC 30800 - Deep Immersion

Credit Hours: 4.00 to 8.00. The third in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. Permission of department required. **Credits:** 4.00 to 8.00

PTEC 30801 - Deep Immersion I

Credit Hours: 3.00. Part one of the third in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. **Credits:** 3.00

PTEC 30802 - Deep Immersion II

Credit Hours: 3.00. Part two of the third in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will change in scale and scope based on the learner's experience, goals, and learning needs. **Credits:** 3.00

PTEC 40601 - ePortfolio VII

Credit Hours: 1.50. Part one of students curating an electronic portfolio demonstrating proficient levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. **Credits:** 1.50

PTEC 40602 - ePortfolio VIII

Credit Hours: 1.50. Part two of students curating an electronic portfolio demonstrating proficient levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. **Credits:** 1.50

PTEC 40700 - ePortfolio II

Credit Hours: 0.50. Students curate an electronic portfolio demonstrating emerging to proficient levels of competence across broad competencies. Students will meet individually and in small groups with faculty mentors to review and critique progress. Permission of department required. **Credits:** 0.50

PTEC 40800 - Capstone And Planning

Credit Hours: 4.00 to 8.00. The final in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Capstone projects emphasize design thinking;

collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will demonstrate proficiency based on the learner's experience, goals, and learning needs. Permission of department required. **Credits:** 4.00 to 8.00

PTEC 40801 - Capstone And Planning I

Credit Hours: 3.00. Part one of the final in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Capstone projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will competency proficiency based on the learner's experience, goals, and learning needs. **Credits:** 3.00

PTEC 40802 - Capstone And Planning II

Credit Hours: 3.00. Part two of the final in a series of transdisciplinary, real-world, project-based work and conversations exploring the intersections of humanities and technology, social and natural sciences. Capstone projects emphasize design thinking; collaboration; communication; hands-on prototyping; testing; assessing. Learners will engage in individual and team project work and conversations that will competency proficiency based on the learner's experience, goals, and learning needs. **Credits:** 3.00

Portuguese

PTGS 10100 - Portuguese Level I

Credit Hours: 3.00. A beginning course in Portuguese. **Credits:** 3.00

PTGS 10200 - Portuguese Level II

Credit Hours: 3.00. Continuation of PTGS 10100. **Credits:** 3.00

PTGS 10500 - Accelerated Portuguese

Credit Hours: 3.00. Accelerated acquisition of basic Portuguese for speakers of Spanish or another romance language. Capitalizes on students' backgrounds in related languages to build skills in listening comprehension, reading comprehension, basic writing, and conversation. Knowledge of a romance language. **Credits:** 3.00

PTGS 20100 - Portuguese Level III

Credit Hours: 3.00. An intermediate Portuguese course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. **Credits:** 3.00

PTGS 20200 - Portuguese Level IV

Credit Hours: 3.00. Continuation of PTGS 20100. **Credits:** 3.00

PTGS 23500 - Luso-Brazilian Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected masterpieces of Brazilian and Portuguese literature, with an emphasis on transatlantic cultural traditions and creative responses to contemporary social challenges. Knowledge of Portuguese not required. **Credits:** 3.00

PTGS 30100 - Portuguese Level V

Credit Hours: 3.00. Continued development of Portuguese speaking, listening, reading and writing abilities, using materials dealing primarily with everyday life and civilization in the Portuguese-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Portuguese. **Credits:** 3.00

PTGS 30200 - Portuguese Level VI

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Portuguese on the basis of materials dealing primarily with the ideas and events that have shaped present-day Portuguese-speaking countries. Conducted primarily in Portuguese. **Credits:** 3.00

PTGS 33000 - Brazilian, Portuguese, And African Cinema

Credit Hours: 3.00. Screening and analysis of selected films from Portuguese-speaking countries: Brazil, Portugal, Angola, Mozambique, Cape Verde, Guinea-Bissau, S. Tome and Principe, with discussion of their cultural contexts (colonial/post-colonial societies; cross-Atlantic relationships; racial diversity; minority/majority issues). Knowledge of Portuguese not required. **Credits:** 3.00

PTGS 39800 - Topics In Portuguese

Credit Hours: 3.00. Advanced studies of particular aspects of Portuguese (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussion, and papers in Portuguese. **Credits:** 3.00

PTGS 39900 - Special Study Abroad Credit In Portuguese

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Portuguese earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

PTGS 49800 - Advanced Topics In Portuguese

Credit Hours: 3.00. Advanced studies of particular aspects of Portuguese (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussion, and papers in Portuguese. **Credits:** 3.00

PTGS 55100 - Brazilian Poetry

Credit Hours: 3.00. A survey of the major currents and most important writers of Brazilian poetry. Readings include Gregorio de Matos, Goncalves Dias, Castro Alves, Mario de Andrade, Manuel Bandeira, and Cecilia Meireles. Permission of instructor required. **Credits:** 3.00

PTGS 55500 - Brazilian Drama

Credit Hours: 3.00. A survey of the primary movements and most important works of Brazilian theatre. Readings include plays by Nelson Rodrigues, Dias Gomes, Ariano Suassuna, and Jorge Andrade. Permission of instructor required. **Credits:** 3.00

PTGS 55700 - Brazilian Fiction

Credit Hours: 3.00. A survey of the development and major texts of Brazilian fiction. Readings include novels or short stories by Jose de Alencar, Machado de Assis, Graciliano Ramos, and Clarice Lispector, among others. Permission of instructor required. **Credits:** 3.00

PTGS 59000 - Directed Reading In Portuguese

Credit Hours: 1.00 to 4.00. Directed readings in Portuguese. Permission of instructor required. **Credits:** 1.00 to 4.00

PTGS 59400 - Special Topics In Luso-Brazilian Literature

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

Psychological Sciences

PSY 1200N - Introduction To Psychology

Credit Hours: 3.00. This foundational course introduces students to psychology as a systematic and scientific way to think about the biological and social aspects of behavior and mental processes. Topics include Research Methods, Behavioral Neuroscience, Sensation/Perception, Learning, Memory, Cognition and Language, Motivation/Emotion, Personality, Social, Stress and Health, Psychological Disorders and Treatment, and Life-Span Development.**Credits:** 3.00

PSY 10000 - Introduction To The Science And Fields Of Psychology

Credit Hours: 1.00. An introduction to psychology as a science and as a profession. **Credits:** 1.00

PSY 12000 - Elementary Psychology

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology **Credits:** 3.00

PSY 12300 - Beyond Mental Health: The Science Of Well-Being

Credit Hours: 3.00. This course seeks to provide a scientific and psychological account of well-being - its definition, determinants, and outcomes. We address questions such as: How do we go about measuring happiness? Can happiness enhance longevity and health? What interventions can promote happiness? What types of societies are happier? This course will engage and challenge students not only intellectually, but also experientially as we work on enhancing happiness in our lives and in the lives of others around us. **Credits:** 3.00

PSY 20000 - Introduction To Cognitive Psychology

Credit Hours: 3.00. A survey of psychology as the science of mental life, covering theories and research in perception, reading, attention, consciousness, imagery, memory and its improvement, problem solving, creativity, decision-making, and artificial intelligence. **Credits:** 3.00

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.**Credits:** 3.00

PSY 20300 - Introduction To Research Methods In Psychology

Credit Hours: 3.00. The use of scientific method in psychology. Lecture covers principles of collecting and interpreting data, using examples of research from many areas of psychology. In the laboratory portion, the student uses many different techniques from various areas of psychology. Should be taken at Purdue University, West Lafayette.**Credits:** 3.00

PSY 22200 - Introduction To Behavioral Neuroscience

Credit Hours: 3.00. An introduction to how the nervous system controls behavior. Topics include evolution and comparative psychobiology, the neuroscience of sensation and perception, the neuroscience of motivation, neuropsychology, and cognitive neuroscience. **Credits:** 3.00

PSY 23099 - Cooperative Education Seminar I

Credit Hours: 1.00 or 2.00. (ENGR 23099) This seminar course is optional for Co-Op students when they are on-campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Prerequisite: Student must have completed at least one Co-Op work term. May be repeated once after the second work term. Can be taken for two credits subsequent to completing two back-to-back work terms. Instructor permission required. **Credits:** 1.00 or 2.00

PSY 23500 - Child Psychology

Credit Hours: 3.00. Not open to students with credit in PSY 36000. General principles of children's behavior and development, from conception to adolescence, including sensory and motor development, and basic psychological processes such as learning, motivation, and socialization. **Credits:** 3.00

PSY 23900 - The Psychology Of Women

Credit Hours: 3.00. The purpose of the course is to provide an overview of the psychology of women. Topics include stereotyping, women and achievement, aggression and power, the psychological concept of androgyny, and attitudes toward feminism. **Credits:** 3.00

PSY 24000 - Introduction To Social Psychology

Credit Hours: 3.00. Not open to students with credit in SOC 34000. A broad survey in current knowledge about human social behavior. Topics covered include aggression, attraction and love, social influence, attitudes and attitude change, nonverbal communication, leadership, prejudice and discrimination, and application of social psychology to law, medicine, and other fields. CTL:ISH 1024 Social Psychology **Credits:** 3.00

PSY 24400 - Introduction To Human Sexuality

Credit Hours: 3.00. This course will provide a broad survey of research on human sexuality from a psychosocial perspective. Topics covered include research methods, gender identity, sexual orientation, reproductive anatomy, typical and atypical sexual behavior, and sexual difficulties and their treatments. CTL:ISH 1022 Human Sexuality **Credits:** 3.00

PSY 27200 - Introduction To Industrial-Organizational Psychology

Credit Hours: 3.00. Survey of psychological principles and research methods relevant to organizations and industry. Topics covered include research methodology, individual differences, personnel selection, performance measurement, training, motivation, job satisfaction, emotions, work stress, and leadership. **Credits:** 3.00

PSY 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PSY 29200 - Topics In Psychology

Credit Hours: 1.00 to 3.00. Various introductory-level topics in Psychology that may be offered on a semester-by-semester basis by Purdue Psychological Sciences faculty or by non-Purdue faculty/instructors as part of a student's study abroad program. **Credits:** 1.00 to 3.00

PSY 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PSY 30500 - Understanding And Analyzing Psychological Data

Credit Hours: 3.00. This course is an upper level undergraduate statistics course for students in psychology and related fields who are interested in conducting or understanding quantitative research. Students should have successfully completed an introductory statistics course (e.g., PSY 20100). The course will begin with an accelerated review of fundamentals concepts (e.g., data visualization, central limit theorem, probability) and then will focus primarily on regression. **Credits:** 3.00

PSY 30600 - Understanding And Analyzing Experiments

Credit Hours: 3.00. This course helps to prepare students for independent research. Students (1) develop an understanding of group-based statistical analyses, such as t-tests and ANOVA; (2) formulate and present a research idea based on statistical tools covered in class; and (3) get experience using statistical software to analyze data.**Credits:** 3.00

PSY 31000 - Sensory And Perceptual Processes

Credit Hours: 3.00. A survey of the study of psychological experiences caused by stimulation to the senses. Topics include theory and research in seeing, hearing, touching, smelling, and tasting as experienced by humans and other animals. **Credits:** 3.00

PSY 31100 - Human Memory

Credit Hours: 3.00. A survey of theories and research about how humans remember information and why they often forget. Topics include research on amnesia, forgetting, and sensory memory systems as well as on practical issues such as how to improve memory. **Credits:** 3.00

PSY 31400 - Introduction To Learning

Credit Hours: 3.00. This course attempts to make clear the theoretical and practical implications of learning principles and findings. Various theories of learning are examined and the implications of these theories, and the learning approach generally, for a variety of practical problems are emphasized. **Credits:** 3.00

PSY 32400 - Introduction Cognitive Neuroscience

Credit Hours: 3.00. (SLHS 30100) Introduction to the neural bases of complex human mental abilities. Emphasis on integrating research from cognitive science, brain-scanning techniques, and the lesion technique. Topics include perception, attention, memory, language, motor control, planning/decision-making and consciousness. **Credits:** 3.00

PSY 32700 - Psychology Of Helping

Credit Hours: 3.00. This course is designed to provide a broad but rigorous, undergraduate-level comprehensive overview of contemporary scientific research on prosocial processes from the perspective of personality and social psychology. **Credits:** 3.00

PSY 33099 - Cooperative Education Seminar II

Credit Hours: 1.00 or 2.00. This seminar course is optional for Co-Op students when they are on-campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Permission of instructor required. **Credits:** 1.00 or 2.00

PSY 33200 - Forensic Psychology

Credit Hours: 3.00. The study of the production and application of psychological knowledge and research findings within the civil and criminal justice systems, including the use of psychological science to resolve legal issues.**Credits:** 3.00

PSY 33500 - Stereotyping And Prejudice

Credit Hours: 3.00. This course examines the topics of stereotyping, prejudice, and discrimination from a social psychological perspective. Relying on empirical findings and relevant theoretical approaches, the course moves beyond lay opinions to explore the social psychological foundations and forms of stereotyping and prejudice, and to examine various strategies for reducing intergroup biases. **Credits:** 3.00

PSY 33600 - Issues In Developmental Psychology

Credit Hours: 3.00. Survey of current issues in developmental psychology and methods for studying these problems. The topics selected for intensive examination reflect contemporary developmental research issues and may involve different-aged children or adults. **Credits:** 3.00

PSY 33700 - Social Cognition

Credit Hours: 3.00. A survey of theory and research on the role of thought processes in social behavior (a combination of social and cognitive psychologies). Topics include causal attribution, person perception, stereotyping, impression formation, event memory, and social judgment. **Credits:** 3.00

PSY 34200 - Introduction To Psychology Of Personality

Credit Hours: 3.00. This course integrates empirical studies (observational, correlational, experimental) with classical and current personality theories. Topics include the biological foundations of personality, self-esteem, extraversion, sex role orientation, authoritarianism, and personality disorders. Minimum competence is assumed in basic experimental design and correlations. **Credits:** 3.00

PSY 35000 - Abnormal Psychology

Credit Hours: 3.00. Various forms of mental disorders from the standpoint of their origin, treatment, prevention, social significance, and relation to problems of normal human adjustment. CTL:ISH 1023 Abnormal Psychology **Credits:** 3.00

PSY 35200 - Introduction To Neuropsychology

Credit Hours: 3.00. This course is an examination of the effects of various types of brain damage on human behavior, the methods used to assess brain damage, and evaluation of research studies on human brain damage and behavior. **Credits:** 3.00

PSY 35400 - Close Relationships

Credit Hours: 3.00. This course introduces undergraduate college students to major topics in psychological research on intimate relationships. There are many types of close relationships. This primarily focuses on relationships that currently are, will be soon, or at one point were, romantic involvements. A goal is to educate students on current research findings concerning intimate relationships. **Credits:** 3.00

PSY 36700 - Adult Development And Aging

Credit Hours: 3.00. Theory and research on adult development from young adulthood through the elderly years. Course covers biological, cognitive, personality, and social issues. Topics include vocational choice, marriage, parenthood, the empty nest, menopause, memory and aging, retirement, widowhood, longevity, and death and dying. **Credits:** 3.00

PSY 37600 - Attention And Cognitive Control

Credit Hours: 3.00. This upper-level undergraduate course provides an overview of research and theory related to attention and cognitive control. The first half of the course focuses on selective attention to locations, objects, and features, as well as the role of attention in memory and skilled performance. The second half focuses on divided attention and cognitive control in multitasking situations, as well as aspects of adaptive, hierarchical, and inhibitory control. The goal of the course is to provide you with an understanding of major theoretical views, key experimental findings, and common research procedures related to attention and cognitive control. **Credits:** 3.00

PSY 38000 - Behavior Change Methods

Credit Hours: 3.00. Application of behavioral learning principles to problems in living. Self-paced learning format covers design and evaluation of behavior modification programs, with practical and ethical issues. Relevant to work with children, adults, clinical patients, athletes, etc., in schools, institutions, and everyday situations. **Credits:** 3.00

PSY 39000 - Research Experience In Psychology

Credit Hours: 1.00 to 3.00. Involvement in an ongoing research project in the Department of Psychological Sciences. Up to 6 credits may be taken for a letter grade. Additional credits after 6 must be taken as Pass/No Pass. Permission of instructor required. **Credits:** 1.00 to 3.00

PSY 39100 - Readings In Psychology

Credit Hours: 1.00 to 3.00. In-depth reading on a specific topic in psychology under the guidance of a faculty member, often in preparation for PSY 49800. Permission of instructor required.**Credits:** 1.00 to 3.00

PSY 39200 - Special Topics In Psychology

Credit Hours: 1.00 to 3.00. Various topics that may change from semester to semester are presented by Psychological Sciences department faculty. **Credits:** 1.00 to 3.00

PSY 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PSY 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PSY 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

PSY 39800 - Independent Research In Psychology

Credit Hours: 3.00. Students will conduct an independent research project related to research that is ongoing in the lab. Students will discuss theories and ideas related to the project, and plan and execute a thesis. Duties may include data coding and entry; participating in the planning of the research and the development of research materials; executing the research with responsibility for all aspects of data collection. Students are expected to be involved in the research project for an average of nine hours per week. Permission of instructor required.**Credits:** 3.00

PSY 40100 - Language And The Brain

Credit Hours: 3.00. (SLHS 40100) This course is an overview of the neutral systems that underlie the core components of language, including speech perception and production, reading and writing, morphology, syntax, semantics, and discourse. During the past few decades, there has been an unprecedented increase in studies on these topics, due in large part to the widespread use of highly sensitive brain mapping techniques that enable researchers to identify relationships between particular brain areas and particular language functions. The findings that have been emerged from this recent explosion of research are exciting and important for several reasons. They provide fresh insights into the nature of the uniquely human capacity for language, and they have significant implications for understanding and treating language disorders that result from brain injury. **Credits:** 3.00

PSY 40300 - Psycholinguistics

Credit Hours: 3.00. (PSY 40300) This course aims to introduce students to the current, research-based understanding of how different aspects of language (such as word perception, language acquisition, or speech production) are represented in the mind. In addition, it will introduce some of the research methods employed by language scientists for gaining insight into such a

representation. This course also aims to help students learn how to critically evaluate research data used to support various theories about psychological and neural foundations of language knowledge. **Credits:** 3.00

PSY 40400 - Honors Research Seminar I

Credit Hours: 3.00. Part one of a research series aimed at providing a structured learning experience to help students develop the basic research skills needed in order to conduct psychological research. Students will be expected to develop a research plan to be completed in concert with PSY 40500. Permission of department required. **Credits:** 3.00

PSY 40500 - Honors Research Seminar II

Credit Hours: 3.00. Part two of a research series aimed at providing a structured learning experience to help students develop the basic research skills needed in order to conduct psychological research. Students will be expected to develop a research plan to be completed in concert with PSY 40400. Permission of department required. **Credits:** 3.00

PSY 41800 - Understanding Autism

Credit Hours: 3.00. (HDFS 41800, SLHS 41800) This course will explore the etiology, neuroscience, diagnosis, and treatment of autism spectrum disorder (ASD). Approached from a multi-disciplinary perspective this course brings together gene, brain, and behavioral sciences with the aim of developing a better understanding of autism. The course will begin with an overview of ASD as a complex behavioral phenotype. This will include discussion of the history of ASD and the expansion of the diagnostic criteria associated with the disorder. This introduction will be followed by several classes in which we will examine some of the key domains of impairment in ASD: reciprocal social interaction, language and communication, and restricted and repetitive behaviors. We will also consider the deficits associated with, but not defining of ASD, and examine co-morbid conditions frequently present in individuals with ASD. We will then address the topics of brain architecture, neurochemistry, and genetics and gene expression, all of which we will attempt to relate back to the behavioral features of autism. We will end the course with a review of treatment practices and their efficacy and an examination of impact of ASD on the family and society. **Credits:** 3.00

PSY 42100 - Alcohol Use And Disorders

Credit Hours: 3.00. The goal of this course is to provide students with a broad understanding of the biological bases of alcohol abuse and alcoholism. The course will cover neuroanatomical, neurochemical and biological systems that regulate the biological and behavioral response to alcohol. Coverage will also include discussions of the role of environment, age, gender, among other factors that influence the response to alcohol and propensity toward abuse and addiction. The course will also cover the neuroscience of treatment and relapse. **Credits:** 3.00

PSY 42200 - Genes and Behavior

Credit Hours: 3.00. An examination of genetic influences on behavior, including the mechanisms of genetic influence, methods of gene manipulation, and the role of genes in development and evolution. Genetic influences on mental illness, learning, memory, and intelligence are considered. **Credits:** 3.00

PSY 42600 - Language Development

Credit Hours: 3.00. (SLHS 30900) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed. **Credits:** 3.00

PSY 42800 - Drugs And Behavior

Credit Hours: 3.00. Discussion of the variety of drugs that affect the nervous system and behavior. Emphasis will be upon a discussion of the physiological and pharmacological bases for the use and misuse of drugs in our society. **Credits:** 3.00

PSY 42900 - Hormones And Behavior

Credit Hours: 3.00. Discussion of the mechanisms and effects of endocrine hormones and brain peptides on sexual differentiation, sexual behavior, learning, response to stress, maternal behavior, and weight regulation. **Credits:** 3.00

PSY 43099 - Cooperative Education Seminar III

Credit Hours: 1.00 or 2.00. This seminar course is optional for Co-Op students when they are on-campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Permission of instructor required. **Credits:** 1.00 or 2.00

PSY 43200 - Social Psychology In Film

Credit Hours: 3.00. This course examines theory and research in experimental social psychology and uses popular films to assist in provoking thought and analysis of the theory and research. **Credits:** 3.00

PSY 43400 - Neurobiology Of Disease

Credit Hours: 3.00. This course explores the neurobiological basis of disorders of the nervous system and psychiatric disease. Students will learn various neurological disorders that affect behavior, the associated cellular and molecular mechanisms, and current treatment strategies. **Credits:** 3.00

PSY 43600 - Foods And Behavior

Credit Hours: 3.00. This course examines aspects of the scientific study of eating and drinking; its effects on individual health and well-being; broader implications of psychology, culture and society on eating and drinking; the effects of food policy on food and beverage intake and well-being. Topics to be covered include physiological signals affecting hunger and satiety, social norms and influences regarding food intake, identifying sources of food and its constituents, disordered food intake, malnutrition, poverty and food, and the influence of food and agriculture industries on food choices and consumption. **Credits:** 3.00

PSY 43700 - Behavioral And Neural Systems Of Learning And Memory

Credit Hours: 3.00. The purpose of this course is to integrate insights on learning and memory from behavioral and neuroscience perspectives based on animal and human research. How brain regions underlie different categories of learning will be covered. Discussions on how these types of learning contribute to clinical disorders, such as anxiety and addiction disorders. **Credits:** 3.00

PSY 43800 - Introduction To Clinical Psychology

Credit Hours: 3.00. This course introduces students to the field of clinical psychology and will provide a broad overview of the roles and responsibilities that fall under the rubric of clinical psychology, with a particular emphasis on psychological assessment and intervention. Focus is on the professional responsibilities of a clinical psychologist (i.e., how clinical psychology is applied in practice), rather than the study of psychopathology per se. **Credits:** 3.00

PSY 44300 - Aggression And Violence

Credit Hours: 3.00. An intensive examination of the nature of human aggression. Among the topics covered will be (1) theoretical perspectives concerning such behavior; (2) social conditions that encourage its performance; and (3) means for its prevention and control. **Credits:** 3.00

PSY 46400 - Research Ethics In Psychological Sciences

Credit Hours: 3.00. Research Ethics broadly refers to the application of everyday values, such as fairness, honesty, and objectivity to scientific research. This course is designed to provide broad coverage of the ethical standards that research scientists must follow and allow exploration of various real-world ethical issues in the psychological sciences. **Credits:** 3.00

PSY 47300 - Selection And Performance Appraisal In Organizations

Credit Hours: 3.00. Classic and current issues in employee selection and the appraisal of employee performance will be discussed. Topics addressed will include: Equal Employment Opportunity and unfair discrimination, developing effective selection and placement strategies, evaluating employee performance, and understanding the performance appraisal process.**Credits:** 3.00

PSY 47500 - Work Motivation And Job Satisfaction

Credit Hours: 3.00. Psychological processes and current theories of work motivation and job satisfaction and their practical implications. **Credits:** 3.00

PSY 48400 - The Psychology Of Consciousness

Credit Hours: 3.00. A survey of psychological experiments and theory in consciousness. An emphasis is placed on altered states of consciousness such as dreaming, hypnosis, drug-induced changes in consciousness, and meditation; and comparison with ordinary consciousness is made. **Credits:** 3.00

PSY 49200 - Internship In Psychology

Credit Hours: 3.00. Experiential, supervised training in various areas of psychology-related fields including human factors, human resources, mental health-related organizations, research labs, and supervised living institutions. Usually taken in junior or senior year. Permission of instructor required.**Credits:** 3.00

PSY 49800 - Senior Research

Credit Hours: 3.00. Student conducts and writes a report on an individual research project under the guidance of a faculty member. Permission of instructor required. **Credits:** 3.00

PSY 50600 - Professional Issues And Trends In Social Psychology

Credit Hours: 3.00. This course is designed to help students acculturate to and acquire a broad knowledge of social psychological research. Topics to be covered include but are not limited to: how to apply for academic jobs, how to present your program of research, how to network at conferences, how to develop a website presence, how to approach potential collaborators, and how to structure your research questions in an appropriate manner for grant applications. Permission of department required. **Credits:** 3.00

PSY 50700 - Current Readings In Social Psychology

Credit Hours: 3.00. This course is designed to expose students to a variety of readings, discussions, and presentations. The seminar examines a diverse assortment of social psychological topics. Students benefit from exposure to current research and methods in the field. Students also benefit from becoming increasingly conversant regarding the latest empirical advances in the field. Permission of department required. **Credits:** 3.00

PSY 51100 - Psychophysics

Credit Hours: 3.00. (ECE 51100) An examination of the relationship between physical stimuli and perception (visual, auditory, haptics, etc.). Includes a review of various methods for studying this relationship and of the mathematical and computational tools used in modeling perceptual mechanisms. Permission of instructor required. **Credits:** 3.00

PSY 51200 - Neural Systems

Credit Hours: 3.00. (SLHS 50700, BIOL 56200) Background in cell biology, psychobiology, physiology, or anatomy is recommended. Overview of the structure and function of neural systems including those involved with motor, somatosensory, visual, auditory, learning, memory, and higher cortical processes. Molecular and cellular aspects of neural function are integrated with discussion of relevant neuroanatomy. Permission of instructor required. **Credits:** 3.00

PSY 51300 - Introduction To Computational Cognitive Neuroscience

Credit Hours: 3.00. Computational cognitive neuroscience is a new field of study that lies at the intersection of computational neuroscience and the similar fields of machine learning, neural network theory, connectionism, and artificial intelligence. Like computational neuroscience, computational cognitive neuroscience strives for neurobiological accuracy and like connectionism, a major goal is to account for behavior. Covered topics include feature extraction / optimization, connectionism, computational neuroscience, and computational cognitive neuroscience applications. Permission of department required. **Credits:** 3.00

PSY 51400 - Introduction To Mathematical Psychology

Credit Hours: 3.00. This course introduces the student to the field of mathematical modeling of psychological processes. Mathematical techniques employed in modeling are learned, and a number of mathematical models and theories that have been developed and employed in various important areas of experimental psychology are explained. An introduction to problems in theory and model testability also is given. **Credits:** 3.00

PSY 51500 - Neuroscience Of Consciousness

Credit Hours: 3.00. How does your brain generate your uniquely subjective experience of the world? Is it possible to identify distinct neurophysiological markers of your awareness of a particular sight, sound, taste, or touch? What is the cortical basis of your sense of being a self with a first-person point of view that is spatiotemporally grounded in a body? How does consciousness relate to attention and working memory? Does consciousness have an adaptive function? Might a person in a coma or a vegetative state still have some form of awareness? Could a computer or a robot ever have what we would consider to be genuine experiences? During the past few decades, these and other questions about the nature of consciousness have been the focus of increasing empirical and theoretical research in neuroscience and other disciplines. The main purpose of the course is to introduce students to this exciting field of inquiry by exposing them to a variety of representative books and articles in the literature. The "backbone" of the course will be Stanislas Dehaene's Consciousness and the brain: Deciphering how the brain codes our thoughts (2014). As we go through the course, we will use each successive chapter in this book as the starting point for a deeper and wider exploration of the given topic(s), bringing into our discussion relevant experimental findings and philosophical perspectives from other investigators. Requirements: Students will take turns guiding discussions and will also write 1-2 page "response papers" to the weekly readings. Permission of department required. **Credits:** 3.00

PSY 52200 - An Introduction To Pediatric Psychology

Credit Hours: 1.00. This course is designed for the clinical psychologist who desires to become acquainted with the field of pediatrics as it is seen by the practicing pediatrician. The student will be introduced to common medical terminology, literature, and interrelated pediatric and psychological problems. Permission of instructor required. **Credits:** 1.00

PSY 55600 - Job Design

Credit Hours: 3.00. (IE 55600) Task analysis, personnel selection and training, job and organizational design, and criteria development and use. Human factors related to job design in order to increase job satisfaction and productivity. **Credits:** 3.00

PSY 57700 - Human Factors In Engineering

Credit Hours: 3.00. (IE 577) Survey of human factors in engineering, with particular reference to human functions in human-machine systems, and consideration of human abilities and limitations in relation to design of equipment and work environments. Primarily for engineers and other non-psychology majors. **Credits:** 3.00

PSY 58100 - Neuroethics

Credit Hours: 3.00. Neuroscience research has led to a better understanding of the neuronal basis of behavior. The knowledge, together with new technological approaches that can predict and even control some aspects of human behavior, can have a major impact on social and legal policies. The course explores ethical, social, and legal implications of the use of new technological and pharmacological advances in brain research. Permission of department required. **Credits:** 3.00

PSY 59100 - Topics In Psychology

Credit Hours: 1.00 to 3.00. Various topics that may change from semester to semester are presented by faculty in the Department of Psychological Sciences. **Credits:** 1.00 to 3.00

PSY 60000 - Statistical Inference

Credit Hours: 3.00. Emphasis is given to principles underlying both parametric and nonparametric inference. **Credits:** 3.00

PSY 60100 - Correlation And Experimental Design

Credit Hours: 3.00. Continuation of PSY 60000 with emphasis upon the design and analysis of experiments. Prerequisite: PSY 60000. **Credits:** 3.00

PSY 60300 - Psychopharmacology

Credit Hours: 3.00. This course will cover core pharmacology concepts and principles, such as neurotransmitters, receptors, drug classes, and mechanisms of drug action, while highlighting recent findings related to pharmacogenetics and sex/gender differences in psychopharmacology. There will also be a primary focus on drug therapy for major psychiatric disorders including addiction, depression, anxiety and schizophrenia. Prerequisites: (BIOL 56200 and PSY 51200) or PSY 61500 or MCMP 57000. **Credits:** 3.00

PSY 60500 - Applied Multivariate Analysis

Credit Hours: 3.00. A survey of the most frequently employed multivariate research techniques, such as multivariate generalizations of univariate tests and analysis of variance, principal components, canonical analysis, and discriminant analysis. A central theme of the course is the general linear model, both univariate and multivariate. A multipurpose program for this

model provides the student with practical experience in conducting multivariate research. Some prior exposure to elementary matrix algebra is recommended. Prerequisite: PSY 60000. **Credits:** 3.00

PSY 60600 - Special Topics In Quantitative Psychology

Credit Hours: 3.00. A seminar covering such topics as linear models, statistical decision-making, and multidimensional scaling. Permission of instructor required. **Credits:** 3.00

PSY 60601 - ANOVA For The Behavioral Sciences

Credit Hours: 3.00. This course is a first-semester graduate statistics course for students in psychology and related fields who conduct quantitative research. The course involves an accelerated review of fundamental concepts (e.g., data visualization, central limit theorem probability), after which the course will focus on statistical techniques for between- and within-person designs that include categorical independent variables (e.g., t-tests, ANOVA). Permission of department required. **Credits:** 3.00

PSY 60700 - Scaling And Measurement

Credit Hours: 3.00. An introduction to the theory of measurement and a survey of modern scaling methods (unidimensional and multidimensional, metric and nonmetric) within the framework of the modern theory of measurement. Some prior exposure to elementary matrix and set algebra is recommended. **Credits:** 3.00

PSY 60800 - Measurement Theory And The Interpretation Of Data

Credit Hours: 3.00. The theory of measurement and the development of reliability and the Spearman-Brown equations, true scores and variables, and correction for attenuation. Variance or covariance of combinations of variables. Item analysis and test construction strategies. Reliability and validity of measurements and the influence of measurement error and measurement threats to research design. Prerequisite: PSY 60000. **Credits:** 3.00

PSY 60901 - Multilevel Modeling

Credit Hours: 3.00. This course familiarizes students with (1) generalized linear mixed (multilevel) models that are often used in the social sciences, and (2) best practices in the models' applications and interpretations. These models are extensions of classic linear regression models, and they go by many names: multilevel modes, hierarchical models, mixed models, etc. Throughout the course, models and methods will be introduced conceptually and will be illustrated using real and simulated data. Prerequisites: graduate coursework in regression and ANOVA, or by permission. Permission of department required. **Credits:** 3.00

PSY 61000 - Multivariate Analysis In The Behavioral Sciences

Credit Hours: 3.00. This is an advanced doctoral-level statistics course that examines the application of multivariate methods to the analyses of organizational data. Topics include: matrix algebra, the general linear model, multivariate analysis of variance, canonical correlation, discriminant function analysis, and factor/component analysis. Prerequisite: Grade of B or higher in (PSY 60000 and PSY 60100) or (STAT 51200 and STAT 51400) or (HDFS 68500 and PSY 63100). **Credits:** 3.00

PSY 61501 - Systems And Behavioral Neuroscience

Credit Hours: 4.00. This course will provide you with a broad introduction to the field of neuroscience and how it can inform our understanding of behavior. First, we will cover neuroanatomy, synaptic communication, and plasticity. Next, we will cover neuroscience research on a range of major topics relevant to behavior: emotion, motivation, attention, learning, decision-making, and social cognition. This course will also provide a brief introduction to a variety of neuroscience research methods that are

commonly used in animal and human research (e.g., electroencephalography, magnetic resonance imaging), including tutorials and live demonstrations. Permission of department required. **Credits:** 4.00

PSY 61601 - Neurobiology Of Brain Disorders

Credit Hours: 4.00. This course covers cellular and molecular mechanisms associated with alterations in brain function and human behavior linked to the most common neurological and psychiatric disorders. Students will learn about genetic, pharmacological, and physiological mechanisms related to the etiology, expression, and treatment of brain disorders. Permission of department required. **Credits:** 4.00

PSY 62101 - Genes, Brain And Behavior

Credit Hours: 3.00. This course examines how genes regulate development and function of the brain to ultimately influence behavior. Genetics has come to be an important aspect of research in almost every field of Neuroscience and Psychology ranging from neural development to cognitive function and dysfunction. However, many students have not had the opportunity to explore this in their studies to date. Therefore, the goal of this course is to provide students with the background needed to understand and think critically about the genetic components of Neuroscience and behavioral research. Numerous questions will be explored mainly through discussion of research papers. Lectures by the professor will fill in background knowledge needed to understand the readings. The questions explored will include: What are chromosomes and genes? What do they do? How do they do it? How do genes control development of the brain? How are single genes manipulated in animals to study their effects on behavior? How can genes associated with normal or abnormal behavior be identified? What has been learned from gene-behavior studies in animals? in humans? What do these studies tell us about the nature-nurture controversy? In addition to exploring these more traditional aspects of behavioral genetics we will address the three most exciting recent developments. These include the use of transgenic primate models, selective remote control of specific neural circuits using optogenetics and chemogenetics, and epigenetics, which helps explain how environmental factors and behavior itself can change gene activity and how these changes may be transmitted from one generation to the next. Many behaviors could be used to explore the principles these questions address. The readings will be selected from papers that focus on learning & memory and mental illness. However, if students are interested in other behaviors, papers that involve those behaviors and serve our purposes can be substituted. Grading will be based mainly on informal presentations of papers and participation in discussions of these papers. Permission of department required. **Credits:** 3.00

PSY 62400 - Human Learning And Memory

Credit Hours: 3.00. Selected survey of important problems in the encoding, storage, and retrieval of laboratory and naturalistic events. **Credits:** 3.00

PSY 62500 - Complex Cognitive Processes

Credit Hours: 3.00. Surveys research and theory concerned with the nature of the "higher-order" mental processes, including decision making, categorization, problem solving, and language. Fundamental questions regarding the nature of the representations that underlie conceptual and linguistic behavior will be addressed. Permission of instructor required. **Credits:** 3.00

PSY 62601 - Bayesian Statistics For Psychological Sciences

Credit Hours: 3.00. The course will explain why you might want to use Bayesian methods instead of frequentist methods (such as t-tests, ANOVA, or regression). We discuss the basic properties and methods of Bayesian analysis and have many activities to show how Bayesian analyses are used. Prerequisites: PSY 60000 and PSY 60100. Permission of department required. **Credits:** 3.00

PSY 62800 - Perceptual Processes

Credit Hours: 3.00. This course is an advanced introduction to the psychology of perception. The course emphasizes visual and auditory perception, reviewing basic concepts, methodologies, research findings, and theoretical approaches. Theories of direct perception, constructivist perception, and computational vision are discussed in detail. **Credits:** 3.00

PSY 62901 - fMRI Design And Analysis

Credit Hours: 3.00. Introduces students to the design of fMRI experiments and fMRI data analysis. Covered topics include an introduction to MR physics, block designs, rapid-event related designs, data preprocessing, and standard analyses using the general linear model. Advanced analysis techniques such as functional connectivity and multivariate pattern analysis and common pitfalls in design and analysis will also be covered. Prerequisites: Required: Basic knowledge of inferential statistics. Recommended: Familiarity with the general linear mode (GLM) and signal processing. Permission of department required. **Credits:** 3.00

PSY 63000 - Stereotyping And Prejudice

Credit Hours: 3.00. Provides an in-depth examination of issues related to stereotyping, prejudice, and discrimination. After a general introduction and historical overview, students will be exposed to a detailed study of the social psychological foundations of stereotyping and prejudice to include their impact and reduction strategies. Permission of instructor required. **Credits:** 3.00

PSY 63100 - Multiple Regression Analysis For The Behavioral Sciences

Credit Hours: 3.00. This "data analytic" course provides an examination of the conceptual underpinnings and advanced application of multiple regression analyses to psychological data. Permission of instructor required. **Credits:** 3.00

PSY 63300 - Seminar In Experimental Psychology

Credit Hours: 2.00 to 3.00. Critical analysis of current problems in experimental psychology. Emphasis upon reviewing literature, preparing and presenting papers. Permission of instructor required. **Credits:** 2.00 to 3.00

PSY 63600 - Self And Identity

Credit Hours: 3.00. This seminar explores many issues related to the self from a social psychological perspective. The goal is to develop a better understanding of theory and research dealing with various aspects of the self. To accomplish this goal, students will learn to critically analyze research papers addressing self-related material. Department permission required. **Credits:** 3.00

PSY 63700 - Human Information Processing

Credit Hours: 3.00. This course develops the methodological tools required for an information processing approach to human behavior. These techniques are applied to such topics as reaction time, signal detection, attention, and skilled behavior, with emphasis upon unifying empirical findings. Prerequisite: PSY 60000, PSY 60100. **Credits:** 3.00

PSY 64000 - Survey Of Social Psychology I

Credit Hours: 3.00. An extensive survey of methods, research, and theory in social psychology. **Credits:** 3.00

PSY 64200 - Social Influence

Credit Hours: 3.00. Students are immersed into the exciting sub-field of social psychology: social influence through lively discussions and readings on the subject. Students will evaluate what is meant by social influence, what it includes, what it doesn't include, as well as current trends in social influence. Permission of instructor required. **Credits:** 3.00

PSY 64300 - Attitudes And Attitude Change

Credit Hours: 3.00. Considers relation of attitudes to beliefs and to behaviors. Surveys major theories of attitude formation and change as well as empirical research related to these theories. **Credits:** 3.00

PSY 64400 - Close Relationships

Credit Hours: 3.00. Acquaints participants with the major social psychological approaches to the study of close, interpersonal relationships, including evolutionary, attachment, and interdependence perspectives. Methodological and data analytic issues relevant to relationships research also are examined. **Credits:** 3.00

PSY 64600 - Seminar In Social-Personality Psychology

Credit Hours: 3.00. A seminar covering a special topic in personality or social psychology. Specific topic varies from seminar to seminar. Permission of instructor required. **Credits:** 3.00

PSY 64700 - Group Processes And Performance

Credit Hours: 3.00. Provides a survey of research concerning small group interaction and performance. Covers topics such as group problem-solving, group decision-making, group polarization, and group structure. Will also discuss group interaction and communication patterns. **Credits:** 3.00

PSY 66700 - Clinical Assessment I

Credit Hours: 4.00. Presentation of general assessment principles and methods. Supervised practice in general diagnostic and treatment procedures as applied to both children and adults. Emphasis is placed on laboratory practice in the administration and interpretation of intelligence tests; behavioral observation techniques and operant remediation procedures. Permission of instructor required.**Credits:** 4.00

PSY 66800 - Clinical Assessment II

Credit Hours: 4.00. Presentation of methods of clinical assessment including structured and unstructured personality tests, physiological recording, behavioral observation, and interview techniques. Emphasis is placed on laboratory practice in the administration and interpretation of personality tests and training in the basic clinical interview techniques. Permission of instructor required. **Credits:** 4.00

PSY 66900 - Prosocial Behavior

Credit Hours: 3.00. This course is designed to provide a broad and rigorous, graduate-level overview of contemporary scientific research on prosocial processes from the perspective of personality and social psychology. Permission of department required. **Credits:** 3.00

PSY 67000 - Principles And Techniques Of Psychotherapy

Credit Hours: 3.00. Discussion and elaboration of the main theories and techniques of psychotherapy, the application of these techniques to the change of behavior, and the analysis of clinical cases for therapy planning. **Credits:** 3.00

PSY 67300 - Psychology Of Behavior Disorders

Credit Hours: 3.00. Advanced abnormal psychology. Consideration will be given to research and theory of psychopathology. **Credits:** 3.00

PSY 67400 - Structural Equation Modeling

Credit Hours: 3.00. This is an advanced course in structural equation modeling (SEM), intended to provide doctoral students with an introductory treatment of the theory and methods of SEM. SEM is a statistical methodology that encompasses a wide variety of models, including path models, exploratory and confirmatory factor models, structural regression models, and latent growth models, among others. Prerequisites: PSY 61000 is highly recommended but not required. Permission of department required. **Credits:** 3.00

PSY 67510 - Research Methods In Clinical Psychological Sciences

Credit Hours 3.00. This course provides an in-depth introduction to the fundamentals of research methods and design, including the scientific approach and its applicability to the science of psychology to the philosophy of science, the role of theory, and hypothesis testing. Philosophical and theoretical fundamentals are discussed, followed by methodological issues. The course includes content on the replication crisis in psychology, the practices that contributed to it, and the means to overcome it, as well as issues in sampling, measurement, and design. The course will examine nonexperimental research as well as experimental and quasi-experimental approaches. Permission of department required.**Credits:** 3.00

PSY 67800 - Seminar In Clinical Psychology

Credit Hours: 2.00. Discussion of special topics in clinical psychology. Permission of instructor required. **Credits:** 2.00

PSY 67900 - Practicum In Clinical Psychology

Credit Hours: 1.00 to 6.00. This is a practicum in clinical psychology, whereby students see individuals for therapy. These cases are supervised by faculty in clinical psychology. This is a requirement for the graduate program, and students must do both adult and child practicum. Students enrolled in this program must register for this course a minimum of four times. Prerequisite: Master's student standing and Psychology majors only. Permission of instructor required. **Credits:** 1.00 to 6.00

PSY 68000 - Survey Of Industrial/Organizational Psychology

Credit Hours: 3.00. This two-semester sequence extensively surveys the various areas of industrial/organizational psychology. The first semester surveys those topics generally classified as dealing with industrial psychology (e.g., selection, placement, training, performance appraisal), and the second semester surveys organizational psychology topics (e.g., job satisfaction, motivation, leadership, decision making, role making). Course provides a critical and up-to-date review of recent and classical research in these areas. Prerequisite: Any undergraduate Statistics course and any undergraduate Social Science Research Methods course. **Credits:** 3.00

PSY 68010 - Survey Of Industrial Psychology

Credit Hours: 3.00. This seminar is designed to familiarize doctoral students with the basic areas of Industrial Psychology and Human Resource Management. The course will include a discussion and analysis of book chapters and journal articles related to key topics. The goal of this seminar is to help students develop frameworks for organizing the myriad conceptual, professional,

and technical issues associated with Industrial Psychology / Human Resource Management. Development of these frameworks is requisite for effective acquisition and integration of information provided in future seminars and development of research ideas. Permission of department required. Prerequisites: Any undergraduate Statistics course and any undergraduate Social Science Research Methods course. **Credits:** 3.00

PSY 68020 - Survey Of Organizational Psychology

Credit Hours: 3.00. The main objective of this course is to introduce doctoral students in the Industrial and Organizational Psychology program (and related disciplines) to the major areas of research in the field of organizational psychology. Additionally, the course aims to provide students an opportunity to: (1) hone their analytic and information presentation skills, and (2) gain practice in developing research ideas. We will discuss classical and contemporary issues in light of both their theoretical and practical implications for the field. The course will include presentations and (synchronous and asynchronous) discussions of assigned readings. Permission of department required. Prerequisites: Any undergraduate Statistics course and any undergraduate Social Science Research Methods course. **Credits:** 3.00

PSY 68100 - Seminar In Research Methodologies Of Industrial/Organizational Psychology

Credit Hours: 3.00. Intensive analysis of application of various research and statistical methods to the study of human behavior in organizational settings. **Credits:** 3.00

PSY 68110 - Research Methods In Industrial-Organizational Psychology I

Credit Hours: 3.00. Intensive analysis of application of various research and statistical methods to the study of human behavior in organizational settings. This course is the first part of a two-semester sequence which covers issues in research design and data analysis techniques common to I-O psychology and other applied fields. We will review the overall research process and various types of research. We will review the various threats to the validity of conclusions that can be drawn from quantitative research and how design features can help address these threats. We will spend time in class critiquing research articles. Permission of department required. **Credits:** 3.00

PSY 68120 - Research Methods In Industrial-Organizational Psychology II

Credit Hours: 3.00. This course is the second part of a two-semester sequence that covers core research methods in the social sciences focusing on Industrial/Organizational psychology, Organizational Behavior, and allied fields of Social and Personality psychology. This course sequence is designed for doctoral students who intend to conduct quantitative empirical research publishable in scholarly journals. This course begins with the philosophy of science, developing and evaluating theory, reviewing and summarizing relevant research. Topics include the examination of research methods applicable to survey data, multilevel data, and longitudinal data. The course concludes with a discussion of 'methods' (strategies) for publishing in scholarly journals. Permission from department required. Prerequisites: PSY 68110, Research Methods in Industrial-Organizational Psychology I (or equivalent) and Basic Statistics. **Credits:** 3.00

PSY 68200 - Advanced Seminar In Industrial Organizational Psychology

Credit Hours: 3.00. Special topics in industrial and organizational psychology are offered on a two-year rotating basis. The special topics are: work motivation, leadership, advanced selection and placement, and performance appraisal. One topic will be treated each semester. **Credits:** 3.00

PSY 68300 - Seminar In Industrial/Organizational Psychology

Credit Hours: 3.00. Topics vary. Permission of instructor required. **Credits:** 3.00

PSY 68800 - Research Methods In Social Psychology

Credit Hours: 3.00. This course provides a broad and rigorous, graduate-level overview of contemporary research methodology in social psychology and personality. The course follows a discussion seminar format. Permission of department required. **Credits:** 3.00

PSY 69000 - Individual Research In Psychology

Credit Hours: 1.00 to 3.00. Involvement in research design, execution, and analysis under the guidance of a faculty member. Permission of instructor required. **Credits:** 1.00 to 3.00

PSY 69100 - Readings In Psychology

Credit Hours: 1.00 to 3.00. In-depth reading into specific topic area in psychology, under the guidance of a faculty member. Permission of instructor required. **Credits:** 1.00 to 3.00

PSY 69200 - Special Topics In Psychology

Credit Hours: 1.00 to 3.00. Various topics which may change from semester to semester are presented by faculty in the Department of Psychological Sciences. **Credits:** 1.00 to 3.00

PSY 69600 - Seminar In Neuroscience

Credit Hours: 2.00. The course is designed to expose graduate students to diverse areas of most up-to-date research and hone their skills in understanding conceptual issues and tools used to study neuroscience. The students help host speakers and introduce speakers before their colloquium talk. The students will also formally present their own research to the area faculty and students once each year, at a level appropriate to their years in the program. Lastly, each student will write a "journal club" style paper on a recently published empirical study. Permission of instructor required. **Credits:** 2.00

PSY 69700 - Clinical Psychology Internship

Credit Hours: 0.00. Clinical psychology internship. Open only to Clinical Psychology students in approved internship facilities. Permission of instructor required. **Credits:** 0.00

PSY 69710 - Clinical Psychology Internship

Credit Hours: 3.00. Clinical psychology internship. Open only to Clinical Psychology students in approved internship facilities. Permission of instructor required.**Credits:** 3.00

PSY 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

PSY 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Public Health

PUBH 120AN - Culture, Health And Happiness

Credit Hours: 3.00. In the US we don't have one culture. We have regional cultures which influence our environmental and health. Students of all majors can learn about mortality patterns in different cultural regions of the country, and learn to use concept maps to understand cultural influences on those patterns in death.**Credits:** 3.00

PUBH 10000 - Introduction To Public Health

Credit Hours: 1.00. This course serves as an introduction to the field of public health. Topics include identification of the principal determinants of health and how they affect individuals and populations, the role of government and public health professionals in health and healthcare, and critical and emerging issues in public health in the US and around the world. **Credits:** 1.00

PUBH 10001 - Introduction To Public Health

Credit Hours: 3.00. This course serves as an introduction to the field of public health. Topics include identification of the principal determinants of health and how they affect individuals and populations, the role of government and public health professionals in health and healthcare, and critical and emerging issues in public health in the US and around the world.**Credits:** 3.00

PUBH 20200 - Health In The Time Of Pandemics: An Introduction

Credit Hours: 3.00. This course will introduce students to basic concepts about health and disease through examination of the sweeping effects of pandemics. In addition to reviewing the effects directly related to human health and healthcare systems, the course will provide an interdisciplinary overview of the social, political, and economic consequences of infectious disease outbreaks and the range of local, national, and global responses to address them. The course will be taught by faculty members representing the broad diversity of disciplines within the College of Health and Human Sciences (HHS), with additional specific contributions from faculty representing other disciplines outside HHS. **Credits:** 3.00

PUBH 20500 - Basic Public Health Studies

Credit Hours: 3.00. Examination of basic scientific concepts as applied to the problems and issues in selected areas of human health behavior with particular attention to their influence on population and individual health. Restricted to students enrolled in major degree programs for which this course is a requirement. **Credits:** 3.00

PUBH 22000 - Sexuality And Health

Credit Hours: 3.00. Deals with various aspects of human sexuality and sexual behavior and their impact upon individual health. Health concerns related to sexual behavior. **Credits:** 3.00

PUBH 22500 - Contemporary Women's Health

Credit Hours: 3.00. Examines behavioral, psychological, and sociocultural aspects of women's experience in healthcare systems. Includes the influence of factors such as age, social class, and ethnicity on women's roles as recipients and providers of health care. **Credits:** 3.00

PUBH 23000 - Community, Culture And Social Justice From A Public Health Perspective

Credit Hours: 3.00. The course provides an introduction to the concepts of community, culture, and social justice. The interaction between community, cultural, ethical, social, economic, environmental, political and social justice dynamics that shape health will be explored.**Credits:** 3.00

PUBH 23500 - Stress And Human Health

Credit Hours: 3.00. Course is designed to provide an understanding of stress and stress management, including the physiology of the stress response, the relationship between stress and disease, potential sources of stress, and methods of intervening to prevent and/or relieve stress. **Credits:** 3.00

PUBH 24000 - Global Health

Credit Hours: 2.00. This course introduces students to current challenges, debates, and efforts at solutions in global public health with a focus on low-and middle-income countries. It provides an interdisciplinary overview of topics that include measures of health and disease, health disparities, communicable and non-communicable diseases, women's health, maternal and child health, food systems and nutrition, health systems, and global cooperation. It also highlights the central role of data in achieving the global health agenda. Permission of department required.**Credits:** 2.00

PUBH 25000 - Intercultural Development In Public Health And Human Sciences

Credit Hours: 3.00. There is a high demand for students to be prepared to work efficiently and effectively across different cultures. Whether working on sustainable and thriving communities and organizations, promoting healthy lifestyles, disease prevention, or developmental health and wellness, the need to develop cultural bridging skills is important for effectively helping individuals and their communities. The course teaches students how to develop a deeper appreciation and empathy for cultural values and traditions that are different from their own, learn how to cultivate a cultural worldview, become more aware of their own cultures, foster intercultural openness and curiosity, and how to communicate across cultures.**Credits:** 3.00

PUBH 29500 - Internship & Career Preparation

Credit Hours: 1.00. This course provides students with professional competencies in identification and development of professional resources that aid in a greater understanding and preparation for careers in public health. Upon completion of the course, students will be prepared to seek an internship and apply concepts learned to their professional development experiences. **Credits:** 1.00

PUBH 30500 - Health Education In Elementary Schools

Credit Hours: 3.00. The problems of physical health, mental health, and safety of the school-aged child are considered, with emphasis on ways in which the elementary teacher meets his or her responsibilities and opportunities for promoting pupil health.**Credits:** 3.00

PUBH 32000 - Health Behavior And Health Promotion

Credit Hours: 3.00. Introduces health behavior theory and practice in the context of health promotion and education. Examines individual, interpersonal, and community approaches to explaining and predicting health behavior and emphasizes their application to interventions in health promotion and education. **Credits:** 3.00

PUBH 32500 - Methods Of Health Promotion And Education

Credit Hours: 3.00. Methods and materials of health promotion and education; preparation and use of content and materials related to health concerns of target populations. A variety of strategies and media are covered with theoretical and practical applications. **Credits:** 3.00

PUBH 36500 - Public Health Research Methods

Credit Hours: 3.00. The course is designed to help you (1) develop an understanding of the nature of research and the scientific method in public health, (2) acquire an appreciation for the different types of research conducted within public health, and (3) provide an overview of the ethical, conceptual, and logistical considerations involved in designing, conducting, and critically evaluating public health research in basic and applied settings.**Credits:** 3.00

PUBH 38000 - Public Health Policy

Credit Hours: 3.00. This course will provide the opportunity to examine and analyze the financing, organization and delivery of health care in the U.S. and how these core elements are shaped and influenced by health care policy and decision-making.**Credits:** 3.00

PUBH 40000 - Human Diseases And Disorders

Credit Hours: 3.00. The major communicable and noncommunicable diseases and disorders that afflict modern man, with particular emphasis upon the etiology, epidemiology, and ecology of these diseases and disorders.**Credits:** 3.00

PUBH 40500 - Principles Of Epidemiology

Credit Hours: 3.00. The study of the distribution of diseases in human populations and factors that influence these distributions. **Credits:** 3.00

PUBH 48000 - Internship For Public Health

Credit Hours: 9.00. The internship experience is a valuable opportunity for students to apply the procedures, theories, skills, and techniques they have mastered in the classroom to a professional work experience in the field. Each student in the Public Health Major at Purdue University is required to perform a 400 hour internship experience that meets the expectations of the student, the internship/practicum site, and the University. The internship is to be a culminating experience representative of the degree program and clinical work that provides students the opportunity to acquire invaluable work experience in the field outside of the academic setting. Must have completed all other major requirements. Permission of instructor required.**Credits:** 9.00

PUBH 49000 - Special Topics In Public Health

Credit Hours: 0.00 to 6.00. Various public health topics that may change from semester to semester. Department persmission required. **Credits:** 0.00 to 6.00

PUBH 49200 - Mentored Research In Public Health

Credit Hours: 3.00. Designed to provide a research learning activity for undergraduate students majoring in Public Health. Students will gain research and presentation experience under the guidance of a supervising public health faculty member. Permission of instructor required. **Credits:** 3.00

PUBH 50000 - Introduction To Public Health

Credit Hours: 1.00 to 3.00. This Public Health course covers a variety of issues related to the profession of public health. The Introduction to Public Health provides the graduate student with an overview of the history, science, mission, practice and future of public health. The core public health principles and services, and the expected competencies of the professional public health practitioner, are discussed. Current issues in public health are also presented for discussion and analysis. **Credits:** 1.00 to 3.00

PUBH 50100 - Introduction To Health Equity

Credit Hours: 3.00. This course introduces the participants to graduate level research in health disparities and the various theoretical and analytical skills needed to be a good health disparities researcher. It will take the course participants through the axiological, ontological and epistemological questions that we are confronted within social scientific research. This course will walk the participants through the various research paradigms and the critical debates associated with it so that they can reflect and possibly make an informed choice about their own research priorities. Permission of department required. **Credits:** 3.00

PUBH 51100 - Foundations Of Global Health

Credit Hours: 3.00. Global disparities in the health and well-being of diverse populations, across and within borders, has never been greater. Profound and rapid changes in demographics, from population growth to urbanization, along with unprecedented shifts in patterns of disease and risks, are coupled with game-changing advances in knowledge, technology, and innovation. This course will introduce students to current challenges and efforts at solutions in global health, with a focus on low- and middle-income countries. It will provide an interdisciplinary overview of topics that include measures of health and disease, communicable diseases such as HIV/AIDS and malaria, non-communicable diseases such as diabetes and cardiovascular disease, women's health, maternal and child health, food systems and nutrition, health systems, and health care delivery. In addition to lectures, the course will include interactive discussions of case studies and specific country examples, aimed at immersing students in the debates and challenges facing global health leaders and decision makers. **Credits:** 3.00

PUBH 51250 - International Health Systems: A Comparative Approach

Credit Hours: 3.00. This course is an introduction to public health priorities from an international perspective, illustrating the interdependent nature of health promotion and disease prevention issues across diverse regions and populations. Coursework examines population health determinants, contrasting industrialized and developing countries and how these influence health goals established by public health institutions, such as the World Health Organization, philanthropic foundations and governmental agencies. International health care needs continue to emerge as interchanges among peoples and nations increase. To effectively address these needs, public health leaders must understand the social, economic, environmental, and political determinants of health and be prepared to respond to challenges related to health and health care at the local, national, and global level. This course examines the historical evolution of international health challenges as well as the future trends that will continue to impact health and health systems worldwide. The course is intended for graduate students in public health; however, it may be of interest to students in social work, nursing, education, criminal justice, psychology, and other related fields. Permission of instructor required.**Credits:** 3.00

PUBH 51350 - Global Health Security And Disaster Management

Credit Hours: 3.00. This course is a contemporary examination of the growing threat and potential public health consequences of disasters and the role of climate change. Additionally, we review the variety of public health and environmental health disasters, their consequences and the role of public health agencies health care systems and practitioners in preparedness, response and recovery from a local, national and global perspective. The course is designed to develop proficiency in analyzing and evaluating the public health response to disasters, the linkage to emergency management frameworks and identifying solutions and methods for improvement. The course is intended for graduate students in public health; however, it may be of interest to students in social work, nursing, education, criminal justice, psychology, and other related fields. Permission of instructor required. **Credits:** 3.00

PUBH 52000 - Human Sexuality And Sexual Health

Credit Hours: 3.00. This course is designed to provide students with an in-depth and applied understanding of the major theories and principles guiding human sexuality and sexual health research. Content covered will enrich an understanding of sexuality and sexual health research methods, past and present research findings, and the intersection of this field and public health practice.**Credits:** 3.00

PUBH 52500 - Statistical Methods For Public Health Evaluation

Credit Hours: 3.00. This course provides an overview of the statistical methods required to evaluate the effectiveness of public health intervention or prevention programs and policies. The course introduces a range of quantitative, qualitative, and mixed methods research designs and the application and tailoring of these designs to evaluations. In addition, we will focus on categorical data analysis methods, which are often necessary for evaluation projects. You will collaborate with those students to conduct an evaluation, develop a report with your findings, and present your findings. The course is intended for graduate students in public health; however, it may be of interest to students in social work, nursing, education, criminal justice, psychology, and other related fields. Permission of department required. **Credits:** 3.00

PUBH 52600 - Randomized Control Trials In Public Health

Credit Hours: 3.00. Randomized control trials provide solid evidence on whether interventions and programs "work" to improve health outcomes. In this course, students will learn how to design a randomized study, handle practical issues that arise in data collection, analyze data using appropriate methods and good statistical practice, identify limitations to statistical evidence, and interpret and communicate findings in an audience-appropriate way. This is a hands-on course in which students will work with data and build skills using SAS statistical software in preparation for careers as biostatisticians, data scientists, and researchers. Pre-requisite: A graduate level introductory statistics course that includes simple linear regression.**Credits:** 3.00

PUBH 53500 - Fundamentals Of Epidemiology

Credit Hours: 3.00. This course is an introduction to epidemiology, which is the study of the patterns, causes, and impact of disease in populations. Epidemiology is increasingly important for public health and clinical medicine research and policy. This course will discuss the basic principles and methods of epidemiology, including measurements of disease occurrence and association, study designs, and determination of causality. Contemporary examples will be used to illustrate the application of these concepts, with an emphasis on environmental causes of disease.**Credits:** 3.00

PUBH 54250 - Public Health And Nutrition

Credit Hours: 3.00. This course will emphasize development, implementation, and evaluation of nutrition intervention programs from a public health perspective. Students have an opportunity to practice setting realistic goals that produce outcomes aimed to improve health and support community and public nutrition. Students will explore changing nutritional behavior and the barriers to such change. This course is intended for graduate students interested in developing, implementing, and evaluating community-based nutrition programs The course is intended for graduate students in public health; however, it may be of interest to students in social work, nursing, education, criminal justice, psychology, and other related fields. Permission of instructor required.**Credits:** 3.00

PUBH 54300 - Physical Activity And Public Health

Credit Hours: 3.00. In this course students will be exposed to epidemiological, behavioral, and public health issues relevant to effective promotion of physical activity. The course is appropriate for students training to be practitioners or researchers from a range of disciplines including exercise science, nutrition, psychology, and public health. Major topic areas will include physical activity epidemiology, determinants of physical activity in youth and adults, and current evidence for physical activity interventions ranging from individual, behavioral strategies, to environmental or policy approaches. **Credits:** 3.00

PUBH 54500 - Healthcare Policy And Administration

Credit Hours: 3.00. This course will provide the opportunity to examine and analyze the financing, organization and delivery of health care in the U.S. and how these core elements are shaped and influenced by health care policy and decision-making. Additionally, we will examine the landmark healthcare reform the Patient Protection and Affordable Care Act (PPACA) of 2010 and legislation since its passing to study the transformation of healthcare to present time. **Credits:** 3.00

PUBH 54600 - Child And Family Health Policy

Credit Hours: 3.00. The main goals of the course are to provide students with foundational knowledge related to research and policies that affect the health and wellbeing of children and families. Students will read and discuss policy-relevant research on current topics associated with child and family health. Students will read and discuss examples of researchers who have made an impact on child and family policies. Students will also write three papers that integrate research and policy perspectives.**Credits:** 3.00

PUBH 54700 - Public Health Program And Policy Evaluation

Credit Hours: 3.00. This course provides an overview of the methods required to evaluate the effectiveness of public health intervention or prevention programs and policies. The course introduces a range of quantitative, qualitative, and mixed methods research designs, and the process for applying and tailoring these designs to program and policy evaluations. In addition, we will focus on the process of engaging communities and stakeholders in program evaluation efforts. The course is intended for graduate students in public health; however, it may be of interest to students in social work, nursing, education, criminal justice, psychology, and other related fields. Permission of instructor required. **Credits:** 3.00

PUBH 54750 - Public Health Program And Policy Evaluation

Credit Hours: 3.00. This course provides an overview of the methods required to evaluate the effectiveness of public health intervention or prevention programs and policies. The course introduces a range of quantitative, qualitative, and mixed methods research designs, and the process for applying and tailoring these designs to program and policy evaluations. In addition, we will focus on the process of engaging communities and stakeholders in program evaluation efforts. The course is intended for graduate students in public health; however, it may be of interest to students in social work, nursing, education, criminal justice, psychology, and other related fields. Permission of instructor required.**Credits:** 3.00

PUBH 54850 - Public Health Law

Credit Hours: 3.00. This course examines the role of law in promoting or impeding positive health outcomes. Students will study the authority and limitations of governments engaging in public health activities as well as the types of legal interventions available to promote public health. Students will apply legal principles to public health case studies on topics such as infectious disease, chronic disease, and violence prevention, among others. Students will also apply public health legal research methodologies to current public health issues and discuss the role of law in public health advocacy. The course is intended for graduate students in public health; however, it may be of interest to students in social work, nursing, education, criminal justice, law, psychology, and other related fields. Permission of instructor required.**Credits:** 3.00

PUBH 57000 - Healthcare In The United States

Credit Hours: 3.00. By the end of this course, you will have a strong foundational understanding of the American healthcare system, along with the basic financial and management skills to make better, well-informed decisions that improve the cost and quality of the healthcare you or your enterprise provides. Understanding the evolution of today's system form the foundation for subsequent learning and leadership. Landmark legislation will also be reviewed including: Hill-Burton Act, Social Security Act, HMO Act, Balanced Budget Act of 1997, PPACA, ARRA. We will focus on a range of healthcare services, including acute care, post-acute care and senior health and housing, ambulatory surgery centers, behavioral health, and medical insurance companies. Permission of instructor required. **Credits:** 3.00

PUBH 57100 - The Business Of Healthcare

Credit Hours: 3.00. This course is designed to help you keep pace with the rapidly changing world health and healthcare. We will (1) explore the drivers of value creation, valuation approaches, and the differences in capital structures between nonprofit and for-profit healthcare providers; (2) examine horizontal consolidation and integrations among nonprofit and for-profit providers mergers and acquisitions, join ventures, and vertical consolidation and integration between providers and payers; and (3) discuss the ethos of healthcare, disruptive innovation, and emotional intelligence. **Credits:** 3.00

PUBH 57200 - International And Comparative Healthcare Systems

Credit Hours: 3.00. This course examines international and comparative healthcare systems by analyzing the roles of private, public, non-profit and civil society sectors on national policy, planning and development. **Credits:** 3.00

PUBH 57300 - Cultural Proficiency For Healthcare Leaders

Credit Hours: 3.00. This course meets all four criteria for being a graduate level course. Readings for this course consist of journal articles and advanced readings. Assessments are designed to require students to integrate and synthesize course concepts. Our reading list and discussion prompts consists of current articles, texts, and examples. Finally, students as part of weekly discussions are required to read and critique academic articles and case studies. **Credits:** 3.00

PUBH 57400 - Healthcare Economics, Policy And Law

Credit Hours: 3.00. This course presents an overview of legal regulations and issues related to healthcare delivery and administration in multiple settings. Topics include healthcare legislation and regulation; professional and institutional liability; medical staff credentialing; patient consent requirements; termination of care; confidentiality of medical care; and the roles of federal, state and private stakeholders. **Credits:** 3.00

PUBH 57500 - Healthcare Accounting & Reimbursement

Credit Hours: 3.00. This course teaches core financial skills of accounting and financial management as they apply to healthcare management systems. Topics include analysis of financial reporting, cost management; reimburse mechanisms, CFO Responsibilities, managed care contracting and fundraising and capital investment. This course is a core class for the Healthcare Operations certificate program. **Credits:** 3.00

PUBH 57600 - Workforce Management And Organizational Behavior In Healthcare

Credit Hours: 3.00. The course focuses on the relationships between healthcare administration and human resource management across various health care organizations, including hospitals, long-term care facilities, and community health organizations. Topics include personnel recruitment and training; compensation and benefits; performance evaluations; staffing plans; employee discipline; and credentialing health care professionals. This course is a core class for the Healthcare Operations certificate program. **Credits:** 3.00

PUBH 57700 - Strategic Planning And Marketing For Healthcare

Credit Hours: 3.00. This course provides an introduction to the conceptualization, development and implementation of strategic planning and marketing for healthcare organizations across several practice settings. Topics covered in the course include theories of decision-making, strategic planning and resource allocation, consumer behavior and provider comparisons. This course is a core class for the "Healthcare Quality Improvement" certificate program. **Credits:** 3.00

PUBH 57800 - Healthcare Quality And Risk Management

Credit Hours: 3.00. The course explores how to identify quality and complexity issues affecting healthcare organization; how to develop, implement and assess quality improvement programs and strategies in various healthcare settings. Topics include continuous quality improvement; lean management; Six Sigma; IHI Quality Improvement Program; Baldrige criteria; patient safety; and quality tools. This course is a core class for the Healthcare Quality Improvement certificate programs. **Credits:** 3.00

PUBH 57900 - Information Powered Patient Care In The 21st Century

Credit Hours: 3.00. This course focuses on the use of computer technology and information science to identify, gather, process, and manage information to help healthcare organizations succeed. Emphasis is placed on technology-based health applications, which support clinical, administrative, research, and educational decision-making that enhance the efficacy of health care administration. **Credits:** 3.00

PUBH 58000 - Health Economics

Credit Hours: 3.00. This course will provide an introduction to the application of health economic principles as it relates to various health care systems, healthcare stakeholders and health policy issues in the United States. Topics include access to care; healthcare parity; relationships between economic characteristics and health status; impact of economy on health services industry; demand and resources for health services; utilization, prices, costs, and health insurance. This course is a core class for the Healthcare Operations certificate program. **Credits:** 3.00

PUBH 58100 - Managing Complex Healthcare Operations

Credit Hours: 3.00. This course focuses on the familiarization of production processes and service systems, and quantitative analysis of problems arising in the management of operations. We consider key performance measures of operations (productivity, flexibility, quality, and response time) as well as important concepts in the planning, design, control, and improvement of processes in healthcare contexts along these dimensions. For this course, students will also acquire the ability to learn ways to conduct operations management through data analysis. This course is a core class for the Healthcare Operations certificate program. **Credits:** 3.00

PUBH 58200 - Advanced Executive Healthcare Leadership Development

Credit Hours: 3.00. This course provides advanced leadership training for healthcare executive. Topics include: emotional intelligence, managing difficult conversations, successful interviewing, employee engagement, building learning environments, adaptive leadership, and creating innovative cultures. This course is a core class for the Healthcare Leadership certificate program. **Credits:** 3.00

PUBH 58500 - Introduction To Environmental Health

Credit Hours: 3.00. An introduction to chemical, physical and biological factors in the environment that affect the health of the community. This course examines health issues, scientific understanding of causes and approaches to the control of major environmental health problems in industrialized and developed countries. This is a core course for the Masters in Public Health (MPH) degree at Purdue. **Credits:** 3.00

PUBH 59000 - Special Topics In Public Health

Credit Hours: 0.00 to 9.00. Various public health topics that may change from semester to semester. **Credits:** 0.00 to 9.00

PUBH 60000 - Professional Development In Public Health Seminar

Credit Hours: 0.00. A professional development course designed to the meet the needs of MPH students in the Department of Public Health. **Credits:** 0.00

PUBH 60100 - Introduction To The Quantitative Methods Of Public Health

Credit Hours: 3.00. Acquaints students with the basic concepts and methods of statistics, the applications, and their interpretation as used in public health. Students learn basic terminology and its meaning, how to calculate various statistical measures and indices, how to quantify health relationships, and how to compute and interpret inferential statistical techniques. Students will acquire the ability to utilize statistical software as a tool to facilitate the processing, editing, storing, displaying, analysis, and interpretation of health research-related data. **Credits:** 3.00

PUBH 60200 - Theoretical Foundations Of Health Behavior

Credit Hours: 3.00. Examines the theoretical foundations of health behavior. Emphasizes the development of a conceptual framework for understanding and facilitating behavior enhancement, elimination, and/or maintenance in health promotion and education. Focuses on current theories regarding health-related behaviors. Permission of instructor required. **Credits:** 3.00

PUBH 60400 - Public Health Administration

Credit Hours: 3.00. An introduction to the principals of management as applied to public health organizations, particularly local health departments. Topics include the organization of the U.S. public health system, legal and ethical obligations of public health administrators, the public health workforce and human resource issues, public health budgeting and finance, and leadership in the public health agency. The course is designed to introduce master's level students in public health to the management skills necessary to successfully implement a public health program. **Credits:** 3.00

PUBH 60600 - Design And Analysis Of Public Health Interventions

Credit Hours: 3.00. (CSR 62300) Professional competencies in design, implementation, evaluation and diffusion of health interventions in community settings. Program planning paradigms, determinants of health behavior, and behavior change strategies serve as a basis for analyzing health interventions. Prerequisite: HS 56500. **Credits:** 3.00

PUBH 60700 - Public Health Practicum

Credit Hours: 3.00. This course integrates public health theory and practice in a professional setting. Students have the opportunity to apply concepts from core and concentration courses, conduct projects, and interact with a range of professionals in the designated setting. Permission of instructor required. **Credits:** 3.00

PUBH 60800 - Culminating Experience

Credit Hous: 3.00. The MPH degree plans of study require a culminating project to be completed in the final semester of study. The student provides evidence of competency mastery by partnering with a public health related agency, identifying a community problem, proposing an evidence-based solution, and developing an evaluation plan. The final product is in the form of a grant proposal. Guidance for proposal development is achieved through completion of a grant-writing workshop and feedback from a faculty advisor. Permission of department required.**Credits:** 3.00

PUBH 69400 - Graduate Seminar In Public Health

Credit Hours: 0.00. Seminar course covering a broad range of current research topics in public health and related fields of study. Seminar presentations by representatives from academia, industry, government, other external institutions and organizations, and

members of the Purdue University community. Intensive analysis of application of various research and statistical methodologies to the study of public health.**Credits:** 0.00

PUBH 69500 - Public Health Independent Research Or Study

Credit Hours: 1.00 to 9.00. Investigation of various public health topics as determined by the interest of the individual public health graduate student and faculty mentor. Permission of department required. **Credits:** 1.00 to 9.00

PUBH 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis.**Credits:** 1.00 to 18.00

PUBH 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis.**Credits:** 1.00 to 18.00

Purdue Systems Collaboratory

SYS 30000 - It's A Complex World - Addressing Global Challenges

Credit Hours: 3.00. The main goal of this course is to address grand challenges that are of global concern - such as environmental sustainability and energy use, natural and human disasters, and political and economic development - using the ideas and tools of complex adaptive systems. The course exploits the broad expertise of the four faculty members by treating these challenges from diverse disciplinary perspectives, from the biological and physical sciences, to the social sciences, to engineering. By way of a set of case studies, students will analyze the features of these challenges which make them complex, and seek to explain and find solutions to the problems that arise in each case. Their treatment of the cases will be informed by published research and computer simulation. Students will actively participate in discussions regarding these global challenges, and contribute to the progress of the class using oral and written presentations. The course will culminate with a final project completed by teams composed of students from different disciplines. **Credits:** 3.00

SYS 35000 - Systems Methods

Credit Hours: 3.00. Introduction to modeling tools and methods for understanding and designing systems. Topics include: defining the problem; defining and validating stakeholders' needs; system modeling and types of models; defining and modeling system behavior; defining and modeling functional, physical and allocated system architectures; and evaluating and modeling the tradeoffs between alternative system designs.**Credits:** 3.00

SYS 40000 - Systems Praxis

Credit Hours: 3.00. Engineers, social scientists, and managers frequently bring people and technology together to address complex problematic situations in an equitable way that benefits people and the environment. Multiple systems concepts and methods have been developed to address these situations, and typical courses in systems focus on a relatively small portion of the rich assortment of available approaches to addressing systems problems. This course introduces students to multiple systems concepts and methods via readings and class lecture. The students then apply these concepts and methods on team-based projects. The course will emphasize critical thinking about how the concepts and methods are applicable to the problematic situations of the projects and how well the project teams were able to perform the required activities.**Credits:** 3.00

SYS 49000 - Topics In Systems

Credit Hours: 1.00 to 6.00. This is an UG Level variable title course for topics related to Systems (Systems Thinking, Systems Engineering, Systems Dynamics, etc.). UG students can enroll in this course to do independent study or individual project with the instructor. Permission of instructor required. **Credits:** 1.00 to 6.00

SYS 50000 - Perspectives On Systems

Credit Hours: 3.00. This course provides an introduction to, and references for, each of four distinct approaches to SE concepts and tools. Individual assignments and team projects will be based on readings from these multiple approaches and selected case studies. Participants will be encouraged to bring their own prior expertise and examples to the discussions and projects. While the course will discuss quantitative topics (including cybernetics, feedback control systems, and statistical process control), the course itself will emphasize a more interdisciplinary conceptual integration rather than stand-alone analysis of these topics. **Credits:** 3.00

SYS 51000 - Tools And Methodologies For Designing Systems

Credit Hours: 3.00. Introduction to modeling tools and methods for designing engineered systems. Topics include: defining the design problem; defining and validating stakeholders' and system requirements; discrete mathematics for system modeling; defining and modeling system operational scenarios; the system development life cycle; defining and modeling functional, physical, and allocated architectures; evaluating and modeling the tradeoffs between alternative architectures; and defining the system qualification process. **Credits:** 3.00

SYS 52000 - Systems Engineering Processes And Professional Competencies

Credit Hours: 3.00. This course covers life cycle processes performed by system engineers and soft skills essential to being a successful system engineer. Topics include systems engineering technical processes, technical management processes, organizational strategies and operations supporting system development, tailoring of processes to industry sectors and domains, cross-cutting systems engineering methods, specialty engineering, systems engineering competencies, and relevant soft skills. Permission of instructor required.**Credits:** 3.00

SYS 53000 - Practical Systems Thinking

Credit Hours: 3.00. Practical systems thinking is designed to give students a sense of how problem solving happens in the real world. This is accomplished through case examples and group projects. **Credits:** 3.00

SYS 59000 - Projects In Systems

Credit Hours: 1.00 to 6.00. This is a Graduate Level variable title course for topics related to Systems (Systems Thinking, Systems Engineering, Systems Dynamics, etc). Graduate students and seniors can enroll in this course to do independent study or individual project with the instructor. Permission of instructor required.
Credits: 1.00 to 6.00

Religious Studies

REL 20000 - Introduction To The Study Of Religion

Credit Hours: 3.00. This course will introduce students to the academic study of religion through an exploration of various methodologies available for a critical, reflective investigation of the study of religion. **Credits:** 3.00

REL 20100 - Interpretation Of The New Testament

Credit Hours: 3.00. An investigation of the religious content of the Christian Scriptures in light of the historical, social, and intellectual contexts out of which they emerged. Other canons and extra-canonical interpretations of the New Testament will also be investigated. **Credits:** 3.00

REL 20200 - Interpretation Of The Old Testament

Credit Hours: 3.00. An investigation of the religious content of documents Christians call the "Old Testament" in light of the historical, social, and intellectual contexts out of which they arose. The student will be introduced to problems and methods in their interpretation. **Credits:** 3.00

REL 20300 - Theology Of Paul

Credit Hours: 3.00. A critical examination of the Pauline and Deutero-Pauline epistles, the book of Acts, and other first century texts associated with Paul of Tarsus. Students will be introduced to problems and methods in the interpretation of ancient texts. **Credits:** 3.00

REL 20400 - Introduction To Christian Theology

Credit Hours: 3.00. This course is an introductory survey of the goals and aims of theology in the Christian tradition. Focus is on the content of Christian theology, its methodological presuppositions and principles of development. **Credits:** 3.00

REL 23000 - Religions Of The East

Credit Hours: 3.00. (PHIL 33000) A study of the history, teaching, and present institutions of the religions of India, Southeast Asia, China, and Japan. This will include Hinduism, Jainism, Sikhism, Buddhism, Confucianism, Taoism, Shintoism, and Zoroastrianism. **Credits:** 3.00

REL 23100 - Religions Of The West

Credit Hours: 3.00. (PHIL 33100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam. **Credits:** 3.00

REL 24000 - Engaging Religious Diversity

Credit Hours: 3.00. The course offers students case-based explorations of local and global religious diversity in various cultural contexts. Religious diversity in secular spaces and the significance of religion for shaping community identities will be examined from multiple disciplinary perspectives. Students will analyze religious representations and influences in the public sphere by studying examples from different genres and media. Additionally, this course offers students opportunities to improve their religious literacy and gain real-world experience through experiential learning projects. **Credits:** 3.00

REL 25000 - A History Of The Christian Afterlife

Credit Hours: 3.00. An exploration of the ways Christians have envisioned the afterlife, including New Testament descriptions. Apocryphal notions, Patristic conceptions, mystical and 19th century descriptions of heaven as sexual union, and 20th century understandings of the afterlife as a "process of education". **Credits:** 3.00

REL 26400 - The Bible As Literature

Credit Hours: 3.00. A literary study of selections from the Old and New Testaments as examples of Hebrew and early Christian literature.**Credits:** 3.00

REL 31700 - Ancient Judaism And Early Christianity

Credit Hours: 3.00. This course is a study of the emergence of Judaism and the rise of Christianity out of roots in the history of ancient Israel. This will include noticing the effects of Greek culture, evidence of anti-Semitism and admiration of the Jews, conversion in a setting of religious pluralism, and the development of Jewish and Christian self-definition in this climate. **Credits:** 3.00

REL 31800 - The Bible And Its Early Interpreters

Credit Hours: 3.00. This course will start with observation of the development of early themes in later parts of the Hebrew Bible and proceed to the on-going influence of these themes in Jewish literature outside the Hebrew canon (apocrypha, pseudepigrapha, targums, midrash, Josephus, Philo, and other Hellenistic Jewish authors), as well as in pagan literature of this era and in early Christian literature, particularly the New Testament. **Credits:** 3.00

REL 35100 - Christian Mysticism

Credit Hours: 3.00. A critical, historical examination of the development of Christian mystical thought, beginning with its earliest intimations in the Hebrew Scriptures, the thought of Plato and Aristotle and continuing through Patristic, Medieval, Renaissance, Reformation, Counter-Reformation and Modern periods to the present. **Credits:** 3.00

REL 45000 - Christian Ethics

Credit Hours: 3.00. The course explores the historical development of Christian moral theology, from pre-Christian times to the present. It includes a study of Biblical moral conceptions, patristic, medieval, Enlightenment, modern, and contemporary understandings of Christian ethics. **Credits:** 3.00

REL 45100 - Christology

Credit Hours: 3.00. The course examines the historical development of Christological doctrine in the Christian faith from the age of the New Testament to the late 20th/early 21st century, paying special attention to the New Testament and conciliar formulations. **Credits:** 3.00

REL 45200 - Systematic Theology

Credit Hours: 3.00. An introduction to the nature, tasks, and methods of what Christians have called "systematic theology", historically conceived through an exploration of the writings of figures such as Augustine, Aquinas, Melancthon, John Calvin, Barth, and Paul Tillich. **Credits:** 3.00

REL 49100 - Special Topics In Religious Studies

Credit Hours: 3.00. Investigation of a special topic in Religious Studies. The topic will vary from semester to semester.**Credits:** 3.00

Russian

RUSS 10100 - Russian Level I

Credit Hours: 4.00. A beginning course in Russian which builds basic skills in speaking, oral comprehension, reading, and writing in Russian through class participation, structured conversation, and short writing assignments. **Credits:** 4.00

RUSS 10200 - Russian Level II

Credit Hours: 4.00. Continuation of RUSS 10100. Further work on developing skills in speaking, oral comprehension, reading, and writing in Russian through class participation, structured conversation, and short writing assignments. **Credits:** 4.00

RUSS 11100 - Conversation Supplement To Russian Level I

Credit Hours: 1.00. Basic development of intonation patterns, formulas for question and response in a variety of situations. Activization of basic Russian vocabulary and grammar. May be taken concurrently with RUSS 10100. **Credits:** 1.00

RUSS 11200 - Conversation Supplement To Russian Level II

Credit Hours: 1.00. Guided practice in conversation based on vocabulary and grammar learned in RUSS 10200. May be taken concurrently with RUSS 10200. **Credits:** 1.00

RUSS 20100 - Russian Level III

Credit Hours: 4.00. An intermediate-level course designed to develop higher skills in speaking, listening, reading, and writing Russian, as well as in intercultural competence and communication through further work on conversational and writing ability. Students work individually and in small groups using authentic reading and audio materials. **Credits:** 4.00

RUSS 20200 - Russian Level IV

Credit Hours: 4.00. Continuation of RUSS 20100. Development of Russian language skills at the higher intermediate level in speaking, listening, reading, writing, and in cultural competence. Conversational and writing ability receive prominence, as well as a review of Russian grammar. Students continue working with authentic reading and audio materials individually and in small groups. **Credits:** 4.00

RUSS 21100 - Conversation Supplement To Russian Level III

Credit Hours: 1.00. Guided practice in conversation based on vocabulary, grammar, and readings covered in RUSS 20100. May be taken concurrently with RUSS 20100. **Credits:** 1.00

RUSS 21200 - Conversation Supplement To Russian Level IV

Credit Hours: 1.00. Guided practice in conversation, based on vocabulary, grammar, and readings covered in RUSS 20200. May be taken concurrently with RUSS 20200. **Credits:** 1.00

RUSS 29800 - Special Topics In Russian

Credit Hours: 3.00. Studies of particular aspects of Russian (e.g. culture, civilization, linguistics, literature, film, etc.) by examining varied selection of works. Readings, discussion, and papers in English. **Credits:** 3.00

RUSS 30100 - Russian Level V

Credit Hours: 3.00. Continued development of Russian speaking, listening, reading, and writing abilities, using material dealing primarily with everyday life and civilization in the Soviet Union from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Russian. **Credits:** 3.00

RUSS 30200 - Russian Level VI

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Russian, on the basis of materials dealing with the ideas and events that have shaped present-day Russia and the Soviet Union. Conducted primarily in Russian. **Credits:** 3.00

RUSS 31100 - Russian Conversation I

Credit Hours: 1.00. Guided practice in conversation on a variety of assigned and spontaneous topics to enhance communicative competence and develop oral and aural abilities. Small group discussions in Russian on various topics. May be taken alone or concurrently with RUSS 30100 or above. May be repeated for credit. **Credits:** 1.00

RUSS 33000 - Russian And East European Cinema

Credit Hours: 3.00. Viewing and analysis of significant Russian and East European films. Evolution of the Russian and East European cinema, its place in world cinema, and its relation to cultural, political, and social trends. Cinematic adaptation of literary and theatrical works. Knowledge of Russian or East European languages not required. **Credits:** 3.00

RUSS 33100 - Post-Soviet Russian Cinema

Credit Hours: 3.00. Viewing and analysis of significant post-Soviet Russian films, providing an understanding of the nuanced sociopolitical situation in contemporary Russia. Evolution of Russian cinema in the post-Soviet era, its place in world cinema, and its relation to cultural, political, and social trends. The course builds an understanding of the Russian political, historical, and cultural context through an exploration of cinematic artistry. It presents and analyzes films that depict aspects of contemporary Russia, covering subjects from the collapse of the Soviet Union to the rise and hold on power of Vladimir Putin, through cinematic adaptation of literary and theatrical works. Conducted in English. Knowledge of Russian is not required. **Credits:** 3.00

RUSS 34100 - Russian Literature In The Nineteenth Century

Credit Hours: 3.00. Selected Russian poetry, prose, and drama from the Kievan period to 1900 in historical and cultural context. Students will write critical essays on literary topics. Conducted largely in Russian. **Credits:** 3.00

RUSS 34200 - Revolution, Repression, Renewal: Soviet Literature And Beyond

Credit Hours: 3.00. Selected Russian poetry, prose, and drama of the 20th century in historical and cultural context. Students will read and discuss major authors and texts and will write critical essays on literary topics. Conducted largely in Russian. **Credits:** 3.00

RUSS 38000 - Russian Culture And Civilization I

Credit Hours: 3.00. This course traces the intellectual and cultural development of Russia, starting with the founding of the Kievan state and continuing to the last days of the Russian Empire. No knowledge of Russian is required. **Credits:** 3.00

RUSS 38100 - Russian Culture And Civilization II

Credit Hours: 3.00. This course traces the intellectual and cultural development of Russia from the revolutionary period to the present. No knowledge of Russian is required. **Credits:** 3.00

RUSS 39900 - Special Study Abroad Credit In Russian

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Russian earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

RUSS 40100 - Russian Level VII

Credit Hours: 3.00. Advanced work on development of Russian speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in Russia and the Soviet Union. Conducted primarily in Russian. **Credits:** 3.00

RUSS 40200 - Russian Level VIII

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in Russian. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted primarily in Russian. **Credits:** 3.00

RUSS 41100 - Advanced Russian Conversation I

Credit Hours: 1.00. Guided practice in conversation on a variety of advanced assigned and spontaneous topics to enhance communicative competence and develop oral and aural abilities. Small group discussions in Russian on various topics. May be taken alone or concurrently with RUSS 40100 or above. May be repeated for credit. **Credits:** 1.00

RUSS 42400 - Business Russian

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking. **Credits:** 3.00

RUSS 49700 - Topics In Russian Literature

Credit Hours: 3.00 to 6.00. This course provides in-depth study of a particular author or facet of the Russian literary tradition. Possible topics include Dostoevsky and His Age; The Art and Thought of Leo Tolstoy; Russian Romanticism: Pushki, Gogol, Lermontov; The Russian Stage: Theater in Russia and the Soviet Union. **Credits:** 3.00 to 6.00

RUSS 49800 - Topics In Russian Culture

Credit Hours: 3.00 to 6.00. This course provides a sustained examination of some aspect of Russian culture or a topic relevant to Russian cultural studies. Topics may include Russia Confronts the East; The Caucasus: An Introduction; Popular Culture in Russia. **Credits:** 3.00 to 6.00

RUSS 56100 - The Structure Of Russian I: Phonology And Syntax

Credit Hours: 3.00. This course treats the sound system and sentence structure of Russian, dealing with the structural pattern on various levels (phonetic, phonemic, syntactic) from various points of view. One weekly class is devoted to theoretical issues affecting Russian phonology and syntax.**Credits:** 3.00

RUSS 56200 - The Structure Of Russian II: Morphology

Credit Hours: 3.00. This course will present a systematic study of Russian morphology in the light of current linguistic research, dealing both with the various categories of inflected words (nouns, pronouns, adjectives, verbs) and with word formation.**Credits:** 3.00

RUSS 59000 - Directed Reading In Russian

Credit Hours: 1.00 to 4.00. Directed readings in Russian. Permission of instructor required. **Credits:** 1.00 to 4.00

RUSS 59600 - Special Topics In Russian Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

Sociology

SOC 10000 - Introductory Sociology

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology **Credits:** 3.00

SOC 22000 - Social Problems

Credit Hours: 3.00. Contemporary problems at the community, society, and international levels, focusing on patterns of social organization and social change in American society, with concentration on such topics as technological militarism and war, poverty, racism, political protest, and cybernation. CTL:ISH 1061 Social Problems **Credits:** 3.00

SOC 26700 - Religion In The Modern World

Credit Hours: 3.00. A sociological overview of religious change in the modern world covering topics such as secularization, religious freedom, religious and ethnic conflicts, the mutual impacts between religion and various social institutions, such as the family, economy, politics, education, and international relations. The thematic and regional foci may vary when the course is offered in different semesters, but the course will emphasize the sociological approach to understanding religion from a global-comparative perspective. **Credits:** 3.00

SOC 27500 - Sociology Of Aging And The Life Course

Credit Hours: 3.00. An examination of research on the social context of human aging, including demographic and developmental changes. A life course perspective is emphasized for studying health, life events, and quality of life. Considers exceptional longevity in comparative perspective. **Credits:** 3.00

SOC 28500 - Criminal Law And Procedure

Credit Hours: 3.00. This course will introduce students to the fundamental role of law in the American criminal justice arena with an overview on general legal principles, the contemporary form and function of criminal laws in today's American society. The course provides a survey on Substantive Criminal Laws emphasizing definitions of a criminal act, elements of criminal culpability, constitutional limitations on declaring certain conduct criminal, and the purposes of punishment. An overview on

criminal procedure defined through federal and state case law will guide understanding on guidelines governing lawful law enforcement procedures and practices, courtroom decorum and admissibility. Emphasis is given on the role of technology in law enforcement to include Fourth Amendment search and seizure, Fifth Amendment right of privacy and electronic surveillance, self-incrimination, and other topics concerning balance of powers pertaining to rights of citizens and rights of state. **Credits:** 3.00

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.**Credits:** 3.00

SOC 32400 - Criminology

Credit Hours: 3.00. (CRJU 32400) Nature and cause of crime; methods of dealing with adult and juvenile offenders, consideration of present programs for the social treatment of crime in the light of needed changes. **Credits:** 3.00

SOC 32600 - Social Conflict And Criminal Justice

Credit Hours: 3.00. This course examines the dynamics of social conflict, with a special focus on legal institutions and criminological processes. Students will learn to think more analytically about the causes of social conflict, its dynamics, and strategies for resolution. **Credits:** 3.00

SOC 32700 - Crime, Deviance And Mass Media

Credit Hours: 3.00. Various forms of mass media are used to explore the sociology of crime and deviance. Topics may include white collar crime, juvenile delinquency, street crime, sexuality and sexual orientation, hate crimes, deviance and community. Assignments include quizzes and short papers. **Credits:** 3.00

SOC 32800 - Criminal Justice

Credit Hours: 3.00. Introduction to institutionalized responses of society to the problem of crime. Analysis of the administration of justice in each of the major components of the criminal justice system and laws regulating their operations. Some consideration given to comparative criminal justice. CTL:ISH 1030 Introduction To Criminal Justice **Credits:** 3.00

SOC 33400 - Urban Sociology

Credit Hours: 3.00. Development of the city and its functions; types of social behavior in cities; influences of city life on personality; city planning. **Credits:** 3.00

SOC 33500 - Political Sociology

Credit Hours: 3.00. Analysis of the social and social psychological sources of routine political participation such as voting and interest group activity, and nonroutine political action such as protest movements and revolution; the organization of power at the community, national, and international level; and political ideology. **Credits:** 3.00

SOC 33800 - Global Social Movements

Credit Hours: 3.00. Explores dynamics of social movements in the world; emphasizes movements in non-western world. Examines emergences of movements, mobilization, tactical actions and consequences, and formal and informal organizations within movements to understand how international, national and local structures affect people. **Credits:** 3.00

SOC 33900 - Sociology Of Global Development

Credit Hours: 3.00. Analysis of the causes and consequences of global development. Topics include: globalization; colonialism and decolonization; food insecurity and dependency; industrialization, poverty and inequality; migration; debt and trade; women's empowerment; global health; rights and social change; and sustainable development. This course will introduce you to the study of global development and globalization. The primary questions we will address are: What is development? What is globalization and what is its relationship with development? How have the processes of global development produced inequalities among nations, regions, races, genders, and classes? Is there a "developing" world and a "developed" world? If so, what are their differences and how do they relate with each other? How have some developing countries become more developed than others? What roles do corporations, the state, and civil society organizations play in the processes of global development? How is global development interrelated with the physical environment, inequalities of consumption, and the environmental crisis? How do people resist the inequalities and perceived injustices of global development through global social movements? How are we interconnected economically, politically, culturally, socially, and ecologically with people all over the world? What are the possible futures of development? To address these issues, our focus will be on the developing world, our scope will be global and long-term, our methodology will be historical-comparative, and our perspective will be social-scientific and critical. **Credits:** 3.00

SOC 34000 - General Social Psychology

Credit Hours: 3.00. Social influences on the individual and processes of social interaction. Individual attitudes and behavior as related to socialization, social norms, social roles, communication and propaganda, and other social influences. Among the interaction processes considered are interpersonal attraction, influence, leadership, cooperation, and conflict. Not open to students with credit in PSY 24000. **Credits:** 3.00

SOC 34400 - Environmental Sociology

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class. **Credits:** 3.00

SOC 34500 - Analyzing Culture On TV

Credit Hours: 3.00. This course uses television shows to explore sociological perspectives on culture. The premise of this class is that we can learn a great deal about how culture is constructed, shared, consumed, and contested from watching (and critically analyzing) television shows. We will read theoretical and empirical work about how culture is defined in the social sciences and some of the leading approaches to studying culture in sociology, and then use those concepts to analyze popular television shows. The study of culture centrally concerns the place of meaning in human life, and we will explore how television shapes and is shaped by culture. We will consider how signs, symbols, language, conceptual structures, forms of knowledge, and forms of power interact to create meaning in our life. Cultural change both produces and is produced by changes in meaning, and we will investigate how cultural change occurs, with a focus on topics like changes to American cultures of love, work, religion, and politics. **Credits:** 3.00

SOC 35000 - Sociology Of Family

Credit Hours: 3.00. Designed to provide an understanding of contemporary courtship, marriage, and family interaction as cultural, social, and social-psychological phenomena. Consideration of the major sources of marital strain and conflict within a heterogeneous, rapidly changing society. **Credits:** 3.00

SOC 35200 - Drugs, Culture, And Society

Credit Hours: 3.00. The course provides an overview of the social and cultural underpinnings of drug use across societies. Students engage with various topics, including addiction, global markets, drug epidemics, public policy, and cross-cultural differences in drug use. **Credits:** 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion. **Credits:** 3.00

SOC 36700 - Religion In America

Credit Hours: 3.00. Examines the social dimensions of religion in American life; religion in American culture; social profiles of America's religious groups, trends in individual religious commitment; and religion's impact on American life. **Credits:** 3.00

SOC 36800 - The Social Significance Of Religion

Credit Hours: 3.00. Examines religion's relationship with family, work, politics, gender, war and peace, race and ethnicity, health, crime and deviance, education, law, and poverty. Content differs each time course is taught. **Credits:** 3.00

SOC 36900 - Religion And Chinese Society

Credit Hours: 3.00. This course provides an overview of various religions in contemporary China, examines religiosity at the micro, meso and macro levels, and discusses the mutual impacts between religion and social, cultural and political life in Chinese societies. **Credits:** 3.00

SOC 37400 - Medical Sociology

Credit Hours: 3.00. Medical sociology provides an overview of the social determinants of health and health disparities, the experience of illness and being a patient, the organization of the medical profession, and the health care system in the United States as well as other areas of the world. **Credits:** 3.00

SOC 37700 - Sociology Of Mental Health

Credit Hours: 3.00. Examines social influences and consequences of mental health and illness. Considers definitions of psychological disorders, stress, stigma, labeling, and treatments. **Credits:** 3.00

SOC 38100 - Data And Society

Credit Hours: 3.00. We are currently witnessing amazing technological innovations brought about by the production, accumulation, and analysis of unimaginable amounts of data. These technologies are disrupting industries, creating new classes of wealthy and poor, and providing novel opportunities for social control and resistance. This course will look at how the

increasing centrality of data is changing our world. Among the questions we will answer: What's so big about Big Data? How intelligent is artificial intelligence? Why does everyone want my data? Will there still be jobs when I graduate? **Credits:** 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis. **Credits:** 3.00

SOC 38300 - Introduction To Research Methods In Sociology

Credit Hours: 3.00. Introduction to the methods of data collection and analysis and to the use of the scientific method of social research. Formulation of hypotheses and research designs for their testing. Elementary principles for the conduct of experiments, observation and interviewing, documentation, content analysis, and surveys. Relationship between social research and social theory. **Credits:** 3.00

SOC 39000 - Individual Research In Sociology

Credit Hours: 1.00 to 3.00. Individual research or reading in an area of sociology under the guidance of a Sociology faculty member. Permission of instructor required. **Credits:** 1.00 to 3.00

SOC 39100 - Selected Topics In Sociology

Credit Hours: 1.00 to 3.00. Various topics in sociology that may change from semester to semester are presented by Sociology faculty members. **Credits:** 1.00 to 3.00

SOC 39103 - Applied Internship In Sociology

Credit Hours: 0.00 to 3.00. Internships offer experiential learning opportunities where students can apply classroom knowledge and develop practical skills while earning academic credit. Permission of department required.**Credits:** 0.00 to 3.00

SOC 40200 - Sociological Theory

Credit Hours: 3.00. An advanced critical treatment of the theories, concepts, and methods of sociology. A basic course required of undergraduate majors in sociology. **Credits:** 3.00

SOC 40900 - Social Networks

Credit Hours: 3.00. Social networks are patterns of social relationships among people, organizations, and other entities (words, events, etc.) that allow communication and influence and provide a context for social life. This course considers social networks both on and off the internet that are important in people's lives for finding dates, getting jobs, maintaining friends and family, finding and maintaining identities, belonging to groups, and communication and influence more generally. **Credits:** 3.00

SOC 41100 - Social Inequality

Credit Hours: 3.00. Examination of systems of class and caste, with special attention to the United States; status, occupation, income, and other elements in stratification. **Credits:** 3.00

SOC 41900 - Sociology Of Law

Credit Hours: 3.00. Provides an overview of American legal thought and legal processes. Major topics include definitions of law; anthropological studies of law; origin and development of law; jurisprudence; police behavior; lawyers and courts; deterrent and labeling effects of legal sanctions. **Credits:** 3.00

SOC 42100 - Juvenile Delinquency

Credit Hours: 3.00. A study of social and psychological factors influencing individual delinquent behavior patterns. Emphasis on preventive and rehabilitative programs and the role of community agencies such as social service agencies, juvenile courts, and youth authorities. Visits to selected organizations and institutions. **Credits:** 3.00

SOC 42300 - Field Practicum In Sociology And Law And Society

Credit Hours: 4.00. Field experience in criminal justice system or social services. Students serve as "interns" in a criminal justice or social service agency one day (or its equivalent) per week, under the supervision of agency personnel. Application of theory and empirical research findings to field problems. Permission of instructor required. **Credits:** 4.00

SOC 42600 - Social Deviance And Control

Credit Hours: 3.00. Sociological and social psychological study of social control and social deviance. Emphasis on theoretical frameworks and empirical research. Consideration also given to specific areas such as substance abuse, suicide, violence, and deviant collective behavior. **Credits:** 3.00

SOC 42900 - Sociology Of Protest

Credit Hours: 3.00. This course focuses on the sociological study of protest. Topics include protest emergence, individual reasons for participation in protest, and outcomes. Course readings cover protest in the United States as well as other cultural contexts. **Credits:** 3.00

SOC 43000 - Sociology of Aging

Credit Hours: 3.00. Examination of the theories of aging, problems confronting older persons, and programs designed to assist the elderly. Consideration of social aspects of aging in the U.S. in the areas of retirement, employment, housing, income, health care, and the family relationships with cross-cultural and a historical comparisons. Typically offered Fall Spring Summer.**Credits:** 3.00

SOC 43200 - Work In Contemporary America

Credit Hours: 3.00. Examines meaning and organization of work in technological society, including job satisfaction, alienation, mobility, conflict, stratification, and unemployment and the impact of race-sex composition of occupations on mobility and politics. Also considers relations with colleagues, organization, clients, and public. **Credits:** 3.00

SOC 45000 - Gender Roles In Modern Society

Credit Hours: 3.00. A critical examination of the complementary roles of men and women, with particular attention to problems of role adjustment in the contemporary United States. The neofeminist movement and countermovements. Role conflicts and adjustments in such areas as family, education, employment, and the political arena. **Credits:** 3.00

SOC 46100 - Health And Social Behavior

Credit Hours: 3.00. This course provides a sociological examination of health and illness, with a particular focus on social position (e.g., race, socioeconomic status, gender), stress and social support, and health care. Goals for this course include developing critical thinking skills, understanding the broader implications of issues related to health, and thinking creatively about potential societal solutions to these issues. **Credits:** 3.00

SOC 48900 - Research Internship In Sociology And Law And Society

Credit Hours: 3.00 to 6.00. Course organized around internship experience in organizations that collect or analyze data from surveys, social media, focus groups, interviews, or experiments. Completion of 60 credits with a minimum GPA of 3.0, including 15 credits of Sociology with a minimum grade of B in SOC 10000, SOC 38200, and SOC 38300. Permission of instructor required. **Credits:** 3.00 to 6.00

SOC 49300 - Interdisciplinary Undergraduate Seminar

Credit Hours: 1.00 to 3.00. An undergraduate seminar devoted to an interdisciplinary examination of social, economic, political, and intellectual movements, using the faculty resources of the participating departments. Subject matter will vary. Each offering of the seminar will be approved by a committee of department heads from the sponsoring departments. Permission of instructor required. **Credits:** 1.00 to 3.00

SOC 49700 - Senior Honors Seminar

Credit Hours: 3.00. A critical examination of some major works in sociology and anthropology, both classical and modern, and of some current theoretical and substantive issues in these disciplines. Open only to students in the departmental honors program. **Credits:** 3.00

SOC 49800 - Senior Honors Paper

Credit Hours: 3.00. The production of a major paper on a topic selected by the student in consultation with the instructor. The students will meet early in the semester for orientation and discussion of topics; in the middle of the semester for progress reports; and late in the semester for presentation and critique of their papers. Open only to students in the departmental honors program. **Credits:** 3.00

SOC 51400 - Racial And Cultural Minorities

Credit Hours: 3.00. America's minority groups; immigration; interracial and intercultural conflicts; assimilation. **Credits:** 3.00

SOC 52500 - Social Movements

Credit Hours: 3.00. A history of social movements and social movement theories from the 19th through the 20th centuries, focused on Western Europe and the USA, although students are encouraged to explore new theories and new movements for their course projects. **Credits:** 3.00

SOC 53100 - Community Organization

Credit Hours: 3.00. A history of communities and community studies from pre-contact North America to the present (including virtual communities, which students may choose to study for their course projects). **Credits:** 3.00

SOC 57000 - Sociology Of Education

Credit Hours: 3.00. Analysis of the American public school as a social organization. Includes: interrelations among community power structure, social stratification, and the school; the roles of superintendent, principal, and teacher in community and school; the classroom as a social system; student culture; and teaching as a profession. **Credits:** 3.00

SOC 57200 - Comparative Healthcare Systems

Credit Hours: 3.00. Using cost, quality, and access to care as core concepts, this course explores healthcare in comparative context. Special topics are health and gender, the environment, epidemics, long-term care, technology, and rationing, among others. **Credits:** 3.00

SOC 57300 - The Human Side Of Medicine

Credit Hours: 3.00. Focuses on sociological theory and research related to social conflicts over the delivery of healthcare in the U.S. Considers social issues pertaining to abortion, AIDS, human experimentation, reproductive technologies, euthanasia, and others. **Credits:** 3.00

SOC 57400 - The Social Organization Of Healthcare

Credit Hours: 3.00. Analysis of the determinants and consequences of the social organization of medical care. Considers morbidity and mortality, costs and utilization of medical services, healthcare occupations and institutions, and change in programs and policies. **Credits:** 3.00

SOC 57600 - Health And Aging In Social Context

Credit Hours: 3.00. Analysis of the social and cultural influences on health in adulthood and later life. Considers distribution of illness among older adults, health behavior, and health services use, including long-term care. **Credits:** 3.00

SOC 58000 - Methods Of Social Research I

Credit Hours: 3.00. An intermediate-level examination of research designs, measurement, and sampling with emphasis on issues of problem formulation and the logic and application of methodological procedures. **Credits:** 3.00

SOC 58100 - Meth Soc Research II

Credit Hours: 3.00. Emphasis on statistical inference applied to sociological problems; topics include the binomial distribution and the logic of inference, one and two sample tests, confidence intervals, and chi-square. Introduction to bivariate correlation and regression, analysis of variance. **Credits:** 3.00

SOC 58300 - Application Of Social Research Methods

Credit Hours: 3.00. Specific methods of survey research, including questionnaire construction, and sampling techniques, as well as case studies and field experiments are covered. Emphasis is on the use of such methods and their implications for the nature of social data. Permission of instructor required. **Credits:** 3.00

SOC 59000 - Individual Research Problems

Credit Hours: 1.00 to 3.00. Individual research or reading in an area of sociology under a Sociology department staff member. Does not include thesis work. Permission of instructor required. **Credits:** 1.00 to 3.00

SOC 59100 - Selected Topics In Sociology

Credit Hours: 1.00 to 3.00. Topics vary. **Credits:** 1.00 to 3.00

SOC 60000 - Development Of Sociological Theory

Credit Hours: 3.00. The development of sociological thought in Western Europe and subsequently in the United States from the publication of Marx's early manuscripts through the sociological writings of the 1940s. **Credits:** 3.00

SOC 60200 - Contemporary Sociological Theories

Credit Hours: 3.00. A companion course to SOC 60000. Examination of the works of recent and contemporary sociological theorists such as Durkheim, Weber, Pareto, Parsons, and Merton, and of major theorists in related disciplines such as Marx, Freud, and Malinowski. Includes an examination of major "schools" or frames of reference such as ecology, structural-functionalism, etc. **Credits:** 3.00

SOC 60900 - Seminar In Sociology

Credit Hours: 3.00. Topics vary. **Credits:** 3.00

SOC 61000 - Seminar On Teaching Sociology

Credit Hours: 3.00. Acquaints students with the literature on teaching sociology and its issues and provides practice instruction through videotaped microteaching, syllabus and examination construction, etc. A theoretical or research paper is required. Prerequisite: Master's student standing. **Credits:** 3.00

SOC 61100 - Social Inequality: Class, Race, And Gender

Credit Hours: 3.00. Survey of major approaches (functional, status attainment, labor market, class, culture) to the sociological study of inequality, including qualitative and quantitative, historical and comparative studies. Students will be asked to complete a project analyzing inequality, which might provide the basis for a publishable paper. Prerequisite: Master's student standing and Sociology majors only. **Credits:** 3.00

SOC 63000 - Seminar In Political Sociology

Credit Hours: 3.00. Intensive consideration of a selected topic or set of topics in political sociology such as political socialization, political movements, comparative political analysis, political ideology in the industrialized West. **Credits:** 3.00

SOC 65900 - Seminar In Marriage And The Family

Credit Hours: 3.00. Seminar in Marriage and the Family. Offered in alternate years. **Credits:** 3.00

SOC 66700 - Seminar In The Sociology Of Religion

Credit Hours: 3.00. Examines topics of traditional or emerging interest in the sociology of religion. Topics covered depend on the theoretical research interests of participating faculty and students.**Credits:** 3.00

SOC 67400 - Seminar In Medical Sociology

Credit Hours: 2.00 or 3.00. Seminar in Medical Sociology. Prerequisite: SOC 57400. **Credits:** 2.00 or 3.00

SOC 67700 - Research Seminar On Aging And The Life Course

Credit Hours: 1.00. An interdisciplinary seminar examining recent research on aging and the responsible conduct of research. Emphasis is given to professional development in gerontology and related fields. **Credits:** 1.00

SOC 68000 - Advanced Social Research Methods

Credit Hours: 3.00. Survey analysis using regression models. Emphasizes ordinary least squares model applied to sociological problems. Also considered are path analysis and logit and logistic regression. A series of projects are required using the PUCC mainframe computer applying course concepts. Prerequisite: SOC 58100 or SOC 60000. **Credits:** 3.00

SOC 68100 - Selected Problems Of Social Research

Credit Hours: 3.00. Working with already available data, each student will conduct one or more research projects, including conceptualization, operational procedures, analysis of the data, and report writing. The data to be used may be from surveys, small group studies, organizational studies, or written documents. Prerequisite: SOC 60000 or SOC 68000. Permission of instructor required. **Credits:** 3.00

SOC 68600 - Qualitative Methods

Credit Hours: 3.00. Surveys qualitative research methods. Considers methods of data collection and data analysis, including computer-assisted techniques. Critical examination of perspectives, assumptions, and issues, including protection of human subjects. Students conduct research projects and write papers using techniques encountered in class. Prerequisite: SOC 58000. **Credits:** 3.00

SOC 69300 - Interdisciplinary Seminar

Credit Hours: 3.00. A seminar on a topic of interdisciplinary interest, taught in cooperation with a member of another department. **Credits:** 3.00

SOC 69500 - Analytic Project In Sociology

Credit Hours: 3.00 or 6.00. Designed to provide experience in defining a research problem, in assessing knowledge and research about the problem, and in analysis. Prerequisite: SOC 58000, SOC 58100. Permission of instructor required. **Credits:** 3.00 or 6.00

SOC 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Space Force Training

SFT 11000 - Foundations Of The Space Force I

Credit Hours: 1.00. A survey of officership, professionalism, communications skills, the Space Force organization and its mission. Emphasis is placed on helping students understand what they will experience as a Space Force officer.**Credits:** 1.00

SFT 12000 - Foundations Of The Space Force II

Credit Hours: 1.00. A survey of Space Force installation design and location, Space Force professions, principles of spaceflight and the space environment, geopolitics, defense policy and strategy, and the Space Force's partner services in the Department of Defense. Emphasis is placed on helping students understand what they will experience as a Space Force officer.**Credits:** 1.00

SFT 23000 - Evolution Of Space Power

Credit Hours: 1.00. An exploration of Space Force heritage and leaders and an examination of distinctive space power capabilities and functions. Its purpose is to instill an appreciation of space power development and employment, while continuing to develop cadet communication skills.**Credits:** 1.00

SFT 24000 - Team And Leadership Fundamentals

Credit Hours: 1.00. This course provides a fundamental understanding of both leadership and team building. Topics include leadership principles, conflict and stress management, and ethical decision making in the context of space Force officership.**Credits:** 1.00

SFT 35100 - Space Security, Law, Policy, And Doctrine I

Credit Hours: 3.00. An examination of space law and policy at the national and international levels with particular focus on the Outer Space Treaty of 1967 and the United Nations' Remote Sensing Principles. Students examine how these laws and policies are viewed in real-world situations.**Credits:** 3.00

SFT 36100 - Space Security, Law, Policy, And Doctrine II

Credit Hours: 3.00. This course address the use of space power as an instrument of national power, emphasizing Space Force doctrine, joint doctrine, and space as an operational domain of war. Students examine both the United States' and other nations' space security programs and how international partners and adversaries view and apply space power.**Credits:** 3.00

SFT 47100 - National Security, Leadership Responsibilities, And Commissioning Preparation I

Credit Hours: 3.00. This course examines security challenges around the world and identifies how the Space Force and the other services are organized and employed in response to those challenges. Topics include fundamental aspects of command, the military justice system, and effective communication.**Credits:** 3.00

SFT 48100 - National Security, Leadership Responsibilities, And Commissioning Preparation II

Credit Hours: 3.00. This course addresses how the Space Force and the other services are organized and employed to respond to national security challenges. It also examines the military justice system and the responsibilities, authorities and functions of military command. Emphasizes the importance of effective communication.**Credits:** 3.00

Spanish

SPAN 1010N - First-Year Spanish I

Credit Hours: 3.00 to 5.00. Introductory Spanish language course. Emphasis on developing basic speaking, writing, listening and reading skills as well as awareness of Hispanic cultures.**Credits:** 3.00 to 5.00

SPAN 10100 - Spanish Level I

Credit Hours: 3.00. A beginning Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. Typically offered Fall Spring Summer. CTL:IWL 1910 Spanish Level I**Credits:** 3.00

SPAN 10200 - Spanish Level II

Credit Hours: 3.00. Continuation of SPAN 10100. CTL:IWL 1911 Spanish Level II**Credits:** 3.00

SPAN 10500 - Accelerated Basic Spanish

Credit Hours: 4.00. Accelerated Basic Spanish course that substitutes for SPAN 10100 and 10200.**Credits:** 4.00

SPAN 11200 - Elementary Spanish Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group; discussions in Spanish on various topics. Not open to students enrolled in or having credit for SPAN 20100 or above. **Credits:** 1.00

SPAN 20100 - Spanish Level III

Credit Hours: 3.00. An intermediate Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1912 Spanish Level III **Credits:** 3.00

SPAN 20200 - Spanish Level IV

Credit Hours: 3.00. Continuation of SPAN 20100. CTL:IWL 1913 Spanish Level IV**Credits:** 3.00

SPAN 20500 - Accelerated Intermediate Spanish

Credit Hours: 4.00. An accelerated intermediate Spanish course that substitutes for SPAN 20100 and 20200.**Credits:** 4.00

SPAN 21200 - Intermediate Spanish Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in Spanish conversation to enhance communicative competence. Small group discussions in Spanish on various topics. **Credits:** 1.00

SPAN 22400 - Spanish Level IV: Business Spanish

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed towards use of Spanish for business purposes. Course materials cover a variety of business aspects in several professions. **Credits:** 3.00

SPAN 23100 - Cervantes' Don Quixote

Credit Hours: 3.00. Reading and discussion of Cervantes' masterpiece. All readings, discussion, papers, and examinations will be in English. **Credits:** 3.00

SPAN 23500 - Spanish American Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected masterpieces of Spanish American literature. The course context will change from semester to semester. Knowledge of Spanish not required. **Credits:** 3.00

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.**Credits:** 3.00

SPAN 28000 - Second-Year Spanish: Special Topics

Credit Hours: 3.00. Selected topics on the civilization, culture, and literature of Spain and Spanish America. Lectures and readings primarily in English, but knowledge of Spanish at the first-year level necessary. **Credits:** 3.00

SPAN 30100 - Spanish Level V

Credit Hours: 3.00. Continued development of Spanish speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in the Spanish-speaking countries from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Spanish. **Credits:** 3.00

SPAN 30200 - Spanish Level VI

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Spanish on the basis of materials dealing with the ideas and events that have shaped the present-day Spanish-speaking countries. Conducted primarily in Spanish. **Credits:** 3.00

SPAN 30500 - Spanish For Heritage Speakers

Credit Hours: 3.00. This course is intended for the student whose home language is Spanish, but whose education has been exclusively in English. The students will first learn to read and write their native dialects and then the standard language using the orthographic norms of the standard language. **Credits:** 3.00

SPAN 30801 - Advanced Spanish For Heritage Speakers

Credit Hours: 3.00. This course is a continuation of SPAN 30500. It is an advanced grammar course designed for Spanish-English bilinguals exposed to Spanish as a minority/native language during early childhood or adolescence but who have not received formal instruction or education in the language. It aims to develop advanced grammar and writing skills. **Credits:** 3.00

SPAN 31200 - Advanced Spanish Conversation

Credit Hours: 1.00. One credit hour advanced Spanish conversation course focused on guided practice in conversation to enhance communicative competence. Discussions in Spanish on various topics. Course may be taken concurrently with SPAN 30100, 30200, 40100 or 40200. **Credits:** 1.00

SPAN 32100 - Introduction To Spanish For The Professions

Credit Hours: 3.00. Continued work at the advanced-intermediate level with a focus on vocabulary and grammar for contexts in a wide variety of professional settings. Conducted primarily in Spanish.**Credits:** 3.00

SPAN 32200 - Spanish For The Health Professions

Credit Hours: 3.00. Intermediate level course directed towards the use of Spanish in the health care professions. It covers specialized vocabulary from the medical fields, as well as grammar and syntax with the goal of developing speaking, listening, reading and writing abilities. Students will have the opportunity to apply their skills in practical contexts and discuss cultural considerations. **Credits:** 3.00

SPAN 32300 - Global Sustainable Engineering

Credit Hours: 1.00 to 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life. Taught in Spanish.**Credits:** 1.00 to 3.00

SPAN 32400 - Cultural Engineering Research In Spanish

Credit Hours: 1.00 to 3.00. The course will apply principles examined and mindsets developed during the Humanities-Informed Engineering Projects course to engineering projects in situ during an internship in the Spanish-speaking world. The local context of the students in this class (i.e., internship abroad) allows students to gain knowledge and practice with a humanistic-engineering framework situated in a particular community and professional setting. There are two, multistep main projects in this course: 1) Case study project and 2) Spanish language use and development project. To connect language learning and intercultural competence more strongly to the humanistic-engineering framework set up in the prior course, this course is conducted in Spanish.**Credits:** 1.00 to 3.00

SPAN 32500 - Spanish For Engineering And Technology

Credit Hours: 3.00. This is an intermediate-level course directed towards the use of Spanish in Engineering and Technology professions. It covers specialized vocabulary from the different technical areas, as well as grammar and syntax, with the goal of developing speaking, listening, reading, and writing abilities. Students will have the opportunity to apply their skills in practical contexts, including job interviews, internships, formal presentations and communication in the workplace.**Credits:** 3.00

SPAN 33000 - Spanish And Latin American Cinema

Credit Hours: 3.00. Screening and analysis of selected Spanish and Latin American films with readings and discussions relative to their historical, social, political, aesthetic, literary, and linguistic contexts. No knowledge of Spanish required. **Credits:** 3.00

SPAN 33500 - The Literature Of The Spanish-Speaking Peoples In The United States

Credit Hours: 3.00. Study of selected poetry, fiction, theatre, and essays written in the United States by Spanish-speaking writers; includes readings in the literature written in Spanish and English as well as bilingual poetry and prose. Conducted in Spanish and English. **Credits:** 3.00

SPAN 34100 - Hispanic Literature I: Poetry And Drama

Credit Hours: 3.00. Reading of selected poetic and dramatic texts from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish. **Credits:** 3.00

SPAN 34200 - Hispanic Literature II: Prose

Credit Hours: 3.00. Reading of selected novels and short fiction from Spain and Spanish-speaking America in their historical and cultural contexts. Readings, discussion, and papers in Spanish. **Credits:** 3.00

SPAN 36100 - The Structure Of Spanish I: Phonetics And Phonology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a contrastive Spanish/English perspective. One session per week devoted to pronunciation improvement. **Credits:** 3.00

SPAN 36200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish, focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.). **Credits:** 3.00

SPAN 38000 - Spanish Language And Culture Abroad

Credit Hours: 3.00 to 6.00. This course must be taken concurrently with participation in an experiential learning opportunity abroad (e.g., study abroad, internship) that requires a period abroad in a Spanish-speaking location. The course will guide students to improve their Spanish language abilities and gain cultural knowledge about their experiential learning location. This course, coupled with the immersion experience, will enhance student learning through Spanish language activities and also cultural research projects. Permission of instructor is required. **Credits:** 3.00 to 6.00

SPAN 39800 - Special Topics In Spanish

Credit Hours: 1.00 to 3.00. Studies of particular aspects of Spanish (e.g., culture, civilization, literature, linguistics, film, art, politics, etc.) by examining a varied selection of works. Readings, discussions, and papers in Spanish.**Credits:** 1.00 to 3.00

SPAN 39900 - Special Study Abroad Credit In Spanish

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Spanish earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

SPAN 40100 - Spanish Level VII

Credit Hours: 3.00. Advanced work on development of Spanish speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in the Spanish-speaking countries. Conducted primarily in Spanish. **Credits:** 3.00

SPAN 40200 - Spanish Level VIII

Credit Hours: 3.00. Spanish 40200 is a content-based course that includes an overview of Spanish grammar. Students will therefore be required to learn a considerable amount of information about the different aspects of the Hispanic, Peninsular and Latin American culture that will include history, politics, art, gastronomy, music, traditions, and literature, among others. **Credits:** 3.00

SPAN 41201 - Advanced Spanish Conversation II

Credit Hours: 1.00. This course is designed to help students use and improve their Spanish speaking and comprehensive skills. Students will be expected to actively participate in classroom discussions, prepare for class, and utilize the target language only. No textbook is needed.**Credits:** 1.00

SPAN 41500 - Spanish Translation And Interpreting

Credit Hours: 3.00. Introduction to the Translation and Interpretation Studies field for Spanish speakers. High level of competence in Spanish required. Overview of translation theory, methodology, and practice both in class and in real settings. Includes a service learning component. Conducted in English and Spanish. **Credits:** 3.00

SPAN 41900 - Directed Tutoring In Spanish

Credit Hours: 1.00 to 4.00. Guided practicum in tutoring Spanish, operation of a tutorial laboratory, and the rationale for audio tutorial second language learning. Students learn tutorial techniques, grade homework, and maintain records under the supervision of the SPAN 10100-SPAN 10200 course chairperson and experienced teaching assistants. Permission of instructor required. **Credits:** 1.00 to 4.00

SPAN 42400 - Business Spanish

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking. **Credits:** 3.00

SPAN 44400 - Advanced Communication In Spanish

Credit Hours: 3.00. Advanced-level communication course that delves into oral and written communication within the Spanish-speaking world, emphasizing cultural context and practical application. This course explores complex grammar structures, pronunciation, lexical variations, and intercultural differences in authentic scenarios. Students will enhance their Spanish language proficiency, focusing particularly on oral expression. Taught in Spanish.**Credits:** 3.00

SPAN 48000 - Spanish Civilization

Credit Hours: 3.00. The study of modern Spanish life, with special emphasis on social institutions and customs. Lectures in Spanish. **Credits:** 3.00

SPAN 48100 - Spanish Culture

Credit Hours: 3.00. The development of the cultural life of the Spanish people as reflected in the geography, history, music, art, and architecture of Spain. Lectures in Spanish. **Credits:** 3.00

SPAN 48200 - Latin American Civilization

Credit Hours: 3.00. Outline of Latin American history; the cultural heritage from Spain and from the pre-Spanish civilizations; the intellectual, social, and cultural progress of the Latin American countries. Lectures in Spanish. **Credits:** 3.00

SPAN 48300 - Latin American Culture

Credit Hours: 3.00. Study of Latin American cultures and U.S. Latino culture, from pre-Columbian times to the present. The course will focus on selected aspects of the cultures of Latin American groups. Conducted in Spanish. **Credits:** 3.00

SPAN 48500 - Food And Culture In The Hispanic World

Credit Hours: 3.00. Advanced-level language and culture course about food culture in the Spanish-speaking world. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of the Hispanic countries. Students will further develop their speaking, listening, reading and writing abilities in Spanish. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience. **Credits:** 3.00

SPAN 49800 - Advanced Topics In Spanish

Credit Hours: 1.00 to 3.00. Advanced studies of particular aspects of Spanish (e.g. culture, civilization, literature, linguistics, film, etc) by examining a varied selection of works. Readings, discussion, and papers in Spanish. **Credits:** 1.00 to 3.00

SPAN 51900 - Teaching College Spanish

Credit Hours: 3.00. A course designed to provide a forum for ideas connecting theory and research to teaching practice. Explores issues related to how learning and teaching can be enhanced and presents practical ideas that can be implemented in the classroom. Permission of instructor required. **Credits:** 3.00

SPAN 54000 - Spanish Literature Of The Middle Ages

Credit Hours: 3.00. A survey of Spanish Literature from 11th to the 15th century through the reading and discussion of representative prose, dramatic and poetic works. Lectures and supplemental readings on literary criticism and on various aspects of the period useful to an understanding of the literature it produced. Permission of instructor required. **Credits:** 3.00

SPAN 54100 - Spanish Literature Of The Golden Age

Credit Hours: 3.00. A survey of Spanish literature from 1500 to 1681. Reading and discussion of representative prose, dramatic and poetic works. Lectures and supplemental readings on literary criticism and on various aspects of the period useful to an understanding of the literature it produced. **Credits:** 3.00

SPAN 54200 - Cervantes Don Quijote

Credit Hours: 3.00. Reading and discussion of Don Quixote in the context of Spanish Renaissance literature and subsequent developments in the genre of the novel. **Credits:** 3.00

SPAN 54300 - Spanish Literature Of The 18th And 19th Centuries

Credit Hours: 3.00. The development of Spanish peninsular literature from Neoclassicism to Realism. Reading, analysis, and discussion of a representative selection of works of the periods. **Credits:** 3.00

SPAN 54500 - Spanish Literature Of The 20th Century

Credit Hours: 3.00. The study of major trends in Spanish peninsular literature from the generation of 1898 to the present. Reading, analysis, and discussion of a representative selection of works of the period. **Credits:** 3.00

SPAN 54900 - Hispanic Women Writers

Credit Hours: 3.00. A survey of the literature of Hispanic women writers from Latin America, the Caribbean, and Spain in light of their traditions and of feminist literary theory and criticism. Permission of instructor required. **Credits:** 3.00

SPAN 55000 - Spanish American Literature Of The Colonial Period

Credit Hours: 3.00. A survey of Spanish American literature of the colonial period. Reading and discussion of a number of representative works as well as excerpts from several others. **Credits:** 3.00

SPAN 55100 - Spanish American Literature Of The 19th Century

Credit Hours: 3.00. A survey of Spanish American literature of the 19th century. Reading and discussion of a number of representative works as well as excerpts from several others. **Credits:** 3.00

SPAN 55200 - Spanish American Literature From 1900 To 1970

Credit Hours: 3.00. A survey of Spanish American literature from 1900 to 1970. Readings and discussion of a number of representative works, as well as excerpts from several others. **Credits:** 3.00

SPAN 55300 - Spanish American Literature From 1970 - Present

Credit Hours: 3.00. A survey of Spanish American literature from 1970 to the present. Readings and discussion of a number of representative works, as well as excerpts from several others. **Credits:** 3.00

SPAN 55400 - Hispanic Caribbean Literature

Credit Hours: 3.00. This course focuses on various topics pertaining to Hispanic Caribbean literature. The particular works included will change each time the course is offered. All coursework and discussion is in Spanish. **Credits:** 3.00

SPAN 55500 - Latino/a Literature

Credit Hours: 3.00. This class offers an overview of U.S. Latino/a literature, written in Spanish and English and produced in the United States. It will introduce students to the many and diverse experiences of different Latino/a groups through their literary production. Permission of instructor required. **Credits:** 3.00

SPAN 55600 - Mexican Literature

Credit Hours: 3.00. A survey of Mexican literature. Reading and discussion of a number of representative works as well as excerpts from several others. Permission of instructor required. **Credits:** 3.00

SPAN 55700 - Argentine Literature

Credit Hours: 3.00. A survey of Argentine literature. Reading and discussion of a number of representative works as well as excerpts from several others and from standard anthologies. **Credits:** 3.00

SPAN 56100 - The Structure Of Spanish I: Phonetics, Phonology, And Dialectology

Credit Hours: 3.00. Linguistic analysis of Spanish phonology, phonetics, and dialectology. Selected topics within the areas of Spanish sociolinguistics and language acquisition. Each of these topics will be approached from a theoretical and contrastive Spanish/English perspective. **Credits:** 3.00

SPAN 56200 - The Structure Of Spanish II: Morphology, Lexicology, And Syntax

Credit Hours: 3.00. Linguistic analysis of Spanish focusing on morphology, lexicology, and syntax. This course will present the grammatical structure of Spanish dealing with word-level phenomena (derivational and inflectional morphology, the lexicon) and phrase- and sentence-level phenomena (constituents, word order, sentence structure, etc.). **Credits:** 3.00

SPAN 56300 - History Of The Spanish Language

Credit Hours: 3.00. Development of Spanish since the Ancient Latin period, taking into account influences of other cultures and languages; Spanish in relation to Latin and other Romance languages; basic principles of language change; language change underlying differences between American and Peninsular Spanish.**Credits:** 3.00

SPAN 56401 - Spanish Sociolinguistics

Credit Hours: 3.00. This course addresses the linguistic variation found at all linguistic levels of Spanish (e.g., phonetics, morphology, syntax) that is explained through social variation (e.g., socio-economic status, race, gender). Regional varieties of Spanish in Latin America, the U.S., and Peninsular societies will be studied. Related topics are style and identity, language attitudes, discourse analysis, and pragmatics. All classes will be conducted in Spanish.**Credits:** 3.00

SPAN 59000 - Directed Reading In Spanish

Credit Hours: 1.00 to 4.00. Directed readings in Spanish. Permission of instructor required. **Credits:** 1.00 to 4.00

SPAN 59400 - Special Topics In Hispanic Literature

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

SPAN 59600 - Special Topics In Spanish Linguistics

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

SPAN 60300 - Second Course To Establish Reading Knowledge

Credit Hours: 3.00. Readings in the physical and biological sciences, mathematics, and engineering. Prerequisite: SPAN 60100. **Credits:** 3.00

SPAN 63000 - Bibliography And Literary Criticism

Credit Hours: 3.00. The use of general and specific reference materials and bibliographical aids in literary research; the basic concepts and terminology of literary criticism. Required of all MA candidates in Spanish. **Credits:** 3.00

SPAN 64200 - Seminar In Spanish Theater

Credit Hours: 3.00. Advanced study of Spanish theater. Content will vary depending on the choice of periods, authors, works, and themes. Permission of instructor required. **Credits:** 3.00

SPAN 65900 - Seminar In Hispanic Literature

Credit Hours: 3.00. Advanced study of special subject. Topics to be announced in advance. Content varies. Permission of instructor required. **Credits:** 3.00

SPAN 67900 - Seminar In Spanish Linguistics

Credit Hours: 3.00. Advanced study and research on a significant topic in Spanish linguistics. Topic to be announced in advance. Permission of instructor required. **Credits:** 3.00

SPAN 68200 - Topics In Latin American Culture

Credit Hours: 3.00. Selected facets of Latin American culture through the eyes of the continent's artists, creative writers, essayists, and social scientists - and in view of current theories of the arts, literatures, multiculturalism, and postcolonialism. **Credits:** 3.00

SPAN 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

SPAN 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Speech, Language and Hearing Science

SLHS 11000 - Exploring The Science And Practice Of Speech, Language, And Hearing Sciences

Credit Hours: 1.00. The Speech, Language, and Hearing Sciences (SLHS) Learning Community will provide SLHS majors with an opportunity to connect with each other, with SLHS graduate students, and with SLHS faculty. Students will be exposed to a variety of different learning and career opportunities within the SLHS field. Participants will also enroll in SLHS 11500 (Introduction to Communication Sciences and Disorders). **Credits:** 1.00

SLHS 11500 - Introduction To Communicative Disorders

Credit Hours: 3.00. Nature, systems, and causes of communicative disorders and the principal methods used for remediation. **Credits:** 3.00

SLHS 13000 - Perception, Action, And Cognition In The Speech, Language, And Hearing Sciences

Credit Hours: 3.00. This course provides a broad introduction to basic science topics that underlie research in the speech, language, and hearing sciences. Topics center around biological and psychological aspects of perception (especially hearing), action (especially speech production), and cognition (especially language). Topics are addressed in terms of developing an understanding of material drawn from popular media aimed at interested non-specialists, including long-form journalism, essays and editorials, documentaries, TEDtalks, popular films and TV shows, etc.**Credits:** 3.00

SLHS 21500 - Exploring Audiology And Hearing Science

Credit Hours: 3.00. This course will introduce students to the discipline of hearing science and to the clinical profession of audiology, with a focus on the unique and exciting aspects of the auditory system. Students will be introduced to the acoustic properties of environmental and speech sounds in relation to hearing loss, the fundamental anatomical and physiological bases of hearing, normal development of hearing and auditory behaviors, history and scope of practice in Audiology, hearing disorders across the life span and assessment and intervention techniques used to manage hearing disorders in children and adults. Guest speakers will include hearing researchers from Purdue University who will talk about their specific research, audiologists from Purdue University and the community who will talk about clinical practice and individuals with hearing disorders who will speak about their personal stories. **Credits:** 3.00

SLHS 22700 - Elements Of Linguistics

Credit Hours: 3.00. (ENGL 22700) Credit will not also be awarded for both SLHS 22700 and LC 26100. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge. **Credits:** 3.00

SLHS 30100 - Introduction To Cognitive Neuroscience

Credit Hours: 3.00. (PSY 32400) Introduction to the neural bases of complex human mental abilities. Emphasis on integrating research from cognitive science, brain-scanning techniques, and the lesion technique. Topics include perception, attention, memory, language, motor control, planning/decision-making, and consciousness. **Credits:** 3.00

SLHS 30200 - Hearing Science

Credit Hours: 3.00. An introduction to the scientific foundations of auditory sensation and perception. The course covers those aspects of acoustics most pertinent to understanding auditory processing of simple and complex sounds (e.g. speech and music), the anatomy and physiology of the peripheral and central auditory systems, and a range of auditory perceptual phenomena and their physiological correlates. **Credits:** 3.00

SLHS 30300 - Anatomy And Physiology Of The Speech Mechanism

Credit Hours: 3.00. This course provides an introduction to the anatomical and physiological bases of the speech mechanism with an emphasis on the neural, respiratory, laryngeal, and supralaryngeal subsystems. **Credits:** 3.00

SLHS 30600 - Introduction To Phonetics

Credit Hours: 3.00. Credit will not be given for both SLHS 30600 and LING 31500. An introduction to articulatory phonetics, speech sounds in languages of the world, and principles and symbols of the International Phonetic Alphabet. Extensive practice in phonetic transcription. **Credits:** 3.00

SLHS 30900 - Language Development

Credit Hours: 3.00. (PSY 42600) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Numerous examples illustrating the nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed. **Credits:** 3.00

SLHS 31000 - Introduction To Audiology: Foundations, Assessment And Management

Credit Hours: 3.00. This course will cover the breadth of audiology practice beginning with foundational content on the acoustic properties of environmental and speech sounds in relation to hearing loss, the fundamental anatomical and physiological bases of hearing, typical development of hearing and auditory behaviors, and the history and scope of practice in Audiology. Clinical topics will include hearing disorders across the lifespan, as well as assessment and intervention techniques used to manage hearing disorders in children and adults. Threaded throughout the course will also be activities designed to develop personal intercultural competence to enhance students' ability to work with diverse patients in a clinical setting. **Credits:** 3.00

SLHS 34500 - Research Methods In Infancy And Childhood

Credit Hours: 3.00. This is a laboratory-based course that focuses on methods to test childhood cognitive and language development. As part of the course, students will be working in the Purdue University Infant Labs. Permission of instructor required. **Credits:** 3.00

SLHS 40100 - Language And The Brain

Credit Hours: 3.00. (PSY 40100) This course is an overview of the neutral systems that underlie the core components of language, including speech perception and production, reading and writing, morphology, syntax, semantics, and discourse. During the past few decades, there has been an unprecedented increase in studies on these topics, due in large part to the widespread use of highly sensitive brain mapping techniques that enable researchers to identify relationships between particular brain areas and particular language functions. The findings that have been emerged from this recent explosion of research are exciting and important for several reasons. They provide fresh insights into the nature of the uniquely human capacity for language, and they have significant implications for understanding and treating language disorders that result from brain injury. **Credits:** 3.00

SLHS 40200 - Introduction To Hearing Loss Treatment And Management

Credit Hours: 3.00. This course provides a broad introduction to audiological treatment and management of hearing loss and its associated challenges. Course topics include an overview of current technology options, including hearing aids, cochlear implants, assistive listening devices, and tinnitus treatment devices. This course emphasizes appropriate counseling techniques, communication strategies, and patient-centered treatment considerations.**Credits:** 3.00

SLHS 40300 - Psycholinguistics

Credit Hours: 3.00. (SLHS 40300) This course aims to introduce students to the current, research-based understanding of how different aspects of language (such as word perception, language acquisition, or speech production) are represented in the mind. In addition, it will introduce some of the research methods employed by language scientists for gaining insight into such a representation. This course also aims to help students learn how to critically evaluate research data used to support various theories about psychological and neural foundations of language knowledge. **Credits:** 3.00

SLHS 40400 - End Of Life Care And Management

Credit Hours: 3.00. We will discuss end of life care and management, primarily from the perspective of speech-language pathologists and audiologists. We will read books, chapters, and articles to gain broad perspectives on end of life, death and dying, and advanced care planning. We will discuss alternative breathing and nutritional interventions, along with their advantages and disadvantages. We will consider methods of counseling patients and families at end of life. We will cover

advanced care planning, health care proxies, advanced directives, palliative care (including hospice). Guest speakers with expertise in related areas will be engaged to provide students with a strong background in these topics.**Credits:** 3.00

SLHS 40500 - Science Of Reading

Credit Hours: 2.00. This course offers an extensive review of the scientific evidence regarding how children learn to read and best practices in teaching reading to typically achieving and struggling readers. Emphasis is placed on informed assessment, the five elements of reading and how to provide an interdisciplinary approach to reading instruction that is explicit, systematic, and cumulative.**Credits:** 2.00

SLHS 40600 - Introduction To Neurodegenerative Disorders

Credit Hours: 3.00. This course is an upper-level elective course for undergraduates in the SLHS major and others who are interested in learning more about neurodegenerative disorders and the effect these disorders have on the cranial sensorimotor system. This course assumes a basic knowledge of the anatomical and physiological bases of the speech mechanism (SLHS 30300) with an emphasis on the neural, respiratory, laryngeal, supralaryngeal, and aerodigestive subsystems. Information presented in this course will build on that basic knowledge and will focus on the effect of neurodegeneration on each of these systems through lectures, article reviews, case-based discussions, and disease-specific group presentations.**Credits:** 3.00

SLHS 40700 - Culturally And Linguistically Diverse Children With Communication Disorders

Credit Hours: 3.00. This course provides students with an overall understanding of typical speech and language development, and communication disorders, across cultural-linguistic groups and issues related to the assessment of and intervention with children from culturally and linguistically diverse populations.**Credits:** 3.00

SLHS 40800 - Introduction To Voice, Upper Airway, And Swallowing Disorders

Credit Hours: 3.00. This course is focused disorders of the larynx and the affect they have on speaking, breathing, and swallowing. This course assumes a basic knowledge of the anatomical and physiological bases of the speech mechanism (SLHS 30300) with an emphasis on the respiratory, laryngeal, and aerodigestive subsystems. Information presented in this course will build on that knowledge and will focus on the etiologies and characteristics of voice, upper airway, and swallowing impairments and the role of speech-language pathologist in assessing and treating these conditions. **Credits:** 3.00

SLHS 40900 - Introduction To The Neural Bases Of Speech And Hearing

Credit Hours: 3.00. An introduction to the neuroanatomy and neurophysiology of the sensory and motor systems involved in speech and hearing. Topics covered include general neuroscience principles, methods for studying the nervous system, and neural mechanisms underlying speech and hearing. The course also introduces disordered systems and contemporary speech and auditory neuroscience research topics.**Credits:** 3.00

SLHS 41000 - Evolution Of Language

Credit Hours: 3.00. This course provides an overview of what is known and what is hypothesized about the evolution of human language. Issues include how we can study evolution of language and speech, how human language compares to animal communication, what neural resources are needed for language use and what is known about how such resources developed in the human brain (perception, production, auditory and visual).**Credits:** 3.00

SLHS 41100 - Speech Vs Sign: Perception, Production, Structure

Credit Hours: 3.00. This course offers a 'compare and contrast' of signed languages and spoken languages, and in the process provides a review of what students have learned about language and speech in their other classes. Issues covered include the definition of 'language', understanding the interaction of cognition and language, neural resources necessary for use of language in speech and in signing, the relationship between gesture and sign languages, and perception and production in both modalities.**Credits:** 3.00

SLHS 41200 - Pediatric Audiology

Credit Hours: 3.00. This course will cover the breadth of pediatric audiology practice including the historical developments in pediatric audiology, as well as assessment, hearing disorders, and management of hard-of-hearing infants, toddlers, young children, and adolescents. Threaded throughout the course will also be activities designed to develop personal intercultural competence to enhance students' ability to work with diverse patients in a clinical setting.**Credits:** 3.00

SLHS 41800 - Understanding Autism

Credit Hours: 3.00. (HDFS 41800, PSY 41800) This course will explore the etiology, neuroscience, diagnosis, and treatment of autism spectrum disorder (ASD). Approached from a multi-disciplinary perspective this course brings together gene, brain, and behavioral sciences with the aim of developing a better understanding of autism. The course will begin with an overview of ASD as a complex behavioral phenotype. This will include discussion of the history ASD and the expansion of the diagnostic criteria associated with the disorder. This introduction will be followed by several classes in which we will examine some of the key domains of impairment in ASD: reciprocal social interaction, language and communication, and restricted and repetitive behaviors. We will also consider the deficits associate with, but not defining of ASD, and examine co-morbid conditions frequently present in individuals with ASD. We will then address the topics of brain architecture, neurochemistry, and genetics and gene expression, all of which we will attempt to relate back to the behavioral features of autism. We will end the course with a review of treatment practices and their efficacy and an examination of impact of ASD on the family and society. **Credits:** 3.00

SLHS 41900 - Topics In Audiology And Speech Pathology

Credit Hours: 1.00 to 3.00. Study of selected topics, varying from semester to semester. Course content will be drawn from areas for which there are no permanent courses. **Credits:** 1.00 to 3.00

SLHS 42000 - Introduction To Developmental Speech And Language Disorders

Credit Hours: 3.00. Students cannot receive credit for both AUS 42000 and AUS 42200. Introduction to disorders of speech and language in children. Characteristics of these disorders, methods of evaluation, and intervention procedures are discussed. **Credits:** 3.00

SLHS 43000 - Speech-Language Disorders In Health Care Settings

Credit Hours: 3.00. Presents speech-language disorders across the lifespan, encountered in a variety of health care settings. Discusses the etiology, evaluation, and management of these disorders; addresses administrative structures, team approaches, and reimbursement issues in health care settings. **Credits:** 3.00

SLHS 44400 - Introduction To Research In Communication Sciences And Disorders

Credit Hours: 3.00. An introduction to fundamental concepts of research in the basic and clinical disorder aspects of speech, language, and hearing processes. Among topics to be covered are research design/strategies, model and theory development, research ethics and data collection and interpretation. Permission of instructor required. **Credits:** 3.00

SLHS 44900 - Introduction To Clinical Practice In Communication Disorders

Credit Hours: 3.00. A course designed to provide instruction in basic diagnostic procedures and therapeutic approaches to speech, language, and hearing disorders. **Credits:** 3.00

SLHS 46000 - Assessment Audiology And Aural Rehabilitation Across The Lifespan

Credit Hours: 4.00. This course will provide an introduction to disorders of the auditory system, the basic assessments that are used to diagnose disorders, and habilitation/rehabilitation. The laboratory provides practical instruction in the procedures discussed in class. **Credits:** 4.00

SLHS 49000 - Directed Study Special Problems

Credit Hours: 1.00 to 6.00. Designed for student to work with individual instructors on special topics of interest. Permission of instructor required. **Credits:** 1.00 to 6.00

SLHS 49800 - Undergraduate Research Experience

Credit Hours: 1.00 to 4.00. The course allows students an opportunity to obtain first-hand experience with research in speech, language, and hearing sciences. Permission of instructor required. **Credits:** 1.00 to 4.00

SLHS 50100 - Neural Bases Of Speech And Hearing

Credit Hours: 3.00. Study of normal human neuroanatomy and neurophysiology related to speech, language, and hearing functions. Includes material concerning normal and abnormal neurological development over the lifespan. **Credits:** 3.00

SLHS 50200 - Fundamentals Of Speech Production And Perception

Credit Hours: 3.00. The physical, biological, and behavioral correlates of normal speech production and perception. Includes an exposure to the measures and methods of speech science. **Credits:** 3.00

SLHS 50300 - Auditory Perception

Credit Hours: 3.00. Behavioral measurement of the capabilities of the normal and impaired auditory system. The laboratory experience includes an exposure to the measures and methods of hearing science. **Credits:** 3.00

SLHS 50401 - The Auditory Periphery

Credit Hours: 3.00. Acoustics and Fourier analysis; outer-ear resonance and interaural differences; middle-ear impedance and structure; inner-ear mechanical responses; hair-cell transduction, electrophysiology, motility; cochlear potentials; cochlear amplifier; suppression; otoacoustic emissions; efferent feedback to the cochlea; damage to the ear; treatments for damaged ears. Permission of department required. **Credits:** 3.00

SLHS 50601 - Neural Bases Of Hearing

Credit Hours: 3.00. **Section I.** Neuroanatomy. Anatomy terminology, overview of cochlear neuroanatomy; afferent and efferent cochlear innervation; auditory nerve formation and termination points in the cochlear nucleus; Neuroanatomy of Cochlear Nucleus, Superior Olivary complex, Nuclei of Lateral lemniscus, Inferior colliculus, Medial geniculate body and the auditory cortex, corticofugal efferent pathways complex. **Section II.** Physiology Neuronal Physiology; response properties of the auditory nerve, cochlear nucleus, superior olivary complex, inferior colliculus, medial geniculate body and auditory cortex, rate-place and temporal-place neural encoding schemes in the auditory nerve, intensity encoding, frequency tuning in normal and cochlear loss,

binaural processing in the superior olivary complex and inferior colliculus, feature maps in the inferior colliculus and medial geniculate body and serial, parallel, hierarchical processing in the auditory cortex and role of cortico thalamic and corticocollicular pathways in shaping subcortical neural representation. **Credits:** 3.00

SLHS 51800 - Counseling In Speech-Language Pathology And Audiology

Credit Hours: 2.00. Application of counseling models, theories, and methods to persons with communicative disorders and their families. Permission of instructor required. **Credits:** 2.00

SLHS 51900 - Special Topics In Audiology And Speech Pathology

Credit Hours: 1.00 to 3.00. Study of special topics, drawn from areas not covered in permanent courses. Topics may vary from semester to semester. **Credits:** 1.00 to 3.00

SLHS 52101 - Speech Disorders In Children

Credit Hours: 3.00. Knowledge base necessary for the competent assessment, diagnosis, and treatment of speech sound disorders in children, including developmental phonological disorders, motor speech disorders, and residual speech errors.**Credits:** 3.00

SLHS 52200 - Language Disorders Of Exceptional Children

Credit Hours: 3.00. Description and diagnosis of children with language disorders and procedures for management. Students in a certification program for EMR, ED, LD or TMR should register for this course rather than AUS 52300. **Credits:** 3.00

SLHS 52300 - Language Disorders In Children: Basic Principles

Credit Hours: 3.00. Principles of description assessment and intervention for children with language disorders. Specific language evaluation and treatment procedures for children in the preschool years. **Credits:** 3.00

SLHS 52900 - Stuttering: Nature, Diagnosis, And Treatment

Credit Hours: 2.00. Reviews applications of research findings and theoretical developments to our understanding of the onset, development, perpetuation, and amelioration of stuttering. Demonstrates and discusses methods and procedures for diagnosing and treating stuttering across the lifespan. **Credits:** 2.00

SLHS 53100 - Language Disorders In Adults

Credit Hours: 3.00. Study of the causes, assessment, and treatment of acquired language disorders in adults, including aphasia, right hemisphere syndromes, and dementia. **Credits:** 3.00

SLHS 53200 - Voice Disorders

Credit Hours: 2.00. Principles of differential diagnosis and clinical management for children and adults presenting voice disorders, based on a working knowledge of normal laryngeal structure and function. **Credits:** 2.00

SLHS 53300 - Medical Speech-Language Pathology

Credit Hours: 2.00. Introduces the graduate speech-language pathology student to issues encountered in the medical environment in preparation for a healthcare externship and a career in the healthcare setting. Topics will include collaborative models in the medical setting, clinical documentation, ethical issues, equipment and instrumentation, medications, among others. **Credits:** 2.00

SLHS 53600 - Traumatic Brain Injury

Credit Hours: 2.00. The mechanisms, effects, assessment, and rehabilitation of traumatic brain injury in children and adults, with emphasis on a team approach to remediation. **Credits:** 2.00

SLHS 53800 - Motor Disorders Of Speech

Credit Hours: 2.00. A study of the neuropathologies that affect the speech production system. Emphasizes the differential diagnosis and management of acquired motor speech disorders. **Credits:** 2.00

SLHS 53900 - Dysphagia

Credit Hours: 3.00. A study of the normal and disordered anatomy and physiology of the swallowing process. Principles of evaluation and treatment of dysphagia are discussed. **Credits:** 3.00

SLHS 54001 - Augmentative And Alternative Communication (AAC)

Credit Hours: 2.00. This course will orient students to the use of augmentative and alternative communication (AAC) across the lifespan. Assessment and evidence-based intervention for people who cannot meet their daily communication needs via natural speech and/or writing and who need AAC will be covered. AAC is neither disorder- nor age-specific. As such, AAC strategies, techniques, and options may be used across the lifespan and with people who have severe communication disorders that interfere with expressive and/or receptive speech and/or language. In that way, AAC can have broad applicability across settings and populations.**Credits:** 2.00

SLHS 54300 - Assessment And Treatment Of Literacy Disorders

Credit Hours: 2.00. An introduction to the characteristics, definitions, etiologies, and assessment of literacy development in school-aged children (4-18 years of age). Emphasis is placed on the scope of practice for speech-language pathologists in the assessment and intervention process for children diagnosed with language-based literacy disorders. **Credits:** 2.00

SLHS 54400 - Clinical School Methods For Communication Disorders

Credit Hours: 2.00. Organization, materials, and methods for conducting speech, language, and hearing services in elementary and secondary schools. Permission of instructor required. **Credits:** 2.00

SLHS 54401 - School-Clinical Methods In Communication Disorders

Credit Hours: 1.00. The focus of this course is on the implementation of speech, language, and hearing services with preschool to secondary (P-12) school-aged children. Students develop a working knowledge of special education law, disability law, and other resources for school-aged children. **Credits:** 1.00

SLHS 54600 - Clinical Seminar In Speech-Language Pathology

Credit Hours: 1.00. This is a clinical seminar course designed to support students' ability to meet knowledge and skills standards related to the scope of practice of speech-language pathologists. This course provides supplemental learning opportunities and

support for students as they complete their hands-on clinical practice each semester by taking a more in-depth look at conditions within the nine areas of practice as well as cultural and linguistically diverse families, ethical standards in clinical practice, professional issues and trends within communication sciences and disorders, and interprofessional education and practice. The course is offered each semester and objectives vary to advance the knowledge and skills required to meet the program and ASHA/CAA guidelines for completion of the program as well as certification standards as indicated by the CFCC.**Credits:** 1.00

SLHS 54900 - Clinical Practice In Speech-Language Pathology I

Credit Hours: 1.00 to 8.00. The second in a series of practicum courses designed to provide instruction and practical experience in fundamental diagnostic and therapeutic approaches to speech and language disorders. AUS 43000 is recommended. Permission of instructor required.**Credits:** 1.00 to 8.00

SLHS 55300 - Implantable Devices

Credit Hours: 3.00. Provides fundamental principles to assist audiologists and speech-language pathologists in the understanding of candidacy, principles of signal processing, and audiologic rehabilitation for children and adults who use cochlear implants. **Credits:** 3.00

SLHS 56000 - Audiologic Diagnostics

Credit Hours: 3.00. Audiometers, audiometric standards, and the use of pure tone and speech signals in the measurement of auditory abilities. Laboratory provides practical instruction in the procedures discussed in class. **Credits:** 3.00

SLHS 56100 - Medical Audiology

Credit Hours: 3.00. Study of the etiology, pathogenesis, symptomology, epidemiology, diagnosis and treatment of diseases, and injuries to the auditory system. **Credits:** 3.00

SLHS 56300 - Pediatric Audiology

Credit Hours: 3.00. Examination of protocols for the identification and evaluation of infants and children with hearing loss, using behavioral, physiologic, and electro-physiologic assessment methods. Course content places an emphasis on clinical decision-making and problem-solving skills. **Credits:** 3.00

SLHS 56400 - Hearing Aids I

Credit Hours: 3.00. An examination of amplification systems as applied in audiological rehabilitation; acoustic, electroacoustic, electronic, and clinical considerations. Laboratory exercises in measurement, modifications, maintenance, selection, and dispensing of hearing aid systems. **Credits:** 3.00

SLHS 56501 - Vestibular Assessment And Rehabilitation

Credit Hours: 3.00. This course will review anatomy and physiology of the vestibular system. Diagnostic assessment, interpretation and proper recommendation techniques will be discussed. Current research addressing dizziness and balance issues will be reviewed as well as case history discussions to help prepare students to see these patients in a clinic setting. The clinical practice of audiology encompasses the assessment and habilitation/rehabilitation vestibular and balance disorders arising from a wide variety of medical and environmental etiologies. It is essential that audiologists have a firm understanding of the most common causes and medical treatments of vestibular disorders for all age groups. Additionally, vestibular assessment and treatment options are expanding rapidly in the past 5-10 years. Student clinicians need exposure to this area of care so that they may grow as research and technology change. Audiologists practice in a medical setting and thus must be comfortable with the

medical approaches and terminology used by otolaryngologists, otologists, neuro-otologists, pediatricians, physical therapists and other allied health professions.**Credits:** 3.00

SLHS 56700 - Auditory Evoked Responses I

Credit Hours: 3.00. Evaluation of peripheral and brainstem auditory system function using evoked potentials. **Credits:** 3.00

SLHS 56800 - Tinnitus Assessment And Rehabilitation

Credit Hours: 2.00. Ringing in the ears (tinnitus) is a common problem among millions of individuals with sensorineural hearing loss. This course will review the physiology, measurement, and treatment for tinnitus. **Credits:** 2.00

SLHS 57000 - Hearing Conservation

Credit Hours: 2.00. A study of noise as a health hazard and as a nuisance; an examination of the ways in which hearing problems related to noise may be reduced. Permission of instructor required. **Credits:** 2.00

SLHS 57401 - Hearing Aids II

Credit Hours: 2.00. The focus of this course is on the evolving technology in hearing aids with an emphasis on the information students will need to make efficacious clinical decisions not only for the hearing aids of today but also for the hearing aids of tomorrow. For each of the hearing aid features that are discussed, we review (1) the need or potential benefit to the patient, (2) the engineering behind the feature, (3) research supporting its efficacy and effectiveness, (4) its limitations, and (5) how to conduct routine clinical measurements to document its functioning. **Credits:** 2.00

SLHS 57700 - Auditory Evoked Responses II

Credit Hours: 3.00. Administration and interpretation of auditory evoked responses generated in the auditory thalamus and cortex. Emphasis is on application of auditory evoked potentials in clinical diagnosis and intraoperative monitoring. Topics include middle (AMLR), late (AEP), and steady-state (SSEP) evoked responses. **Credits:** 3.00

SLHS 57900 - Clinical Practice In Audiology

Credit Hours: 1.00 to 12.00. Supervised clinical practicum in evaluation of hearing and communication status and in remediation of communication problems. Clinical practices include, but are not limited to, auditory site of lesion, sensory aid selection, fitting and evaluation and communication training for children and adults. Clinical practicum is available in the M. D. Steer Audiology Center and off-campus facilities. Permission of instructor required. **Credits:** 1.00 to 12.00

SLHS 58500 - Engineering Projects In Community Service: AuD I

Credit Hours: 2.00. Audiology clinical doctoral students, engineering, and speech, language, and hearing sciences undergraduate students work in a team-oriented research and development service-learning process. Students with faculty advisors collaborate with community partners to develop technology meeting adaptive and educational needs. **Credits:** 2.00

SLHS 58800 - Evaluating Research In Evidence-Based Practice

Credit Hours: 2.00. The focus of this course is on developing the skills necessary to critically consume literature and apply it to clinical practice as speech-language pathologists and audiologists. Students complete a comprehensive evidence-based practice project, which includes developing a clinical question, conducting a literature review, and critiquing acquired research articles.

They gain guidance from a skilled mentor in their research area and receive course instruction on best practices in appraising research necessary for evidence-based practice. **Credits:** 2.00

SLHS 59000 - Directed Study Of Special Problems

Credit Hours: 1.00 to 6.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 6.00

SLHS 60900 - Seminar In Language Acquisition

Credit Hours: 2.00. Critical review of current research in selected areas of typical and atypical language acquisition. Permission of instructor required. **Credits:** 2.00

SLHS 61900 - Advanced Topics In Audiology And Speech Pathology

Credit Hours: 0.00 to 3.00. Study of advanced topics, varying from semester to semester. Course content will be drawn from areas for which there are no permanent courses. **Credits:** 0.00 to 3.00

SLHS 64800 - Speech-Language Pathology Education Externship

Credit Hours: 1.00 to 8.00. Full-time school-clinical experience to provide speech, language, and hearing services in elementary and secondary schools, under the supervision of a school clinician and university staff holding the ASHA Certificate of Clinical Competency. **Credits:** 1.00 to 8.00

SLHS 64900 - Speech-Language Pathology Healthcare Externship

Credit Hours: 1.00 to 8.00. An advanced-level clinical practicum in speech and language disorders. Prerequisite: SLHS 54900. Permission of instructor required. **Credits:** 1.00 to 8.00

SLHS 65800 - Advanced Topics In Audiology

Credit Hours: 2.00 or 3.00. Detailed study of selected topics in audiology. Permission of instructor required. **Credits:** 2.00 or 3.00

SLHS 65900 - Audiology Practice Management

Credit Hours: 2.00. An examination of business and professional issues related to audiology. Practice management topics include conducting a feasibility analysis, writing a business plan, employee management, marketing, reimbursement, and practice growth. Professional issues include licensing, certification, liability issues, and career planning. Prerequisite: SLHS 57900 and Doctor of Audiology majors only. **Credits:** 2.00

SLHS 66100 - Advanced Medical Audiology

Credit Hours: 3.00. The clinical practice of audiology encompasses the audiological assessment and habilitation/rehabilitation of hearing loss arising from a wide variety of medical and environmental etiologies. It is essential that audiologists have a firm understanding of the most common causes and medical treatments of hearing impairment for all age groups. Additionally, the future clinician will be better served by recognizing the how rapidly information changes in this arena and becoming comfortable with reliable educational resources that are available for life-long learning in this area. Audiologists also practice in a medical setting and thus must be comfortable with the medical approaches and terminology used by otolaryngologists, otologists, neuro-

otologists, pediatricians, radiologists, anesthesiologists and other physicians. Additionally, audiologists may be the first contact with a hearing-impaired patient and their role in the referral process will be emphasized. **Credits:** 3.00

SLHS 67000 - Integrative Audiology Grand Rounds

Credit Hours: 1.00. This course provides advanced audiology students an opportunity to share and think deeply about the complex cases they are experiencing on off-campus placements. Students share cases online with their peer students who will provide thoughtful responses and reflections based on their own experiences. This course also provides a summative assessment of the students' knowledge in the final two years of their education. Due to the highly complex nature of the cases, students must use past clinical experiences and knowledge learned in multiple courses in order to successfully present cases and to respond in thoughtful ways that contribute to the online learning environment. Permission of department required; must also be currently enrolled in SLHS 57900 or SLHS 67900 completing an audiology externship.**Credits:** 1.00

SLHS 67800 - Audiology Educational Externship

Credit Hours: 1.00 to 8.00. School clinical experience to provide audiology services in elementary and secondary schools under the supervision of a school clinician and University staff holding the Certificate of Clinical Competence in Audiology from the American Speech-Language and Hearing Association. Permission of department required. **Credits:** 1.00 to 8.00

SLHS 67900 - Advanced Clinical Practice In Audiology

Credit Hours: 4.00. An advanced-level clinical practicum in audiology. Permission of instructor required. **Credits:** 4.00

SLHS 68800 - Research Integration And Dissemination For Evidence Based Practice

Credit Hours: 2.00. The focus of this course is on developing skills integrating current research and communicating about research in clinical practice. Students complete a comprehensive project involving a literature review, clinical decision and poster. They gain guidance from a skilled mentor in their research area and receive course instruction on best practices in scientific communication in a variety of modes, including developing an oral pitch, preparing a literature review and evaluation, and creating and delivering a poster and writing a research abstract. Pre-Requisite: Students must complete Evaluating Research - currently offered as SLHS 51900. **Credits:** 2.00

SLHS 69000 - Directed Study Of Special Problems

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 4.00

SLHS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

SLHS 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Studies College of Liberal Arts

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty. **Credits:** 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty. **Credits:** 3.00

SCLA 11000 - Language And Cultural Exchange I: Self In Context

Credit Hours: 3.00. The course takes a social science-based approach to investigating the American university by examining contemporary college life, the history of the American academy, social and environmental issues on campus, and opportunities for engagement with the wider community. Students will improve their speaking, listening, reading, writing skills in English so that they can actively participate in social and academic communication.**Credits:** 3.00

SCLA 11100 - Language And Cultural Exchange II: Texts And Contexts

Credit Hours: 3.00. Students will continue to develop the foundational language skills and knowledge that they need to succeed in their other classes at Purdue and to prepare for further academic and professional opportunities. Students will also deepen their understanding of American culture and improve their ability to think about cultural differences in positive ways. In a sense, this class will be a bridge to help you transition to other language-intensive courses at Purdue where you need to read, write, and speak frequently and/or work in groups (such as business, engineering, literature, public speaking, and social sciences).**Credits:** 3.00

SCLA 11500 - Introduction To Career Decisions

Credit Hours: 1.00. This course is designed to guide the student through self-exploration and an investigation of the world of work. The class format will be short lectures followed by class discussions and activities. Not open to students who have completed GS 11900. **Credits:** 1.00

SCLA 19100 - Special Topics In Liberal Arts

Credit Hours: 1.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum. Permission from instructor required. **Credits:** 1.00 to 3.00

SCLA 20000 - Cornerstones In Constitutional Law

Credit Hours: 3.00. In this interdisciplinary course, students read case law to understand legal reasoning and constitutional doctrines and identify major constitutional conflicts. It explores how the forces of technology, economics, politics, environmental change, scientific development, and medicine transform constitutional law. **Credits:** 3.00

SCLA 29100 - Special Topics In Liberal Arts

Credit Hours: 1.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum. Permission from instructor required. **Credits:** 1.00 to 3.00

SCLA 30000 - Liberal Arts Influentials

Credit Hours: 1.00. As a lecture/discussion course, Liberal Arts Influentials features speakers from a diverse range of Liberal Arts majors and introduces students to the myriad career opportunities available to Liberal Arts graduates. Speakers represent careers in the arts, media, industry, politics and more. Students are encouraged to initiate dialogue with working professionals. Only students enrolled in the College of Liberal Arts may register for GS 30000: LA Influentials. **Credits:** 1.00

SCLA 31500 - Internship Development Strategies

Credit Hours: 1.00. This course offers sophomore and junior students the opportunity to gain key skills to prepare for a professional internship. Topics range from "Why intern" to conducting searches, to resumé writing and interview techniques to establishing a professional identity. **Credits:** 1.00

SCLA 39000 - Special Credit For Study Abroad In Liberal Arts

Credit Hours: 1.00 to 4.00. This course number is for assignment of credits in studies in Liberal Arts earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

SCLA 39100 - Special Topics In Liberal Arts

Credit Hours: 1.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum. Permission from instructor required. **Credits:** 1.00 to 3.00

SCLA 41500 - Senior Job Search Seminar

Credit Hours: 2.00. This course is designed to get LA seniors actively started on their job search. Highly intensive assignments, in-class activities, presentations and projects are designed to better prepare students for all aspects of the job search process. **Credits:** 2.00

SCLA 49000 - Directed Reading

Credit Hours: 1.00 to 3.00. Designed for a student to work with an instructor on a topic of special interest. **Credits:** 1.00 to 3.00

SCLA 49100 - Special Topics In Liberal Arts

Credit Hours: 0.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum. **Credits:** 0.00 to 3.00

SCLA 49105 - Liberal Arts Undergraduate Research Experience

Credit Hours: 0.00. This course is for students in the Dammon Dean's Scholars program or the Margo Katherine Wilke Undergraduate Research program. This course is required each semester a student participates in either program. Permission of instructor required.**Credits:** 0.00

SCLA 49500 - Special Credit For Study Abroad In Liberal Arts

Credit Hours: 1.00 to 4.00. This course number is for assignment of credits in studies in Liberal Arts earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue. **Credits:** 1.00 to 4.00

SCLA 50500 - Technology, War, And Strategy

Credit Hours: 3.00. This course introduces students to the interaction between strategy and technology internationally and across historical eras. The course is rooted in historical political, military, economic, technological, and cultural strategy, and it engages core ideas that cut across disparate schools of thought and historical contexts. The course prepares students to appreciate and understand the foundational principles of designing and executing broad strategic initiatives with world-changing consequences that engage profound national economic and technological commitments.**Credits:** 3.00

SCLA 50600 - Space Strategy

Credit Hours: 3.00. Space is the most recent domain in which nations and great powers dispute strategic political, military, economic, and legal interests. The course analyzes the origins, tensions, and promises embedded in the space-focused strategies of major international players. The course will discuss these issues from the US national and strategic interests perspective, focusing on how strategic competition and conflict in space could and should be handled. The course combines technological with grand strategy concerns. **Credits:** 3.00

SCLA 50700 - Grand Challenges In Defense Engineering

Credit Hours: 3.00. This course examines past, present, and future engineering challenges to develop new conceptual insight, research priorities, system integration, and timely methods to meet emerging national defense engineering needs. The course matter involves challenges in Energy, Logistics and Information, and Rapid Offense and Defensive Systems and subsets of each designed to develop understanding depth and transfer analytic and planning skills needed to meet future defense needs. The selected three topics begin with a past engineering challenge to gain perspective on how prior needs were met in their time, a present challenge under current focus, and a possible future challenge and solutions that will require combining prior best practices with the accelerated development needed in the changing world. **Credits:** 3.00

SCLA 51000 - Data And Science Storytelling

Credit Hours: 3.00. The primary assumption of our course is that the goal of communicating with data is ultimately to identify causal mechanisms and change the status quo due to the obtained insights. All audiences have previous understandings of the world, and meaningful data stories should challenge their assumptions about that world. The communication of this data-based new knowledge violates prior assumptions, shares memorable new information and moves the audience to act based on the new knowledge. This is best accomplished through a story. In other words, this communication assumes the form of a story, which is defined as the narrative of how an unexpected cause creates an effect. **Credits:** 3.00

SCLA 52000 - Social And Digital Media Analytics For Business Communication Professionals

Credit Hours: 3.00. This course provides an overview of how to transform social media and digital media information into business intelligence and actionable insight. Although students are not expected to know a programming language prior to taking the course, students are expected to understand basic statistics and to have a desire to learn the processes, procedures and vocabulary used by data analysts in modern organizations. The goal is not to train them as practicing data scientists, but as knowledgeable data analytics consumers and as informed teammates and leaders of cross-functional teams tasked to make decisions using data.**Credits:** 3.00

SCLA 52100 - Societal Impacts Of Artificial Intelligence

Credit Hours: 3.00. Students in this course will draw upon knowledge from multiple fields to understand how AI is transforming social, political, and economic practices in institutions and in society. They will utilize interdisciplinary theories and methodological tools to measure and evaluate the societal impacts of AI. The utilizes a mix of case and source data and recent research in the field of AI to create opportunities for shared communication and learning among those in technical and non-technical fields that utilize artificial intelligence. Students will engage in systematic analysis of societal impact. **Credits:** 3.00

SCLA 52200 - Artificial Intelligence Policy, Governance, And Ethics

Credit Hours: 3.00. This course provides students with a strong grounding in the policy, ethical, and legal regulatory dimensions and environment that shape the governance of AI. Students will analyze current and emerging laws, regulations, and governance strategies shaping the AI landscape across multiple jurisdictions and sectors. The course will help students gain an interdisciplinary understanding of the core ethical principles and values that guide AI.**Credits:** 3.00

SCLA 53000 - Strategic Foresight And Leadership

Credit Hours: 3.00. This course provides emerging leaders with strategic foresight tools and skills to understand and make decisions regarding long-term future operational defense-related environments. Strategic foresight is the ability to create and sustain a variety of high-quality long-term views and apply emerging insights in organizationally adaptive ways. Strategic foresight produces scenarios that are the basis for strategies and plans to help defense or industry organizations remain competitive into the foreseeable future. **Credits:** 3.00

SCLA 59000 - Special Topics

Credit Hours: 3.00. This course, whose specific topics might change, focuses on strategy and military studies a global scale. The course will be rooted in all the elements of strategy (political, military, economic and cultural), plus strategic theory and technology's impact on it. The course exposes students to a set of historical and contemporary strategic dilemmas that involved difficult trade-offs, costly investments, wild risks, incredible victories, and crushing defeats. This is a multidisciplinary course that focuses on several core ideas and principles that cut across schools of thought and examples from past, present and future. **Credits:** 3.00

Sustainable Food and Farm Systems

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class. **Credits:** 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class. **Credits:** 3.00

SFS 30100 - Agroecology

Credit Hours: 3.00. This course introduces students to the application of ecological concepts to food production systems and farm management. We will consider species interactions, nutrient and water cycles, regenerative practices, alternative approaches to agriculture, and ecosystem services provided to and by agro-ecosystems. **Credits:** 3.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability. **Credits:** 3.00

SFS 31100 - Aquaponics

Credit Hours: 1.00. (FNR 31300) (HORT 31100) There has been significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia, and our impending food crisis has kindled an interest in developing aquaponic systems in western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. High input costs can, however, be a limitation. The waste disposal problem of the fish can become the nutrient supply to the plants. **Credits:** 1.00

SFS 31200 - Urban Agriculture

Credit Hours: 1.00. Urban agriculture has the potential to address a range of social, economic and environmental issues including food insecurity, energy conservation, and human health and well-being. During this 5-week course, students will learn about the forces driving urban agriculture as well as the political and biophysical factors constraining it by reading articles, reviewing case studies, and visiting urban farms, vertical farm factories, food pantries, and local food advocacy groups. At the end of this course, students will apply the knowledge they've gained by developing a plan to increase urban agriculture in the greater Lafayette metropolitan area. **Credits:** 1.00

SFS 31300 - Farm To Fork

Credit Hours: 1.00. This course will investigate the culinary opportunities of local and seasonal foods and the horticultural demands of producing and marketing them. Dr. Hallett will represent the "farm", giving students a brief overview of the production of local and seasonal foods in Indiana. The "farm" will harvest produce at the student farm and deliver it to the "fork" -- Chef Ambarish Lulay - who will work his culinary magic in the teaching kitchens in the HTM department. The focus, from both "sides" of the course will be the importance of niche marketing for farmers and chefs. This course is going to be tasty and fun! **Credits:** 1.00

SFS 31400 - Comparative Livestock Production Systems

Credit Hours: 1.00. This course will compare and contrast the various livestock and poultry systems in the United States. The course will begin with in depth analysis of the history and structure of prevalent or conventional livestock and poultry production systems followed by a similar analysis of the various alternative production systems currently in use in the US, including organic, grass-fed, and pasture-raised among others. A heavy focus will be placed on critically evaluating the pros and cons of each system, regulations of both conventional and process-verified systems and potential differences in products resulting from different management and processing systems. **Credits:** 1.00

SFS 31500 - Principles Of Permaculture

Credit Hours: 1.00. The goal of this class is to encourage students to think of farming systems, including their energy and resource flows, economics and social characteristics, in the ways that ecologists think of ecological systems. How does energy flow through farming systems, and how do resources recycle (or not)? What are the weaknesses of farming systems that could be

mitigated by mimicking natural systems? Issues of efficiency, sustainability and resilience will be investigated in the context of permaculture, a theory of food production and landscape design that has an emphasis on perennial crops, low input production, and ecological diversity. The centerpiece of the course will be to further develop the Purdue Student Farm using permaculture principles. **Credits:** 1.00

SFS 35100 - SFS Capstone Project

Credit Hours: 1.00. The SFS Capstone Project is a directed-learning course that will require students to prepare and present a sustainability analysis of a farm enterprise, most likely the enterprise at which they conduct their required summer internship, and this may be an internship approved at an operation other than a farm. Students will be required to analyze and enterprise taking into account its economic, environmental and social sustainability, and its broader role in sustaining the local and regional economy, environment and community. The analysis will be prepared as a paper and a presentation that will be given to the undergraduates of the SFS program at an SFS program meeting. The paper and the presentation will be prepared in consultation with a faculty mentor from the SFS program committee and will be graded by the faculty mentor. Completion of an approved work or internship experience. **Credits:** 1.00

SFS 39100 - Special Problems In Sustainable Food And Farming Systems

Credit Hours: 1.00 to 3.00. Contemporary topics in sustainable food and farming systems are explored. Topic selection is based on student interest. Permission of instructor required. **Credits:** 1.00 to 3.00

SFS 41100 - Structural Racism In US Agriculture

Credit Hours: 1.00. A discussion-based exploration of the history and legacies of structural racism in American agriculture. We will analyze the barriers to success faced by non-white farmers in the US, the structures that have oppressed minority groups in agriculture, and ways in which these forces might be reversed or resisted.**Credits:** 1.00

SFS 41200 - Colonialism, Globalization, And Food Justice

Credit Hours: 1.00. This course will uncover the foundations of inequities in access to healthy, nutritious food from the first era of colonization to the modern era of globalization. The course will make students aware of the racial and ethnic inequities in farming and food systems and consider mechanisms of decolonization: resistance against the status quo and the development of new food systems. **Credits:** 1.00

SFS 41300 - The Cultures And Agricultures Of The United States

Credit Hours: 1.00. The United States is a vast country encompassing many climates, geographies, and human histories. This course will investigate the diversity of the United States by examining a dozen locations with respect to people-and-place. How have people shaped these places, and how have these places shaped the people who have lived in them?**Credits:** 1.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing. **Credits:** 3.00

Statistics

STAT 3010N - Elementary Statistical Methods

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.**Credits:** 3.00

STAT 3500N - Introduction To Statistics

Credit Hours: 3.00. A data-oriented introduction to the fundamental concepts and methods of applied statistics. Exploratory analysis of data. Sample design and experimental design. Probability distributions and simulation. Sampling distributions. The reasoning of statistical inference. Confidence intervals and tests for one and two samples. Inference for contingency tables, regression, and correlation. Introduction to regression with several explanatory variables. Essential use is made of statistical software throughout. Intended primarily for students majoring in the mathematical sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: two semesters of college calculus.**Credits:** 3.00

STAT 5110N - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.**Credits:** 3.00

STAT 5120N - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.**Credits:** 3.00

STAT 5190N - Introduction To Probability

Credit Hours: 3.00. (MA 51900) Algebra of sets, sample spaces, combinatorial problems, independence, random variables, distribution functions, moment generating functions, special continuous and discrete distributions, distribution of a function of a random variable, limit theorems.**Credits:** 3.00

STAT 5200N - Time Series And Applications

Credit Hours: 3.00. An introductory course in stationary time series with applications. Topics include stationarity, autocovariance function, ARIMA (Autoregressive Integrated Moving Average) models, and basic spectral analysis (periodograms and their estimation, tapering, linear filtering). Extensive use of R is incorporated for building time series models and estimating the time series spectrum.**Credits:** 3.00

STAT 10100 - Freshman Orientation Seminar

Credit Hours: 1.00. A one-credit course for first-year Statistics/Mathematics majors designed to develop concepts and skills in team building, time management, and professional development that complement the students' academic and research training. Talks from a broad range of speakers are included. **Credits:** 1.00

STAT 11300 - Statistics And Society

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries. **Credits:** 3.00

STAT 17000 - Introduction To Actuarial Science

Credit Hours: 2.00. (MA 17000) An introduction to actuarial science from the point of view of practicing actuaries from life insurance, casualty insurance and consulting; introduction to insurance and the mathematical theory of interest; application of spreadsheets to problems related to actuarial science. **Credits:** 2.00

STAT 19000 - Topics In Statistics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading course or special topics course at the freshman level for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. **Credits:** 3.00

STAT 24200 - Introduction To Data Science

Credit Hours: 3.00. (CS 24200) This course provides a broad introduction to the field of data science. The course focuses on using computational methods and statistical techniques to analyze massive amounts of data and to extract knowledge. It provides an overview of foundational computational and statistical tools for data acquisition and cleaning, data management and big data systems. The course surveys the complete data science process from data to knowledge and gives students hands-on experience with tools and methods. Basic knowledge of Python required. Computer Science majors cannot count this course as a degree requirement but can take it for credit as a free elective if taken before CS 37300, 34800, 47100, 47300, 44800.**Credits:** 3.00

STAT 25000 - Problems Solving In Probability

Credit Hours: 2.00. (MA 25000) This course is designed to teach techniques for solving problems in probability theory which are relevant to the actuarial sciences. It is intended to help actuarial students prepare for the Society of Actuaries and Casualty Actuarial Society Exam P/1. Credit by Examination is not available for this course. MA/STAT 41600 is strongly recommended. **Credits:** 2.00

STAT 29000 - Topics In Statistics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading course or special topics course at the sophomore level for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

STAT 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in statistics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

STAT 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in statistics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

STAT 30100 - Elementary Statistical Methods

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra. **Credits:** 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365. **Credits:** 3.00

STAT 31100 - Introductory Probability

Credit Hours: 3.00. An introduction to basic probability with some theoretical background as well as applications to the physical sciences and engineering. Formulation of probability problems, general probability rules, conditional probability and Bayes Theorem, and discrete and continuous random variables and their properties. Prerequisite: two semesters of college calculus. **Credits:** 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus. **Credits:** 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence

intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100. **Credits:** 3.00

STAT 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional experience in Statistics. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit a summary report and company evaluation. Permission of instructor required. **Credits:** 0.00

STAT 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional experience in Statistics. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit a summary report and company evaluation. Permission of instructor required. **Credits:** 0.00

STAT 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional experience in Statistics. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit a summary report and company evaluation. Permission of instructor required. **Credits:** 0.00

STAT 39000 - Topics In Statistics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading course or special topics course at the junior level for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

STAT 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in statistics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

STAT 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in statistics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

STAT 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in statistics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

STAT 41600 - Probability

Credit Hours: 3.00. (MA 41600) An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and

continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem. Credit cannot be given for more than one of STAT 22500, 31100, or 41600. Prerequisite: multivariate calculus. **Credits:** 3.00

STAT 41700 - Statistical Theory

Credit Hours: 3.00. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Maximum likelihood estimation. Sufficient statistics. Hypothesis tests and confidence intervals. Distribution theory for common statistics based on normal distributions, including linear regression. Bayesian Statistics include posterior inference, posterior mean, maximum a-posteriori estimator, credible intervals, and Bayesian hypothesis testing. **Credits:** 3.00

STAT 42000 - Introduction To Time Series

Credit Hours: 3.00. An introduction to time series analysis suitable for students of actuarial science, engineering, and the sciences. Model building and forecasting with ARMA and ARIMA models. Basic financial volatility models (ARCH and GARCH). Resampling methods for confidence intervals. Basics of spectral analysis, including spectral density estimation and periodograms. **Credits:** 3.00

STAT 46800 - Applied Multivariate Analysis

Credit Hours: 3.00. A detailed exposition of some of the more commonly used multivariate statistical techniques, including the geometric intuition underlying their use. Familiarity with the notation and the basic operations of matrix algebra, and with the standard univariate statistical procedures is assumed. Topics include dimension reduction techniques (principal components, factor analysis, and canonical correlation), clustering, classification, neural network, and structural equation models.**Credits:** 3.00

STAT 47201 - Fundamental Long Term Actuarial Mathematics

Credit Hours: 4.00. Mathematical foundation of actuarial science, emphasizing probability models for life contingencies as the basis for analyzing life insurance and life annuities and determining premiums and reserves. This course provides the background for Course MLC of the Society of Actuaries and Course 3L of the Casualty Actuarial Society.**Credits:** 4.00

STAT 47301 - Introduction To Arbitrage-Free Pricing Of Financial Derivatives

Credit Hours: 3.00. This course exposes students to a number of financial economics concepts related to arbitrage-free option pricing in the binomial market model and the Black-Scholes model. Specific models include (1) Options and parity relationship between options; (2) Option Pricing under the Binomial model; (3) Option Pricing under the Black-Scholes model; (4) Option hedging and the market maker's overnight profit; (5) Black Scholes theory with Brownian motion and Ito calculus; (6) Risk-neutral option pricing and Monte Carlo valuation; (7) Stochastic interest rates and Stochastic Volatility. This course provides the background for Couse MFE of the Society of Actuaries and Course 3F of the Casualty Actuarial Society. **Credits:** 3.00

STAT 47401 - Statistics For Risk Modeling I

Credit Hours: 3.00. This course introduces various statistics learning methods for analyzing insurance data. The main objective is to prepare actuarial science students for the Exam SRM: Statistics for Risk Modeling of the Society of Actuaries.**Credits:** 3.00

STAT 47501 - Advanced Long Term Actuarial Mathematics

Credit Hours: 3.00. This course covers advanced life contingencies topics such as multiple decrement models, joint life models, pension models, and profit emergence and testing for insurance products. It builds on the basic life contingent models learned in STAT 47200. **Credits:** 3.00

STAT 47902 - Fundamental Short Term Actuarial Mathematics

Credit Hours: 3.00. This course aligns with one of the Society of Actuaries examinations. The course will cover the learning objectives for a portion of the Society of Actuaries Examination STAM. Permission of department required. Permission of instructor required.**Credits:** 3.00

STAT 49000 - Topics In Statistics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading course or special topics course at the senior level for undergraduates are given under this number. Permission of instructor required. **Credits:** 1.00 to 5.00

STAT 50100 - Experimental Statistics I

Credit Hours: 3.00. Concepts and methods of applied statistics. Exploratory analysis of data. Sample design and experimental design. Normal distributions. Sampling distributions. Confidence intervals and tests of hypotheses for one and two samples. Inference for contingency tables, regression and correlation, and one-way analysis of variance. Use of the SAS statistical software. Intended primarily for students who have not had calculus. Not open to students in mathematical sciences or engineering. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: College Algebra. **Credits:** 3.00

STAT 50200 - Experimental Statistics II

Credit Hours: 3.00. Multiple regression including the general linear test, model selection, and regression diagnostics. Analysis of variance for factorial designs, including multiple comparisons. Analysis of covariance. Repeated measures designs. Extensive use of the SAS statistical software. Intended primarily for students who have not had calculus.**Credits:** 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. **Credits:** 3.00

STAT 50600 - Statistical Programming And Data Management

Credit Hours: 3.00. Use of the SAS software system for managing statistical data. How to write programs to access, explore, prepare, and analyze data. Using the DATA step and procedures to access, transform, and summarize data. Introduction to the SAS macro language. Prepares students for the base SAS certification exam. **Credits:** 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT

35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus. **Credits:** 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite. **Credits:** 3.00

STAT 51300 - Statistical Quality Control

Credit Hours: 3.00. A strong background in control charts including adaptations, acceptance sampling for attributes and variables data, standard acceptance plans, sequential analysis, statistics of combinations, moments and probability distributions, applications.**Credits:** 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs. **Credits:** 3.00

STAT 51500 - Statistical Consulting Problem

Credit Hours: 1.00. Taken by students in the Applied Statistics Master's program who have participated in the Statistical Consulting Service (STAT 597). Focus is on addressing statistical consultation problems that involve either design of experiments or statistical analysis. Problems involve written reports and oral presentations. Permission of instructor required. **Credits:** 1.00

STAT 51600 - Basic Probability And Applications

Credit Hours: 3.00. A first course in probability, intended to serve as a background for statistics and other applications. Sample spaces and axioms of probability, discrete and continuous random variables, conditional probability and Bayes' theorem, joint and conditional probability distributions, expectations, moments and moment generating functions, law of large numbers, and central limit theorem. (The probability material in course one of the Society of Actuaries and the Casualty Actuarial Society is covered by this course.)**Credits:** 3.00

STAT 51700 - Statistical Inference

Credit Hours: 3.00. A basic course in statistical theory covering standard statistical methods and their application. Estimation including unbiased, maximum likelihood and moment estimation; testing hypotheses for standard distributions and contingency tables; confidence intervals and regions; introduction to nonparametric tests and linear regression. **Credits:** 3.00

STAT 51900 - Introduction To Probability

Credit Hours: 3.00. (MA 51900) Algebra of sets, sample spaces, combinatorial problems, independence, random variables, distribution functions, moment generating functions, special continuous and discrete distributions, distribution of a function of a random variable, limit theorems. **Credits:** 3.00

STAT 52000 - Time Series And Applications

Credit Hours: 3.00. An introductory course in stationary time series with applications. Topics include stationarity, autocovariance function, ARIMA (Autoregressive Integrated Moving Average) models, and basic spectral analysis (periodograms and their estimation, tapering, linear filtering). Extensive use of R is incorporated for building time series models and estimating the time series spectrum. **Credits:** 3.00

STAT 52200 - Sampling And Survey Techniques

Credit Hours: 3.00. This course covers basic sampling design and analysis techniques. Sampling designs include: simple random, stratified, clustered, multi-staged, and systematic samples. Methods of estimation appropriate to design features and efficiency and costs related to sample design are covered. **Credits:** 3.00

STAT 52400 - Applied Multivariate Analysis

Credit Hours: 3.00. Extension of univariate tests in normal populations to the multivariate case, equality of covariance matrices, multivariate analysis of variance, discriminant analysis and misclassification errors, canonical correlation, principal components, factor analysis. Strong emphasis will be placed on use of existing computer programs.**Credits:** 3.00

STAT 52500 - Intermediate Statistical Methodology

Credit Hours: 3.00. Statistical methods for analyzing data based on general/generalized linear models, including linear regression, analysis of variance (ANOVA), analysis of covariance (ANCOVA), random and mixed effects models, and logistic/loglinear regression models. Application of these methods to real-world problems using SAS statistical software. **Credits:** 3.00

STAT 52600 - Advanced Statistical Methodology

Credit Hours: 3.00. As a sequel to STAT 52500, this course introduces statistical modeling tools for situations where standard least-squares techniques may not apply. This includes an extensive coverage of generalized linear models (GLM) for non-Gaussian responses, mixed effects models to describe correlated data, nonparametric regression, and lastly, parametric and nonparametric survival models for the analysis of (possibly censored) time-to-event data. Among issues to be discussed are the estimation of the models, the testing of hypotheses, and the checking of model adequacy. Data examples will be used throughout the course to illustrate the methodologies and the related software tools in R. **Credits:** 3.00

STAT 52700 - Introduction To Computing For Statistics

Credit Hours: 3.00. This course provides a thorough introduction to the R programming language, and its use for statistical computing and data science. The course will first look at the fundamentals of R, including different data-structures, control-flow, and the basic vocabulary. An emphasis will be placed on learning idiomatic and efficient R, covering ideas such as recycling, vectorization and functional programming. The course will then look at principles and tools for tasks like organizing data ('tidy data'), manipulating data ('data carpentry'), querying data (through topics like regular expressions) as well as visualizing data (including interactive visualizations). The material and the homework will encourage development of modular reusable code and reproducible research through ideas such as object-oriented programming and dynamic documents in R Markdown. The last part of the course will study statistical procedures such as least-squares regression, LASSO, Monte Carlo sampling and Markov chain Monte Carlo. Besides exams and homeworks, the course will involve a final project that students can collaborate together on. **Credits:** 3.00

STAT 52800 - Introduction To Mathematical Statistics

Credit Hours: 3.00. The course introduces the fundamental frameworks of statistical theory, from which statistical methods can be derived. This includes the framework of data and statistical models, decision theory (risk functions, Bayes and minimax criteria), sufficient statistics, exponential distribution families, estimation methods, unbiased estimators and information inequality (Cramer-Rao), the Neyman-Pearson framework of hypothesis testing, monotone likelihood ratio families and likelihood ratio tests, and an introduction of asymptotic approximations. Students will need background in advanced calculus, linear algebra, probability, and some mathematical analysis. **Credits:** 3.00

STAT 52900 - Applied Decision Theory And Bayesian Statistics

Credit Hours: 3.00. Bayesian and decision-theoretic formulation of problems; construction of utility functions and quantifications of prior information; methods of Bayesian decision and inference, with applications; empirical Bayes; combination of evidence; Bayesian design and sequential analysis; comparisons of statistical paradigms. **Credits:** 3.00

STAT 53200 - Elements Of Stochastic Processes

Credit Hours: 3.00. (MA 53200) A basic course in stochastic models, including discrete and continuous time Markov chains and Brownian motion, as well as an introduction to topics such as Gaussian processes, queues, epidemic models, branching processes, renewal processes, replacement, and reliability problems. **Credits:** 3.00

STAT 53800 - Probability Theory I

Credit Hours: 3.00. (MA 53800) Mathematically rigorous, measure-theoretic introduction to probability spaces, random variables, expectation, independence, weak and strong laws of large numbers, conditional expectations, and martingales. **Credits:** 3.00

STAT 53900 - Probability Theory II

Credit Hours: 3.00. (MA 53900) Convergence of probability laws; characteristic functions; convergence to the normal law; infinitely divisible and stable laws; Brownian motion and the invariance principle. **Credits:** 3.00

STAT 54000 - Computational Finance I

Credit Hours: 3.00. An introduction to the mathematical tools and techniques of modern finance theory, in the context of Black-Scholes option pricing. Brownian motion and its stochastic calculus, Ito's formula, and Feynman-Kac formula. Pricing and hedging of claims on Black-Scholes assets. Incomplete markets. Path-dependent options. Stochastic portfolio optimization.**Credits:** 3.00

STAT 54100 - Computational Finance II

Credit Hours: 3.00. Stochastic interest rate models. American options from the probabilistic and PDE points of view. Numerical methods for European and American options, including binomial, trinomial, and Monte-Carlo methods. **Credits:** 3.00

STAT 54500 - Introduction To Computational Statistics

Credit Hours: 3.00. This introductory course covers the fundamentals of computing for statistics and data analysis. It starts with a brief overview of programming using a general purpose compiled language (C) and a statistics-oriented interpreted language (R). The course proceeds to cover data structures and algorithms that are directly relevant to statistics and data analysis and concludes with a computing-oriented introduction to selected statistical methods. A significant part of the course involves programming and hands-on experimentation demonstrating the covered techniques, ration, and Markov chain Monte Carlo methods. **Credits:** 3.00

STAT 54600 - Computational Statistics

Credit Hours: 3.00. The course focuses on two fundamental aspects in computational statistics: (1) what to compute and (2) how to compute. The first is covered with a brief review of advanced topics in statistical inference, including Fisher's fiducial inference, Bayesian and frequenstist methods, and the Dempster-Shafer (DS) Theory. The second is discussed in detail by examining exact, approximation, and interactive simulation methods for statistical inference with a variety of commonly used statistical models. The emphasis is on the EM-type and quasi-Newton algorithms, numerical differentiation and integration, and Markov chain Monte Carlo methods.**Credits:** 3.00

STAT 54900 - An Introduction To QTL Mapping In Experimental Populations

Credit Hours: 3.00. This is an introductory/interdisciplinary (master's level) quantitative trait locus (QTL) mapping course. QTL mapping is associated with the statistical analysis of genetic/genomic data and is considered part of the general science known as bioinformatics. **Credits:** 3.00

STAT 55300 - Theory Of Linear Models And Analysis Of Experimental Designs

Credit Hours: 3.00. Least squares analysis of linear models. Gauss Markov Theorem. Estimability and testability of parameters. Confidence regions and prediction regions. Introduction to design of experiments. Analysis of variance. Factorial and block designs. Analysis of random, fixed, and mixed models. Components of variance. Distribution of linear and quadratic forms in normal vectors. A firm background in matrix algebra and some previous exposure to linear models or analysis of variance is desirable. **Credits:** 3.00

STAT 57900 - Foundations Of Statistical Machine Learning

Credit Hours: 3.00. This course provides a comprehensive treatment of modern statistical machine learning topics. These include linear regression, kernel method, trees, boosting, and deep neural networks. We understand these subjects from a statistical perspective with some mathematical rigorousness.**Credits:** 3.00

STAT 58000 - Application Of Statistical Theory

Credit Hours: 3.00. The use of numerical methods to obtain answers in problems arising in probability and statistics. Topics will include the use of the likelihood function, Bayesian and classical methods of estimation and testing, evaluation of probabilities, linear and nonlinear regression. STAT 53200, 55400, and some knowledge of computing and complex analysis are desirable. **Credits:** 3.00

STAT 58100 - Bioinformatics Seminar

Credit Hours: 1.00. This is a weekly forum for presenting both applied and theoretical work in the broad area of bioinformatics. Bioinformatics is the science of generating, organizing, and analyzing biological data. This seminar series occurs both in the fall and spring semesters and attracts speakers from Purdue University, as well as throughout the world. Students are encouraged to register for this course, and everyone else is encouraged to attend this open seminar. **Credits:** 1.00

STAT 58200 - Statistical Consulting And Collaboration

Credit Hours: 3.00. This course is designed to emphasize and develop the skills needed by a statistical consultant/collaborator. Topics include: problem solving, consulting session management, written and oral communication, research ethics, design of experiments, collection of data, and application of statistical methods to real problems. Class activities include actively participating in consulting sessions held by the Statistical Consulting Service, small group projects, short papers, and oral presentations. Permission of instructor required. **Credits:** 3.00

STAT 59000 - Internship Seminar

Credit Hours: 1.00 to 3.00. Students complete an internship where they will use statistical methods. A detailed report describing the internship work is required. Permission of department required. Permission of instructor required. **Credits:** 1.00 to 3.00

STAT 59700 - Statistical Consulting Seminar

Credit Hours: 1.00. Active participation in weekly consulting meetings, directed reading in the statistical literature, application of statistical methods to real problems, report writing. Permission of Instructor required. **Credits:** 1.00

STAT 59800 - Topics In Statistical Methods

Credit Hours: 0.00 to 6.00 (West Lafayette, IUPUI) 1.00 to 3.00 (North Central). Directed study and reports for students who wish to undertake individual reading and study on approved topics. Permission of instructor required. **Credits:** 0.00 to 6.00

STAT 63800 - Stochastic Processes I

Credit Hours: 3.00. (MA 63800) Advanced topics in probability theory which may include stationary processes, independent increment processes, Gaussian processes; martingales, Markov processes, ergodic theory. Prerequisite: STAT 53900. **Credits:** 3.00

STAT 63900 - Stochastic Processes II

Credit Hours: 3.00. (MA 63900) Continuation of STAT 63800. **Credits:** 3.00

STAT 65600 - Bayesian Data Analysis

Credit Hours: 3.00. Bayesian data analysis refers to practical inferential methods that use probability models for both observable and unobservable quantities. The flexibility and generality of these methods allow them to address complex real-life problems that are not amenable to other techniques. This course will provide a pragmatic introduction to Bayesian data analysis and its powerful applications. Topics include: the fundamentals of Bayesian inference for single and multiparameter models, regression, hierarchical models, model checking, approximation of a posterior distribution by iterative and non-iterative sampling methods, and Bayesian nonparametrics. Specific topics and the course outline are subject to change as the semester progresses. All topics will be motivated by problems from the physical, life, social, and management sciences. Conceptual understanding and inference via computer simulation will be emphasized throughout the course. Permission of department required.**Credits:** 3.00

STAT 66700 - Measure-Theoretic Statistics: Decision Theoretic And Classical

Credit Hours: 3.00. Decision theoretic approach to statistical problems, complete class theorems, Bayes and minimax procedures, sequential decision problems, sufficiency, comparison of experiments, invariance; most stringent, similar, unbiased, likelihood ratio tests; efficiency, Cramer-Rao inequality, estimation analogues of good tests; confidence sets. Prerequisite: MA 57100, STAT 52800, STAT 53900, STAT 57600. **Credits:** 3.00

STAT 69000 - Seminar

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 3.00

STAT 69100 - Seminar In Probability Theory

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 3.00

STAT 69200 - Research Colloquium

Credit Hours: 1.00. A colloquium or seminar course with discussion. Colloquium speakers present current technical results from statistics. A discussion follows in which the speaker and instructor take questions and explain issues in detail. Students give reports on lectures. Permission of department required. **Credits:** 1.00

STAT 69500 - Seminar In Mathematical Statistics

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required. **Credits:** 1.00 to 3.00

STAT 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

STAT 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Technical Communications

TCM 18000 - Exploring Intercultural technical Communication

Credit Hours: 3.00. This course will explore issues in diverse technical communication workplace settings using Intergroup Dialogue. Students will explore intercultural communication, conflict resolution, social identity, community, and social justice with diverse groups. A component of this class will be engaging with clients, co- facilitators, and/or guest speakers. Topics in this course will include a variety of social identities including (but not limited to) race/ethnicity, nationality of origin/citizenship, gender, sex, sexual orientation/attraction, SES/social class, age, religion/spirituality, ability/disability status, body size/type, level of education.**Credits:** 3.00

TCM 21800 - Introduction To Engineering Technical Reports

Credit Hours: 1.00. This integrated technical communication course introduces foundational skills for technical reports in engineering. Students will practice a recursive writing process and use techniques for analyzing content for different audiences and purposes.**Credits:** 1.00

TCM 22000 - Technical Report Writing

Credit Hours: 3.00. Extensive application of the principles of clear writing in industrial reporting, with emphasis on adaptation to the audience; organization of ideas; and a concise, objective writing style.**Credits:** 3.00

TCM 22200 - Introduction To Technical Documentation

Credit Hours: 1.00. This integrated technical communication course introduces foundational skills for creating effective technical documentation.**Credits:** 1.00

TCM 25000 - Career Planning In Engineering And Technology

Credit Hours: 1.00. Course will guide you through a systematic, hands-on approach to making career-related decisions. The course assumes that career planning is an ongoing process and requires understanding of self and one's environment; therefore, you will leave the course with the necessary tools to find and acquire an internship, co-op, or job now and in the future.**Credits:** 1.00

TCM 31000 - Technical And Scientific Editing

Credit Hours: 3.00. The course focuses on techniques for editing functional technical and scientific products in academic and professional settings.**Credits:** 3.00

TCM 32000 - Written Communication In Science And Industry

Credit Hours: 3.00. Analysis of current writing practices in technology and science, especially in organizational settings. Practice in designing and preparing reports for a variety of purposes and audiences.**Credits:** 3.00

TCM 34000 - Correspondence In Business And Industry

Credit Hours: 3.00. The development and application of strategies and skills for writing letters for business and industry in technology and engineering. Applications may include resumes and letters of application, informational and persuasive letters, and in-house memoranda.**Credits:** 3.00

TCM 35800 - Technical Reporting Analysis And Development

Credit Hours: 1.00. This integrated technical communication course builds advanced technical reporting skills including analysis, synthesis, and development of technical content, structure, and style for technical audiences.**Credits:** 1.00

TCM 35900 - Technical Data Reporting And Presentation

Credit Hours: 1.00. This integrated technical communication course builds advanced data reporting and presentation skills for technical and non-technical workplace audiences.**Credits:** 1.00

TCM 36000 - Communication In Engineering Practice

Credit Hours: 2.00. The application of rhetorical principles to written and oral communication in the engineering professions. Planning, drafting, and revising professional engineering reports; planning and delivering oral presentations; organizing information; developing persuasive arguments.**Credits:** 2.00

TCM 41500 - Technical Communication For Design Projects

Credit Hours: 1.00. This integrated course applies advanced principles and theories of technical communication in a senior design project. Students will create and manage effective oral and written communication for workplace contexts.**Credits:** 1.00

TCM 42000 - Field Experience In Technical Communication

Credit Hours: 1.00 to 3.00. Full- or part-time work in technical communications, supervised by a qualified professional in the cooperating organization and a faculty advisor. Requires periodic written and oral reports and final written and oral reports on work experience and assigned readings. Credit varies with scope of projects. Meets RISE criteria. May be repeated for a total of 4 credit hours. Permission of instructor required.**Credits:** 1.00 to 3.00

TCM 42500 - Managing Document Quality

Credit Hours: 3.00. (ENG W532) This course examines and applies principles of creating technical publication in order to pursue quality management of the process. Students will produce effective publications by identifying and intervening in crucial points in documentation cycle - planning, researching, designing, drafting, reviewing, testing, and revising.**Credits:** 3.00

TCM 43500 - Portfolio Preparation

Credit Hours: 1.00. Preparation of professional portfolio for review by faculty or subject matter experts. Includes readings and development of a professional career plan. **Credits:** 1.00

TCM 49900 - Issues in Technical Communcation

Credit Hours: 1.00 to 3.00. Topics of current and specialized interest for technical communicators. Hours and subject matter arranged by staff.**Credits:** 1.00 to 3.00

TCM 51000 - Effective Workplace Technical Communication

Credit Hours: 3.00. Students from a variety of majors will blend theory and practice as they analyze variables in workplace communication contexts, apply iterative processes of creating effective technical communication, and produce publications within typical workplace technical communication genres.**Credits:** 3.00

TCM 54000 - Advanced Managing Document Quality

Credit Hours: 3.00 to 4.00. In this course, students will examine and apply principles of creating a technical or professional publication from start to finish Students will explore and practice publication quality management issues such as planning, researching audience and content, designing the publication, drafting, obtaining reviews, conducting usability testing, and negotiating within organizational cultures.**Credits:** 3.00 to 4.00

Technology

TECH 10000 - Technology Freshman Seminar

Credit Hours: 1.00. Technology Freshman Seminar. **Credits:** 1.00

TECH 10100 - Women In Technology: Exploring The Possibilities

Credit Hours: 1.00. An in-depth view of the emerging role of women in technology. Presentations by career professionals and faculty in a variety of technology disciplines will increase familiarity with the diversity of programs within the school. Academic and interpersonal skills and strategies needed to succeed in technology careers, and issues such as balancing work and family, will be addressed. **Credits:** 1.00

TECH 10500 - Introduction To Engineering Technology

Credit Hours: 3.00. Introduction to the different disciplines incorporated in engineering technology as well as the skill set needed to be a successful student in engineering technology. Focus will be on individual and professional development, problem identification, developing analytical skills, time and resource management, project planning, design, implementation and evaluation, and oral and written communication in the engineering technology profession. **Credits:** 3.00

TECH 11000 - Freshman Honors Seminar

Credit Hours: 1.00. A first-year honors seminar designed to inform and challenge technology students. Discussion will include a broad range of technology and intellectual issues. By invitation or permission of the instructor. Permission of instructor required. **Credits:** 1.00

TECH 12000 - Design Thinking In Technology

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives. **Credits:** 3.00

TECH 19900 - Special Topics In Technology

Credit Hours: 1.00 to 3.00. Special topics in Technology; subject matter to be arranged. **Credits:** 1.00 to 3.00

TECH 22000 - Designing Technology For People

Credit Hours: 3.00. Innovating in our complex world requires understanding people and the issues and challenges they face. This unique course brings together perspectives from technology and anthropology to address this by exploring ethnographic studies of people and technology interactions. Through this process, students will practice the problem scoping skills necessary to identify and define problems and begin to generate appropriate design solutions. In addition, students will learn how to observe and talk with people about technology and discuss a range of ways people use technology. Accordingly, the course will focus on human-centered design and how to empathize will people during the design process. This will allow students to learn how to identify opportunities for innovation that emerge when designers carefully observe and listen to humans using technology and/or experiencing problems with current technology. Note: This class engages the material in both the classroom and innovation labs.**Credits:** 3.00

TECH 23199 - Professional Practice Extensive Seminar II

Credit Hours: 1.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 1.00

TECH 27199 - Professional Practice Extensive Seminar I

Credit Hours: 1.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 1.00

TECH 28155 - Technology Study Abroad

Credit Hours: 1.00 to 6.00. Faculty-led, short-term, study abroad experience with a technology-related focus. Topics and learning outcomes will vary by course offering. Instructor permission required.**Credits:** 1.00 to 6.00

TECH 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in technology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

TECH 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in technology. Program coordinated by school with cooperation of participating exmployers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required. **Credits:** 0.00

TECH 29900 - Special Topics In Technology II

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of technology provided by technology faculty. **Credits:** 1.00 to 3.00

TECH 30000 - Technology Cooperative Education Practice III

Credit Hours: 1.00 to 3.00. Semester of external career related experiences designed to enhance the student's preparedness for entering an initial or second career. A minimum of 10 weeks and 200 hours are required for credit. Instructor permission required. Typically offered Fall Spring Summer.**Credits:** 1.00 to 3.00

TECH 30010 - Technology Career Enrichment Internship III

Credit Hours: 1.00 to 3.00. Semester of external career related experience designed to enhance the student's preparedness for entering an initial or secondary career. A minimum of 10 weeks and 200 hours are required. Instructor permission required. Typically offered Fall Spring Summer.**Credits:** 1.00 to 3.00

TECH 30100 - Renewable Energy Systems

Credit Hours: 3.00. Course provides the students with an introduction to renewable energy sources. Topics include photovoltaic, solar thermal systems, fuel-cells, hydrogen, wind power, waste heat, bio-fuels, wave/tidal power, geothermal power and hydroelectric. Analysis of technical, economic, environment, politics, and social policy are integral components of the course. Typically offered Fall Spring Summer.**Credits:** 3.00

TECH 30300 - Energy Efficiency And Auditing

Credit Hours: 3.00. Course discusses fundamentals of energy efficiency and energy auditing. Students will analyze audit data, research energy improvement measures, and prepare recommendations. Topics include energy audit process, energy audit reports, energy bill analysis, economic analysis, audit instrumentation, and will include a subset of the following: building envelope, electrical system, HVAC system, waste heat recovery, lighting, cogeneration, and other prevalent commercial/industrial systems. Typically offered Fall Spring Summer.**Credits:** 3.00

TECH 32000 - Technology And The Organization

Credit Hours: 3.00. A course intended to provide students with experiences mirroring what they will encounter in the world of work. Students will participate in interdisciplinary teams to explore technology solutions. Course topics include public policy, regulatory and ethical issues, teaming and leadership, and project management. Permission of department required. **Credits:** 3.00

TECH 33000 - Technology And The Global Society

Credit Hours: 3.00. The intersection of technology, globalization, and society is at the core of this course. Students examine socio-cultural issues related to the development and use of technology across intercultural contexts, explore perspectives and principles behind global technology influences, and examine the complexities and ethical nuances of technology and innovation.**Credits:** 3.00

TECH 33099 - Professional Practice Extensive Seminar III

Credit Hours: 1.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 1.00

TECH 33199 - Professional Practice Extensive Seminar IV

Credit Hours: 1.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 1.00

TECH 34000 - Prototyping Technology For People

Credit Hours: 3.00. Innovating in our complex world requires us to think strategically and make the best decisions possible for both designing and business development. Accordingly, this unique course brings together perspectives from technology and business management to iteratively prototype innovative solutions to student-selected problems. This process will include creating prototypes in a variety of media, using the appropriate methods/tools, as well as exploring the processes and biases related to how people process information and make decisions. This type of work will help to guide the innovation process by gaining insights from testing prototypes and interacting with people to deepen one's understanding of customer needs, market segments, costs of goods, competitor operations, and market strategies. At the conclusion of the course, students will pitch a viable design solution and business model for a validated problem to a variety of potential investors and/or stakeholders. Note: This class engages the material in both the classroom and innovation labs. Students of all levels of experience, will explore tools/programs related to computer aided design, 3D printing, app development, and digital prototyping.**Credits:** 3.00

TECH 34099 - Professional Practice Seminar I

Credit Hours: 1.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 1.00

TECH 35000 - Technology Cooperative Education Practice IV

Credit Hours: 1.00 to 3.00. Semester of external career related experience designed to enhance the student's preparedness for entering an initial or secondary career. A minimum of 10 weeks and 200 hours are required for credit. Instructor permission required. Typically offered Fall Spring Summer.**Credits:** 1.00 to 3.00

TECH 35010 - Technology Career Enrichment Internship IV

Credit Hours: 1.00 to 3.00. Semester of external career related experience designed to enhance the student's preparedness for entering an initial or second career. A minimum of 10 weeks and 200 hours are required for credit. Instructor permission required. Typically offered Fall Spring Summer.**Credits:** 1.00 to 3.00

TECH 35099 - Professional Practice Seminar II

Credit Hours: 1.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 1.00

TECH 36099 - Professional Practice Seminar III

Credit Hours: 1.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 1.00

TECH 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional practice with qualified employers within industry, government, or small business. Permission of instructor required. **Credits:** 0.00

TECH 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional practice with qualified employers within industry, government, or small business. Permission of instructor required. **Credits:** 0.00

TECH 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional practice with qualified employers within industry, government, or small business. Permission of instructor required. **Credits:** 0.00

TECH 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in technology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of instructor required. **Credits:** 0.00

TECH 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in technology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of instructor required. **Credits:** 0.00

TECH 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in technology. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of instructor required. **Credits:** 0.00

TECH 39699 - Professional Practice Internship

Credit Hours: 0.00 to 3.00. Professional practice with qualified employers within industry, government, or small business. Permission of instructor required. **Credits:** 0.00 to 3.00

TECH 39900 - Special Topics In Technology III

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of technology provided by technology faculty. **Credits:** 1.00 to 3.00

TECH 40000 - Technology Study Abroad

Credit Hours: 1.00 to 8.00. This course is utilized to record credits earned through participation in Purdue study abroad programs. Permission of instructor required. **Credits:** 1.00 to 8.00

TECH 43099 - Professional Practice Extensive Seminar V

Credit Hours: 2.00. Optional co-op seminar course where students advance their professional development through sharing their work experiences and receiving feedback from the instructor and other co-op students. Seminar enrollment is intended to occur in the first on-campus semester following a co-op work session. **Credits:** 2.00

TECH 48155 - Technology Study Abroad

Credit Hours: 1.00 to 6.00. Faculty-led, short-term, study abroad experience with a technology-related focus. Topics and learning outcomes will vary by course offering. Instructor permission required.**Credits:** 1.00 to 6.00

TECH 49600 - Senior Design Project Proposal

Credit Hours: 1.00. Capstone problem identification and solution design course demonstrating synthesis of technical, professional, and general knowledge for senior engineering technology students. Proposal presentation is required. **Credits:** 1.00

TECH 49700 - Senior Design Project

Credit Hours: 2.00. Teams will develop innovative solutions based on proposal outcomes in TECH 49600 for current issues in the engineering technology profession, workplace, or community. Project deliverable, presentation, and written report are required. **Credits:** 2.00

TECH 49900 - Special Topics In Technology IV

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of technology provided by technology faculty. **Credits:** 1.00 to 3.00

TECH 52200 - Sustainability Foundations

Credit Hours: 3.00. Emphasis is placed on definitions of sustainability for corporate, governmental and non-governmental organizations, as well as the frameworks used for developing and implementing sustainability programs. Areas of emphasis in environmental, economic, social, and energy sustainability are explored along with policy and regulations that apply to decision-making. Permission of instructor required. **Credits:** 3.00

TECH 52300 - Sustainable Critical Infrastructures

Credit Hours: 3.00. This is an applied sustainability course that explores critical infrastructures needed for sustainability efforts, and explores several industrial segments in-depth including supply chain and energy. Frameworks for evaluating benefits versus risks will be introduced as well as metrics for evaluating. Permission of instructor required. **Credits:** 3.00

TECH 52400 - Sustainability Analysis Assessment

Credit Hours: 3.00. Applied research project where students conduct a sustainability project under instructor guidance. Emphasis is on new developments relating to technical and operational aspects of sustainability as it applied in industry using triple bottom line evaluations. This course emphasizes a holistic approach to sustainability that includes environmental, economic, and social aspects as well as the impact of policy, standards and regulations on decision-making for sustainability. Permission of instructor required. **Credits:** 3.00

TECH 53300 - Design Theory And Technology

Credit Hours: 3.00. This course provides an overview of theories and approaches to the transdisciplinary concept of design, spanning multiple disciplines and types of design outputs with a focus on technology. Students will read the work of leading design scholars, and situate their personal approach to design practice and research based on historical and current trends in the literature. Student work will be focused on theoretical and practical outcomes, with two main learning goals: 1) building upon and critiquing theories, methods, and processes of design in their original research; and 2) generating an awareness and representation of their personal design philosophy. **Credits:** 3.00

TECH 58100 - Workshop In Technology

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education. **Credits:** 0.00 to 8.00

TECH 58300 - Smart Manufacturing Applied Technologies

Credit Hours: 3.00. This course addresses new content focusing on the 9 core capabilities and technologies that are at the forefront of digital transformation in the manufacturing industry. It also discusses the three core principles driving this transformation, particularly with the use of the Internet of Things (IoT) to create digital, smart, and connected systems using data to optimize key business drivers and objectives in manufacturing. The goal is to enable faster, flexible, and more efficient processes to produce higher-quality goods, reduce manufacturing costs, increase productivity, and foster industrial growth. These new concepts have not been previously taught at Purdue.**Credits:** 3.00

TECH 58400 - Financial Analysis For Smart Manufacturing

Credit Hours: 3.00. The course will provide manufacturing professionals with foundational tools needed to conduct financial analysis for planning, implementing, and assessing Industry 4.0 projects focused on the application of technology for the integration of the smart manufacturing enterprise. The course begins with basic financial topics including financial statements, financial ratio analysis, and the strategic profit model, and then moves into concepts needed to address typical investment projects for Industry 4.0. Particular attention will be paid to asset lifecycle management models and the priorities that are important in the application of Industry 4.0 technologies to achieve performance improvements. Focus areas will include digital cost reduction efforts such as cost, level of effort, and impact needed to drive capital efficiencies and lower organizational costs. Project budgeting, savings and return on investment models, and project scalability and repeatability will all be discussed. A final corporate financial investment project is required.**Credits:** 3.00

TECH 60100 - Research Seminar In Technology

Credit Hours: 1.00. This course provides an introduction to the field and scholarship of Technology and the skills necessary for success. Prerequisite: Doctoral student standing. **Credits:** 1.00

TECH 60200 - Seminar In Technology And Society

Credit Hours: 1.00. This course focuses on relevant issues and challenges facing professionals in technology-related careers. Topics may include, but are not limited to: ethics, legal issues, public policy, defining technology, and technology and society. Prerequisite: Doctoral student standing. **Credits:** 1.00

TECH 60300 - Graduate Seminar - Planning

Credit Hours: 1.00. This course is designed to guide students in creating individual development plans tailored to their academic and professional aspirations. Students will learn to assess their skills, interests, and values, aligning them with potential research and academic paths. The course will cover setting realistic goals, identifying resources, and developing strategies for personal and academic growth. Students will engage in workshops and activities that foster self-reflection and practical planning skills. By the end of the course, students will have a personalized roadmap that outlines the steps necessary to achieve their graduate school objectives. **Credits:** 1.00

TECH 62100 - Seminar In Technology

Credit Hours: 1.00 to 3.00. Current problems in Technology. **Credits:** 1.00 to 3.00

TECH 62510 - Risk Analysis And Management

Credit Hours: 3.00. Study of the conceptual frameworks of risk management and internal control that form the basis of the internal auditing profession; review the professional standards and practices that guide the internal auditor; define the roles and responsibilities of the internal auditor in assessing enterprise risk and in establishing or enhancing controls to mitigate such risk; describe the assurance tests and techniques that support the internal auditor in assessing governance, risk management, and process controls. Assurance engagements are mainly addressed. Special attention will be given to audit sampling plans and the role of the internal auditor in assessing internal controls over fraud. A study of risk assessment and management techniques, methods, and models used in industry to minimize, control and communicate risks, including conducting various risk management protocols. In addition, the class will examine the latest ISO Standards. ISO 14001 and ISO 31000 standards. Permission of department required. Prerequisite: STAT course 300 level or higher with a C or better.**Credits:** 3.00

TECH 62700 - Digital Leadership

Credit Hours: 3.00. This course will provide an overview of the strategic use and management of social media by technology leaders. In the digital age, technology and data transform every step of the business process, generating a need for new digital tools across all industries and capabilities. Technology innovation leaders and enterprise leaders must be conversant in current and emerging technologies, particularly the growing influence of social media, to identify opportunities and create competitive advantage. Permission of department required. **Credits:** 3.00

TECH 62800 - Technology Research And Use Of Data Analytics

Credit Hours: 3.00. Examines concepts, models and methods useful for applying data analytics in business environments. Focusing on Hypothesis generation, the capturing, storage and expression of data, analysis for research and visualization. Permission of department required. **Credits:** 3.00

TECH 62900 - Global Supply Chain Analysis & Optimization

Credit Hours: 3.00. This course will provide an overview to supply chain management including history of supply chain, elements of supply chain, interactions of supply chain elements, and factors that impact supply chain success. **Credits:** 3.00

TECH 63000 - Leadership Of Cybersecurity & Cyberforensics

Credit Hours: 3.00. This course will provide an overview of cybersecurity for technology leaders. The digital age is ever changing and provides new challenges, threats and opportunities to the technologies that we use. As leaders, we need to learn the considerations of the impact of our decisions on the stakeholders in our environment and the risks they expose. In this course, we

will analyze current trends and threats in the information security space. In addition, the course will also force the analysis of current computing environments and the unique challenges they can bring. Permission of department required.**Credits:** 3.00

TECH 63100 - Global Perspectives On Emerging Technologies

Credit Hours: 3.00. This course centers on an in-depth treatment of the discipline of technology and its intersections with culture, innovation and economics. Systematic analysis of technology and its international dimensions will be required as is horizon scanning, both nationally and internationally. Proficient written and oral communication is necessary for success. Permission of department required.**Credits:** 3.00

TECH 63200 - Demographic Leadership

Credit Hours: 3.00. This course addresses the major underlying changes redefining the United States. It directly yet sensitively examines how we as individuals can more readily deal with demographic shifts, and in the end, how changes in racial and ethnic diversity and age distribution present us all an opportunity to be our better selves. Permission of department required.**Credits:** 3.00

TECH 63300 - Strategic Management Of Technology Innovation

Credit Hours: 3.00. This course looks at how organizations manage the technology innovation process and the function of new product development teams. We discuss idea generation, new product research and development, management of the innovation process, strategies for successful deployment and marketing of technology innovation, applicable laws, and regulations, and return on investment. We will take a broad look at industry though three lenses: 1 - large public companies, 2 - mid-sized family and privately controlled enterprises, and 3 - entrepreneurially led startups.**Credits:** 3.00

TECH 63400 - Global, Legal, Ethical Issues For Technology Leaders

Credit Hours: 3.00. In this course, the nature of contemporary ethical, legal, and technological issues facing organizational leaders are examined. Effective organizational leadership strategies will be explored through a series of readings, discussions, case studies and reflective practice, and organizational effectiveness will be discussed in terms of topics such as ethical decision-making, corporate social responsibility, codes of ethics, public policies/government regulations, the global environment, technological innovation, risk management, and specific areas of law covering health and safety, contracts, warranties and liabilities, intellectual property, technology, and international laws and regulations. Strategies for effective leadership within the framework of managerial decision-making in an ethical context will be examined. Graduate student standing or senior status with consent of instructor.**Credits:** 3.00

TECH 63500 - Global Perspectives In Emerging Technology

Credit Hours: 3.00. This course involves an in-depth treatment of technology and its intersections with culture, innovation and economics. Systematic analysis of technology and its international dimensions will be required. Horizon scanning both in North America and internationally is needed to succeed in this course as is proficient written and oral communication.**Credits:** 3.00

TECH 63700 - Research Focus: The Social Internet

Credit Hours: 3.00. This course simulates an interdisciplinary think tank environment where students identify research questions and examine the impact of social media and social networking technologies on various aspects of society, business, culture, communication, web experience, and interface design. The course integrates immersion in social media with consideration of several theoretical perspectives from diverse fields. Students complete an original research project customized to fit individual or team interests. The course encourages theoretical and methodological diversity. Permission of instructor required. **Credits:** 3.00

TECH 63800 - Leading & Managing Tech Organizations

Credit Hours: 3.00. This course will provide an overview of many Issues in leadership to include topics such as but not limited to Leadership framework, strategies, and an overview of critical business processes. Leading organizations and the teams within are elements of this course that will be addressed and demonstrated throughout the books and exercises in this course. We will focus on what is needed to be a great leader in various situations, and paths to improving leadership trust and leader thinking skills.**Credits:** 3.00

TECH 64000 - Research DTech Thesis

Credit Hours: 1.00 to 18.00. This course will be the research course for Online Doctor of Technology (DTech) students. This research dissertation course is to reflect the student's work to prepare and pass the preliminary examination, prepare and pass the dissertation proposal and successfully defend and pass the DTech dissertation.**Credits:** 1.00 to 18.00

TECH 64100 - Advanced Analytics For Research And Industry

Credit Hours: 3.00. Offers students training and experience in advanced parametric statistical techniques in both research and industrial applications. While statistical theory necessary to properly conduct analyses will be discussed, this course focuses on practical applications of analysis strategies, including issues in handling data from organizations and industry settings. Material includes overview and implementation of relevant statistical software applications. Practical skills in presenting advanced analyses to both professional and scientific audiences is a key component of the course. Prerequisites: IET 50700 or STAT 50100. Permission of instructor required. **Credits:** 3.00

TECH 64600 - Analysis Of Research In Industry And Technology

Credit Hours: 3.00. Analysis of research and evaluation of research reports. Emphasis on understanding the application of fundamental statistical methods in design and interpretation of research findings in industrial, technical, and human resource development environments. Prerequisite: Master's student standing. **Credits:** 3.00

TECH 67600 - Analysis Of Research Methods

Credit Hours: 3.00. Analysis of research and evaluation of research reports and funding - emphasis on understanding the application of fundamental statistical methods in design and interpretation of research findings in industrial, technical, business, and government environments.**Credits:** 3.00

TECH 69000 - Independent Study In Technology

Credit Hours: 1.00 to 6.00. Intensive individual study of selected current developments and issues in technology. A faculty sponsor is required for this course. Prerequisite: Doctoral student standing. Permission of instructor required. **Credits:** 1.00 to 6.00

TECH 69500 - Graduate Professional Practice

Credit Hours: 0.00. Advanced professional experience in Technology. The experience is coordinated by the major professor with cooperation of a participating employer. Students submit a summary report. Permission of instructor required. **Credits:** 0.00

TECH 69700 - Qualitative Research Methods In Technology Studies

Credit Hours: 3.00. In-depth examination of qualitative methods and frameworks used in technology research. Students learn by application a variety of methods from the qualitative research toolbox such as interviewing, focus groups, observation, and

experience analysis. TECH 69700 prepares students to plan, pilot, and assess an original qualitative research study and to integrate qualitative research findings in the technology design and evaluation process. Permission of instructor required. **Credits:** 3.00

TECH 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Technology Leadership and Innovation

TLI 10000 - Organizational Leadership Career Orientation

Credit Hours: 1.00. In this course students are introduced to potential organizational leadership-related career paths. Topics include introduction to organizational leadership careers, self-assessment and career alignment, and networking and professional development. **Credits:** 1.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment. **Credits:** 3.00

TLI 15200 - Business Principles For Organizational Leadership

Credit Hours: 3.00. This course will introduce the topic of applied organization leadership in the context of working organizations. Topics include basic functions, structures, and operations of organizations, and an introduction to reading and understanding balance sheets, cash flow statements, and profit-loss statements. **Credits:** 3.00

TLI 16100 - Prototyping In Engineering/Technology Education

Credit Hours: 3.00. Design, make, and innovate! This course provides basic instruction on the proper and safe use of tools and equipment used to prototype innovative ideas. This includes 3D printers, laser cutters/engravers, fabrication tools/equipment, CNC mills/routers, and microcontrollers/microcomputers.
Credits: 3.00

TLI 20000 - Organization Leadership Career Exploration

Credit Hours: 1.00. In this course students continue their exploration of organizational leadership-related career opportunities. Topics include resume building and internship search strategies, interview skills and professional etiquette, and identifying and securing internships. **Credits:** 1.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection. **Credits:** 3.00

TLI 25500 - Foundations Of Human Resource Development

Credit Hours: 3.00. Much has been discussed about the importance of people in organizations, difficulties within organizations, and challenges faced by today's organizations. This course covers the field of human resource development (HRD) as an important area of practice within organizations. The course provides an introduction to HRD theories, principles, concepts, and practices. It provides foundations through the study of history, current paradigms, and perspectives on the future of the field of HRD while specifically focusing on training and development, organization development, and career development as organizational functions within HRD. **Credits:** 3.00

TLI 26200 - Foundations Of Integrated STEM Education

Credit Hours: 3.00. This course provides students with a conceptual understanding of an integrated approach to teaching Science, Technology, Engineering, and Mathematics (STEM). Integrated STEM pedagogies include project/problem-based (PBL), design-based, and inquiry-based approaches to teaching. Students engage in a co-teaching model to deliver STEM instruction and observe local K-12 classrooms.**Credits:** 3.00

TLI 26500 - Teaching The TE Of STEM

Credit Hours: 3.00. A course for teacher education majors that provides rationale and techniques for integrating engineering and technological literacy into the K-12 mathematics and science curriculum. Experiences focus on the engineering design process, mechanisms, robotics, strength of materials, electrical circuits, and electronics. **Credits:** 3.00

TLI 29000 - Independent Study In Technology Leadership And Innovation

Credit Hours: 1.00 to 3.00. Supervised individual study in technology leadership and innovation topics. Permission of instructor required. **Credits:** 1.00 to 3.00

TLI 29900 - Special Topics In Technology Leadership & Innovation

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faulty. Group instruction in new or specialty areas of Technology Leadership and Innovation is provided by Technology faculty, subject to TLI Curriculum Committee approval. **Credits:** 1.00 to 3.00

TLI 30000 - Organizational Leadership Career Transition

Credit Hours: 1.00. In this course students prepare to make the transition from organizational leadership students to organizational leadership professionals. Topics include career planning and advancement, professional networking and relationship building, and transitioning successfully from college to career. **Credits:** 1.00

TLI 31400 - Leading Innovation In Organizations

Credit Hours: 3.00. This course provides the foundation for understanding the manner in which companies capture innovation and use it to set themselves apart from competitors. Topics covered include the attributes of organizations that are successful in fostering a culture of innovation; the characteristics and roles of leaders and members in innovative organizations; managerial processes and organizational systems that facilitate the successful development, commercialization, and adoption of innovative technologies, products, and services; and methods used to measure innovation-related outcomes. **Credits:** 3.00

TLI 31500 - New Product Development

Credit Hours: 3.00. This course introduces the process of technological innovation and new product development from concept to commercialization. Topics covered include ideation, R&D, prototyping (design and modeling), testing for quality, the patent process, intellectual property rights, marketing and cost evaluation. **Credits:** 3.00

TLI 35510 - Training And Talent Development

Credit Hours: 3.00. This course is designed to develop theoretical and applied perspectives on needs assessment, design, development, delivery, and evaluation of training and development in organizational contexts. Emphasis is placed on assessing learning and performance outcomes throughout the training and development process. Implication of training to talent development are also highlighted in a highly automated workplace. **Credits:** 3.00

TLI 35520 - Organization Development And Change

Credit Hours: 3.00. This course provides an introduction to major theories, concepts, skills and techniques for the practice of organization development processes and interventions using a consultancy approach. Implications for organizational change are integrated as part of an OD effort. **Credits:** 3.00

TLI 35530 - Strategic Planning In Human Resources

Credit Hours: 3.00. The course provides students with a theoretical foundation for strategic planning within the context of systems thinking. It also develops the practical skills needed to create and execute effective strategic plans for human resource activities. **Credits:** 3.00

TLI 35540 - Staffing Organizations

Credit Hours: 3.00. This course provides an overview of the processes by which organizations staff positions with both internal and external applicants. The course covers theory, research, and legal foundations that inform organizational staffing actions. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, retention, and internal and external selections practices. **Credits:** 3.00

TLI 35550 - Compensation And Rewards

Credit Hours: 3.00. This course examines the compensation and reward structures of organizations. It covers the planning and implementation of a total compensation system, including job evaluation, salary survey and analysis, benefits, and development of a structured pay system. Included are behavior implications and legal compliance issues related to compensation and rewards. **Credits:** 3.00

TLI 35560 - Employment And Labor Law For The Human Resource Professionals

Credit Hours: 3.00. This course provides a foundation for understanding the impact of labor laws and legal issues in organizations. Topics include corporate social responsibility, employment law, environmental issues, conflict resolution, and global challenges. **Credits:** 3.00

TLI 35570 - Job Analysis And Job Design

Credit Hours: 3.00. This course demonstrates procedures for analyzing tasks related to specific jobs. Topics include collecting occupational data and information, the relevance of job analysis on individual and organizational performance, impact on training and development, and associated legal issues. **Credits:** 3.00

TLI 35580 - The Individual And Organizational Performance

Credit Hours: 3.00. This course develops an understanding of the principles and theoretical foundations of individual and organizational performance management. Emphasis is placed on the perspectives, methodology, and theoretical frameworks as well as applications for performance management from the perspective of human resources professionals.**Credits:** 3.00

TLI 35600 - Global Technology Leadership

Credit Hours: 3.00. This course examines leadership of high-tech organizations across cultures and national boundaries. Topics covered may include forging strategic alliances, negotiating contracts, meeting ISO requirements, managing a multinational workforce, identifying emerging markets, and driving innovation. **Credits:** 3.00

TLI 36100 - Engineering And Technology Education Instructional Planning And Evaluation

Credit Hours: 3.00. This course addresses selecting content, writing instructional objectives, planning lessons, preparing a unit of study, and evaluating student progress. Emphasis is placed on evaluating instruction and student achievement to include developing valid, reliable testing instruments as they relate to measuring student achievement in the cognitive, affective, and psychomotor domains. **Credits:** 3.00

TLI 36700 - Teaching Design And Innovation I

Credit Hours: 3.00. This course focuses on the development of appropriate engineering design knowledge and skill required to effectively teach middle and high school engineering/technology education courses by infusing engineering design into the curriculum. Students will use 3-D solid modeling software, rapid prototyping, and other design technologies as they engage in the engineering design process through an open-ended engineering design challenge.**Credits:** 3.00

TLI 45560 - Professional Internship In Human Resources

Credit Hours: 3.00. The undergraduate internship course is designed as a culminating learning experience for students nearing graduation. Students have an opportunity to seek out practical work experience related to human resources to use knowledge acquired in the classroom. The course will serve as a professional development opportunity helping students reflect and build upon their experiences gained through the required 500-hours human resources related work. **Credits:** 3.00

TLI 45570 - Global Human Resources

Credit Hours: 3.00. This course prepares students to lead human resource activities within a global, technology-driven economy and business environment. Topics include recruitment, training and development processes, cultural issues, policies and regulations within a global and international context. **Credits:** 3.00

TLI 45580 - Human Resource Information Systems And People Analytics

Credit Hours: 3.00. This class surveys Human Resource Information Systems (HRIS) to understand how they facilitate communication processes, policy implementations and change management. Big data is transforming how firms recruit and develop talent and this course introduces concepts and methods for making better through people analytics.**Credits:** 3.00

TLI 45590 - Foundations Of Human Resources Capstone

Credit Hours: 3.00. This course synthesizes all of the required and secondary content areas described in the SHRM HR Curriculum Guidelines. Students will prepare for the SHRM Certified Professional (SHRM-CP) exam while demonstrating their accumulated knowledge and in the area of human resources. **Credits:** 3.00

TLI 45700 - Technology Policy And Law

Credit Hours: 3.00. This course provides a foundation of understanding the broad impact of technology policies and laws on organizational performance, innovation, corporate accountability, and sustainability. Topics include corporate social responsibility, employment and contract law, intellectual property, e-commerce, and environmental and global challenges. **Credits:** 3.00

TLI 45800 - Leadership For Competitive Advantage

Credit Hours: 3.00. Organizations who consistently outperform competitors realize bottom-line impact through efficient leveraging of organizational strategy, leadership, internal and external talent acquisition, organizational culture, and marketing strategies. This course will explore the relationships between these areas and introduce organizational tools and concepts to enable the student to recognize and build capacity for sustainable competitive advantage in technology organizations. **Credits:** 3.00

TLI 45810 - Internship Program

Credit Hours: 1.00. An internship designed to combine university study with work experience directly related to the student's plan of study. Permission of department required. **Credits:** 1.00

TLI 45820 - Internship Program Seminar

Credit Hours: 2.00. An internship designed to combine university study with work experience directly related to the student's plan of study. Includes reflection on interning experience as well as a written final paper and oral presentation covering the student's internship experience. Permission of department required. **Credits:** 2.00

TLI 45830 - Service Learning

Credit Hours: 3.00. Service learning is a reflective experience in which students actively engage in the community and integrate that experience into the classroom. Permission of department required. **Credits:** 3.00

TLI 45900 - Technology Focus Seminar

Credit Hours: 3.00. This course will provide the synthesis between each student's technology focus area and technology leadership. Students will apply advanced leadership knowledge and skills to technology-based problems while working in diverse teams. Topics include team leadership, integration of technologies to develop innovative solutions, and project management. **Credits:** 3.00

TLI 46000 - Teaching Design And Innovation II

Credit Hours: 3.00. This course expands the engineering design process, incorporating rapid prototyping and other fabrication technologies to create a specified solution. The course emphasizes process flow chart planning and logistics of engineering/technology education laboratory management. Prototypes will be tested in real situations and data gathered on performance. Designs will be revised to reflect a deeper understanding of manufacturing and use, being sensitive to structure, function, and behavior from a systems-level perspective. Intellectual property, marketing, and infrastructure will be discussed.**Credits:** 3.00

TLI 46100 - Engineering/Technology Teacher Lab Planning

Credit Hours: 3.00. This course provides future engineering/technology education teachers with information on designing, organizing, and managing engineering/technology education facilities. An in-depth study of specific laboratory requirements

related to safety is covered. Management skills related to students, equipment, and supplies are addressed. Students design an engineering/technology education laboratory.**Credits:** 3.00

TLI 46200 - Methods Of Teaching Engineering/Technology Education

Credit Hours: 3.00. Students identify a variety of instructional techniques appropriate for teaching engineering/technology education. Students will present lessons and develop evaluation instruments to determine student achievement. Methodological insights and understanding for teaching technical subject matter is stressed. **Credits:** 3.00

TLI 48590 - Organizational Leadership Capstone I

Credit Hours: 3.00. This course provides the synthesis between technology and organizational leadership. Students will apply advanced leadership knowledge and skills to issues, problems, and challenges in technology-rich organizations while working in diverse teams. Topics include team leadership, integration of technologies to develop innovative solutions, problem-solving and decision-making, globalization, cross-cultural management, and project management. Permission of Department required. **Credits:** 3.00

TLI 48595 - Organizational Leadership Capstone II

Credit Hours: 3.00. This course builds upon the prerequisite capstone course in which students engage in theory-based applied learning as well as team project-based learning and learning in context. Students will work with organizations to address various organizational challenges in which they will integrate their organizational skills and demonstrate their leadership competencies. **Credits:** 3.00

TLI 48800 - Technology Leadership And Innovation Capstone

Credit Hours: 3.00. This is an integrative course that focuses on using cross-functional teams to identify, scope, design, and propose solutions for problems that span the areas of industrial engineering technology, organizational leadership, and supply chain management. Field trips may be required. **Credits:** 3.00

TLI 49000 - Independent Study In Technology Leadership And Innovation

Credit Hours: 1.00 to 3.00. Supervised individual study in technology leadership and innovation topics. Permission of instructor required. **Credits:** 1.00 to 3.00

TLI 49800 - Undergraduate Research In Technology Leadership And Innovation

Credit Hours: 1.00 to 3.00. Students will conduct research in the area of technology leadership and innovation with a primary investigator. The primary focus of the course is to contribute to ongoing research, while learning current research techniques. Analyzing data, determining courses of action, developing critical thinking, and presenting results are emphasized. Requires prior approval of, and arrangement with, a faculty research advisor. Permission of instructor required. **Credits:** 1.00 to 3.00

TLI 49900 - Special Topics In Technology Leadership & Innovation

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faulty. Group instruction in new or specialty areas of Technology Leadership and Innovation is provided by Technology faculty, subject to TLI Curriculum Committee approval. **Credits:** 1.00 to 3.00

TLI 52000 - Foundations Of Innovation Studies

Credit Hours: 3.00. Foundations Of Innovation Studies has been designed to provide a broad spectrum introduction to the field of innovation studies. Students will gain practical and theoretical knowledge of innovation at a variety of levels, including the individual, team, organizational, and ecosystem contexts. Students will examine innovation strategies and tensions within the innovation "Triple Helix" of industry, academia, and government through the use of case studies and individually selected research reports. Throughout the class, students will examine recent innovation efforts and present short innovation cases that align with the learning objectives of the class. **Credits:** 3.00

TLI 52100 - Drug Development

Credit Hours: 3.00. (ABE 51100) A review of drug discovery and drug development, with emphasis on the regulatory aspects of these activities. Animal preclinical research and human clinical research are discussed in detail. In addition, the process for the assembly of an IND and NDA is discussed along with the Phases (I,II,III) of human clinical trials. The CMC (chemistry manufacturing and control) aspects of drug development are presented along with ICH documents and manufacturing process analytical technologies. The course concludes with a brief review of international regulatory issues and patents. **Credits:** 3.00

TLI 52200 - Good Regulatory Practice

Credit Hours: 3.00. Includes a review of the FDA and ICH regulations on good manufacturing, good laboratory, and good clinical practices. The meaning of these regulations, the globalization of practices, and the roles and responsibilities of various professionals implementing these regulations are addressed. Special emphasis will be detailed coverage of the process for the assembly and submission of an IND or NDA, and the function of the regulatory affairs department in a pharmaceutical company. **Credits:** 3.00

TLI 52300 - Quality Management, Audits And Inspections

Credit Hours: 3.00. This course provides advanced topics in quality management and business improvement methods that apply to the pharmaceutical industry. Emphasis will be placed on specific issues of industry, audits, and inspections, as well as the successful selection and presentation of business and quality improvement projects to produce compliance and competitive advantage. **Credits:** 3.00

TLI 52400 - The Documents And Dialogues Of Drug Delivery And Registration

Credit Hours: 3.00. This capstone advanced course will integrate previous learning relating to laws and regulations, quality principles and practices, and the preparation and submission of documents for preclinical research, clinical trials and new drug approvals. Special topic lectures will be given. Considerable time will be devoted to preparing regulatory documents and conducting "mock" dialogues and negotiations with "pretend" agency officials. **Credits:** 3.00

TLI 52500 - Molecular Basis Of Manufacturing Pharmaceuticals

Credit Hours: 3.00. This advanced course addresses important Chemistry Manufacturing and Control (CMC) issues related to process analytical technology. The course provides important information on strategies for monitoring processes on-line, the best approaches to analyzing data, how the data can be used to find process critical control points, and strategies for reporting the data to the FDA. The course may include laboratory exercises, laboratory tours, and/or workshops outlining how to interpret the data. **Credits:** 3.00

TLI 52600 - Digital Innovation And Transformation

Credit Hours: 3.00. Rapidly evolving digital technologies are fueling a stream of innovation opportunities. To remain relevant, incumbent firms need to innovate and transform their business models. Digital strategies and innovation, however, oftentimes conflict with traditional managerial thinking. For example, rapidly falling coordination costs and the rising relevance of data make diversification patterns profitable that contradict today's dominant view that focused product-market positioning is best.

This course explores the different effects the digital revolution has on the foundations of competitive advantage and thereby prepares its students to design, apply, and implement strategies and systems for digital innovation. Permission of instructor required. **Credits:** 3.00

TLI 52700 - Behavioral Analytics

Credit Hours: 3.00. Behavioral Analytics has been designed to provide a foundation of skills and tools that enable students to determine their own project topic, collect the data that they need, manipulate that data, and perform analysis consistent with their data. This is an experiential learning process that offers a great deal of flexibility with respect to the methods and tools used, and students are encouraged to create a final project in a manner consistent with publications within their discipline. Permission of instructor required. **Credits:** 3.00

TLI 54000 - Smart Manufacturing Enterprise: Organizational Behavior And Leadership In The Digital Enterprise

Credit Hours: 3.00. Smart manufacturing is about increasing efficiency and eliminating pain points in your system. It's characterized by a highly connected, knowledge-enabled industrial enterprise where all organizations and operating systems are linked, leading to enhanced productivity, sustainability, and economic performance. Implementing smart manufacturing techniques requires an effective understanding of organizational behavior and leadership skills required for the new digital enterprise. This knowledge of individuals' perceptions, attitudes, and behavior enables leaders to choose appropriate leadership styles and managerial practices to increase organizational effectiveness and positive human outcomes. This course will provide an overview of organizational behavior and leadership concepts important for implementing change within a smart manufacturing enterprise. **Credits:** 3.00

TLI 62500 - Research In Open Innovation I

Credit Hours: 3.00. This is a research-oriented course designed for graduate students who aim to develop and implement a scientific research project in the field of open innovation. They will critically discuss and evaluate scientific writings relevant to the new research area of open innovation from the fields and disciplines of innovation studies, information systems, and other social sciences. Through synthesis of theories and frameworks used in academic articles, the students will develop a theoretically and practically motivated research question. They will also implement a pilot study to examine their hypotheses. The Research Center for Open Digital Innovation (RCODI) in the Discovery Park at Purdue will offer opportunities to plan and implement individual questions, if students have not identified their own data source. In addition, the students will participate in an action-oriented research project in open innovation performed by the class as a group project to gain experience in experimental innovation research and practice. Prerequisites: Basic statistics (at least STAT 30100 or equivalent, STAT 50100 or higher is recommended); foundational knowledge in scientific research (TECH 64600 or SOC 58000 or equivalent). Permission of instructor required. **Credits:** 3.00

TLI 62579 - Global, Legal And Ethical Issues In Technology Leadership

Credit Hours: 3.00. This course examines the global, legal and ethical issues that influence global technology leadership and management. Topics include ethical decision making; management; global issues; intellectual property and innovation; business law; relevant international laws; public policies and regulations; risk management; strategic alliances and joint ventures; and issues of organizational sustainability. This course relies on the case-study approach and covers a broad range of current and emerging technologies and businesses. **Credits:** 3.00

TLI 62600 - Technology Entrepreneurship And Research Translation

Credit Hours: 3.00. (ABE 62600) The course is designed to introduce graduate students and faculty mentors to the intellectual, financial, and management processes associated with translating research into tangible products through university initiated, early-stage commercialization (start-up) activities. Lectures will present case studies of technologies and pathways to

commercialization. Guest speakers will illustrate the start-up process through real-world experience, and will also address approaches for managing entrepreneurial activities, intellectual property and conflicts of interest in a university environment. No course prerequisites, however students should be involved in research with commercial implications. Permission of instructor required.**Credits:** 3.00

TLI 66200 - Philosophy Of Technology

Credit Hours: 3.00. The term technology has multiple meanings and applications so vast that one clear and all-encompassing definition of the term has become unattainable. However, to build an epistemology of technology, we must explore ways to define technology so to provide a foundation for a philosophy of technology. This course will explore multiple views and definitions of technology embedded within the scholarly work focused on technology in order to build and defend a philosophy of technology. **Credits:** 3.00

The Data Mine

TDM 10100 - The Data Mine Seminar I

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 11100 - Corporate Partners I

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 11200 - Corporate Partners II

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also

has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 19000 - The Data Mine Special Topics

Credit Hours: 1.00 to 5.00. Supervised reading course or special topics course at the freshman level for undergraduates are given under this number.**Credits:** 1.00 to 5.00

TDM 20100 - The Data Mine Seminar III

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 20200 - The Data Mine Seminar IV

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 21100 - Corporate Partners III

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 21200 - Corporate Partners IV

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 29000 - The Data Mine Special Topics

Credit Hours: 1.00 to 3.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights

about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00 to 3.00

TDM 30100 - The Data Mine Seminar V

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 30200 - The Data Mine Seminar VI

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 31100 - Corporate Partners V

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 31200 - Corporate Partners VI

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 39000 - The Data Mine Special Topics

Credit Hours: 1.00 to 3.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00 to 3.00

TDM 40100 - The Data Mine Seminar VII

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 40200 - The Data Mine Seminar VIII

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00

TDM 41100 - Corporate Partners VII

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 41200 - Corporate Partners VIII

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 49000 - The Data Mine Special Topics

Credit Hours: 1.00 to 3.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.**Credits:** 1.00 to 3.00

TDM 50100 - The Data Mine Seminar

Credit Hours: 1.00. Intended for any student across campus desiring broad coverage of data science and analytics topics.**Credits:** 1.00

TDM 51100 - Corporate Partners

Credit Hours: 3.00. Students in The Data Mine Corporate Partners Learning Community will work in groups with Corporate Partner mentors on a variety of projects. They will analyze real data related to questions that the Corporate Partner proposes. Most projects will last for a full academic year (late August through late April), with multiple reports and presentations given more frequently. The mentor is expected to meet with the students weekly by Microsoft Teams, or (more rarely) in person. Students are expected to actively participate in these meetings and in all individual and group work. The goal of the course is to help students build impactful industry related skills in data science, visualization, and data engineering. The Data Mine staff also has data scientists who can assist students with technical questions focused on the skills being built and the research conducted. Students can work on real-world industry facing issues that have a high value add for the corporate partner.**Credits:** 3.00

TDM 59000 - The Data Mine Special Topics

Credit Hours: 1.00 to 3.00. Focused topical coverage of data science and analytic topics intended for any student across campus.**Credits:** 1.00 to 3.00

Theatre

THTR 13300 - Acting I

Credit Hours: 3.00. Beginning training and exercises in the basic elements of acting, including vocal and physical preparation, sensory awareness, releasing the imagination, and a basic understanding of action an objective. Staging exercises and terminology are emphasized. **Credits:** 3.00

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required. **Credits:** 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required. **Credits:** 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required. **Credits:** 1.00

THTR 16000 - Introduction To Scene Design And Technology

Credit Hours: 2.00. This course is designed to introduce the students to the process and tools of scene design and technology. **Credits:** 2.00

THTR 16100 - Introduction To Costume Design And Technology

Credit Hours: 2.00. Introduction to analytical, artistic, and practical skills required when creating costumes for theatre. Beginning training in elements and principles of design, rendering and presentation skills. Elementary instruction in costume construction, including hand and machine sewing, costume crafts, and basic patterning. **Credits:** 2.00

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design. **Credits:** 2.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program. **Credits:** 2.00

THTR 16400 - Introduction To Theatre Organization And Management

Credit Hours: 2.00. A theoretical study of performing arts management and backstage operations from audition through performance. Techniques of scheduling, production management, stage management, technical direction, house management, safety issues, and emergency procedures. **Credits:** 2.00

THTR 20100 - Theatre Appreciation

Credit Hours: 3.00. Understanding and appreciation of the theatre's role in the modern world, dramatic structure and analysis, the actor, director, designer, and critic; attendance at current stage productions; class discussion of production elements. CTL:IFA 1302 Theatre Appreciation **Credits:** 3.00

THTR 21300 - Voice For The Actor

Credit Hours: 2.00. Designed to heighten the actor's awareness of the vocal instrument. Elementary vocal techniques will be practiced to expand the student's vocal flexibility and range. Emphasis on freeing habitual vocal tensions and teaching the student the fundamentals of vocal health. **Credits:** 2.00

THTR 23300 - Acting II

Credit Hours: 3.00. Continued development of the basic acting tools of objectives, actions, justification, and personalization; continued vocal and physical work; introduction of script and character analysis; and the introduction of audition techniques. The course will use material from contemporary dramatic literature in the rehearsal process. Prerequisite: THTR 133. Instructor permission required for non-majors. **Credits:** 3.00

THTR 23500 - Vocal/Physical Preparation

Credit Hours: 2.00. Vocal/Physical Preparation is designed to increase and deepen student's physical awareness, develop physical and vocal stamina, flexibility and strength, modify habitual modes of expression, expand vocal and physical range, and increase student's ability to respond expressively. **Credits:** 2.00

THTR 25300 - Survey Of Audio Production

Credit Hours: 3.00. An introduction to theories and techniques of audio production. **Credits:** 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry. **Credits:** 3.00

THTR 25600 - Stage Make-Up

Credit Hours: 2.00. Study of facial anatomy, the aging process, the principles of light and shadow, and character analysis. Theory and practice in the basic techniques of applying stage makeup. **Credits:** 2.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production. **Credits:** 3.00

THTR 27100 - Interpreting The Play Script

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a play script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation. **Credits:** 3.00

THTR 29000 - Special Topics In Theatre

Credit Hours: 1.00 to 3.00. Topics will vary. **Credits:** 1.00 to 3.00

THTR 32300 - Acting: Movement For The Actor

Credit Hours: 3.00. Designed to heighten body awareness in movement and stillness. Characterization techniques will be practiced that expand the student's flexibility, aerobic capacity, strength, agility, and range of self-expression. Emphasis on freeing habitual tension patterns through the exploration of expressive movement. **Credits:** 3.00

THTR 33300 - Acting III

Credit Hours: 3.00. Application of foundational acting techniques to specific disciplines. May be repeated for credit. Instructor permission required for non-majors. **Credits:** 3.00

THTR 33400 - Acting III: Acting For The Camera

Credit Hours: 3.00. Continued development of acting technique, as it relates to challenges unique to acting on film, television and commercials. Students will develop an effective process for on-camera performance. Class exercises/presentations are recorded, viewed and critiqued by the students and the instructor. **Credits:** 3.00

THTR 33600 - Rehearsal And Performance II

Credit Hours: 1.00 or 2.00. The study and practice of rehearsal techniques and stage performance. Students will be assigned to acting and stage management duties in experimental and major stage productions. Permission of instructor required. **Credits:** 1.00 or 2.00

THTR 35300 - Theatre Audio Techniques I

Credit Hours: 3.00. A theoretical and practical study of the technical aspects of audio as they relate to theatre. The course will include specifications, layout and installation techniques, operation, and maintenance of theatre sound systems, etc. Majors have priority. Offered alternate years. **Credits:** 3.00

THTR 35400 - Painting For The Stage

Credit Hours: 3.00. The principles and practice of painting for the stage. Study of tools, media, and techniques used in traditional scenic painting, costume painting, and the creation of dimensionality on various surfaces. Offered alternate years. **Credits:** 3.00

THTR 36000 - Scenic Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into an environment for dramatic action. Emphasis on the interrelationship among all aspects of production and how the scenic element becomes a building block toward total picturization. Offered alternate years. **Credits:** 3.00

THTR 36100 - Costume Design

Credit Hours: 3.00. Theory and principles of design specifically applied to stage costume design. Emphasis on the interrelationship of all aspects of production and how the costume becomes a building block toward total picturization. Offered in alternate years. **Credits:** 3.00

THTR 36200 - Light Design

Credit Hours: 3.00. A project course in utilizing the principles of design as they can convey an environment and its qualities to further dramatic action. Emphasis on the interrelationship among all aspects of production and how light becomes a building block toward total picturization. Offered in alternate years. **Credits:** 3.00

THTR 36300 - Sound Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into auditory response and environment. Emphasis on the interrelationship among all aspects of production and how sound becomes a building block toward total picturization. Majors have priority. Offered alternate years. **Credits:** 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required. **Credits:** 1.00 to 2.00

THTR 38000 - Histories Of Theatre

Credit Hours: 3.00. Variable topics in theatre and performance history. Emphasis on the study of the works, aesthetics, and innovations of a theatrical form/genre alongside social, cultural, economic, and political contexts. **Credits:** 3.00

THTR 38100 - Theatre And Performance Historiography

Credit Hours: 3.00. Historiographic analysis of theatre, drama, and performance of the 20th and 21st centuries. Emphasis on the relationship between modern and contemporary performance to world history from social, political, and cultural perspectives. Course includes both written and practical components. Prerequisites: THTR 201, THTR 271. **Credits:** 3.00

THTR 39000 - Directed Study Of Special Theatre Problems

Credit Hours: 1.00 to 3.00. An undergraduate level, individualized, and intensive study of any aspect of theatre required by the student's plan of study. Permission of instructor required. **Credits:** 1.00 to 3.00

THTR 43300 - Acting IV

Credit Hours: 3.00. Adaptation of acting techniques to professional applications. **Credits:** 3.00

THTR 43400 - Advanced Acting Skills

Credit Hours: 3.00. A specially designed class for the advanced undergraduate actor. Areas of study may include period/style acting; verse performance; mask work; advanced characterization; and audition techniques. **Credits:** 3.00

THTR 44000 - Directing: Page To Stage

Credit Hours: 3.00. This course focuses on theoretical and practical understanding of the essential principles and fundamentals of directing for the stage. Students will learn a proven directorial methodology and engage in essential research and written and practical presentations throughout. Permission of instructor required. **Credits:** 3.00

THTR 45800 - Problems In Theatre Technology

Credit Hours: 1.00 to 3.00. A tutorial in technical theatre. Available for students who wish to do more extensive work in theatre technology. Permission of instructor required. **Credits:** 1.00 to 3.00

THTR 46800 - Problems In Theatre Design

Credit Hours: 1.00 to 3.00. A tutorial in theatre design. Available for students who wish to do more extensive work in the design aspects of production. Permission of instructor required. **Credits:** 1.00 to 3.00

THTR 47902 - Capstone Project

Credit Hours: 3.00. Students will develop, present, and reflect upon a performance event based on the research framework developed in THTR 49701: Capstone Preparation in the subsequent semester. Students will demonstrate their learning through a focused experience that requires the integration and application of the full breadth of skills and knowledge gained during the course of study. These events are ideally collaborative, but solo project proposals are allowed. Capstone Project includes the rehearsal process and performance at the end of the semester, with a reflection submitted during finals week. The instructor will meet with students through the course of the semester to mentor this performance/production-based process. Permission of instructor required.**Credits:** 3.00

THTR 49000 - Special Topics In Theatre

Credit Hours: 1.00 to 3.00. Topics will vary. **Credits:** 1.00 to 3.00

THTR 49701 - Capstone Preparation

Credit Hours: 3.00. Students will build the research-as-practice framework and development structure for a performance that will be realized during THTR 49702: Capstone Project in the subsequent semester. This proposal will evolve out of research that will include examining works related to the research enquiry of the topic identified in their proposal as well as practice-as-research frameworks to determine which frameworks fit the performance. The instructor will meet with students through the course of the semester to mentor this research-based process. All requests for space, equipment, costume and props, production staff and monetary support, as well as the creative idea of the project, must approved by the semester's end. Permission of instructor required.**Credits:** 3.00

THTR 51000 - Stage Dialects

Credit Hours: 2.00. A study of the actor's use of dialects. Learning dialects and their practical use through scene study. Permission of instructor required. Offered in alternate years. **Credits:** 2.00

THTR 51300 - Vocal Production For The Stage I

Credit Hours: 2.00. The study of the voice production mechanism. Emphasis on exercises in relaxation, breath, alignment, and tonal focus. Permission of instructor required. **Credits:** 2.00

THTR 51400 - Vocal Production For The Stage II

Credit Hours: 2.00. Continuation of Vocal Production for the Stage I. Emphasis on exercises in vocal exploration through application to performance. Permission of instructor required. **Credits:** 2.00

THTR 52300 - Creating A Character I

Credit Hours: 2.00. Techniques towards the physical embodiment of a character. Permission of instructor required. **Credits:** 2.00

THTR 52400 - Creating A Character II

Credit Hours: 3.00. Advanced techniques towards the physical embodiment of a character. **Credits:** 3.00

THTR 52500 - Theatrical Characterization

Credit Hours: 3.00. The discovery of a unique performing personality through the use of a wide range of mask and clown characterization techniques. **Credits:** 3.00

THTR 52600 - Advanced Stage Movement

Credit Hours: 2.00 to 3.00. Advanced movement training, including one or more of the following: stage combat, circus skills, gymnastics, period movement, dance, repatterning techniques, martial arts disciplines, and explorations into character. **Credits:** 2.00 to 3.00

THTR 53200 - Professional Issues In Theatre

Credit Hours: 2.00. Training in the techniques of the prepared audition, cold readings, improvisational auditions, and interviews. A survey of various employment opportunities and the demands of the professional theatre, educational theatre, and professional training. Permission of instructor required. Offered in alternate years. **Credits:** 2.00

THTR 53300 - Acting Technique

Credit Hours: 3.00. Intensive study of the internal and external elements of acting through the use of improvisational principles within the context of scene study. **Credits:** 3.00

THTR 53500 - Vocal/Physical Preparation

Credit Hours: 1.00. Practice in the coordination of the vocal and physical apparatus of the actor. Permission of instructor required. **Credits:** 1.00

THTR 53600 - Advanced Problems In Acting

Credit Hours: 2.00 or 3.00. Advanced study of selected problems in acting, including detailed role and play analyses, thorough rehearsals and critiques of performance. Permission of instructor required.**Credits:** 2.00 or 3.00

THTR 53800 - Acting For The Camera

Credit Hours: 3.00. Development of acting styles and audition techniques for the camera. Permission of instructor required. **Credits:** 3.00

THTR 53900 - Period Style For The Actor

Credit Hours: 3.00. Applied focus on theatrical styles of acting. Scene study related to the development of skills necessary to perform work from a variety of periods and a variety of genres. **Credits:** 3.00

THTR 54000 - Advanced Directing

Credit Hours: 3.00. Application of principles of directing to the various types of drama; laboratory practice in directing plays for experimental production. **Credits:** 3.00

THTR 54500 - Directional Process In Production

Credit Hours: 3.00. A study of models the director uses when dealing with the other creative personnel involved in production. Primary emphasis will be placed on the directorial and actoral processes as they relate to the work of the designers and technicians. Offered in alternate years. Permission of instructor required. **Credits:** 3.00

THTR 55000 - Advanced Scenery Technology

Credit Hours: 3.00. A theoretical and practical study of theatrical scenery planning, construction, and stage use. Topics will vary by semester and will include project management techniques, mechanical design, automation systems, show control systems, rigging, and safety issues. Permission of instructor required. **Credits:** 3.00

THTR 55100 - Advanced Costume Techniques

Credit Hours: 3.00. An advanced study of specialized skills and construction techniques used in the creation of theatre costumes.**Credits:** 3.00

THTR 55300 - Theatre Audio Technology II

Credit Hours: 3.00. The study of the technical aspects of audio as they relate to use of, and experimentation with, various techniques in the design, installation, and specification of theatre sound systems, etc. Priority for majors. Offered in alternate years. Permission of instructor required. **Credits:** 3.00

THTR 55400 - Advanced Theatre Drafting

Credit Hours: 3.00. An advanced projects course in drafting for the theatre. Emphasis on accepted theatrical drafting, standards, types of drawing, and presentation formats. Offered in alternate years. **Credits:** 3.00

THTR 55600 - Advanced Stage Makeup

Credit Hours: 3.00. Advanced training and practice in the application of theatrical makeup. Emphasis on problem solving and varied materials and application techniques. Offered in alternate years. **Credits:** 3.00

THTR 55800 - Advanced Problems In Theatre Technology

Credit Hours: 1.00 to 3.00. Advanced study and application of technical theatre problems and practice. Permission of instructor required. **Credits:** 1.00 to 3.00

THTR 56000 - Advanced Scenic Design

Credit Hours: 3.00. Advanced study of the principles of design and their application to specific staging problems. **Credits:** 3.00

THTR 56100 - Advanced Costume Design

Credit Hours: 3.00. Advanced study of the principles of costume design and their application to specific problems. **Credits:** 3.00

THTR 56200 - Advanced Light Design

Credit Hours: 3.00. Advanced study of the principles of light design and their application to specific lighting problems. **Credits:** 3.00

THTR 56300 - Advanced Sound Design

Credit Hours: 3.00. Advanced study of the principles of sound design for theatre and theory application to specific problems. Offered in alternate years. **Credits:** 3.00

THTR 56400 - Theatrical Rendering

Credit Hours: 3.00. Provides advanced training in rendering techniques used by theatrical designers. Students will study perspective drawing, figure drawing, painting, and explore different materials used by designers to communicate their artistic vision. **Credits:** 3.00

THTR 56700 - Model Construction

Credit Hours: 3.00. Model construction is one of many skills required of scene designers and is a preferred communication tool for many directors and designers. This course offers a variety of practical exercises for presenting both blueline and full-color models. **Credits:** 3.00

THTR 56800 - Advanced Problems In Design

Credit Hours: 1.00 to 3.00. A described tutorial in theatrical design or design research. Permission of instructor required. **Credits:** 1.00 to 3.00

THTR 56900 - Special Problems In Audio Production

Credit Hours: 3.00. Advanced study and application of sound studio production techniques to different audio related disciplines. Permission of instructor required. **Credits:** 3.00

THTR 57001 - Statics And Structures For Theatre I

Credit Hours: 3.00. Advanced study of static forces and analysis of the ability of specific structural shapes and materials traditionally used in theatrical scenery construction to resist these forces. This course will be taught both fall and spring semesters once every three years. **Credits:** 3.00

THTR 58000 - Period Style For The Designer

Credit Hours: 3.00. A survey of the major aesthetic developments in art, architecture, interior decor, costume history, and musical styles from Ancient Egypt to the present, intended for the edification of the theatre designer. Permission of instructor required. **Credits:** 3.00

THTR 59000 - Directed Study Of Special Theatre Problems

Credit Hours: 1.00 to 3.00. An individualized and intensive study of any aspect of theatre required by the student's plan of study. Permission of instructor required. **Credits:** 1.00 to 3.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester. **Credits:** 3.00

THTR 61300 - Classical Text I

Credit Hours: 3.00. Concentration on increasing vocal flexibility through exploration and preparation of Shakespearean texts. Permission of instructor required. Prerequisite: THTR 51400. **Credits:** 3.00

THTR 61400 - Classical Text II

Credit Hours: 3.00. Continuation of Classical Text I, with emphasis on studio scene work beginning with Shakespeare and progressing through the works of other major classical playwrights. Permission of instructor required. Prerequisite: THTR 61300. **Credits:** 3.00

THTR 63300 - Interpretive Acting Techniques

Credit Hours: 3.00. Advanced work in script and character analysis, character development, interpretation, interaction and relationship dynamics; rehearsal of complex scenes using material from various contemporary forms and theatrical genres. Prerequisite: THTR 53300. Permission of instructor required. **Credits:** 3.00

THTR 64000 - Directing Internship

Credit Hours: 1.00 to 6.00. Practical experience with a university, professional, or community theatre to facilitate the transition from student to professional director. Available for graduate students in their final year. Particular assignment must be approved by the student's major professor. Permission of instructor required. **Credits:** 1.00 to 6.00

THTR 65800 - Special Problems In Technology

Credit Hours: 1.00 to 3.00. A described tutorial leading to postgraduate level project work for those students who are developing advanced theories in stage technology. Prerequisite: THTR 55800. Permission of instructor required. **Credits:** 1.00 to 3.00

THTR 66900 - Tutorial Internship For MFA

Credit Hours: 3.00 to 6.00. Off-campus internship designed to provide practical field experience under professional supervision in selected situations related to the candidate's area of specialization. Arrangements for internship must be approved by the candidate's graduate advisory committee. Permission of instructor required. **Credits:** 3.00 to 6.00

THTR 67000 - Script Interpretation

Credit Hours: 3.00. The study of scripts through several lenses, ranging from Aristotelian analysis to holistic, contemplative practice. The course includes seminar discussion, response papers, group projects, exercises, and a final script interpretation in the form of a formal paper. Prerequisite: THTR 60100. Permission of department required. **Credits:** 3.00

THTR 67100 - Modern Theory And Criticism

Credit Hours: 3.00. A seminar on modern performance theory, aesthetics, and practice. Emphasis on European theatre since 1875 and American theatre after 1960, with application through performance projects. Prerequisite: THTR 60100. Permission of instructor required. **Credits:** 3.00

THTR 69700 - MFA Terminal Project

Credit Hours: 3.00 to 6.00. MFA Terminal Project. Permission of instructor required. **Credits:** 3.00 to 6.00

THTR 69800 - Research MA Or MFA Thesis

Credit Hours: 1.00 to 18.00. Research MA Or MFA Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

Veterinary Clinical Sciences

VCS 22100 - Veterinary Nursing Techniques For The Normal Animal (SA & LA)

Credit Hours: 4.00. The course will introduce the students to concepts related to normal, healthy large and small animal patients. The course includes both lecture and laboratory components. **Credits:** 4.00

VCS 22200 - Dentistry-VN

Credit Hours: 0.50. This course is an introduction to veterinary dentistry for the technician, with emphasis on basic dental anatomy, pathologies and treatments, dental charting, intraoral radiography, dental cleaning and periodontal disease management.**Credits:** 0.50

VCS 22300 - Surgical Nursing-VN

Credit Hours: 1.00. This course is an introduction to the surgical environment and all aspects related to the principles of asepsis and the practice of sterile technique. Students will learn using a variety of teaching modalities (lecture, group work, laboratory experience).**Credits:** 1.00

VCS 22400 - Small Animal Nursing I

Credit Hours: 2.00. This course will introduce students to nursing and diagnostic techniques for small animals and the body response to disease. **Credits:** 2.00

VCS 22500 - Large Animal Nursing I

Credit Hours: 2.00. This course builds on concepts learning in VCS 22100 related to normal, healthy large animal patients. It also introduces the students to higher level patient care for the large animal patient. **Credits:** 2.00

VCS 22600 - Principles Of Anesthesia-VN

Credit Hours: 2.00. This course is an introduction to surgical nursing and anesthesia. The principles of asepsis and sterile technique will be introduced and demonstrated by staff and in some cases, practiced by the student. The basics of anesthesia will be introduced and practiced by the student.**Credits:** 2.00

VCS 22800 - Small And Large Animal Nutrition-VN

Credit Hours: 1.00. This course will introduce students to an overview of nutritional concepts as it applies to common domestic small and large animal species and selected exotic companion/avian pets. Basic concepts for understanding nutritional needs for all species will be introduced as well as therapeutic use of diets as it relates to animal nursing.**Credits:** 1.00

VCS 25100 - Introduction To Diagnostic Imaging-VN

Credit Hours: 0.50. This course is an introduction to veterinary diagnostic imaging and is designed to instruct the veterinary technician student in the basic principles of imaging, necessary to perform imaging tasks within a veterinary hospital. This course will introduce the fundamentals needed in the clinical imaging rotations and in practice.**Credits:** 0.50

VCS 25200 - Diagnostic Imaging-VN

Credit Hours: 2.00. Provides an introduction to imaging of domestic animals. Emphasis will be placed on radiological principles and techniques, darkroom procedures and design, preparing technique charts for various X-ray units, animal positioning, and radiation safety. **Credits:** 2.00

VCS 32100 - Large Animal Nursing II

Credit Hours: 2.00. This course build on concepts learned in VCS 22100 and VCS 22500 related to normal, healthy large animals patients. It also introduces the student to higher level patient care for the large animal patient. **Credits:** 2.00

VCS 32200 - Small Animal Nursing II

Credit Hours: 2.00. This course will cover management of hospitalized patients, client education, and preventative medicine programs. Emphasis will be on the role of the veterinary technician in the veterinary hospital. **Credits:** 2.00

VCS 41800 - Applied Small Animal Behavior-VN

Credit Hours: 2.00. Clinical applications of canine and feline behavior problems. The normal and common abnormal behaviors of domestic dogs and cats will be presented. Emphasis will be on taking clinical history from owner, observing animals, and establishing behavioral modification treatment plans as part of the veterinary team.**Credits:** 2.00

VCS 46700 - Medical Equipment & Maintenance-VN

Credit Hours: 2.00. A laboratory in the utilization, care, and maintenance of electronic equipment used in veterinary diagnostics.**Credits:** 2.00

VCS 46800 - Advanced Emergency And Critical Care For Veterinary Nurses

Credit Hours: 2.00. This course is a culmination of previously studied clinical skills, disease processes, and small animal nursing that is focused on transferring knowledge to practical use. The course will be taught utilizing emergency and critical care case

studies to highlight disease processes, physiology, critical thinking skills, and the role of the veterinary nurse in providing high level patient care. The course goal is to prepare graduates to respond to emergent and critical patient scenarios in all types of small animal veterinary practices. **Credits:** 2.00

VCS 60200 - Problems In Clinical Medicine And Surgery

Credit Hours: 1.00 to 5.00. Individualized topics selected from the various areas of Veterinary Clinical Sciences. May include directed readings, discussion, and other intensive studies in specialized topics. Prerequisite: DVM degree. Permission of instructor required. **Credits:** 1.00 to 5.00

VCS 60300 - Introduction To Clinical Research, Trials and Translational Research

Credit Hours: 1.00. This course is designed for students entering the Graduate Program in the Department of Veterinary Clinical Sciences. During the course, lectures are presented which introduce students to the elements and scope of clinical research, including the methods used in clinical research, trials and translational research. Topics covered will explain the principles of safe and ethical conduct of clinical research. Students will also be introduced to the principles of data collection, management and interpretation. Permission of instructor required. **Credits:** 1.00

VCS 60400 - Animal Models In Translational Research

Credit Hours: 1.00. This course is designed for students in the Graduate Program in the Department of Veterinary Clinical Sciences. During the course, lectures are presented which help students obtain a working knowledge of the use of animal models in research. Topics covered will explain the principles of using animals in research and as a model for human diseases. Students will also be exposed to the principle elements of translational research, methods used in translational research and trials, and the principles of data collection, management and interpretation. Prerequisite: VCS 60300. Permission of department required. **Credits:** 1.00

VCS 60500 - Supervised Surgical Laboratory Training In Small Animal Surgical Techniques And Approaches

Credit Hours: 1.00. Small animal neurosurgical, orthopedic and soft tissues approaches, techniques, and procedures practiced in cadaver labs. Only graduate students enrolled in an American College of Veterinary Surgeons or American College of Veterinary Internal Medicine - Neurology/Neurosurgery residency will be eligible. Permission of instructor required. **Credits:** 1.00

VCS 61000 - Clinical Training In Veterinary Clinical Sciences

Credit Hours: 2.00 to 6.00. Veterinary Clinical Sciences (VCS) residents working in specific specialty areas rotate through relevant specialty clinical services in the Veterinary Teaching Hospital (or other specialty facilities) as determined by the resident committee and the requirements of each specialty college. Rotation lengths are 2.5 to 5 weeks. Residents are closely supervised by VCS faculty and gradually are given more individual responsibility as decision-making and clinical skills develop. Permission of instructor required. **Credits:** 2.00 to 6.00

VCS 62000 - Seminar In Clinical Medicine And Surgery

Credit Hours: 1.00 to 3.00. Seminars provide a forum for discussion of current concepts and research results in clinical medicine and surgery, and other aspects of veterinary medicine. Permission of instructor required. **Credits:** 1.00 to 3.00

VCS 62100 - Topics In Advanced Medicine

Credit Hours: 1.00 to 3.00. Advanced study and investigation of the pathophysiology, occurrence, diagnosis, treatment, management, and prevention of animal diseases. Emphasis will be given to the medical aspects of diseases by body system (e.g., renal, gastrointestinal, etc.) and by medical discipline (e.g., oncology, ophthalmology, etc.). Permission of instructor required. **Credits:** 1.00 to 3.00

VCS 63000 - Current Topics In Veterinary Clinical Sciences

Credit Hours: 1.00 to 6.00. One-two hour sessions organized and conducted weekly by VCS residents, with input/discussion from the attending VCS faculty. Alternating weekly topic sessions may include journal club and morbidity and mortality patient rounds or other topics appropriate to the specialty. Permission of instructor required. **Credits:** 1.00 to 6.00

VCS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required. **Credits:** 1.00 to 18.00

VCS 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of Department required. **Credits:** 1.00 to 18.00

VCS 80100 - Behavior, Husbandry, And Diagnostic Techniques I

Credit Hours: 1.50. Introduction to behavior, husbandry, and diagnostic techniques of domesticated animals. Behavioral patterns and methods of management of various breeds of companion animals and animals used in the production of food, fiber, and feathers; restraint techniques, methods of collecting samples for diagnostic purposes, and methods of medication appropriate to a given species; concepts of population and production medicine and the importance of regulatory medicine. **Credits:** 1.50

VCS 80110 - Veterinary Skills And Competencies I

Credit Hours: 2.50. This course is designed to allow students to develop competence in communication, husbandry, diagnostic, and therapeutic skills of veterinary medicine and surgery. In addition, instruction will be delivered in the areas of veterinary business, professionalism, and health professional wellness. Instruction will be provided by online modules, hands-on laboratories using models, cadavers, and live animals, as well as, self-paced training in the veterinary skills lab. Students will further develop these skills through the care of teaching animals. **Credits:** 2.50

VCS 80120 - Veterinary Skills And Competencies II

Credit Hours: 2.00. This course is designed to allow students to develop competence in communication, husbandry, diagnostic, and therapeutic skills of veterinary medicine and surgery. In addition, instruction will be delivered in the areas of veterinary business, professionalism and health professional wellness. Instruction will be provided by online modules, hands-on laboratories using models, cadavers, and live animals, as well as, self-paced training in the veterinary skills lab. Students will further develop these skills through the care of teaching animals. **Credits:** 2.00

VCS 80130 - Introduction To Population Medicine And Veterinary Ethics

Credit Hours: 2.00. This course will introduce first year veterinary students to the fundamental principles of population medicine. This will include concepts behind population versus individual animal medicine, population animal industries and their management practices, population animal diseases, outbreak investigation, regulatory medicine, and interactions between wild and domestic animals. Following an introduction to population medicine, students will shift to a discussion of veterinary ethics and its application to various animal industries. Students will explore basic concepts in animal use ethics and welfare, ethical and moral reasoning, and critical thinking and problem solving in population medicine. **Credits:** 2.00

VCS 80140 - Fundamental Principles Of Comparative Nutrition

Credit Hours: 2.00. This course will cover fundamental aspects of comparative nutrition building on knowledge from veterinary comparative anatomy and physiology courses. Multiple species will be discussed to provide the student a broad-based foundational knowledge in key nutritional concepts, including feeds and feeding assessment and the animal's physiologic state/lifestage. The student will learn how physiologic status will impacts energy needs and nutritional adequacy, on an individual and/or group basis. The student will also develop skills in forage identification, pet food assessment, and when the individual/group is at risk of nutrient deficiency. **Credits:** 2.00

VCS 80200 - Behavior, Husbandry, And Diagnostic Techniques II

Credit Hours: 1.50. A continuation of VCS 80100. Intermediate studies of behavior, husbandry, and diagnostic techniques. Behavioral patterns and methods of management of various breeds of companion animals and animals used in the production of food, fiber, and feathers; restraint techniques, methods of collecting samples for diagnostic purposes, and methods of medication appropriate to a given species; concepts of population and production medicine and the importance of regulatory medicine. **Credits:** 1.50

VCS 80201 - Professional Skills I

Credit Hours: 1.00. This course builds on the skills taught in VCS 80100 and VCS 80200 Behavior, Husbandry and Diagnostic Techniques I and II. Students will be taught additional clinical skills and practice them in the clinical skills laboratory. Communication skills will be taught with the opportunity to practice them in role-plays. Financial management, professionalism and wellness topics will also be discussed. Students will participate in the care of teaching animals. **Credits:** 1.00

VCS 80202 - Professional Skills II

Credit Hours: 2.00. This course builds on VCS 80201 Professional Skills I. Students will be taught additional clinical skills and practice them in the clinical skills laboratory. Communication skills will be taught with the opportunity to practice them in role-plays. Financial management, professionalism and wellness topics will also be discussed. Students will participate in the care of teaching animals. **Credits:** 2.00

VCS 80210 - Veterinary Skills And Competencies III

Credit Hours: 2.00. This course is designed to allow students to develop competence in communication, husbandry, diagnostic, and therapeutic skills of veterinary medicine and surgery. In addition, instruction will be delivered in the areas of veterinary business, professionalism and health professional wellness. Instruction will be provided by online modules, hands-on laboratories using models, cadavers, and live animals, as well as, self-paced training in the veterinary skills lab. Students will further develop these skills through the care of teaching animals. Students will also complete observational assignments and treatment duties in the Veterinary Teaching Hospital. **Credits:** 2.00

VCS 80220 - Veterinary Skills And Competencies IV

Credit Hours: 2.00. This course is designed to allow students to develop competence in communication, husbandry, diagnostic, and therapeutic skills of veterinary medicine and surgery. In addition, instruction will be delivered in the areas of veterinary business, professionalism and health professional wellness. Instruction will be provided by online modules, hands-on laboratories using models, cadavers, and live animals, as well as, self-paced training in the veterinary skills lab. Students will further develop these skills through the care of teaching animals. Students will also complete observational assignments and treatment duties in the Veterinary Teaching Hospital. **Credits:** 2.00

VCS 80300 - Behavior, Husbandry, And Diagnostic Techniques III

Credit Hours: 1.00. A continuation of VCS 80200. Behavior, husbandry, and diagnostic techniques related to preventive medicine and production systems of domesticated animals. Behavioral patterns and methods of management of various breeds of companion animals and animals used in the production of food, fiber, and feathers; restraint techniques, methods of collecting samples for diagnostic purposes, and methods of medication appropriate to a given species; concepts of population and production medicine and the importance of regulatory medicine. **Credits:** 1.00

VCS 80301 - Veterinary Clinical Skills I

Credit Hours: 2.00. This course introduces students to the clinical environment in the Veterinary Teaching Hospital (VTH). Students will assist with treatments of patients and participate in activities of the various clinical services. Students will be assigned daytime and after-hours shifts. Laboratory sessions will address clinical skills, client communication skills, financial management, professionalism and wellness. **Credits:** 2.00

VCS 80302 - Veterinary Clinical Skills II

Credit Hours: 2.00. This course is a continuation of VCS 80301 Clinical Skills I. Students will work with 4th year veterinary students in VTH. Students will assist with treatments of patients and participate in activities of the various clinical services. Students will be assigned daytime and after-hours shifts. Laboratory sessions will address clinical skills, client communication skills, financial management, professionalism and wellness. **Credits:** 2.00

VCS 80310 - Veterinary Skills And Competencies V

Credit Hours: 2.00. This course is designed to allow students to develop competence in communication, husbandry, diagnostic, and therapeutic skills of veterinary medicine and surgery. In addition, instruction will be delivered in the areas of veterinary business, professionalism and health professional wellness. Instruction will be provided by online modules, hands-on laboratories using models, cadavers, and live animals, as well as, self-paced training in the veterinary skills lab. Students will also complete observational assignments and treatment duties in the Veterinary Teaching Hospital. **Credits:** 2.00

VCS 80320 - Veterinary Skills And Competencies VI

Credit Hours: 2.00. This course is designed to allow students to develop competence in communication, husbandry, diagnostic, and therapeutic skills of veterinary medicine and surgery. In addition, instruction will be delivered in the areas of veterinary business, professionalism and health professional wellness. Instruction will be provided by online modules, hands-on laboratories using models, cadavers, and live animals, as well as, self-paced training in the veterinary skills lab. Students will also complete observational assignments and treatment duties in the Veterinary Teaching Hospital. **Credits:** 2.00

VCS 80400 - Behavior In Domestic Animals

Credit Hours: 1.00. Instruction in basic principles of behavior; factors determining normal and abnormal behavior; and the different types of learning. The main domestic species will be characterized in terms of their normal behavior with which behavior problems are most important in the different species. **Credits:** 1.00

VCS 80500 - Small Animal Behavioral Therapy

Credit Hours: 1.00. Provides information on the diagnosis, treatment, and prevention of behavior problems of dogs and cats, with emphasis on differential diagnosis of behavioral problems and behavioral pharmacology. Topics include aggression, anxiety related problems, inappropriate elimination, client counseling, and problem prevention. Client interaction and the question of euthanasia for behavioral problems is also discussed. **Credits:** 1.00

VCS 80600 - Small Animal Medicine And Surgery I

Credit Hours: 3.50. An overview of clinical approach to common medical and surgical diseases of dogs and cats. A systems approach is used to teach the major concepts of diseases affecting each body system. The focus is on diagnosis and treatment of common diseases encountered in small animal clinical practice. **Credits:** 3.50

VCS 80610 - Small Animal Medicine I

Credit Hours: 3.50. This course is the first in a series that provides an overview of clinical approaches to common medical diseases of dogs and cats. A systems approach is used to teach the major concepts of diseases affecting each body system. The focus of this course is disease recognition based on initial medical information (ex. signalment, presenting complaint, physical examination), diagnosis, and treatment of common diseases encountered in small animal clinical practice. **Credits:** 3.50

VCS 80616 - Small Animal Clinical Nutrition

Credit Hours: 1.00. This nutrition course presents the established knowledge of metabolism and physiological chemistry pertaining to nutrients and the control of biochemical pathways at the gene, cell, organ, and system level. The goal of this course is to provide the fundamentals of nutrient metabolism while discussing nutritional modification in the management of disease. At the completion of this course, the veterinary student should be proficient in recognizing a nutrition-related problem in a clinical patient, conducting a thorough nutritional assessment, and constructing appropriate nutritional strategies for both the pet and client. The veterinary student will achieve an understanding of systemic metabolism that can be applied to the contemporary practice of veterinary medicine. **Credits:** 1.00

VCS 80620 - Small Animal Medicine II

Credit Hours: 1.50. This is the second course in a series providing an overview of clinical approaches to common medical diseases of dogs and cats. A systems approach is used to teach the major concepts of diseases affecting each body system. The focus of this course is disease recognition based on initial medical information (ex. signalment, presenting complaint, physical examination), diagnosis, and treatment of common diseases encountered in small animal clinical practice. **Credits:** 1.50

VCS 80630 - Small Animal Surgery

Credit Hours: 2.50. This course will teach basic surgical principles applicable across species such as suture materials and patterns and principles of hemostasis. Common surgical diseases affecting the various body systems of dogs and cats will be discussed with a focus on pre- and postoperative care. Routinely performed surgical procedures (neuter, spay, C-section) will be discussed. Orthopedic topics will include bone healing, management of musculoskeletal trauma, fracture management, and fundamentals of external and internal fracture stabilization techniques for dogs and cats. The course will conclude with discussions of select musculotendinous conditions, principles of amputation and joint and limb salvage, and an introduction to principles of physical therapy. **Credits:** 2.50

VCS 80700 - Small Animal Medicine And Surgery II

Credit Hours: 2.00. An overview of clinical approach to common medical and surgical diseases of dogs and cats. A systems approach is used to teach the major concepts of disease affecting each body system. The focus is on diagnosis and treatment of common diseases encountered in small animal clinical practice. **Credits:** 2.00

VCS 80800 - Equine Medicine And Surgery

Credit Hours: 2.50. Diagnostic methods and prevention, control, and treatment regimens for common diseases affecting horses. Issues related to diseases of regulatory importance (epidemic and exotic) are discussed. Students also learn about surgical correction of selected problems and elective surgical procedures. **Credits:** 2.50

VCS 80801 - Equine Medicine

Credit Hours: 2.50. Core course focused on the major equine diseases and preventive medicine/herd health (biosecurity, vaccination, parasite control, dental disease). The course will cover pathogenesis, diagnosis, and treatment/management of these conditions or syndromes. **Credits:** 2.50

VCS 80900 - Ruminant Medicine And Surgery

Credit Hours: 2.00. Diagnostic methods and prevention, control, and treatment regimens for common diseases affecting ruminants. Issues related to food quality assurance and safety, and diseases of regulatory importance (epidemic and exotic). Surgical correction of selected problems and elective surgical procedures. **Credits:** 2.00

VCS 80910 - Food Animal Medicine

Credit Hours: 4.00. This course focuses on the major infectious, metabolic, and parasitic diseases of ruminants, camelids, swine, poultry and other avian flocks. The pathogenesis, diagnosis, and treatment of these conditions or syndromes will be reviewed. Additionally, the course will cover proper management, including vaccinations and animal husbandry, to prevent the development of these conditions. **Credits:** 4.00

VCS 80920 - Large Animal Surgery

Credit Hours: 2.50. This course will cover the core fundamentals of surgical diseases of multiple large animal species, including the horse, bovine, small ruminants and camelids. Case management approaches are utilized to provide examples of disease conditions affecting these large animal species. **Credits:** 2.50

VCS 81000 - Swine Production Medicine

Credit Hours: 1.00. Diagnostic methods and prevention, control, and treatment regimens for common diseases affecting swine. Issues related to food quality assurance and safety and diseases of regulatory importance (epidemic and exotic) are discussed. **Credits:** 1.00

VCS 81100 - General Surgery Laboratory

Credit Hours: 1.00. Introduction to basic skills in surgery and anesthesia. Models are used to learn basic skills of instrument use, tissue handling, dissection, and suturing. Students will progress to common anesthetic and surgical procedures on live and cadaver animals. **Credits:** 1.00

VCS 81101 - Small Animal Surgery Lab I

Credit Hours: 1.50. Introduction to basic skills in surgery and anesthesia. Models are used to learn basic skills of instrument use, ligation, dissection, and suturing. Students will progress to common anesthetic and surgical procedures on live and cadaver animals. The live animal surgery will teach physical examination, formulating an anesthetic plan, anesthetic induction, maintenance and recovery, as well as feline spay and neuter. **Credits:** 1.50

VCS 81200 - Principles Of Anesthesia, Surgery, And Emergency Medicine

Credit Hours: 2.00. Introduction to basic principles of anesthesiology and surgical practice. The principles of aseptic technique, operating room protocol, tissue handling, hemostasis, and wound repair. Principles of emergency medicine, including shock therapy, fluid therapy, and trauma management. **Credits:** 2.00

VCS 81201 - Principles Of Veterinary Anesthesiology

Credit Hours: 2.00. Introduction to basic principles of anesthesiology. Pharmacology of anesthesia and analgesic drugs, anesthetic equipment, monitoring, regional and local anesthetic techniques, pain management and anesthesia care of multiple species and special disease considerations will be covered. **Credits:** 2.00

VCS 81210 - Small Animal Primary Care And Wellness

Credit Hours: 2.00. This course will discuss conditions that are commonly treated in small animal primary care practice. Topics will include wellness and preventative care for dogs and cats at all lifestages, dental care, diagnosis and management of common oral and skin diseases, and emergency medicine. Humane euthanasia and palliative care will also be discussed. **Credits:** 2.00

VCS 81300 - Diagnostic Imaging

Credit Hours: 1.00. In the first half of the core diagnostic imaging course, emphasis is on how images are made using current technology. Although radiography is emphasized, imaging modalities such as ultrasonography, computed tomography, magnetic resonance imaging, scintigraphy, and thermography are discussed. In the second half of the course, types of lesions that can be observed in large and small animals with the various imaging modalities are explained. The course is offered once annually, and its successful completion is required for any of the elective courses offered by Diagnostic Imaging. **Credits:** 1.00

VCS 81400 - Comparative Theriogenology

Credit Hours: 1.00. Basic aspects of reproduction in large and small animals, including obstetrics and genital diseases, on a single animal or group basis are covered. **Credits:** 1.00

VCS 81410 - Comparative Theriogenology

Credit Hours: 2.00. This course develops a broad clinical knowledge of common reproductive management strategies and clinical conditions associated with reproduction in the major domestic species. It provides information and strategies for the conduct of breeding soundness examinations and infertility work-ups in the male; estrous cycle characteristics, diagnostics and control in females; breeding management strategies, pregnancy diagnosis, and management of gestation; investigation and control strategies for pregnancy loss; management of parturition and treatment of dystocia; normal postpartum changes and diseases of the peripartum period and the pathophysiology and treatment of uterine infections. Material will be presented in both comparative and species-specific manner. Students should review reproductive anatomy and physiology notes in preparation for this course. **Credits:** 2.00

VCS 81500 - Ophthalmology

Credit Hours: 1.00. This course is an introduction to veterinary comparative ophthalmology. It covers the anatomy of the eye, diagnosis, pathophysiology, and treatment of the ocular diseases commonly seen in companion and food animal species: canine, feline, equine, avian, bovine, caprine, ovine, porcine, lagomorphs. Covers pharmacology as it relates to medications used to treat ocular disease. **Credits:** 1.00

VCS 81700 - Achieving Success In Private Practice

Credit Hours: 1.50. Provides a foundation for the application of practice management principles. Focuses on operations management, financial management, human resource management, and marketing management. **Credits:** 1.50

VCS 81800 - Small Animal Surgery Laboratory I

Credit Hours: 0.50. Common orthopedic and soft tissue surgical procedures are performed on cadaver and live animals. **Credits:** 0.50

VCS 81802 - Small Animal Surgery Laboratory II

Credit Hours: 1.50. This course will build on VCS 81100 by emphasizing the importance of proper basic surgical skills (instrument carriage, suturing, knot tying). Surgical skills will be expanded by performing several procedures on cadaveric tissue: abdominal approaches, gastrointestinal surgery, urogenital surgery, wound management, amputations. One lab will be dedicated to ophthalmologic procedures. Ovariohysterectomies and castrations will be performed on live dogs and cats to further develop the students' surgical skills as well as skills in physical examination, formulating an anesthetic plan, anesthetic induction, maintenance & recovery and postoperative care. **Credits:** 1.50

VCS 81900 - Small Animal Dentistry

Credit Hours: 3.00. Students will be involved with the evaluation and treatment of small animal dentistry patients. Patient activity will occur during four days of the week. On the fifth day, procedure labs using cadaver specimens will be held. Daily patient discussions will occur, topic/additional patient rounds may also be presented on the fifth day. A complete spectrum of small animal dentistry treatments is provided by the clinical service. Therefore, the students will be involved with all levels of dental/oral care. For students enrolled in Small Animal/Companion Animal and mixed animal tracks. Total clinic hours 129.**Credits:** 3.00

VCS 82000 - Small Animal Surgery Laboratory II

Credit Hours: 0.50. More advanced soft tissue and orthopedic surgical techniques are practiced on cadaver and live animals. **Credits:** 0.50

VCS 82100 - Clinical Neurology

Credit Hours: 3.00. Students will be directly or indirectly involved in the evaluation, treatment and care of patients present to the neurology/neurosurgery service. Cadaver work may supplement the clinical experience. Students will be expected to accomplish the objectives of the Neurology/Neurosurgery block and to develop greater knowledge, clinical judgment, diagnostic capabilities and neurologic examination skills that would enable them to manage more complex cases, such as intervertebral disc disease, seizures, encephalopathies and neuropathies.**Credits:** 3.00

VCS 82200 - Large Animal Surgery I

Credit Hours: 0.50. Basic surgical training in large animals, including both soft tissue and orthopedic procedures. **Credits:** 0.50

VCS 82300 - Large Animal Surgery II

Credit Hours: 0.50. More advanced surgical training in large animals, including both soft tissue and orthopedic procedures. **Credits:** 0.50

VCS 82500 - Ruminant Theriogenology

Credit Hours: 0.50. All aspects of ruminant reproduction are covered, including obstetrics and genital diseases on a single animal or group basis. **Credits:** 0.50

VCS 82501 - Ruminant Theriogenology

Credit Hours: 1.50. This course will cover clinically pertinent aspects of ruminant reproduction in more detail than prerequisite courses, including obstetrics and genital diseases on an individual and group basis. The laboratory portion will teach the proper techniques for rectal palpation and reproductive ultrasound in ruminants. Principles of embryo recovery and transfer will be practiced. **Credits:** 1.50

VCS 82700 - Small Animal Imaging

Credit Hours: 2.00. A continuation of VCS 81300. Specific diseases of small animals where imaging is part of the diagnosis are discussed. Emphasis is on radiography and ultrasonography. The use of alternate imaging modalities is discussed where appropriate. **Credits:** 2.00

VCS 82701 - Diagnostic Imaging

Credit Hours: 3.00. This course covers basic mechanisms of image generation and interpretation. The first half of the course deals with principles of image formation and the introduction to advanced imaging modalities. A synopsis of the principles of radiobiology and radiation safety is offered. The second part of the course features imaging interpretation based on previously mastered imaging principles. The third part of the course builds the foundation of film reading and interpretation such as radiographic anatomy and radiographic signs of specific disease conditions. This course serves as a foundation for the fourth-year diagnostic radiology rotation. **Credits:** 3.00

VCS 82800 - Clinical Rotation In Neurology And Physical Rehabilitation

Credit Hours: 3.00. The first week of the 3-week block, students will spend 100% of the time on the neurology service. Weeks 2 and 3 of the block, the students will spend 100% of the time on the physical rehabilitation service. The course is a 3.0-credit elective clinical rotation. Currently, the neurology service receives three days per week (M, W, F), and the physical rehabilitation service receives new appointments one day per week (T) and recheck appointments daily (M-F). A PVM clinician will lead this elective rotation. The majority of cases will be small animal patients, but some exposure to large animal, equine and small ruminant cases may take place. Students are also expected to practice clinical and technical skills which are required for each service.**Credits:** 3.00

VCS 82900 - Equine Imaging

Credit Hours: 1.00. A continuation of VCS 81300. Specific diseases of horses where imaging is part of the diagnosis are discussed. Emphasis is on radiography and ultrasonography. The use of alternate imaging modalities is discussed where appropriate. **Credits:** 1.00

VCS 83100 - Equine Theriogenology Laboratory

Credit Hours: 1.00. This elective course provides the student with the opportunity to become proficient in all aspects of mare reproductive management. Palpation of the mare's reproductive tract will be emphasized. It also allows students to enhance their abilities to recognize reproductive problems and to formulate and carry out a diagnostic and therapeutic plan. **Credits:** 1.00

VCS 83200 - Equine Lameness

Credit Hours: 0.50. Advanced study of equine lameness, with a focus on the performance horse. Physical examination of the locomotor system, lameness diagnosis, and the establishment of a prognosis are emphasized. **Credits:** 0.50

VCS 83201 - Equine Lameness

Credit Hours: 2.00. Advanced study of equine lameness with a focus on the performance/sport horse. Physical examination of the locomotor system (axial and appendicular), diagnosis, treatment, and establishment of a prognosis are emphasized through lecture and laboratory sessions. **Credits:** 2.00

VCS 83300 - Advanced Equine Medicine

Credit Hours: 1.00. A continuation of VCS 50800. **Credits:** 1.00

VCS 83400 - Food Animal Surgery

Credit Hours: 0.50. A continuation of Large Animal Surgery for students with a selected interest in large animal/mixed practice. Surgical diseases of cattle are emphasized. **Credits:** 0.50

VCS 83700 - Clinical Nutrition For Ruminants And Swine

Credit Hours: 1.00. Current information on nutritional requirements of cattle and pigs, along with the relationships between nutrients and outcomes when nutrients are under- or oversupplied in different phases of the life cycle of cattle and pigs. Specific rations and nutritional requirements of cattle and pigs. Students will be expected to evaluate nutritional problems. **Credits:** 1.00

VCS 83800 - Swine Production Medicine

Credit Hours: 1.00. Introduction to production and health management in swine herds. The concept of the model herd is introduced, and the use of records in the diagnosis of problems and maximizing production efficiency is covered. The focus is herd-based and includes problem-solving. **Credits:** 1.00

VCS 83901 - Beef Production Medicine

Credit Hours: 1.00. The goal of this course is to present the concepts of beef production medicine to prepare the student to formulate plans to solve herd problems. The topics of herd health, fertility, nutrition, records, genetics, marketing and environment will be discussed and students will work in groups to solve real herd issues. An optional herd visit will also be available to all students. **Credits:** 1.00

VCS 83902 - Dairy Production Medicine

Credit Hours: 1.00. The goal of this course is to present the concepts of dairy production medicine to prepare the student to formulate plans to solve herd problems. The topics of dairy cow nutrition (including ration balancing programs), calf nutrition and management, records analysis including the use of PCDart computer program, vaccination programs, and animal welfare evaluations. Additionally, students will be exposed to team troubleshooting and performing farm evaluations. Outside speakers may be used as content experts. **Credits:** 1.00

VCS 83903 - Cattle Production Medicine

Credit Hours: 1.50. "Production medicine" is an important part of modern bovine veterinary practice. This course will demonstrate this role of production medicine in bovine practice and the potential value to the producer and veterinarian. Topics discussed during the class will include cattle nutrition (including exposure to ration balancing programs), calf nutrition and management, records analysis including the use of computer programs, mastitis and milk quality measurements, economics, and animal welfare evaluations exposure to different facets of the beef industry (cow/calf, stocker, feedlot) and the differences in management in those systems, genomics, and immunology/vaccinology. Additionally, students will be exposed to team troubleshooting and performing farm evaluations. Outside speakers may be used as content experts. **Credits:** 1.50

VCS 84000 - Small Ruminant/Llama Medicine

Credit Hours: 1.00. The pathogenesis, diagnosis, treatment, and prevention of common diseases of small ruminants and llamas. **Credits:** 1.00

VCS 84101 - Advanced Ophthalmology

Credit Hours: 0.50. This course is an advanced course in ophthalmology covering topics not covered in the core ophthalmology course. Species discussed will include canine, feline, equine, bovine, ovine, caprine and exotic species. Topics include vision and neuro-ophthalmology, surgery, ocular emergencies, ocular manifestations of systemic disease, ocular examination, and diagnostic techniques and modalities specific to diseases of the eye. **Credits:** 0.50

VCS 84300 - Successful Practice Skills

Credit Hours: 0.50. Builds upon the foundation for the application of practice management principles learned in VCS 51700. Focus is in the areas of communications and relationships with clients, staff, and colleagues; leadership development; and key essentials of practice operation for the prospective associate (or practice director). **Credits:** 0.50

VCS 84400 - Client Communications - Companion Animal Practice

Credit Hours: 0.50. The course will be taught in a discussion format utilizing small group exercises and role-plays. The goal is to demonstrate and describe effective client communication skills. Because effective client communication is a learned skill, the course will provide multiple opportunities for students to practice and refine their skills. Students who participate in this course will be videotaped working through a scenario with a simulated client. While being videotaped and then watching oneself can be very uncomfortable and potentially embarrassing, it is a great way to improve communication skills and is worth the potential momentary discomfort. **Credits:** 0.50

VCS 84500 - Small Animal Medicine Laboratory

Credit Hours: 0.50. A guided experience in the performance of diagnostic procedures used in small animal practice. Intended for those who will work with dogs and cats as professionals. Designed to introduce some advanced procedures and to provide an opportunity for refinement of procedures introduced earlier in the curriculum. **Credits:** 0.50

VCS 84600 - Advanced Small Animal Medicine

Credit Hours: 2.00. An advanced course dealing with selected diseases of dogs and cats. Designed for the student who is focusing on small animal or companion animal practice. A systems approach is used to teach the major concepts of diseases affecting each body system. Focuses on diagnosis and treatment of diseases commonly encountered in small animal clinical practice. Topics covered in this elective include endocrinology, nephrology, gastroenterology, and immune-mediated diseases. **Credits:** 2.00

VCS 84601 - Small Animal Medicine III

Credit Hours: 2.00. An advanced elective course focused on selected diseases of dogs and cats. Designed for the student who is considering entering either small animal exclusive practice, mixed animal practice, or companion animal practice. A systems approach is used to teach the major concepts of diseases affecting each body system while developing a deeper understanding of common diseases in the dog and cat. This course will concentrate on the diagnosis and treatment of diseases commonly encountered in small animal clinical practice. Topics in this elective include nephrology, urology, oncology, endocrinology, infectious diseases, cardiology, gastroenterology (includes liver and pancreas). **Credits:** 2.00

VCS 84700 - Advanced Small Animal Specialties

Credit Hours: 2.00. An advanced course dealing with selected diseases of dogs and cats. Designed for the student who is focusing on small animal or companion animal practice. A systems approach is used to teach the major concepts of diseases affecting each body system. Focuses on diagnosis and treatment of diseases commonly encountered in small animal clinical practice. Topics included in this elective include cardiology, dermatology, neurology, and oncology. **Credits:** 2.00

VCS 84701 - Small Animal Medicine IV

Credit Hours: 2.00. An advanced elective course focused on selected diseases of dogs and cats. Designed for the student who is considering entering either small animal exclusive practice, mixed animal practice, or companion animal practice, following graduation. A systems approach is used to teach the major concepts of diseases affecting each body system while developing a deeper understanding of common diseases in the dog and cat. This course will concentrate on the diagnosis and treatment of diseases commonly encountered in small animal clinical practice. Topics in this elective include neurology, respiratory, oncology, dermatology, and immune-mediated diseases. **Credits:** 2.00

VCS 84800 - Advanced Small Animal Surgery

Credit Hours: 1.50. An advanced course dealing with selected surgical diseases of dogs and cats. Designed for the student who will be practicing on small animals (small animal, companion animal, or mixed animal track). A systems approach is used to teach important concepts of surgical diseases and procedures affecting each body system. Focuses on the diagnosis and treatment of diseases commonly encountered in small animal practice. **Credits:** 1.50

VCS 85000 - Small Animal Dentistry

Credit Hours: 0.50. A thorough understanding and practical knowledge of the oral examination, dental prophylaxis, and tooth extraction. The principles of endodontics, periodontics, orthodontics, and restorations are discussed. Techniques useful in oral surgery, such as dental bonding and intra-oral splinting are presented. **Credits:** 0.50

VCS 85100 - Medicine And Surgery Of Nontraditional Pets

Credit Hours: 2.00. An overview of clinical approach to common medical and surgical diseases of nontraditional pets. Focuses on diagnosis and treatment of common diseases encountered in small animal clinical practice. **Credits:** 2.00

VCS 85200 - Comparative Theriogenology II

Credit Hours: 1.00. This course is a continuation of VCS 81400 and will cover basic aspects of reproduction in large and small animals, including obstetrics and genital disease on an individual and group basis. **Credits:** 1.00

VCS 85300 - Small Animal Emergency And Critical Care

Credit Hours: 1.00. The emergently-ill pet is a frequent scenario for both primary care private practices and the primary emergency care center. Due to the unpredictable nature of these clinical scenarios, this course provides the veterinary student the knowledge to quickly assess and stabilize pets using standard of care protocols. Common presentations and diseases are used to reinforce key concepts in emergency and critical care medicine. **Credits:** 1.00

VCS 86000 - Emergency Medicine/ICU

Credit Hours: 0.00. Designed to teach principles of intensive medical care. Advanced monitoring, critical care technology, and nursing care principles are applied as appropriate for patients under the supervision of their attending clinician. **Credits:** 0.00

VCS 86001 - Small Animal Emergency And Critical Care

Credit Hours: 3.00. This course is designed to provide an extensive three-week experiential clinical rotation that is focused on small animal emergency and critical care. The student will participate in receiving, triaging, and treating small animal emergency cases, as well as monitoring and treating critically ill small animal patients admitted to the Veterinary Teaching Hospital. Rounds will be topic and case oriented. For students in all tracks.**Credits:** 3.00

VCS 86002 - Small Animal Emergency And Critical Care II

Credit Hours: 3.00. This course is designed to provide an intensive 3-week experiential clinical rotation that is focused on small animal emergency and critical care. The student will participate in receiving, triaging, evaluating emergency cases as well as monitoring and treating critically ill small animal patients admitted to the Veterinary Teaching Hospital. There will be a focus on providing additional opportunities for the student to participate in and perform advanced critical care techniques.**Credits:** 3.00

VCS 86003 - Small Animal After-Hours Care & ICU Rotation

Credit Hours: 3.00. This course is designed to provide experience in the principles of intensive medical care and management of hospitalized small animal cases. This course will provide learning opportunities for students to practice skills and to gain experience assessing and working with hospitalized patients in the intensive care unit (ICU) and hospital wards during after-hours shifts (including evenings, overnights, and weekends dependent upon student numbers) while working with attending clinician(s) and nursing staff. As emergency caseload and ICU populations are unscheduled and their timing is unpredictable, there may be both in-hospital shifts as well as times that students are on call during this rotation. (129 clinical hours)**Credits:** 3.00

VCS 86004 - Large Animal After-Hours & Emergency Rotation

Credit Hours: 3.00. This course is designed to provide experience in the principles of intensive medical care and management of large animal emergency cases. Students will work with the attending clinician(s) and nursing staff to care for the emergency and critical care cases admitted to the hospital. As emergency cases are unscheduled and their timing is unpredictable, there will be both in-hospital shifts as well as times that students are on call during this rotation. (129 clinical hours)**Credits:** 3.00

VCS 86100 - Small Animal Medicine I

Credit Hours: 3.00. Basic clinical experience and training in the art and science of small animal medicine. Total clinic hours 129.**Credits:** 3.00

VCS 86201 - Small Animal Surgery - Soft Tissue I

Credit Hours: 3.00. Students will be expected to participate in the evaluation, treatment, and care of patients, learning from clinical case material, reviewing topics, and reading the surgical literature. Students will perform elective neutering procedures as the primary surgeon and assist in other surgical procedures. Students will participate in surgery rounds at least once each day, with every student researching and discussing the theoretical aspects of cases and making a formal case or topic presentation to other students and faculty at least once during the course. Total clinic hours 129.**Credits:** 3.00

VCS 86202 - Small Animal Surgery - Orthopedic I

Credit Hours: 3.00. Students will be expected to participate in the small animal orthopedic service. Students will be expected to participate in the evaluation, treatment and care of patients, learning from clinical case material, reviewing topics, and reading the surgical literature. Students will gain experience performing orthopedic and neurologic examinations and localizing lesions. Students will participate in surgery rounds at least once each day, with every student researching and discussing the theoretical

aspects of cases and making a formal case or topic presentation to other students and faculty at least once during the course.**Credits:** 3.00

VCS 86203 - Shelter Medicine And Surgery

Credit Hours: 3.00. Students will spend two weeks performing elective surgery on shelter animals in the mobile surgery unit and one week working at an off-campus shelter. The mobile surgery unit, staffed by a DVM faculty member and a full-time RVT will operate 4 days per week, estimated 12 hours per day. Students will perform independent study on the day they do not participate in mobile surgery. During the one week at the shelter, students will work approximately 50 hours spread over 5 days of the week assisting the shelter medicine veterinarian in all aspects of shelter medicine. There will be a limit of 4 students per block, with a maximum of 3 students participating in the mobile surgery unit at any time. Preference will be given to students who are planning to specialize in shelter medicine.**Credits:** 3.00

VCS 86204 - Clinical Rotation In Shelter Medicine At IndyHumane

Credit Hours: 3.00. The course is a 3-week clinical rotation at the Humane Society of Indianapolis, 7929 N. Michigan Road, Indianapolis, IN 46268, under the supervision of on-site staff veterinarians serving as mentors. The student will assist the on-site mentors in ongoing day-to-day veterinary assessment, medical care, surgical treatment including spay/neuter, preventive care including vaccinations, and infectious disease control involving shelter animals (primarily dogs and cats).**Credits:** 3.00

VCS 86300 - Small Animal Community Practice

Credit Hours: 3.00. Provides students with training in outpatient small animal medicine and client communication. Special emphasis is placed on preventive medicine. Students are required to write one paper as arranged with the instructor. Total clinic hours 129.**Credits:** 3.00

VCS 86400 - Dermatology/Behavior

Credit Hours: 3.00. During the 3-week block, students will spend 50% of time in each service (7.5 total contact days for each service). Currently the Dermatology service receives 2 days a week and the Behavior service receives 2 days a week. On the fifth business day the students will take care of follow-ups from clients as well as in-house consultations. Students are also expected to practice clinical and technical skills which are required for each service. This elective rotation provides opportunities in dermatology to perform a thorough dermatologic assessment of the patient including dermatological history and physical examination of the skin and adnexa, identification and description of skin lesions and formulation of a reasonable list of differential diagnoses. The students will be involved in performing and interpreting skin scrapings, trichogram, cytology, bacterial cultures, fungal cultures, skin biopsy, and otoscopic/video-otoscopic exam. In aptitude for diagnosing and treating a variety of dermatologic conditions. Finally, the students will have the opportunity to develop the art of client communication and client education in veterinary dermatology.**Credits:** 3.00

VCS 86502 - Large Animal Medicine I

Credit Hours: 3.00. Clinical training in problem solving of medical diseases, performance of diagnostic procedures, treatment, and care of individual animals. Emphasis on bovine cases. Total clinic hours 129.**Credits:** 3.00

VCS 86600 - Large Animal Surgery I

Credit Hours: 3.00. Students are exposed to, and responsible for, case-oriented problem-solving experiences with large animal surgical diseases, including lameness. Students may have an opportunity to focus on a particular species during a portion of the basic block. The basic block includes the development of skills and capability with the principles of surgery (e.g. anesthesia, asepsis, and wound healing) as applied to large animal patients. The basic block experience is directed to primary level care. Total clinic hours 129.**Credits:** 3.00

VCS 86700 - Equine Field Service I

Credit Hours: 3.00. This course will provide training in outpatient and ambulatory equine medicine, surgery, theriogenology, and preventive medicine.**Credits:** 3.00

VCS 86800 - Equine Field Service II

Credit Hours: 3.00. Provides students with training in outpatient and ambulatory equine medicine, surgery, theriogenology, and preventive medicine. Special emphasis on client communications and computerized practice management is provided. A special project in practice management is required. Total clinic hours 129.**Credits:** 3.00

VCS 87000 - Clinical Cardiology

Credit Hours: 3.00. Students will actively participate in diagnostic and therapeutic procedures in all veterinary species with an emphasis on small animals. Students will be instructed and actively perform such diagnostic and therapeutic procedures including: electrocardiography, echocardiography, blood pressure determination and catheter placement. Students will be given exposure to invasive procedures such as angiography, intracavitary pressure determinations, PDA embolization, balloon valvuloplasty and pacemaker implantation. Students will receive "active" clinical instruction as well as lectures in the form of teaching rounds. Current concepts in cardiovascular medicine will be emphasized. Total clinic hours 129.**Credits:** 3.00

VCS 87100 - Small Animal Medicine II

Credit Hours: 3.00. Additional clinical experience and training in the art and science of small animal medicine. Total clinic hours 129.**Credits:** 3.00

VCS 87102 - Oncology I

Credit Hours: 3.00. This block is designed to provide maximum exposure to clinical and comparative oncology. Students will develop skills necessary to fully evaluate and treat canine and feline cancer patients. Students will receive two weeks of exposure to the medical oncology clinic and one week of exposure to the radiation oncology clinic. Students will gain experience with various biopsy techniques and with therapeutic modalities including chemotherapy and radiation therapy. Independent study of relevant current literature is expected. The oncology student will concentrate on handling oncology patients but will have general internal medicine responsibilities during non-clinic hours.**Credits:** 3.00

VCS 87104 - Clinical Investigation In Oncology II

Credit Hours: 3.00. This elective will allow senior students the opportunity to investigate a problem in clinical oncology. The problem and method of investigation will be defined by the student and instructor. Methods of investigation available could include: 1) prospective or retrospective studies relating to the diagnosis, biological behavior, and treatment of specific canine or feline neoplasms, and 2) in vitro evaluation of tumor cells (e.g. cell culture). Oncology rounds attendance and case responsibility in oncology will also be expected. The experience gained in this course may aid in preparing the student to enter graduate or residency training. An expanded course description for the specific problem to be investigated must be placed on file in the departmental office and in the office of the Associate Dean of Academic Affairs. Total clinic hours 129. Permission of instructor required.**Credits:** 3.00

VCS 87105 - Pet Practice

Credit Hours: 6.00. Advanced instruction and clinical experience in dermatologic medicine. Students participate fully in diagnostics, therapeutics, patient management, drug studies, and research activities. Extensive self-study materials are available. Small Animal Community Practice: Students will receive training in primary care small animal and exotic pet medicine,

behavior, theriogenology, client preventive medicine and overall pet wellness to promote the family-pet bond. Students will be required to write one paper as arranged with instructor. **Credits:** 6.00

VCS 87201 - Clinical Veterinary Anesthesiology

Credit Hours: 3.00. This course will provide clinical training in anesthesiology. Students may focus on large animals, small animals, or a mixture of the both. The students will participate in daily rounds to discuss case work-up as well as advanced topics in anesthesia that are not covered in other courses. Topics may include mechanical ventilation, blood gas interpretation, neuromuscular blockade, and adjunctive anesthetic procedures (epidural analgesia, brachial plexus block, etc.).**Credits:** 3.00

VCS 87202 - Small Animal Surgery - Soft Tissue II

Credit Hours: 3.00. Students will be expected to assume greater responsibility for evaluation, treatment, and care of patients while developing greater knowledge, clinical judgment, and diagnostic capabilities that enable them to manage more complex cases. Students will learn from clinical case material, reviewing topics, and reading the surgical literature and will be given more responsibility for case management. Students will perform elective neutering procedures as the primary surgeon and assist in other surgical procedures. Students will participate in surgery rounds at least once each day, with every student researching and leading case discussions, demonstrating more initiative and independence. Each student will make a formal case or topic presentation to other students and faculty at least once during the course. Total clinic hours 129.**Credits:** 3.00

VCS 87203 - Small Animal Surgery - Orthopedic II

Credit Hours: 3.00. Students will be expected to assume greater responsibility for evaluation, treatment, and care of patients while developing greater knowledge, clinical judgment, and diagnostics capabilities that enable them to manage more complex cases. Students will be expected to learn from clinical case material, reviewing topics, and reading the surgical literature. Students will gain additional experience performing orthopedic examinations.**Credits:** 3.00

VCS 87502 - Large Animal Medicine II

Credit Hours: 3.00. Advanced clinical training in problem-solving of medical diseases, performance of diagnostic procedures, treatment, and care. Students may be allowed to spend up to three working days off campus to work with a veterinarian engaged in practice in the student's area of interest. This off-campus experience should enhance the student's education by complementing experience gained on campus.**Credits:** 3.00

VCS 87600 - Large Animal Surgery II

Credit Hours: 3.00. Students have advanced responsibility for large animal surgical patients with a species focus. Students are expected to conduct the appropriate presurgical physical examination, assist with the surgery, and be responsible for the postoperative care of most primary care level patients and many secondary care level patients. Total clinic hours 129.**Credits:** 3.00

VCS 87700 - Large Animal Lameness

Credit Hours: 3.00. Students are exposed to, and responsible for, case-oriented problem-solving experiences with large animal lamenesses and orthopedic diseases. The case exposure is primarily equine, but lameness students are expected to help with food animal lamenesses and orthopedics, as a comparative biomedical approach to studying locomotion and the musculoskeletal system. Depending upon the availability of lameness cases, lameness students will participate with the general clinic responsibilities and emergency duty in the large animal surgery. Students may be allowed to spend up to three days off campus to work with a veterinarian engaged in practice in the student's area of interest. This off-campus experience should enhance the student's education by complementing experience gained on campus. **Credits:** 3.00

VCS 87800 - Swine Production Medicine I

Credit Hours: 3.00. Advanced training and extensive experience in working with swine herds on a herd health management program. Total clinic hours 129.**Credits:** 3.00

VCS 87900 - Bovine Theriogenology And Production Medicine I

Credit Hours: 3.00. Training and experience in working with reproductive management problems in dairy and beef herds. The importance of herd records in assessing performance and health is stressed, and training is provided in the use of computerized recording systems and ration formulation programs. Total clinic hours 129. **Credits:** 3.00

VCS 87902 - Comparative Theriogenology

Credit Hours: 3.00. Training and experience in working with reproductive management problems in dairy and beef herds. The importance of herd records in assessing performance and health is stressed, and training is provided in the use of computerized recording systems and ration formulation programs. Total clinic hours 129.**Credits:** 3.00

VCS 87903 - Bovine Theriogenology And Production Medicine II

Credit Hours: 3.00. Advanced training in the areas of embryo transfer, embryo grading, artificial insemination, oviduct patency tests, and ultrasound use in ambulatory food animal practice. Training will also focus on repeat breeder cows. Additional responsibilities will be designated in the areas of herd health, production medicine and the recognition of disease processes.**Credits:** 3.00

VCS 87905 - Advanced Beef Cow-Calf Production Medicine

Credit Hours: 3.00. This course is designed to provide an intensive 3-week experiential clinical rotation that is focused on beef cow-calf production medicine. The students will spend about 50% of the time on herd visits and about 50% on research and writing up herd reports. Each student will be responsible for a specific area of focus on each herd visit. Purdue students taking the block will be available for back-up emergency duty on days when they are on campus.**Credits:** 3.00

VCS 87910 - Bovine Field Service I

Credit Hours: 3.00. Students will be trained and experience working with individual animal and herd health issues in an ambulatory setting. Students will have the opportunity to participate in after-hours emergencies on a voluntary basis. In addition, students will have the opportunity to provide routine veterinary services at the Purdue ASREC Dairy and Beef Unit. Students may elect to schedule up to five business days of the rotation at a farm animal focused private practice.**Credits:** 3.00

VCS 87920 - Bovine Field Service II

Credit Hours: 3.00. Advanced training in the areas of embryo transfer, embryo grading, artificial insemination, oviduct patency tests and ultrasound use in ambulatory food animal practice. Training will also focus on repeat breeder cows. Additional responsibilities will be designated in the areas of herd health, production medicine and the recognition of disease processes. **Credits:** 3.00

VCS 88000 - Ruminant (Dairy) Production Medicine I

Credit Hours: 3.00. Training and faculty-directed independent study in dairy production medicine. Emphasis is on health and management from the newborn calf to the lactating dairy cow. Particular attention is paid to nutritional management, herd monitoring, and herd records analysis. Additionally, vaccination programs, facilities, and welfare auditing will be covered. The

block may be customized according to the interests of the students enrolled. A limited amount of time is spent on individual animal care. Farm visits to observe different management styles and to provide troubleshooting of herd problems will also be scheduled during the block. Students may be allowed to spend up to five working days off-campus to work with a veterinarian engaged in practice in the student's area of interest. This off-campus experience should enhance the student's education by complementing experience gained on campus.**Credits:** 3.00

VCS 88001 - Ruminant (Dairy) Production Medicine II

Credit Hours: 3.00. This course is meant to build on the knowledge gained in VCS 88000 and is directed at students that are focused on future intensive dairy practice. The structure of the block will be similar to VCS 88000, but there will be more in-depth discussion of ration building, records analysis, and mild quality. Additional farm visits will also be performed to provide exposure to different types of dairy farms that will be encountered in dairy practice.**Credits:** 3.00

VCS 88002 - Clinical Veterinary Services For The Indiana State Fair

Credit Hours: 3.00. The course is a 3-credit clinical rotation. A PVM clinician will lead this elective 3-week clinical rotation. Students will spend 3 weeks providing veterinary care to all exhibition animals at the Indiana State Fair. The veterinary services provided include health assessment during check-in, assessment of ill animals, and on-call service after business hours. The majority of cases will be swine and cattle, but can also include horses, poultry, and small ruminants.**Credits:** 3.00

VCS 88100 - Small Animal Medicine III

Credit Hours: 3.00. Further clinical exposure with emphasis on cases in the student's area of interest. A faculty mentor will be assigned to each student. Total clinic hours 129.**Credits:** 3.00

VCS 88300 - Clinical Investigation In Theriogenology

Credit Hours: 3.00. Provides senior students an opportunity to investigate a clinical problem in a laboratory situation. The student is expected to apply one of the many research techniques available in the school to address the question. The experiences gained may allow the candidate to pursue graduate and residency training in theriogenology. An expanded course description for the specific problem to be investigated must be placed on file in the departmental office and in the office of the associate dean of academic affairs. Total clinic hours 129.**Credits:** 3.00

VCS 88400 - Equine Theriogenology Clinical Rotation

Credit Hours: 3.00. This 3-week rotation will offer students the opportunity to work directly with the Equine Theriogenology in-house service. Students will be able to observe and manage both mares and stallions with reproductive conditions commonly seen in practice. The rotation may include management of hospitalized high-risk mares during their gestation, mares with hospitalized neonates that need reproductive evaluation and treatment, and dystocia diagnosis and treatment. **Credits:** 3.00

VCS 88500 - Large Animal Medicine III

Credit Hours: 3.00. Advanced clinical training with focused interest in a specialized type of practice, in-depth training in internal medicine, or participation in large animal related research activities. Students may be allowed to spend up to three working days off campus to work with a veterinarian engaged in practice in the student's area of interest. This experience should enhance the student's education by complementing experience gained on campus. The short off-campus experience should be arranged with the professor of record of the course at least 30 days prior to the beginning of the block.**Credits:** 3.00

VCS 88600 - Large Animal Surgery III

Credit Hours: 3.00. Students at this level are expected to function with greater independence, carrying out the history, physical examination, and postoperative care of all elective and certain emergency/intensive care patients of the species of their choice. Depending upon the capabilities and competence of the student, as determined by the surgery faculty and staff, he or she will have the opportunity to conduct supervised surgical procedures. Students may be allowed to spend up to three days off campus to work with a veterinarian engaged in practice in the student's area of interest. This off-campus experience should enhance the student's education by complementing experience gained on campus.**Credits:** 3.00

VCS 88601 - Large Animal Surgery III Food Animal

Credit Hours: 3.00. This course will focus on food animal surgery and lameness and will only be offered 1-2 times per year. Students will be expected to function with greater independence than during LAS I and II, carrying out the history, physical examination and postoperative care of elective and certain emergency/intensive care patients. Depending upon the capabilities and competence of the student, as determined by the surgery faculty and staff, he/she will have the opportunity to conduct supervised surgical procedures. This block will focus on food animal surgical diseases through seminars, in-clinic hands-on laboratory sessions, rounds discussions and an emphasis on food animal clinical cases. Total clinic hours 129. **Credits:** 3.00

VCS 88602 - Clinical Veterinary Services At Caesars Entertainment Equine Specialty Hospital

Credit Hours: 3.00. In this 3-week rotation students will assist the staff with diagnosis and treatment of sports-related conditions including lameness diagnosis and treatment, evaluation and treatment of upper respiratory diseases, and diagnosis and treatment of a variety of surgical conditions such as lacerations and traumatic injuries to the musculoskeletal system. Students will assist in advanced diagnostic imaging including nuclear imaging and CT imaging with a unit that allows horses to be imaged while standing. A dynamic endoscope is available for use on the track to evaluate upper respiratory disease while the horse is exercising. Students will perform lameness examinations under guidance of the staff clinicians and will be expected to participate in after-hours emergencies. Rounds will be held daily when horses are hospitalized. The caseload is not limited to racing Thoroughbred horses but includes a diverse population of sport horses including Standardbred racehorses, working Quarter Horses, and hunter-jumper and dressage horses.**Credits:** 3.00

VCS 88800 - Swine Production Medicine II

Credit Hours: 3.00. This course is a faculty-directed independent study. Students are expected to use campus, state, and national resources to deal with herd problems. The goal is to bring the knowledge base of the student to the entry level expected for a swine practitioner. Emphasis is placed on veterinary services needed to maintain top production efficiency in swine herds. Total clinic hours 129. **Credits:** 3.00

VCS 89100 - Diagnostic Imaging

Credit Hours: 3.00. Clinical training and experience in radiology and ultrasound imaging as it contributes to the practice of veterinary medicine. Seminars are based on small animal imaging. Total clinic hours 129.**Credits:** 3.00

VCS 89101 - Veterinary Diagnostic - Ultrasound

Credit Hours: 3.00. This rotation will provide opportunity for hands-on small animal ultrasound imaging. The student will have the opportunity to pre-scan the patients prior to actual scan by the radiologist. By doing so, the student will learn the ultrasound scanning techniques and real-time interpretation of ultrasonography. In addition, students will observe the scanning of veterinary patients by the radiologist and will be asked to participate in ultrasonography interpretation. **Credits:** 3.00

VCS 89200 - Veterinary Forensic Medicine

Credit Hours: 1.00. The definition of forensic medicine is a science that deals with the relation and application of medical facts to legal problems. The primary role of a forensic specialist is to provide law enforcement officials, judges, and jury members with the information necessary to make decisions (decision to prosecute, render a verdict, etc.) regarding a case. This elective course is designed to expose students to the many situations where veterinary medicine and the law intersect. **Credits:** 1.00

VCS 89300 - Shelter Animal Medicine

Credit Hours: 1.00. The Shelter Animal medicine course will be offered to second and third year veterinary students. The course will cover topics essential to understanding the complexity of population medicine in a shelter environment and related welfare issues. Topics to be covered include animal shelter models (no-kill/adoption guarantee, tradition, etc.), population medicine and disease control as it relates to the environment and the animals, critical care in a shelter environment, foster care, neonatal care of shelter animals, population statistics, animal behavior and relinquishment issues, abuse and cruelty, legal and ethical issues, euthanasia, and developing and implementing animal disaster plans. **Credits:** 1.00

VCS 89400 - Comparative Ophthalmology I

Credit Hours: 3.00. Students are given the opportunity to develop the technical skills needed to test for vision and examine each ocular structure for abnormalities. The rotation includes clinical experience and instruction in veterinary (comparative) ophthalmology with participation in the diagnosis, therapy, and management of clinical cases and various research activities. A seminar presentation and/or special project is required. Total clinic hours 129.**Credits:** 3.00

VCS 89500 - Purdue Veterinary Hospital Practicum

Credit Hours: 0.00. Students will be assigned to work on a service in the Purdue Veterinary Hospital (PVH) over one-half of the December-January holiday period. The student will gain hands-on practical experience in the diagnosis and treatment of patients presented to the PVH. The student will also gain some experience managing emergent cases. Total clinic hours 45.**Credits:** 0.00

Veterinary Medicine

VM 10200 - Careers In Veterinary Medicine

Credit Hours: 1.00. Overview of the field of veterinary medicine presently and as anticipated for the future. Presentations will include descriptions and discussions of the nature of the professional activity, organization of veterinary medicine, career opportunities, issues confronting the profession, and the admission requirements of the profession. **Credits:** 1.00

VM 10500 - Intro To Veterinary Nursing - DL

Credit Hours: 1.00. An introduction to the profession of Veterinary Technology will be presented. It will include the many roles of veterinary technicians on the veterinary teams in practice and non-practice areas. Learning skills with an emphasis on medical terminology will be covered to help the student develop a foundation of medical vocabulary for future courses. **Credits:** 1.00

VM 10800 - Veterinary Nursing Career Exploration

Credit Hours: 1.00. This course will introduce students to basic concepts related to the veterinary technology profession. The course will provide an introduction to the various career opportunities within the veterinary healthcare profession as well as a general introduction to the attributes and traits of veterinary medical professionals. Veterinary technology as a career will be explored to promote understanding of the responsibilities of the veterinary technician and technologist in the veterinary medical field. Enrollment restricted to non-veterinary technology majors and first-year veterinary technology students. Second through fourth-year veterinary technology students may not register for this course.**Credits:** 1.00

VM 10900 - Veterinary Nursing Learning Community

Credit Hours: 1.00. This Learning Community course is designed for freshman in the Veterinary Nursing Program and is focused on new student integration, providing resources available on campus to facilitate student success in the first year, creating community, and introduce students to Purdue and the Program. **Credits:** 1.00

VM 11400 - Anatomy I - DL

Credit Hours: 2.00. This course is the first of two courses in the distance learning program that presents an introduction to the study of the major body systems and topographic relationships of the major domesticated species, with emphasis on the carnivore.**Credits:** 2.00

VM 11600 - Anatomy II - DL

Credit Hours: 2.00. This course is the second of two courses in the distance learning program that presents an introduction to the study of the major body systems and topographic relationships of the major domesticated species, with emphasis on the carnivore.**Credits:** 2.00

VM 13500 - Physiology I - DL

Credit Hours: 1.00. This course is the first of two courses in the distance learning program that presents an introduction to general physiology of the mammalian body systems and the general physiological process with emphasis on domestic animals. This course will address the functions of the different systems and homeostasis; the functions of the cell; the different compartments and solute transport; blood and defense; general functions of the nervous system, reflexes and special senses; the function of the nerve and muscle; cardiovascular system; and digestive system.**Credits:** 1.00

VM 13600 - Physiology II - DL

Credit Hours: 1.00. This course is the second of two courses in the distance learning program that addresses the functions of the kidney and its role in regulation of extracellular volume and acid-base; respiration, mechanics of respiration and its control, transport of gases and hypoxia; physiology of the endocrine system, functions of the gonads, fertilization, pregnancy, parturition and lactation.**Credits:** 1.00

VM 14000 - Introduction To Veterinary Technology

Credit Hours: 1.00. This course provides an orientation to the profession of Veterinary Technology. **Credits:** 1.00

VM 14001 - Small Animal Nursing I - DL

Credit Hours: 3.00. This is the first of two courses involving nursing and management of the small animal patient. This is the introduction to small animal patient care and treatment that a technician will be expected to provide in a veterinary practice. It includes techniques, equipment, client education, management of the hospitalized patient and preventative medicine. Emphasis will be on the role of the veterinary technician in the veterinary hospital. **Credits:** 3.00

VM 14700 - Surgical Nursing - DL

Credit Hours: 1.00. This course is designed to instruct veterinary technician students in the basic principles of veterinary operating room protocols and sterilization of surgical supplies commonly used within a veterinary hospital. Emphasis will be placed upon key concepts of surgical preparation of the patient, and the role of the circulating nurse and surgical nurse. In addition, the concepts of proper instrument care, sterilization procedures and inventory rotation will be covered. **Credits:** 1.00

VM 14801 - Large Animal Nursing I - DL

Credit Hours: 2.00. This is the first of two courses involving nursing and health management of the large animal patient. This is the introduction to large animal patient care and treatment that a technician will be expected to provide in a veterinary practice. It includes techniques, equipment, client education, management of the hospitalized patient and preventative medicine. Emphasis will be on the role of the veterinary technician in the veterinary facility. **Credits:** 2.00

VM 15001 - Clinical Pathology I - DL

Credit Hours: 2.00. This course is the second course that provides basic instruction in the concepts of Clinical Pathology to the veterinary technician student. This course will include hemostasis; immunohematology; the basic concepts of clinical chemistry; urinalysis evaluation; and the fundamentals of cytological sample handling and evaluation.**Credits:** 2.00

VM 20100 - Introduction To Veterinary Nursing

Credit Hours: 1.50. A didactic course which presents the basic skills that will be used in all nursing courses and in the overall curriculum. The course will provide an introduction to the various opportunities within the veterinary healthcare profession as well as a general introduction to the attributes and traits of veterinary medical professionals. In addition, the course introduces medical math and terminology used in veterinary medicine. Students will complete exercises utilizing math concepts used for dosage calculations, conversions, proper notation, dispensing medications, fluid therapy calculations, and percent solutions. Students will use medical terminology including prefixes, roots, and suffixes of medical terms to complete exercises. This knowledge will be utilized in didactic courses and labs as well as in clinical rotations. Students will learn normal temperature, pulse and respiration values for various species. There will be both in-class and self-study components. This course combines content previously presented in VM 14000 and VM 25100.**Credits:** 1.50

VM 20200 - Pharmacy Procedures - DL

Credit Hours: 1.00. This course introduces students to the concepts of pharmacy procedures used in veterinary practice. Concepts covered in this course include basic record keeping, safe handling of drugs and chemicals, inventory control, calculation of amount of drugs to be dispensed or dosed, reading prescriptions, labeling drug containers, compounding, and drug regulatory matters that impact the veterinary hospital pharmacy. **Credits:** 1.00

VM 20500 - Small Animal Nursing Mentorship I - DL

Credit Hours: 1.50. This is the first of three clinical mentorships in small animal nursing. This clinical mentorship will require the veterinary technician student to work with a small animal veterinary care facility to practice several tasks under the supervision of a clinical mentor. This clinical mentorship focuses on the principles of history taking, physical examination, simple diagnostic sample collection, parenteral and oral administration of medication, and venipuncture. Permission of department required. **Credits:** 1.50

VM 20600 - Small Animal Nursing Mentorship II - DL

Credit Hours: 1.00. This is the second of three clinical mentorships in small animal nursing. This mentorship requires the student to work with a small animal veterinary care facility to practice several tasks under the supervision of a clinical mentor. This clinical mentorship focuses on the principles of venipuncture, catheter placement, various methods of urine collection, vaginal cytology, dental prophylaxis, and ECG tracings. Permission of department required. **Credits:** 1.00

VM 20700 - Small Animal Nursing Mentorship III - DL

Credit Hours: 1.00. This is the third of three clinical mentorships in small animal nursing. This mentorship will require the student to work with a small animal veterinary care facility to practice several tasks under the supervision of a clinical mentor. This clinical mentorship focuses on the principles of oncology, dermatology, ophthalmology, and emergency care procedures. Permission of department required. **Credits:** 1.00

VM 20800 - Farm Animal Nursing Mentorship - DL

Credit Hours: 1.00. This clinical mentorship focuses on the principles of basic handling, nursing, and diagnostic techniques used in large animal medicine. Permission of department required. **Credits:** 1.00

VM 20900 - Equine Nursing Mentorship - DL

Credit Hours: 1.00. This clinical mentorship focuses on the principles of handling, restraint, and equine nursing care. Tasks to be documented include restraint and handling techniques, data collection, basic nursing care, and administration of medication and treatments. Permission of department required. **Credits:** 1.00

VM 21000 - Small Animal Anesthesia Mentorship - DL

Credit Hours: 2.00. This mentorship will require the student to work with a small animal veterinary care facility to practice several tasks under the supervision of a clinical mentor. This mentorship focuses on the principles of anesthesia from induction, maintenance to recovery. Permission of department required. **Credits:** 2.00

VM 21100 - Food Animal And Equine Anesthesia-Clinical Mentorship-DL

Credit Hours: 1.00. This mentorship focuses on the principles of large animal anesthesia from induction and maintenance to recovery. Students will be required to complete projects and participate in discussions related to large animal anesthesia cases.**Credits:** 1.00

VM 21200 - Surgical Nursing Mentorship - DL

Credit Hours: 0.50. This clinical mentorship will require the student to work in a veterinary care facility to practice several tasks under the supervision of a clinical mentor. This mentorship focuses on the principles of operating room procedures, patient and instrument preparation for surgery and the duties of the circulating nurse and the scrub nurse. Permission of department required. **Credits:** 0.50

VM 21300 - Microbiology Mentorship - DL

Credit Hours: 0.50. This Clinical Mentorship will require the student to practice several tasks under the supervision of a clinical mentor (veterinarian, credentialed veterinary technician, or microbiologist). This Clinical Mentorship focuses on the motor skills required to obtain samples, prepare specimens for examination, and perform technician-level diagnostic techniques. Permission of department required. **Credits:** 0.50

VM 21400 - Parasitology Mentorship - DL

Credit Hours: 0.50. This Clinical Mentorship will require the student to practice several tasks under the supervision of a clinical mentor (veterinarian, credentialed veterinary technician, or parasitologist). This Clinical Mentorship focuses on the motor skills required to obtain samples, prepare specimens for examination, and perform technician-level diagnostic techniques. **Credits:** 0.50

VM 21500 - Small Animal Diagnostic Imaging Mentorship I - DL

Credit Hours: 1.00. This is the first of two clinical mentorships in diagnostic imaging. This mentorship will require the student to work with a small animal veterinary care facility to practice several tasks under the supervision of a clinical mentor. This mentorship focuses on the principles of film loading, processing, presentation for viewing radiographs, care and maintenance of processors, and imaging of the thorax and abdomen. Permission of department required. **Credits:** 1.00

VM 21600 - Small Animal Diagnostic Imaging Mentorship II - DL

Credit Hours: 1.50. This is the second clinical mentorship in small animal diagnostic imaging. This mentorship requires the student to work with a small animal veterinary care facility to practice several tasks under the supervision of a clinical mentor. This mentorship focuses on the preparation of a technique chart, imaging of the shoulder, radius, ulna, stifle, spine, skull, and pelvis. Permission of department required. **Credits:** 1.50

VM 21700 - Equine Diagnostic Imaging Mentorship - DL

Credit Hours: 0.50. This clinical mentorship will require the student to work with a food animal/equine veterinary care facility to practice several tasks under the supervision of a clinical mentor. This mentorship focuses on the imaging of the carpus, fetlock, tarsus, navicular projection, P3 views, and the dorsoproximal-palmarodistal view. Permission of department required. **Credits:** 0.50

VM 22100 - Laboratory Animal Health II -DL

Credit Hours: 1.00. This course is the second of two courses that provide basic instruction in the concepts of laboratory animal health management to the veterinary technician student. This course will place an emphasis on the care of laboratory animals as well as specific procedures that are used in laboratory animal medicine. **Credits:** 1.00

VM 22300 - Pharmacy Mentorship - DL

Credit Hours: 0.50. This clinical mentorship will require the veterinary technician student to work with a veterinary care facility to practice tasks under the supervision of a clinical mentor. This clinical mentorship focuses on the principles of drug order fulfillment, reconstitution of medications, correct storage of medications (including controlled substances), safe handling of hazardous medications, and inventory control procedures. Permission of department required. **Credits:** 0.50

VM 22400 - Necropsy Mentorship - DL

Credit Hours: 0.50. This clinical mentorship focuses on the motor skills and techniques in performing a basic prosection (necropsy). Tasks include basic necropsy technique, techniques for sample collection and storage, and safety issues related to handling animal specimens. Course is offered as Distance Learning. Permission of department required. **Credits:** 0.50

VM 22500 - Advanced Clinical Mentorship - DL

Credit Hours: 1.50. This clinical mentorship will require the student to complete 120 hours of additional work experience while completing a series of selected projects related to veterinary medicine. Permission of department required.**Credits:** 1.50

VM 22501 - Parasitology - DL

Credit Hours: 2.00. This course provides basic instruction in the concepts of parasitology to the veterinary technician student. Emphasis will be on the basic information needed to accurately identify parasites commonly encountered in veterinary medicine. Emphasis will also be placed on life cycles and zoonotic aspects of the parasites covered.**Credits:** 2.00

VM 22600 - Lab Animal Mentorship - DL

Credit Hours: 1.00. This clinical mentorship focuses on the motor skills involved with the basic handling, restraint, administration of medication and nursing care of laboratory animals. Permission of department required. **Credits:** 1.00

VM 22700 - Clinical Pathology Mentorship - DL

Credit Hours: 2.00. This clinical mentorship will require the student to work with a laboratory, small or large animal veterinary care facility to practice several tasks under the supervision of a clinical mentor. This clinical mentorship focuses on the principles of blood film evaluation for different species, manual and automated CBCs, normal and abnormal cellular morphology, urinalysis, chemistry panels, and differentials. Permission of department required.**Credits:** 2.00

VM 22800 - Integrations - DL

Credit Hours: 2.00. This course will provide instruction in the concepts problem based learning for the nursing process (patient evaluations, interventions, and desire resolutions) using a cased based approach. This course will integrate foundational knowledge form anatomy, physiology, with the information in the veterinary nursing courses. Cases will involve different domestic animal species.**Credits:** 2.00

VM 22900 - Lab Animal Medicine - DL

Credit Hours: 2.00. This course will provide instruction in the concepts of Laboratory Animal Health Management to the veterinary technician student. This course will place an emphasis on the information needed to work with laboratory animals as well as issues that apply to laboratory animal medicine along with the care of laboratory animals and exotics and specific procedures that are used in laboratory animal and exotic pet medicine. Students are expected to achieve a level of understanding of laboratory animal care and management so that they will be able to communicate effectively with the veterinarian and other individuals. **Credits:** 2.00

VM 23000 - Public & Occupational Health -DL

Credit Hours: 1.00. This is the first of two courses that provide basic instruction in the concepts of workplace safety related to the veterinary technician. This course will place an emphasis on the basic information needed to recognize hazards commonly encountered and the steps that should be taken to reduce the risk of exposure to hazards. Other practical aspects of public health will be discussed.**Credits:** 1.00

VM 23001 - Small Animal Nursing II - DL

Credit Hours: 2.50. This is the second of two courses involving nursing and management of the small animal patient. This course continues the concepts of small animal patient care and treatment that a technician will be expected to provide in a veterinary practice. It includes techniques, equipment, client education, management of the hospitalized patient and preventative medicine. Emphasis will be on the role of the veterinary technician in the veterinary hospital. **Credits:** 2.50

VM 23100 - Diagnostic Imaging - DL

Credit Hours: 3.00. This course involves principles of imaging that are necessary for the performance of diagnostic imaging procedures in a veterinary hospital. This course provides an introduction to x-ray generation, image formation, exposure factors, scatter radiation, grids, film, screens, safety, basic terminology, positioning, darkroom techniques, artifact identification, advanced positioning techniques for the small animal, large animal techniques, contrast techniques, technique charts, basic ultrasound, diagnostic imaging in exotic animals. **Credits:** 3.00

VM 23200 - Principles Of Anesthesia - DL

Credit Hours: 3.00. This course involves the basic principles of anesthesia and anesthetic delivery for the veterinary technician. This course focuses on the preparation of the patient for anesthesia, the agents used as pre-anesthetics, induction agents and general anesthesia, the physiologic impacts of anesthesia on the body, multi-species anesthetic techniques (small animal, large animal/equine, pocket pets), managing high risk patients, anesthetic complications, and pain management. **Credits:** 3.00

VM 23300 - Optho, Derm & Oncology - DL

Credit Hours: 1.00. This course involves the instruction of nursing and management of small animal patients related to ophthalmology, dermatology, and oncology. It presents concepts of small animal patient care and treatment that a technician will be expected to provide in a veterinary practice. It includes techniques, equipment, client education, management of the hospitalized patient, and preventative medicine related to these specific clinical disciplines. Emphasis will be on the role of the veterinary technician in the veterinary hospital. **Credits:** 1.00

VM 23400 - Microbiology - DL

Credit Hours: 2.00. This course is designed to enable the veterinary technician to satisfactorily collect and process specimens, and characterize and identify microorganisms that may be encountered in veterinary practice situations. This course will introduce microorganisms commonly encountered in veterinary medicine. Different laboratory techniques will be illustrated.**Credits:** 2.00

VM 23500 - Pharmacology I - DL

Credit Hours: 1.00. This course is the first of two courses in the distance learning program that presents an introduction to the principles of pharmacy and pharmacology for the veterinary technician. Emphasis will be placed upon key concepts of how drugs work, terminology commonly used with therapeutic agents, important mechanisms and side effects of commonly used veterinary drugs, and dosage calculations.**Credits:** 1.00

VM 23600 - Pharmacology II - DL

Credit Hours: 1.00. This course is the second of two courses in the distance learning program that presents an introduction to the principles of therapeutics and pharmacology for the veterinary technician. Emphasis will be placed upon key concepts of how drugs work, terminology commonly used with therapeutic agents, important mechanisms and side effects of commonly used veterinary drugs.**Credits:** 1.00

VM 23701 - Large Animal Nursing II - DL

Credit Hours: 3.00. This is the second of two courses involving nursing and health management of the large animal patient. This is the introduction to large animal patient care and treatment that a technician will be expected to provide in a veterinary practice. It includes techniques, equipment, client education, management of the hospitalized patient and preventative medicine. Emphasis will be on the role of the veterinary technician in the veterinary facility. **Credits:** 3.00

VM 23900 - Dentistry - DL

Credit Hours: 0.50. This course is an introduction to veterinary dentistry for the technician, with emphasis on basic dental anatomy, pathologies and treatments, dental charting, intraoral radiography, dental cleaning and periodontal disease management. **Credits:** 0.50

VM 24000 - Nutrition - DL

Credit Hours: 1.00. This course will provide an overview of nutritional concepts as they apply to common domestic small and large animal species and selected exotic companion/avian pets. Basic concepts for understanding nutritional needs for all species will be introduced as well as the therapeutic use of diets as they relate to animal nursing. **Credits:** 1.00

VM 24100 - Occupational & Public Health I

Credit Hours: 1.00. This course will cover selected zoonotic diseases, occupational hazards and safety issues, related to the veterinary health care team and veterinary facility.**Credits:** 1.00

VM 24200 - Integrations I

Credit Hours: 1.00. An introduction to problem based learning of the nursing process (patient evaluations, interventions, and desired resolutions) using a case based approach. This course will integrate foundational knowledge from anatomy, physiology, with information in the veterinary nursing courses. Cases will involve different domestic animal species. Students will learn using a variety of teaching modalities (lecture, group work, problem based learning). **Credits:** 1.00

VM 24300 - Clinic Rotations I

Credit Hours: 1.50. This course will provide the basic learning situations for developing the techniques required of veterinary technicians in pharmacy, radiology, surgery, medical nursing, and ancillary areas. Total clinic hours 9/week.**Credits:** 1.50

VM 24400 - Clinical Rotations II

Credit Hours: 1.50. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.**Credits:** 1.50

VM 24500 - Veterinary Management Topics - DL

Credit Hours: 1.50. This course is the first of two courses that provide basic instruction in the concepts of a veterinary technician's role in the management of day-to-day operations of a veterinary clinic. This course will emphasize problems related to ethical and liability issues, medical records, inventory, marketing and fees, writing cover letters and resumes, and job interviews. Students must be currently working/volunteering at least 10-15 hours a week at a veterinary facility. **Credits:** 1.50

VM 24800 - Animal Disease - DL

Credit Hours: 2.00. This course is a survey of common small animal and large animal diseases, their clinical signs, and how these signs can be explained by physiology and pathophysiology. The zoonotic potential for the disease and the role of the veterinary technician in the treatment, management, and education of client/owner of the affected animal is also emphasized.**Credits:** 2.00

VM 24900 - Clinical Rotations III

Credit Hours: 3.50. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.**Credits:** 3.50

VM 25001 - Clinical Pathology II - DL

Credit Hours: 2.00. This course is the second course that provides basic instruction in the concepts of Clinical Pathology to the veterinary technician student. This course will include hemostasis; immunohematology; the basic concepts of clinical chemistry; urinalysis evaluation; and the fundamentals of cytological sample handling and evaluation.**Credits:** 2.00

VM 25100 - Medical Math And Terminology For Veterinary Technicians

Credit Hours: 0.50. This course will introduce students to fundamental medical terminology and basic math and dosage calculations commonly used in veterinary medicine. The course includes both classroom and on-line components. **Credits:** 0.50

VM 32300 - Laboratory Animals & Exotic Pet Medicine-VN

Credit Hours: 2.00. This course will cover the proper methods of restraint, daily care, nursing techniques, and housing needs for the common species of laboratory animals.**Credits:** 2.00

VM 34200 - Integrations II

Credit Hours: 1.00. A continuation to problem based learning of the nursing process using a case based approach. This course will integrate foundational knowledge from anatomy, physiology, veterinary nursing courses, clinical pathology, pharmacology, anesthesia diagnostic imaging, microbiology and parasitology. Cases will involve different domestic animal species and laboratory animals. Students will learn using a variety of teaching modalities (lecture, group work, problem-based learning). **Credits:** 1.00

VM 34210 - Integrations-VN

Credit Hours: 2.00. This course will give an introduction to problem-based learning of the nursing process (patient evaluations, interventions, and desire resolutions) using a case-based approach. This course will integrate foundational knowledge from anatomy, physiology, and information in the veterinary nursing courses. This course will draw on fundamentals and concepts learned from all courses to this point including pharmacology, diagnostic imaging, parasitology, small animal nursing, and large animal nursing, so as to enable you to apply knowledge of understanding of clinical cases. Cases will involve different domestic animal species.**Credits:** 2.00

VM 34300 - Clinic Rotations IV-VN

Credit Hours: 5.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.**Credits:** 5.00

VM 34400 - Clinic Rotations V-VN

Credit Hours: 5.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical radiology, pharmacy, and ancillary areas.**Credits:** 5.00

VM 34500 - Veterinary Management Topics I-VN

Credit Hours: 1.50. The course will introduce students to concepts related to working in and managing a veterinary practice. Emphasis will be on client communication and education as well as facilitating a job search, interviewing and cover letter and resume creation.**Credits:** 1.50

VM 36500 - Laboratory Animal Management-VN

Credit Hours: 3.00. This course will cover the principles of laboratory animal science for the technologist (veterinary and LATG). Concepts of facility management, animal health and diseases, regulatory issues, compliance, and instrumentation will be presented.**Credits:** 3.00

VM 39000 - Practicum

Credit Hours: 4.00. Veterinary technologist level off-campus experience in one area of interest totaling 480 hours over 12 weeks. **Credits:** 4.00

VM 40900 - International Veterinary Medicine

Credit Hours: 0.50. The course will consist of a series of lectures and discussions addressing international aspects of veterinary medicine. The course will include the following topics: foreign animal diseases, biosecurity, animal welfare and ethics, veterinary medicine around the world, food security, and cultural competence. **Credits:** 0.50

VM 41001 - International Practicum

Credit Hours: 4.00. The student will experience an integrated employment situation combined with veterinary team interaction to augment his/her specialized CoVM clinical learning experiences. The student will work under the direct supervision of a licensed veterinarian or credentialed veterinary technician designee of tech veterinarian. The student is required to complete a pre-departure orientation with the PVM Director of International Programs. **Credits:** 4.00

VM 41003 - International Veterinary Medicine for the Veterinary Nurse - Directed Experience

Credit Hours: 0.50 to 2.00. This course allows veterinary technology students to participate in a unique faculty/staff-led veterinary learning experience in an international location. Credit will be assigned on the basis of 0.5 credit for each 45-60 hours of student effort, up to a max of 2 credits. In most instances, one week of experience will equal 0.5 credit. Each veterinary learning experience will be designed by the faculty/staff leader to accomplish specific learning goals in the focused area of study. The course will vary in length from 1-4 weeks depending on the specific experience.**Credits:** 0.50 to 2.00

VM 42500 - Veterinary Technician Grand Rounds

Credit Hours: 0.00. Provides a regular forum to bring those in the college together, focused around their common interest in veterinary medicine. Case-based presentations emphasize the basic pathophysiology of disease and clinical investigation and demonstrate the interactions between the clinical and basic sciences. **Credits:** 0.00

VM 44100 - Occupational & Public Health II-VN

Credit Hours: 1.00. The course covers selected aspects of public health and safety related to the veterinary health care team, patient, client and public.**Credits:** 1.00

VM 44200 - Veterinary Management Topics II-VN

Credit Hours: 1.50. This course is a continuation of the first veterinary practice management course. It will introduce students to concepts related to leading a veterinary medical team and managing the day-to-day management of the veterinary practice. Emphasis will be on human resources, marketing and financial management.**Credits:** 1.50

VM 44300 - Clinic Rotations VI-VN

Credit Hours: 2.00. This course will provide clinical learning situations for developing techniques required for veterinary technicians in surgery, medical nursing, clinical pathology, radiology, pharmacy, and ancillary areas.**Credits:** 2.00

VM 44400 - Veterinary Technology Clinical Orientation

Credit Hours: 3.00. This course is an intensive experience and clinical orientation to the Veterinary Teaching Hospital for graduates from another AVMA accredited Veterinary Technology program who wish to complete a BS degree at Purdue University. This course is a four week long, full day rotation (40 hours per week). **Credits:** 3.00

VM 44500 - Senior Project-VN

Credit Hours: 4.00. This is an independent study course in which the student engages in learning activities to enhance their knowledge in a particular area of veterinary technology of their choosing, demonstrate effective oral and written communication, and apply analysis, integration, and syntheses to achieve a solution.**Credits:** 4.00

VM 45000 - Animals in Emergencies - Disaster Management-VN

Credit Hours: 1.00. The course is intended to assist animal care providers in understanding the incident command system and developing plans that improve the care of and mitigating the impact of disasters on livestock and pets.**Credits:** 1.00

VM 45100 - Contemporary Topics In Life Skills-VN

Credit Hours: 1.00. This course will introduce the student to a variety of different skills needed to be successful after graduating from college. It will introduce students to concepts related to managing a job search and evaluating job offers, establishing and using credit, investing, saving, risk assessment and managing college debt.**Credits:** 1.00

VM 45300 - The Role Of The Clinical Research Technician

Credit Hours: 1.00. This course is aimed for the student with a strong interest in clinical trial research. The student will gain a broader knowledge of regulatory bodies involved in research and the vital team role the clinical research technician/nurse plays during clinical trials. The student will gain exposure to histology preparations, microtome use and immunohistological staining procedures as well as receiving clinical cases from current oncology trials. Enrollment will be capped to four students per semester. **Credits:** 1.00

VM 45400 - Animal Rehabilitation And Physiotherapy

Credit Hours: 1.00. This course is an introduction to physical rehabilitation of the veterinary patient. It is designed to instruct students in the basic principles of rehabilitation. This course will introduce the fundamentals needed in clinical practice. **Credits:** 1.00

VM 45500 - Equine Behavior-VN

Credit Hours: 1.00. This course is an in-depth look at equine behavior beyond the basics covered in the nursing courses. It is designed to show how the environment in which the horse is kept can affect its behavior. This course will also demonstrate how the study of behavior is applied in equine welfare and to the solution of practical problems and problem behavior in the equine patient.**Credits:** 1.00

VM 45600 - Advanced Ophthalmology-VN

Credit Hours: 1.00. This course is an in-depth look at ocular anatomy and physiology, use of exam equipment, diagnostic techniques, imaging, pharmacology, surgical instrument identification, cleaning, and care of instruments, surgical nursing, surgical procedures, anesthesia protocols and concerns that are associated with these procedures. **Credits:** 1.00

VM 45700 - Advanced Neurology-VN

Credit Hours: 1.00. This course will focus on neuroanatomy and neurophysiology as well as explore a variety of common neurologic diseases and the basic pathophysiology behind those disease processes. Students will also learn proper nursing care techniques associated with patients with these diseases. **Credits:** 1.00

VM 45800 - Advanced Surgical Nursing And Anesthesia

Credit Hours: 1.00. This course is an in-depth look at small animal surgical nursing, surgical procedures, surgical instrumentation, wound management and the physiological reason certain anesthetic protocols are used. Students will learn using a variety of teaching modalities. **Credits:** 1.00

VM 49000 - Topics In Veterinary Medicine

Credit Hours: 0.50 to 5.00. Advanced study in the field of animal health and practice of veterinary medicine. Permission of instructor required. **Credits:** 0.50 to 5.00

VM 80900 - International Veterinary Medicine

Credit Hours: 0.50 or 1.00. The course will consist of eight lectures addressing international aspects of the following topics: zoonotic diseases, food hygiene, biosecurity, animal welfare, animal husbandry, infectious diseases, cultural competence, veterinary medical education, and role of international organizations in animal health. Participating students will be required to choose an internationally relevant topic of interest to research. The last session of the course will be a poster session in which each student will present and discuss a poster. The posters will be evaluated by a panel of 3-4 faculty members and a grade assessed. Permission of Department required. **Credits:** 0.50 or 1.00

VM 81000 - Veterinary Externship

Credit Hours: 6.00. A six-week or 280-contact-hour work experience, under the direct supervision of a veterinarian, in a facet of veterinary medicine selected as a career goal by the student. **Credits:** 6.00

VM 81001 - International Veterinary Experience

Credit Hours: 1.00 to 6.00. This course will allow veterinary students to establish a unique veterinary learning experience in their area of interest in an international location. Each veterinary learning experience will be designed by the student with input from faculty advisor and the professor of record. Permission of instructor required. **Credits:** 1.00 to 6.00

VM 81002 - Veterinary Medicine Service Learning-VIDA

Credit Hours: 2.00. This 10 day service learning study abroad program is designed for veterinary students to gain practical experience by performing spay neuters of small animals as well as addressing wellness needs of both small and large animals. **Credits:** 2.00

VM 81003 - International Veterinary Medicine- Directed Experience

Credit Hours: 1.00 to 6.00. This course allows veterinary students to participate in a unique faculty-led veterinary learning experience in an international location. Credit will be assigned on the basis of 1 credit for each 45-50 hours of student effort up to a maximum of 6 credits. In most instances, one week of experience will equal one credit. Each veterinary learning experience will be designed by the faculty leader to accomplish specific learning goals in the focuses area of study. The course will be offered in the summer and will vary in length from 1-6 weeks depending on the specific experience. **Credits:** 1.00 to 6.00

VM 81004 - Conservation Medicine And Exotic Pet Medicine And Surgery In Czech Republic And Austria

Credit Hours: 3.00. This course is a 3-week international rotation for 2nd and 3rd year DVM students in Czech Republic and Austria. Students will spend 4-8 days in UVPS clinics and several days onsite at Zoo Brno. Additional lectures, animal science and behavior experience in both countries. Permission of department required. **Credits:** 3.00

VM 81005 - Pre-Clinical Practicum In Veterinary Medicine

Credit Hours: 1.00 to 3.00. This practicum will provide international students with hands-on experience working in a modern veterinary practice or other veterinary medical setting. The student will gain experience working as a member of the veterinary team and participate in wellness care as well as diagnosis and treatment of disease using contemporary equipment and facilities.**Credits:** 1.00

VM 81006 - Veterinary Externship I

Credit Hours: 3.00. A three-week (140 contact hour) work experience, under the direct supervision of a veterinarian, in a facet of veterinary medicine selected as a career goal by the student. Students are required to spend the entire three weeks at externship site(s). Splitting time between two externship sites is permitted by approval by Instructor of Record. Arrangements for the externship are the responsibility of the student and the supervising veterinarian. All cost are paid by the student, but the student may receive compensation (stipend or hourly) from the veterinarian. **Credits:** 3.00

VM 81007 - Veterinary Externship II

Credit Hours: 3.00. A three-week (140 contact hour) work experience, under the direct supervision of a veterinarian, in a facet of veterinary medicine selected as a career goal by the student. Students are required to spend the entire three weeks at externship site(s). Splitting time between two externship sites is permitted by approval by Instructor of Record. Arrangements for the externship are the responsibility of the student and the supervising veterinarian. All cost are paid by the student, but the student may receive compensation (stipend or hourly) from the veterinarian. **Credits:** 3.00

VM 82000 - Applications And Integrations I

Credit Hours: 2.00. This course uses a small group tutorial, problem-oriented approach to understanding how basic science concepts are integrated into clinical aspects of veterinary medicine. Students are expected to identify learning issues, resolve identified gaps in their knowledge base, integrate information across disciplines, and practice/develop problem-solving skills using simulated case materials. Evaluation of students will be based upon, but not limited to, tutorial group evaluation, peer evaluation, self-evaluation, and comprehensive content and process examinations. Introductory session on hematology, clinical chemistry and radiography will be included to facilitate student interpretation of testing used in the cases. **Credits:** 2.00

VM 82500 - Current Issues In Veterinary Medicine

Credit Hours: 0.00. This course provides a regular forum to bring PVM students and faculty together to discuss current issues facing the veterinary profession. Topics will vary depending upon current events and opportunities to feature guest lecturers. Time-shifting may be done to accommodate special events such as PVM Research Day. **Credits:** 0.00

VM 83000 - Applications And Integrations II

Credit Hours: 2.00. This course uses a small group tutorial, problem-oriented approach to understanding how basic science concepts are integrated into clinical aspects of veterinary medicine. Students are expected to identify learning issues, resolve identified gaps in their knowledge base, integrate information across disciplines, and practice/develop problem-solving skills using simulated case materials and research problems. Evaluation of students will be based upon, tutorial group evaluation, peer evaluation, self-evaluation, and a comprehensive content and process evaluation, which will include material from VM 82000 and other current DVM courses (anatomy, physiology, etc.). **Credits:** 2.00

VM 84000 - Applications And Integrations III

Credit Hours: 2.00. This course uses a small group tutorial, problem-oriented approach to understanding how basic science concepts are integrated into clinical aspects of veterinary medicine. Students are expected to identify learning issues, resolve identified gaps in their knowledge base, integrate information across disciplines, and practice/develop problem-solving skills using simulated case materials. Evaluation of students will be based upon, tutorial group evaluation, peer evaluation, self-evaluation, and a comprehensive content and process evaluation, which will include materials from previous classes (VM 82000/83000 and other freshman DVM courses) as well as the current DVM coursework (hematology, parasitology, bacteriology, pharmacology and pathology).**Credits:** 2.00

VM 85000 - Applications and Integrations IV

Credit Hours: 2.00. Small group tutorial, problem-oriented approach to understanding how basic science concepts are integrated into clinical aspects of veterinary medicine. Students are expected to identify learning issues, resolve identified gaps in their knowledge base, integrate information across disciplines, and practice/develop problem-solving skills using simulated case materials and research problems at a higher level of performance than in VM 82000, VM 83000, and VM 84000. Evaluation of students will be based upon, but not limited to, tutorial group evaluation, peer evaluation, self-evaluation, and a comprehensive content and process examination that will include material fromVM 82000, VM 83000, and VM 84000. The final examination will contain an oral component. **Credits:** 2.00

VM 86000 - Early Origins Of Veterinary Medicine Seminar

Credit Hours: 1.00. Students will study the very early origins of man's fascination with animals from the Paleolithic era, and the roots of veterinary medicine in Mesopotamia, Ancient Egypt, and East and South Asia. Particular attention will be paid to works of art that help demonstrate man's fascination with animals and their well-being. This course is appropriate for students with no previous study of history or art history. **Credits:** 1.00

VM 86500 - History Of Veterinary Medicine From Marshals, Horse Doctors, Cow Leeches, The First Schools Of VM

Credit Hours: 1.00. The students will study the history of marshals, horse doctors, cow leeches, and authors, an emphasis on the launching of European veterinary education with a rationale for a veterinary profession, and the history of the first official schools of veterinary medicine in France (Lyon and Alfort), concluding with the history of the increasing demand for veterinary schools. Particular attention will be paid to works that help demonstrate man's fascination with animals and their well-being. This course is appropriate for students with no previous study of history or art history. Special note: This syllabus and course schedule is subject to revisions as needed throughout the semester. Students will be given advance notice of any change. **Credits:** 1.00

VM 86600 - Pathogenic Bacteria, Viruses, Mayhew, Darwin, And Mendel

Credit Hours: 1.00. Students will study the golden age of pathogenic bacteriology from the 1860s to the end of the nineteenth century; the discovery of viruses; the development of immunological products; intractable vector-borne hemoprotozoal parasitic diseases; horse-doctoring in the nineteenth century; care of animals used in transport, war and sport; and will conclude with

Darwin's natural selection and Mendel's fractional inheritance. Particular attention will be paid to works that help demonstrate man's fascination with animals and their well-being. This course is appropriate for students with no previous study of history or art history. **Credits:** 1.00

VM 86700 - Veterinary Medicine Comes Of Age

Credit Hours: 1.00. Students will study early veterinary contributions to biomedical science; how livestock production was enhanced by veterinary specialists; companion animal medicine; bioethics, animal experimentation, and sentience; overcoming the exclusion of women, and the evolving spectrum of opportunity in veterinary careers. Particular attention will be paid to works that help demonstrate man's fascination with animals and their well-being. This course is appropriate for students with no previous study of history or art history. **Credits:** 1.00

VM 87000 - History Of Veterinary Medicine From The Ancient Greeks Through The Renaissance Seminar

Credit Hours: 1.00. The students will study the contributions of the ancient Greeks and Romans to the development of animal doctors. The veterinary highpoint during the Byzantine Empire and Arabian medical and veterinary progress will also be studied. Animals in the Dark Ages, equine and canine medicine in Medieval Europe, and the Italian roots of the Renaissance in medical sciences will be studied. Particular attention will be paid to works of art that help demonstrate man's fascination with animals and their well-being. This course is appropriate for students with no previous study of history or art history. **Credits:** 1.00

VM 87800 - Swine Herd Health And Diagnostic Pathology

Credit Hours: 3.00. Arrange total clinic hours 129. Advanced training and experience in working with swine herds on a herd health management program (see VCS 87800, 129 clinic hours) and advanced training in diagnostic approaches to identification of the causes and pathogenesis of disease of mammals (see VCS 88600, 129 clinic hours). **Credits:** 3.00

VM 89000 - Topics In Veterinary Medicine

Credit Hours: 0.50 to 5.00. Advanced study in the field of animal health and practice of veterinary medicine. Permission of instructor required. **Credits:** 0.50 to 5.00

VM 89100 - Special Topics In Veterinary Medicine Arranged

Credit Hours: 3.00. Opportunities for as many as 50 off-campus, three-week blocks are available for each fourth-year class. Only educational experiences that have no comparable coverage in the Purdue DVM curriculum will be acceptable. Permission of instructor required. **Credits:** 3.00

VM 89200 - Principles Of Professionalism, Jurisprudence, And Ethics

Credit Hours: 1.00. Presentation/discussion format dealing with a broad spectrum of ethical, legal, and professional issues that impact the veterinary profession. Students are challenged to analyze the role they play as responsible members of the veterinary professional community. **Credits:** 1.00

VM 89400 - International Veterinary Medicine- Directed Clinical Experience

Credit Hours: 1.00 to 3.00. This course allows veterinary students to participate in a unique faculty-led veterinary learning experience in an international location. Credit will be assigned on the basis of 1 credit for each 45-50 hours of student effort up to a maximum of 3 credits. In most instances, one week of experience will equal one credit. Each veterinary learning experience will be designed by the faculty leader to accomplish specific learning goals in the focuses area of study. The course will be

offered at various times during the clinical year and will vary in length from 1-3 weeks depending on the specific experience. **Credits:** 1.00 to 3.00

VM 89401 - Clinical Rotation In Small Animal Medicine In Switzerland

Credit Hours: 3.00. This course is a 3-credit clinical rotation. A faculty member will lead this elective 3-week clinical rotation in Switzerland. Students will spend one week each participating in rotations in small animal medicine and related disciplines at the University of Zurich, University of Bern, and one or two private veterinary clinics in Switzerland or southern Germany. The Purdue faculty member leading the rotation each year will spend one week at each rotation site. During time that the Purdue faculty member is not with the students at rotation sites, on-site mentors will supervise the students' clinical experience. **Credits:** 3.00

VM 89500 - Clinical Applications

Credit Hours: 2.00. Introduction to the Veterinary Teaching Hospital (VTH) and the Animal Disease Diagnostic Laboratory. Students rotate through various sections of the VTH and participate in the evaluation and management of patients. Problem-solving skills and application of material from the basic sciences are emphasized. **Credits:** 2.00

VM 89900 - Veterinary Medicine Topics

Credit Hours: 0.50 to 6.00. This is a variable title/variable credit course for VM.**Credits:** 0.50 to 6.00

Women's Gender and Sexuality Studies

WGSS 28000 - Women's, Gender, And Sexuality Studies: An Introduction

Credit Hours: 3.00. An introductory survey of the concepts and research data in the new scholarship on women. Topics covered include biology, sexuality, socialization, family and work, creativity, and politics. **Credits:** 3.00

WGSS 28100 - Variable Topics In Women's, Gender, And Sexuality Studies

Credit Hours: 1.00 to 4.00. This course examines in-depth particular topics from the introductory course in Women's Studies. It addresses gender issues for both men and women. Possible topics include gender and popular culture, women's bodies, body image, and health, masculinities, queering gender and gender transgression.**Credits:** 1.00 to 4.00

WGSS 28200 - Introduction To LGBTQ Studies

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally. **Credits:** 3.00

WGSS 38000 - Comparative Studies In Gender And Culture

Credit Hours: 3.00. This course expands students' understanding of gender issues by exploring the multicultural diversity of women's lives. It examines how race, class, sexuality, and culture interact and shape society and ecology in the United States and in a global context. **Credits:** 3.00

WGSS 38100 - Women Of Color In The United States

Credit Hours: 3.00. Explores the diversity of racial and ethnic groups in the United States with a particular emphasis on the histories, experiences, and cultural contributions of women of color. Provides a broad introduction to the intersections of gender, race and ethnicity. **Credits:** 3.00

WGSS 38200 - Love, Sex And Sexuality

Credit Hours: 3.00. Explores intimate relationships and marriage practices in Western and non-Western societies from a historical and comparative perspective. Examines the changes in love and marriage in Greco-Roman societies, medieval and modern Europe, China, India and the Muslim world, among others. **Credits:** 3.00

WGSS 38300 - Women, Work, And Labor

Credit Hours: 3.00. Examines race, class and gender issues as they affect working women in America. Covering women's work from domestic labor to informal economies to factories, topics include women's participation in trade unions, wage inequalities, family leave policies and sexual harassment.**Credits:** 3.00

WGSS 39000 - Variable Topics In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Variable topics under the direction of an instructor in a particular field of specialization. **Credits:** 1.00 to 4.00

WGSS 48000 - Feminist Theory

Credit Hours: 3.00. Intensive study of a variety of contemporary and international feminist theories from an interdisciplinary perspective. Provides an overview of major trends, critical approaches, and diverse viewpoints in the field of feminist theory. **Credits:** 3.00

WGSS 48200 - Interdisciplinary Studies In Sexuality

Credit Hours: 3.00. This course offers an interdisciplinary introduction to recent work in lesbian and gay studies in various fields, including literature, history, film, cultural theory, medicine, law, and studies of sexuality.**Credits:** 3.00

WGSS 48300 - Feminisms In Global Perspective

Credit Hours: 3.00. Explores feminist struggles through the writings of First and Third World feminist scholars. Focuses on feminist projects within and against colonial, nationalist, religious and global contexts. Includes Third World feminist critiques of Western feminisms. **Credits:** 3.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.**Credits:** 3.00

WGSS 49200 - Practicum In Women's, Gender, and Sexuality Studies

Credit Hours: 2.00 to 4.00. This course is designed to integrate knowledge derived from women's studies scholarship with practical experience. Students will define their own projects in consultation with women's studies faculty. Periodic conferences and written reports required. Permission of instructor required. **Credits:** 2.00 to 4.00

WGSS 49900 - Independent Study In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of the instructor in a particular field of specialization. Permission of instructor required.**Credits:** 1.00 to 4.00

WGSS 59900 - Selected Topics In Women's Gender And Sexuality Studies

Credit Hours: 3.00. A study of selected topics taught by an instructor in whose particular field of specialization the content of the course falls. Permission of instructor required. **Credits:** 3.00

WGSS 68000 - Feminist Theory

Credit Hours: 3.00. This course focuses on feminist theories at an advanced level and in a global perspective. Graduate students engage with key theoretical issues in contemporary feminist studies, and examine how feminist scholars have theorized women and gender issues across disciplines. **Credits:** 3.00

WGSS 68100 - Contemporary Issues In Feminist Scholarship

Credit Hours: 3.00. Applies feminist theory, knowledge, and methods to the examination of selected contemporary issues. Emphasizes ways in which theory and practice interact in feminist scholarship. Content may vary according to the issues examined. Prerequisite: WGSS 68000. **Credits:** 3.00

WGSS 68200 - Issues In Feminist Research And Methodology

Credit Hours: 3.00. This course provides a methodological framework for theorizing, constructing and executing research from a feminist perspective. Students acquire knowledge of the diversity of feminist research projects and methods; they learn to pose research questions; and they will be able to prepare a research or grant proposal drawing on interdisciplinary methods. The course is designed to meet the needs of graduate students in Women's Studies and is open to students in other programs who are interested in feminist research. The course deals with both theoretical and practical issues in methodology. Prerequisites: WGSS 68000. **Credits:** 3.00

Vertically Integrated Projects

VIP 17910 - First-Year Participation In Vertically Integrated Projects (VIP) Lim

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically integrated teams (first year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in a limited number of professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies, and development tools. Permission of department required. **Credits:** 1.00

VIP 17911 - First Year Participation In Vertically Integrated Projects (VIP) I

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 1.00

VIP 17912 - First Year Participation In Vertically Integrated Projects (VIP) II

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 1.00

VIP 17920 - First Year Participation In Vertically Integrated Projects (VIP)

Credit Hours: 2.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 2.00

VIP 27910 - Sophomore Participation In Vertically Integrated Projects (VIP) Lim

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically integrated teams (first year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in a limited number of professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 1.00

VIP 27920 - Sophomore Participation In Vertically Integrated Projects (VIP)

Credit Hours: 2.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 2.00

VIP 27930 - Sophomore Participation In Vertically Integrated Projects (VIP) Ext

Credit Hours: 3.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically integrated teams (first year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 3.00

VIP 37910 - Junior Participation In Vertically Integrated Projects (VIP) Lim

Credit Hours: 3.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically integrated teams (first year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in a limited number of professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 1.00

VIP 37920 - Junior Participation In Vertically Integrated Projects (VIP)

Credit Hours: 2.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 2.00

VIP 37930 - Junior Participation In Vertically Integrated Projects (VIP) Ext

Credit Hours: 3.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.**Credits:** 3.00

VIP 47910 - Senior Participation In Vertically Integrated Projects (VIP) Lim

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically integrated teams (first year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in a limited number of professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools. **Credits:** 1.00

Healthcare Engineering Technology Management

HETM 22500 - Healthcare Technology Diagnostics And Repair

Credit Hours: 3.00. This course will explore fundamental repair theory and applications of technology used in the clinical setting, switching logic and controls, and systems repair in medical devices. Typically offered Fall.**Credits:** 3.00

HETM 24000 - The Technology Of Patient Care

Credit Hours: 3.00. This course provides an overview of medical equipment used in the hospital and other medical environments to diagnose and treat patients. Sensors and physiological signals will be explained. Equipment found in various hospital

departments and medical specialties will also be discussed. Patient safety and regulations will be emphasized. Typically offered Fall Spring Summer.**Credits:** 3.00

HETM 31500 - Introduction To Imaging Modalities

Credit Hours: 3.0. The fundamentals of diagnostic imaging equipment will be explored. The principles of x-ray based systems will be explored. Components and features of MRI, ultrasound, PET, and nuclear medicine will be discussed. Image storage and communication protocols will be presented. Typically offered Fall.**Credits:** 3.00

HETM 40200 - Healthcare Device System Security

Credit Hours: 3.00. Students explore the clinical applications of computer networks, integrated medical devices, interoperability, and electronic medical records. Special emphasis will be on security and HIPAA compliance associated with physiological data. Hands-on learning will involve campus-area hospitals. Typically offered Fall Spring.**Credits:** 3.00

HETM 44000 - Codes, Regulations And Patient Safety

Credit Hours: 3.00. This course explores applicable NFPA 99, JCAHO, CLIA, FDA and other regulatory agencies and their regulations governing medical equipment in the clinical environment. Case studies will be used to provide examples of interpretation and application. Typically offered Fall.**Credits:** 3.00

HETM 46000 - Systems Engineering Technology For Healthcare

Credit Hours: 3.00. Participants will gain insight into the analysis of multiple-entity clinical systems involving healthcare technology. Focus will include process analysis and improvement to satisfy clinical customer needs. Course content will explore the interdisciplinary efforts related to support the development, verification, deployment, integration, operations and user training of complex systems involving healthcare technology, as well as the creation of information about system performance associated with management decision making. Typically offered Fall, Spring.**Credits:** 3.00

HETM 49000 - Project Planning And Design

Credit Hours: 1.00. Students are expected to prepare an individual design in collaboration with industry and/or the clinical setting. This course will introduce the applications of project management to the student's design. Topics include project scope, scheduling, resource limitations, stakeholder interactions, delivery and quality assurance. Typically offered Fall Spring.**Credits:** 1.00

HETM 49300 - Healthcare Engineering Technology Management Ethics And Professionalism

Credit Hours: 1.00. Students will explore ethical, social, political, legal and ecological issues that practicing BMET's may encounter. Particular emphasis will be placed on patient safety and privacy issues. Typically offered Fall Spring.**Credits:** 1.00

Interior Architecture

INT 10300 - Introduction To Interior Design

Credit Hours: 3.00. An overview of the field of interior design, its history, and theory. An application of the principles and elements of interior design. Basic hand drafting. This course is for those who are seeking or considering a degree in Interior Design.**Credits:** 3.00

INT 12400 - Space Planning For Interiors

Credit Hours: 3.00. Introduction to the fundamentals of design for human activity, standards for space, programming, and graphic communication. Requirements for ADA and Universal Design will be included.**Credits:** 3.00

INT 12500 - Color And Lighting Of Interiors

Credit Hours: 3.00. Exploration of the physiological, psychological, and phenomenal aspects of color and light in interior spaces. Application includes specification and selection of lighting fixtures and light sources.**Credits:** 3.00

INT 15100 - Textiles For Interiors

Credit Hours: 3.00. An extensive study of textiles: fiber types, yarn production, fabric construction, finishing, coloring, and printing. Application of textiles for use in residential and commercial interiors.**Credits:** 3.00

INT 20200 - Interior Materials And Applications

Credit Hours: 3.00. Analyzes information related to use of surfacing materials applied as interior finishes in interior design projects. The role of green design is introduced, and ecological issues are integrated into each category of materials analyzed.**Credits:** 3.00

INT 20400 - History Of Interiors And Furniture I

Credit Hours: 3.00. A survey of historical development of interiors, furniture and decorative arts from early history to 1800 (early neoclassic). Emphasis on design motifs, ornamentation and furniture styles.**Credits:** 3.00

INT 22400 - Residential Interior Design Studio

Credit Hours: 3.00. This studio class will emphasize the design of residential space, recognizing design development as a process. Space design, working drawings, plans, and client presentations also will be covered. The course will utilize computer-aided drafting and design (CAD).**Credits:** 3.00

INT 22600 - Commercial Interiors I

Credit Hours: 3.00. This studio course emphasizes the elements used by designers in the development of nonresidential space. Studies include technological and building requirements; building and life-safety codes; square footage and space planning standards. Organizational, ergonomic, technical, spatial and environmental factors will be considered.**Credits:** 3.00

INT 30400 - History Of Interiors And Furniture II

Credit Hours: 3.00. The continuation of a survey of historical development of interiors, furniture, and decorative arts beginning with 1650 Colonial America through the 20th century. Emphasis is on design motifs, ornamentation, and furniture styles. Adaptation and use of period styles within contemporary design are included.**Credits:** 3.00

INT 32400 - Residential II: Housing Design

Credit Hours: 3.00. This studio class will emphasize the design of residential space, recognizing design development as a process. Space design, working drawings, plans, and client presentations also will be covered.**Credits:** 3.00

INT 32600 - Commercial Interior Design Studio II

Credit Hours: 3.00. This studio course emphasizes the elements used in development of nonresidential space. Studies include technological and building requirements; building and life-safety codes, ADA guidelines, square footage and space planning standards.**Credits:** 3.00

INT 42600 - Evidence-Based Design

Credit Hours: 3.00. This studio-based course emphasizes the principles of evidence-based design in modern practice. Students will acquire working knowledge of best practices with relation to healthcare or similar environments based on empirical data.**Credits:** 3.00

INT 42800 - Interior Design Capstone Design Project

Credit Hours: 3.00. In this B.S. Capstone course the designer tackles a semester long advanced design problem by applying the design process from project obtainment through construction documents. This class is team-taught and must be taken in conjunction with INTR 48000.**Credits:** 3.00

INT 45200 - Interior Building Systems

Credit Hours: 3.00. A survey course of building systems that covers the design implications of heating, air-conditioning, plumbing and electrical systems of both residential and commercial buildings. Sustainable technologies such as solar energy for heating, cooling, or hot water heating, day-lighting, and recycling systems will be included.**Credits:** 3.00

INT 45300 - Business Practices Of Interior Design

Credit Hours: 3.00. Business principles and practices as they relate to the interior design profession. Includes business formation and management, professional ethics and organization, certification and licensing issues, design liability, and project management.**Credits:** 3.00

INT 48000 - Senior Portfolio

Credit Hours: 3.00. This course will assist the student with developing a professional level portfolio and related materials which may be used in interviewing for an Interior Design position, and provides an opportunity to showcase all academic work created at this institution. Topics and activities include branding, resume preparation, website design, social media management, interviewing, and the creation of various related portfolio materials.**Credits:** 3.00

INT 49500 - Sustainable Design In Engineering And Technology

Credit Hours: 3.00. In this multidisciplinary course students will create industrial ecological solutions within their unique disciplines. A theoretical framework on Green Design is used to identify and apply green concepts while working on multidisciplinary teams. Environmental concerns for better air quality and global environmental issues are explored.**Credits:** 3.00

Business - IU (BUS)

BUS A2000 - Foundations Of Accounting

Credit Hours: 3.00 to 5.00. The course addresses the role of accounting in society and business, with a special emphasis on fundamental concepts and the basic design of accounting systems.
